While attributing to the ḏāḥiliyya the faults condemned in the Qurʾān, Muslims do not fail to recognize a certain number of virtues among the ancient Arabs, such as honor [see ’IRD], courage and dignity [see MURUWWA], and hospitality [see DAVF].

For relevant information on social organization see QIILA, QIILA, QARILA, etc., and, for the position of women, NIKAH and TALAK. (ED.)

DJIHIM [see NAR].

DJIHIR (BAU), one of the families of government contractors characteristic of their period who almost completely monopolized the caliph’s vizierate during the protectorate of the Great Saldjūkids, and deriving their particular importance from that fact. The founder of the political fortunes of the dynasty, Fakhr al-Dawla Abū Naṣr Muḥammad b. Muḥammad b. Ḏīhir, born in al-Mawsil in 398/1007-8 of a family of rich merchants, entered the service of the Shīʾi Ḥakīm princes of that town; then, after one of them, Kirmāshš, fell in 414/1024, as a result of somewhat obscure feuds he went to Aleppo where at one time he was vizier to the Mirdāsid Shīʾi Muʾizz al-Dawla Ṭīmān, and finally (in 442/1055) when he became vizier to the Marwānid of the Diyar Bakr, Naṣr al-Dawla (401-53), a Sunni and vassal of the Saldjūkids from before the time of Tughrul Beg’s entry into Baghādād (447/1055). After his protector’s death, the rivalries between the sons apparently caused him some anxiety, and he was able to take advantage of the difficulties of which caliph al-Raʾīm was experiencing in choosing a vizier who would be persona grata to the sultan and at the same time ready to safeguard the prerogatives of the caliph, to have the post offered to himself (454/1062), for which no doubt he was further recommended by the administrative talents he had revealed at Mayyāfārīk. The family was to hold the position of vizier almost without a break for half a century, and Fakhr al-Dawla himself was to remain as vizier, apart only from four months in 460-1/1068, until 471/1080 when he fell into disgrace, to be replaced, however, after some months by his son (born in 435) and close colleague ʿAmīd al-Dawla. Ibn Ḏīhir calculated that, if he was obliged on the one hand to defend the rights of the caliphate and to avoid wishing to appear to act without the caliph’s orders, on the other hand he could only enjoy a really secure position if he maintained close personal relations with the sultanate and his eminent and powerful vizier (from the time of Alp Arslan’s reign 455/1063), Naṣr al-Mulk; these ties were strengthened, after the incident in 460-1/1068, by the marriage of ʿAmīd al-Dawla to one of Naṣr’s daughters, and then after her death (on the eve of the affair in 471/1080 which possibly her death precipitated) by his subsequent marriage to her niece: thanks to this it was possible at last to put to a stop the hostile intrigues of Gōhūrān, the sultan’s representative in Baghādād, in that year. However in the second half of Malikshāh’s sultanate (463-85/1070-94), in face of the Saldjūkīd hold over Baghādād which was increasing, the caliph Fakhr al-Muktadī (467-87/1075-94) in 476/1083 replaced the Ḏīhirds by Miskawayh’s successor, Abū Ṣuḥdā‘ Rūḏhrāwārī who, without being in any way anti-Saldjūkīd, was perhaps a truer representative of the vizier in his heart, and more attentive to the religious, orthodox aspect of the caliphate’s own policy. It was then that the Ḏīhirds embarked on another venture, the explanation of which, if not from their point of view at least from that of the sultan’s government, seems far from clear. Taking advantage of the Marwānīds’ difficulties, Fakhr al-Dawla in fact arranged that Malikshāh, who provided him with the necessary troops, should entrust him with the task of conquering the principality in which, it was true, he had maintained his interests and relations, but of which neither Malikshāh nor his predecessors had ever had cause to complain. Furthermore, the military operations were difficult, being complicated by the intervention of the ʿUkaylīd of al-Mawṣil, Muslim, who saw clearly that if an autonomous neighbouring state were to disappear, his own, which he had put to far more questionable uses, would not long survive, and even by the somewhat equivocal attitude of the Saldjūkīd Turkomān leader Artuk. Actual sieges were necessary to take Mayyāfārīkīn, ʿAmīd and other fortresses in the Diyar Bakr, and the war in which ʿAmīd al-Dawla’s brother al-Kāfī Zaʿīm al-Ruṣāsī ʿAbū ʿl-Kāsim ʿAlī also took part was only concluded at the beginning of 478/1085. Fakhr al-Dīn hunted out and apparently squandered the Marwānīds’ treasure, appropriating a portion of it for himself, and from the end of 481/1086 until 482/1087 he was in view of his unpopularity to replace him by a less self-seeking representative as head of government in the province. However, in 482 ʿAmīd al-Dawla obtained the right to farm taxes from the province, paying ten million dirāms in three years, while his father received the administration of al-Mawṣil which meanwhile had also come into Malikshāh’s possession; he won a good reputation with everyone by the remission of taxes, and the family was able to retrieve its fortunes before the death of Fakhr al-Dawla which occurred in al-Mawsil in 483. In the following year Nāṣr al-Mulk persuaded the caliph to reappoint ʿAmīd al-Dawla to the office of vizier which he was to retain after the death of the great Saldjūkīd administrator, Malikshāh and al-Muktadī until 493/1100; to govern the Diyar Bakr he had left his brother al-Kāfī as representative, later succeeded by his son.

But harsher times were to befall the family. In 487/1094, after Malikshāh’s death, his brother Tutuṣh took possession of the Diyar Bakr; after retaining al-Kāfī as vizier, perhaps for a short time, he recalled him and, under the Turkomān leaders who were to partition the province between themselves, we hear no more of the Ḏīhirds. In Baghādād the new sultan Bākyārāk, running short of funds
during the wars he was obliged to wage against his brothers, and possibly not being certain of al-Dawla's loyalty to his cause, had him arrested and finally to al-Fath b. Khakan [q.v.] and then after the latter's fall from power, he was made an allowance by the authorities, if not inspired by them, and relating to topical events; notwithstanding some degree ofácidence grise, so to speak, or of unofficial adviser at least. We have seen already that the writings which won him the recognition of the Caliphate and were certainly intended to justify the accession to power of the 'Abbasids; they were the prelude of a whole series of opuscules addressed to the authorities, if not inspired by them, and relating to topical events; notwithstanding some degree of article in risālas beginning: "Thou hast asked me about such and such a question .... I answer thee that ...", it may be presumed that in many cases the question had in fact been asked and he had been requested to reply in writing. For, if he was never admitted to the intimacy of the Caliphs, he was in continuous contact with leading political figures and it is rather curious that he should have attached himself successively to Muhammad b. 'Abd al-Malik al-Zayyāt [q.v.], then after the latter's fall from favour (233/847) which almost proved fatal to both men, to the Kādi al-kudūd (d. 240/854) Ahmad b. Du'ā'īd [q.v.] and to his son Muhammad (d. 239/853) and finally to al-Fath b. Khākān [q.v.] (d. 247/861).

He nevertheless retained ample independence and was able to take advantage of his new position to

Encyclopaedia of Islam, II 25
further his intellectual training and to travel (particular- 
ly to Syria; but al-Mascudi, Murudí, i, 206, was 
to criticize him for having attempted to write a 
geography book) an almost entirely lost—without 
having become old enough. In the course of this, he 
found a rich store of learning in the many translations 
from Greek undertaken during the Caliphate of al-
Ma'mun and studying the philosophers of antiquity
—especially Aristotle (cf. al-Hâjijîrî, Tobkridî 
muṣâṣ arisâtâliyya min K. al-Ḥayawâni, in Muṣâllat 
hulîyyat al-ddâbî, Alexandria, 1933 ff.)—enabled him 
to broaden his outlook and perfect his own 
theological doctrine, which he had begun to elaborate 
under the supervision of the great Mu'tazâlis of the 
day, of whom al-Nâzâmî and Thûmâmâ b. Ašqâras 
[qq.v.], who seems to have had a strong influence on 
him, should be placed in the first rank.

Towards the end of his life, suffering from 
pleurisy, he retired to his home town, where he 
died in Muharram 255/December 865-January 866.

Like many Arabic writers, al-Djahîz had a very 
great output. A catalogue of his works (see Aрабика, 
1956) lists nearly 200 titles of which only about 
forty, authentic or apocryphal, have been 
perennially preserved, in their entirety; about fifty others have 
been partially preserved, whilst the rest seem irretrievably 
lost. Brockelmann (S I, 241 ff.) has attempted to 
classify his works according to real or supposed 
subjects and gives us some idea of the breadth and 
variety of his interests. Considering only the extant 
works, which now for the most part are available 
in editions of varying quality, two broad categories 
may be distinguished: on the one hand, works 
coming under the head of Dabajîhînad adab, that is 
said to be written in a rather entertaining manner 
to instruct the reader, with the author intervening 
only insofar as he selects, presents and comments on 
documents; on the other hand, original works, 
dissertations where his ability as a writer and to some 
extent his efforts as a thinker are more clearly shown.

His chief work in the first category is K. al-
Ḥayawâni (ed. Hârûn, Cairo n.d.; 7 vols.) which is 
not so much a bestiary as a genuine anthology 
based on animals, leading off sometimes rather 
unexpectedly into theology, metaphysics, sociology 
etc.; one can even find embryonic theories, without 
the influence of Aristotle (cf. al-Hadjiri, 
Takhridî
kulliyyat al-ddâbî, Alexandria, 1933 ff.)—enabled him 
to broaden his outlook and perfect his own 
theological doctrine, which he had begun to elaborate 
under the supervision of the great Mu'tazâlis of the 
day, of whom al-Nâzâmî and Thûmâmâ b. Ašqâras

which summarize or indicate points where al-Djahiz differs from other Muttazilis. Too little is known of the doctrine itself for one to be able to do more at this stage than simply refer to the article mu'tasila, pending the completion of a thesis specifically concerned with the question.

Meanwhile, even though al-Djahiz’s place in the development of Muslim thought is far from negligible, he is chiefly interesting as a writer and an adab, for with him form is never overshadowed by content; even in purely technical works. If he is not the first of the Arab professional writers, if in rhetoric `Abd Allah b. al-Mukaffa’ [q.v.] and Sahl b. Härün [q.v.], to name but two, are his masters, nevertheless he gave literary prose its most perfect form, as was indeed recognized first by politicians who made use of his talent for the `Abbāsid cause and then by Arab critics who were unanimous in asserting his superiority and making his name the very symbol of literary ability.

Al-Djahiz’s writing is characterized by deliberately contrived disorderliness and numerous digressions; the individuality of his alert and lively style lies in a concern for the exact term—a foreign word if necessary—picturesque phrases and sentences which are nearly always unrhymed, but balanced by the same idea in two different forms; what would be pointless repetition to our way of thinking in the mind of a 3rd/9th century writer simply arose from the desire to make himself clearly understood and to give ordinary prose the symmetry of verse; though difficult to render and appreciate in a foreign language, the flow of his sentences is perfectly harmonious and instantly recognizable. Nevertheless, for the majority of literate Arabs of al-Djahiz remains, if not a complete buffoon, at least something of a jester; his place as such in legend can undoubtedly be attributed in part to his fame and his ugliness, which made him the hero of numerous anecdotes; but it must also be attributed to a characteristic of his writing which could not but earn him the reputation of being a joker in a Muslim world inclined towards soberness and gravity; for he never falls, even in his weightiest passages, to slip in anecdotes, witty observations and amusing comments. Alarmed at the boredom enshrouding the speculations of a good many of his contemporaries, he deliberately aimed at a lighter touch and his sense of humour enabled him to deal entertainingly with serious subjects and help popularize them. But he realized he was doing something rather shocking and one cannot help being struck by the frequency with which he feels it necessary to plead the cause of humour and fun; the best example is in K. al-Tahib wa l-tadawir (ed. Pellat, Damascus 1955) a masterpiece of ironic writing, as well as a compendium of all the questions to which his contemporaries whether through force of habit, inactive instinct or lack of imagination offered traditional solutions or gave no thought at all. Without stepping outside the boundaries of the faith—this itself was something of a strain—he takes for granted the right to submit to scrutiny accepted attitudes to natural phenomena, ancient history and legends handed down as truths, to restate problems and skilfully suggest rational solutions. Nor is that all; for at a time when mediaeval Arabic culture was taking shape, he was a passionate defender, or on Greek thought, always careful however to curb the intrusion of the Persian tradition, which he considered too dangerous for the future of Islam, into the culture he longed to bestow on his co-religionists. This vast undertaking, based on the spirit of criticism and systematic doubt in everything not directly concerned with the dogma of Islam, was unfortunately to be to a considerable extent narrowed and side-tracked in the centuries to follow. It is true that al-Djahiz was to have admirers as noteworthy as Abū Rayyān al-Tawḥīdī, imitators and even counterfeiters, who made use of his name to ensure greater success for their works; but posterity has only kept a deformed and shrunken image of him, seeing him at the most as a master of rhetoric (see Pellat, in al-And., 1956/2, 277-84), the founder of a Mu'tazil school—whose disciples no one bothers to enumerate—and the author of compilations to be drawn upon for the elaboration of works of adab, a sizeable share of recorded information on dhikāliyya and the early centuries of Islam.

Bibliography: The main biographies are those of Khāṭib Baghdādī, xii, 212-22; Ibn ʾĀsikīr, in MMIA, ix, 203-17; Yākfūt, Ḥirādī, vi, 56-80. A general outline is to be found in manuals of Arabic literature, as also in: Sh. Diābī, al-Djahiz mušallīm al-ʾabī wa l-tadabbur, Cairo 1351/1932; K. Mardam, al-Djahiz, Damascus 1349/1930; T. Kayyūlī, al-Djahiz, [Damascus] n.d.; H. Fākhūrī, al-Djahiz, Cairo 1953; M. Kurdi ʿAll, Umarid al-bayān, Cairo 1355/1937; H. Sandūbī, Adab al-Djahiz, Cairo 1350/1931; Ch. Pellat, Le Milieu basrien et la formation de Gāhī, Paris 1953; idem, Gāhī ʿaṣbādāt wa l-Sāmārā, in RSO, 1952, 47-67; idem, Gāḥisāna in Arabic, 1954/5, 1955/6 and mainly 1956/7: Essai d'inventaire de l'œuvre gāḥiyye, with an account of mass, editions and translations (one should add to the bibliography: A. J. Arberry, New material on the Kitāb al-Fīrāst of Ibn al-Nadīm, in Ist. Research Assoc. Miscellany, i, 1948, which gives the notice from Fīrāst on Dajīz, missing in the editions; and also: F. Gabrieli, in Scritti in onore di G. Furlani, Rome 1957, on the R. fi manṣūb al-Turk; the Tunisian review al-Fīrāst, Oct. 1957 and March 1958, on the article; J. J. Finkel, in Abū al-Fayyūd et la société de son temps (in Arabic, Beirut 1957 (?), not consulted here). It should be pointed out that in addition to the editions quoted in the course of the article, the following collections have been published: G. van Vloten, Trua opuscula, Leyden 1903; J. Finkel, Three essays, 1926; P. Kraus and M. T. ʾAṭārī, Muṣīma rasāʾil al-Djahiz, Cairo 1943 (a French translation of these texts is being prepared); H. Sandūbī, Rasāʾil al-Djahiz, Cairo 1352/1933; Iḥdā ʿaghratā risāla, Cairo 1342/1906; O. Rescher, Excerpta und Übersetzungen aus den Schriften des ... Gāḥī, Stuttgart 1931 (analytical translation of a good many texts). The texts in the three manuscript collections: Dāmad Ibrāhim PāSHA 314; Br. Mus. 1129 and Berlin 5052 (see Oriens, 1954, 85-6) have in a good many cases been published; those not yet published, along with some other texts of less importance, will be included in our Nuṣṣ Gāḥiyya ghayr manṣūra, K. al-ʿUrdidn, etc. has been recently discovered in Morocco, but is of no great interest. (CH. PELLAT)
Djahlahwän — Al-Djahshiyari

Brahols (or Brahui). Area, 21,128 sq. miles, population unknown, estimated 100,000. The capital is Khuzdar and the population is mainly Brahöhi with a few Balochi ans to the Tjaks and from age by opponents.

Bibliography: Baluchistan Gazetteer, vi, B. Bombay 1907; M. G. Pikulin, Beludghi, Moscow 1959.

Djahm b. Saffāwī, Abu Mushriz, early theologian, sometimes called al-Tirmidhī or al-Samarqandī. He was a client of Rāsīb (a bā′īn of Azd) and appears as secretary to al-Hārīrī b. Suraydī, "the man with the black banner" who revolted against the Umayyads and from 116/734 to 128/746 controlled tracts of eastern Khurāsān, sometimes in alliance with Turks. Djahm was captured and executed in 128/746, shortly before al-Hārīrī himself.

The basis of this movement of revolt, of which Djahm was intellectual protagonist, was the demand that government should be in accordance with "the Book of God and the Sunna of His Prophet" (al-Ṭabarī, ii, 1570 f., 1577, 1583, etc.); and the movement according to which men acted only metaphorically, as the sun "acts" in setting. They held that God had a distinct eternal attribute of knowledge, called "the Book of God and the Sunna of His Prophet" (al-Shifāʾ al-Dajhmiyya, in Dār al-Fālün Ilāhīyyat Fikhlustātī, v-vi (1927), 313-27).

Other views ascribed to him are those of the sect of Djāhmiyya [q.v]., which is not heard of until seventy years after his death, and whose connexion with him is obscure. (W. Montgomery Watt)

Djahmiyya, an early sect, frequently mentioned but somewhat mysterious.

Identity. No names are known of any members of the sect, apart from the alleged founder Djahm [q.v.]. The basic fact is that "after the translation of the Greek books in the second century a doctrine (makhla) known as that of the Djāhmiyya was spread until Bishr b. Ghiyath al-Marṣī [q.v.] and his generation (Ibn Taymiyya, Akhīda Hamawuyi, ap. M. Schreiner in ZDMG, llii, 72 f.; lii, 544). A pupil of Abu Yūsuf (d. 182/798), Bishr (d. 218/833 or a little later) was questioned about his strange views under Ibrāhīm b. al-Mahdī (c. 202/817) (Ibn Abī l-Wafā′, al-Djawharī al-muḍīfī, i, nos. 1146, 371). Apart from this the early Baloch and Tjaks, known as the Djahmīs, appear as secretaries prior to the advent of Bishr al-Marṣī (al-Fikh al-akbar, 200; translation by A. S. Halkin, 14) says there were Djahmīyya in Tirmīzhī in his own time, of whom some became Ashīratīs.

Doctrines. They held an extreme form of the doctrine of ḥabar, according to which men acted only metaphorically, as the sun "acts" in setting. They held that God had a distinct eternal attribute of knowledge, called "the Book of God and the Sunna of His Prophet" (al-Shifāʾ al-Dajhmiyya, in Dār al-Fālün Ilāhīyyat Fikhlustātī, v-vi (1927), 313-27; al-Dārīmī (d. 282/895), Kitāb al-Radd ʿalā l-Dajhmiyya, ed. G. Viteslam (with introduction and commentary) Lund and Leiden 1960.

(W. Montgomery Watt)

Al-Dajshiyari, Abu ʿAbd Allāh Muḥam-mad b. Abūdūs, a scholar born in al-Kūfah, who played a role in the formation of the early 10th century on account of his relations with the viziers of the time. He succeeded his father in the office of hāḏīb to the vizier Allā b. Isā, of whose personal guard he was in command in 306/912. Later, he is found among the supporters of Ibn Mūkla whom he helped to be proclaimed vizier and whom he concealed after his fall; several times he was imprisoned and fined, either by the viziers or by the amirs Ibn Rāʾīkh and Badḵam. He died in 327/942.

Al-Dajshiyārī is principally known as the author of a Kāṭib al-awzarā′ wa l-kuttābī which traced the history of the Secretaries of State and viziers until 296/908; only the first part, stopping at the beginning of al-Muʿāmmīn's caliphate, has been preserved for us intact. This work, which reveals the true spirit of inquiry of a chronicler as well as an undeniable taste for adornments and much emphasis upon men's characters and intellectual qualities as upon their administrative or political activities. Al-Dajshiyārī also wrote a voluminous chronicle of al-Muṭakādir's caliphate, from which certain passages are thought to have been recovered, and a collection of stories (asmār) which seems to be lost despite the opinion of those who would like to
attribute to al-Djahshiyari the K. al-Hikdydt al-\[iba, an anonymous work published recently (see Arabic, iv, 1957, 214). In his life, see M. Canard, Akhhr ar-Radd billa\[, Algiers 1946, i, 143 n. 3; J. Latz, Das Buch der Westire und Staatssekretäre von Ibn Âbdûs al-Gakhdiyrî, Anfänge und Ummi-\[yadzeit, Walddorf-Hessen, 1958, 3-6; D. Sourdel, Le vizirat âabbâdsâ, Damascus 1959-60, index; Ibn Khallîkân, ed. Cairo 1948, vi, 23. On his writings, see G. A. S. I, 219-20; in addition to the facsimile edition of the K. al-Hikdydt al-\[iba, ed. by H. von Mîk (Leipzig 1926), the edition by Mustafâ al-Sakhîd[], etc., which appeared in Cairo in 1357/1938, should be added; the pages devoted to the beginnings and the Umayyad period have been translated into German by J. Latz (supra); the character of the work has been studied by D. Sourdel, La valeur littéraire et documentaire du "Livre des Vizirs" d'al-\[Gakhdyirî, in Arabicî, ii, 1955, 193-210; the surviving fragments of the second part have been published or recorded by Mîkhâîl \[Awâdîd, in MIMA, xviii, 1943, 318-32 and 435-42, and D. Sourdel, Mélanges L. Massonîn, iii, Damascus 1957, 271-99. On the \[Abbâd al-Muqâthdîr, see D. Sourdel, Mélanges L. Massonîn, iii, 271 n. 2. (D. SOURDEL)

DJA^ZARIDS. The terrible conflict brought about by the fall of the Umayyad Caliphate led the Cordovans, under the direction and advice of the influential and respected vizier Abu Hazm Dja^warz b. Mikhailmad b. Dja^warf, to declare incapable and expel from the city all the members of the imperial family. They proclaimed a form of republic (422/1032) at the head of which they placed the vizier, who had already demonstrated his great political talents at the court of Ushâm II. Once elected, however, he refused to assume all the reigns of power, and formed a democratic government which administered all public affairs. He himself claimed to be no more than the executor of the Council's decisions on behalf of the people. Order and calm were restored at Cordova, the vizier earned the respect of the petty Berber kings in the neighbouring areas, and even the Banû âAbbâd of Seville learned to leave him in peace. Trade took on a new lease of life, prices came down, and the tax collected on the control of the al-Qarâbî, the last of which lasted for 12 years until his death in 435/1043. His son Abu 'l-Walîd Mikhailmad, called al-Raghdî, succeeded him. Without assuming the title of Sultan, he followed the line of conduct established by his father. In order to avoid a rupture with the Mu'tâdîd of Seville, he recognized the deceitful face of Ushâm II, and intervened as a mediator in the war between the Mu'tâdîd and Ibn al-Alfâs of Badajóz. But he was not of the same mettle as his father, and, lacking the energy to command, he delegated the administration of his small state to his vizier Ibn al-Râkî, who became the virtual sovereign of Cordova. He earned the hatred of Mikhailmad's younger son, 'Abd al-Malik, who, drawn into the intrigues of al-Mu'tâdîd, treacherously assassinated the vizier in Muharrâm 450/March 1058. His son, from proposing to him, for the deed, his father appointed him crown prince, giving him a free hand in governing and the right to use Caliphate titles. The Cordovans rapidly developed a strong dislike for him on account of his illegal dealings. Whereas al-Mu'tâdîd dethroned the reyes de tatlas of the south, 'Abd al-Malik continued his arbitrary rule. In 460/1069, when al-Mu'tâdîd and the vizier Ibn Râkî were dead, Ibn al-Alfâs saw his chance to seize Cordova, and 'Abd al-Malik sum-

moned the assistance of al-Mu'tâmid. The latter sent a cavalry detachment of 1300 men, and they raised the siege set by Ibn al-Alfâs. But the Cor-
dovans allowed al-Mu'tâmid's generals to capture 'Abd al-Malik and his aged father who had ruled for 25½ years, and they were both exiled to the island of Saltis, off Huelva, where the Odil flows into the sea.

DJA^Z, a term used in a general way to denote permissible acts, that is to say acts which are not contrary to a rule of the law. However, in the classical division of acts into five categories (al-âkhâm al-âkâm; cf. Dict. Tech. Terms, i, 379 ff.; I. Goldzîher, Die Zährlit, 66 ff.; Juynboll, Handbuch, 59 fl.) adopted by the writers on jurisprudence, the term is usually considered synonymous with âbdîd or charitable acts (mâkhîr), as from which it is forbidden (harâm) or simply considered reprehensible (mâtrîh).

In writings on jurâsî, that is to say of the Muslim jurisconsults, the term dja^zîs assumes a different significance. The juridical act which is not completely null and void (bâhilî) or merely defective (fâsidî)—according to the Hanâfîs—is regarded as sahîh, that is, as valid. It is the act carried out in conformity with the prescribed form. It must in principle produce all its effects. A valid act of this kind is certainly dja^zî, or permissible; but the correct term to denote it is sahîh.

Hanâfî authors, however, preferred to use the term dja^zîs, not to denote a valid act but, in particular, to specify that the act was legitimate or licit, in point of law. In their works, the study of each contract under consideration generally begins with...
a preamble in which the writer is at pains to state that the contract is djā'iz by reason of some text, or custom, or omnis contenus, or simply its practical usefulness (muṣafahah) to the parties, which for the purpose of the obligation en droit musulman, i, 105, no. 112). This is true of the contract of hire (Kāsānī, Badā'ī, iv, 174); of guarantee (ibid., vi, 3); and of deposit (Sarākhshī, Māsbā, xi, 108). In all these texts the writer raises the question whether the contract is or is not djā'iz, quite apart from the fact that it can be valid or not, according to whether the conditions of its conclusion or validity have or have not been fulfilled. Thus, with regard to the contract of locatio operis ( sistiṣnā), the conditions of legality are made clear, independently of conditions of conclusion (inšīkhād, validity (ṣiḥhah), irreversibility (luzum) or efficacy (nafādī). (Kāsānī, v, 209). Sometimes the term maṣṣrū is used in place of djā'iz, as for example in the contract of crop-sharīf (mussa'ra') (Kāsānī, vi, 175); and in the contract of association (ibid., vi, 220). In fact the djā'iz act is, correctly, the lawful act, maṣṣrū in point of law. But lawful must here be understood in a special sense. It is not a question of the legality of the object or cause of the contract, but rather of the act considered in itself, as to how far it is sanctioned by law. And thus, in the final analysis, the term djā'iz as used by jurists in writings on jurīṣ, by indirect means comes to approximate the term muṣafahah which is found in works on usūl, in the writings of fuḥū logicians.

Furthermore the term djā'iz, taken in the sense of maṣṣrū, goes beyond the limits of juridical acts. It underlies the theory of criminal responsibility, since it is established that a lawful act cannot give rise to damages (al-dī'awḍ al-sharī', al-A,119). Thus it is that the contract can be djā'iz when it is revocable. (For the Mālikis, see Kāsānī, Karafi, iv, 15; for the Śafi'īs, Suyūtī, Adbāb, 141; for the Ḥanbalis, Ibn Rūḍāna, iv, 119). Thus it is that the contract can be djā'iz for one of the parties, that is to say revocable by him, and not djā'iz, or irrevocable, for the other—just as it can be djā'iz for both, that is to say revocable by both parties (al-A,awlī, Būghyat al-mustarṭihīn, 112).

In logic, djā'iz means what is not unthinkable, whether it be necessary, probable, improbable, or possible (Dict. Tch. Terms, i, 207 fl.)

Djā'iza [see Ǧila].

Djakarta, town on the north coast of Java, a few miles to the east of 107° E. Long. The name is believed to be the abbreviated form of Djakarta, Victorious and Prosperous; in its turn it was corrupted into Jakarta (Jacatra) by the first Dutch visitors (1610). Judging by the name, we may suppose old Djakarta to have been the residence of a more or less independent prince, who was Javanese by descent or by culture. The Dutch settlement was given the name Batavia, from Batavi, one of the Latin names for the Netherlands; Jan P. Coen, local representative of the Dutch Chartered Company, decided to establish his headquarters here in 1619. In 1628 and 1629 Batavia was heavily attacked by Anjaku krasumu alias Sultan Agung, king of Mata rams. The narrow escape was followed by a long period of peace and prosperity which made the Indonesians use the expression unung Batawi, ‘Batavian luck’. Several stories were invented to explain that luck, the most interesting being the one which Cohen Stewart published in 1850 (Geschiedenis van Baron Sakendh, Batavia); it says that Jan P. Coen was the son of a Javanese princess with a flaming womb who had been given in marriage to Sukmul, twin-brother of Sekendh (Iskandar Dhu ’l-Karnayn, Alexander the Great).

The town was the seat of a Dutch Governor-General from 1619 to 1942, with a British interregnum from 1811 to 1816. As such it developed into an international centre of trade, and within the Indonesian Archipelago into a centre of administration. Under the Chartered Company (1619-1799) it attracted a multitude of merchants, from various parts of Indonesia as well as from various foreign countries (China, India, Arabia). Especially in the second half of the existence of the Netherlands Indies (1800-1942) Batavia was the gateway for various kinds of missionary activities, in the field of religion as well as in the field of school education. Both factors—commerce and propaganda—have contributed to the cosmopolitan character of the town; it may be true that the majority of the Indonesian population is Muslim, it is as true that the town does not owe its importance, character and function to the Muslims as such.

From the viewpoint of Islamology it deserves attention that Batavia was an observation-post for the study of Muslim life ever since it came into existence as a European town under Dutch rule. When Snouck Hurgronje was appointed adviser to the Colonial Government for Muslim and native affairs (1889) his office in Batavia became a centre for theoretical and applied Islamology. The Batavian Faculty of Law, founded in 1924, had a chair for Muslim law and Islamology from the very beginning. This is why Indonesian Islam, in many respects different from the type of Islam which one finds in Egypt and similar countries, is fairly well known. See Ǧawah, Indonesia, Java, Sumatra.

Batavia became Djakarta once more in 1942, when the Japanese conquered Indonesia and put an end to the colonial empire of the Dutch. The Indonesian Republic, proclaimed in 1945 and recognized by the Dutch in 1949, maintained Djakarta as its capital. The town which counted a population of approximately 400,000 people in 1940, is rapidly growing. It still has a cosmopolitan character, though its present function might detract from this character in a near future. (C. C. Berg)

Djakat [see Zakkāt].

Dalj [see Taṣīr].

Dalā'īr, Dalā'īr [see Dalā'īr, Da- lā'īrīd].

Dalā'īl al-Dawla, honorific title of various princes, notably the Būyīd (see below), the Ghazzawīd Muhammad (q.v.), and the Mirdasīd Nasr (q.v.).
DJALAL AL-DAWLA, Abū Tahir b. Bahāʾ AL-DAWLA, a Buyid, born in 383/993-4. When Sultān al-Dawla, after the death of his father Bahāʾ al-Dawla in 403/1012, was named amir al-umaraʿ, he established at al-Mansūrīya in Baghdaḍ the office of governor of Başra. The latter stayed there for several years without becoming involved in the private quarrels of the Buyids. In 415/1024-5 Sultān al-Dawla died and his brother Mustashrīf al-Dawla died in the following year. Djalāl al-Dawla was then proclaimed amir al-umaraʿ, but, as he did not appear at Baghdaḍ to take the provincial dignity, an inscription was given instead to Abū Kālīḏār, son of Sultān al-Dawla, who was also unable to accept the office. When Djalāl al-Dawla heard that he was no longer named in public prayers he marched on Baghdaḍ with an army, but was defeated and had to retreat to Başra. However, in Ramadān 418/October 1027 he entered the capital at the request of the Turks who were unable to keep on good terms with the population of Baghdaḍ and were afraid of the influence of the Arabs. But friendly relations with the Turks were short-lived. In the following year an insurrection broke out in Baghdaḍ, and Djalāl al-Dawla restored order only with difficulty. At the same time Abū Kālīḏār took possession of Başra without striking a blow and in 420/1029 succeeded in capturing Wāsīt. As Djalāl al-Dawla was preparing an expedition against Ahwāz, Abū Kālīḏār wanted to start peace negotiations; but Djalāl al-Dawla preferred to sack Ahwāz, and took prisoner the women of Abū Kālīḏār's family. At the end of Rābiʿ I 421/April 1030 the latter marched against Djalāl al-Dawla but was defeated after a three days' battle and had to flee, while the victor first took Wāsīt and then entered Baghdaḍ. Başra was also conquered, but Abū Kālīḏār's troops soon reoccupied it, though in Shawwal/October of the same year they suffered a further defeat near al-Madhār. In the capital, the insubordination of the Turkish mercenaries increased constantly, and the amir al-umaraʿ soon lost the last vestiges of his authority. In 423/1032 Djalāl al-Dawla's palace was sacked, and he was obliged to leave the town and flee to ‘Ukbarā, where Abū Kālīḏār was proclaimed amir al-umaraʿ by the Turks in Baghdaḍ. Abū Kālīḏār then came to Ahwāz and, as the amir held no particular power, Djalāl al-Dawla was able, after about six weeks, to return to his capital where, however, the situation was steadily worsening. In the following year his palace was once again attacked and pillaged, and for the second time the Buyids, who from now on was completely powerless, was forced to take to flight. This time he went to al-Karīk where he was protected by the Ṣafīn, remaining there until the rebels called him back to Baghdaḍ. In the same year the governor of Başra, Abū ‘l-Kāsim, revolted against Abū Kālīḏār who was intending to depose him, and called in Djalāl al-Dawla's son al-ʿAzīz to Başra. But in 425/1033-4 al-ʿAzīz was driven out, and the population again took an oath of loyalty to Abū Kālīḏār. During this period complete anarchy dominated the capital and in 427/1035-6 a new revolt broke out in the army which however was brought back to loyalty by the caliph's intervention. In 428/1036-7 Barṣtoḡān, who was one of the most powerful Turkish leaders in Baghdaḍ and whose position was threatened, called on Abū Kālīḏār for assistance. Once more Djalāl al-Dawla was driven out of Baghdaḍ but, after being helped by Kirwāsh b. al-Mukallād al-Musliḥ and Dubayṣ b. 'All of Hilla, while the Daylamites broke away from the Turks in Baghdaḍ, he was soon able to expel Barṣtoḡān and occupy the capital. Barṣtoḡān was then taken prisoner and put to death, and Abū Kālīḏār at last made peace with Djalāl al-Dawla. The final reconciliation was sealed by the marriage of one of Djalāl's daughters with Abū Maṣʿūr, Abū Kālīḏār's son. On this occasion Djalāl al-Dawla took the ancient Persian title "king of kings", which in fact was far from justified by his own lack of authority and the general anarchy. In 431/1039-40 or, according to others, in 432/1040, he had to face a further Turkish revolt in the capital. Djalāl al-Dawla died on 6 Shābān 435/9 March 1444, leaving the Buyid kingdom in a state of the deepest degradation.

Bibliography: see Buwayhids.

(K. V. Zettersten)
Ottoman Chamber of Deputies (medîlis-i meb'utdn) he served as deputy for Erzurum, temporary presiding officer, and co-founder of the Nationalist Party (Vatan) group; upon the death of Reşâd Hikmet, he was elected (March 1920) President of the Chamber. Two weeks later, after the reinforced occupation of the capital and the adjournment sine die of the Chamber, he led the flight of deputies to Ankara, where he urged his colleagues to join the Grand National Assembly convened by Mustâfâ Kemal [Atatürk]. He became the Assembly's Second President (rezâ-i dînî, Minister of Justice in the Ankara government (January 1920 and July to August 1922), and its diplomatic representative in Rome (1921-3). His differences with Kemal became apparent as early as the autumn of 1920 during an extended stay in his native Erzurum. A proposal that 'Arif be appointed governor-general over the Eastern wilayets went unheeded, and he in turn delayed for two months before accepting Kemal's invitation to return to Ankara and held him in high esteem of justice he was considered one of the parliamentary leaders of the conservative opposition (i�ındaî grub) in the Assembly. After 1923 he retired from political and diplomatic life. He died in Paris on 18 January 1930.

DJALAL AL-DIN HUSAYN AL-BUKHÂRI, surnamed Mağdîm-i Dihiînî-yân Dihaîgâhî, one of the early pîrs of India, was the son of Sayyid Ahmad Kabîr whose father Sayyid Jalâl al-Dîn-i Surkh had migrated from Bukhâra to Multan and Bhakkar [q.v.]. A descendant of Ísmâm 'Ali al-Nâki, his father was a disciple of Rûkân al-Dîn Abu 'l-Fath, son and successor of Bahâ al-Dîn al-Zarkiyyâ [q.v.]. Born 707/1308 at Uchç, where he also lies buried, he was educated in his home-town and in Multan but seems to have left for the Hijaz at a very young age in search of more knowledge. He is reported to have visited, in the course of his extensive travels which he received his education in his home-town and in Multan but seems to have left for the Hijaz at a very young age in search of more knowledge. He is reported to have visited, in the course of his extensive travels which he left the capital almost immediately and to make for the territories formerly allotted to him by his father and corresponding more or less to the modern Afghânîstân and Afghanistan. The Mongols had posted observation parties along the northern frontiers of Khurasân but Djâlal al-Dîn succeeded in breaking through this cordon and reaching Ghazna, where he found himself

Bibliography: Shams-i Sirâj 'Aflî, Fârîq, Fûrû elucidating the sense of "Eternal [God]" and employing the iism of "Eternal [Spiritual] Reality" (for mîmârîn). The spelling is that proposed by d'Ohsson, from the Turkish mengi [where this] he went to Gurgand which they reached some little time shortly before his death on an island in the Caspian Sea. The Mongols had posted observation parties along the northern frontiers of Khurasân but Djâlal al-Dîn succeeded in breaking through this cordon and reaching Ghazna, where he found himself

... and the last ruler of the dynasty. The spelling is that proposed by d'Ohsson, from the Turkish mengi [where this] he went to Gurgand which they reached some little time shortly before his death on an island in the Caspian Sea. The Mongols had posted observation parties along the northern frontiers of Khurasân but Djâlal al-Dîn succeeded in breaking through this cordon and reaching Ghazna, where he found himself
army the only serious defeat that the invaders suffered during the whole campaign. However, deserted on the very battlefield by almost half of his followers he was obliged to retreat southwards pursuing the Mongols out of the reach of the main Mongol army. He was overtaken on the banks of the Indus and after offering desperate resistance (8 Shawwal 618/24 November 1221) escaped to safety by riding his horse into the river and swimming the farther side. After a successful expedition against a petty rādža in the Salt Range Djalal took the field against Nāsir al-Dīn Kūbāqa [q.v.], the ruler of Sind, and sought in vain to form an alliance with Sultan Shams al-Dīn Iltumish [q.v.] of Dūhail. He remained nearly three years in India and then decided to make his way to ‘Irāk-i ‘Adjam, where his brother Ghiyāth al-Dīn had now established himself. In 621/1224 he appeared in Kirmān, where Burāk Hādījī [q.v.] had seized power. Djalal al-Dīn found it expedient to confirm him in his usurped authority before continuing his journey to Fārs, which he reached as usual in the course of the Atabeg Sa’d [q.v.] and to ‘Irāk-i ‘Adjam, where he was at once successful in dispossessing his brother. The winter of 621-2/1224-5 passed in Khūzistān, his troops colliding with the forces of the Caliph al- Nāṣir. He then proceeded to attack and overthrow the Atabeg Öz-Beg [q.v.] of Ḥābdāriyān, whose capital Tafriz he entered on 17 Rādjab 622/25 July 1225. From Ḥābdāriyān he invaded the territory of the Georgians capturing Tiflis on ‘Aṣār 619/1222, and met his death in the battle of Arzindjan (28 Ramadan 627/10 November 1227). The Mongols then broke up and pursued by Cingiz-Khan in person at the head of the main Mongol army. He was overtaken on the banks of the Oxus. After another campaign against the Georgians capturing Tiflis on ‘Aṣār 619/1222, to the town of Akhlat [q.v.] in the territory of the Atabeg Sa’d [q.v.] but was obliged to raise the siege and retreat almost immediately owing to the severe cold. In the following year the Mongols reappeared in Central Persia and Djalal al-Dīn engaged them in a great battle before the gates of Iṣfahān. The result was a Pyrrhic victory for the invaders who at once retreated northwards and had soon withdrawn beyond the Oxus. After another campaign against the Georgians Djalal al-Dīn again, in Shawwl 626/August 1229, laid siege to Akhlat. With the fall of the town in Shawwl 627/August 1230 Burāk Hādījī [q.v.] reentered Sivas, stayed for some four years in Akshehir near Kay-Kubād I [q.v.], the Sultan of Rūm. Defeated in the battle of Arzindjan (28 Ramadan 627/August 1230) he withdrew into Ḥābdāriyān and had no sooner concluded peace with his opponents than he was threatened with the approach of new Mongol armies under the command of Corgmālūn. A Mongol force overtook him in the Mughān Steppes and he fled first to Akhlat and then to the vicinity of Āmid. Here the Mongols made a night attack in his encampment (middle of Shawwl 628/17 August 1231): roused from a drunken sleep he made off in the direction of Mayyāfarḵīn and met his death in a nearby Kurdish village, where he was murdered for reasons either of gain or of revenge. The ruler of Āmid recovered his body and gave it burial, but many refused to believe that he was dead, and time and again, in the years that followed, pretendors would arise claiming to be Sultan Djalal al-Dīn.
however, withdrew to Kayseri after some time and died there, probably in 637/1239-40. His tomb is in Kayseri. According to Alaâî, Djalâl al-Dîn went to Aleppo and Damascus after the arrival of the Sâyyid to complete his studies. Burhân al-Dîn is supposed to have made him aware that his father possessed, besides exoteric learning, other learning that could be won not through study but through inner experience. After the death of Burhân al-Dîn Djalâl al-Dîn was alone for five years. On 26 Dju'mâ 2/1244 the wandering dervish Shams al-Dîn Muḥammad Tabrîzî came to Konya and put up in the house of Shams's house at Djalâl al-Dîn met and talked to him; Shams asked him about the meaning of a saying of Bâyyazîd Bîstâmî, Djalâl al-Dîn gave the answer. According to Alaâî, Djalâl al-Dîn had already seen Shams once in Damascus (Furûzânî, Mawlânâ, 65-6). However that may be, the appearance of Shams-i Tabrîzî made a decisive change in the life of Mawlânâ. In the Şûfî manner he fell in love with the dervish and took him into his home. It will be possible to say something about Shams's remarkable personality only when his collected sayings, the Makâlât, have been edited. He constantly wore a black cap (kâdûkh) and because of his restless wandering life was called parandâ "the fierler". Although, as his Makâlât show, he had the usual theological conceptions of his time, he tried to keep Mawlânâ away from the study of books. It seems from his sayings that he had a certain bluntness of character. Shams-i Tabrîzî is called in the sources sulân al-mâ'ârîkhân, "prince of the loved ones", and Mawlânâ's son Sulân Walad, who knew Shams well, and was aware of the relationship of Shams with his father, develops in the İbtidânâmâ a theory that there is another class of "lovers who have reached the goal" (îdâkhân-i mâyî) besides the "perfect saints" (auliyâ-i kâhmî). Beyond these there is a further stage (mâhâm), that of the "beloved" (ma'ârîkhân). Until Shams appeared nobody had heard anything about this stage, and Shams had reached it. Shams showed Mawlânâ this way of Şûfî love, and Mawlânâ had to re-learn everything from him. Mawlânâ's love for Shams-i Tabrîzî turned him into a poet, but at the same time caused him to neglect his wirûds and disregard his khalîfâs. The wirûds were angered by this and maintained that they were more important than the foreign, unknown dervish and are even said to have threatened Shams's life. Thereupon Shams fled on 21 Shawwâl 643/11 March 1246 to Damascus. But the wirûds did not achieve their end. Mawlânâ was quite disconsolate, and sent his son Sultan Walad to Damascus. Shams could not resist the spoken entreaties of Sultan Walad and the written poetical entreaties of Mawlânâ, and returned on foot with Sultan Walad to Konya. But at once the wirûds began to murmur again and took pains to keep Shams away from Mawlânâ. Shams is said to have declared that he would now disappear for ever and no-one would be able to find him again. On 5 Şa'bân 643/5 December 1247 Shams was murdered with the participation of Sultan Walad's brother 'Aîdâ al-Dîn, or at his instigation, and the corpse was thrown into a well and later found by Sultan Walad. It seems that his coffin has been discovered in the latest repairs done on the burial-place in Konya, (A. Gölpınarlı, Mevlânân' dan sonra Mevlevîkân, 83). It is understandable that Sultan Walad says nothing of this murder in the İbtidânâmâ, not wanting to make the family scandal public. Shams's death was obviously kept from the Mawlânâ, as he went to Damascus twice to look for him. His spiritual condition is depicted in touching verses by Sultan Walad (Waladânâmâ 56-7): he became all the more a poet, devoted himself to listening to music and to dancing (samâ') to an extent that even his son obviously felt was immoderate, and found the lost Shams in himself. In most of his gazzâls the takhallus is not his own name, but that of his mystic lover.

Shams had, however, flesh and blood successors. In the year 647/1249 Mawlânâ announced that Shams had appeared to him again in the form of one of his wirûds, Şâlâh al-Dîn Zakrîyâ of Konya. He appointed him his khalîfâ, who was immediately distinguished by his handsome and pleasant character, as bhalûf, and thus as the superior of the other wirûds. He himself wanted to retire from the offices of gâyahk and preacher. The wirûds found that Shams al-Dîn, the Tabrîzî, had been more bearable than the uncultured goldsmith's apprentice from Konya, whom they had known from childhood. Plans were even made to murder him, and then revealed. The wirûds noticed that Mawlânâ threatened to desert them completely, and they asked remorsefully for forgiveness. We may assume that the loyal attitude of Sultan Walad himself and the modest, pleasant personality of Şâlâh al-Dîn helped to surmount this second crisis. For ten years Şalâh al-Dîn filled the office of a deputy (mâhûb and bhalûf), then he became ill and died, according to the inscription on his sarcophagus, on 1 Muhtarrâm 657/9 December 1258 (A. Gölpınarlı, Mevlânân' dan sonra Mevlevîkân, 355). His successor, Celebi Hûsân al-Dîn Hasan, whose family came from Urmia, was to be the inspirer of the Małrunâ. Hûsân al-Dîn's father was the chief of the akhis in Konya and the surrounding districts and so was known as Aghî Türk. Hûsân al-Dîn lived with Mawlânâ for ten years until the latter's death on 6 Dju'mâ 7/8 December 1273; his appointment as Şâykh must therefore fall approximately in the year 662/1263-4, and there must therefore be five years between the death of his predecessor and his own taking office (according to this the statement in İsl. xxvi, 124-5, should be corrected). After Mawlânâ's death Hûsân al-Dîn offered the office of bhalûf to Sultan Walad, the son of the master, who, however, turned him down. See also 656-7.

On the people's insistence Sultan Walad now accepted the title of Şâykh and held it until his death on 10 Radjab 712/1312. He was followed by his son Ülû 'Ârif Celebi (d. 719/1319), followed by his brother 'Abîd Celebi, followed by his brother Wâgid Celebi (d. 742/1341-2). A list of the Celebis to the present day can be found in A. Gölpınarlı, Mevlânân' dan sonra Mevlevîkân, 152-3, and in Tahsin Yazıcı's translation of the Mandikâlî-i Sârînî, II, 62-6 of the Önsöz.

The real history of the order begins with Sultan Walad. He founded the first branches of the order and helped it to gain greater respect. Already in the lifetime of Mawlânâ the members of the order had the title Mawlâvi (Aflâkî, i, 334). At first they were recruited from among artisans, which gave offence (Aflâkî, i, 151). The central part of the religious practices was held by listening to music, and dancing, which were indeed common among other orders, but never had the greatest importance, as with the Mawlâws. The dance ceremony in the regular, solemn form which is usual later, was, as Gölpınarlı has proved, first introduced by Pir Aâlî Celebi (d. 864/1460) (Mevlânân' dan sonra Mevlevîkân, 99-100). On this ceremony cf. H. Ritter, Der Reigen der tanzenden Derwische, in Zeitschrift für vergleichende Musikwissenschaft, i; A. Gölpınarlı, Mevlânân' dan...
sonra, 370-59, and Mevlevi dâhileri (Istanbul konservatuarı nesriyati, Turk Klasiklerinden VI-XV cild) 1933-9, publ. by Istanbul Music Conservatory.

Mawlana's piety and thought have not yet been the object of a thorough examination. Anyone undertaking such an examination would have to take care not to rely too much on the Ma'ânnawi commentaries, which read into the work the views of their own time or their personal views. Also the Divân of Mawlana has only now become available in a critical edition, so that the examination can really begin. According to A. Golpinarli, himself a former Mawlawi dervish, the Mawlaws do not regard their order as a Sîfî order in the strict sense. Gölpınarı is inclined to connect the order with the Malâmatiya movement from Khorâsân. Even in reading the sermons of Mawlana's father one notices a gladness praised there which reminds one of the gladness praised there which reminds one of the merriness of hearts (tibât al-kulub) of the Kalandar dervishes, as Ulu 'Arif Celebi, and still more his brother 'Abîd Celebi, and the Divânâh, Mehmed Celebi, who was used in the expansion of the order (Gölpınarlı, Mevlâd'î dan sonra, 101-22). But of course this does not prove anything for Mawlana himself. He appears to have been of a philanthropic, anything but fanatical, spirit, and to have worked off his excitement in the dance. Whether his religious ideas possess anything original besides the general mystical piety of his time, will have to be shown by the analysis of his works, which are:

1) The Divân, containing ghâsals and quatrains.
There are also Greek and Turkish verses in this, the presence of which shows a certain connexion with sections of the common folk and also with the non-Muslim elements of the Konya population. His takhallus is "Khâmîsh". This, however, is usually replaced with the name of Shams-i Tabriz. In some ghâsals Şâlâh al-Dîn also appears as the takhallus. Former impressions and editions of the Divân have now been superseded by the good edition of Bâdid al-Zaman Furûzanfar, published in 1924, (The title comes from a verse of Ibn al-Arabi). Cf. Nicholson, Selected poems from the Divân Shahsi Tabrizis, edited and translated, published in 1935.)

2) Ma'ânnawi-i mâ'ânnawi. Didactic poetical work in double verses, in six dârtars. (The seventh dâftar supposedly discovered by Rûshidî İsmîlî Dede is spurious). The long poem was dictated by Hüsâm al-Dîn Celebi, who suggested to Mawlana that he should produce something like the religious ma'ânnawi of Sanâ'î and 'At'târ. Mawlana is supposed to have at once pulled the famous eighteen verses of the introduction out of his turban already written. The rest he dictated to Hüsâm al-Dîn. The date when the work was begun is not known. We know only that between the first and second dâftar was a pause of two years, caused by the death of Hüsâm al-Dîn's wife. The second dâftar was started in 662/1263-4, as the poet says himself (il, 7). Mawlana dictated his verse whenever it occurred to him, whether he was dancing, in the bath, standing, sitting, walking, sometimes in the night until morning. Then Hüsâm al-Dîn read out what was written and the necessary corrections were made. The whole is composed very informally and without any thought of a well-planned structure. Thoughts hang together in free association, the interspersed stories are often interrupted and continued much later on. (On the style, cf. Nicholson's 'Mîrâj al-Ma'ânnawi', the preface to Gölpınarlı's translation). The classic edition is that of R. A. Nicholson, The Ma'ânnawi of Jalalu'ddin Rûmi, edited from the oldest manuscripts available; with critical notes, translations and commentary, London 1924-40 (GMS, vi, r-8). Latest Turkish translation: Mevleva, Mesevî, Veled İbûdah tarafsandanda tercîme edilmiş, Abdülâhî Gölpınarlı tarafindan muhitli serkeler karsılâstırılmış ve eser bir âçma ifâde edilmiştir, Istanbul 1942 ff.

Bibliography: H. Ritter, Philologika XI. Mevlâna Galâl-iddîn Rûmî ve onun Kreis, in Islam, xxvi, 1942. (Life. Sources for biography, manuscripts of the works along with the works of his father, his son, and of Shams-i Tabriz). The most important biographical sources are: Sultan Walad, İbtîdânâme, published by Djalâl Hûmâyûn, Mawlâmî-i Waladî hâ tâbihî ve muhadîmen, Tehran 1935; Fûrdûn b. Ahsâm Sipahîlî,

ii) It is not easy to summarize systematically the main lines of Djalal al-Dīn’s thought. He was not a philosopher (in his works there are often attacks against the vanity of purely intellectual philosophy) and claimed not to be a classical poet (both in the Dīvān and the Mathnawī he proclaims his dislike for rhymes and poetical artifices) but above all he was a passionate lover of God who expressed his feelings in a poetically unorthodox, volcanic way, thus creating a style which is unique in the entire Persian literature. Historically, influences on him by the religious and philosophical thought of Ghazzālī, Ibn ʿArabī, Sanā‘ī, and ʿAttār have been traced. The importance of the influence of Ibn ʿArabī on him has been perhaps exaggerated. The following account outlines as shortly as possible some of the main trends in Djalal al-Dīn’s thought. Quotations from the Mathnawī are from Nicholson’s edition mentioned in Bibliography.

God: The absolute transcendence of God seems conceived not only spatially and intellectually but even morally. God is Himself the Absolute Value, Good, and the ideal to which both human and his is directed (ii, 2617 ff.). Reality is ordered in four “spaces”: the Realm of Nothingness, of Phantasy, of Existence, of Senses and Colours (ii, 3092-7). God is beyond Nothingness and Being. He works in the Nothingness, which is His Workshop (ii, 688-90; i, 760-2; iv, 2341-83). In this sense it is difficult to speak of a real “pantheism” in Djalal al-Dīn: in any case immanence is totally foreign to his turn of mind.

Creation: Djalal al-Dīn seems to accept the Ash‘ari idea of the discontinuity of time and creation, God creates and destroys all in discontinuous atoms of time (i, 1140-8). He creates things moving enchanting words in their ears while they are still asleep in the Nothingness (i, 1447-55).

The World: The non-human World is something created by God in preparation for the creation of Man. Nature is a hint of God: every tree that germinates from the dark earth extending its branches towards the sun is a symbol of the liberation of Spirit from Matter (i, 1335-6; 1342-6). Creation has been however progressive. In a famous passage (v, 3637 ff.) Djalal al-Dīn sketches a theory of mystical evolution (not to be mistaken for a scientific and Darwinistic evolution). The emergence of Man (who always remained Man, even in his former stages of development) from the animal kingdom is a first step indicating further journeys to the realms of the Angels and of the Godhead.

Man: Man is not simply a compound of body and soul. The human compound is formed by a body, His manifest part, a deeper soul (rūḥ, ʿuyûn), and the concealing mind (ʿalāk and, even deeper, a rūḥ-i waṣī (spirit partaking of Revelation) present only in Saints and Prophets (ii, 3253 ff.). Djalal al-Dīn’s spiritual anthropology does not accept an indiscriminate possibility for every one to reach the highest stages of sanctity. Saints and Prophets are “different” from ordinary men. In a very interesting passage Djalal al-Dīn shows the pragmatic utility of bowing in veneration to the Holy Men: it is the only way of breaking the ever-reappearing humanistic pride and superfluity of Man (i, 811 ff.).

God speaks through the mouth of the “man of God”. The Prophet, the Holy Man is the manifest sign of the Unity of God and he is above the normal human standards (i, 2257 ff.).

Ethics: Djalal al-Dīn is far from speaking the language of modern “liberal” religious thinkers. The exterior practices of worship are binding for all. The reason given for this is also of a typically Muslim pragmatic character: the exterior rites are useful, like the presents of a lover to his Beloved. If Love were purely a spiritual thing why should God have created the material World? (i, 2624 ff.). On the problem of freedom and destiny he acutely remarks that there is a great difference between the momentaneous act of God (ṣūr) and the result of that act (māznī) between ṭabā (the act of deciding or predestining) and manā (the predestined thing). One has to love the ṣūr of God, not his māznī like an idolator (iii, 1360-73). When his spiritual eyes are open, man recognizes that he is, at the same time, totally “operated” and moved by God (i, 598 ff.) and totally free, of a freedom unmeasurably above the petty freedoms of ordinary men (i, 956-9). To reach this deeper freedom in God, efforts and action (ḥikmat) are necessary (i, 1074-7). Excellent examples of this supreme freedom are the Saints and the Prophets (i, 635-7).

Life after death: The nearness to God in the world beyond is never felt by Djalal al-Dīn as a real absorption in God without any residue. The metaphors he uses to express this are both in his Workshop and in his Workshop. The Mathnawī (iii, 3669 ff.) are for instance the following: The flame of the candle in the presence of the sun (but yet the candle exists and “if you put cotton upon it, the cotton will be consumed by the sparks”) or a deer in presence of a lion, or, elsewhere, as red-hot iron in the fire, when iron takes the properties of fire without losing its own individual essence. In that state it can claim to be fire as well as iron. The
soul near God becomes then one “according to whose desire the torrents and rivers flow, and the stars move in such wise as He wills” (iii, 1885 ff.). In another passage Djalal al-DIn tells of a lover who, as he reached the presence of his Beloved, died and “the bird, his spirit, flew out of his body” for “God is such that, when He comes, there is not a single hair of thee remaining” (iii, 4677 ff.). Djalal al-DIn goes even so far as to admit an element of activity in the otherworldly plane, so that the highest degree in the life of spirit “is not attainment but infinite aspiration after having attained”: “... there is a very occult mystery here in the fact that Moses set out to run towards a Khidr ... This Divine Court is the Infinite Plane. Leave the seat of honour behind: the Way is thy seat of honour!” (iii, 1557 ff.).

Djalal al-DIn Rumi’s style: The style of the ghazals of Djalal al-DIn’s Divan is conditioned by the fact that many of them were “sung” by the poet himself or were destined to be sung. A well known tradition shows us Djalal al-DIn improvising odes while gently dancing around a pillar in his school, and another story tells how he found one of his beloved pupils and companions, the already mentioned goldsmith Shalal al-DIn Zarkub, while listening enraptured, in a street, to the rhythmic beat of his goldsmith’s hammer. His powerful sense of rhythm is not always accompanied by equal attention to the strict rules of classical quantitative Persian poetry. He often complaints against metres (“musafilun musafilun musafilun killed me!”) and more than one verse both in his Divan and in his Mathnawi shows strong irregularities. In his Divan two styles can be distinguished, a “singing” and a “didactic” style. Often some ghazals begin in the former (strong rhythm, double rhymes etc.) to pass slowly into the second or vice versa. In the Mathnawi, which is a single uninterrupted discourse, where the Speaker is often drawn by a word or a casual connexion of the past into ever newer subjects, anecdotes and sub-accidents, three styles can be distinguished. The purely “narrative” style; at the end, or during the telling of a story, however, comments are introduced in a “didactic” style. Here and there, either in the context of a story or of its comment, the author seems to be suddenly taken away as by rapture and then he uses his “ecstatic” style, in which some of the best verses of the Mathnawi are composed. Both the narrative and the didactic styles are of a remarkable simplicity and colloquialness, almost unique in the Persian literature of that time. Elements of colloquial language penetrate sometimes even into the more refined language of the ghazals and of the “ecstatic” style of the Mathnawi. We have even some verses of Djalal al-DIn containing a few words and sentences in colloquial Greek. Because of this strongly personal features Djalal al-DIn’s style found practically no imitators, but it is highly—and rightly—valued by modern Persians (even by those who do not fully agree with his mystical views) and perhaps exerted a certain influence in the movement of simplification and modernization of Persian literature begun in the past century.

Bibliography: To the bibliography above add:
Life: Allâkî, Manâkbî al-şârîfîn, is partly trans-
he died at least 50 years after the reform, Khayyāmī, if he ever took part in that consultation, must have been very young. By the term Tārīkh-i Djalalī is meant a new calendar instituted in 629/1231 by the above mentioned sultan Malikgāh. This was, as a matter of fact, rather a reform of the common Persian calendar that had remained in general usage in Iran, side by side with the Arabian calendar with lunar year and months used by Muslims, after the downfall of the Persian empire and the domination of the Arabs in Iran in the 7th century A.D. Through this reform the Persian vague year of 365 days was stabilized and brought into exact agreement with the astronomical tropical year of 365.2422 days (or strictly speaking 365 days 5 hours and about 49 minutes). This regulation was effected by adding one day in every four and sometimes five years to the vague year, thus making it 366 instead of 365 days. This was in a way more or less similar to the Julian calendar.

The Persian year was, from the time of its institution probably in the 5th century B.C., a vague year of 12 months of 30 days each and five odd days (andargāh, Arab. al-mustaraba) added at the end of the year as intercalary days. This is believed to have been the original order which was re-established towards the end of the 4th/10th century in the great part of Persia by one of the Buyid kings of Fārs, who transplanted the epagomenae from the end of Abān where they then were, to the end of the 12th month where they remained in those parts of the country and also with the Zoroastrians of Iran and the Parsis of India. As a matter of fact the place of the five supplementary or intercalary days, i.e., the above mentioned andargāh (the so-called epagomenae) has not been always at the end of the year after the 12th month, but they had been periodically advancing in the civil year by being moved forward a month every 120 years. That is to say, after being at first at the end of the last month for 120 years, they were moved to the end of the first month, where they remained for another 120 years, and then they were again moved forward and put at the end of the second month and so on, until they were brought to the end of Abān the 9th month probably in the 5th century A.D. (of course after some 960 years from the institution of this process). This periodical and regular movement or change of the place of the epagomenae in the civil year was a consequence of the periodical shifting of the places of the six Zoroastrian religious festivals of 5 days each, called gāhanbārs, a whole month forward in the civil year once every 120 years, with a view of keeping those most important religious feasts fixed in their original astronomical places in the tropic year.

The epagomenae, which were, as a matter of fact, the Avestan 5 Gādā days, also constituted one of those gāhanbārs, the sixth one, i.e., the Avestan ḤamaspaspaṇaBaya, and hence it moved in the civil year in the same way as the other gāhanbārs. This operation of shifting forward the gāhanbārs periodically, and consequently the epagomenae as well, was described in the Muslim books of chronology, as an intercalation of one month in the year (in reality in the ecclesiastic fix year) carried out by a special process which cannot be fully explained in this article.

The above mentioned periodical operation, executed more or less regularly in the pre-Islamic ages, ceased to be carried out during the last century or the last two centuries of the Sāsānid period, and was no longer carried out after the downfall of that dynasty and the Muslim conquest of Iran. Therefore the epagomenae remained, as has already been said, at the end of Abān till about 1000 A.D. in the southern provinces of Persia, and still later in the northern provinces of the country e.g., in Mazandarān (and, as I have been recently informed, also in the district of Sāngar near Simnān) even at the present time.

The effect of the calendar reform of Malikgāh was (1) to fix the beginning of the Persian solar year in the day of vernal equinox. The New Year or the first day of the first month was (2) to provide a rule for keeping New Year's Day always fixed in the same astronomical point of time by counting every fourth (or sometimes fifth) year 366 days instead of 365. This was, in fact, an intercalation of one day every four or five years at the end of epagomenae, somewhat similar to that effected in the Julian year, where once in every four years (leap years) an intercalary day is placed at the end of February.

However, just as the above mentioned intercalation in the Julian calendar did not bring the Julian year into exact agreement with the tropical year, because the latter is about 11 minutes shorter than the Julian year, which is 365 and a quarter days, the difference amounted to about 45 minutes in 4 years or one day in about 128 years, and therefore a further adjustment was found necessary; the Djalālī year would have been as imperfect as the Julian if the intercalation of one day in the year were limited to every fourth year.

In both calendars a means for eliminating the imperfection was elaborated. While in 1582 A.D. the Pope Gregory XIII introduced a new arrangement in the order of the above mentioned yearly intercalation in the Julian year, by establishing a rule according to which the epagomenae would be omitted in the last year of every century except in those divisible by 400, such as 1600, 2000, 2400 A.D. etc., the initiators of the Djalālī calendar or rather reform made the intercalation of one day in the year dependent on the vernal equinox occurring in the afternoon of the 366th day, provided that it had been in the preceding year before midnight.

The equinox or the exact point of time when the sun (in reality the earth) reaches the equinoctial point of the ecliptic, which in astronomy is conventionally called "the first point of Aries", was the real commencement of the year. In other words the Djalālī year, being a solar tropic year, always began on the vernal equinox and the exact time of this astronomical beginning could be found out every year by calculation. Thus the first day of the calendar year (civil year New Year's Day), was always the day on which the sun at midday was already in Aries, having entered that sign sometime between that point of time and midday of the preceding day.

Now as a rule every time the equinox occurred in the afternoon after having occurred the last time (i.e., at the beginning of the preceding year) before noon, the year just coming to a close would be a leap year, i.e., an intercalation of one day would be
effected. This happened normally once in every four years, when the fourth year was of 366 days instead of 365. However, if in a given fourth year when, as has been said, an intercalation would normally have been due, the equinox did not fall in the afternoon but occurred before midday, even though it also occurred before noon in the preceding year, such a year in spite of the fact that it followed three successive common years (of 365 days each) would not be a leap or bisextile year and the intercalation would be effected only in the next year (i.e., in the fifth year). The period of time of this quinquennial or five-yearly intercalation was never fixed by a regular rule by the reformers. It was left absolutely dependent on the result of the astronomical calculation each year, that is to say it was to be estimated by deductive method. A similar process is followed in the modern calendar of Persia instituted in 1925 A.D. It was, however, noticed that this case (the postponement of intercalation to the fifth year) occurred only after some 6 or 7 or 8 quadrennial intercalations. In other words some oriental astronomers like Ulugh Beg (d. 1449) believed that the quinquennial intercalation would follow at times the sixth, and at other times the seventh, quadrennial ones, however without giving any regular sequence for the alternative cycles. Again, other astronomers like Küth al-Din of Shiraz (d. 1312) put the alternative periods as 7 or 8. This means that according to the former the quinquennial intercalation would fall in the 29th (instead of 28th) or 33rd (instead of 32nd) year, and according to the latter in 33rd or 37th year. If by alternative numbers the regular sequence were meant, the first system (that of Ulugh Beg) would mean 15 intercalations in 62 years and the second (that of Küth al-Din) 17 intercalations in 70 years. Possibly every author worked out these cycles according to his own opinion of the length of the tropic year.

By calculation on the basis of the length of the fraction of the day (over 365 days) in the tropic year, according to the modern measure, there will be still an error of one day in 3844 years in the case of some or 7 or 8 quadrennial intercalations. In other words some oriental astronomers like Ulugh Beg (d. 1449) believed that the quinquennial intercalation would follow at times the sixth, and at other times the seventh, quadrennial ones, however without giving any regular sequence for the alternative cycles. Again, other astronomers like Küth al-Din of Shiraz (d. 1312) put the alternative periods as 7 or 8. This means that according to the former the quinquennial intercalation would fall in the 29th (instead of 28th) or 33rd (instead of 32nd) year, and according to the latter in 33rd or 37th year. If by alternative numbers the regular sequence were meant, the first system (that of Ulugh Beg) would mean 15 intercalations in 62 years and the second (that of Küth al-Din) 17 intercalations in 70 years. Possibly every author worked out these cycles according to his own opinion of the length of the tropic year.

Djalayir, Djalayirid (Djalayir, Djalayirid). Originally the name of a Mongol tribe (see Ragh' al-Din, Tawhik-i Grassani, esp. bbb a), the term Djalayir (and Djalayirid) in Islamic history principally denotes one of the successor-dynasties that divided up the territories of the defunct Ilkhanid empire. The spelling 'Djalayir' is given by al-Ahrl, the contemporary, and very likely official, chronicler of the dynasty. Djalayirid genealogies usually begin with Tikâ Nîyun (hence the dynasty’s other name Ikanî), a follower of Hülagâ, and proceed through Ahsâbâ and Husayn to Hasan ‘Buzurg’, the founder of the dynasty, who was Ulûs Beg and governor of Rûm under Abû Sa’îd.

When Abû Sa’îd died without heirs in 735-6/1335 A.D., the great chiefs of the Ilkhanid empire struggled to control the succession, and elevated in turn three obscure Hülagûds: Arpâ (735-6/1335-6), Mûsâ (736-7/1336-7), and Muhammâd (737-9/1336-8). These rapid changes at the top did not seriously disturb the structure of the empire: Muhammâd, the protegé of Hasan Buzurg, ruled over as large a realm as had Abû Sa’îd.

The breakdown of the empire began with the defeat of Hasan Buzurg and execution of Muhammâd by the Cubânid, Hasan “Kûtûk” (so-called to distinguish him from the Djalayirid Hasan), in 738-9/1338-9. Hasan Kûtûk, who ruled in the name of Sâbitbîk (739/1339) and Sulaymân (740-1/1340-1), could not control the whole Ilkhanid realm. Hasan Buzurg and his followers established themselves at Baghdad, and continued to dispute Cubânid authority, as did Eretna, the governor (and, after 741/1341-2, independent ruler) of Rûm, and the ruler of Khurâsân, Tughâ Timurr. Hasan Kûtûk’s attempts to subdue the Djalayirids (741-2/1341-2) and Artaanâ (743/1343) failed, while the great chiefs, Ahsâbâ and Husayn, at the end of 743/1343, hijacked Hasan Buzurg and fled with him to Ashraf, seized power and forced Sulaymân and Sâbitbîk to flee to Hasan Buzurg. Ashraf (who ruled in the name of a certain Anâghirwân) also failed to dislodge the Djalayirids from Baghdad (748/1347-8), and, moreover, lost control of the provinces of Isfâhan, Kirmân, Yazd and Shîrzâd that had owed allegiance to Hasan Kûtûk.

Although Hasan Buzurg was instrumental in the breakdown of the Ilkhanid empire, he seems to have hoped rather for its restoration—on his own terms—than its collapse. He used only the title Ulûs Beg that he had held under Abû Sa’îd, and either acknowledged legitimate Dîjingids as sovereigns—Tughâ Timurr (739-40/1338-9), 740-1/1340-1, Dîhân Timurr (739-40/1338-9), and 741-2/1341-2—and, or left sovereignty unattributed (746-7/1346-7). Hasan Buzurg died in 759/1359, leaving Djalayirid leadership to his son, Uwayw. When, in the same year, Sultan Dinbâk of the Golden Horde overthrew Ashraf, the Djalayirids in Baghdad recognized Dinbâk as their sovereign. But the Mongol empire in Iran was not to be renewed. Dinbâk died in 758-9/1358-9, and his son, Bîdîbâk, abandoned Ashraf to Dinbâk’s former supporters, led by a certain Ahsâbâ. Uwayw then assumed personal sovereignty (759/1358) and undertook to annex Ashraf’s territory. His first campaign failed, but after his retreat, Muhammâd b. al-Muzaffar, who had seized Fârs and Isfâhan in the years following Hasan Kûtûk’s death, RAIDED ADHABRAYD (760-1/1360-1), and so weakened Ashraf. Although Hasan Buzurg had looked to Uways’ second invasion succeeded (761/1361).

There were further Djalayirid successes during the years 762-5/1361-4, especially in Fârs, where the Muzaffarid princes, Shâh Mûmûd and Shâh Shudîjâ, having deposed their father, Muhammâd, were quarrrelling over the succession. Shâh Mûmûd acknowledged the Djalayirid suzerainty, and was enabled by Uways to hold Isfâhan and seize Shîrzâd. But after 765/1364 a series of reverses precluded further Djalayirid expansion. Until about 770/1370 Uways was busy suppressing revolts by the Shîr-wânshâh, by Khâdîja Mîrdânî in Baghdad, and, by the Karakoyunlu Turkomans in the Diyârbakr region. While meeting these challenges, Uways faltered in his support of Shâh Mûmûd, who was driven from Shîrzâd. Another enemy appeared in 772/1371-2, when Amîr Wall of Astarabâd began to attack Ravy. Uways died in 775-6/1374, and was succeeded by his son, Husayn, after the great amirs had murdered an unpopular elder son, Hasan. Other harbingers of decline appeared during Husayn’s reign (776-86/1374-82): Husayn came to depend entirely upon Amîr ’Adîl for leadership; and Husayn’s brothers, Shâykh ’Ali, Ahmad, and Shâh Ismâl, were left at large and even given positions of power despite the example Husayn had set of profiting from a brother’s murder. Abroad, the death of Shâh Mûmûd in 776-7/1375 enabled Shâh Shudîjâ to occupy Isfâhan and attack Adhâr-baydân (777/1375-6, 783/1381; Amîr Wall continued to threaten the border at Rayy; and the Karakoyunlu had again to be subdued (779/1379).

The dangers implicit in these events were soon realized. Shâykh ’Ali rebelled in 780/1378-9, held Shîbûtstar against Husayn and ’Adîl, and, in 782/1381, seized Baghdad. Then, in 783/1382, ’Adîl led the army against Rayy, leaving Husayn at Tabriz. Ahmad, seeing Husayn unprotected, gathered a force from his own domains in Ardâbîl and slew his brother. When attacked in turn by Shâykh ’Ali, coming from Bagh-dâd, and by ’Adîl, returning from Rayy with Bâyazîd, Ahmad called in the Karakoyunlu. Shâykh ’Ali was killed, and ’Adîl and Bâyazîd retreated to Sultanîyya.

Before Ahmad could consolidate his position in Adhâr-baydân, the intervention of the Golden Horde and then Timûr drove him away. Ahmad retreated to Baghdad (787/1385), and later fled before Timûr to the Ottomans, and then to Egypt. After Timûr’s death in 807/1405, Ahmad regained Bagh-dâd, and briefly reoccupied Tabriz, only to be driven out by the Timûrid Abû Bakr, who was, in turn, ousted by the Karakoyunlu. When Ahmad tried again to take Tabriz (812/1410), he was captured by the Karakoy- nunlu, and executed on the pretext of having violated an agreement to cede Adhâr-baydân to Karâ Yusuf Karakoyunlu, made while they were fellow-exiles in Egypt.

Although Baghâd fell to the Karakoyunlu in 814-5/1412-13, Djalayirid princes survived in lower Mesopotamia for some years. The last of these, Husayn II, fell during the siege of Hilla by the Karakoyunlu in 835-6/1432.

Djalayirid patronage has left us the khan and mosque of Mirânî in Baghdad, Salâm Sâwâdî’s poems, and the miniatures of Shams al-Dîn Ahmad, himself a poet, unsuccessfully offered his support to Hâfiz, who would not leave Shîrzâd.

DJIΛLI (see DIAWALIL.)

DJIΛLIL, a family and quasi-dynasty in Mosul, where seventeen members held the position of wa‘ṣil of that wilāya for various periods between 1139/1726 and 1250/1834. If legendary origins in eastern Anatolia can be ignored, the founder of the family, ‘Abd al-Djalil, seems to have begun life as a Christian slave of the local and equally famous ʿUmar family in the later 11th/17th Century. His son Isma‘īl al-Djalīl and grandson Fadlullāh, attained the Pashalik of Mosul by exceptional merits after a long career of public office, and governed it with distinction for some years from 1139/1726; and the easy succession of his son, Ḥādīḍi Ḥusayn Pasha, in 1143/1730 to a position which, with interruptions, he held until 1173/1759, showed that the family was already a firm claimant to hereditary rule of the province. Ḥādīḍi Ḥusayn, an outstanding personality, attained lasting fame for his part in the defence of Mosul against Nādir Shâh, notably in 1156/1743; he held also at intervals other wilāyas and high positions in ʿIrāq and elsewhere in the Ottoman Empire, as did for the next fifty years his sons and relations, to an extent doubtless unique among ʿIrākī families before or since. The chronic tribal and country-side disorders of northern ʿIrāq, and of Mosul itself, at this period rendered all government precarious, and tenures shortlived; but a Djalill pre-eminent in northern ʿIrāq and elsewhere in the Ottoman Empire, achieved a remarkable degree of stability in the last great period of the Sūlṭān. Eminent among these were Amin Pasha (son of Ḥādīḍi Ḥusayn) who was six times wa‘ṣil, in part during his father’s lifetime: his son, Muḥammad Pasha, who ruled the wilāya more or less at peace for 18 years (1204-22/1789-1807); and Ahmad Pasha, who rebuilt the walls of Mosul at intervals from 1228/1813.

The local annals of the ninety years covered by Djalill pre-eminence in northern ʿIrāq are unedifying in their tale of violent, selfish and corrupt misgovernment, and are of interest mainly for the light they throw on the contemporary administration of the remotest Turkish provinces; but the virile persistence, and at times the superior qualities, of the effectively irreplaceable Djalill dynasty for so long a period entitles them to a place in history. Their descendants in Mosul are still numerous, but no longer influential.

DJIΛNĪS, Arabic for Galen, born in Pergamon, in Asia Minor A.D. 129, died in Rome about 199; the last great medical writer in Greek antiquity, outstanding as an anatomist and physician as well as a practising physician, surgeon and pharmacologist. He also became known as an influential though minor philosopher. More than 120 books ascribed to him are included in the last complete edition of his Greek works (ed. by F. Kühn (Leipzig 1871-1912)); they represent by no means his whole output: some works have survived in Arabic, Hebrew or Latin translation only, others are unretrievably lost.

Although Djalins stands nowhere in the first rank, his popularity especially as a physician grew steadily in subsequent centuries, and he eventually became the most influential teacher of medicine together with Hippocrates (Bukrāt (q.v.) who had helped to establish as a model physician and a pattern of perfection, and whose treatises he had explained in many elaborate commentaries. When the teaching of Greek philosophy and medicine was definitely made part of the Christian syllabus of learning in ± 500, the preservation of the greater part of his numerous works was assured and his supreme position established for the next millennium. Whereas the far superior works of his predecessors in Alexandria and elsewhere have perished, his codification of the great achievements of the Hellenistic physicians, whose independence of mind he still understood and taught himself, was handed on to posterity and was instrumental in establishing a fundamentally unbroken tradition of scientific medicine which never lost sight of him.

As in the case of philosophy and other sciences, Syrian and Arabic medicine follow the late Greek syllabus almost without a gap. We are not too badly informed about the Syriac translations of Djalins, by Sergioius of Rashā‘ayna (d. 536) and Job of Edessa (about 825) for instance. We have Ḥunayn b. Ishākh’s (q.v.) detailed survey of 129 major and minor works by Djalins translated into Syriac and/or Arabic by himself and others, which are fully digested and understood and taught himself, was handed on to posterity and was instrumental in establishing a fundamentally unbroken tradition of scientific medicine which never lost sight of him.

There can be no doubt—although details have still to be ascertained and interpreted in monographs—that Galen’s medical works in their entirety, his methods and his results, were fully digested and appreciated by all the later Arabic physicians and became an integral part of their medical learning, in their original form as well as in summaries, commentaries and new works based on them. This by no means applies only to such outstanding physicians as Muḥammad b. Zakariya al-Rażī (q.v.) or Ibn Sinā (q.v.) but to many others as well (cf., e.g., J. Schacht-M. Meyerhof. The medico-philosophical
controversy between Ibn Butlan of Baghdad and Ibn Riddan of Cairo, Cairo 1937, passim). A comparison between Djalinus and Ibn Sinâ's Kullu fi 'l-fish would yield very interesting results indeed. Djalinus deserves a major chapter in any future history of Arabic medicine down to the first half of the 20th century. The Galen studies in medieval and Renaissance Europe owe very much to the Arab precedent and to Galen-translations from the Arabic.

A number of otherwise lost medical and philosophical works of Djalinus has been recovered from Arabic translations, and it seems appropriate to mention them here.

The Arabic versions of books by Galen which are preserved in the original Greek may often prove useful for the establishment of the Greek text, especially in cases where only late Greek manuscripts are available. Moreover, they are very important for the general history of medical terminology, and work in this direction has scarcely been begun. The Arabic text of Galen's commentary on Hippocrates KAT [wəpəs] to emigrate), will be published in 1962 as part of the Corpus Medicorum Graecorum. A Ger. tr. of the Arabic text of Pēpel ḫīšūjīy by P. Pfaff is to be found in the Corpus Medicorum Graecorum Supplementum, iii, 1941.

A survey of Arabic MSS of Galen, as far as it could be established at the time of the compilation, is to be found in H. Diels, Die Handschriften der antiken Ärzte, Berlin 1906. Additions: H. Ritter- R. Walzer, Arabische Übersetzungen griechischer Ärzte in Stabularius Bibliotheken in Berichte der Berliner Akademie, phil.-hist. Klasse, 1934 and in many miscellaneous publications.

An intensive and detailed study of Arabic medical writers will no doubt eventually yield more texts of Galen and will make it possible to write the history of his very important impact on the development of Arabic medicine. Important results would yield very interesting results indeed.

States. Since then nine mosques have been built, of which the most imposing is that of Washington, D.C., founded in 1952 and patronized by the embassies. Of the estimated 33,000 Muslims, mostly Palestinians and Yamanites, 5,000 live in Detroit, attracted by employment in the automobile factories. In 1924 New York housed six newspapers (in 1960 five) and three monthlies. The oldest newspaper extant, al-
Hudā, celebrated on 22 February 1960 its sixty-second anniversary. A census taken in 1929 lists 102 Arabic periodicals and papers, extant and extinct, which saw the light in North America and 166 in South America. (Ibid., 1957.)

The first to reach Brazil was again a Lebanese in 1874. The movement acquired mass proportions in the 1880’s following Emperor Pedro II’s visit to Lebanon and Palestine. In 1892 an Ottoman-Brazilian treaty gave further impetus. Argentina was equally interested in new emigrants to develop its vast resources. The Syro-Lebanese community in Brazil is larger than that of the United States; that of Argentina numbers about 150,000, of Mexico 60,000. A number of streets in Latin American countries bear the names of Syria, Lebanon or of a citizen born there. In South America such emigrants felt more at home than in North America; they also prospered more and maintained a stronger Arab tradition. In wealth and influence the São Paulo colony, headed by the Jafet (Yāfhī) family—founded by a Christian from al-Shuwayr, Lebanon—compares favourably with that of Cairo. In 1959 the São Paulo community maintained two sport clubs (one Syrian, one Lebanese), two chambers of commerce, one hospital, one orphanage, two secondary schools and a score of philanthropic organizations. Its Greek Orthodox Cathedral, begun in 1939, is the most imposing place of worship erected by Syro-Lebanese emigrants anywhere.

Though originating mostly in villages the bulk of the emigrants to the two Americas took to business. The general pattern was to start from peddling, carrying a kāsā (from Portuguese caixa) and knocking at doors, move on to shopkeeping and graduate to large store owning and perhaps to a leading position as a merchant or industrialist. Arabic papers abound in “success stories” of pen-niles emigrants (30,000,000, according to a United States source). Arabic-speaking merchants are credited among other things with contributing to the introduction and popularization of kimonos, lingeries, negliges, linens, laces, Oriental rugs and Near Eastern food articles. The “folks back home” were generally never forgotten. Remittances to relatives and friends in the course of the first World War have been credited with saving numberless lives. Even as late as 1952 Lebanese official statistics credit Lebanese emigrants with remittances to relatives, friends and religious and educational institutions amounting to $22,000,000. Descendants of emigrants have entered all kinds of professions. In 1939 California sent to the House of Representatives in Washington the first son of a Lebanese emigrant; in the same year a second-generation girl singer was admitted to the Metropolitan Opera in New York. In 1960 an American citizen whose father was born in Zahlah (Lebanon) was elected mayor of a large city (Toledo, Ohio).

More striking perhaps has been the literary contribution. New York boasted a literary circle, founded by Kahil Gibran (Djabrān Khalīl Djabrān, [q.v.]), whose influence has been felt throughout the Arab world. Its counterpart in São Paulo published for twenty years a magazine (al-Andalus) which had a wide vogue. These writers treated new themes, struck fresh notes, introduced modern styles and reflected the Western influences to which they were exposed in their adopted lands. By their writings, correspondence and return visits Arabic-speaking emigrants contributed substantially to the liberalizing, modernizing trend of their native lands. Some of the tenderest and most often quoted modern verses have been composed by Arabic poets in New York and São Paulo.

Legislative restrictions on immigration into the New World had speeded the movement into Australia where the Syro-Lebanese community is estimated at 20,000 largely clustered in Sydney.

The wave of migration which rolled from the eastern Mediterranean in the decade preceding the first World War sent sprinkles to the remotest corners of the habitable world. The Canadian community now counts about 30,000.

Abḥāth, xii, pt. 1 (March 1959), 59-72; Institute of Arab American Affairs, Arabic-speaking Americans, New York 1946; Nadīm al-Maqdīsī, The Muslims of America, in The Islamic Review, xiii, no. 6 (June, 1955), 28-32; Diārā Saydah, Abādūn wa-
part run along the shoulders and the upper part of the arms. The head and neck are put through the holes at each side; they could be left uncovered if armlets were not sewn on to the edges of the armholes. These armlets are very short. At their lower extremity is a slit (nifuk) for the elbow and at the top a second slit (jatha) across, through which, when necessary (e.g., for the ritual ablution) the bare fore-arm can be thrust. The diallab is made either of native cloth or (in prosperous towns) of European. The former is woolen, rarely and only quite recently of cotton or cotton and wool. These cloths are dyed in different colours in different districts; red, brown, black, white, of uniform colour, striped or spotted. The European materials are thick, usually navy blue, black or dark grey. — The diallab of native manufacture consists of a single piece of cloth, which is made of the required size. The hood is not added but consists of a quadrangular piece of cloth woven on the sides, of which are folded together behind and sewn. In the diallab of European cloth, the hood is cut separately and put on. The seams of the diallab are covered with braid and often ornamented with tassels, knots and rosettes. — The cut, the form of the diallab and the hood, the ornamentation, the style of weaving, the sewing and of lining vary much in different districts. — This garment is called diallab (diallabá, diallabíyya), throughout the greater part of Morocco and in the west of Algeria; it is also used in other parts of the Maghrib, e.g., in the south of Algeria and in the Mzb but it is given another name there. Among the Andalusian Muslims, however, the word diallabíyya was the name of a garment, the shape and use of which we do not know; in Egypt, we find a phonetic equivalent of the word, gallabíyya (with g for d), but the garment it denotes is quite different from the diallab of the Maghrib. The origin of the word is uncertain. Dozy considers the form diallabíyya to be the original one and diallab, diallabá to be corruptions. He therefore gives to the original meaning of "garment of a diallab, i.e., a slave dealer". This view seems philologically untenable. It is much more probable that diallabá is connected with the Old Arabic diallabb "outer garment". The dissimilative dropping of the b in this word of foreign origin (cf. Noldeke, Neue Beiträge zur semitischen Sprachwissenschaft, 55) is not surprising; moreover it has also taken place outside the Maghrib in the modern forms of the word gillab; thus for example in the dialect of "Umân we find gilláb with the meaning of "women's veil".

DJALOR, a town in the Indian state of Rajasthan, some 75 miles south of Dindobur on the left bank of the Sukri river. Although the troops of ʻAlá al-Din Khâlid had passed through Djalor on their return from the conquest of Gujûrât in 966/1267, it was not then occupied by them. In Qumâddi I 705/December

1305, however, that king sent ʻAyn al-Mulk, governor of Multân, on an expedition to Djalor, Ujdâyân and Cândér; he was opposed by an army of 150,000 Hindus on his entry into Mâlâw, and his victory over them, which brought Ujdâyân, Dâhr, Mândâ, and Cândér (qq.v.) into Muslim possession, so impressed the Câwhân râdâj of Djalor that he accompanied ʻAyn al-Mulk to Dihil to swear his allegiance to ʻAla al-Din. Two years later this râdâj's arrogance caused ʻAlâ al-Din to attack Djalor, which was taken for Dihil by Kamâl al-Din Gurg. On the weakening of the sultanate's position in the south of India, it seems to have relapsed into Câwhân possession.

At some time in the 8th/14th century a body of Lohâni Afgâns left their adoptive province of Bihâr and came to Mârâf, where they entered the service of the Câwhân râdâj of Djalor. On the latter's death by a trick at the hands of a neighbouring râdâj in 794/1392 their leader, Malik Khurram, assisted the râdâj's widow in carrying on the government, but after disagreements between the Khâns and the Râdjûts he established himself as ruler over the city and its fort, Songir (Sanskrit: svarna-giri "golden hill"), and sought through Zâfar Khân, shâbâddar of Gujûrât under the Tughâlûcks, a farman from Dihil confirming his title; this was given, 796/1394. After Tîmu'ûr's depredations in north India in 801/1399 the Djalors became independent rulers for a time, before later becoming feudatory to the new and powerful sultanate of Gujûrât.

At some time in the early 10th/16th century the Djalorî family had added Pâlanpur (q.v.) to its dominions, and by mid-century its ruler had acquired the title of Nawwâb. By about 1110/1699 the Nawwâb moved his seat from Djalor to Pâlanpur, which remained an independent Muslim state until 1956; for the history of the dynasty, see Pâlanpur.

Monuments. The fort of Djalor was built by the Paramâra Râdjûts, and remained substantially unchanged under Muslim rule except for the modification of its perimeter wall for artillery. The oldest monument is the mosque in the city, built from temple spoil probably at the time of ʻAlâ al-Din, 564 m. square, with cloisters of three arcades on north, south, and east, broken by doorways, and a deeper than ordinary entrance on the west. A later period is faced with a screen wall of later date, probably of the time of Muâzaffar II of Gujûrât (917-921/1511-1515); an inscription including the name of Muhammad b. Tughûk stands over the north door, implying an extension or restoration in his time. The arcades have been enriched by the addition of graceful and delicate stone lattice screens of the middle Gujûrât period. Known as the Tughûkîa masjid, it was for long used as an arsenal. A smaller mosque stands in the fort; although said by Erkine (Raiyutana Gazetteer, iii A, 1909, 189 ff.) to have been built by ʻAlâ al-Din's armies, it seems to be in its present form entirely a construction of the period of Mahmûd I (863-917/1458-1511) or Muâzaffar II of Gujûrât, and bears an inscription of the latter.

A town in 'Irāk (Babylonia) and, in the mediaeval division of this province, the capital of a district (nassādī) of the Ṣafad-Kubdāh circle to the east of the Tigris, was a station on the important Kūhrāsān road, the main route between Babylonia and Irān, and was at about an equal distance (7 parasangs = 28 miles) from Dastādīr [q.v.] in the south-west and from Kābūlnā in the north-east. It was watered by a canal from the Diyālū (called Nahī Dīlūlā), which rejoined the main stream a little further down near Bādīsār [q.v.]. Near this town, which seems from the statements of the Arab geographers to have been particularly important, the Arabs inflicted a severe defeat on the army of the Sāsānian king at the end of the year 16/637.

According to Mustawfi, writing about 740/1340, the Saldīn Sūltān Malikgāhā (465-85/1073-92) built at Dīlūlā a watch-house (ribāt, popularly rubāt) which probably served also as a caravanserai; after his time the place was usually called Ribāt Dīlūlā. This statement helps us to locate the site of Dīlūlā with certainty; for indeed there can be no doubt that Ribāt Dīlūlā must be identified with the modern Kūzīrūbāt, especially since the distances given by the Arab geographers for Dīlūlā apply perfectly to Kūzīrūbāt. Its geographical position is 34° 10′ N., 45° 3′ E.; it lies within the mountains, at the east end of the pass through the Djabal Hamrin. The Dīlūlā flows by at some distance to the east of the town. The name Kūzīrūbāt ("red caravanserai") is popularly corrupted to Kazilābād and Kazrābād (cf. Petermann, Reisen im Orient, ii, 274) or abbreviated to Kizzābāt (cf. Herzfeld, in Petermanns Geogr. Mitt., 1907, 51). Like its mediaeval predecessor, the modern Kūzīrūbāt is of only moderate importance; it still has no other rôle than that of a transit and relay station on an important caravan route.

Ritter, Erdkunde, ix, 418, 489; Ker Porter, Reisen in Georgiaien, Persien u. Armenien, etc., Weimar 1833, ii, 234. (M. Streck)

The Goliath of the Bible appears as Dālūt in the Kurān (ii, 248/247-252/251) (the line of al-Samaw‘al where the name occurs is inauthentic), in which it commands three superposed stages of truncated conical form, with an interior staircase (over 160 steps); the height of this minaret (about 60 m.) puts it between the Kūtb minār of Dīlūlā [q.v.] and the minaret of Būghārā [q.v.]. One of the inscriptions on this minaret, which is entirely covered with a striking decoration, gives the name of the prince who ordered its construction: Ghiyāth al-Dunya wa l-Dīlahā (Kutb minār de Djdm: la découverte de la capitale des sultans Ghūrids [XIe-XIIe siècles], in Mém. Delegation archéol. française en Afghanistan, xvi, Paris 1959, 91 pp., 17 plates and two maps).

Further research (H. Massé) is needed to clarify general ideas, and to show what system underlies the expression of grammatical number, as regards the Arabic plural and collective. The Arabic language distinguishes between: 1) the singular, 2) dual, 3) plural, 4) collective. Arabic grammarians have paid close attention to the first three: 1) the singular: al-wāhid, mutrah is applied to the "simple" noun (as opposed to marubah, applied to the "compound" noun) by the Muṣīf 4; but it has also been used for "singular!", likewise jārd [q.v.].—2) the dual: al-muthannd, for units numbering three or more, with the subdivision: dijam sālim "sound plural", the external plural and dijam muhassar "broken plural", the internal plural. As

Talmud of Jerusalem Shabbat vi, 2 [26c]; cf. H. Lewy, MGWI, lvii, 1933, especially 179). With the help of these linkings, even though the Bible story in its authentic form must have been known to a writer as particular about first hand information as al-Ya‘kūb, Dīlūt became a kind of collective name for the oppressors of the Israelite nation before David. The battle against Dīlūt is localized in the Ghor or lower valley of the Jordan (see AVN DILU7).

regards 4), the collective, they have no general word to denote it. In relation to the noun of unity they have distinguished between: the *ism al-djins* "specific name*, which possesses a noun of unity, made by means of the suffix -at, added to it, e.g.: *tam* "dates", noun of unity *tamer* "a date*; the *ism al-djam* which denotes a *djam-*a* "collection, assembly of beings*, but does not possess a noun of unity or else forms it in a manner different from that given above: without a noun of unity, like *baam* "tribe, group to which one belongs*, with noun of unity provided by another word, like *ibl* "camels*, *is* "birds*, *af* "Chinese", *mata* "snow*, *massa* "dust*, etc. This does not create any difficulties. It remains to examine the external plural for substantives which are only substantives (proper names included). The difficulty noted above, for the *'ukald*, arose precisely from the participial adjectives (the *'ifa*) which can become substantives.

B. — The external plural for substantives and proper names.

a) Proper names: the question of the *guand* naturally affects the external plural for proper names and also of diminutives.

For the former, Sibawayhi (ii, ch. 350) leaves a choice between the external plural and the internal plural when the name is capable of forming it, e.g.: for Zayd (masc. proper name): *sawdana* or *ayyad*, *swaَdَ*; for Hind (fem. proper name): *hinaida* or *ahnida*, *huwaَ*; but -at for the plural of men's proper names terminated by -at*: *talha* "Talha*, *taladat* (according to the Basrans, 4th disputed question, Ibn al-Anbari, *K. Al-Inshad*, ed. Weil, 18 ff.).

As to the diminutive (like *showaَy*îr, diminutive of *shai* "poet"): for the masc. *djam*: *shoowaَy*îr*una*; *shoowaَy*îrd for the feminine; -at for the plural of the diminutive for non-rational beings: *kitâb* "book*, diminutive *kutâyib*, pl. *kutâyibat*.

Substantives which are purely substantives: a small proportion reverts to the suffix -an*una: biliteral nouns like *sanad* "year*; *sina una and some isolated ones, like *djam* "world*, *djamâna*. The suffix -at is used much more widely. It is given to:

1. feminine substantives with the suffix -at or -at*; *sahraw* "desert*; *dikâra* "memory*.

2. names of the letters of the alphabet: *alif*, *alef*.

3. names of the Muslim months: *ramadân*, *ramâdân*.

4. infinitives of the derived Forms of verbs used as substantives: *la*ri* "definition*, *la*ri*ât.

5. foreign nouns: *si* *îd* "stable*, *si* *îldait*; the same, denoting men: *bâshä* "Pasha*; *bâshâd*.

The modern language still carries on this procedure: *tisîfa* "telephone*, *tisîfâdât.

6. biliteral substantives: *sanad* "year*; *sanawat* and a few isolated ones, some feminine like *arad* "earth*, *aradât*, others masculine like *djadâm* "mineral*, *djadâmâd*.

7. a particular and important usage can be included here: agent-nouns or passive nouns of
all Forms of the verb and of adjectives with the suffix -at are regarded as neuter, e.g.: al-šāhāt "Good" (Kurān, II 23/25, 76/82, etc.), al-sāyínah "Evil" (Kurān, IV 22/18, VII 154/153, etc.), aš-maḏḥabbah the "creatures", etc. This usage still exists in modern Arabic: al-maḏḥabbah "refreshments", etc.

To sum up, for the ġawla the external plural is the proper plural of relative adjectives, the agent-nouns and passive nouns fa'ul and maš'ul, muḏ'ul (and still more, Forms which take only the external plural), of the Forms fa's'ul, fa'ul, fa'uld (for adjectives with one or two short vowels, the external plural is also given as the standard form (the šiyās) but not for the other adjectives subject to greater variation. With substantives, the ġawla apply only in respect of proper names and diminutives. In this special treatment of rational beings is to be found the indication of a true Class, operative in classical Arabic. It was important to place it.

C.—External plural, plural for small numbers.

Another assertion by the Arab grammarians is that the external plural is a plural for small numbers (Muğul § 235, Ibn Ya'qūb, 612-2) (which characteristic can cross its influence with the preceding). There is thus a way of explaining, in certain instances, the coexistence of the external plural and the internal plural for the same word, e.g.: karaydah (small number), ḥura* (large number) for a singular karayda* "village". This seems to be particularly noticeable for the external plural in -di and to have had an influence on dialects: the plural for a small number, described by E. F. Sutcliffe in A grammar of the Maltese language, London 1936, 36, is of this kind. The question of small numbers will occur again in connexion with internal plurals.

II.—The internal plural

The internal plural is found sporadically (as it were, still on trial) in Western Semitic languages in the north (Hebrew-Aramaic) (Brockelmann, Précis, § 165). It is the Western Semitic languages in the south which made use of the procedure, particularly Arabic (only ten Forms of the internal plural in Gees). But from what do these internal plurals derive? Are they the plural of a singular following a genetic connexion or, on the other hand, are they independent words linked simply by the singular-plural relationship? This genetic connexion cannot be established: even in the case of sing. ju'ul; pl. ju'ul, sing. ju'ul, pl. ju'ul, the question is not clear (cf. below); some ju'dān plurals are seen to come from a suffix -ān: kakkūnān > kakkūnān "brothers", djāran > djārān "neighbours", but the words thus pluralised are lost in the mass of internal plurals of the Form ju'dān, independent of a singular. Thus the second position is adopted by many Orientalists (see Barth, Nominalbildung, 417-8). Internal plurals are therefore considered to be derived from collectives which are connected with abstract words (M. Bravmann has recently maintained the contrary view, in Orientalia, xxii, 1953, 7-8, but he is not convincing).

Internal plurals are collectives clarified by the plural: collectives offered a mass, through this use of the plural, individualities have become distinct in this mass (see below, III) and can be numbered (that is to say, counted precisely according to the different numbers), or else remain simply with a vague, not fixed, number—the indeterminate plural.

The human mind can easily make the transition from the collective to the indeterminate plural because, while being a true plural, it retains some subtle element of the former through the vagueness and imprecision of the number of units comprised. This is also true in Arabic, the same word without any internal change or variation in its external form may be looked upon in one connexion as a collective and in another as an indeterminate plural. A good example is provided by Raḍl al-Dīn al-Astarābādī (Ṣh. Sh., ii, 196, 1-3) when he states explicitly that the ism al-dīn (coll.) for the noun of unity with -ā', takes the plural in -ā for a small number and uses the same form without -ā for a large number, as for example for "ant": namāl (n. of un.) pl. namāli (small number), nam (large number). This is his example (loc. cit.) even though there exists the internal plural for a large number nīmil. This concept of an indeterminate plural, for a vague number of units, brings an element of clarity, here and in other instances, e.g. for baum (see below). A true plural, it forms a link and transition between collective and plural.

The link between collectives and abstract nouns, it seems to us, cannot be denied; a collective on the way to becoming an abstract word (this cannot be developed here (see my Traité § 71); conversely, an abstract word which becomes collective, e.g. ḍā'āb "youth" (abstract word), ḍā'āb "young people" (coll.). The collective thus proves to be the link between the abstract word and the internal plural. But not all collectives derive from an abstract word. Can one therefore refuse the language the power of directly creating, for natural masses, collectives to which it has opposed nouns of unity to designate separate members of these masses? In this question of the internal plural it is well to consider the complexity of the collective from which it derives, a complexity increased by the diversity of the collective waiz, which have passed into the internal plural.

How has the relationship between singular and plural for internal plurals been established? Semantic analogies have been followed, e.g. fi'sulāt for animals, and also formal analogies, e.g. the so-called plural of quadrilaterals, also extensions purely analogical by simple propagation of a waiz. All this has varied from one region of the language to another, either in diachrony or in synchrony throughout the vast expanse of Arabia.

Behind the internal plural lies a long and complicated history which we have no longer the means to unravel. In classical Arabic they appear as a product that had been moulded in the general process of internal flexion. A good way of approaching the question is to consider this product within the framework of internal flexion, according to the series affected: initial basis and development, as a sort of outline. No doubt an outline simplifies and neglects cross-currents, but it is not altogether without its value in introducing a systematic arrangement based on the general progress of the language.

In this way one can distinguish four main series, with progression in them according to the lengthening of the vowels, the gamination of the second root consonant or the use of the affix:

a) Series: fi's'ul, fi's'ul, fi's'ul (fi's'ul + a'), af's'ul (= a' + fi's'ul, or fi's'ul > af's'ul > fi's'ul, see below), fi's'ul (fi's'ul + a' or secondary parallel formation of fi's'ul).

b) Series: fi's'ul, fi's'ul, fi's'ul (fi's'ul + a'), af's'ul (= a' + fi's'ul), fi's'ul (fi's'ul + a).
c) Series: *a damages (these only collective), *a damages

(see *a damages + *a), a damages (= *a damages + a damages), a damages = (*a damages + *a damages), a damages = (*a damages + a damages), a damages = (*a damages + a damages), a damages, a damages.

Series: a damages = (*a damages + a damages) and a damages (probably a damages + a damages). The plural forms of quadrilaterals will be discussed later. But a damages like **a damages servants** is a collective (ism al-dam), similarly a damages (like **a damages “asses”) and a damages for a singular a damages (like **a damages “ring”), **a damages is also a collective (ism al-dam).

As for a damages (sing. a damages), a damages (sing. a damages), they are indubitably acknowledged by Arab grammarians to be broken plurals. A problem arises with the development: a damages, a damages. Is this the plural of a damages (Brockelmann’s solution, Grundriss, i, 430, Anm. 2)? Or merely the external plural of the singular a damages, a damages (with supplementary vowel for the second root consonant) (see Nöldeke, in ZA, xvii, 72)? Arab grammarians had proposed the solution adopted by Brockelmann; Ibn Ya’ish refutes them (650, l. 6-8); a damages, a damages, a damages, applied in the usage for a single number!), cannot be the plural of a plural, a kind of plural which is valid for a large number. The question could be discussed further. The situation is not clear. But the solution is, more probably, to be found in the direction: simple external plural.

Internal plurals for a small number.

The distinction is made between plurals for a large number and plurals for a small number (3 to 10 inclusive) in the general teaching of Arab grammarians (see e.g. Muwj, § 235). They did not invent it. But to what extent they fixed what had been a flexible usage, or imposed a distinction which departed from the spoken language and which was preserved only in the traditions of fine language (poetry), one cannot tell exactly. A study of the practice of the different authors will certainly produce interesting results. We know already that poets have not always conformed with rules. The language itself did not always provide the means to observe them, e.g. *salam “reed cut for writing” has only one plural *salam (plural for a small number), similarly *rasan “horse’s nose-band” *arsan; on the contrary, *sera; applied to a plural for a large number (according to Ibn Ya’ish 652 l. 14; like Sibawayhi, he does not recognize any plural except *sibat, see L. 4, x, 10.16). The so-called internal plurals of quadrilaterals are incapable of expressing the distinction, e.g.: **turhan “talon, claws”, pl. **baradharin (for a small or large number). From all this one can discern that in practice there was considerable variation. It remains to say that Arab grammarians have put forward, for a small number, the Forms a damages, a damages, a damages (in frequent association respectively with a damages, a damages, a damages), and a damages (seldom used), and besides the external plural noticed above. This subdivision of the internal plural was noteworthy.

Apart from this last (a damages), the other Forms (of the plural for a small number) have the peculiarity of having an initial hamsa. It seems to me that this hamsa is not unconnected with the indication of the small number and acts in the linguistic sense as a formative prefix (however a damages is not considered as a plural for small numbers). Barth (Nominalbildung, 422, l. 16-17) already considered it to be “ein spezifisches Mittel der Pluralbildung”, but did not see how to explain its precise origin. It seems that some research work is to be done to investigate the possibility that a hamsa, originally prothetic (in a damages > */a damages > a damages), was later reinterpreted as a formative hamsa and capable of generalization and of extension to other Forms.

The so-called internal plurals of quadrilaterals.

The so-called formation of “quadrilaterals” is considered separately. In fact it possesses a special characteristic. It includes not only quadrilaterals properly speaking like *a damages “scorpion”, but words which, with three root consonants, add another as prefix, like a damages “for a small number (according to Ibn Ya’ish 652 l. 14; like Sibawayhi, he does not recognize any plural except *sibat, see L. 4, x, 10.16). The so-called internal plurals of quadrilaterals are incapable of expressing the distinction, e.g.: **turhan “talon, claws”, pl. **baradharin (for a small or large number). This subdivision of the internal plural was noteworthy.

Apart from this last (a damages), the other Forms (of
III—The collective

It is important to have a clear conception of the collective. Collectives are not plurals. Plurals denote a plurality of distinct beings or objects, collectives on the contrary denote a sum or assembly of several objects, inter- or intraacting from the component units (see the Lexique de la terminologie linguistique by J. Marouzeau, Paris 1933, 47 and 145). The collective is the mass in which the individuality of those “massed together” is blurred: it is this mass which is envisaged and which constitutes as it were a unit, a kind of singular. A collective, considered purely as such, cannot be numbered, unless one wishes to indicate the plurality of the unit represented by the mass of its components. When the collective can be numbered to denote the plurality of the latter, it is a sign that it has ceased to belong to the collective category through becoming plural: the individuality of the “objects massed together” has become distinct (see above for the determinate plural).

At the beginning of this article the Arabs’ terminology was explained: it now remains to examine the question of gender and the distribution of collectives in the light of the *u'kala*.

The *ism al-ḏżaḥiyn* (n. of un. with -ʿa-) is formed for natural masses of non-rational beings, e.g. *naḥl* “bees”, *naḥāl* “a bee”, very rarely for objects made by man. As for gender, it can be considered as either masculine or feminine, according to e.g.: *Kurʿān*, LIV, 20 and LXIX, 7. This is the teaching of *Muṣf*, § 271, Ibn Yaʿṣīh, 701, l. 20-2. But according to the *Sh. Sh.* (ii, 195, l. 2-3) the masculine gender is dominant.

The *ism al-ḏジャー* (n. of un. with -yy-) is formed for the *u'kala* (with very rare exceptions), e.g. *yahād* “Jews”, *yahāḏiyyah* “a Jew”. The question of gender is not discussed in grammars; according to the usage of the *Kurʿān*, *yahād* is used as masculine plural or feminine singular (for the verb which precedes, e.g.: *kālāti*-i-yaḥāḥu*).

The *ism al-ḏジャー* without an individual noun or with the individual noun provided by another word: masculine or feminine for the *u'kala* feminine for the others.

The *ism al-ḏジャー* with the noun of unity provided by another Form of the same root. It exists both for the *u'kala* and for the others. *활owell* (i, 192-45) expresses himself clearly, Wright (i, 182 A) is not sufficiently thorough. For Sibawayhi in his ch. 249 (ii, 210-1), the masculine is dominant; the same view is held by al-ʿAstārābādī (*Sh. Sh.* ii, 204, l. 7-8); Ibn Yaʿṣīh (673, l. 23-4) is even more positive.

As regards the *u'kala*, there exists an important collective which Arab grammarians have not fitted exactly into their categories (*Muṣf*, § 267, Ibn Yaʿṣīh, 695). It is formed by means of the suffix -ʿa added to the agent-noun: *al-sabīlah* “the travellers”, *al-muḥāšīl* “the combatants”, *al-muṣīla* “the Muslims”, etc., and in particular to the relative adjectives: *al-murarāyiyāh* “the Marwanids”, *al-subāyriyya* “the Zubayrites”, etc. This procedure allows one to designate sects, groups, parties, and it is freely used in the modern language. Used in this manner, -ʿa has formed the collective in the reverse way from that used for the *ism al-ḏジャー* (n. of un. with -ʿa-).

*Note:* *jaʿati* (coll.) can provide a complete system, e.g.: *ṣabb* (coll.) “companions”, *ṣabbī* (n. of un.), *asḥāb* (plural for small number), *ṣikaḥ* (plural for large number), or else *ṭaff* (coll.) “birds”, *ṭabur* (n. of un.), *ṭyūr* (plural for small number), *ṭyūr* (plural for large number). But this system cannot be generalized: it is not *hiyyā* (al-ʿAstārābādī, *Sh. Sh.* ii, 203). One habitually says: *ṣabbī pl. aṣḥāb, ḍilīsī pl. ḍilīṣās, etc.* But generally these internal plurals derive from *jaʿati* (coll.) and not from the noun of the Form *ḏジャー*.

There are at least two aspects to the collective: the collective-unit, the mass considered as a sort of unit, whereby use in the singular is possible: *kaum karim* “a noble tribe”, *al-hamād al-muṣaḥāwāḥ* “the ring-dove”; the collective-object which inclines towards the neuter, and hence the tendency to denote the anonymous mass by a feminine singular, even for rational beings: *rubī raʿīya* “grazing camels”, *kaum bīṣārī* “a nomadic tribe”. The internal plurals of nouns have inherited from their former status as collectives the possibility of being treated in this way: *ijdāl kāḥīra*. But if the component parts resume their distinct individuality in the mass, the collective passes into the indeterminate plural: *kaum karima*, *kaum muḥrīmāna* “noble people”.

These different considerations have been able to exert their influence to a greater or lesser degree, and in the same way with greater or lesser regard for the *u'kala*, among the various tribes throughout the vast territories of Arabia. Arab grammarians intended to portray the *araʾīya* as an entity and have been at pains to show its unity and harmony. It was necessary to simplify the diversity, but by selecting which aspect? Hence the divergencies of opinion. Only precise monographs furnished with statistics and based on texts will give a clear view of the situation.

For all the questions discussed in this article:
(H. Fleisch)

**DJAMACA**, meeting. As in the religious language of Islam it denotes “the whole company of believers”, *djama*at al-mu'minin, and hence its most usual meaning of “Muslim community”, *djama*da islamiyya. In this sense *djama*da is almost synonymous with umma [*q.v.*]. The two terms must, however, be distinguished.

The term umma is Kur'ānic. It means “people”, “nation”, and is used in the plural (umam). It accepts its religious language of Islam it denotes “the whole community”, and is almost synonymous with *umma* [*q.v.*]. In this sense *umma* is hence its most usual meaning of “Muslim community”, and is used in the plural (umam). “nation”, and is used in the plural (umam).

Acquires its religious significance particularly in the example in the (diplomatic) “Documents” reproduced by Ibn Sa'd and ascribed by him to the Prophet. Letter from Muhammad to the Sāhib of Bahrayn: “and that you enter into the Community by the space of a single span, withdraws his neck from the halter of Islam”, and: “Whosoever of the 3rd-4th/9th-10th century, would define the *djama*da as “the ancient religion” (al-dīn al-ṣāhir), by which we understand the practices, beliefs and customs of the Companions during the period of the first three “rightly guided” Caliphs (e.g. Abu l'-Hasuyn b. al-Farrā', Tabāhī al-hanbāli, ii, 32-3, cited by H. Laoust, Ibn Batī'a, 9, n. 2). But if the *djama*da in its strict sense is the community of the Companions, there remains the fact that every Muslim is bound, down through the centuries, to follow it and conform to it. “To follow the Community”, *luzūm al-djama*da, is a duty of the believer upon which the Ḥanbalīs have consistently insisted (e.g. Ibn Batī'a, Ibn al-Ḥanbal, 5/10). By the same token, “the *djama*da of the Ancients” is kept alive down through the ages. At every epoch those Muslims who are wholly faithful to the Tradition are integrated in the *djama*da. The first credo (*Ašida, i) of Ibn Ḥanbal describes them as ahl al-sunnah wa l-*djama*da wa l-*ʿāthār*, thus joining to the first two terms the “precedent” of the Prophet and the Companions (cf. H. Laoust, Ibn Batī'a, 11, n. 1). The expression ahl al-*ḥadīth* (“traditionists”) was to become an approximate equivalent, until the appearance of ahl al-*khabb*, which was to have a tendency to prevail later.

The stream of Hanball doctrine was to remain faithful to this notion of a Community centred upon the faith of the Ancients as the only absolutely authentic faith. Ibn Taymiyya for example was to speak of both umma and *djama*da. He was to stress the obligation of the ahl al-*sunnah* wa l-*djama*da to follow the “precedents” (*iḥār*) of the Prophet “just as much in the depths of their inmost beings (ḥātim) as in their external behaviour (ṣāhir)”, and to follow in the same way the paths of the Companions (*Wāsitiyya, 34, cf. H. Laoust, ibid., 10,n*).

This reverential attachment of Ḥanbalism to the *djama*da finally arrives, in a manner of introverted devotion, at the point where the faithful of the Medina period grouped around Muhammad are recalled, and where this is the “religion” revived by each generation of believers until the last hour of the end of time.

The same was not to hold good for the other schools. For example, to the extent that the *ṣījām* is understood (e.g. the Shāfiʿī school) to be the consensus of the scholars living in a given generation, and becomes the fourth “source” (distinct from the *sunnah*) of Islamic law, *al-djama*da loses its strict
historical reference to the first years of Islam. Already al-Tabari (cited by Rashid Rida, Khildfa, 14) had argued against a *djamāʿa* restricted to the group of the Companions, according to him the *lusūm al-djamāʿa* ought to be defined, without reference to any particular period, as the obedience of the Muslim community to the sovereign that it has chosen for itself; and "whosoever breaks his contract with the sovereign leaves the *djamāʿa*". The verb here employed which signifies "to obey the sovereign" evokes the notion of "the one who commands authority", and must be taken to refer to the Imām, the guidance of whom constitutes the essence of the *djamāʿa*. The first Muslims alone, but to every Imām recognized as legitimate. It will become, according to this point of view, a factual reality rather than a value primarily doctrinal, and will thenceforth tend to be supplanted by *umma*.

This is most noticeable in the *Wilām al-kalām*. By underlining his affirmed respect for Ibn Hanbal, Al-Ashafī, and Aḥmad, two celebrated credo of the Ṭabi‘a and the Maḥbūl simply as the agreement of the *ahl al-sunna*. Once only is the notion of "community" there in operation: the intercession of the Prophet for "the great sinners of the Community", and *umma* is the term employed (Maḥbūl, i, 332). In the *Luma* likewise, whether it is a question of the attitude (condemned as dissidence) of the Muťazilites, or of the consensus of the Community as the foundation of the *idjāmāʿa*, it is always *umma* which alone appears. It was no part of the task of *kalām* to devote a chapter to *al-djamāʿa*. As for the works which deal with "Public law" they look at the *Imāma* or the Khālīfa from the aspect of the conditions of power, and have no concern to analyse the formal constituent elements of the Community. More and more it is the term *umma* which comes to epitomize the communal fervour of the believers.

And yet *djamāʿa*, with its connotation of doctrinal unity, never entirely disappeared from the technical vocabulary. It could be found, *passim*, in many works; such, too, is the case in the contemporary period. It is found also, incidentally, in the *Zuhr al-Islām*, 199, of Aḥmad Amlān citān Mās‘ūdī. The adjective *djamūʿi* was to indicate the movement of the Community. The same applies to the more restricted, more localised meaning of the word, Every assembly of Muslims gathered together in order to "perform the prayer" (ṣalāt [ṣalā]) is a *djamāʿa*. This definition is eminently suitable for the obligatory ritual of the *zuhr* on Friday, *djamāʿa*, which, is, accordingly, the day of meeting par excellence; and the mosque, *djamāʿa*, where the ritual is performed in the place which gathers together the believers. The same holds good for the obligatory prayers performed in congregation on the prescribed festivals. It is in relation to the congregational prayers that the two credo of Al-Ashafī speak of *djamāʿa* in the singular in the Maḥbūl, i, 323, and in the plural in the Ṭabi‘a, 22. This *djamāʿa* of Muslims united in the performance of the prayer, as testimony to their faith, will be of a form and nature which is not so much determined by principle as fixed by the description of its own particular imām "little imām".

The word has been most regularly used in Morocco. In Algeria, records at least a hundred years old confirm the existence under the name "djmaa", of local administrative assemblies. Their competence to own property was confirmed as regards the patrimony of the "douar", but was suppressed

Hanbals, readily admits the definition of Tabari referred to above, and identifies *djamāʿa* with the "men who bind and loosen" in each period. In the same paragraph he uses *umma* in a fairly approximate, but nonetheless not identical, sense. For him the *djamāʿa* is the whole group of those who hold the reins of authority and who must be followed when they are in agreement (*idjāmāʿa*). It is the *umma* which is liable to be split by disturbances; the best line of conduct to observe, therefore, (the *hadith* of Ḥuḍayfah b. al-Yaman) is to remain faithful to the *djamāʿa* and its Imām. Furthermore, the title of Rashīd Rida's chapter, *al-Imām al-idā‘i*, the meaning of the term *djamāʿa* is characteristic.

In the *salāfī* sense, then, it may be said that the people who constitute the *djamāʿa* are those Muslims whose faith and truth are guaranteed and who are thereby in perfect line of continuity with the faith of the Ancients (*salāf*). To them belongs the right to designate the supreme Imām to whom they promise allegiance (bay‘a) in the name of all, and who, by the same token, will be the duly appointed leader of the entire *umma*. The *djamāʿa* only attains its full import when united with its Imām.

The same applies to the more restricted, more localised meaning of the word, Every assembly of Muslims gathered together in order to "perform the prayer" (ṣalāt [ṣalā]) is a *djamāʿa*. This definition is eminently suitable for the obligatory ritual of the *zuhr* on Friday, *djamāʿa*, which, is, accordingly, the day of meeting par excellence; and the mosque, *djamāʿa*, where the ritual is performed in the place which gathers together the believers. The same holds good for the obligatory prayers performed in congregation on the prescribed festivals. It is in relation to the congregational prayers that the two credo of Al-Ashabi speak of *djamāʿa* in the singular in the Maḥbūl, i, 323, and in the plural in the Ṭabi‘a, 22. This *djamāʿa* of Muslims united in the performance of the prayer, as testimony to their faith, will be of a form and nature which is not so much determined by principle as fixed by the description of its own particular imām "little imām".

(i) The word has been most regularly used in Morocco. In Algeria, records at least a hundred years old confirm the existence under the name "djmaa", of local administrative assemblies. Their competence to own property was confirmed as regards the patrimony of the "douar", but was suppressed
politically and juridically (decree of 25 May 1863; ruling of 20 May 1868; decree of 11 September 1873, with particular reference to Kabylia). However, even before the 1914 war, public opinion was demanding a liberalization of the system. This was in part the aim of the 1915 reform which established elected “djemaas” within the “mixed commune”. The administration was later to attempt, not without circumspection, to develop from these first assemblies the communal evolution of which they contained the nucleus.

As for Algeria, it was no doubt in the Berber regions, and especially in Kabylia, that the first observers had noted the most revealing features of these collective undertakings. The ajmā'as (and variants), which included all the adults but paid regard to individual and family influences, and much nearer to a "senate" than to an ekklesia, met regularly, deliberated on all matters of concern to the village and showed a vitality which has endured side by side with official life, even to the point of continuing to exert influence, in certain cases, through the codification of the kāmbūs, an accepted function of public law.

But it is in Morocco, in the High and Middle Atlas, that investigation has demonstrated the system functioning in its purest form. A constant theme of the research conducted up to the present time has been to bring out the triple incidence of these communal customs upon political life which becomes organized, within the canton, in a sort of spontaneous democracy, upon judicial life which is governed by regulations of extraordinary detail, and upon the tenure of property. In 1922, L. Milliot defined the djamā'as as “representative assemblies of the different groupings of tribe, subdivision, douar, family which make up Muslim society in Morocco. These groupings exercise over vast stretches of territory rights characterized by occupation in the form of cultivation leaving widely scattered areas of fallow-land, and grazing . . . .”

This economic aspect, stimulating the competition of the two systems of cultivation, the European and the native, the intensive and the extensive, has throughout the colonial period constituted a constant preoccupation for the legislator, administrator and judge through its actual effects on practical life. Juridical definitions have reflected the successive phases of the proceedings and have taken a particular turn in Algeria (‘arsh or sabga (sābka) land) in Morocco (bīd al-djama’a), and lastly in Tunisia where this regulation seems to have reached its latest development. Tunisia, however, provides the example which reveals most clearly, through the interference that has taken place between private ownership of estates, collective property and religious foundations or hubus, both the richness and the danger of this form of tenure which is so exposed to spoliation from all sides.

The juridical designation of the djamā’a, elevated to the small tribal or cantonal senate, gave rise in Morocco to an evolution that was taking shape at the time of the beginning of the Protectorate and which has proceeded to develop more and more with regard to property, but also in civil and penal matters. The culminating point was reached at the time of the beginning of the Protectorate and which has proceeded to develop more and more with regard to property, but also in civil and penal matters. The culminating point was reached at the time of the beginning of the Protectorate and which has proceeded to develop more and more with regard to property, but also in civil and penal matters. The culminating point was reached at the time of the beginning of the Protectorate and which has proceeded to develop more and more with regard to property, but also in civil and penal matters. The culminating point was reached at the time of the beginning of the Protectorate and which has proceeded to develop more and more with regard to property, but also in civil and penal matters.

**DJAMAKIYYA.** A term current in the Muslim World in the later Middle-Ages equivalent to salary. Its origin is the Persian dāmā = “garment”, whence djamākhi, with the meaning of a man who receives a special uniform as a sign of investiture with an official post. From this came the form djamākiyya with the meaning of that part of the regular salary given in dress (malbāš, libās) or cloth (kumādij). Ultimately it took the meaning of “salary”, exactly as the word dījārīya, which meant originally a number of loaves of bread sent daily by the Sultan to someone, took the sense of salary in the terminology of the Azharis during the Ottoman period. Djamākiyya first seems to have acquired the sense of salary under the Salādūs, since the official terminology of the Fātimids did not use this term for this salary, only with regard to property, but also in civil and penal matters. The culminating point was reached at the time of the celebrated “Berber dahir (ṣāḥib)” of 16 May 1930 which the nationalist opposition, with the support of Islamic opinion throughout the world, at once denounced as an attack upon the religious Law. One of the first measures taken by Morocco after gaining independence was therefore the revocation of this dahir, and the establishment of lay judges incidentally contributed a further step towards modernity. In short, whatever may be the hazards of this long history, they have served to emphasize the intimate connexion which, in the rural Maghreb, associates the use of this term with certain forms of effort by local groups and of its connexions with the soil. These forms, hitherto characterized by their anachronistic particularity, seem at the present day to be adapting themselves to the demands of a more intensive agriculture and of administrative decentralization. That is why, particularly in Morocco, the djamā’a is always found as the central point of the reform. It is possible that, by remarkable sociological conjuncture, certain contemporary evolutions are being based upon the rich communal potentialities comprised, in the Maghreb, by the djamā’a, an ancient word and a reality of long standing.

The Basrans split into two parties: some followed the governor nominated by the Sultan, others broke away. Without revealing her intention, A'isha decided to go to Basra, where she remembered a certain place offering the best prospects for the success of the insurgent movement. In the provinces nearest to Mecca, she collected several hundred men with their mounts (600 or 700?) and set off for Mecca, hearing of this, realized that he must react in order not to be isolated in Medina. After bringing together, slowly and with difficulty, a contingent of 700 warriors, she too set out (according to al-Tabari, i, 3139, the last day of Rabii II). His aim was to intercept the troops, he set off again, in the direction of al-Irak. At the same time the rebels were hurrying to find there the money and troops needed for the expedition. A'isha agreed to join the expedition; she was to rouse the people, as Talha and al-Zubayr seemed hardly qualified for that role; not only had they so stirred up opinion against 'Uthman that they could be accused of being murderers of the Caliph, but they had also paid homage to 'Ali immediately after the election; in rebelling against him they were thus violating their pact, so that they had to claim, in order to justify themselves, that they had been forced to pay homage by violence. Haša bint 'Umar [q.v.], whose first intention was to follow the rebels, was dissuaded by her brother 'Abd Allah [q.v.]. After collecting several hundred men with their mounts (600 or 700?) they set off. 'Ali, hearing of this, realized that he must react in order not to be isolated in Medina. After bringing together, slowly and with difficulty, a contingent of 700 warriors, he too set out (according to al-Tabari, i, 3139, the last day of Rabii II). His aim was to intercept the insurgents, but he did not succeed in reaching them; at al-Rabadha, he learned that they had already passed that halt, and, with her mind at rest, she carried on (cf. Yakut, ii, 352, etc.); this episode is worth mentioning only because of the importance attached to it in the sources. When they reached the outskirts of Basra, the leader opened negotiations and began to make propaganda. A'isha, through an emissary and letters to certain notables in the town, tried to persuade the Basrans to join the insurrection, the aim of which, she proclaimed, was išāla; a word that implied the restoration of the Islamic law and its hadid and hence revenge for 'Uthman, the re-establishment of the disrupted social order, the placing of power in the hands of a Caliph legally elected by a committee orğud, but, for 'Ali, the restoration of his authority, a return to the observance of the Sunna of the Prophet, and the suppression of privileges. The Basrans split into two parties: some followed the governor nominated by
Ali, Uthman b. Hunayf, who, without deliberately opposing the rebels, temporized while awaiting the arrival of Ali; others made common cause with Aisha and her two associates, whose forces had grown on the way. In a meeting at al-Mirbad, an esplanade three miles from Basra, the rebel leaders addressed the people and their propaganda was successful. Disorders followed, then a mêlée at the "place of the tanners" and on the following days fights near the Dår al-Ruzāk, or supply store (the sources do not agree on details). It is there that the chief of police, Huqaym b. Aqabah, was killed. He was too pro-Ali to stand aside and wait without acting. At last, an armistice was concluded: to settle who would hold power in the town of Basra, they were to await the return of a messenger sent to Medina to find out whether it was true that Taḥa and al-Zubayr had been forced to pay homage to Ali (evidently the governor was trying to gain time). In the meantime, the situation was not to be altered: the governmental palace, the great mosque, and the bayt al-māl were to stay in the hands of the governor Ibn Hunayf; but because of the significance attached to the leadership in prayer, it was agreed that this office would be performed by two imāms, the governor himself, and another nominated by the insurgents. Taḥa and al-Zubayr quarrelled, as each wanted to have this function, but Aisha decided that they would exercise it on alternate days, or, according to another version of the facts, that their respective sons Muḥammad and Abū AbdAllāh would exercise it in turn. The inquiry of the messenger sent to Medina was favourable to Taḥa and al-Zubayr, but a letter which had reached the governor declared exactly the opposite of what they asserted. Consequently Uthman b. Hunayf would not give up his office and a brawl broke out in the mosque. But the most serious fact was the assault made by the rebels on the bayt al-māl; they killed or made prisoner (and later decapitated) its guards who were Zūtū [q.v.] and Sayābīdža [q.v.]. The attackers moreover forced Uthman b. Hunayf to leave the palace and pulled out his hair and his beard: he succeeded in getting himself released and joining Ali by threatening them with reprisals against their families in Medina and withdrawing his authority. In these brawls and fights, who were the aggrieved? Some traditions praise the moderation of the rebels (Aisha is said to have forbidden her men to use their hands except in self-defence) but it is evident that it was they who were the attackers, as they needed provisions and money, and were afraid of being caught later between the advancing forces of Ali and those of the governor. With Basra occupied, the rebels placed an order calling on the population to surrender all who had taken part in the siege of the House (the house of the Caliph Uthman), called nufūr in the sources, so that they might be killed like dogs. The people obeyed and those killed, it was said, numbered six hundred (only Ḥurūk b. Zubayr [q.v.] was able to escape because he was protected by his tribe). This slaughter and the distribution of gifts and supplies which Taḥa and al-Zubayr made to their partisans angered part of the population of Basra, and 3,000 men went to join Ali at Dīl Kār, among them the Banū Abī al-Kays. The tribe of the Tamīm, the most important in Basra, on the other hand, remained neutral with its chief al-Āhnaf b. Kays [q.v.]. While these events were taking place (the parleys with the governor had lasted, it is said, for twenty-six days), Ali had advanced as far as Dīl Kār, for, instead of marching on Basra, he had preferred to approach Kūfah so as to win over its inhabitants to his cause. Unfortunately for him, the governor Abū Mūsā al-Asghar, although he had recognized Ali's election as valid, exhorted the Kūfahans to stay neutral in the approaching civil war and the envoy sent by Ali to Kūfah (al-Asghar, Ibn 'Abbās, al-Ḥasan, Āmmār b. Yāsir) had to make a great effort to persuade part of the population (6, 7 or 12 thousand men?) to leave the town and join him. Abū Mūsā was deprived of his office. At last Ali arrived on a mule, with the outskirts of Basra and negotiations were opened between him and the insurgents. Although everyone was convinced that agreement was near, fighting began between the two armies. The same question arises here—who started it? According to some traditions, Ali had ordered his men not to attack, and it was only after the murder of some of his partisans that he felt himself entitled to fight against opponents belonging to the ahl al-bītā (Aḥmad, xvi, 152; al-Masʿūdī, Murādī, iv, 314 ff. etc.). But al-Ṭabarī (i, 838-3) reports another tradition which explains why and how the battle began: Ali is said to have shown his intention of not according protection to the persons implicated in the murder of the Caliph Uthman, and these, anxious about their fate, are said to have provoked the conflict by a sudden attack unknown to Ali. The battle lasted from morning to sunset (according to the (pseudo-) Ibn Kūṭayba, Cairo 1377, 77, seven days). The sources differ on the date when it took place: the most frequent date is 10 Djuʾmādāʾ II 36/4 December 656, but according to Caetani (A.H. 36, § 200) the date 15 Djuʾmādāʾ II/9 December is to be preferred. It is a striking fact that the warriors often belonged to the same tribes, to the same clans, and sometimes even to the same families, and they fought one another regardless of kinship. Aisha is said to have forbidden her men to use their hands except in self-defence) but it is evident that it was they who were the attackers, as they needed provisions and money, and were afraid of being caught later between the advancing forces of Ali and those of the governor. With Basra occupied, the rebels placed an order calling on the population to surrender all who had taken part in the siege of the House (the house of the Caliph Uthman), called nufūr in the sources, so that they might be killed like dogs. The people obeyed and those killed, it was said, numbered six hundred (only Ḥurūk b. Zubayr [q.v.] was able to escape because he was protected by his tribe). This slaughter and the distribution of gifts and supplies which Taḥa and al-Zubayr made to their partisans angered part of the population of Basra, and 3,000 men went to join Ali at Dīl Kār, among them the Banū Abī al-Kays. The tribe of the Tamīm, the most important in Basra, on the other hand, remained neutral with its chief al-Āhnaf b. Kays [q.v.].
development of the battle from the tactical point of view; the general picture that emerges from the battlefield consists of a series of duels and encounters along the opposing ranks, and not of a general engagement. The most serious fighting was undoubtedly that which took place around the camel. It is impossible to calculate the numbers of combatants or of casualties because of the great variation in the figures (which vary, for the dead, between 6,000 and 30,000; the latter figure is considerably exaggerated, since for the forces of 'Ali alone, the numbers who left Medina and those who joined him later can hardly have exceeded 15,000 men). 'Ali was taken prisoner, but far from being ill-treated was shown great respect. 'Ali decided, however, that she must return to Medina and on that point he was inflexible. He granted aman to all the insurgents, and certain compromised individuals (Marwān b. al-Ṭākam, for example) were able to join Mu‘awiya in Medina. An act which caused a stir among the Yemenis, and especially among the Muslims, was his refusal to allow them to take captive the women and children of the conquered or to seize their goods, with the exception of things found on the battlefield (al-Tabarī, i, 3277; al-Mas‘ūdī, Murādī, iv, 316 ff., etc.); they asked why enemies whose blood it had been judged lawful to shed should be treated in this way; the Khāridjites made this afterwards one of their points of indictment against ‘Ali.

After the battle ‘Ali received the homage of the inhabitants of Baṣra, of which he nominated Ibn ‘Abbās governor (with Ziyyād b. Abīhi at his side) thus causing the indignation of al-ʿAḍḥar, as two other sons of al-ʿAbbās had the same office, one in the Yemen, and the other in Mecca.

In the whole insurrection of al-Djamal, the pre-eminent personality is ‘Aḥṣa; she appears as energetic, resolved (except for a moment at al-Hawab) to gain her end and respected in her decisions; while Ṭaḥā and al-Zubayr, under her orders, quarrelling with each other, making weak excuses to defend themselves against the accusation of having broken faith with ‘Ali, withdrawing during the battle consisted of a series of duels and encounters, look like men impelled only by ambition and at the same time lacking the energy and firmness necessary to succeed. Caetani assumed that there was an organizer (such as al-Zubayr), 213 ff. (part played by al-Zubayr), 213 ff. (part played by Ṭaḥā). Besides the well-known histories of the enterprise behind the widow of the Prophet, namely Marwān, who followed the insurgents; the theory is attractive, but there is nothing to confirm it; if Marwān was in fact the insurgents’ counsellor, he operated so discreetly that the sources hardly speak of his actions.

**Bibliography:** Tabarī, i, 309-23 (in detail, excluding episodes): ‘Ali prepares to fight his opponents: 309-1; ‘Aḥṣa excites the people in Mecca and calls for vengeance for the murder of ʿUṯmān, agreement and march of the rebels, who occupy Baṣra: 3096-106, 3111-38; march of ‘Ali halting in Dhu‘ Kār: 3206-11, 3141-3, 3154 ff.; situation in Kūfah and ‘Ali’s efforts to win the inhabitants to his cause, removal of Abū Mūsā: 3147 ff., 3155-54, 3092 ff., 3129 ff.; ‘Ali’s march towards Baṣra: 3138-40; negotiations between ‘Ali and the rebels: 3155-8, 3175 ff.; events preceding the battle, neutrality of al-Abnaf: 3143-5, 3162-9; battle: 3174-98; ‘Ali and ‘Aḥṣa after the battle: 3224-6, 3231; homage of the Baṣrans and nomination of Ibn ‘Abbās as governor of the town: 3229 ff.; Tabarī trans. Zotenberg iii, 658-64 (with some additions); Baladhūrī, Anṣāb, ms. Paris, ff. 467 recto-493 verso (contains traditions neglected by Tabarī: cf. G. Levi Della Vida, Il Califfato di ‘Allī secondo il Kitāb Anṣāb al-ʿArṣāl ila al-Baladārī, in RSO, vi (1913), 440-9); Ya‘qūbī, ii, 209-13; Abū Ḥanīfa al-Dinawarī, al-Aḥābbār il-tawālī, 150-63 (pseudo) Ibn Kutayba, K. al-Imāma wa ʾl-siyāsā, ed. Muḥ. Maḥmūd al-Rāfī, Cairo 1322/1904, i, 88-133; idem, ed., Muṣṭafā al-Bābī al-Halabī, second ed. 1377/1957, i, 52-79 (speeches, letters and details missing elsewhere); Fr. Buhl, Ṭaddāri, 304-23, 324-37; idem, Ṭaddāri, 295; Ibn Miskawayh, Tādjarī al-unam, facsimile of the Istanbul ms., i, 518-26; Ibn al-ʿAṭir, K. min, iii, 164-218 (rēsumé of Ṭabari); Ibn Abī ʾl-Hadlīdī; ʿṢarḥ al-ʿUshār al-baladārī, Cairo 1329, ii, 77-82, 497-501 (passage interesting for details of the occupation of Baṣra); Ibn Ṭahārī, Ṭaddārī, vi, 229-44 (with details missing elsewhere); Ibn Khālidūn, iii, App., 155-61 (good resume of ‘Ali’s military career); and especially the Kharidjites, Ibn Taghribirdī, Dhabābī, and Abu ʾl-Fīdā’ are not important. Much information about al-Djamal and especially about its episodes and the verses declaimed on that occasion are to be found scattered among the books of adab (such as Mubahraad; Aḥānī; ʿṬābī; Šāhī, Ṭahā, Ṭabāsīn; Ibn Kutayba, ‘Uṣayn; Ḥāfī, Bayān, etc., and in bibliographical collections, e.g. in Ibn Saʿd; Ibn al-ʿAṭir, Usd; Ibn Ṭahārī, Ṭaddārī; Ibn Khallikān etc. The following are passages with a certain historic interest; Ibn Saʿd, iii, i, 20; v, 16; Aḥānī, xvi, 131; Ṭādī, ed. Bulāk, 1293, ii, 275-84; Ibn ʿAbd al-Barr, Istābāb, Bayḍārāba, 1318-29, 209 (part played by al-Zubayr), 213 ff. (part played by Ṭaḥā). Besides the well-known histories of Weil, A. Müller, and Muir, see also: Fr. Buhl, ‘Ali som prætendent og Kalif, Copenhagen 1921, 40-55; N. Abbott, Asbāb al-Ṭamāl, Chicago 1942 and especially Caetani, Annali, 36. A.H., §§ 21-302.

**Djamal** [see ‘Im al-Djamal].

**Djamal al-Dīn al-Afghānī**, al-Savydd Muhammad b. ʾṢafdar, was one of the most outstanding figures of nineteenth century Islam. Cultured and versed in mediaeval Muslim philosophy, he devoted his life to the task of awakening the Muslims from their lethargy and regression, and to awakening the forces of the Muslim revival. He was, in the words of E. G. Browne, at the same time a philosopher, writer, orator and journalist. Towards colonial powers he was the first to take the political attitude since 1900 and 1950 by Muslim apologists. By the spoken and written word he preached the necessity of a Muslim revival, both in thought (the need to throw off blind fatalism and give intelligence and freedom their place) and in action (the need for a Turkish and European type of Education and the need to organize political and economic forces to resist the aggressions). The first phase of his career was that of a political agitator (such as in his Al-Mujāhīd, 1901 and his Al-Mujāhīd, 1902), who opposed the view of Western civilization, considered by him as a Pan-Islamic ideology and a means of achieving a political solution of the問題s of the Muslim world. He was the first to insist on the necessity of a Muslim revival. He was, in the words of E. G. Browne, at the same time a philosopher, writer, orator and journalist. Towards colonial powers he was the first to take the political attitude since 1900 and 1950 by Muslim apologists. By the spoken and written word he preached the necessity of a Muslim revival, both in thought (the need to throw off blind fatalism and give intelligence and freedom their place) and in action (the need for a Turkish and European type of Education and the need to organize political and economic forces to resist the aggressions).
proper place in life) and in action. Courageous and uncompromising, he aroused and strengthened the enthusiasm of his audiences wherever he went in his long years of exile. In Egypt he influenced the youth of Cairo and Alexandria, so that his personality left its mark both on future moderate leaders and partisans of immediate violence. He supported movements working for constitutional liberties and fought for liberation from foreign control (Egypt, Persia). He showed Muhammad Abduh, Muslim, that political reform or did not show enough resistance to European encroachments. He even envisaged the possibility of political assassination. His ultimate object was to unite Muslim states (including Shi'ite Persia) into a single Caliphate, able to repulse European interference and recreate the glory of Islam. The pan-Islamic idea was the great passion of his life. He remained unmarried, made do with the absolute minimum in the way of food and clothing and took no stimulants other than tea and tobacco.

His family descended from Husayn b. 'Ali through the famous traditionalist 'Ali al-Tirmidhi, whence his right to use the title Sayyid. According to his own account he was born at Asadabad near Konar, to the east and in the district of Kâbul (Afghanistan) in 1254/1838-9 to a family of the Hanafi school. However, Shî'ite writings give his place of birth as Asadabad near Hamadan in Persia; this version claims that he pretended to be of Afghan nationality, in order to escape the despotic power of Persia. He did in fact spend his years of childhood and adolescence in Afghanistan. At Kâbul he followed the usual Muslim pattern of university studies and in addition began to pay attention to philosophy and the exact sciences, through the still receiving medical used at that time. Then he spent more than a year in India, where he received a more modern education, and made the pilgrimage to Mecca (1273/1857); on his return, he went back to Afghanistan and entered the service of the amir Dast Muhammad Khan [q.v.], whom he accompanied on his campaigns against Herât. The amir's death led on his campaign against Herât. The amir's death led to civil war between his sons over the succession [see AFGHANISTAN]. Djamal al-Dîn taking sides with the amir's activities in Egypt had helped to stir up unrest. The revolt failed because of the British intervention of 1882 ending in the occupation of the country by the Khedive Tawfik, then at Calcutta, where the British requested him to remain as long as the Urabi Pasha affair lasted. It was while staying in Haydarabad that he composed in Persian his refutation of materialists [see A. Ford]. He begins with an attack on Darwin's ideas and goes on to assert that only religion can ensure the stability of society and the strength of nations, whilst atheistic materialism is the cause of decay and debasement. He stresses this assertion by detailing all that belief in God and religion gives a society, first in terms of the collectivity: pride in the knowledge of one's superiority to animals and of belonging to the finest community, i.e., Islam, and also in terms of the individual: fear of stricture, loyalty and truthfulness. He attributes the loss of political supremacy of certain states to materialism (Epicureanism in Greece, the doctrines of Voltaire and Rousseau in France etc.). He ends with an apologia for Islam, rendered antonomastically as religion.

During this time the situation in Egypt was becoming explosive. In 1881 'Urabi Pasha rose up against the Khedive, the Circassian officers in the army, and foreigners. It is certain that Djamal al-Dîn's activities in Egypt had helped to stir up unrest. The revolt failed because of the British intervention of 1882 ending in the occupation of the country by the Khedive Tawfik, then at Calcutta, where the British requested him to remain as long as the Urabi Pasha affair lasted. It was while staying in Haydarabad that he composed in Persian his refutation of materialists [see A. Ford]. He begins with an attack on Darwin's ideas and goes on to assert that only religion can ensure the stability of society and the strength of nations, whilst atheistic materialism is the cause of decay and debasement. He stresses this assertion by detailing all that belief in God and religion gives a society, first in terms of the collectivity: pride in the knowledge of one's superiority to animals and of belonging to the finest community, i.e., Islam, and also in terms of the individual: fear of stricture, loyalty and truthfulness. He attributes the loss of political supremacy of certain states to materialism (Epicureanism in Greece, the doctrines of Voltaire and Rousseau in France etc.). He ends with an apologia for Islam, rendered antonomastically as religion.
only refer to 23 September 1882 although a number of studies in Arabic prefer 1883. But let us look at his subsequent activities. On 18 May 1883 in the Journal des Débats of Paris he published a reply to the lecture which Ernest Renan had given at the Sorbonne on 29 March 1883 on *L'Islam et la science* and which had caused a great deal of feeling in Muslim circles in Paris. In his reply he asserted that Islam is compatible with science, that in the past there had been Muslim scientists, some of them Arabs; only the present state of Islam could support the opposite view. On 3 September 1883 Blunt met and discussed Pan-Islam with the Shah of Persia, a campaign against British policy in Muslim countries. Leading newspapers published articles by him which made an impact on influential circles (on the Eastern policy of Russia and Great Britain, the situation Turkey and Egypt, the importance and justification of the movement brought about in the Sudan by the Mahdi). But the outstanding feature of his stay in Paris was the meeting with Muhammad 'Abdul 'Aziz, who had joined him and acted as his editor, of an Arabic weekly *Urwa al-Wuthqah* (The Indissoluble Link). This journal was the organ of a secret Muslim society of the same name which financed it. The first number appeared on 15 Diwānād I 1301/13 March 1884 and the eighteenth and last on 26 Diwān '1-Hijjah 1301/16 October 1884. Sent free of charge to members of the association and anyone else requesting it, its entry into Egypt and India was barred by the British (confiscations and heavy fines for being in possession of it). In spite of various stratagems (such as sending it in closed envelopes, as Djamal al-Din later revealed) it did not reach enough readers and had to lapse. Its influence was nevertheless considerable. It attacked British action in Muslim countries. It emphasized the doctrinal grounds on which Islam should lean, in order to recover its strength. In 1885 Muhammad 'Abdul left his mentor and went to Beirut; from then on the two men followed politically divergent paths. Muhammad 'Abdul temporized, concentrating mainly on reforms that were immediately possible, above all in teaching. Djamal al-Din continued as a lone pilgrim along the road to pan-Islamism.

In 1885, on the suggestion of W. S. Blunt, British statesmen approached Djamal al-Din, in spite of their attacks on him and his activities, over steps to be taken with regard to the movement of the Mahdi in the Sudan. The discussions led to no practical result. Shortly afterwards (1886) Djamal al-Din was invited by telegram to the court of Shah Nasir al-Din in Tehran. He was given a lavish reception and was earmarked for high office. But very soon his increasing popularity and influence became offensive to the Shah and he was forced to leave Persia “for health reasons”. Next he went to Russia where he established important political contacts and on behalf of Russian Muslims obtained the Tsar’s permission to have the Kurʿān and religious books published. He stayed there till 1889. On his way to the Paris World Fair he met the Shah in Munich, and was persuaded by him to return to Persia. During his second stay there Djamal al-Din had cause to realize how changeable the sovereign was. Djamal al-Din had drawn up a plan of legal reforms; by criticizing it the jealous Hamid had twice summoned him through his ambassador in London (1892). After first declining, Djamal al-Din consented to go. Was the sultan sincere in inviting the illustrious champion of a pan-Islamism, in which Turkey would have played a major part, and did he really intend to work with him towards its realization? Or, as Ahmad 'Amin suggests, did he want Djamal al-Din near him to be able to neutralize his influence more effectively? It is difficult to say. The newcomer was given a fine house on the hill of Nishantash, not far from the imperial palace of Yildiz. He received 75 Ottoman pounds a month and was allowed to keep contact with people wishing intercourse with him. The sultan behaved kindly towards his guest, listened to him to begin with at least and persuaded him to drop his resentful attitude to the Shah. He even offered him the post of shaykh al-Islam, but he declined it. That was the turning-point. Intrigues and rivalries, especially on the part of Abu 'l-Huda, the leading religious dignitary, made Djamal al-Din’s position impossible. Relations between the sultan and his guest became extremely frigid. Djamal al-Din made several requests for permission to leave, which always met finally with a negative reply. We have some idea of his position at that time from the visitors he received. He was paid and deserted by the sight of so much cowardice around him. He
criticized Muslims for their boastfulness and inactivity. His ideas were twisted so that he was accused, for example, of wanting to recognize the young Khedive Abd al-Husayn as Caliph because the latter had gone out of his way to meet him during a walk one day. But he continued to profess the same ideas on the need for constitutional liberties and on Islam, the one solid foundation of reformed Muslim states of the future. When on 11 March 1896 the Shah fell victim to an assassin who was a loyal follower of Djamal al-Din, he was accused of guiding the assassin. Abd al-Kadir al-Maghribi, his personal enemy against the charge, notably in his statements shortly afterwards to the correspondent of the Paris newspaper Le Temps. But his position was even more precarious.

He died on 9 March 1897 from cancer of the chin; rumour had it that Abu 'l-Huda ordered the doctor only to pretend to treat him, or even poisoned him. He was buried in the cemetery of Ninhantash. At the end of December 1944, his remains were taken to Afghanistan and laid to rest on 2 January 1945 in the suburbs of Kabul near 'Ali-Abad, where a mausoleum had been raised to him.

Despite his knowledge of Muslim theology and philosophy, Djamal al-Din wrote little on these subjects. His treatise on the refutation of materialists was soon translated [see DABRIYYA]. He has left an extensive succinct outline of the history of Afghanistán called Talimmat al-bayd' (lith., Cairo, undated, 45 p.) and the article 'Abd in the Da'irat al-Maš'ir of Butrus al-Bustani; commentaries on various libraries; with the exception of a moral lesson; finally he went into the hall of the madrasa, his lesson being given as they walked along; according to Tahir Bursali, 1388 according to Adnan al-Din; however, this tradition derives from an unreliable source and must be treated with reserve. Djamal al-Din is said to have held office as Diawharl's Arabic lexicographical work, an indispensable requirement of anyone seeking to obtain this appointment. Like the ancient Greek philosophers he split up his very numerous pupils into three classes: those in the first class, known as meshiiyyun (peripatetic), met outside the door of his house and accompanied their master to the madrasa, his lesson being given as they walked along; those in the second class, known as niekibiyun (stoics), awaited him under the pillars of the madrasa where his master, still standing, gave his second lesson; finally he went into the hall of the madrasa to join the pupils of the third class, known as kathiiyin (stoics), met outside the door of the house of his master to accompany their master to the madrasa, his lesson being given as they walked along; and trade in Miṣr (Alexandria 1296, 5 Djamâdâ I); two articles on despotic governments (fi 'l-hukmât al-istisbâdîyâya) in al-Manâr, iii. Considerable information is to be found in articles from periodicals on visits to Djamal al-Din and interviews with him. Cf. in German Berliner Tageblatt (23 June 1896, evening edition) and Beilage zur Allgemeine Zeitung (Munich, 24 June 1896). Muhammad al-Makhzumi, Khâfirat Djamal al-Din, Beirut 1931 (a fundamental work, reporting many conversations between the author and Djamal al-Din, in the course of which most of the topics of modern Muslim apologetic are raised in turn); 'Abd al-Kadir al-Maghribi, Djamal al-Din, Cairo, collection Ikba', n. 68; Charles C. Adams, Islam and Modernism in Egypt, London 1953, 4, 17; Ahmad Amin, 'Az'mâm al-Islâm fi 'l-ṣaâr al-badîd, Cairo 1948, 59-120; Mahmoud Kasim, Djamal al-Din al-Afghani, bayânahu wa-falsafatihu, Cairo (undated, about 1953), with a bithero unpublished letter; Mahmûd Abûrîyâ, Djamal al-Din al-Afghani, Cairo 1958, a popularization but with an interesting bibliography; Kabûl alamanakh, year 1323, 344-7 (in Pashtû). I. GOLDZIHER-J. JOMIER

Djamal al-Din Aksarayi, a Turkish philosopher and theologian, who was born and died (791/1389-?) at Aksaray. According to tradition Djamal al-Din Mehmed, who during his lifetime was known by the name of Djamâli, is said to have been the great-grandson of Fâghr al-Dîn Râzi. He was appointed instructor at the madrasa of Zindjîli, at Aksaray, after learning by heart the Sâhib, al-Djawhari's Arabic lexicographical work, an indispensable requirement of anyone seeking to obtain this appointment. Like the ancient Greek philosophers he split up his very numerous pupils into three classes: those in the first class, known as meshiiyyun (peripatetic), met outside the door of his house and accompanied their master to the madrasa, his lesson being given as they walked along; those in the second class, known as niekibiyun (stoics), awaited him under the pillars of the madrasa where his master, still standing, gave his second lesson; finally he went into the hall of the madrasa to join the pupils of the third class, known as kathiiyin (stoics), met outside the door of the house of his master to accompany their master to the madrasa, his lesson being given as they walked along; and trade in Miṣr (Alexandria 1296, 5 Djamâdâ I); two articles on despotic governments (fi 'l-hukmât al-istisbâdîyâya) in al-Manâr, iii. Considerable information is to be found in articles from periodicals on visits to Djamal al-Din and interviews with him. DJAMAL AL-DIN HANSWI

DJAMAL AL-DIN AL-HUSAYNI

DJAMAL AL-DIN AKSARAYI — DJAMALI

Bibliography: Brockelmann, SI, II, 328; T. Bursali, 'Othmdnî Muellifleri, i, 265; A. Adnan Asik, 'Evraklar, s. Y., 1939, 17; Türk Anstikopedisi, s.v. Cemaldebinı Aksarayi.

DJAMAL AL-DIN (T. Cemaldebinı EFENDI, 1848-1919, Ottoman Shaykh al-Islam, was born in Istanbul (9 Djumada I 1265/13 April 1848), the son of the kâddî ashker Mehemmed Kâmil Efendi. Educated by his father and by private tutors, he attained the rank of mudarris and entered the secretariat of the Shaykh al-Islam's department. In 1295/1880 he was appointed Secretary (mekûbbâd), with the rank of mûsîle-i Suleymâniyye, then became kâddî ashker of Rûmen, and in Muhamram 1290/14 August 1874 Shaykh al-Islam. He held office until 1327/1909, retaining his post in the cabinets formed immediately after the revival of the Constituent Assembly in 1908. He became Shaykh al-Islam again in 1912, in the cabinets of Ghaçî Ahmed Müktîr Paşa and Kâmil Paşa, but lost office with the fall of Kâmil Paşa's cabinet in the coup of 1332/1913. Like many prominent personalities who were known to be opposed to the Society for Union and Progress he was banished from Istanbul, and spent his last years in Egypt, where he died in Rabî'â II/1913. He is buried in Istanbul. A shrewd and affable man, he won the confidence of Abd al-Hamîd II and managed to conform to the exigencies of his time. He was a writer of some power and an amateur of divân literature.

DJAMAL PASHA [see DJAMAL PASHA]

DJAMALI, MAWLANA 'ALÎ AL-DIN 'ALÎ B. AHMAD B. MUHAMMAD AL-DJAMALI, Ottoman Shaykh al-Islam from 908/1502 to 932/1526, also called simply 'Alî Celebi or Zenbîlî 'Alî Efendi, was of a family of shaykhs and scholars of Kâramân who had settled in Amasya. Djâmîl was born in this city (H. Husâm al-Dîn, Amasya ta'rikhî, i, Istanbul 1327, 105, 321). After his studies under such famous scholars as Mollâ Khusraw in Istanbul and Hûsmâyîde Muštîlî al-Dîn in Bursa Djâmîl was appointed a mufti in Amasya, and then a mufti in Istanbul. His cousin, Shaykh Muhammad Djâmîl in Amasya, was using his influence in favour of Bâyazid against Djem, rivals for the succession to Mehmed II (cf. Madjdi, Hadâ'îk al-gâhâkîb, Istanbul 1269, 285).

All Djâmîl had to resign when Kâramân Mehmed, who eventually was Djem, became grand vizier in 881/1476. But with Bâyazid II's accession to the throne in 886/1481 Djâmîl was again made a mudarris and then in 888/1483 a mufti in Amasya where he was appointed in addition a mudarris at the Theşmînîye Madrasa in Istanbul in 900/1495, thus reaching the highest degree in the career of tails. His biography (Madjîl, 302-8) suggests that he retained a spiritual influence on Bâyazid II as did his cousin Shaykh Muhammad.

All Djâmîl left Istanbul for the hadîj but had to stay one year in Egypt where he learned of his appointment to the post of Shaykh al-Islam [q.v.] in Djâmîl II 909/November-December 1503. Under Bâyazid II, Selim I, and Suleyman I he kept this post for twenty four years until his death in 932/1526. By his personal influence and bold interferences in certain important governmental affairs (cf. Madjdi, 305-7) he was responsible for making the office of Shaykh al-Islam one of the most influential in the state. When Selim I argued that his interference meant an infringement of the Sultan's executive power in the affairs of the sultanate which should be absolutely independent, Djâmîl replied that as Shaykh al-Islam he was responsible for the Sultan's salvation in the other world. The Sultan eventually agreed to modify some of his decisions to meet Djâmîl's objections. As a sign of his admiration Selim wanted to confer on him the office of kâddî ashker [q.v.] of both Rumeli and Anadolu. He declined the offer, saying that he would never accept a position in hadîj [q.v.]. However, he was to overshadow the kâddî ashkers who were most influential in the government as the heads of the administration of tails and hadîj.

In the tradition of the shaiesh attached to the Ottoman Sultans, Djâmîl was interest in tasawwuf [q.v.] and was attached to a maîrî called Şîfî 'All Djâmîl. He is said to be the author of a treatise on tasawwuf entitled Rûsid*î fi bâbî al-dawwârîn. He was venerated as a man after his death and various manbîses were told about him. He was buried in the garden of the small mosque he had built in Zeyrek street in Istanbul. A selection of his fatûdu are collected in Mâkhâjarî al-fatâwî. He is also the author of a Mûhâjarî al-kadîyâ.

DJAMALI, HÂMÎD B. FA'DIL AL-ÂLÎ OF DIHIL (d. 942/1536), poet and Şîfî hagiographer. He travelled extensively throughout the Dâr al-Islam from Central Asia to the Maghrib, and from Anatolia to Yemen. His hagiographical work, al-Şîfîs, including Djâmîl [q.v.], with whom he had interesting discussions in Harât. His travels constitute a link.
between the Indian Sufi disciplines and those of the rest of the Muslim world; while it is possible that the style of the Persian poetry of the court of Harat travelled to India in his wake, creating the sahk-i Hindī of the 10th/16th century. Though a Sufi, with a reputation for asceticism, DJAMĀLī, like other Suhrawardī mystics before him, associated intimately with the Sultans of Dīhil. His relations with Sikandar Lodi were especially cordial, on whose death he wrote a mathnāwī. After the overthrow of the Lords by the Mughals [q.v.], he developed friendly relations with Bābur [q.v.] and Humāyūn [q.v.], often accompanying them on his military expeditions. His son Shaykh 'Abd al-Rahmān Gaddāt became sadr early in the reign of Akbar [q.v.].

He compiled a lengthy diwān and a mystical mathnāwī, Mirādī al-maʿāni; but his fame chiefly rests on Siyar al-ṣāfiyīn, a tadhkira of the Indian saints of the Cishtiyya and Suhrawardiyya orders, which is one of four months near Baghdad, and about two months in Damascus and Tabriz), he lived quietly in Harat, dividing his time between his studies, poetry and music and singing, and by them earned his living while still a youth; taking his inspiration from popular dombra, he developed friendly relations with him, and died at Harat on 18 Muharram 898/9

Of these there were seven, according to him, who had for some time been preparing to celebrate his centenary in 1941 were preparing to celebrate his centenary while he was still alive.

His original works, transmitted orally or in writing, were collected and published in Alma Ata in 1946, at the same time and in the same town as the collected edition of his poems translated into Russian.

The Soviet authorities who had previously awarded him the Order of Lenin and a Stalin Prize in 1941 were preparing to celebrate his centenary when he died in 1946.

His original works, transmitted orally or in writing, were collected and published in Alma Ata in 1946, at the same time and in the same town as the collected edition of his poems translated into Russian.

ED.

DJAMĀR. The word djamār is a contraction of Pers. dīmār, "clothes-keeper", cf. Dozy, Suppl.

This word is not, as stated by Sobernheim in EI, a "title of one of the higher ranks in the army in Hindustān . . .", although djamār, popularly djamār, Anglo-Indian Janamdar, "leader of a number (djamā) of men", is applied in the Indian Army to the lowest commissioned rank of platoon commander, but may be applied also to junior officials in the police, customs, etc., or to the foreman of a group of guides, sweepers, etc.

In Mamlūk Egypt the djamārdiyya (sing. djamār), "keepers of the sultan's wardrobe", were all Royal Mamlūks (mamlūk sulṭānīyya). Many, but not all, of them belonged to the sultan's corps of bodyguards and select retinue (khāṣṣakīyya). A head or commander of the djamārdiyya was called ra's nawab al-djamārdiyya. Of these there were seven, according to Khallī b. Shāhīn al-Zahrī, Zubdat kaḏīf al-mamlākī, 115-6.

DJAMĪ, MAWLANA NUR AL-DIN 'ABD AL-RAHMAN, the great Persian poet. He was born in Kardžīrd, in the district of Dījam which is a dependency of Harat, on 23 Shābān 817/17 November 1414 and died at Harat on 18 Muharram 898/9 November 1492. His family came from Dašqīt, a small town in the neighbourhood of Iṣfahān; his father, Nizām al-Dīn Abīmdār, was called qaṣīm, and died at Harat; consequently the poet had for some time signed his works with the title of Dāvūdī Dāshīr before adopting the name Dījam. In the regular course of his studies, he became aware of his deep passion for mysticism, and took as his spiritual director Šād al-Dīn Muhammad al-Kāshghāri, the disciple of and successor to the great saint Bahāʾ al-Dīn Naḥghbūnd, founder of the order of the Naḥghbūndīs [q.v.]. Two biographers, 'Abd al-Qāhir Lārī (his disciple, buried in 912/1506 beside Dījamī's tomb) and, in particular, Mir 'Ali Shīr Naḵwā, a famous minister and scholar, have described the events of his life: apart from two pilgrimages, one to Mašqhad, the other to the holy cities of the Ḥīdżār (in 877/1472, with a further stay of four months near Bagdad, and about two months in Damascus and Tabriz), he lived quietly in Harat, dividing his time between his studies, poetry and
spiritual exercises, honoured by the sovereigns of the time whom he in no way flattered with excessive panegyrics by dedicating his works to them. Bābur [q.v.] in his Memories says that he was without an equal in his time in the field of the concrete and speculative sciences; Mehemmed II tried to attract him and was present during his last days, does not confirm this statement (which recalls St. Jerome's about the madness of the poet Lucretius). Djami's funeral, conducted by the prince of Harat, was attended by great numbers; his tomb, near that of Sa'd al-Din his director, is well cared for. Of his four sons (he was son-in-law of Sa'd al-Din), three died in infancy, the fourth in early youth (when reading these panegyrics on him and commenting on Sa'd's life and works, one is reminded of the term 'Fakhr al-Islam', he conceived the idea of writing his Bahāristān).

His writings, which are both diverse and numerous, testify to the flexibility of his genius, the depth and variety of his knowledge, and his perfect mastery of language and style. Although he wrote a great deal in prose, he is mainly known for his poetic panegyrics by dedicating his works to them. Babur praised collection, the second (cf. introd. by Bricteux, 47 ff.); the lastly, the Tadhkirat al-awliyā, a collection of memorials and in a number of lyric poems we find the language and the themes of pantheistic mysticism, challenging comparison with the works of the very greatest poets of Sufism; if Djami is not, as he is often said to be, (perhaps through Daulat-Shah's influence) the last of the classical poets, he is probably the last of the great mystical poets.

Of his very numerous works in prose (commentaries on the Qur'ān, on mystical questions and poems—in particular on the KHAMRĪYÂ of Ibn al-Farid), mention must be made of the highly prized collection NAṣḥāt al-umūs ("The breath of divine intimacy", ed. Calcutta 1859), biographies of mystics, preceded by a comprehensive study of Ṣūfism (trans. Silvestre de Sacy, in Not. et extr. des mss. B.N., ii, (1831), 287-436; for this work, Djami made use of the Tādghirat al-a'lisīyā of Farid al-din Aṭṭār while completing it); the treatise Shawkāh al-nubuwwa ("Distinctive signs of prophecy"), which is clear and precise; the short treatise on mysticism Lāwârī ("Shaking or light"), which treated with invocations and poems, introd. by Whinfield and Muhammad Kazwini, Or. Translat. Fund, 1906); lastly, the Bahāristān (1478), a collection of memorable able sayings, witticisms, striking anecdotes, short notes on poets and stories about animals (several ed.); Ger. tr. Schlechta-Weserfeld, 1846; Fr. tr. H. Massé, 1925).

Bibliography: the manuscript of the complete works (KUlliyāt) of Djami, in his own hand, is preserved in the Institute of Oriental Languages at Leningrad (cf. Victor Rosen, Collections de l'institut les manuscrits persans, 215-61). In addition to the references given in the article, see: Gr. I. Pk., ii, 233-305 and 305-7; E. G. Browne, iii, index s.v. Jami; and in particular 'Ali Aqṣārā Hakmat, DJAMI (in Persian; Tehran 1230/1954): life and works, 1-228; selected pieces, 228-373). (Fr. tr. H. Massé).

DJAMI [see MASDJID].

DJAMI'ā. From the root djamā'ā (to bring together, to unite), this Arabic term is used to denote an ideal, a bond or an institution which unites individuals or groups, e.g., al-Djami'ā al-Islāmiyya (Pan-Islamism); Djami'ā al-Duwal al-'Arabiyā (League of Arab States); Djami'ā (Uni-
versity). This article is limited to the last-mentioned meaning and deals with university institutions in the Islamic countries.

Although Diāmi'a, in this sense, includes, in popular and semi-official usage, traditional institutions of higher religious education (such as al-Diāmi'a al-Azhariyya; see, for example, Mub. 'Abd al-Rahmān Ghānima, Ta'rikh al-Diāmi'at al-Islāmiyya al-Kubra, Ta'ifān 1953), officially it is restricted to the modern university, established on western models. Thus, Law no. 184 of 1958, organizing the diāmi'at of the United Arab Republic does not name al-Azhār among these universities. This article will, consequently, deal with "modern" universities. It should be stressed, however, that in Islamic countries higher education had a remarkable tradition in the older institutions of the mosque, the madrasa and other centres of education and learning. For these traditional institutions, see the articles AL-AZHĀR, DāR AL-TULUM, DEOBAND, MASLIGHT, etc.

The term diāmi'a seems to have come into use towards the middle of the 19th century, and to have been translated from "université" or "university". Butrus al-Bustānī does not have an article on it in his Dīrārat al-Ma'dīrī (vi, Beirut 1882). Originally, it seems to have been used as an adjective qualifying madsara. (The earliest such use I have been able to trace is by Ahmad Fāris al-Shīdhīyak, in al-Sād 'ala al-sād, Paris 1855, 513, where he speaks of mādārisim al-dīmim'. But there may have been earlier ones. This adjectival form continued down to the early years of the twentieth century. See Dūjdī Zaydān, al-Hilāl, viii/15, 1 January 1900, 24, and xi, 18 and 19, 1 July 1904, 590; madsarat Oxford al-dīmim').

Furthermore, there was no clear distinction in those years between diāmi'a and kulliyā as one was used as equivalent to "college". Badger's English-Arabic Lexicon (London 1881) includes madsara diāmi'a as one of the Arabic equivalents of "college", whereas for "university" he gives: "dār kulliya at al-tulim", and "dār al-'ulām wa l-faṣālīn": Neither Bellot's Vocabulaire arabe-français (Beirut 1893), nor Hava's Arabic-English Dictionary (Beirut 1899), includes diāmi'a, but both include kulliyā, the former translating it by "l'université" and the latter by "college".

Similarly, other dictionaries published in the nineteenth or early twentieth century either do not include diāmi'a (such as al-Bustānī's Muḥi al-mukāhī, 1867-70, Steingass, Arabic-English Dictionary, 1881, or Şartūnī's Aḥbar al-ma'dīrī, 1889-93), or use it as an adjective qualifying madsara, without distinguishing it properly from kulliyā (Abcarius, English-Arabic Dictionary 1905; Hammām, Mu'dīm al-jālīlī, 1907; Saadeh, English-Arabic Dictionary, 1911).

The first definite use of diāmi'a in the technical meaning of university appears to have been in the movement of some intellectual leaders and reformers in Egypt in 1906 for the establishment of a diāmi'a misriyya. On 12 October 1906 a group of such leaders, the most active among whom seems to have been Kāsim Amin, met in the house of Sa'īd al-Fattāḥ Badār, al-Amāl Fu'ād wa naṣṣal al-dīmim' al-misriyya, Cairo 1950, 6 ff.). From then on, the use of diāmi'a began to be established in the Arab countries as equivalent to "university", whereas kulliyā is now reserved for a faculty or an independent college.

In other Islamic countries, other terms came into use, either derived from the national language, such as Dārzād (the abode of knowledge) in Iran, or borrowed from the West such as "Université" in Turkey, "University" (U. Yāniwa'st) in Pakistan, and "Universitas" in Indonesia.

Survey of university activity in Islamic countries

In recent years, university education has undergone rapid and extensive development in Islamic countries. Established universities are yearly increasing their facilities, courses and student enrolments, and new universities are being planned or opened to meet the increasing demand for higher education. Any statement about them is likely to become out-of-date the time it is published. Consequently, only a general summary of their history and present situation will be attempted here. For current details the reader will have to consult the catalogues or handbooks of individual universities, national or regional handbooks or reports, or a general work of reference such as the International Handbook of Universities. No attempt will be made to refer to independent colleges, or any other institutions of higher learning that do not bear the name Diāmi'a or its equivalent.

Since the establishment of universities is closely bound up with the cultural and national development of their respective countries, or regions, the following summary will follow the lines of the various cultural areas in the Islamic world.

United Arab Republic: Egypt. Technical and professional education began in Egypt in the reign of Mūhammad ʿAlī. The contacts which Egypt had with the West since Bonaparte's campaign and the autonomy it enjoyed within the Ottoman Empire laid the ground for the educational efforts and reforms under Mūhammad ʿAlī. Use was made of foreign, particularly French, advisors and professional men; educational missions were sent to Europe, and a number of specialized technical and professional schools were established, mainly to meet the needs of forming an army and a civil service on modern lines. These years (1841-44) were a movement of active educational expansion. In 1827 a School of Medicine was established and was followed by various military schools, and by Schools of Pharmacy, Maternity, Engineering, Agriculture, Civil Administration and Accountancy, Languages and Translation, etc. This movement received a set-back under ʿAbbās I and Sa'īd (1848-63). Most of these Schools were closed, but they were reopened under Isma'il. In 1871, Dār al-'Ulām for the training of teachers of Arabic was opened; in 1880 Teachers' Training College; and in 1882 a School of Administration (changed in 1886 to School of Law).

In 1906, there arose a movement for the establishment of a national university. A committee of prominent citizens and intellectual leaders was formed and funds were sought from the Government and the public. This university—commonly known as al-Diāmi'a al-Misriyya to distinguish it from the later state university—was opened on 21 December 1908. Its teaching was limited to courses in literature, history, philosophy, and social sciences, and a number of leading European orientalists and other professors were invited to teach in it. Following World War I, the Egyptian Government took steps to establish a state university. This university, con-
sisting of the former national university as the nucleus of the Faculty of Letters, of the Schools of Law and Medicine already established and of a new Faculty of Science, was instituted by law in March 1925. It continued to develop by the incorporation of existing Schools into Faculties, or by the creation of new ones.

In 1938 a branch of this University was established in Alexandria comprising branches of the Faculties of Letters and of Law. In 1941 a third branch, of the Faculty of Engineering, was opened. In 1942 a full-fledged university was founded in Alexandria. This was followed by another university in Cairo in 1950. These three universities which in course of time came to bear the names of, respectively, Fu'ād I, Fārūk, and Ibrāhīm, have since the Revolution been called the Universities of Cairo, Alexandriana and 'Ayn Shams. Following a policy of spreading facilities of higher education throughout the country, the Egyptian Government began in 1954-55 to plan for another university in Asīlīt. This university opened its doors in October 1957 with a Faculty of Science and a Faculty of Engineering. Other Faculties are being instituted gradually, the scientific ones taking precedence over others. Of the four universities in Egypt, the oldest and most developed is the University of Cairo. In addition to its twelve faculties and its various institutes in Cairo, it administers a branch in Khartoum comprising faculties of Law, Letters, and Commerce.

In 1919 the American University at Cairo was established. An independent private institution, it now includes a faculty of Arts and Sciences, a faculty of Education, a School of Oriental Studies, a Social Research Centre and a Division of Extension, and is smaller than the state universities in facilities, number of staff and students, and educational influence.

Syria. In 1902, under Ottoman rule, a School of Medicine was established in Damascus with Turkish as the medium of instruction. During World War I, it was transferred to Beirut, where a School of Law had been opened in 1912. Both institutions were closed at the end of the War. They were reopened in Damascus in 1919, with Arabic as the medium of instruction. In 1924, they were joined together in the Syrian University, which continued to be limited to the Higher Education faculty of Letters, Sciences, Law and Economic and Political Sciences, etc.) were established and made dependent to various ministries. In 1951, a "Council of Higher Education" was set up to co-ordinate the work of the Faculties, "in preparation for the establishment of the 'Irāk University". Following the formation of the U.A.R., the name of the Syrian University was changed into that of the University of Damascus. Law no. 184 of 1958, published on October 21, 1958 governed the organization of universities in the U.A.R. In addition to the five universities mentioned above, it instituted a University at Aleppo (which was due to open in 1960-61) and created the Higher Council of Universities, with seat in Cairo, to co-ordinate the activities of these institutions. Since 28 Sept. 1961, the former organization was reestablished in Syria.

Lebanon: The universities in Lebanon, in order of founding, are: The American University of Beirut, the Université St. Joseph and the (state) Lebanese University, all of which are located in the capital, Beirut. The oldest, the American University of Beirut was established by the American missionaries in the sixties of the last century, but was from the start made separate from the Mission, and governed by an independent Board of Trustees. Its original name was the Syrian Protestant College and under this name it was granted a charter by the State of New York. On April 1864. University work in the School of Arts and Sciences began in 1866. The School of Medicine opened in 1867, the School of Pharmacy in 1871, the School of Commerce in 1900, the School of Nursing and the Hospital in 1905. On November 18, 1920, the Board of Regents of the University of the State of New York changed the name of the institution into the American University of Beirut. In 1951, the School of Engineering was established, in 1952 the School of Agriculture and in 1954 the School of Public Health. The medium of instruction is English.

The Université St. Joseph was founded by the Jesuits in Beirut in 1875. It received the title of University from Pope Leo XIII in 1881, but in Arabic it continued for many years to be called Kūliyyat Mīr Yūsuf (See Cheikhano's article on its fiftieth anniversary, Al-Mārāqī, xxxiii 5, May 1925, p. 321 ff.). Originally, its higher instruction was limited to theology and philosophy. In 1883, under agreement between the Jesuits of Syria and the French Government, the School of Medicine was established, and, in 1888, the School of Pharmacy, both becoming in 1889 the Faculté française de Médecine et de Pharmacie. In 1902 was founded the Faculty of Oriental Studies which was closed with the rest of the University during World War I. In 1913, the School of Law was opened; in 1919, the School of Engineering; and in 1937 the Institute of Oriental Studies. The medium of instruction is French.

The Lebanese University started in 1952 with a Higher Teachers' Institute for the training of teachers for secondary schools. It was formally organized by Legislative Decree no. 25 of 6 February 1953 (revised by Leg. Decree no. 26 of 18 January 1955), but its activity remained restricted to the Higher Teachers' Institute with its two divisions, literary and scientific, of three years each leading to the Licence, and a fourth year of pedagogical training. In 1959 a Faculty of Law and Economic and Political Sciences was established, and in the same year a regulatory decree (no. 2883 of 16 June 1959) gave the University its inner constitution. This decree provided for faculties of Letters and Sciences, Higher Teachers' Institute, Pedagogical and Political Sciences, for a Higher Teachers' Institute and an Institute of Social Studies, and, like similar state university constitutions or charters, for other faculties, colleges or institutes which might later be created. Also, like other state universities in Arab countries, the language of instruction is Arabic, unless otherwise decided in particular fields.

'Īrāk. Before World War I, there was only one institution of higher education in 'Īrāk: a School of Law. In 1923, the 'Irāk Government decided to establish a university called Djāmī‘at Āl al-Bayt, but this plan was later abandoned. Instead, between 1920 and 1949, a number of Faculties or Colleges (Medicine, Education, Engineering, Business and Economics, etc.) were established and made dependent to various ministries. In 1951, a "Council of Higher Education" was set up to co-ordinate the work of the Faculties, "in preparation for the establishment of the 'Irāk University". Following many commissions and reports, the University of Baghdad was established by Law no. 60 of June 6, 1956. This Law provided for the establishment of a "Constituent Council" which was charged with the study of each of the existing Faculties and Colleges
to decide on its inclusion in the University. On 15 September 1958 a new Law was issued to replace the previous one. According to it, the University is composed of the Faculties of Letters, Sciences, Law, Commerce, Education, Engineering (Women), Engineering, Agriculture, Medicine, Dentistry, Pharmacy, Veterinary Medicine and such other Faculties and Institutes as may be established in the future.

Sa'di Arabia: The King Sa'd University was established in Riyadh by Royal Decree no. 17 of 21 Rabii' II 1377/14 November 1957. It started with a Faculty of Letters. In 1958 a Faculty of Science was added, followed by a Faculty of Pharmacy and a Faculty of Commerce. Each of these Faculties is being developed at the rate of a class a year. A project has been drawn up for an extensive campus and ample building facilities, and plans are under study for curricular and other developments.

Kuwait: The Government of Kuwait asked a committee of experts to study the question of establishing an university in that Principality. The committee met in Kuwait during the month of February 1960, and presented its recommendations to the Government.

Sudan: The University of Khartoum was officially constituted by Act of Parliament on 24 July 1956, seven months after the establishment of the new Republic of the Sudan. It developed from the University College of Khartoum, which was founded in 1951 by the fusion of Gordon Memorial College and the Kitchener School of Medicine. The former had in 1945 grouped together the Schools which had been set up from 1936 onwards to give post-secondary training in Arts, Law, Public Administration, Engineering, Agriculture and Veterinary Science. The academic standard of the College was recognized in 1945 by the University of London which admitted it to Special Relationship. The Kitchener School of Medicine was founded in 1924, and from 1940 onwards its final examination was supervised by a visitor appointed by the Royal Colleges of Physicians and Surgeons of England.

The University of Khartoum includes at present the following Faculties: Agriculture, Arts, Economic and Social Studies, Engineering, Law, Medicine, Sciences, and Veterinary Science. The only other institution of higher education in the Sudan is the Military Academy, which is based on the previously mentioned branch in Khartoum of the University of Cairo including faculties of Law, Letters, and Commerce.

Libya: The University of Libya was founded in 1955-56. The Law establishing it was issued on 15 December 1955. It started with a Faculty of Letters and of Pedagogy in Benghazi. Since then a Faculty of Commerce in Benghazi and a Faculty of Science in Tripoli have been added. Plans for the development of these Faculties and for the creation of new ones are under way.

Tunisia: al-Djami' a-l-Mi'am, the traditional centre of higher religious instruction in Tunisia has in recent years been popularly called al-Djami' a l-Zaytuniyya, but the only post-secondary education it has given is in the fields of Islamic studies and Arabic language and literature related to them. Modern university studies were recently started in schools or institutes on the French model and using generally the French language. Thus, the Institut des Hautes Études, founded in 1945 and attached to the Sorbonne, covered the fields of Law, Arabic Studies, Sciences, and Social Sciences. In 1960, the Tunisian University was founded incorporating existing institutions and establishing new ones. Law no. 2 of 1960 (31 March 1960) established the Tunisian University as a public institution, Decree (Amir) no. 98 of the same date set up its organization, and a ten-years plan for its development has been formulated.

Algeria: The University of Algiers was until 1962 a French university organized and administered as other French state universities. Growing out of a School of Medicine and Pharmacy (1859) and Schools of Law, Science and Letters (1879), it was formally established as a university in 1909. It included these Faculties and certain specialized institutes and used French as the medium of instruction.

In Morocco, as in other countries, modern higher instruction in Morocco started with separate institutions: the Institut des Hautes Études Marocaines, Centres d'Études Juridiques and Centre d'Études Superieures Scientifiques. With the acquisition of independence, there was a movement for the establishment of a national university. This university, the University of Rabat, was inaugurated in December 1957, and was formally organized by royal decree (Zahir Šarif) no. 1.58.390 of 29 July 1959. It consists of Faculties of Holy Law (Šarî'î'î), Legal, Economic and Social Sciences, Letters, Physical and Natural Sciences, and a Faculty of Medicine and Pharmacy to be established. Here again the relation of this University (and particularly its Faculty of Holy Law) with the traditional Islamic higher education centred around the celebrated Djâmi' al-Karawiyîn in Fâs depends upon future developments.

Turkey: Modern technical and professional education started in Turkey towards the end of the 18th and the beginning of the 19th century, to meet the needs of the army, navy and civil service. In 1773 a Muhendisîkhane [q.v.], or School of Engineering for the needs of eastern Turkey. This was done with the traditional Islamic higher education centred around the celebrated Djâmi' al-Karawiyîn in Fâs depends upon future developments.

In 1955 the Aegean University (Ege Universitesi) was established in Izmir. In 1956 Atatürk University was founded in Erzurum to serve the needs of eastern Turkey. This was done with the assistance of the University of Nebraska, under contract between this University and the Technical Cooperation Administration of the U.S.A. All these
universities are state institutions. By the University Law of 1946, they were granted administrative and financial autonomy.

In 1957, the Middle East Technical University was established in Ankara, by special act of parliament, with powers including faculties. The United Nations and UNESCO have been closely associated with the Government of Turkey in the planning and development of this university. Whereas the other universities use Turkish as their medium of instruction, this uses English and hopes to attract students from other countries of the region.

Iran: The oldest and the most important of the universities of Iran is the University of Tehran, Dānishgāh-i Tehran. Growing out of the polytechnic school, Dār al-Funun (1851), and of other more recently established schools, it was constituted as a state university in 1934. It now includes eleven Faculties: Arts, Fine Arts, Islamic Sciences (‘Ulām-i Ma‘ṣbāl wa Manḥāl), Law, Science, Engineering, Agriculture (at Karadā), Medicine, Dentistry, Pharmacy and Veterinary Medicine. Other universities to serve the needs of the provinces have been established since World War II. In 1947, the University of Tabrīz (Āḏharbājyān) was founded, and was followed by the Universities of Maḥbāb (Khorāsān), of Shīrāz (Pars), of Isfahān, and of Ahwāz (Khurāsān).

These provincial universities have as yet a limited number of Faculties (mostly professional), but their development in this short period indicates the concern of the Government of Iran to extend the facilities of university education and to spread it throughout the country. The language of instruction in all the universities of Iran is Persian.

Afghanistan: Higher university education in Afghanistan began with a Faculty of Medicine in 1932. Other Faculties were later established and all were incorporated in the University of Kābul, which was founded by Royal Decree in 1946. This University now includes Faculties of Medicine (including Women’s Division and School of Nursing), Law and Political Science, Science, Letters, Islamic Law, Agricultural Engineering, a Women’s Faculty (Social and Physical Sciences) and Institutes of Economics and of Education. Instruction is through the medium of Persian and Pashto.

India and Pakistan: It was not until the early decades of the nineteenth century that schools and colleges on western models began to be established in the sub-continent of India. These institutions used English as the medium of instruction. Following the recommendations of Sir Charles Wood, the Universities of Calcutta, Bombay, and Madras were established in 1857, and remained for twenty-five years the only universities in India. In 1882 the University of the Panjab was created at Lahore, and in 1887 the University of Allāhābād. No other university was established before World War I. Subsequently there were two periods of rapid development of university institutions: 1915-1929, and after partition. The latest edition of the Common-wealth Universities Handbook (1960) lists thirty-seven universities in India, of which eighteen were established or achieved full university status after 1947. Of the six universities of Pakistan, only two, the University of the Panjab (1982) and the University of Dacca (1921), existed before independence, although many colleges were affiliated to universities in India before partition.

In India, two universities have been active in the field of higher education for the Muslim community. The older, the ‘Allīgahr Muslim University, has played its particular role in the intellectual life of this community. Founded in 1875 by the author and reformer Sir Sayyid Ahmad Khān, as the Moham-medan Anglo-Oriental College, with the object of imparting modern scientific education, it received its charter as a university in 1920, and has since its establishment served as an influential centre of Indian Muslim intellectual life.

The other University, Osmania, at Haydarābād, Deccan, was founded in 1918 and has also paid special attention to Islamic studies. In addition to these two universities, there are Muslim colleges which either form part of, or are affiliated to, other Indian universities. Among other institutions of higher education, mention should be made of the Jamia Millia Islamia (q.v.) at Jāmānagar, Dīhil, whose courses in the arts and social sciences lead to an examination recognized by the government as equivalent to the B.A. degree of an Indian university.

In Pakistan, there are six universities: University of the Panjab at Lahore (1922), University of Dacca (1921), University of Calcutta (1947), University of Karachi (1950), University of Punjab (1950), and University of Rajshahi (Rādsjāhī) (1953). Although these institutions are entirely secular and pursue liberal, scientific and professional education on modern lines, they are permeated by Islamic traditions and spirit.

The first universities established in the sub-continent of India in the middle of the last century took as their model the then newly established University of London. This University was at that time a purely examining body. Thus the early universities were slow to develop teaching of their own. At present, the universities of India and Pakistan are of various types, but most of them are both teaching and affiliating. Post-graduate teaching is generally carried on by the universities themselves, whereas first-degree teaching is still largely done by affiliated colleges under university supervision and examination arrangements.

Malaya and Singapore: The University of Malaya was founded in 1949 by the combined actions of the governments of the Federation of Malaya and the Colony of Singapore. It grew out of two existing colleges in Singapore, King Edward VII College of Medicine. The other was the Victoria College, whose courses in the arts and social sciences lead to an examination recognized by the government as equivalent to the B.A. degree of an Indian university. This University was at that time a purely examining body. Thus the early universities were slow to develop teaching of their own. At present, the universities of India and Pakistan are of various types, but most of them are both teaching and affiliating. Post-graduate teaching is generally carried on by the universities themselves, whereas first-degree teaching is still largely done by affiliated colleges under university supervision and examination arrangements.

Indonesia: Although Faculties (largely professional) had been instituted in Indonesia in the period between the two World Wars, the movement for the establishment of universities began in 1949 and has progressed rapidly since the country acquired its sovereignty. These universities have incorporated previously existing Faculties and created new ones. In 1949 Universitas Gadjah Mada was instituted at Djogdjakarta by merger of five Faculties, whose number has grown to eleven. Universiteit Indonesia was founded in 1950 at Djakarta and now includes Faculties of Medicine, Law and Social Sciences, Philosophy and Letters, Economics, Mathematics
and Natural Sciences (at Bandung), Technology (at Bandung), Veterinary Medicine (at Bogor) and Agriculture (at Bogor). Other Faculties of the University established at Surabaya, Bukittinggi and Makassar, have since formed the nuclei of separate universities: Universitas Airlangga (1954), Surabaja (also incorporating the former Faculty of Law of Universitas Gadjah Mada in Surabaja); Universitas Andalas (1956), Bukittinggi; and Universitas Hasannuddin (1956), Makassar. A new university is being established in Bandung independently of the Faculties of the Universiteit Indonesia set up there.

In addition to the above, some of all state universities there are a number of private institutions. Of particular importance for us are the Universiteit Islam Indonesia, Diogjakarta (theology, social economics, law) and the Perguruan Tinggi Islam Indonesia, Medan (law and social sciences, theology).

Reference should finally be made to universities in some of the predominantly Muslim Republics of the U.S.S.R. which also serve the needs of the Muslim population, such as the University of the U.S.S.R. at Baku (1919), the Tadjik State University at Stalinabad (1948), and the Uzbek State University (1933). These Universities follow the pattern of universities in the Soviet Union, and use, along with Russian, local languages in their instruction.

Bibliography: As the majority of the universities in the Islamic countries are state institutions, the basic sources on their constitutions and organization are the government-promulgated charters embodied in laws, decrees, or other government acts, as well as the catalogues, reports, or handbooks issued by the individual universities, national associations of universities, or the government ministries. For universities in Arab countries, Sāḥiṣ al-Jaṣṣāṣ's Ḥākwiyat al-Nawzā bi al-arabiyya, published by the Cultural Section of the League of Arab States (5 vols., Cairo, 1949-57), summarizes the governing legislation and other acts, and gives pertinent information on the programs and activities of the universities up to 1956. For Pakistan and India see the Handbook of the Universities of Pakistan, 1955-6 (Inter-University Board of Pakistan, 1956) and the Handbook of the [Indian] Universities, 1955-6 (Inter-University Board of India, 1956). For universities in these two and other countries of the British Commonwealth, see Commonwealth Universities Yearbook, 1960, (37th edition, ed. J. F. Foster, London, 1960). General information about universities (outside the Commonwealth and the U.S.A.) is given in the International Handbook of Universities (1st edition, ed. H. M. R. Keyes, International Association of Universities, Paris 1959). Discussions of various problems will be found in Universität und moderne Gesellschaft, edd. C. D. Harris and M. Herkheimer, Frankfurt 1959; Science and Freedom, 12, Oct. 1958; J. Jomier, Ecoles et universités dans l'Egypte actuelle, in MIDEO 1955, ii, 135-60, 1956, iii, 387-90; H. de l'Isle, Les universités islamiques d'Indonésie, in Orient, no. 21, 1962, 81-4. For accounts of current university activity and development see the Bulletin of the International Association of Universities (quarterly, published since February 1953). The International Association of Universities (6, Rue Franklin, Paris, 16) also maintains a documentation and information centre on universities, including those treated in this article.
to be the most perfect representative of the Udhra poets, who "when loving, die".

(F. GABRIELI)

**DJAMIL (b.) NAJLAH AL-MUDAWWAR, Arab journalist and writer, born in Beirut in 1862, died in Cairo on 26 January 1907.** Djamil came from a wealthy, intellectually active, Christian family, and grew up in conditions which were very favourable to his development as a writer. His father (1822-80), who lectured on Arabic grammar, French, and Italian in Beirut, was an interpreter at the French Consulate, and a member of the Beirut town council; he also took part in editing the Beirut newspaper *Haddat al-Aḥbār*, as well as being a member of the *Société Asiatique*, Paris, and of *Al-Djam’yya al-ilmīyya al-sūriyya*, Beirut.

Djamil pursued Arabic studies, and also studied French language and literature at Beirut University. He soon began to show a preference for the history of the peoples of the ancient Orient. Later on, he became editor of several journals. He collaborated in the semi-monthly *Al-Dīnān*, and also in *Muṣhtafat*. The second of these moved its offices from Beirut to Cairo in 1888. Finally, he brought out the pan-Islamic paper *Al-Mu’āyyad* in Cairo.

**Djamīl al-Mudawwar reached fame with his *Haddat al-Islām fī Dār as-Salām*, Cairo 1888, 1905, 1932.** This work is of great literary importance, because it is a completely new departure in Arabic literature. It was probably modelled on J. Barthélemy’s (1716-95) *Voyage du jeune Anacharsis en Grèce*, and takes the form of letters. It quotes many lesser-known singers and ḳīyān, Maḥbād (q.v.), Ibn ʿAṣīḥa (q.v.), Ḥābābā and Sāliḥā received their training. Artists as great as Ibn Surayjā (q.v.) would come to hear her, and would accept her critical judgments, while her salon was regularly frequented by such poets as ʿUmar b. Abī Rabīʿa, al-ʿAwās, and al-ʿArḍjī. When at one time she was on a pilgrimage, all the singers and musicians of the Ḥijāz gathered to accompany her, or to welcome the ‘star’ of Medina to Mecca. They then accompanied her back to Medina, where an enormous festival of music and song lasted for 3 days. Although the story is of doubtful authenticity, being regarded as false by Abu ʿl-Faradj al-Isfahānī himself, it is nevertheless an indication of the fame which has always surrounded the figure of Djamil. The date of her death is unknown.

**Bibliography:** The basic reference-work is the *Ḳitāb al-ʿAṣīḥā*, vii, 124-48 (Beirut ed., viii, 188-234); it has been extensively used by Caussin de Perceval, *Notices anecdotiques sur les principaux musiciens arabes des trois premiers siècles de l’Islamisme*, Paris 1828 (A. Seyd, 1834), and by Ambris, *Al-Djamāli al-muḥannīyi* (A. Schade and J. Pellat)

**DJAMIYYA.** This term, commonly used in modern Arabic to mean a “society” or “association”, is derived from the root *DJ·M·S*, meaning “to collect, join together, etc.”. In its modern sense it appears to have come into use quite recently, and was perhaps first used to refer to the organized monastic communities or congregations which appeared in the eastern Uniate Churches in Syria and Lebanon at the end of the seventeenth and beginning of the eighteenth centuries (e.g., *Djamīyyat al-Muhābbat*, the Salvatorians, a Greek Catholic order founded c. 1708). In the middle of the nineteenth century the term came into more general use first in the Lebanon and then in other Arabic-speaking countries, to refer to voluntary associations for scientific, literary, benevolent or political purposes. Perhaps the first of them was *Al-Djamīyya al-sūriyya*, founded in Beirut in 1847 through the efforts of American Protestant missionaries with learned tastes, for the purpose of raising the level of culture. Its members were all Christians, and included the famous writers Nasif al-Ẓaydījī and Butrus al-Bustānī (q.v.), as well as a number of missionaries and the English writer on the Lebanon, Colonel Charles Churchill, then living near Beirut. The society met regularly
until 1852; in 1857 it was succeeded by al-Diam'iyya al-shariyya, a larger society on the same model but including Muslims and Druzes; it had corresponding members in Cairo and Istanbul, includingPrime Minister Fuad Pasha, and in 1868 received official recognition from the Ottoman government. In 1880 the French Jesuit missionaries in Beirut created a similar organization, al-Diam'iyya al-shariyya; its membership was partly foreign, partly local and wholly Christian.

At a slightly later date there arose societies with more practical aims: for example, the first feminist society, Diam'iyyati b'dakura Suriyya, founded in Beirut in 1881 or earlier, and a number of benevolent associations. Perhaps the first of these was al-Diam'iyya al-khayriyya al-islimiyya, founded in Alexandria in 1876, as an expression of the new public consciousness which was appearing in Egypt at that time. Its aim was to found national schools for boys and girls; one school was established in Alexandria and placed under the direction of the famous scholar Muhammad Abduh. Another society, the Sharif Husayn and the British authorities in Cairo, which led to the revolt in Arabia against Turkish rule; the military leader of the revolt, Husayn's son Faysal, was himself a member of the society. A generation later, in Egypt, there was founded another daim'iyya which has played an important role in politics: al-Ikhwan al-Muslimin [q.v.], started in 1928 by Hasan al-Banna [q.v.], had the explicit purpose of bringing about a moral reform in Islam, but in course of time it became more openly political in its aims and methods, and in the confused decade after 1945 seemed near to taking over power in Egypt, until suppressed by the military régime in 1954. In general however the word daim'iyyat [q.v.] had by then become almost synonymous with political movements, although the latter term still remained in use for charitable, cultural and other such voluntary organizations.

Ottoman Empire and Turkey

The most common term for "society" or "associa-
tion" in Ottoman and modern Turkish is daim'iyyat (cem'iyyet or cemiyet), to which partisans of istârâhe prefer dernek or more rarely, birik. Since the late 19th century daim'iyyet has been the word used for voluntary associations, secret or open, for political, benevolent, professional and other purposes. In the early twentieth century, political parties began to call themselves firka or, occasionally, birik, both of these yielding, in common usage since the 1920's, to parti. Among the near-synonyms of daim'iyyet, endûrûmen (encümen, from P. andûrûman [q.v.]) designates (i) a parliamentary committee and (ii) a quasi-public organization such as the Turkish History and Turkish Language Societies, its istârâhe equivalents in these two senses being, respectively, (i) komisyon and (ii) kurum; keyd or keyet ("committee") designates a temporary or ad hoc grouping; gurup or parti gurubu a parliamentary party; and kulub (club) a more informal cultural, social, or convivial organization.

Legislation granting and regulating the right of association has been a product mainly of the 20th century. The Ottoman reform decrees of 1839 and 1856 promised civic equality and security of person and property, but the 1876 constitution for the first time included a specific if limited guarantee of freedom of association (art. 13: "Ottoman subjects have the right within the limits of existing laws and
regulations to found all manner of associations for commercial, industrial, and agricultural purposes"), buttressed by promises of freedom of the press (art. 12: "...free within the limits of the law...") and of the organizations or of those with headquarters outside Turkey also were outlawed, except where special permission should be granted by cabinet decree in the interests of international cooperation (art. 10). By a major amendment of 5 June 1946 (law no. 4919), the prohibitions against associations contrary to the Six Arrows and against those based on class were lifted, and that against regional associations limited to political parties. Other laws of international restrictions: Laws no. 334 (15 April 1923) and 556 (25 February 1925) prohibited propaganda for restoration of the sultanate or caliphate and the abuse of religion for political purposes. A decree of 1922 outlawed Communism and art. 163 against religious-political associations. Law no. 5018 of 20 February 1947 (arts. 141 and 142 being directed chiefly against Communist and art. 165 against religious-political associations). Law no. 5018 of 20 February 1947 for the first time specifically regulated trade unions and employers' associations (both being termed sindikat, from Fr. syndicat). The Constitution of the Second Republic of 9 July 1961 provides broad and specific guarantees of the freedom of association (art. 29: "Every individual is entitled to form associations without prior permission. This right can be restricted only by law for the purposes of maintaining public order or morality") and of the right to form trade unions and employers' associations (art. 46) and political parties (art. 50).

The actual development of associational life was at times broader and at times narrower than the legislative history would indicate. Until the 1908 revolution, political associations within the Empire took the form of secret conspiracies, often with headquarters in exile. Among the first were those organized by nationalists among the Christian minorities, notably the Greek Ethnikie Hetairia (National Association) founded in Odessa in 1814, followed by the Armenian Hincak party (Geneva 1887) and the Dashnaktsutun (Armenian Revolutionary Federation, 1890). The earliest political movements among Ottoman Muslims lacked elaborate organization; rather they were short-lived and abortive conspiracies aimed at the quick overthrow of the reigning sultan. Such was the nature of the Kulei't Indirici Partisi (the "Revolutionary Federation, 1828 and the so-called Scelleri-Askiz Committee of the same year. A more elaborate society was formed in 1865 by a number of prominent literary and political figures with liberal and constitutionalist aims, including the poet Naim Mekel. When its members were banished or exiled in 1867, the centre of their activities shifted to Europe, where they adopted the name Yeni 'Othomnliiler (New Ottomans) or Juvenes Tures. From this time onward, "Young Turks" became the name commonly used by Europeans to designate the advocates of Ottoman constitutionalism; in Turkish, the name occurs only as a French loan word, Jon Turk. Returning from exile after the deposition of 'Abd al-'Aziz, the original "Young Turks" played a leading role in the events leading to the adoption of the constitution of 1876. With the establishment of 'Abd al-Hamid II's autocracy, the movement was at first eclipsed and then relegalated once again to secrecy, banishment, and exile. In 1889, a number of students at the Army Medical College (Mektebi Tibbiyyet-i 'Ashoriyye) in Istanbul, including Ibrahim Temo and Abdullah Djedwe, formed a secret political society known at first as Terakki-i Isitab and later as 'Othomnli Ittihat ve Terakki Dernegi (Ottoman Society of Union and Progress, later commonly known to Westerners as the Committee of Union and Progress). In Paris, the most prominent spokesman of the anti-Hamidian exiles was Ahmed Riza (Ridâ), editor of the journal Mecmuet (i.e., Mecmuet, "Consultation"). Defections and factionalism weakened the movement from time to time, whereas 'Abd al-Hamid's repressive measures supplied a steady stream of new recruits both for the secret internal and for the exiled opposition movement. Thus, whereas Ahmed Riza considered himself an adherent of Comtean positivism and hence an advocate of strong central government, his rival "Prince" Sabâb al-Din formed a "Society for Individual Enterprise and Decentralization" (Tegbehhü-a Shakhhi we 'Adem-i Merkeziiyet Djem'iyyet), Paris 1902). By 1906, the centre of gravity of the opposition movement had once again shifted from Europe to the Empire itself, whereas dismounted military officers and civil servants spread the conspiracy to the provincial centres to which they were posted. That year a small Fatherland and Freedom Society (Watî 'In Hurreyyet Djemîyyet) was formed in Damascus with the participation of Mustafa Kemal (the later Ataturk) and a
larger Osmanlı Hurreyyet Diem'iyyeti in Salonica with participation of Ta'at, Diemal (both later Paşhas) and other prominent future figures. By the end of 1907, the Salonica group had absorbed the remnants of the Damascus society and merged with representatives of the Paris exile movement under the name of “Committee (or Society) of Union and Progress—a name adopted out of respect to its predecessors rather than a name acquired by direct inheritance” (Ramsaur, 122 f.). The successful revolution of 1908 was the result mainly of pressure of Macedonian army units enlisted into the conspiracy by the powerful Salonica group.

From 1908 to the present, periods of proliferation of political and other voluntary associations have alternated with periods of suppression or coordination under the aegis of a single, powerful party. The number of parties and political associations listed for each of these periods in the index of Tunaya's work (772-7) may serve as a rough measure of this ebb and flow: 1814-1908: 18; 1908-13: 22; 1913-8: 2; 1918-23: 55; 1923-45: 5; 1945-52: 30. Among the many associations formed after the 1908 revolution were the New Generation Club (Nesl-i Djedid Kâlibâ, 1908, representing Sabâh al-Din's decennial trend), an Ottoman Press Association (Ma'ba'at-i 'Othmdniyye Diem'iyyeti, 1908), an Arab-Ottoman Brotherhood Society (1908), a pro-Unionist association of umla' (Diem'iyyet-i Fitâhidâyye-i Umoviyeyi, 1908), the Turkish Society (1908) and the Turkish Home Society (1911) both later (1913) merged and expanded into the Turkish Hearth (Türk Odâgâhî, for the next two decades the most important association of Turkish nationalist intellectual and cultural leaders with branches throughout the country). The list of constituent organizations which on 17 April 1909 formed the Ottoman Unity Committee (Hey'et-i Mütefikâ-i 'Othmdniyye) to oppose the threat of counter-revolution provides an indication of the variety of political and semi-political associations which had sprung up in the capital in the first few months after the 1908 revolution (see Tunaya, 275 f.): Ottoman Society of Union and Progress, Ottoman Liberal Party, Daşnaktsutün, Greek Political Society, Ottoman Democratic Party, Albanian Central Club, Kurdistan, Circassian Mutual Aid Club, Bulgarian Club, Club of Millîkiyye Graduates, Ottoman Medical Society, etc. Philanthropic and professional societies, such as the Red Crescent (Hilâl-i Ahmer Diem'iyyeti, later called Kızılay), the Children's Aid Society (Hümâyye-iElfâl Diem'iyyeti, today Çocuk Esirgeme Kurumu), and the Istanbul Bar Association also date back to this period. On the political scene, the Society of Union and Progress was the most powerful organization in the country, and for the next decade it became known as the "Society—Diem'iyyet tout court"—even though in 1913 it officially proclaimed its transformation into a political party. Meanwhile, adherents of Sâbâhâddîn and a continuous stream of discontents from Unionist ranks formed a number of opposition parties, most of which eventually merged in the Freedom and Accord Party (see Tunaya, 324; cf. Frustor in World Politics, xi, 541). Many of these semi-political societies of the armistice period included the Kurdistan Resurrection (Te'dîlî Society, the National Unity Committee, the Society of the Friends of England and the Society for Wilsonian Principles (the last two respectively a collaborationist and a nationalist group), a Society for Mutual Aid Among Victims of Political Persecution (Mehdârîn-i Siyâsîyye Te'dâsin Diem'iyyeti). Once again the list of societies adhering to a non-partisan effort at national unity, the National Congress (Millî Kongre) of 29 November 1918, gives an indication of the wide variety of associations then in existence. It reads, in part, as follows: Turkish Hearth, Children's Aid Society, Teachers' Colleges Alumni Association, Navy Society, Galatasaray Students' Home, Mutual Aid Society of Kabataş (a quarter of Istanbul), Women's Employment Society (Kadinlarî Calış- tirmalînî Diem'iyyeti), National Defence Society, Press Association, Teachers' Society, National Instruction and Physical Education Association, Bar Association, Painters' Society, Farmers' Association, National Association of Private Schools, Craftsmen's Society, Women's Welfare Association (Diem'iyyet-i Khay- riyye-i Nisâwînîyye), Muslim Women's Employment Society, Society of Music-Loving Ladies, Society for the Modern Woman (Asrî Kadin Diem'iyyeti), Society for the Promotion of Fine Arts, etc. etc. (Tunaya, 420). During this same period we also encounter the first parties with a specific appeal to the lower classes, notably the Workers' and Peasants' Socialist Party of Turkey, the Ottoman Labour Party, and the Socialist Party of Turkey (ibid., 438, 458, 463).

While the capital and the central government were coming increasingly under the control of Allied occupation authorities, local societies were forming in most of the vilayet and kadî districts of Anatolia and Eastern Thrace for the purpose of opposing Allied occupation, partition, and annexation plans. In the case of one of the earliest and most prominent of these, the Ottoman Committee for the Defence of Thrace and Pashaeli (Edirne, 2 December 1918), we know that it was prepared and founded at the behest of Ta'at Paşa, who hoped that such local groups would be able to carry on the Unionist political cause after the defeat of the Empire and the demise of the central party organization (see Beyiklioğlu, 1, 123; cf. Rustow in World Politics, xi, 541). Many similar organizations were founded in other important cities within a few days or weeks of each other, in some cases also with direct participation of local Unionist leaders (Ottoman Society for Defence of Rights of Izmir, 2 December 1918; Society for the Defence of Rights of the Eastern Vilayets, founded in Istanbul, 4 December 1918, Erzurum branch opened 10 March 1919; Cilician Society, Adana 21 December 1918), one
may infer that there may have been a more comprehensive central plan. Whereas the earlier nationalist organizations rallied to the slogan of "DEFENCE OF RIGHTS" (müddfa-i hakk), those formed in western Anatolia at the time of the Greek occupation of Izmir (May 1919) commonly called themselves "REJECTION OF ANNEXATION" (redd-i ikbāḥ) societies. Regional congresses of these groups were held throughout the summer of 1919 at Erzurum, Balıkesir, Alâşehir, and elsewhere. Whatever the antecedents of the Defence of Rights movement, its nation-wide consolidation was the result of the activities of Mustafa Kemal Pasha [Atatiirk] [g.v.], who was elected chairman of the Erzurum Congress and himself called for a nationwide congress at Sivas (4-11 September 1919) which repudiated the Union and Progress Movement, defined the foreign policy aims of the nationalist resistance movement in the so-called National Pact (mīddfa-i millû), and created the consolidated Society for the Defence of Rights of Anatolia and Rumelia (Anadolu ve Rumeli Müddafa-i Hukuk Djâmîyyatii, later as the People's Party, later as the Republican People's Party), the greatest notoriety because of its campaigns for the re-introduction of the Arabic version of the Law for the Restoration of Order (Takrir-i Sukun Kanunu, 4 March 1925). The convening of a Grand National Assembly at Ankara on 23 April created a de facto nationalist government which was to become the foundation of the First Turkish Republic (proclaimed on 29 October 1923).

In the Ankara Assembly Kemal time and again faced a religious-conservative opposition, known as the Second Group, but the elections of 1923 resulted in the complete elimination of these opponents. Later that year the Defence of Rights Society was reconstituted as the People's Party, later as the Republican People's Party (Khâlb Fîrıkstî, Dîjmü'âriyyeyet Khâlb Fîrıkstî [g.v.], and eventually Cümhuriyyet Halk Partisi). The precipitate manner in which the Republic had been proclaimed and fears of personal rule by Kemal led to the formation of a new opposition group, the Progressive Republican Party (Terakkiperver Dîjmü'âriyyet Fîrıkstî, 17 November 1924), led by Kemal's closest and earliest associates of the 1919-20 period. Following the Kurdish uprising of February-April 1925, this party was charged with complicity in the insurrection and dissolved by cabinet decree (3 June 1925) under authority of the Law for the Restoration of Order (Takrir-i Sukun Kanunu, 4 March 1925). The following year, most of the members of its Assembly were tried, and seven of them sentenced to death and executed, on unproven charges of complicity in the attempt on Kemal's life discovered in İzmir.

Although the formation of opposition parties was never formally prohibited, the events of 1924-26 clearly discouraged any would-be founders for the next two decades. The only important exception was the short lived Free Republican Party founded (and reclosed within four months) at Kemal's suggestion by his close friend Ali Fethi [Okyar] [g.v.] in 1930. The dissolution of the Turkish Hearth (see above) in 1931 (involving the conversion of its branches into People's Houses to be administered by the People's Party), the merger of the posts of müdafa and müdvet chairman of the Republican People's Party (1936), the formation of a new Press Association under the chairmanship of Atatürk's long-time journalistic spokesman Fahîh Rifki Atay (11 June 1935), and the Law of Association of 1938 (see above) were so many steps toward the complete coordination of all associational and political activities within a single official party. Earlier, the formation under Atatürk's personal auspices of the Turkish Historical Society and the Turkish Language Society (Türk Tarikh Kurumu and Türk Dil Kurumu, 1932), provided a vehicle for Atatürk's concern with the promotion of a national-historical consciousness and of language reform. A radical shift toward a policy of democratization and liberalization came at the end of the Second World War, first heralded in President İnönü's speech of 19 May 1945, and confirmed after some wavering by his pledge of impartiality between government and opposition parties of 22 July 1947. (The 1946 revision of the Law of Associations and the new Labour Code of 1947 were parts of the new political course). As a result, the formation of political and other associations multiplied in unprecedented fashion in the years after 1945. Tunaya lists as many as 14 parties founded during the single year of 1946. During the same year voluntary associations of national prominence were numerically distributed among various categories as follows: trade unions and employers' associations 234; sports clubs 246; civic improvement associations 79; scholarly associations 22; trade unions and employers' associations 20; health societies 17; journalists' associations 13 (Türkiye Yılıği 1947, 266). The more liberal atmosphere also encouraged a secret revival of dervish orders which continued to be outlawed. (For specific cases of arrest see G. Jäschke, Die Türkei in den Jahren 1942-51, Wiesbaden 1955, index s.v. Derwischorden). Among these, the Tijdjanîyye attracted the greatest notoriety because of its campaigns for reintroduction of the Arabic version of the adîdieh and of smashing statues of Atatürk. The latter subsided after the passage in 1953 of a new law for the protection of the memory of Atatürk which imposed heavy penalties on such activity. A number of parties were disbanded after 1945 because of Communist leanings, notably the Socialist Toilers' and Peasants' Party of Turkey (closed 16 December 1946 by the Istanbul Martial Law Command) and the Socialist Party of Turkey (closed by the same decision, reopened after acquittal of its founders in 1950, and reclosed by court order on 17 June 1953). A number of other parties or associations of the extreme right were similarly dissolved, including the Islam Democratic Party (involved in an assassination attempt on the liberal journalist Ahmed Emin Yalman and closed by court order on 20 October 1952), the Great East ( Büyük Doğu) Society (dissolved itself 26 May 1951 while on trial for "reactionary" activities and after its leader, Necip Fasıl Kasıkçik, had been apprehended on a gambling charge), and the pan-Turkist and racist Turkish Nationalists' Association (Türk Milliyetçiler Derneği, dissolved by court order 4 April 1953). (Information in this paragraph furnished to author by Turkish Ministry of the Interior, January 1954).

The advent to power of the Democratic Party under Celâl Bayar and Adnan Menderes as a result of the 1950 elections soon brought more systematic legal and extra-legal restrictions upon the freedom of association. Whereas the parties just listed consisted mainly of small groups of obscure men whose aims were repudiated by the vast majority of thoughtful citizens, the major targets of Menderes's repressive policies, it soon became clear, were the major opposition parties themselves. In December 1953, the assets of the Republican People's Party
(in opposition since 1950) were taken over by the government treasury, and just before the 1954 elections the second largest opposition group, the Nation Party (Millet Partisi) was dissolved by court order on tenuous allegations of being in fact a religious association. The latter party soon reappeared as the Republican Nation Party, enlarged in 1957 into the Republican Nation Peasants' Party. Toward the end of the decade opposition parties were subject to stringent police controls at their meetings, suppression of their newspapers, and systematic harassment of their members throughout the country. At the same time many voluntary associations were pressed into joining the Patriotic Front (Vatan Cephesi) under Democratic Party auspices. The overthrow of the Menderes regime in the revolution of 27 May 1960 brought a temporary moratorium on all political activities under the provisional government of General Gürsel's Committee of National Unity. With the proclamation of the Constitution of the Second Republic, political and associational freedoms were once again restored, although the leaders of the deposed Democratic regime of Bayar and Menderes remained barred for the time being.

(D. A. Rustow)
One of the earliest societies to be formed during the reign of Nasir al-Din was the Madjmac-i Ughwewat founded by ‘All Khan Zahir al-Dawla b. Muhammad ‘All Khan, the Iguiddbsbgb in and singtons of Zahir al-Din’s successor ‘Ali Sháh as the leader of a group of Niftimtalláhervishes who had gathered round Safí ‘Ali Sháh as their pir. Although Madjmac-i Ughwewat was something in the nature of a Súfí fraternity rather than a literary or political society, it appears to have been regarded by some as the first of the “political” andjumans and on these grounds its premises were destroyed on the orders of Muhammad ‘Ali Sháh after the bombardment of the National Assembly (Mu‘ayyir al-Mamálík, Idgáli-i ʿAṣrrí Náṣírí, in Yáqmá, i/7, 1956, 326 ff.). Nevertheless the society appears to have continued in existence or to have been reformed (see Husayn Samíl, Maṭbūʿát wa maqālát wa taṣarrúf, Tehran n.d., 314 ff.).

Towards the end of Náṣír al-Dín’s reign various secret or semi-secret associations started to meet in Tehran and the provinces. When these andjumans (which came to be known individually by the term andjuman-i millí, i.e., a national or popular society), first started to meet their deliberations appear to have been mainly confined to discussions on the desirability of the liberation of the people from the yoke of tyranny, and of the benefits which accrued from freedom, justice, and education. Their members were held together by discontent at existing conditions and a belief in the need for modernization. After the assassination of Náṣír al-Dín in 1896 the activities of the andjumans increased and their members advocated reform more openly. Their membership appears to have been drawn predominantly from the middle ranks of the ‘ulámí. At this period the andjumans (or those of which we have records) seem to have considered their function was to combat illiteracy and even founded schools, which some of them did. In the second term the andjumans, known as the “popular” andjumans, the “political” andjumans or to have been reformed (see Browne, The Persian revolution of 1905-1909, Cambridge 1910, 245). One of the late 19th century andjumans, the Andjuman-i Ma‘arif founded in 1315/1897-8, was apparently something in the nature of a Súfí fraternity rather than a literary or political society, it appears to have been regarded by some as the first of the “political” andjumans and on these grounds its premises were destroyed on the orders of Muhammad ‘Ali Sháh after the bombardment of the National Assembly (Mu‘ayyir al-Mamálík, Idgáli-i ʿAṣrrí Náṣírí, in Yáqmá, i/7, 1956, 326 ff.). Nevertheless the society appears to have continued in existence or to have been reformed (see Husayn Samíl, Maṭbūʿát wa maqālát wa taṣarrúf, Tehran n.d., 314 ff.).

With the grant of the constitution in August 1906 the Andjuman-i Makhfi-i Thána wá was reconstituted and numerous other andjumans, with local and professional affiliations, sprung up in the capital and the provinces. In Tehran within a short space of time some two hundred andjumans were formed; some of the larger ones are said to have had several thousand members. Their purpose was to support the constitution, advocate reforms, watch over the actions of the government and its officials, and demand rectification of their grievances or alleged injustice. Two main types of andjuman came into existence: “official” andjumans and “popular” andjumans. The former were the provincial councils (andjuman-i ayyáltí wa wíláyáltí) which were originally set up in the provincial towns for the purpose of electing deputies to the National Assembly and were later recognized by Article 90 of the Supplementary Fundamental Laws promulgated on 7 October 1907. Article 91 lays down that they should be elected by the people and Article 92 states that they were to be free to exercise supervision over all reforms connected with the public interest. The second type of andjuman, the “popular” andjuman, was also recognized by the supplementary Fundamental Laws, Article 21 of which states “Societies (andjumans) and associations (iqfilimátí) which are not productive of mischief to religion or to the state and are not injurious to good order are free throughout the whole empire, but members of such associations must not carry arms, and must obey the regulations laid down by the law on this matter . . .” The provincial councils varied a good deal from place to place. The Andjuman-i Ayyalátí of Tabriz, which had been set up for the purpose of the election
of deputies to the new National Assembly, was dissolved by Muhammad 'Ali, the wali 'ahd and governor of Adharbaydjan, as soon as the deputies had been elected. It reformed almost immediately as the Angjuman-i Milli though it subsequently appeared that the original nationalist members had been replaced by officers and secretaries (Karim Tahirzada Bihzad, Kiyani-i Adharbaydjan dar inkilabi-i mahsuliyyat-i Iran, Tehran n.d. 148-9, 174 ff; cf. also Aubin, La Perse d'aujourd'hui, Paris 1908, 40). After the coup d'etat of 1907 it became, in the absence of the National Assembly, the focal point of the constitutional or nationalist movement in Persia. In Isfahan the Angjuman-nukaddas-i Milli-i Isfahan, opened on 6 Dhu'l Ka'ba 1324/22 December 1906, appears to have had executive as well as consultative functions and to have been run by the leading 'alam', merchants, and citizens of the town (see the weekly paper published by the Angjuman-nukaddas-i milli-i Isfahan, 1907-8; and also Muhammad Sa'dr Hashimi, op. cit., i, 290). The membership of the "popular" angjumans also varied from place to place to reflect the strongly developed in Tehran, Tabriz, Isfahan, and north Persia than in the south. Whereas prior to the grant of the constitution the Tehran angjumans were largely drawn from the religious classes and the intellectuals, in the second phase they had a strong connexion with the craft guilds; many of them also had local affiliations. In Tabriz each street tended to have its own angjuman; and in Tehran not only were there local angjumans but the inhabitants of different districts and provinces who lived in Tehran also formed their own angjumans. In Adharbaydjan from the first the angjumans were opposed to the large landowners and had a strong "middle class" bias. In Isfahan, on the other hand, the angjumans were largely dominated by the local religious leaders. In Rasht some of the members of the Angjuman-i Milli formed there are said to have been connected with the Social Democratic Party of Baku (Malikzadeh, Tarih-i inkilabi-i mahsuliyyat-i Iran, ii, 264). In general, however, the members of the angjumans had had no political experience, and there was a tendency on the part of some of them to an irresponsible interference in the administration of the country ( Cf. Cd. 4381 Persia No. 1 (1909), no. 176, p. 143). In spite of this they played an important part in creating a public opinion in favour of constitutional reform and were the one support which the National Assembly had against the reactionary party. Further, through the contact which the angjumans established with each other they fostered a certain sense of solidarity among those who were seeking to assert themselves against the arbitrary, and often tyrannical, rule of the provincial governors. Prior to this time any attempt by the people to assert themselves against the local authorities was likely to be isolated. The angjumans created a sense of a community of interest and this gave the people in widely separated districts courage to act. The success of the angjumans in providing a focal point for public opinion in support of the constitution was such that their opponents sought to counter this by infiltrating into existing angjumans to have been known by its original name hoping to confuse the issue by working in secret against the constitution under cover of nationalist associations.

Muhammad 'Ali, who succeeded his father, Musaffar al-Din, in January 1907, disliked the constitution from the start. After the appointment of Mirza 'Ali Asghar Khan Amn al-Sultân, the A'tabak-i A'zam, as prime minister in the late spring of 1907 there was a great increase in the numbers of the angjumans, secret and otherwise, formed for the defence of the constitution (Abdallâh Mustawfi, Shahr-i zindagi-i man, Tehran 1945, ii, 244-6; memorandum by Churchill, enclosed by Sir Cecil Spring Rice to Sir Edward Grey in a letter dated 23 May 1907, Cd. 4581, no. 26, p. 27). Little was done to implement the constitution. Disorders were fomented in the provinces. Russia was suspected of aiding and encouraging the Shah against the National Assembly, and the belief grew that there was secret collusion between the Shah and the Amin al-Sultân for the overthrow of the constitution and the sale of the country to Russia. On 31 August the Amin al-Sultân was assassinated by a certain Abbâs Âkâ (who immediately afterwards shot himself). On the assassin's body was found a paper stating that he was devotee (fiddâ'i-i milli) no. 41 of the Angjuman. Whether in fact such an angjuman whose members were thus known as fiddâ'is really existed remains an open question. There is, however, no doubt that the murder had the support of the Shah, and gave rise to the belief that the membership of secret societies whose members would not stop at political assassination to gain their ends was spreading. Popular sentiment approved the murder and regarded Abbâs Âkâ as the saviour of the country (Kasrawi, op. cit. (in Bibl.), 447 ff., Browne, op. cit., 150 ff.).

An abortive attack by the court party on the National Assembly in the winter of 1907-8 was frustrated by the help of the Tehran and provincial angjumans. Some of them meanwhile began to raise volunteers for a kind of national militia. In June 1908 a more serious attack was made against the National Assembly. The angjumans again rallied to its defence, this time in vain. The Cossack regiment bombarded the Assembly and the angjumans were dispersed after a brief resistance. The Assembly was closed and a number of prominent nationalists were arrested and some executed. The organization of the nationalist resistance, which culminated in the deposition of Muhammad 'Ali and the restoration of the constitution in July 1909, largely devolved on the angjumans. They were helped in this by angjumans formed by Persian communities abroad, especially the Angjuman-i Sa'adat in Constantinople. As soon as the Angjuman-* Sa'adat Assembly he sent instructions to the provinces for all the angjumans to be closed also (Kasrawi, op. cit., 672). Immediate and effective resistance came from Tabriz only. Government troops were expelled from the town, which was then blockaded, the siege being raised by Russian troops who opened the Julfa road in April 1909. The resistance of Tabriz organized by the Angjuman-i Milli-i Ayâlati, although the nationalists were eventually forced to capitulate, gave the nationalists in other cities of Persia, especially Isfahan and Rasht, time to recover after the coup d'etat of 1908. In Isfahan contact was eventually established between the angjumans and the Bakhtiyarís and in January 1909 Isfahan was taken. At the end of April a force of Bakhtiyarís and nationalist fighters (muğâhidîn) set out from Isfahan for the capital, while the Sipahdar-i A'mâm Muhammad Wall Khan, who had been in command of the government troops outside Tabriz and had gone over to the the nationalists and assembled a force of muğâhidîn in Gilân and Tunâkabûn, marched on Tehran from the neighbourhood of Kazâm. The two forces entered Tehran on 13 July and Muhammad 'Ali abdicated on 17 July.
With the restoration of the constitution the activities of the "popular" andjumans declined. For a brief period in 1912 when renewed attempts to change the constitution were made they were once again sporadically active; and various acts of violence were attributed to them. However, when the constitution was again suspended in 1912 on account of the opposition of the National Assembly to the Russian ultimatum demanding the dismissal of Mr. Morgan Shushter, the treasurer-general, the cumulative effect of internal disorders, the infiltration of hostile elements into the nationalist movement, the infiltration of all, Russian, did not make virtually impossible, the emergence of a popular movement of protest. The "popular" andjumans, thus, had no longer a function to perform and so they disappeared from the political scene.

(iv)—Tunisia. In Tunisia, the term djam'iyya does not appear to have been in use before the 19th century. Khayr al-Din al-Tunus used it in 1284/1867 in the sense of academy, scientific association; charitable society; municipal or cantonal organization (djam'iyyat al-khdnt), agricultural or industrial association; parish, parish council; various groups of teachers, notables, officials, local magistrates, municipal councillors. In the field of economics he used sharika (but djam'iyya for a joint-stock company). He even used the expression al-darabiyya (Akwas al-masadik). In the twentieth century djam'iyya signifies association, society, corporation, league, parliamen
tary assembly (al-djam'iyya al-thakdfiyya) and includes so-called voluntary associations of every sort (al-djam'iyya al-jam'iyya). Religious associations.—The oldest is the Djam'iyyat al-Askhd, in charge of the public harbou and with the right to inspect the endowments of private harbous and Zaulias (sawaya). It is social and religious in character. With it can be connected the Djam'iyyat ka'adyiya (charitable), the first of which was founded in 1323/1903. In 1380/1902 the Yearbook (Rasama) added the takhdy (sing: takhyiya), institutions dating from 1314/1905, under 'Ali Pasha Bey. Neither the traditional Islamic organizations nor the confraternities (fariba) bear this name. The non-confessional associations founded after 1900 added to their titles the adjective islamiyiya or tarabiyyiya, to be replaced by tunusiyiya or wataniyyiya between 1919 and 1938 (a period of intense Destour activity). In 1935 Shaykh 'Abd al-Aziz al-Bawandi founded the Djam'iyyat al-islamiyiya al-khurabiyyiya (Kurlanic readings).

Political associations.—To the "evolutionist" group are attributed numerous foundations connected with music (al-Hilal, 1322/1904 and al-Jussayniyya founded in 1907 in al-Nasriyya), sport (al-Islamiyya, 1905), the theatre (1905), etc. Special mention must be made, on account of its influence, of the "Association of North African Muslim students in France" (Djam'iyyat talabat shamli Iftikhyya al-muslinin bi-Fransa), which was presided over by several well-known Tunisians. From the time of its foundation (1934) the Neo-Destour created or controlled numerous associations (for example, Unj al-shubbdn al-muslmn). In 1945 there occurred a characteristic regrouping of existing associations (agricultural labourers, workers, officials, students, and teachers, women, young people etc.). The word hijze, party, denotes a purely political association from the time of the foundation of the Young Tunisian Party (1907).}

Economic associations.—The first of these appears to have been the association of food merchants: Djam'iyyat tudujdar al-ma'ta'ah (15 September 1888). After 1906 they became more numerous (at least nine societies were founded between 1910 and 1921); in this sphere, after 1906 sharika tends to replace djam'iyya. From 1888 to 1938, out of 38 societies only 6 bear this second name. At first societies had a symbolic name (nahda, i'tadun, 'aladud) with sharika as a secondary name, then changed or added the adjective tamimidhat al-sa'dikiyya) which rapidly acquired great political importance. Groups with aims concerned with sport, music, the theatre etc. also adopted or at least implied the title Djam'iyya.

Cultural associations.—The term djam'iyya applies particularly to unaffiliated associations of this sort. The earliest in date (18 Radjab 1314/22 December 1896) was the Djam'iyya al-khdamiyya whose aim was the teaching of modern science to Tunisian students, particularly those of the great mosque. The second (15 December 1903) was the Association of Former Pupils of Sadiki (Djam'iyyat kidama' al-talidimhat al-sa'dikiyya) which was founded in 1910, the National Commercial Society (al-Tarakki, 1910), the National Commercial Society (al-Amam, 1914); and the still more significant title al-Istihlab al-khusr.

Cultural associations.—The term djam'iyya applies particularly to unaffiliated associations of this sort. The earliest in date (18 Radjab 1314/22 December 1896) was the Djam'iyya al-khdamiyya whose aim was the teaching of modern science to Tunisian students, particularly those of the great mosque. The second (15 December 1903) was the Association of Former Pupils of Sadiki (Djam'iyyat kidama' al-talidimhat al-sa'dikiyya) which rapidly acquired great political importance. Groups with aims concerned with sport, music, the theatre etc. also adopted or at least implied the title Djam'iyya.

New associations.—With the coming of independence (20 March 1957), the associations underwent a transformation (juridical reforms, a new political, cultural, economic structure). What was called (ittihab) took the place of Djam'iyya. However, the term remained in use for cultural associations, as is shown by the recently established "Cultural Associations Centre" (Ddr al-djam'iyyat al-thakdfiyya).

publications) of associations and societies (in Arabic and French): a more detailed study is to appear in IBLA.

(A. Deemereeman)

India and Pakistan.—In Muslim India the word diamiyya is replaced by diamatul or diamat as a term for religious or religio-political as distinct from purely political organizations. The term, in this sense, is of recent though not of modernist origin.

The Diamatul-i mudajhidin, the religio-political organization formed by Sayyid Ahmad Barelvi, owed its name to its movement of diamah against the secularist party in 19th century and later against the British. Essentially it based its programme on the teachings of Shâh Wali Allah and his successors to purify Indian Islam from syncretic elements borrowed from Hinduism and to organize and strengthen the Muslim community socially and politically. It was a popular organization deriving its support from all cross-sections of Muslim society and operating its own bayt al-adl and bayt al-mdldh. The Diamatul-i al-ulama-i Hind was founded in 1919 at the peak of the Indian Muslim agitation in favour of the Ottoman Khilafat. Mawlana Mahmud Hasan, already a well-established religio-political leader was among its founders, and though the ulama of the Farang Mahall [see dar al-ulum] and members of the Nadwat-ul-ulama also participated in it, the element of Deoband [q.v.] remained by far the most powerful. It supported the nationalistic programme of the Indian National Congress and was opposed to separatist trends in Muslim politics and to the demand for Pakistan by the general Muslim consensus.

This led in 1945 to the formation, by a dissident group of Deobandis and other ulama, of the Diamatul-ul-ulama-i Islam, under the leadership of Shabbir Ahmad Uhmâni, which supported the Muslim League's demand for Pakistan. It moved to Pakistan in 1947, and during the various phases of that country's constitution-making championed the traditionalist view of the shari'ah. Another traditionalist organization which participated to some extent in the processes of constitution-making and legislation was the Diamatul-ul-ulama-i Pakistan.

The Diamatul-Islami differs from these traditionalist religio-political bodies in that it has a strong programme strictly on fundamentalism. It was founded in 1941 by Abu 'l-Alâ Mawdudl, with its centre at Pathankot, and moved to Pakistan in 1947, where it developed itself into a well-knit, well-organized religio-political group, extending its influence into urban and rural areas of West Pakistan and playing a controversial role on the question of the ideals and constitution of Pakistan as an Islamic state. Its fundamentalism is the complete antithesis of liberal modernism and vests all rights of legislation imutrably in God alone, denying them to all human agencies, individual or collective, thus preaching a theocracy which is to be run by the consensus of the believers according to the letter of the revealed law.

Bibliography: Among old writers, it is to be noticed that Husri (Zahr and Diam, see index) frequently quotes anecdotes and lines of al-Diammâz; Khatib Baghdadî, iii, 125-6, and Kutubî, 'Uyân al-tawdrlkh, MS. Paris 1588, 149 a-b, carry a notice of him; Marzubani, Mu'adham, 276, and Mul'dim, 431, concentrate more on the work than the man. See also: Djaluz, 163; Marzubani, i, 174-5, 395; see index; Ibn Kutayba, Mul'dam, 71; Tabari, iii, 1412; Ibn al-Athir, vii, 39; Âghami, index: Qasâ'ib, Thmâr al-bulshâ, 322; Ibn al-Hashadji, Hamâsa, 275; 'Askari, 'Indatayn, 50; Kâli, Amâlî, iii, 46; Yâkût, Irshad, ii, 60. Biographical data and a number of lines are contained in Sandûbh, 'Adab al-Djâlîz, 46-8; Hâgîri, in his edition of the Djâlîz of Djalîz, 315, gives a summary of his biography: (Ch. Pellat)

Djâmînâ, the usual modern Muslim spelling of the Indian river which rises in Tehrl in the Himalaya and falls into the Ganges at Allahabad. Generally called Jamna (older Jumna) on western maps, its Sanskrit name Yamuna has been largely re-adopted in modern India; it was known to Ptolemy as Gemina, which was quick and scathing at repartee, but his humour, following the taste of the time, was in general very coarse.

etc.) to the south. Navigable for the greater part of its length in the plains, it was an important traffic route which is coming under the railways; this and the purity of its water have largely been responsible for its urban settlements in Dihlī, Mathurā (Muttra), Āgrā, Etāwā, Kulpī and Allahābād [qq.v.].

Of its canals, the East Jumna canal was a British enterprise. The western canal, however, was begun by Firoz Shāh Tughlūkh in 757/1356, as a monsoon supply channel to Hīdrār and Hānī, [224 ff.). They can be traced to an ancient pagan cult of planetary origin, but warned that the present state of knowledge does not permit of a definitive answer being given (see HADJDJ).

Djāmsīd (Avestan Yima Khshaeta “Yima the brilliant”), in abbreviated form Djam, an Iranian hero who has “remained alive in popular and literary tradition, from Indo-Iranian times until our own day (see the texts collected, translated and commented upon by A. Christensen, Le premier homme et le premier roi dans l’histoire légendaire des Iranians, ii.)

To the Indian hero Yama, son of Vivasvant, sometimes immortal man become god, sometimes the first human to have suffered death and to have become its god (Rig-Veda. Māhābhārata, Atharva-Veda; cf. the texts in Christensen, op. cit.) there corresponds, in the texts from ancient Iran, the hero Yima, son of Vivasvant, a hero of the millennium when men, rescued from the influence of the pristine dharma of priestly religion, did not know hunger or thirst, heat or cold, old age or death; he founded towns and villages in thousands, kindled the three sacred fires, organized the social castes, preserved humanity from perishing by providing a safe, vast refuge, underground but nevertheless light, the Var [cf. Noah’s ark], on the approach of a terrible winter followed by floods, provoked by a
sorcerer or demon; but, according to the texts, he taught men, who were then simply vegetarians, to eat animal meat (hence his condemnation by the Avesta which forbids sacrifices of blood; cf. text and commentary in Christensen, op. cit., ii, 119). Several historical personages bore the name of Djamshid (or Djam); among others, the son of the Sasānīd king Kavadh I (Christensen, L'Iran sous les Sassanides, index: Zham; idem, Les Kayanides, 40), a son of the Ottoman sultan Mehmed II (see Djamshid, Dr. Safa, Hamāsa-sarātī dar Īrān, 396 ff.; idem, Tāvīrīh-i adabiyat-ī Īrān, (index); H. Masse, Croyances et coutumes persanes (index I: Djamshid).

Bibliography: in addition to the works mentioned in the text, see: Desmaisons, Dictionnaire persan-français, art. Djamshid, the name denoting three sovereigns; Gr. I Ph. (s.v. Yima); A. Christensen, Les Kayanides (index: Yim); Sven S. Hartman, Gayomart (index: Gayomard, Demd-i Naṣrābaddār); B. Benveniste, Les classes sociales dans la tradition avestique, in JA, ccxii (1932), 117 ff.; G. Dumézil, Jupiter, Mars, Quirinus, 45 ff.; Browne (index: Djamshid as named in lyric poetry); Dr. Safa, Hamāsa-sarātī dar Īrān, 396 ff.; idem, Tāvīrīh-i adabiyat-ī Īrān, (index); H. Masse, Croyances et coutumes persanes (index I: Djamshid).

Djamshid was associated with the magic cup which credits Djamshid with the invention of wine (cf. Muhammad Mu'īn, Masdasyasā, Tehran 1326/1948, 267 ff.; Djamshid appears many times in the ghazals of Ḥāfīz (play of words on djam and Djam: ed. Kazwīnī-Ghāni, no. 78, 179, 431, 468).

In his early youth Djanab came under the influence of the last important group of supporters of Sasanid tradition: Christensen, op. cit., 74; later, he was avenged upon Ḥūshang through the hollow tree in which he had taken refuge (a borrowing from Talmudic tradition: Christensen, op. cit., ii, 124 ff.).

In his early youth Djanab came under the influence of the last important group of supporters of Sasanid tradition: Christensen, op. cit., ii, 124 ff.).

The poet Asadī (s.v.) of Tūs told of the romance between Djamshid and the king of Kābul with whom he had taken refuge from Zahhāk, who pursued them as far as China (Livre de Gerghasp, i, 37-91, text and trans. Cl. Huart); Djamshid's magic cup has given the name to a poem djam-i Djam (see art. Awarna; the vowel of the second Djam should be changed to a short a); a romance in verse by Salmān of Savē (s.v.) tells of the love of Djamshid, son of the emperor of China, and Khūshīrd, daughter of the emperor of Byzantium. As it is not possible to mention here all the poems in which Djamshid features, we will limit ourselves to the "Djamshid's daughter", following the popular belief which credits Djamshid with the invention of wine (cf. Muhammad Mu'īn, Masdasyasā, Tehran 1326/1948, 267 ff.; Djamshid appears many times in the ghazals of Ḥāfīz (play of words on djam and Djam: ed. Kazwīnī-Ghāni, no. 78, 179, 431, 468).

Christensen, Les Kayanides (index: Yim); Sven S. Hartman, Gayomart (index: Gayomard, Demd-i Naṣrābaddār); B. Benveniste, Les classes sociales dans la tradition avestique, in JA, ccxii (1932), 117 ff.; G. Dumézil, Jupiter, Mars, Quirinus, 45 ff.; Browne (index: Djamshid as named in lyric poetry); Dr. Safa, Hamāsa-sarātī dar Īrān, 396 ff.; idem, Tāvīrīh-i adabiyat-ī Īrān, (index); H. Masse, Croyances et coutumes persanes (index I: Djamshid).

Djanab Shihāb al-Dīn

He was born in Monastir. Upon the death of his father, an army officer, killed at the battle of Plewna (1876), he settled in Istanbul with his mother and attended, as a boarder, various military high schools, graduating from the military School of Medicine in 1889 as an army doctor. He spent four years in Paris completing his medical studies. On his return to Turkey he served in various Department of Health offices in the provinces and in Istanbul. After the Constitution of 1908 and during the First World War he tried political life without success. On retiring from government service he joined the staff of the Faculty of Arts of Istanbul University (1914) but had to resign in 1922, following a student protest about his hostile attitude towards the Nationalist movement in Anatolia. After the establishment of the Republic (1923), and after a vain attempt to win the favour of the new Government in Ankara, he lived until his death a relatively secluded life, contributing essays and occasional poems to the revived literary review Taheret-ī Fūnān.

In his early youth Djanab came under the influence of the last important group of supporters of
the old school of literature and his first poems are in the classical tradition. But he soon freed himself of this influence and began to write poems strongly inspired by the work of the great modernist ʿAbd al-Jahak Ḥāmid and of ṭhe ṭMiddle of Kurʾān, LVI, 77-9. The distinction is based on the wording of Kurgan, ṭtayammum [q.v.].

The western group consists primarily of Bedouins, though some own property, e.g., the chief of the tribe, Djasir, who has land in ʿĪz, which is regarded as the tribal capital. Dīṣir also has a claim to the island of Maṣṭra, on which he stays for a time each year. The favourite range of the western Djanaba, the wadis in the vicinity of the town of Adīn, lies east of the range of the ṭDurūʾ.

The Djanaba belong to the Ghafiri faction, in which they are allied with the ṭDurūʾ in opposition to ʿAlī Wahiba, who are ṭHināwī. The enmity between these tribes is no longer as bitter as it once was. In ṭDjaʿān the Djanaba are allies of Banī Bū ṣAllī. The Djanaba call themselves Sunnis; Iḥādī doctrines have not made much headway among them, though they respect the Iḥādī ṭImām. Bibliography: B. Thomas, Alarms and excursions in Arabia, Indianapolis, 1931; W. Thesiger, Arabian sands, London, 1959; ʿAbd Allāh b. Ṯumayd al-Ṣālimī, ṭTuḥfat al-Aʿyān, Cairo, 1332-47. Also information from inhabitants of Oman.

(Ḡ. Ṭeṣṭīʾ)

Djanābshīhāb al-Dīn—Djanābshāb

Istanbul 1934; Ālī Ṭanī Ṭawīm, in Aylık Anıtıbāfühlū, Istanbul 1945, i, 298-9; Ṭenān Ṭukbīz, Bātī tāsirīne ʿūrā ṭīrī ṭuṣṭūlī, Ankara 1953, 205; Cenāb Mīṣāḥ, (Fahīr Ṭeṣṭīʾ) al-Djanābshāb (ṣing. Djanābshīb), one of the leading tribes of Oman. Apparently at one time the strongest of all the Bedouin tribes there, the Djanaba still number enough nomadic members to rank as peers of the ṭDurūʾ [q.v.] and ʿAlī Wahiba [q.v.] in the desert. The main divisions of the Djanaba are the Maḍjīlā (sing. Maḍjīl), pronounced Māʾālī, the ṭFawārīs, ʿAl ṭDubayyān, and ʿAl Ābū ṭGhālīb, of which the first is considered to be paramount. The present chief ṭraṣṭīd of the tribe is Dīṣir b. Ṭaḥmīb, whose predecessors were the descendants of al-Murr b. Ṭanīṣūr.

Covering a wide territory, the Djanaba generally speaking fall into two groups, an eastern and a western. In the east many have settled along the coasts, in Śūr on the Gulf of Oman, which is shared with Banī Bū ṣʿAllī, and in the little ports of the coast of the Arabian Sea as far south as al-Dīkār. These settled folk have largely turned their hand to nautical affairs, and some have done well as merchants, trading to Bombay, Zanzibar, and the Red Sea. The nomads in the eastern group have large herds of camels and goats, which they keep on the coasts in winter and in the interior in summer, sheltering themselves in caves from the south-west monsoon. Some are skilful fishermen, especially in catching sharks.

The western group consists primarily of Bedouins, though some own property, e.g., the chief of the tribe, Dīṣir, who has land in ʿĪz, which is regarded as the tribal capital. Dīṣir also has a claim to the island of Maṣṭra, on which he stays for a time each year. The favourite range of the western Djanaba, the wadis in the vicinity of the town of Adīn, lies east of the range of the ṭDurūʾ. In ṭDjaʿān the Djanaba are allies of Banī Bū ṣʿAllī. The Djanaba call themselves Sunnis; Iḥādī doctrines have not made much headway among them, though they respect the Iḥādī ṭImām. Bibliography: B. Thomas, Alarms and excursions in Arabia, Indianapolis, 1931; W. Thesiger, Arabian sands, London, 1959; ʿAbd Allāh b. Ṭumayd al-Ṣālimī, ṭTuḥfat al-Aʿyān, Cairo, 1332-47. Also information from inhabitants of Oman.

(L. Ṭeṣṭīʾ)

Djanābshāb, the state of so-called major ritual impurity. It is caused by marital intercourse, to which the religious law assimilates any effusio seminis. One who is in this state of so-called major ritual impurity, the minor ritual ablation (wuduʿ [q.v.]). The ṭazāyamōmm [q.v.]. On the other hand, the law prescribes for a Muslim in the state of so-called minor impurity the minor ritual ablation (wuduʿ [q.v.]). The distinction is based on the wording of Kurʾān, V. 6. The ṭazāmān cannot perform a valid ṭahīl; he may not make a ʿfāṣil round the Kaʿbah, enter a mosque (except in cases of necessity), touch copies of the Kurʾān or recite verses from it; these last provisions are based on the traditional interpretation of Kurʾān, LVI, 77-9. Djanābshāb is also called “the ṭmajor ṭadāḥa” [q.v.], in opposition to the minor ritual impurity.

AL-DJANAWAN, ABU 'ABD ALLAH BAHAR AL-DIN
MUHAMMAD B. YA'QUB B. YUGAF, SHAIKH AL-DIN AL-HANAFI

Ibn al-Suluk fi tabakat al-umam wa l-muluk, an important biographical
dictionary of the learned men, primarily jurisconsults,
of Yemen arranged by the towns in which they were born
or lived. The work proper is preceded by a long introduction comprising a political
history of the country from the time of the Prophet to 724/1323-4,
early recognized by the later historians of Yemen to be of the greatest value so that his work
is quoted as a source by al-Khazrajdi, al-Ahda, Abu Makhrama, and others.
The biographical portion was later continued by al-Khazrajdi in his Ti'iraz
vi'dam al-zaman fi tahabit al-ydn al-umam and in the
Tu'hasi al-zaman fi a'yan al-Yaman by al-Ahda.
The Suluk of al-Djanani has not as yet been edited in its
entirety although a portion of the historical intro-
duction, that concerning the Fattimid fi'din in
Yemen, has been edited and translated from the
manuscript in the Bibliothèque Nationale (2117, Add. 267, foll. 308-326) by H. C. Kay in his Yaman,
it's early medieval history (London, 1892). To those
manuscripts of the Suluk listed by Brockelmann
should be added the excellent copy in the Chester Beatty Library
(no. 3110, i. & ii) and another in the
Egyptian National Library in Cairo (25 Ta'Rih);
the latter is a recent photocopy of that in the library of
the great mosque of San'a'.

Bibliography: Brockelmann, II, 184, S II, 236; Hâjdil Khallla, ed. Flügel, ii, 613; al-
Sakhawi, F'lan in Franz Rosenthal, A history of Muslim historiography, 406-7; Kay, pp. xii-xiv.

(C. L. GEDDES)

AL-DJANAWANI (also AL-DJENAWANI), ABU
UBAYDA 'ABD AL-HAMID, GOVERNOR OF THE
Djabal Nafusa for the Ibâdite imâm of Tâhart.
He was a native of the village of Ijânawun (also
Djenawen, in Berber Iqan) situated below the
town of Djâdû in the present district of Fassâto.
He already enjoyed great prestige there about 196/811
during the stay of the imâm 'Abd al-Wahhâb b. 'Abd
al-Rahbân b. Rustam in the Djabal Nafusa. On the
death of Abu 'l-Hasan Ayyûb he was elected
governor of the Djabal Nafusa by the people of the
country and afterwards received the investiture from 'Abd al-Wahhâb, probably a little before the death
of the latter which occurred in 208/823. His gover-
norship, the duration of which corresponded very
nearly with the reign of the imâm Alâb b. 'Abd
al-Wahhâb (208/823-258/871), was troubled by the
continuous war which he had to wage against the
heretic Khâlaf b. al-Samh, grandson of a previous
Ibâdite imâm of North Africa, Abu 'l-Khaatâb 'Abd
al-Alâ b. al-Wahhâb. Several episodes are known of
this war which came to an end only after the victory
which al-Djanawani achieved over Khalaf's army
in 221/835. As a result of this victory the Djabal Nafusa,
whose population were fanatical partisans of the
Rustamids, continued to be a province of the state
of Tâhart until the latter's downfall.

Al-Djanawani was pious and learned. Besides
Berber he also knew Arabic and the language of
Kanem (lugha kdnamiyya), a very strange fact. He
is counted among the twelve mustadâd ib-dû?'i
('those whose prayers are answered') who inhabited the
Djabal Nafusa towards the end of the 2nd/8th
century and the beginning of the 3rd/9th. He resided
at Ijânawun which at this period became for a time
the religious and political centre of the whole
Djabal Nafusa. The Ibâdite tradition recorded by al-
Shamâkî speaks of seventy Ibâdite scholars who
flocked there at that time from all the province
governed by al-Djanawani.

(T. LEWICKI)

DJANABA — DJANAZA
there were exceptions; Abū Bakr [q.v.] gave orders that he should be washed by his widow. It was a mark of piety for one at the point of death to wash himself in readiness. The body was not stripped entirely and was washed several times, always an uneven number, and for the last sādir leaves or camphor was steeped in the water. If disease made it unwholesome to touch the body, it was enough to pour quantities of water over it. Washing began with the right side and the parts washed in the ritual ablation. Martyrs who fell in battle were not washed and were buried in their tight-fitting clothes without prayers. Grave-clothes might be the every day garments, usually three, though sheets were used; white was the normal use though colours were allowed but not red. The eyes were closed, the jaw tied up and the grave-clothes tied tightly but were loosened in the tomb. The body was carried to the grave on an open bier with a cloth thrown over it, and there was an extra covering for a woman. Burial might be in the house but was more usual in a cemetery. The funeral moved quickly for, "If I am good, hurry me to God; and if I am bad, get rid of me quickly". It was better to walk in the procession than to ride and it was a work of merit to help carry the bier, it only for a few steps. A halt might be made at a mosque for prayers which differed from the salah [q.v.] because the mourners stood throughout. Prayers were said by the grave. An extreme personification might be used. A near relative officiated though the governor or a famous scholar might be asked to lead or might insist on doing so. The inam [q.v.] stood by the head of a nian or by the trunk of a woman. Prayers were said over an infant if it had cried once but not over a suicide. Those sitting in the street should stand as a funeral passes. Women were not allowed to be present; this was to avoid the lamentation customary in the Djähiliyya [q.v.] because lamentations added to the pains of the dead. The earth must not press on the body which must sit up to answer Munkar and Nakir (see 'ADHAB AL-KABR) so the grave depended on whether a "trencher" or a "nicher" came first. If this tale is true, these forms of burial existed before Islam but the details are so precise that the whole is suspect. The nearest relatives descended into the grave to put the body in position with the face towards Mecca and to loosen the grave-clothes. One man one grave is the rule; after the battle of Uhud two bodies were put in one grave but one was taken away later; if a man and a woman had to be laid in one grave, there had to be a partition between them. Burial might be on the day of death or the following day but a hurried burial at night was not approved. Some held that the earth over a grave should be level though others allowed a small mound. Covering it with flagstones and the niche shut off by a horizontal stone, it had a hole in it to let water through. Coffins were not used at first but by the 6th century they were common. There might be a meal with gifts of food to the poor. Customs changed; women followed funerals, professional mourners were employed and masonry tombs became common.

Djânâbâz. The Persian djânâbâz, 'playing with one's life; dare-devil' developed these three meanings which, mainly through Ottoman Turkish, spread into a number of languages: 1. 'acrobat', especially 'rope-dancer', which is known in the east as far as Eastern Turki (dânbaşî), in the west in the Caucasian, Turkish, and Egypt (gânbaðhaîî 'rope-dancers', gânbaûz 'gymnastics'), 2. 'soldier' [see article DJANBAZAN], 3. 'horse-dealer'; this latter word spread through Turkey (recorded in the 16th century: Glîsa Elezoviç, Is Carradehîş Türkî Arkîva Muhîmme Defterî, Belgrade 1951, 115, no. 659) north as far as Rumania and south to Syria and Lebanon, often with pejorative development of the meaning: 'one who drives a hard bargain' (Bulgaria), 'merchant who demands exorbitant prices' (Syria), 'trickster' (Rum. gânbaész). —Acrobats, known since antiquity, were always popular in the Near East, and, in particular, in the festivities given by the Ottoman sultans to the people of the capital they were never missing. 'A troupe of excellent Tumblers and Mountebanks (where of Turkey abounds above all the Regions of the Earth)...' begins the description of such a festivity (Michel Baudier, transl. by Edward Grimestone, The History of the Serrail and of the Court of the Grand Seigneur, London 1635, 88 f.). The earliest reference to djânbaç in Ottoman times seems to be found in the description of a circumcision feast for the royal princes in Edirne in 1457 (here Laonikos Chalkokondyles translates the Turkish term, spelled pehlikân [q.v.], as Eastern Turki in the west in the 16th century we have many descriptions, often accompanied by illustrations, both in Turkish sources and narratives of European travellers, of the performances of various kinds of acrobats at public festivities; particularly famous was the circumcision feast which Murâd III gave for his son Mehmed (III) in 990/1582. Ewliyâ Celebi's travel book offers interesting details about the djânbaç in the 17th century. In his account of the palace of the Istanbul guilds he mentions the guild of the acrobats (I, 625 f.), listing several names. He also mentions that the most outstanding rope-dancer, Mehemed Celebi of Uskudar, was holding an imperial letter patent (khâfi'i sherîf) by which he was appointed warden (ser-lesîme) of all acrobats (here the term is pehîvûdan) of the empire, of whom a total of 200 masters were listed in his register (defter). Mehemed Celebi is again mentioned among the participants of a memorable show at Istanbûl (now Zîr, nowadays Ankara) where—we are told by Ewliyâ Celebi (ii, 439-42, ed. Özön, iii, 10-13)—all rope-dancers (here the narrower term remsîbûz is used) assembled once every 40 years for a contest which resulted in the promotion of the apprentices to master's status. The sources for the 16th and 17th centuries can be found in Metin And, Kir Fûn, Kir Fûz, Eski donanma ve şenliklede seyirîk oyunlar, Istanbul

DJANBAZAN (Persian plural of djânbiâz, see previous article)—the name of a military corps in the Ottoman Empire. It is not known when exactly the corps was founded, although it may have been in the reign of Orkhan Ghâzî [q.v.]. The djânbažân served only in time of war, like the ta'azz [q.v.], though being more exposed to military/(political) interference (miners and sappers). Grzegorzek (Z sidsylatâv Rumelskîskîk epoхи wyprawy wiedenskiej, Löw 1912, 53 ff.) believes, however, that they were organized in 844/1440 by Murad II [q.v.] to meet the first Balkan expedition of John Hunyady and that they took part in the battle of Varna. The djânbažân served in the vanguard and were charged with dangerous tasks. This fact led Hammer (Staatsverwaltung,/index) to class them with the irregulars known as serden-gelî (lit. "mad or wild adventurers"), gommîlî ("volunteers") and delî ("madmen", [q.v.]). Grzegorzek followed by Babar (Za wirtschaftlichen Grundlage des Feldzuges der Turken gegen Wien im Jahre 1853, Vienna/Leipzig 1916, 29 ff.) held, however, that they formed the personal body-guard of Bâgzergîs [q.v.] and sandîqâ hegîs, like the djânbažân, while D'Oehsson (Tablau general, vii, 309) thought that, like the gharbînî, the djânbažân served as coastal militia in Anatolia.

The djânbažân later joined the yürüks ("nômads", [q.v.]) and Tatars as well as the yaya ("infantry") and müsellems ("sappers") in forming support forces for the Janissaries (cf. Djelâl-zâde Niğmândî, Tabâhât al-mamlûkî fi darâdât al-maslîk, Fâth Library MS 4467, f. 8; I. Hâkî Uzûncârlî, Osmanlı devleti ticâbdanında kapı kuşu ocâkları, Ankara 1943, 3). A kömün-nâmâ dating back to the middle of the 10th/16th century is in existence concerning the djânbažân of Rumelî. It states that the djânbažân formed an oğlak, that only one served at a time, the remaining nine paying 50 akâs each as "âwârî-i diwânsîye" (see 'âwârîto). The kömün-nâmâ describes the djânbažân as nomads, paying taxes (bâid-i hâsî ruşûmu) to their own officers (Su-hâkî). The relatives and dependants of the djânbažân were assimilated to the corps, which could also be joined by outsiders, related by marriage, and by converts. The djânbažân of Rumelî were considered part of the yûrûk zêvânet of Vize; they were subject to the same penal, taxation and other rules, and seem, therefore, to have come largely from the same stock. They were subject, however, to a more complicated system of anawîrî services (Kömün-nâmâ-i Djânbažân, Başvekâlet Arşivi, Târu Defterleri, no. 226). The Kömün-nâmâ-yi AÎ-i Olymnîn (v. TOEM) states that djânbažân on active service should be considered as soldiers and that the "estate duty" (resm-i kîsmet) for any killed in war should be paid to the bâid-i lâsher, if it exceeds 100 akâs, and in other cases to the bâids of wilâyets.

Later, however, all djânbažân were considered soldiers and all duties became payable to the bâid-i lâsher of Rumelî.

In 950/1543 the corps (â'ârî) of djânbažân amounted to 39 and in 964/1557 to 41 oğlak. 'Ayn-î 'Allî (Kawâmîn-i AÎ-i Olymnîn, 41) gives their strength together with that of ta'azz as 1280, of whom one tenth served at any one time. The corps was abolished towards the end of the 16th century (according to D'Oehsson under Selim II) together with those of the yaya and müsellems.

The djânbažân were cavalry troops and they also bred horses for the army. After their dissolution their name lived on in the form of "âl djânbažâl" meaning "were broken". (M. TAVRÖ GÖMBÖLLÜ)

DJANBULAT, a family of amirs, Derîzî in religion and Kurdish in origin ("soul of steel" in this language), established in the Lebanon, where they formed the Djânbulâtî party, active until the present day (common modern spellings: Djoumblatt, Jomblatt, etc.). The Djânbulât, related to the Ayyûbîds according to Lebanese tradition, appeared in the region of Killy during the 13th century (the Mamlûk Djânbulât al-Nâşîr, governor first of Aleppo and then of Damascus in 902/1497-9, sultan of Egypt for six months under the name of al-Malik al-Ashraf Abu l-Nâsr, d. 906/1501, seems to have no connexion with this family). Djânbulât b. Kâsim al-Kurdi (d. 980/1572), surnamed Ibn ʿArâbî, perhaps by taktiya, suppressed brigandry in the sandîqâl of Kilîl, where he had been placed in charge by the Ottomans, and participated in the conquest of Cyprus. His son Husayn (d. 1013/1604) evicted the wâlî Naṣîh Maḥsa from Aleppo, whom he had assisted against the rebels of Damascus, and was executed at Van for having refused to join in an expedition against Iran. 'All, his son (Djânbulatoghlu to the Ottoman historians), rebelled in Aleppo and extended his rule in Syria; he aligned himself with the amir of Mount Lebanon, Faqhr al-Dîn Ma'n, against Yûsuf al-Sayya, also a Kurd, the governor of Tripoli, defeated the latter at Hamâ, but then was reconciled to him; he established an independent amirate from Hamâ to Adana, failed to remit taxes to the Sultan, had the bîhûba recited in his own name, and raised an army of more than 30,000 men. He was conquered at Orûjî in 1016/1607, as was his ally Faqhr al-Dîn; thanks to his uncle Haydar, he received the pardon of the Sultan at Istanbul. Placed in command of Temesvar, he joined battle with the Janissaries, fled to Belgrade, and was decapitated in 1020/1611. The Djânbulât, however, kept their command over Kilîl and thereafter remained faithful to the Sultan; a nephew of 'All, Mustâfî, became bey of Rumelî. They seem to have left some remnants in the Lebanon during the latter half of the 16th/17th century.

Djânbulât b. Sa'd (d. 1050/1640), probably grandson of 'All, finally emigrated to the Lebanon in 1040/1630 with his sons Sa'd and Rabbû, settled in the Shîf, and, from 1041/1631, joined the campaign of the amîr. His son Rabbû succeeded him, and 'All, his grandson (d. 1224/1712), outlived his brothers Fâris and Şaraf al-Dîn, who were assassinated; he entered the service of the powerful Druze chieftain Kablân al-Kâldî al-Tanâkî, married his daughter, and inherited his fortune and his influence, which he increased by his generosity towards the common people. He helped the amir Haydar Shihâb to carry on the war against 'Ayn Dîn, 1218/1803, against the Yamani "party". Before his death he wished to divide his fortune between his son-in-law 'All and the amîr, but the Druzes bought back the latter's portion for 'All's benefit. This son-in-law 'All built the castle of Muğlêrâyî, finally established the local authority of his family, developed with the Djânbulât "party" an opposition movement to the amîral power, and intervened in the dissensions
of the Shihâb whom he looked upon as upstarts. In 1173-4/1760 he assured the succession of the amir Mansûr against his co-regent Ahmad, then deceased by him, brought the amir Yûsuf to power, joined with him in an unhappy struggle against Dâhir al-
'Umar, and later turned against him, won over by the intrigues of Dîjâzar. He died as an octogenarian in 1192/1778.

Başhîr Dîjandûlât, grandson of 'Ali (?), built the mosque of Muçhtâra on the model of that of Acre, and undertook important irrigation works; he helped the accession to power in 1202-1778 of the amir Bashîr II Shihâb al-Dîjandâr, to whom he was related; he set up his lieutenant 'Abbâs against him during the amir's absence in Egypt; the latter on his return defeated him at Muçhtâr and had him strangled in 1240/1825. After the downfall of the Shihâb dynasty in 1841 the Ottomans preferred the Arslân to the too rich and powerful Dîjandûlât for the Qâ'imakamate of the Shîf. Sa'd Dîjandûlât, set aside in this way, took an active part in the bloody events of 1860; condemned to death, he died in prison in 1861. His son Nasîb continued after him the struggle for authority against the Arslân, whom he eliminated, at the end of the 19th century, from the Kâ'îma-
(32,533),(966,808)

The Dîjandûlât "party" (with a scarlet flag edged with green, bearing a hand and a dark green scimitar) was formed, not in the 17th century as is often supposed, but during the first half of the 18th, when the amir Haydãr supported against 'Ali Dîjandûlât 'Abd al-Salâm Yazbak 'Amãd, who formed the Yazbakî "party". These parties do not continue, as is sometimes claimed, the classical Yamani (finally eliminated from the mountains after 'Ayn Dâra) and Kaysî (with whom the Dîjandûlât were always friendly clans), but substitute for this traditional division an analogous one, some effects of which persist in the contemporary political life of the Lebanon.

Dîjandîr or Dîjandîr, the name given to certain guards regiments serving the great Saljûq and subsequent dynasties. Attached to the royal house-
hold, they provided the sovereign's bodyguard, and carried out his orders of execution. Their commander, the amir Dîjandîr, was a high-ranking officer; some of them are reported as being alâbâhs [q.v.]. Under the Saljûqs of Rûm, they formed an elite cavalry guard, and wore their swords on gold and the badge of the imperial coat of arms. Under the Mamlûks [q.v.], the post being held by an amir of a thousand. Later the office declined in importance, and from the middle of the 15th century to the end of the Mamlûk Sultanate the Dîjandîrs were common soldiers. From Mamlûk Egypt the term passed to North Africa, where it was used of the bodyguards of the Marinids.

Dîjandarî, name of an Ottoman family of 'ulema-stated in the sources, in later works usually Candarli, appears in the oldest inscriptions as Dîjandarî, which has been explained as a nisba from Pers. dîjandar, 'body-
guard' (so Fr. Taeschner and P. Wittek, in 7s/. xviii, 83) or from a locality Dîjand or Cender near Sivri-
hisar (so I. H. Uzuncarşılı, in Bülent, xxiii, 457 f.).

(1) Khayr al-Dîn Khallî b. 'Ali (popularly 'Kara Khallî') is said to have been hâdî successively of Bilegikj, Iznik and Bursa. Murâd I, shortly after his accession, appointed him to the newly-created office of hâdî asker [q.v.], and later (certainly by 783/1381, perhaps earlier, see Belleten, xxii, 465-8) made him vizier; as the first Ottoman vizier to combine with the supervision of the supervising vizier of the sultans, he is reckoned the first 'Grand Vizier'. He played a prominent part in the conquest of Western Thrace, Macedonia and Thessaly, and penetrated Albania (787/1385). Left in Rumeli as vizier. The name, variously spelt in the early sources, in later works usually Candarli, appears in the oldest inscriptions as Dîjandarî, which has been explained as a nisba from Pers. dîjandar, 'body-guard' (so Fr. Taeschner and P. Wittek, in 7s/. xviii, 83) or from a locality Dîjand or Cender near Sivri-
hisar (so I. H. Uzuncarşılı, in Bülent, xxiii, 457 f.).

(2) Khayr al-Dîn Pasha [q.v.] is credited to the chroniclers with the establishment of the corps of the yaya [q.v.] and later of the yeni-serî [q.v.]. He was married to a daughter of Tâdj al-Dîn Kurdi, müderris of the medrese of Iznik. Three sons of his are known: 'Ali (2), İbrîhîm (3) and Ilyâs; the last is said to have been beglerbegi and to have died under Bâyezid I; he had a son, Dâwud Çelebi, who died in 898/1492.

(3) İbrîhîm Pasha's early career is obscure (he too seems to have been a partisan of Emir Suleymân). In 808/1406 he was hâdî of Bursa (Belleten, v, 560 f.). According to one account (Neshri, ed. Taeschner, i, 133) he was sent by Mûsam Çelebi, after Emir Suleymân's death, to Constantinople to demand tribute, and seized the opportunity to desert to Mehemmed I,
who appointed him vizier (but 'Ašḥikpashazāde [ed. Giese, 196] says he had been ḏādiʿāshārī to Meḥmed, who made him vizier on occupying Bursa). A document of 818/1415 shows that he was in that year ḏādiʿāshārī (TTTEM xvi, 379 and n. 21), and another of 823/1420 (Bellett, v, 561) that he was by then second vizier (Bayezid Pasha being Grand Vizier). When, shortly after Murād II's accession, Bayezid Pasha was killed by the pretender 'Dūzme' Muṣṭafā, Ibrāhīm succeeded him as Grand Vizier and remained in office until his death, of the plague (O. Turan, Türk skizeleri, 24, on 24 Dhu 'l-Ḩaḍra 823/25 August 1429). Ibrāhīm (full references to the influence of his family, weakened by their adherence to Meḥmed II's rivals, and followed a cautious and prudent foreign policy.

(4) Khalīl Pasha [q.v.], the eldest son of Ibrāhīm, was by 847/1443 Grand Vizier. He enjoyed Murād II's full confidence to the end of his reign, but the part he had played in recalling Murād to the throne and in guiding him was by then second vizier (Bayezid Pasha being Grand Vizier). A document of 823/1420 (Bellett, v, 561) that he was by then second vizier (Bayezid Pasha being Grand Vizier). When, shortly after Murād II's accession, Bayezid Pasha was killed by the pretender 'Dūzme' Muṣṭafā, Ibrāhīm succeeded him as Grand Vizier and remained in office until his death, of the plague (O. Turan, Türk skizeleri, 24, on 24 Dhu 'l-Ḩaḍra 823/25 August 1429). Ibrāhīm (full references to the influence of his family, weakened by their adherence to Meḥmed II's rivals, and followed a cautious and prudent foreign policy.

The second phase of the Djangall movement was marked by open Bolshevik support, which changed its whole character. On 18 May 1920 the Red fleet bombarded Enzeli, and Soviet troops occupied Rasht, and by October 1921 the rebellion was over. Mīrza Kucik Khan, styling himself the 'representative of the Persian Socialist Soviet Republic proclaimed in the city of Rasht', announced the establishment of the Persian Socialist Soviet Republic. The Glīn Soviet, which remained in power until the autumn of 1921, confiscated the estates of the big landowners and distributed them among the peasants, but met with no success in its attempts to organize the Persian peasants into independent local Communist groups.

By the terms of the Soviet-Iranian treaty of 20 February 1921, the Soviet Government renounced the imperialist policies of the former Czarist Government towards Persia, and on 8 September 1921 Soviet forces were withdrawn from Persia. Deprived of Soviet support, the Djangall movement collapsed when faced by strong Persian forces under the leadership of Rīdā Kān (later Rīdā Shāh [q.v.]), and by October 1921 the rebellion was over. Mīrza Kucik Khan was captured, and executed.
Djanganli — Djankli Haidiji 'Ali Pasha

DNÉNGS, name of the dynasty which ruled Bukhârâ (q.v.) from 1007/1599 to 1199/1785. It was descended from Djânî b. Ya'âr Muhammad, a prince of the house of the Khân of Astârkhan (Tâhir Ahdârkhân and Ahsârkhân) who had fled from his homeland before the advancing Russians to Bukhârâ around 963/1556. It was from this homeland of his that the dynasty was also called Ahsârkhânids (for genealogy cf. Čorangids).

Djân married Zahra Khanîn, a sister of the Shaybânîid ruler Ābd Allâh b. Iskandar (q.v.). On the latter's death in 1006/1698 the empire that he had founded rapidly crumbled, and it was then that the son of this marriage, Bâkî Muhammad, was able to establish himself in the territory at the core of the state around Bukhârâ in 1007/1599 (for more detailed information see Bukhârâ); he died in 1014/1605-6. The state was strengthened by Imâm Kûl Khan (1027-53/1611-43), who secured internal order by the cruellest of methods and, thanks to his religious leanings, he enjoyed the archivs of the favours. He finally retired to undertake the hadîjdî (1060/1650).

The most significant ruler of the dynasty was Ābd al-Âzîz (1055-91/1645-80), who was also outstanding as a Muftî. After his death the authority of the dynasty sank rapidly. The local princes (Bîy) became almost independent, and the Farghânâ valley was separated off as a Khôkand (q.v.) Khânate on its own. Abu l-Fayd (1123-60/1711-47) became a plaything in the hands of the amiral family of Mangît (q.v.), whose members often held the position of an Atâlik. From 1167/1753-4 it was the Mangîts who exercised the actual power within the state. The last Djan married Abu l-' Ghâzlî Khan (1171-99/1757-85) was only nominally Khân, rather like the Čingizids in the case of Timûr. Yet the first completely independent Mangît ruler (since 1199/1785) continued to be related in marriage to the Djanîs.

Under the Djanîs Bukhârâ was one of the centres of Sunni orthodoxy; its leading rôle in defensive struggles against Şî'î Persia was politically significant also. Furthermore, the state constantly had to withstand attempts on the part of the Mughal ruler Shâhjahân (q.v.) in the first half of the 17th/18th century to regain the homeland of his ancestors. Through the rivalries of the Biys and the growing pressure of taxation, however, the agriculture of the state deteriorated more and more, and commerce took other paths. Literary expression was in Persian rather than in Özbek, and it consisted essentially of works of a traditional stamp; yet these works, as also the historical writings of this period (in spite of much Russian pioneer work) have not yet been fully investigated. The architecture is greatly inferior to that of the Timûrids.

Djakîn (Canîk), an area along the Black Sea between Bafra and Fatsa, including the mouths of the rivers Kızîl and Yeşil İrmak, as well as the mountainous regions to the east. It is called after the Tsan (Georg. ćan, compare Macdonald Kinneir, Journey, 282)—a tribe of the Laz—and it has a mild climate and fertile soil; consequently, it is relatively densely populated (between 50 and 100 people per sq. km.). Until recently it was related in marriage to the sandjak of Samsun (q.v.), and is applied even today to the beautiful mountain forests of Djänik Dağlar along the Black Sea coast from Samsun to Ordu.

Djänîk once belonged to the Turkish provinciality of the Djândar-oghlu of Kâstamûnî, and together with this, it was incorporated into the Ottoman Empire by Sultan Bâyazîd I. After Bâyazîd's defeat at Ankara in 1402, Djänik was re-established by Timûr, but it was later conquered by Mehêmed I, becoming a lâwâ of the eydiyet of Siwas with Samsun (which—next to Trabzon—is the most important port on the Black Sea) for capital. In more recent times, it was a sandjak of the vilâyet of Trabzon, with the sandjak of Samsun, Fatsa, Ünye, Termel, Çarşamba, and Bafra. Under the Turkish Republic, the greater part of Canik forms the vilâyet of Samsun.

Djakîklî Hâdîdji 'Ali Pasha, Ottoman soldier and founder of a Derbeyî (q.v.) family. He was born in Istanbul in 1153/1740-21, the son of Ahmed Ağa, a kapâdî-bâshî at the Imperial palace. As a youth he accompanied his elder brother Suleyman Pasha to Djänik, where he eventually succeeded him as ruler with the title, customary among the autonîmous deerebeyes, of mukassil (q.v.). During the Russo-Turkish war of 1182/1768-1188/1774, he held a number of military commands. Serving first in Georgia, he was appointed in Destiny II 1185/ September-October 1769 to the staff of the Se'âlker of Moldavia, where he distinguished himself in the fighting against the Russians and took part in the battle of Khotîn, narrowly escaping capture. As a reward he was given the rank of vizier. In 1188/1774 he led an expedition to the Crimea and in 1190/1776 was appointed Se'âlker of Kars. In the meantime he had been able to consolidate his authority in
Djanlk, overcoming or winning over such opposition as existed, and to extend his dominions eastwards. In 1185/1777 he was recognized as Wali of Trebizond, where his brother Sulayman Pasha had preceded him. The province was assigned to him as a mdlikdne [q.v.]. Within the next few years his holdings were extended to include Sivas and Erzurum.

On 3 Dhu 'l-Hijja 1191/2 January 1778 he was again appointed Serasker of the Crimea and given the command of an expeditionary force which, with naval support, was to threaten the peninsula. This plan came to nothing. All Pasha now had to deal with his Anatolian rival the Çapanoğlu (see Ömer), who, at the instigation of his enemies in Istanbul, launched an attack against him. Deprived of his offices and of his vizirial rank, he fled in 1193/1779 to the Crimea, where he sought refuge with the Khan, Shahīn Giray. In Şahbân 1195/August-September 1778, thanks to the mediation of the Khan, he was pardoned and reinstated, recovering the rank of vizier and the control of his dominions. In 1190/1776 he presented a memorandum to the government on the reasons for the Turkish defeat in the Russian war and, more generally, on the reforms that were needed in the Empire. The work of a man of action, it deals with practical problems in simple, direct, and sometimes forceful language, and is a remarkable document of its time.

An edition is in preparation. All Pasha died in Şahbân 1196/June-July 1785.

Bibliography: Djewdet, Ta'rikkh, iii, 144-6; Sîddîqî, Oğlu Sîddîqî, iii, 548-9; Ismail Hakkî Uzan-çarî, Osmanlı tasvirleri, iv/v, Istanbul, 1956, 447-51, 509-11, iv/vi, 1959, 32-3. All Pasha's memorandum is mentioned by Djewdet (loc. cit.) and is preserved in Üpsala (a rather free paraphrase of parts of it will be found in M. Norberg, Türkiska Rikets Annaler, v, Hernösand 1822, 1425-43).

(B. Lewis)

DJANNA, "Garden", is the term which, used autonomastically, usually describes, in the Kur'ân and in Muslim literature, the regions of the Beyond prepared for the elect, the "Companions of the right"? E.g.: "These will be the Dwellers in the Garden where they will remain immortal as a reward for their deeds on earth" (Kur'ân, XLVI, 14). Other Kur'ânic terms will be considered later either as synonyms or as particular aspects of the "Garden": al-Ma'mûd, li-Firdaws ("Paradise", sg. farîdû, cf. paraklesis XXIII, 11), the Dwelling of Salvation or of Peace (dâr al-Salâm, VI, 127; X, 25), of Sojourner (al-Muhammâ, XXXV, 35), of the true Life (al-Hayawan, XXIX, 64), Garden of Retreat or of Refuge (gânnat al-Ma'âwâ, LIII, 15), of Eternity or Immortality (al-Âhad, XXV, 15), Gardens of Delight (gânnat al-Nâmîm, X, 9), etc. Following current usage, we shall translate Djanna as "Paradise", and cite Firdaws in its transliterated form.

(A) Evidence from the Kur'ân

The description of Paradise, the presentation of the relationship between its delights and the "good deeds" (şâliâhî) performed on earth by the believer, together with the description of Hell (nâr, dijâkannam) and the terrors awaiting the damned, form one of the major themes of Kur'ânic preaching. These passages constitute a form of târîka bîhâlîbiyya ("way of eloquence") with frequent and urgent evocations of the blessed life. The schools were to differ on the interpretation of these verses.

It would take too long to classify and enumerate here the descriptive details of the Kur'ân. The essentials may be found in Şübiî al-Sâlih, Les Délices et les Tournants de l'Au-Delà dans le Coran, doctoral thesis (Sorbonne 1954), typescript, 18 ff. The following summary is derived from it:—Location: "the garden of Retreat" is in heaven, near the "Lotstree of the Boundary (al-Muntahâ)" (LI, 22, LIII, 14-5). Two texts which suggest a prosopopoeia (fasî'ir) foretell that Paradise "shall be brought near" to the righteous (LXXXI, 13), "close unto them" (LXXV, 22). There is mention of the gates of Paradise, of their guards and of the greetings with which they met the elect (XXXIX, 73). The size of Paradise is equal to that of earth and heaven together (e.g., I, 133, LVII, 21). There will be pleasant dwellings for the chosen (XIX, 72) and pavilions where Houris are kept (LV, 72). Lofty gardens (LXXVIII, 10), leaping fountains (fasî'ir), streams of living water (id.), of milk, wine and honey (XLVII, 15), fountains scented with camphor (LXXVI, 5) or ginger (id., 17), shady valleys, all sorts of delicious fruits (fasî'ir), of all seasons and without a thorn. . . .

The life of Paradise is described in concrete details, especially in the Suras of the first Meccan period (the Suras of the other periods also refer to it): regal pomp (LXXIII, 24), costly robes, scents, bracelets; the texts lay emphasis on the "good works" performed on earth by the believers, and their fruits on earth will bear fruit in Paradise. The garden of Paradise is like a banquet, served in priceless vessels (e.g., LII, 24) by immortal youths "like separate pearls", with meats and fruits to the heart's desire (LI, 22, LV, 54, etc.), where scented wines, never-failing goblets of a limpid liquid (LXXVIII, 47), "delight for those who drink" (XLVII, 15), bring neither drunkenness (XXXVII, 46-9) nor rouse folly or quarrelling (LXXVIII, 35). "Eat and drink in peace, as a reward for your deeds, reposing on rows of couches!" (LII, 19-20),—couches inlaid with gold or with precious stones (LXVI, 15), etc.

The elect will rejoice in the company of their parents, their wives and children who were faithful (XIII, 23, XXXVI, 56, XL, 8, XLIII, 70). They will praise their Lord (XXXV, 34), bending towards each other in love, conversing in joy and recalling the past (e.g., LXXVI, 47, LII, 25, etc.) with "sacred wine" (id., 15, 11, 15, 14),""—couches inlaid with gold or with precious stones (LXVI, 15), etc.

A happy life, without hurt or weariness, neither sorrow, fear nor shame (Şübiî al-Sâlih 24) where every desire and every wish is fulfilled (XVI, 31, 39). "The Pious will there enjoy what they desire and We will grant yet more (mâzâl)" (L, 35). This "more", like the "addition" (zîydda) of, X, 26, is usually associated with the "approval" (ridwan) of God foretold to the elect (thus, I, 15, 35 in fine). Now, "to believers, God has promised Gardens where rivers of water flow, where they will rest immortal. He has promised them goodly dwellings in the gardens of Eden. (But) the approval of God is greater. That will be the great Victory' (IX, 72). The fruits of it will be nearness to God, God will bring the elect near to his Throne (passim), and "on that Day some faces will shine in contemplating their Lord" (LXXV, 22-23). This last text, understood in the sense given in our translation, was to serve as the accepted scriptural foundation.
for the dominating thesis of the “vision of God” (ruyât Allîh) in Paradise (see below).

Subhî al-Sâlih, 12 ff., emphasizes a certain progress in the Kuranic annunciation of Paradise: the Sûras of the first Meccan period describe it with numerous brief, concrete details “in an ardent, brief and elliptical style, with the symmetry of antithesis”. During the second and third Meccan periods “the descriptive elements become (...) more summary”. Later we find “a more abstract means of evocation”. Well-known is verse XIII, 35, Musnad al-Tabari, the picture of the Garden promised to the Pious; the later allegorical interpretations were to base themselves on it, making the concrete descriptions of Paradise the representation of an inexpressible reality. And it was during the Medina period that stress was laid on the divine “approval”, joy above all others.

Does the Kur'ân refer to different sorts of Gardens organized hierarchically, or should we understand the term ëdâh (authentic)? Others are called da'll (unique), by one only. The hypothesis can be accepted, according to the commentators. Let us simply consider two verses: “For those who fear (the Judgment) seat of their Lord, there will be two Gardens” (LV, 46), and “this side of the two, two Gardens” (id., 62); certain tasâfsir render dîn not by “this side of” like M. Blachère (en deçà), but by “above”. Should we assume four distinct Gardens? A single description applies to each pair, and the descriptions of both groups are identical except for infinitesimal differences.

Relationships may be established between the Muslim Paradise and some earlier eschatological traditions, particularly Persian and Judeo-Christian, cf. as an example the comparison proposed by Grimm and Tor Andræ between the Kur'ânic descriptions and certain Syriac hymns by the Deacon Ephrem (cf. Tor Andræ, Der Ursprung des Islams und das Christentum, Fr. tr., Les origines de l'islam et le Christiantum, Paris 1955, 151 ff.).

(B) Principal elaborations

How has Muslim thought interpreted the data of the Kur'ân? Laying aside the copious Shîlâ'exegeses, we shall consider:—(i) hadîth and so-called traditional commentaries; (2) developments of the “science of hadîm” (jâînîs); (3) falsa'fa and tasawwui; (4) efforts at synthesis; (5) reformers and contemporary modernists.

1. Traditions and traditional exegesis

The hadîths devoted to Paradise and the life therein are very numerous. Their dominating tendency is a literalness which emphasizes the reality and the detail of sensual pleasure. The value attributed to them is variable. Many are considered hadîth (authentic); others are called da'll (doubtful). Certain of them derive not from the Prophet, but from a Companion or a Follower (hadîth mauhî or mâhî). Among the many sahîk, if some are mutaqaddûr (ensured by many lines of transmission), many are ‘asiz (rare), little known and vouched for by only two authorities; or even akhîd (unique), by one only. The Musnad of Ibn Hanbal abounds with descriptions of the joys of the Beyond. The Kur'ân and Musnad Al-Bukhârî and Muslim and the four Sunan reproduce numerous traditions on the same subject; see in particular Al-Bukhârî, K. Badr al-Khaïb, c. 8, K. Al-Rikàb, c. 51, and especially K. Al-Tasîfîr. Muslim’s commentators are in the habit of grouping eleven principal hadîths reproduced by him, on the subject of Paradise. For

a restatement and discussion of these sources, see Subhî al-Sâlih, op. cit., 43 ff. A typical example of traditional exegesis is given in the tasâfsir of Al-Tabari. It may be considered together with the abundant contribution from the “story-tellers”; themselves inspired by the old “story-tellers” (kassâsî) and “weepers” (bacha’âns), who in their concern to catch the popular imagination multiplied all kinds of extravagant concrete details. On the basis of these diverse sources, there were extensive and varied developments. It is impossible to give an exhaustive survey. Here are some points of reference, borrowed from authoritative compilations of hadîth, or from Al-Tabari, or Al-Shârânî (Mukhtâsar), who himself gives a summary of Al-Kuraitî, etc.

Location:—most commonly Paradise is placed under the Throne of God, above the highest heaven. It is usually distinguished from the Eden of Adam. Traditional accounts of the “ascension” (mi‘râj, [40]) of the Prophet describe in detail his progress across the various planes and degrees. The Entrance:—the different levels of Paradise are reached through eight principal gates, the respective dimensions and distances of which are described (the figures are intended to give an impression of limitless space). Each level is in turn generally divided into a hundred degrees. The highest level, which is either in the seventh heaven or, better (see below), beyond, is sometimes called Eden, sometimes Firâdns, etc. According to an often-quoted hadîth (e.g., Al-Bukhârî, Dianâ’is, 7), the key to open these doors has three webs: the proclamation of the divine Unity (tawhid); obedience to God; and abstention from all unlawful deeds. Others add “the swords of battle on the path of God”. The Prophet Muhammad will enter first. The poor believers will precede the rich. Angels will welcome the elect to the strains of an exquisite Arab melody—Arabic being the only language in Paradise. A banquet of welcome awaits them and each dish is described at length. They will be led to dwellings made ready for them, “accomppanied by their wives, their children, by hourîs and by youths” (Subhî al-Sâlih, 121). Note: though Paradise already exists, the descriptions of a happy Beyond are always related to the resurrection of the body. It is not until after the resurrection, the “gathering” (hasîr) and the Judgment, that the “Halls Eternal” will receive their guests.

The representation of Paradise. An eternal Spring will spread an everlasting light. One day in Paradise is equal to a thousand days on earth. The stuff of which it is made is of musk, gold and silver. The palaces are of gold, silver, pearls, rubies, topazes, etc.: descriptions which may be taken metaphorically, but which the commentators may see as concrete realities. The stream Al-Kawâthar (cf. Kur’ân, CVIII, 1), with a scent more subtle than musk, flows over pearls and rubies between banks of gold. Four rivers, whose names are given, spring from mountains of musk, flow between banks of pearls and rubies, and carry to the elect milk “of an unvarying flavour”, wine “a delight to those who drink”, “clearest” honey (cf. Al-Tabari, Ibn Hanbal, etc.). There are references to four mountains (Ubdud, Sinai, Lebanon, Hasîb) to a large valley, innumerable plains, wonderful fruit-trees. It would take a horse a hundred years at the gallop to emerge from the shade of the banana-tree (Al-Bukhârî, Rîkah, 114; Musnad, passim). A single leaf from the “Lote-Tree of the Boundary” could shade the whole Community
of the Faithful. In Paradise there are horses and camels “of dazzling whiteness”, perhaps goats and sheep, and winged Ravens made of red rubies will serve as the mounts of the elect (al-Tirmidhi, Dzawna, etc.).

The pleasures of Paradise. Here too there is the same concern for extravagant and concrete descriptions. Each of the elect will have the same stature as Adam (60 cubits by 7), and the same age, 33 years, as Jesus. Their robes and adornments will be marvellous. The delights of eating and drinking are the occasion for a surfeit of endless detail, as are also the hours of rest which follow them. The Kur’ânic evocation of the Houris calls forth endless commentaries (cf. Subûb al-Šâlibi, 133-40) which celebrate the carnal joys, “a hundred times greater than earthly pleasure”, that the elect will derive from their perpetual virginity. But the female Believers who have been admitted to Paradise through the merit of their good deeds will rank 70,000 times greater than the Houris in the eyes of God.—The whole of Paradise will be drenched in glorious music: the angels, the elect, the creatures of Paradise, the hills, trees and birds all joining in the universal melody.

The Vision of God. The most wonderful melody of all is the voice of God greeting the elect. Several traditions (e.g., al-Shârâni, Mukhlissar, 128; Ibn Khudhayl, Hâdâl al-arwa’dh, 225m) speak of the visit that the elect will pay “each Friday” to the Most High, at his invitation, and after they have chosen “a fine face” at the “suk of Recognition”. The men following the Prophet, the women in the train of his daughter Fâtimah, will cross the heavens, pass by the celestial Kâ’bah surrounded by praying angels, draw near to the “Guarded Table” (al-lawh al-mahfûz “Guarded Table”) where the Pen writes the divine decrees, and finally emerge on to the “terrace of the Throne”, which is of musk. “The veil of light lifts” and God appears to his guests “like the moon at the full”. In his Isâma, Cairo ed. 15, al-Asâr’âr calls this last the “highest bliss”: a “spectacular”, not a transforming, vision (Massjion). Paradise, which will be eternal, already exists. But the emphasis is laid on the incomparable and ineffable nature of the conditions of the future life. In conformity with one of the great Ash’ârî principles, all that is said of it must be taken literally but bîdâ kayl, “without asking how”. Not only have the pleasures of Paradise no common measure with earthly joys, but they bear no analogy to them; they are of a different nature.

c) The later Ash’ârîs (called “modern” by Ibn Khaldûn), in whom there is often a mixture of Ash’ârîmism properly so called and Mâturidis, adopt a ta’wil (interpretation) which is perhaps more influenced by the Falâsîfîa than by the Mu’tazila. The most notable example is Falâhr al-Dîn al-Râzî (12th-13th centuries). The principles of his exegesis are stated in his Kûbâ’ asâs al-ta’wilîs (Cairo ed. 1327), and he supplied an associated with them “spiritual” delights (râhânîyyât). All the Mu’tazila, on the other hand, deny the vision of God and, by an appropriate grammatical exegesis, give a different interpretation to the Kur’ânic verses which mention it. In the same way they reject the present existence of Paradise which, according to them, will only be created at the Resurrection.

Among the mutakallimûn, three fundamental attitudes may be distinguished: a) Mu’tazîlî schools (which influence the tasîf of al-Zamakhsharî). Their principle of “reason as the criterion of the Law” does not favour an allegorical or spiritual interpretation, but in the sense of a more restrained literal exposition, which treats as figurative any statement or description deemed rationally unacceptable.
3. Falsafa and taṣāwuf.

Between al-Asghar, who follows Ibn Ḥanbal, and the ṭasir of Fakhr al-Dīn al-Rāzī, the Hellenistic falsafa, exerted some influence on the course of these controversies, confining himself to declaring his respect for the prophetic teaching. But everything is determined by the conception of prophecy in question. In his "esoteric" Risāla adhawiyya fl amr al-madhhab (ed. S. Duniyā, Cairo 1949), Ibn Snā in his exoteric works is careful not to deny the Resurrection; the same is true of Ibn Rushd, who, at the conclusion of the Tahdīfiṭ al-tahdīfiṭ, confines himself to declaring his respect for the transcendent God. A text attributed to Ibn Snā, in its deepest reality, the life of Paradise will be that of intelligible substances united with the Active Intellect and the Universal Intellect in which, as in a clear mirror, will shine the supreme Divine Lights.

Is then the apparent meaning of the Kur'ānic descriptions totally ignored? No. They are of value, in their literalness, for the "weak-minded" (bahī) who, although they have observed God's commands on earth, will be incapable of rising to the life of pure intelligence. They will be experienced, in the strict sense, not as sensual delights, but as pleasures of the imagination, thanks to the heavenly Bodies (cf. Naḍīj, 2, and Cairo ed. 1419/1357, 298; see also Isḥāq, ed. Forget, Leiden 1892, 196 § 2; Ibn Snā, in order to put forward this opinion, takes shelter behind the authority of "certain teachers").

Avicenna's influence marks a break in the history of taṣāwuf. The first Sufīs took Kur'ānic teaching literally, but focussed their hopes on the supreme bliss and reward, the vision of God. Well-known is the allegorical act of Rābi'as, who wanted "to burn Paradise" (and "drown Hell") so that God might be loved for Himself alone and not for His rewards (and feared for Himself alone and not for His punishments). In some famous texts, al-Īṣāfāl objects to the "market of images" (the sāk of the traditional exegesis where the elect choose "a fine face" for "the visit on Friday"), and proclaims: "If in Paradise I were prevented from meeting Him, were it only for an instant, I would make life intolerable for the elect of Paradise" (cf. L. Massignon, Lexique technique, Paris 1954, 253). For al-Hallāj everything is turned towards the ru'yāt Allāh, dazzling but intermittent, in which the elect find happiness only by the "experience"—Characteristic is the attitude of al-Muḥāsibī, of whom texts transpose the promised bliss into spiritual values, whilst his Kitāb al-tawakkhum, in order to encourage popular piety, emphasizes the sensual and carnal descriptions.

The later Sūfīs took care not to remove the sensual character of the joys of Paradise, but they developed, often extensively, the "superior" spiritual sense, revealing the "kā'f" (the only the Stool ('arsh) of Delights.—But in other texts the Fatḥ al-Dīn, 190, and the commentator the others again Eden. Certain opinions, less popular, define only four "dwellings" or gardens, and place Eden on the level of the fourth heaven. But it is generally accepted that, beyond the seventh heaven (or simply the highest heaven), and thus not cosmi-

450 DJANNA

earthly garden, distinct from the heavenly Paradise. The commentaries which distinguish the two Edens in this way usually place Paradise above the seventh heaven.

One last detail. Some hierarchical plans ("stages") of Paradise are often allowed; but there was no consensus on the order of enumeration. A khādīj of Ibn ʿAbbās proposes: (1) (the highest circle) the dwelling of Majesty, (2) of Peace, (3) the garden of Eden, (4) of Refuge (or "Retreat"), (5) of Immortality, (6) of the Firdaws, (7) of Delights.—But in other texts the Firdaws is put as a "monster"; the others again Eden. Certain opinions, less popular, define only four "dwellings" or gardens, and place Eden on the level of the fourth heaven. But it is generally accepted that, beyond the seventh heaven (or simply the highest heaven), and thus not cosmically located, Paradise, whether or not divided into plans or hierarchical divisions, has above it only the Stool (kursi) and the Throne (ʿarsh) of the Most High God. (See below the summary by al-Bāḍjārī).

...
4. Two essays in synthesis.

The jalāṣaṣa on one side and the many Şûfīs on the other were regarded with mistrust and often opposed by the official teaching. Nevertheless their influence was effective. The expansion of Tarţaṣad ("brotherhoods") spread throughout the masses many Şûfī interpretations, sometimes but not always mixed with "philosophical" glosses. This resulted in some attempts at synthesis, clearly concerned to maintain the values of the faith. We will consider two of them.

Al-Ghazzālī. — The most important synthesis is that by Abū Ḥamīd al-Ghazzālī (earlier therefore than Ibn Ἠrābī), in which are united the traditional currents, kalām, jalāṣaṣa and ṣāṣaṣaṣuṣuṭ. In the Iḫyāṣāṣad and the Iḫyāṣ, al-Ghazzālī defends the Ashʿarī thesis of the vision of God. The Kitāb al-maṣaṣṣaṣa wa-mā baʿdahu of the last quarter of the Iḫyāṣ (Cairo ed. 1352/1933, iv, 381-468) reproduces extensively hadīṭh and traditional texts which describe the sensual pleasures and joys of Paradise. But the Māṣṣad al-ṣomāṣ (Cairo ed., n.d.), without rejecting them, insists on the superiority of spiritual bliss. Paradise is a "medium of bliss" of which only images are revealed to us. There is the same doctrine in Mīṣān al-ʿamaṣ (cf. tr. Hikmāt Ḥaṣṣānī 5-6): it is because the pleasures of Paradise "are incomprehensible to the understanding of the commonality of men" that they "assimilate them to the sensual pleasures which they know". Here they are very close to the theses of Ibn Sinā. Al-Ghazzālī, however, differs radically from the "philosopher" in his teaching of the reality of the resurrection of the body. His own personal ideas seem to take shape as follows: the believers who can only conceive of sensual and material happiness will enjoy the pleasures of Paradise in the flesh; others will delight in imaginative pleasures; and others again, "the holy and the initiated (ʿirfān)" will enjoy superior delights, intellectual and spiritual, which alone can satisfy them and of which the sensual delights described in the Law are only the image. Elsewhere the possibility is not ruled out that some of the elect may share in the three kinds of joy at the same time (cf. Ārūṣān, 40, and Şûbīḥ al-Ṣāḥīḥ, 286), as M. Subhi al-Salīḥ "the philological exegesis" (texts) of the traditions, that is the teaching of the Book. The vision of God is possible, but is not of the same nature as an ocular vision on earth; it is by transforming their visual faculty that God will reveal himself to His elect. The literal, descriptive sense (localization and pleasures of Paradise) is upheld but soberly explained. The principle of bīlā ḵayṣ is reaffirmed, especially on the subject of the joys dispensed by the Houris. Let us note finally that a critique of traditional sources is adumbrated. For Muhammad ʿAbdūb, the hadīṭh, even if ṣābīḥ, may only be retained if they are mutawaddīt, warranted by many lines of transmission. This principle leads him to reject the hyperboles of many literalist descriptions.

Rāṣīḥ Rīḍā and his great Taṣṣīṣ al-Maṣāṣṭā. — This important differentiation between the hadīṭh is taken up again and elaborated, even to the point of an internal criticism of certain maṣāṣītexts) of the traditions. Thus Rāṣīḥ Rīḍā rejects as inauthentic those which promise to the elect Houris in abundance, and he refers to a hadīṭh reproduced by al-Bukhārī and Muslim, which awards to everyone in Paradise his earthly wife and a single Houri. The descriptions abounding in hyperbolical literalism are, he says, mistaken in not considering the spirit of the Arabic language, which requires that all anthropomorphisms be interpreted metaphorically. We should strive to understand the inner spirit of the Kurʾān which teaches both sensual and spiritual delights, but which places the second far above the former. For Rāṣīḥ Rīḍā, the authentic hadīṭh par excellence is that which defines the blessed life as "that which no eye has seen, nor ear has heard, nor hand has felt..." (texts) of the traditions. Thus the parallelism between the hadīḥs of the authentic Afterlife, the excessively rationalist principle of the Muṭaṣāzla, the allegorism of the Şûfīs, and he attacks by name Ibn Ἠrābī. Only the attempt to understand the actual text of the Kurʾān counts. If the spiritual life prevails over the life of the flesh, if the delights of Paradise are both sensual and intelligible, it is because that is the teaching of the Book. The vision of God is possible (contrary to the Muṭaṣāzla) but "it is not a fundamental basis of the Islamic faith" (texts) of the Şûbīḥ al-Ṣāḥīḥ, 325-35, and ref. Taṣṣīṣ al-Maṣāṣṭā.

In conclusion it may be useful to mention with M. Şûbīḥ al-Ṣāḥīḥ "the philological exegesis" presented by ʿAbd al-Kaḍār al-Maghrībi who, in 1920, wrote a commentary on the twenty-ninth section of the Kurʾān, which al-Ṭabarī reissued in the work Ālā hāmīṣa ḫaṣṣaṣ al-Taṣṣīṣ, Cairo n.d.). The author dismisses the literalist exegesis which presents the life of the Beyond in purely sensual terms: that would be to fail to take account of the incomparable power of expression of the text; he also dismisses the purely spiritual allegorical exegesis, for it derives only from subjective views. He requires an exegesis founded on the laws of the Arabic language, its eloquence and its use of metaphor. The terms describing the delights of Paradise aim at evoking part; and Eden comes in the second place; (2) four Gardens, according to the Kurʾān, LV, 46 and 62, which are considered as the ultimate earthly abode in the Delightful Refuge, Eden, Frīdaṣaṣ∂; (3) a single Abode to which the seven designations may be applied, each underlining one of its qualities.

5. Reformers and contemporary modernists (cf. Şûbīḥ al-Ṣāḥīḥ, Vth part.).
the grandest possible conception of joy. We should then understand these terms literally, but as designating, in the Other World, concrete realities intrinsically different from those here below. It is thus we should understand the fleshly joys promised to the elect: consequently, the feasts of Paradise are by no means intended for the satisfaction of sensuality, and the delights offered by the Houris represent a reality inaccessible to human understanding, a noble pleasure in which the female believers will share.—The author adds that his exegesis is only one of several alternative possibilities, and that a Muslim is free to prefer another.

The Egyptians Sayyid al-Kūth, Amin al-Khālí, and especially Muhammad Ahmad Khalaf Allāh, a disciple of the former, go even further than the Shaykh al-Magribī in the study of the "literary genres" of the Kurʾān. Azihari circles displayed violent opposition towards Dr. Khalaf Allāh. In conclusion: the official teaching has never confirmed the exclusively allegorical and spiritual interpretations of Kurʾānic verse and hadīth concerning Paradise. Throughout the centuries two trends have co-existed: (1) the so-called traditional exegesis, which accepts many traditions and which endlessly multiplies concrete details about the life of Paradise and its sensual pleasures; (2) the attempts of ḥaḍām, of al-Qazzāzī, of the Salafīyya reformers, etc., who retain indeed the obvious literal meaning of the Kurʾānic text, but take care not to amplify it; who insist on the intrinsic difference between the realities of the Beyond and earthly realities, emphasizing the primacy of the spiritual over the carnal order. Even without mentioning the "philological" exegesis of al-Magribī, we may say that the attempts of Muhammad ʿAbdūh and of Rashīd Riḍā to perform an internal critique of the traditions may well open new perspectives to our knowledge of the tafsīr.

Bibliography: in the article. (L. GARDET)

DJANNĀBA, (Djannābā, Djinannāba), arabized forms of Ganāfā, a town and port in the VIth ostān (Fars) of Persia. The name is a corruption of Gand-āb, 'stinking water', so called because of the bad quality of its water (see Ibn al-Balkhī, Fūṣūs al-dawāl va'l-dakhrīr, I, 129). Ganāfā, one of the most flourishing towns of the Persian coast in the 4th/10th century. An oil-pipe line from the Gač Sarān oil-field (which lies 70 km. to the north-east) to the island of Khūragā (q.v.), where tankers of the largest size will be loaded, is shortly to be constructed; it will enter 'stinking water', so called because of the bad quality of its water (see Ibn al-Balkhī, Fūṣūs al-dawāl wa'l-dakhrīr, I, 129). The town of Ganāfā was for a long time an important manufacturing centre where cloths of good quality were produced. Pearling was also carried on from there. It was the birthplace of Abū Sulaymān al-Djannābī (q.v.), the well-known Kārmātīan dāʾī. According to the Ḥadīth al-ʿi-lam (127), it was a large and flourishing town in the 16th century. An oil pipe-line from the Gač Sarān oil-field (which lies 70 km. to the north-east) to the island of Khūragā (q.v.), where tankers of the largest size will be loaded, is shortly to be constructed; it will enter the sea just to the north-west of Ganāfā. The town is connected with Būghār (q.v.) by a dry weather road 150 km. in length. Agriculture, fishing and shipping repairs are carried out at Ganāfā, the population of which in 1915 was 2,235. The modern form of the name is Ganāvā.

AL-DJANNĀBĪ, ABū MUHARRĀM MUṢTAFĀ b. Ḥasan b. Siyan al-Husaynī al-Ḥāghmī, 20th/16th-century author of an Arabic historical work dealing with eighty-two Muslim dynasties in as many chapters, entitled al-ʿi-lam al-sāhkīr fi ḍawūl al-awwāl wa-ʿawwālīr, usually called Taʿrīkh al-Djannābī. A Turkish translation and abridgment were prepared by the author himself. Whether the accepted form of the maḥkāzūn is correct or should be rather Djannābī cannot be decided in the absence of information as to whence it was derived. Al-Djannābī came from a distinguished Amasya family, studied and taught in various cities, and was for a short time judge of Aleppo. His younger brother was the poet Suʿūdī. Both died in the same year 999/1590.

Bibliography: Brockelmann, ii, 357, S I, 411 f., III, 1281; ʿUmmâlī mêlîfî, irti, 40; F. Bahinger, 188 f. (F. ROSENTHAL)

AL-DJANNĀBI, ABū Saʿīd Ḥasan b. Bahrām, was the founder of Kārmātīan power in East Arabia. Born at Djannābā on the Fars coast, he is said to have become a flour merchant at Baṣra. He was crippled on the left side. His first mission as a Kārmātīan is said to have been as a dāʾī in southern Iran, where he had to go into hiding from the authorities. He was then sent to (mainland) Bahrayn, where he married into a prominent family and won followers rapidly, perhaps among a group formerly attached to the line of Ibn-al-Hanafiyya.

We find that in 286/899 he had subjected a large part of Bahrayn and taken Katfī. In 287 his partisans were in strength around Hadjar, the capital of Bahrayn, and were approaching Baṣra. The Caliph Muḫtaḍīd sent an army of 2,000 men against them, to which were added many volunteers. This army was cut to pieces; its general was taken prisoner, then set at liberty; the other prisoners were killed. About 290/903 Abū Saʿīd took Hadjar after a long siege, by cutting off the water supply; he then subjected Yamām and invaded ʿUmmān. In 300 his troops again invaded the district of Baṣra, but in 301/913 he was murdered by a slave, together with several of his high officers.

He left several sons, of whom Saʿīd succeeded, to be replaced later by the youngest, the famous Abū Tāhir [see art. below]. Abū Saʿīd was venerated after his death. His partisans believed that he would return; a horse was always kept saddled at the door of his tomb. The Kārmātīans of Bahrayn called themselves Abū Saʿīdās after him, and attributed to him the later constitution of their republic.

(B. CARRA DE VAUX)-[M. G. S. HOODSON]

AL-DJANNĀBĪ, Abū ʿAlī Tāhir. Abū ʿAlī Sulaymān b. Abū Saʿīd al-Ḥasan was one of the most famous chiefs of the small Kārmātīan state of Bahrayn and, for several years, the terror of the pilgrims and of the inhabitants of lower ʿIrāk. On the death of Abū Saʿīd [see art. above] in 301/913-4, or 300/912-3 according to al-Masʿūdī, his son Saʿīd succeeded him and governed
with a council of notables (al-'Ikhāniyya). For some time the Karmatians refrained from troubling the caliphate and were even on good terms with the government of the vizier 'Abd b. 'Isā, who granted them privileges such as the use of the port of Sirāf, in 304/916-7. In 307/920-9, however, there was an attack on Basra to support a Fātimid attempt against Egypt, according to Ibn Khalḍūn (Ubar, iv, 89). At this time Abū Tāhir was not personally at the head of affairs, since he was still too young, having been born in Ramdān 256/June-July 907, and he seems to have been appointed as maiṣir b. Abdullah 311/923-4 when he appears, although aged then no more than 16, in Rābī‘ II/July-August 923, as commander of the Karmatians who entered Basra by surprise at night. Escalading the walls, they established themselves in the town before any resistance could be organized, and spent seventeen days in pillage and massacre. As early as 305/917-8, however, Sa'd, whom the sources depict as lacking energy and authority, had been deposed, perhaps at the instigation of the Fātimid 'Ubayd Allāh. The latter, according to Ibn Khalḍūn, sent a letter of investiture to Abū Tāhir, whose reign is by some sources dated from this year.

The attack against Basra in 312/923-4 coincided with the removal of the vizier 'All b. Ṣa‘īd whom his enemies represented as the ally of the Karmatians. At the end of the same year Abū Tāhir attacked the pilgrim caravan returning from Mecca to al-Habīr, and took prisoner the amīr Abu 'l-Hayyādī 'Abd Allāh b. Ḥamdān, who had been charged with the protection of the caravan. Abu 'l-Hayyādī and the prisoners were released some time afterwards at the same time as an envoy from Abū Tāhir arrived at Baghdaḍ demanding the cession of Basra, Ahwāz and even other territories. This claim was rejected and, in 312/924-5, the pilgrims were again attacked and ʿUffā was sacked by Abū Tāhir. In 315/927-8, having again plundered ʿUffā, Abū Tāhir gained a great victory over the army sent against him by the caliph and commanded by Yūsuf b. Abī 'l-Sādī q.v., whom he captured and who was put to death in Dhu 'l-Ka‘a 315/January 928 in the course of the operations that followed. Advancing up the Euphrates, Abū Tāhir arrived at Anbār, crossed the river with the intention of marching on Baghdaḍ, but was stopped by the army of Mu‘nis q.v. thanks to the destruction, at the instigation of Abu 'l-Hayyādī, of the bridge on the Nahr Zubārā. He thereupon turned north and reached Raḥba, Karkhsīyā and Raḵša, holding the inhabitants to ransom. Some detachments penetrated as far as Sīndjar, Ra‘ba‘ān and Naṣībīn. Abū Tāhir did not return to Bahrayn until the beginning of 317/February-March 929, when he had built a dār al-khīṣra called al-Mu‘āniyya (it is known that the Karmatians called themselves mu‘āminīn), near al-Abāsī, its capital.

The most sensational act of Abū Tāhir was his expedition against Mecca where the pilgrims were gathered and where he arrived on 7 Dhu ‘l-Hijārā 311/December 923 (cf. also De Goeje, op. cit.) to receive official investiture for the regions which he possessed or had conquered. Abu Tāhir refused to restore the Black Stone, but agreed to cease obstructing the pilgrims and offered to have the khūfa read in the name of the caliph if he were allowed free use of the port of Bahrayn. However, in 323/935 he again attacked the pilgrimage, defeated the caliphal troops between ʿUffā and Kādiryā, and occupied ʿUffā for several days before returning to Bahrayn. Fresh negotiations were commenced in 325/937, by the amīr al-umāra‘ Ibn Rā‘īk, with Abū Tāhir who had again entered ʿUffā. In reply to the demand of the Karmatian, who wanted the caliph to give him 120,000 dinars per year in silver and supplies, Ibn Rā‘īk proposed that Abū Tāhir and his troops should consider themselves as enrolled in the service of the caliph and that this sum be considered as a salary. No agreement was signed. Finally, in 327/939, thanks to an ʿAlīd of ʿUffā, the pilgrimage was able to resume in consideration of a tribute of 25,000 (or 120,000) dinars and a protection due (khiṣra) which was regularly levied by the Karmatians on the pilgrims; this did not, however, in any way prevent incursions into the south of ʿIrāq.

Abū Tāhir died of smallpox at the age of 38 in 332/943-4, and was succeeded by his brother Abīmad.

The activity of Abū Tāhir raises questions as to what were his relations with Isma‘ilism, whether he really considered the Fātimid caliph ʿUbayd Allāh to be the awaited imām and obeyed him, and whether it was at his secret request that he carried off the Black Stone and launched attacks against ʿAbbasid territory. The question of the differences and the common ground between Karmatians and Isma‘ilis, dealt with by Ivanov, Ismaili tradition concerning the rise of the Fatimids, 65 ff., and Ismailis and Karmatians in JBIRAS, 1940, 78 ff., and B. Lewis, The origins of Isma‘ilism, Cambridge 1940, ch. iii on the Karmatians of Bahrayn and particularly the Karmatians and the Fātimids, will not be examined here; this account is restricted to a review of the facts concerning the history of Abū Tāhir. There are documents as much in favour of an adherence to the Fātimid caliphs as against (see the texts in B. Lewis, op. cit.). In their work on ʿUbayd Allāh al-Mahdī H. Ibrāhīm Ḥasan and T. Ahmad Shāraf incline to the idea of secret and close relations between Abū Tāhir and the first Fātimid caliph, and a real subordination of the former to the latter. Finally, in 327/939-40, it was said that Abū Tāhir recognized ʿUbayd Allāh as the mahdī, that he sent him the khiṣra, and that he was his agent in Bahrayn (see the declarations of the Karmatian interrogated by ‘Alī b. Ṣa‘īd and of the secretary of Yūsuf b. Abī ‘l-Sādī Ḥ. Ibrāhīm Ḥasan, 277). Abū ‘l-Mahāsin declares that he recognized ʿUbayd Allāh as mahdī.
on his return from Ṭabba in 317/929; but the letter of Ubayd Allah to Abu Ṭahir which is cited, and the letter of <Ubayd Allah to Abu Tahir which is mentioned in the text): BGA, i, 27; ii2, 40; iii, 12, 53, 69, 83, 97, 107, no; v, 78; vi, 153, 191; vii, 96, 313, 341; for modern works, other than those of Ivanow and B. Lewis mentioned in the article (there is an Arabic tr. of B. Lewis entitled Usūl ʾal-ʾIsmaʾiliyya, Baghdad 1947), see H. Bowen, The life and times ofʿAli Ibn ʾIsa, Cambridge 1928, index; Hasan Ibrahim Hasan and Taha Ahmad Sharaf, ʿUbayd Allah al-Mahdi, Cairo 1947, 94, 176, 180 ff., 217 ff., 225 ff., 220 ff., 257, 277, 270, 302. For the episode of Abu ʾL-Haydāj and Ibn Abī ʾL-Sādj, see M. Canard, Histoire de la dynastie des Ḥanḍimīdīs, i, 352 ff., 355 ff. (M. Canard)

**AL-DJAR** [see GANDJA].

AL-DJAR, once an Arabic port (furdā) on the Red Sea, 20 days' journey south of Ayla, 3 from al-Djufa. Until almost the end of the Middle Ages (when Yanbu', which is situated further north, took over this function), al-Djar was the supply port of Medina, one day's journey away (this according to Yākūt, ii, 5; according to BGA, vi, 191 it was two days' journey; according to BGA, i, 19, and ii, 31 it was three). Al-Djar was half on the mainland, and half on an island just offshore. Drinking water had to be brought from the Wādī Yalyal, two parasangs distant. It was an important entrepôt for trade with Egypt, Abyssinia, India and China. The harbour of Karāf (probably the Καραφωνος of Ptolemy), used for trade with Abyssinia, was situated on an island, a square mile in area, facing the town. There were many castles (ṣuyūr) in al-Djar. Their beginnings must date back to the time of ʿUmar, who had two castles built here for the purpose of housing 20 ship-loads of grain (Yaḥyābū, i, 177). By 1800, the name of the town no longer appears in descriptions of travel, and it was apparently replaced by Burayka (Burēka), which is the name of the bay of al-Djar. Extensive ruins found there may well be the remains of the old castles. The whole stretch of the Red Sea from Djudda to al-Kulzum was referred to as al-Djar in antiquity.

In the time of the Prophet, those who had taken part in the rebellion against the caliph (in 230/814-5) were referred to as al-Djar (Baladhuri, Futūḥ Misr, ed. G. Jacob, Die altesten Spuren des Wesskinds, in M. Slane, i, 246). The name was also applied to the region of the Red Sea and the coast. In 145/762: Tabarl, ii, 177. A name, al-Djar, first recorded in the lists of cities in Arabia in the time of the Caliphate of al-Muktadir. The trade in assignments (ṣukūk) for grain from the stores in al-Djar, the earliest recorded instance of promissory notes, is recorded in the hadīth and in the discussions of the scholars of Medina (Mālik, al-Muwatta', sections al-ʾina and ǧamīʿ bayʿ al-ʾlaḏām, with al-Zurqānī's commentary; Ibn ʿAbd al-Ḥakam, Futūḥ Misr, ed. Torrey, 166 ff.; G. Jacob, Die ältesten Spuren des Wesskinds, in M. Slane, xxviii/2, 1925, 250-1). The name also indicates the reign of ʿAlī, the khalif of ʿUmar, and the reign of ʿAbd al-Muṭṭaḍir, under whom the town was in a state of unrest on other occasions: for instance in 250/864-5 (Tabarl, iii, 1336), 266/879-80 (Tabarl, iii, 1941), under al-Muṭṭakīr (Abu ʾL-Farajār al-ʾIsfahānī, Maḥāṭī al-ʾIbāḥiyyān, 706, Cairo 1949).

DIETRICH)

Djarād, locusts. The word is a collective noun, the nom. unit. being djūrād, which is applied to the male and female forms in various climatic regions, but in its gregarious destructive form it is particularly and lamentably well-known. Invasions of locusts are a phenomenon not peculiar to the Muslim world, since they occur from China to America and from the U.S.S.R. to South Africa, but almost the entire Muslim world lies within the affected area, and in a region where invasions are especially frequent and severe. There is no need to give an account here of a well-known phenomenon which from the Bible to our own times has been described by many writers. Contemporary biologists have established that in their gregarious forms locusts are the same as in their solitary, peaceful forms: unfavourable climatic conditions simply modify the nature of their reproduction and mode of life. Young locusts then take flight in dense masses numbering millions which darken the sky like a vast cloud; the sound of the rasping of their legs and wings is intensified; when there is a drop in temperature, as for example in the evening, they suddenly settle on the ground and in a few moments every scrap of vegetation is destroyed, sometimes even when the destructive form occurs in an area where invasions are often frequent and severe.

In Arabic zoological, pharmacological and lexical works numerous kinds are mentioned, of which, according to some authors, differ in colour (green, red, tawny asfar, white). Where it is stated that the male is tawny and the female black, a specific variety is obviously spoken of. Some locusts fly and some leap. Some have a big and some a small body. They have no fixed habitat but wander about from place to place following a leader. The males have a lighter body and therefore are better able to fly. Locusts have six feet, the tips of which (or: the hind legs) are like saws. Their saliva is a deadly poison to plants.

In the opinion of the ancient Arabs, who used to eat them, locusts yield a delicious food tasting like the meat of scorpions; and Diābīṣ wondered why certain people did not like it. Yet eating it was believed to cause epilepsy (yajzāy). Locusts are eaten to this day by the Bedouin: methods of preparation in Hess, 124.

Medicinal uses of the locust and its significance when occurring in dreams are dealt with in pertinent works.

Three writings, each entitled Kitāb al-Djarād (probably little lexical treatises), none of which is extant, are attributed to the following authors (Fihrist, 56, 59, 83): 1) Abū Naṣr Abīnātu.b. Ḥātim (al-Bāhīl [q.v.]); 2) Abū Ḥātim al-Sijjīstānī [q.v.]; 3) Abū al-ʿAbd al-Yāqūt al-Albānī. (ii). The locust, more commonly known as grass-hopper, exists in various harmless forms in almost all climatic regions, but in its gregarious destructive form it is particularly and lamentably well-known. Invasions of locusts are a phenomenon not peculiar to the Muslim world, since they occur from China to America and from the U.S.S.R. to South Africa, but almost the entire Muslim world lies within the affected area, and in a region where invasions are especially frequent and severe. There is no need to give an account here of a well-known phenomenon which from the Bible to our own times has been described by many writers. Contemporary biologists have established that in their gregarious forms locusts are the same as in their solitary, peaceful forms: unfavourable climatic conditions simply modify the nature of their reproduction and mode of life. Young locusts then take flight in dense masses numbering millions which darken the sky like a vast cloud; the sound of the rasping of their legs and wings is intensified; when there is a drop in temperature, as for example in the evening, they suddenly settle on the ground and in a few moments every scrap of vegetation is destroyed, sometimes even over an area of several square kilometres. As a result the local population suffers an economic catastrophe, except only that the locusts themselves, if they can be killed, provide some food.

From time to time chronicles mention particular invasions of locusts, but generally without giving details, and the information to be gathered from these references is, it seems, too haphazard and localized to allow any deductions to be made in respect of possible modifications in the habits of the locusts, the periodicity of their invasions or the area of their migrations. Today there are several migratory species, the two that chiefly concern us being the Desert Locust (Schistocerca gregaria, mainly in East Africa and Asia) and the Migratory Locust (Locusta migratoria, all other parts of Africa). Attempts have always been made to prevent these invasions; and although modern techniques have to some extent increased the effectiveness of control, they have not in fact introduced any new methods for a long time nor, as yet, have they overcome this scourge. Naturally, the local inhabitants have destroyed the eggs whenever they have found them, as a preventative step. When an invasion takes place, they try to stop the locusts advancing, or to kill them by digging pits, spraying poison, using wheeled screens and flame-throwers etc., (poison and fire already envisaged by Ibn Wāghṣiyiya) although the destruction inflicted does not prevent terrible
damage being done. Resistance can only be successful formation to the Byzantines. The...nhabitants of the mountain districts, the... decided to put an end to this dangerous development, to put a stop to this dangerous development,... to serve the Arabs as scouts and spies, to guard the Ibn al-Zubayr but also preoccupied with the revolt... for anti-locust control see in particular the periodical Locusta, from 1954. (Cl. CAHEN)

**DJARADIIMA (Mardai'tes).** This name, the singular of which is Djarajumālī (cf. Aghani), v, 158, Aghani, v, 150, in a poem of Aššā Hamdān), according to Yākūt, ii, 55 denotes the inhabitants of the town of Djarajuma, situated in the Amanus (Lukkām), and of the marshy districts north of Antioch between Bās and Būkā. This word could also be connected with Gurgum, the old name of a legendary province in the region of Mar'ash, on which see Dussaud, Topogr. hist. de la Syrie, 283, 469. On the other hand Father Lammens recorded a village called Djarām near the road between Aleppo and Alexandretta and the springs of Hammām (Hamam) Shāykh (Shaykh?)

As inhabitants of the Arabo-Byzantine border country, the Djarādima played an important part during the early days of Islam in the wars between Arabs and Byzantines, and they were known to Byzantine historians by the name Mardai'tes (see below). Somewhat lukewarm Christians, though whether Monophysite or Monothelite is not known, and dependants of the “patriarchate of Antioch”, they enjoyed semi-independence vis-à-vis the Byzantines to whom they supplied soldiers and irregular troops. The Arabs, after taking Antioch, sent an expedition against them commanded by Ḥabīb b. Maslama al-Fihri. According to al-Baladhuri and Ibn al-Aṣḥīr, the Djarādima agreed to serve the Arabs as scouts and spies, to guard the Amanian Gates and, along with the Arabs, to garrison the small forts commanding the road into and out of Syria. Wellhausen has, however, questioned whether they ever played this rôle before the time of Walīd I, after 85/798 (see below). They were given exemption from jīzāya and had the right to a share of the booty when they took part in military operations. But their loyalty was intermittent, and they did not hesitate to betray the Arabs and pass in-f...form to the Byzantines. The instability of the frontier and the difficulty of access to their country made it impossible for the Arabs to impose their authority over them.

The Byzantine historian Theophanes, like Michael the Syrian and Bar Hebraeus, states that during the reign of Mu'awiyah, the emperor Constantine Pogonatus (641-68) sent the Mardai'tes (Djarādima) against Syria. Supported by Byzantine troops and under the command of Greek officers, their forces occupied the whole stretch of territory from the Black Mountain (the Amanus) to the Holy City (Jerusalem), and thus blocked control of all the mountains in the Lebanon. Many runaways slaves, no doubt Greek in origin, joined the Djarādima, as did a number of the inhabitants of the mountain districts. In a short time their forces numbered several thousand men. According to Father Lammens, this operation is said to have started in about 46/666. To put a stop to this dangerous development, Mu'awiyah began negotiations with the emperor and, after lengthy discussions, accepted a peace treaty (annual tribute of 3,000 gold pieces, liberation of 8,000 prisoners and handing over of 50 thorough-bred horses). This treaty was perhaps accompanied by a promise that the emperor would abandon the Mardai'tes and withdraw from them all help in the form of men, arms and money. It is not known if the emperor intervened with the Mardai'tes in the Lebanon who in any case, as Michael the Syrian testifies, suffered partial defeats at the hands of Mu'awiyah and were further discomfited in about 49 or 50 by the settlement of the Zutt [q.v.] in the Antioch region and further north in the country of the Djarādima (al-Baladhuri).

It is curious that the account given by Theophanes is not confirmed by the Arab historians who do not connect the peace treaty, probably concluded in 58 or 59/678-9 shortly before Mu'awiyah's death, with the question of the Djarādima whom they do not mention at that period. Wellhausen has accordingly raised doubts regarding the account given by Theophanes, suggesting that he had brought the Mardai'tes into Mu'awiyah's treaty as a result of confusing it with the treaty made by 'Abd al-Malik and the history of the Djarādima in his time, which we shall deal with later; while Father Lammens, thinking, on the contrary, that the Arab historians have not preserved any record of this incident because they have confused it with events at the time of 'Abd al-Malik. However al-Baladhuri, when speaking of the Djarādima at the time of 'Abd al-Malik, makes a very clear reference to a treaty concluded with them by Mu'awiyah, who gave them money and in return took hostages whom he kept at Ba'albek. But the writer places this incident at the time of Mu'awiyah's war against “the people of 'Irāk". That would mean the war against 'All, that is to say at an earlier period. The uncertainty remains.

In the time of 'Abd al-Malik, in 69-70/688-9, taking advantage of the fact that the caliph was not only engaged in a difficult war with the anti-caliph Ibn al-Zubayr but also preoccupied with the revolt of the Umayyad 'Amr b. Sa'id al-Asghārī whom he had left in command of Damascus. Justinian II sent the Djarādima to attack Syria. Al-Baladhuri reports that Greek cavalry, under the command of a Byzantine officer, came into the Amanus district and then advanced as far as the Lebanon, and that this force was joined by large numbers of Djarādima, native peasants and runaway slaves. To put an end to the attacks of
these adventurers the caliph was compelled to sign a treaty with them, guaranteeing a weekly payment of 1,000 dinars. Then he offered the emperor to make peace on the same terms as Mu'awiya when the latter had been engaged in the war with the people of Irāk. Theophanes also mentions this treaty, in connexion with two particular years, 6176 (65/684) and 6178 (67/686), the latter possibly being a renewal. The figures given by him are not the same as for the treaty with Mu'awiya (for 6176: 365,000 gold pieces, 365 slaves, 365 thoroughbred horses; for 6178: 1,000 gold pieces, 1,000 slaves and 1,000 shielders). But at the same time the emperor increased his claims, for we see in 6178 that the caliph had to surrender to the emperor half the tribute from Cyprus, Armenia and Iberia (cf. Michael the Syrian, ii, 469). For this consideration Justinian agreed to withdraw the Mardaites, and he recalled 12,000 of them; they settled on Byzantine territory. Theophanes reproves him for denuding the frontier in this way. But al-Baladhūri, who dates the treaty 70/689 is unaware of this withdrawal and, according to Nicephorus, Brevarium, 36, the recall of the Mardaites, insofar as they were recalled, took place when Justinian broke the truce, and in order to reinforce his army. Theophanes also says under 6179 (69/690) that some Mardaites from the Lebanon came to rejoin the emperor's army in Armenia. Others remained in the Amanus, and there were still some there at the time of Walid II (see below).

According to al-Baladhūri, the caliph after signing the treaty resorted to a trick to get rid of the Djaradjima. He sent one of his trusted supporters, by name Suḥaym b. al-Muḥādīr, to see the Greek officer commanding them; Suḥaym succeeded in winning his confidence by pretending to take his part against the caliph. Then, using troops that had been in hiding, he made a surprise attack, killing the officer and massacring the Greeks who were with him. As for the Djaradjima, he granted them the āmun; some went away and settled in villages in the neighbourhood of Hims and Damascus, others went back to the Amanus. The native peasants who had made common cause with them returned to their villages and did not fight against the Djaradjima. Some of these adventurers entered the caliph's service. According to al-Baladhūri, one of them named Maymūn al-Qurqūjūmāni (known by the Byzantines as Malouma), a former Greek slave of a member of the Umayyad family, was set free at the request of Abīd al-Malīk who had been told of the prowess he had shown in battle in the Lebanon, and he was put in charge of a garrison at Antiōch. In the time of Walīd, at the head of an army of 1,000 men who were no doubt Mardaites, he took part in the expedition sent by Maslama b. Abīd al-Malīk against Tyana, where he was killed. But al-Baladhūri was certainly mistaken when he said that his death was a great sorrow to Abīd al-Malīk, for the latter was already dead at that time. Another mistake about him occurs in al-Ṭabarī who, under 87/706, records a tradition from Wakīdī, according to which he was said to have been killed in the ranks of the Greeks. We see from Theophanes (under 6201 (89/709-10); cf. Nicephorus, Brevarium, 43-4) that this is certainly a reference to a former Mardaites fighting for the Arabs; it was precisely to avenge his death that these words were said to have undertaken the expedition in the course of which they laid siege to Tyana. (For the complications of this incident see Wellhausen 436-7, according to whom the Tyana expedition lasted for two years, 88 and 89).

However the Djaradjima, in their retreats in the Amanus, and with the support of Greeks who had come from the neighbourhood of Alexandria, continued to be a source of trouble for, in the same year 89, Maslama organized an expedition against their stronghold Djudjūma which was captured and destroyed. But the Djaradjima were treated exceptionally: they were allowed to keep their Christian faith whilst wearing Muslim dress, without being subject for ten years to payment of tribute, and to take for themselves and their families and to take part in Muslim expeditions with the right to despise those whom they slew; their goods and their trade were not to be subject to any discrimination from the fiscal point of view. This shows beyond doubt that their secession was feared and that they were needed. A number of them were settled in the region of Tīzin and Layḥīn in north Syria, others at Hims and at Antioch. Many emigrated however, crossing over into imperial territory. They settled in Pamphylia in the neighbourhood of Attaleia where they were known by the name of Mardaites and were commanded by a catapan. It has been observed that, even today, the population of this district still shows very clear traces of its Syrian origin (see Honigmann, Ostgrenze, 41, following Petersen and Von Luschau, Reisen in Lykien, Mīlyas und Kibyratis, ii, 1859, 208 ff.).

We find references to those who stayed on in Muslim territory under Yazīd II in the Irāk army (al-Dībāḥ, Bayān, i, 114), and under Hīṣām b. Abīd al-Malīk in a garrison in the Amanus (al-Baladhūri, 167, ed. Cairo, 174). During the 'Abbadīd period their privileges were confirmed for them by Wāghīk, but Mutawakkīl ordered that they should be subject to diqya, though continuing to give pay to those who were employed in the frontier posts.

As we have seen, the Djaradjima are the Mardaites. The Syrian historians call them Gargūmayē, with the additional epithet Līphūrī or Lī麽rē, that is to say brigands (cf. ịsịsị in Ibn al-Aṭīr, Nihāyā, under ardūma). The name Djaradjima is given in Ibn al-Fakhrī, 35, as denoting natives (wādhī) of Syria, as opposed to Djarāmīkī, natives of Djarāmīk, Nabāt, natives of Sawād and Sabābīdā, natives of Sind. But we find in Aghānī, vi, 76 (Aghānī II, xvii, 75) that Djaradjima, in Syria, denotes those of Persian origin like the Abnāī in the Yemen, the Aḥāmīrā in Kūfā, the Aṣāwīrā in Bāṣra and the Khaḍāmīrā in Djarāmīk. An allusion to the existence of the Djaradjima in the Amanus in the 4th/10th century will be found in H. Zayat, Vie du Patriarche melkite d'Antioche Christophe (d. 667) par le prosperityrā Ibrahim b. Yūhanna. Document inédit du Xe siècle, in Proche Orient Chrétien, ii, 1952, 60, where mention is made of a monastery of the Virgin called Dayr al-Djaradjima in the Diābal al-Lūkāmān.

DJARASH, the ancient Gerassan, place in
Transjordan situated south-east of the
'Adjûlim, in a well-wooded hilly district, standing
on a bank of a small tributary of the Wâdi
'I-Zarkâ, the Wâdi 'I-Dayr or Chrysoros of the
Greeks. Founded in the Hellenistic era at a centre
of natural communications, later to be followed by
Roman roads, it was captured by the Jewish leader
Alexander Jannaeus in about 80 B.C., but freed by
Pompey; it then belonged to the towns of the
Decapolis, being incorporated successively in the
Roman province of Syria and the province of Arabia.
Known as Antioch on the Chrysoros, it enjoyed its
greatest prosperity in the time of the Antonines, and
it was then that most of the monuments whose

DJARBA (Djerba) is the largest island of the
Maghrib littoral, with an area of 514 sq. kms. It
lies to the south of Tunisia in the gulf of Gabes
(‘Little Syrtis in ancient times), an area noted for
its sandbars and tidal currents. The two peninsulas
of Mehabeul and Accara reach out towards it from
the Djeffara plain, but the island is separated from
the mainland by the Bou Grara Sea and Strait of
al-Kantara. The terrain is a deposit of the
quaternary age, being marine on the periphery and
continental inland.

There is no source of fresh water on the island
apart from the few gullies along the clayey cliff of
Guellala in the south, where the water merely
trickles for a few hundred yards even after the
heavy rains. The precipitation is slight and sporadic,
an average of 200 mm. (= 7.84 in.) falling in a
season of about 40 days, and even a continually
high relative humidity cannot offset this lack of rain.
The underground water-level to which wells are
sunk through a layer of sandy soil and a limestone
crust is abundant but saline except in the eastern
interior. Deep drillings have been made to find an
artesian water-level in the miocene clay of the sub-
structure, but the water is salty and virtually
unusable. The inhabitants of the island have
always had to collect water in tanks, private and
public, and except on certain small plots, cultivation
of the land has yielded a very low output. All those
who throughout the centuries have attacked the
island have had to contend with its shortage of
water.

Like the Kerkena islands, Djerba is connected
with the mainland by the wide sandbanks which
surround it less than 10 m. below the surface of the
sea. These banks often silt up completely. At Ţrik
el-Djmel, for instance, the caravans cross them on
their way to the Tarbella peninsula, and nearby a
road has recently been constructed over the remains
of the Roman causeway to al-ţanţara. There is thus
a direct link for modern traffic between the mainland
and the island. The effect of tidal currents on the
mud and fine sand has been to create a series of
channels, ‘oueds’, in the sandbanks. Indeed, the gulls
of Venice and Gabès are the only areas of the Medi-
terranean which are tidal. At Djerba there is a diffe-
rence of 1 m. between high and low tide. The dangers
of navigating the currents and sandbanks have always
served as a defence against outside intruders. In 253
B.C., during the first Punic War, a Roman fleet ran
aground at low tide off Djerba, and it was only
refloated at high tide by unloading the ships.
(Polybius, i, 39). In 1511, Pedro Navarro landed his
troops at high tide, and had sufficient foresight to
withdraw his ships with the ebb tide. But the
Spanish soldiers were thrown back by the islanders,
and had great difficulty in regaining their ships
which were lying four miles offshore (Leo Africanus,
trans. Épaulard, 401). It should be added that the
sea abounds in fish, and certain shrimps are swarmed
with sponges.

"Djerba, the isle of the shallows of Periplus, of
the Lotus-eaters of Erasthones and other Greek
writers, was called Pharis by Theophrastus, Meninx
by Polybius, and possibly Phla by Herodotus. The
land was well cultivated from the middle of the
fourth century B.C. onwards, at which time it was
certainly under the rule of Carthage" (Gisell, Hlst.,
ii, 124). As in Roman times, its economy was based
mainly on the growing of olives, although in the
fourth century B.C. the oil was still extracted from
wild trees. Not much is known about its maritime
dory during classical times, but it is said that there
were 400 oueds, and that the area was considered
fishing-grounds in the area. The for the most part shapeless remains of
ancient settlements point to its economic importance
at that time. Only Meninx can be accurately located,
its ruins standing under the Burdj al-ţanţara at the
end of the Roman causeway. It is probable that
Girba, from which the island’s name originated, was
situated near Hountm-Souk, and that Tipaza and
Haribus were in the neighbourhood of Adjim and Guellala respectively. The sack of Jerusalem in the first century A.D. resulted in a considerable influx of Jews, from whom most of the present-day Jewish population is descended. After having been part of the proconsular province, Djerba fell successively under the power of Tripolitania, the Vandals, and Byzantium. In the Byzantine age the bishop of Djerba was appointed from Tripoli. In 665, during the wars waged in Byzacene by Ma'awiya b. Hudaydj, Djerba was conquered and occupied by Ruwayf b. Tabbit. For the next centuries rule is known about the island, except that it came under the rule of Kayrawân and Mahdiyya. Its natural isolation was reinforced by the independent spirit of its inhabitants and their attachment to the Kharidjite schism, which between the 2nd/8th and 4th/10th centuries extended to places so wide apart as Djabal Nafusa (Tripolitania) and the Mzâb (Algerian Sahara). It explains perhaps why Arab writers such as al-Bakrî and al-Idrîsî have so few kind words to spare for them, finding them ill-natured and hypocritical. Al-Bakrî remarked that they 'acted piratically on both land and sea', and al-Idrîsî pointed out that they were Berbers and could speak no other tongue. Nevertheless the island was described in the eleventh century as a mass of gardens and olive-groves, and Djerba (Girba) figured as one of its small towns.

The invasions of the Banû Hilâl in the 5th/11th century, and the fall of the Zïrîd dynasty, seemed to increase the Djerbian's spirit of independence. Their piratical raids on the Tunisian coast and on the Christian fleets became more frequent. In 1113/6-6 'Ali b. Yâhyâ the Zïrîd was still their master. But George of Antioch, admiral to the Norman king of Sicily Roger II, conquered and occupied the island in 1135. The capture of Mahdiyya in 1148 strengthened Norma rule, which persisted until 1160 despite an uprising in 1153 which was rapidly suppressed. They were then driven from the Tunisian coast and islands by the great Almohad conqueror 'Abd al-Mu'îmin. In 683/1284, at the beginning of the reign of the Hafsîd prince 'Abd al-Hâfîs 'Umar, a Christian expedition easily retook the island. It was under the command of the Norman Castilian George de Dinan, and it was landed in Sicily, Peter III of Aragon. In 1289 the Christians built a fortress to guard over the Strait of al-Kantara, which date the island was brought under the direct rule of Sicily. But a fresh revolt, in which the Djerbians gained the assistance of the Hafsid king Abu Abd al-Mu'min. In 1292, when the Christian conquest was made from the sawdust of palm-trees.

The defiance and independent spirit of the Djerbians brought clashes with the Hafsîds as well as with the Christians. Not only did they turn a deaf ear to Abu Ali Fâris's peaceful propaganda in favour of orthodoxy, but in 885/1480 they suddenly broke their association with Abu Umar 'Ughmân and deliberately destroyed their only link with the mainland, the Roman causeway. Up to then it had been restored several times and kept in good condition.

Despite the plunderings, massacres and deportations resulting from Christian invasions, and the wars between the two rival sects (the Kharidjî and the 'Alawis), the island was removed from the Christians. Not only did they turn a deaf ear to Abu Ali Fâris's peaceful propaganda in favour of orthodoxy, but in 885/1480 they suddenly broke their association with Abu Umar 'Ughmân and deliberately destroyed their only link with the mainland, the Roman causeway. Up to then it had been restored several times and kept in good condition.

The rulers of Turkish Tunisia, Dey's and Beys, who were succeeded from 1177/1705 onwards by the rulers of the Hûsaynid dynasty, appointed first sha'ikhs and then kâ'idâs to represent them in the outlying possession of Djerba; these important officials were recruited hereditarily from certain families. In the 10th/16th century it was the Semu- meni family which ruled, and they were succeeded by the Bel Djellouis. One of them, Sa'id, was put to death in 1521/1732 for ordering the sinking of all
flat-bottomed boats in order to prevent them falling into the hands of the invading troops of Yunus Bey, son of Ali Pasha. Thereafter the Ben Ayed family ruled the island until the last quarter of the nineteenth century.

From the early eighteenth century onwards, Maliki orthodoxy gradually replaced the Ibadi schism, and Arabic began to establish itself as the most common language. Uprisings against the central power periodically brought war to the island, in particular from 1707/1599 to 1709/1610, and in 1864. In the eighteenth century there were also several raids by the Berbers of the nomadic Urghamma and Accara tribes from the desert, led by Ghalib Ali Pasha. Thereafter the Ben Ayed clan continued to be the dominant family in the island, and for commercial reasons they maintained a strong network of contacts with the outside world.

The island contains 400,000 olive trees, most of them now too old to be productive, and 570,000 palm trees, many of which are neither fertile nor irrigated. As in Zarzis, they are extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm weavings, and they are also extensively used in the manufacture of palm whe...
octopuses and sponges which are so abundant in the waters off Djerba. The islanders also fish with rods, eel-pots and various types of nets.

The Djerbians work hard in their several occupations, and because of this good deal they remain very devoted to their island, and to their social and family ties.

**AL-DJARDJARA,** an ancient fortress in Arabia Petraea situated on the Roman road leading from Buṣrā to the Red Sea, about one mile north of Adhrūb (q.v.). Like Adhrūb, it submitted to Muham- mad, in 631, on condition of payment of tribute. The distance between Adhrūb and Al-Djarbā, estimated at “three days’ journey”, has been mentioned frequently in the hadith as an indication of the size of the basin (ḥawd [q.v.]) where the Prophet will stand on the day of Judgment. The expression “between Adhrūb and Al-Djarbā” thus has become proverbial to denote a considerable distance.

The place came into prominence for the second time during the Crusades, when Sulāh al-Dīn camped there in August 578/1183, during his ex-pedition against Damascus.

**AL-DJARBA,** patronymic deriving from the locality of Djīrbarāyā in Ṭirāk (on the Tigris, south of Baghdad), borne by several viziers of the ‘Abbāsid and Fātimid caliphs.

1. — Muhammad b. al-Fādil, former secretary of al-Fādil b. ‘Ala‘, sent to the Mamluks by the Fatimids in 1118/1707 to negotiate peace. He was sent to the Seljuk sultan El-āṣkārī in 1128/1716 to negotiate a truce, which was signed at the end of the year, but was soon discarded by reason of his negligence. Recalled to the vizierate by al-Musta‘īn in May 1129/1718, he died soon afterwards in the year 1130/1725, aged about sixty (see Saḍāfī, al-Walfī, iv, 4, ed. Dedering, no. 1796).

2. — Ahmad b. al-Qāshib, son of a governor of Egypt (Ibn al-Ṭanīm, Shādkhārat, a. 265), had been secretary-tutor to prince al-Muẓāṯār and became vizier in 1132/1719. He died in 1133/1720 (see Saḍāfī, al-Walfī, iv, 4, ed. Dedering, no. 1796).

3. — al-Ṭabarī, see above. (D. SOURDEL).

The famous “Tower of Skulls” (Burj al-ru’ūs) built by the Djārbāns with the bones of the dead, often mentioned by European travelers, was demolished in 1848 by order of Ahmad Bey, bey of Tunis.

DIARH wa 'L-TADIL, (disparaging and declaring trustworthy), a technical phrase used regarding the reliability or otherwise of traditionists and witnesses. This article deals with the former; for the latter see 'Adl. While the criticism of hadith did not, as is often said, apply solely to the tirdad, this formed a very important part of it. In the course of the 2nd/8th century when it was realized that many false traditions were being invented, interest in the transmitters developed, and statements regarding their qualities were made. In the 3rd/9th century books began to be written, generally in the form of lists of men with their dates, and statements regarding their credibility. We also find notes on the qualities of traditionists in the canonical Sunan collections of tradition, in the Sunan of al-Dārimi [g.v.], and elsewhere. In the introduction to his Šabk Muslim found it necessary to justify the investigation of traditionists' credentials because many felt it was wrong to criticize them. Such views must have continued for a long time, for al-Ḥakīm (d. 405/1014) still found it necessary to defend the practice of writing books on Qīm al-hadith which were written (4th/10th century onwards). al-Djarh wa 'L-tadil formed a recognized branch of the subject.

The Companions of the Prophet were considered reliable, so dijarh could not apply to them; but traditionists of later generations were subject to investigation. Views were held regarding the qualities of a reliable transmitter. He must (1) be a Muslim, (2) have sound intelligence, (3) be truthful, (4) never conceal defects in his transmission, (5) be trustworthy. In his K. al-djarh wa 'L-tadil, Ibn Abī Ḥātim al-Rāzī (d. 327/939) discusses in the introduction the various classes of transmitter, and his classification served as a standard for later times; e.g., al-Khāṭib al-Baghdādī (d. 463/1071) in his Kitāb, and Ibn al-Salāḥ (d. 643/1245) in his Usīm al-hadith. He mentions in order of merit four types whose traditions may be accepted. They are (1) tihā (trustworthy), or mutāhin (exact); (2) saddāb (truthful), mahālalhu al-yidq (his station is veracity), or lā ba‘ṣ bihi (there is no harm in him); (3) ṣayyīb; (4) sāliḥ al-hadith (good, or upright, in tradition). The second type is not so authoritative as the first and the third is slightly inferior to the second. The fourth contains men whose traditions may be written down for comparison with those of others. There are four classes of lower authority still: (1) layin al-hadith (easy-going in tradition); (2) layna bi-kawj (not strong); (3) daw’ al-hadith (weak in tradition); (4) matrāk al-hadith (one whose traditions are abandoned), dkhīb al-hadith (rejected), or hadīth dīb (liar). The first two deserve to have their traditions considered and compared with those of others; the third, though inferior, is not to be rejected outright, but one must find whether his traditions are supported elsewhere. The fourth is utterly rejected. A number of other terms are also applied to other writers.

But while this sounds straightforward matters were not so simple, for sometimes a transmitter called trustworthy by one authority was called weak by another. This raised a difficulty, but opinion seemed to prefer the view that when both djarh and tadil were expressed about the same man, the djarh had more authority because those who expressed this view must have possessed information not available to others. But while those who expressed tadil did not need to supply reasons for their view, those who expressed djarh must do so, for people differed in their idea of what constituted weakness, and it is only when the reasons are stated that one can know whether the judgment is valid. Opinions differ as to whether one authority is enough to express djarh and tadil. Two men were not able to attest the reliability of witnesses, but Ibn al-Salāḥ holds that the testimony of one man is sufficient to state the reliability or otherwise of a transmitter of tradition.

DIJARH [see kāyil].
DIJARID [see al-zarita].
DIJARID (BILAD AL-). The Djerid or “country of palms” is a district of the Sahara situated in south-western Tunisia which includes the oases of Nefta, Tozeur (Ṭūṣar), El-Ouidane (al-Udyyān) and al-Ḥamna (not to be confused with al-Ḥamna of Gabès). In the Middle Ages the Djerid was more often called Kashīlyā; but this name which is sometimes a synonym of Tozeur only (Ibn Hawkal, 243; al-Idrīsī, 121), frequently embraces Gafsa and the Neżfāwa (Ibn Kīlāḏān, i, 192) along...
with the modern Djerid, and sometimes even the district of Gabès (Leo Africamis, 8).

Apart from al-Hamma which is in the north, the oases are situated at the foot of the last antifinal fold (Drâa al-Djerid) of the Atlas, between 25 and 75 metres in altitude, on the edge of an immense sabkha wrongly named Chott el-Djerid on maps: it is an immense plain of salty clay, absolutely sterile, 110 by 70 km.; it produces no pastureage of salsoaceous plants except along its border, to which alone the name sabbah applies; this is the sabkha Takmart of Arab writers. According to tradition, the sea covered the district at quite a recent period; in fact, its altitude is about twenty metres, and it has been possible to show recently that the sabbaha of Djerid and its eastward extension, the sabbaha of Fej jedi, were in the Quaternary Age merely lagoons temporarily connected with the Gulf of Gabès.

The climate is essentially that of a desert: Tozeur only receives 89 mm. (3.5") ins. of rain a year, and very irregularly; mean temperatures there for January and July are 10° C. (50° F.) and 32° C. (90° F.); frosts are very rare, but the temperature often exceeds 40° C. It is the typical climate of the date-palm, provided that it is given abundant irrigation. Numerous springs appear at the foot of the Drâa al-Djerid, fed by a strong artesian water-level enclosed in the upper Cretaceous limestones and Pontien sandstones (Tertiary): with some artesian wells, which have been sunk fairly recently, they provide a total of about 1850 litres a second. Thus the oases of the Djerid have always had the reputation of being the finest in Tunisia.

Tozeur (Tasuros, or Blâd al-Ḥaḍar), Nefta (Nepte) and al-Hamma (Aquae) were points on a forward road near the Roman and Byzantine limes. It is not certain that Tokūys (El-Oudiane), referred to by al-Yaḥṣūbī in the 3rd/9th century, is of ancient origin. The Djerid was twice conquered by Arab conquerors: in 26/647 by Ibn Zuhayr and in 49/669 by al-Yaḥṣūbī in the 6th/12th century, and in the 13th century were replaced by tribes of Sulaym origin, the Kūb and Mirdās, who migrated from the Djerid to the neighbourhood of Bone. In the 14th century the Kūb levied the iktd, whilst certain Mirdās, after acquiring property at Tozeur, gradually began to settle. But the great Ḥafṣid sovereigns of the 15th century, as a result of several expeditions, succeeded in imposing their authority over the settled as well as the nomadic population, through the help of active governors.

From the 12th century Ḥarīgism was in full decline, weakened by dissensions between Wabbiyya and Nekkāra; it seems to have disappeared when it faced with the propaganda of Shāfiʿī. From the 5th/nth century. In 1053, the Kastiliya was ravaged by the Riyāḥ, the vanguard of the Banū Hilāl, commanded by Abī b. Abī l-Rayḥ; it was quickly incorporated in the independent principality carved out of southern Tunisia by the governor of Gaṣfa, 'Abd Allāh b. al-Rand; this principality, with its sometimes brilliant court, was to endure until the Mamluks took it over. But slowly after that the Djerid became one of the bases of operations of ʿAli, and then of Yahyyā b. Ghanīya, in their attempts to restore the Almoravid empire. Under the Ḥafṣids, in the 13th and 14th centuries, it was in fact in the hands of families who were seeking to preserve their hereditary power; among them were the Banū Yamlūl at Tozeur and the Banu l-Khala at Nefta, both descended from nomadic Arabs; they paid no more heed to the councils of notables than to the advice of their sovereigns, especially in the 14th century. But they were compelled to negotiate constantly with the nomads, to whom the settled population paid tribute (ghafdrā on harvests or a payment of money); the nomads guaranteed their supplies of grain and the export of dates, stored provisions in the houses and guarded the flocks of the rich oasis inhabitants; though turbulent and dangerous, it was not in the nomads' interest to abuse their strength. These nomads, the Rīyāḥ, were little by little thrust back in the course of the 6th/12th century, and in the 13th century were replaced by tribes of Sulaym origin, the Kūb and Mirdās, who migrated from the Djerid to the neighbourhood of Bone. In the 14th century the Kūb levied the iktd, whilst certain Mirdās, after acquiring property at Tozeur, gradually began to settle. matician Fourier and doctor Desgenettes, among others, were connected. The 116 numbers, each of 4 quarto pages, of the Courrier des deux continents constitute a historical source of the highest importance. In Arabic, Marcel's printing-press had mainly published proclamations, notices and communiqués, but after Kléber's assassination (16 June 1800) it also printed the first Arabic newspaper, al-Tanbih Keith, which was founded by Menou and, it seems, was only short-lived (see F. Charles-Roux, Bonaparte, gouverneur d'Egypte, Paris n.d., 135 ff.; R. Canivet, L'imprimerie de l'expédition d'Egypte, in BIE, 1909; Reinaud, in JA, 18, 1851, 249).

It was at Ceuta, at the opposite end of the Maghrib, on 1 May 1820, that the first newspaper to be published in Morocco appeared, El Liberal Africano, the weekly publication of the patriotic Society of the town; it came to an end after 6 numbers on 5 June of the same year (V. Ferrando la Hos, Apuntes para la historia de la Imprenta en el Norte de Marruecos, Tetuan 1949, 23).

In 1824 a French monthly, called Le Smyrniot, was founded in Izmir by a Frenchman, Charles Tricon. After some initial difficulties with both the Turkish and French authorities, it was reorganized under new management, and began to appear weekly, under the name of Le Spectateur oriental, with four quarto pages. It circulated mainly among foreign commercial elements. In 1827 Alexandre Blacque, a lawyer from Marsanne, a well-known figure in the Levant, became part owner and effective editor of the Spectateur, to which he was already a regular contributor. Later renamed the COURIER DE SMYRNE, it played a lively rôle in the affairs of the time, and more than once involved its editor in trouble with the Powers by its forthright comment, notably by its advocacy of the Ottoman cause against the Greek insurrection (L. Lagarde, Note sur les journaux français de Constantinople à l'époque révolutionnaire, in JA, ccxxxi, 1948, 271-6; idem, Note sur les journaux français de Smyrne à l'époque de Mahmoud II, in JA, 19, 190, 103-44; Selim Nühet, Türk Gazeteciliği 1832-1932, Istanbul 1931, 10-28—with a reproduction of a whole issue of the Gazette, dated 1 Floréal, year V = 20 April 1797, and of Le Spectateur Oriental, Decade 1, no. 11, 20 Février 1797; Ahmed Emin, Takvim-i Wekidâ-i divânî, a modern account of modern Turkey as measured by its press, New York 1914, 28-9; Charles White, Three years in Constantinople, ii, London 1843, 42-22). A Turkish account of Russian attempts to get the paper suppressed would be found in the history of Lufti (Ta'virî-i Lufti, iii, 98 ff.). Lufti quotes the Russian ambassador as saying "Indeed, in France and England journalists (gazeteci) can express themselves freely, even against their Kings; so that on several occasions, in former times, wars broke out between France and England because of these journalists. Praise be to God, the divinely-guarded realms were protected from such things, until a little while ago that man turned up in Izmir and began to publish his paper. It would be well to prevent him ... " (Lufti, ii, 100; cf. Emin 28).

It was at this point that Egypt was to re-appear on the scene. As early as 1821, Muhammed 'Ali had given instructions for the publication of a daily newspaper which was to be submitted to him each day and to contain various official, administrative and economic items of information, but it was probably (the numbers prior to 1840 have not been preserved) on 12 Djumâda I 1244/20 November 1828 that there appeared in Cairo the first number of the first real periodical in Arabic, al-Wâhid N'al-Maṣrîyya, the organ of Muhammed 'Ali's Government of Egypt; at first issued weekly in Arabic, it later appeared for several months in Turkish and then finally returned to Arabic; it then only appeared three times weekly, with a separately published French edition, and it remained the only periodical in Egypt under Muhammed 'Ali's Government; from the time of the Khedive Isma'il it was published daily, and in addition to orders, decrees and laws it also contained new local and foreign items, editorials and occasional illustrations. In 1881, with Muhammed 'Ali (Abdul âzîz) as chief editor, it was the most important and widely circulated newspaper of the time.

During the British occupation it reverted to its earlier form and merely contained notices and information on affairs of state. In 1929 it still appeared in official lists.

In this as in so many other matters, the Sultan in Istanbul responded quickly to the challenge of the pâsha in Cairo. In 1831 M. Blacque was summoned to Istanbul to publish the Moniteur ottoman, the official journal of the Ottoman government, in French. The following year, on 1 Djumâda I 1247/14 May 1832, the first issue of the Turkish Takvim-i Wekidâ appeared. A leading article presented the newspaper as a natural development of the imperial historiographies, with the function of making known the true nature of events and the real purport of the acts and imperial-Historic government, in order to prevent misunderstanding and forestall uninformed criticism. A further purpose was to provide useful knowledge on commerce, science, and the arts. Unlike the Moniteur, which gave some space to news and comment, the Takvim was limited to official statements. It was issued by an office called the Takvimâne-i 14 atımi, the first director of which was the Imperial Historiographer Fsad Elendi ten (whom see Babinger, GOW, 354-6). Five thousand copies were distributed to officials and notables, as well as to foreign embassies. The inauguration of the postal service in 1834 greatly helped its circulation. Between 1832 and 1838 about 30 issues a year were published. Thereafter it appeared about once a week, though with some interruptions. The final issue, number 4,068, was published on 4 Rabîî I 1341/24 November 1922, during the upheavals following the resignation of the first director, the official organ of the Turkish government by the Resmi Dîrîde, later renamed Resmi Gazette, of Ankara. (Lufti, iii, 156-60; Nühet, 30-5; Emin 29-32).

The first non-official newspaper published in the Turkish language was the weekly Dîrîde-i Hawdîdî, founded in 1840 by the Englishman William Churchill. After his death in 1864 it was continued by his son. In appearance rather like the Takvim-i Wekidâ, it was commercial in purpose, and carried an increasing amount of advertising. It did, however, publish many articles and features, often in serial form, thus offering an apprenticeship in journalism to a number of Turkish men of letters. (On some of the contributors to the Dîrîde-i Hawdîdî see the articles of Iznâlimnî Muhammed Kemal in Türk Tarihî-i ÿahine Mekâîlî, 96 and 97). The Crimean War brought new needs and opportunities. Churchill reported from the battlefield for English newspapers, and his reports were also published in Turkish in special supplements of the Dîrîde-i Hawdîdî, giving the Turkish reader, anxious for news of the war, a new insight into the function of the press.

A second officially sponsored Turkish periodical was the Wâhidî-i Tibbiyye, a medical monthly published for the first time in 1850, in both Turkish

Encyclopaedia of Islam, II
and French. Other journals also appeared in French, as well as in Italian, Greek, Armenian, and Judeo-Spanish.

In 1855, the second Arabic newspaper, the *Mir'āt al-Āmilī*, founded by Hāssan who was compelled to take refuge in London [see below, iii], appeared in Beirut; the same town also saw the start of *al-Sūltānā* in 1857 and, on 1 January 1858, of the *Hādīdat al-Afšār*, published in Arabic and French by Khalīl al-Khūrī; the main purpose of this publication, which had the backing of the Turkish Government, was to acquaint the numerous foreigners residing in Beirut with the Porte’s views.

The year 1860 brought two important innovations: the first was the establishment of an Arabic newspaper, *al-Dżārida* [q.v.], compared with which the earlier efforts seemed formless and inarticulate; started in Constantinople by the Lebanese Ahmad Fāris al-Shidyāk in July 1860, and vigorously supported by the Turkish Government, this periodical defended the cause of Islam which had been recently embraced by its founder. The latter can be regarded as the father of newspaper Arabic, having done so much to enrich the language, while *al-Dżārida* was the greatest Arabic newspaper of the 19th century, in sale in Cairo, Beirut, Damascus, 'Irāk and West Africa, its wide circulation depending on the care lavished upon its editing and presentation. It reached its apogee in about 1870, but after the death of Ahmad Fāris in 1884 his son Sālim was unable to maintain the earlier standard. From 1888 to 1898, *al-Shidyāk* printed, under the title *Kanz al-Ragā‘i‘* [q.v.], seven volumes made up of articles on literature, history etc., reproduced from his newspaper, and still of undeniable documentary interest. — The second innovation of 1860 was the weekly *al-Muktaf*, being the fortnightly review of *al-Dżārida*, the first privately owned newspaper produced by a Turk. Its founder was Çapanzade Agah Efendi, scion of a derebey [q.v.] family, and a senior official in the Translation Office of the Sublime Porte. Associated with him as editor was the writer Ibrahim Şināš [q.v.]. Churchill responded to this competition by publishing a daily version of his paper five times a week—the *Rāshām-e-i Dirāsh-e-i Hāmātā* [q.v.], and for a while there was keen rivalry between the two. In the increasingly authoritarian mood of the time the press began to encounter difficulties, and soon the *Terjīmān* was suspended for two weeks because of an article probably written by Ziya (Diyā) Pasha. This was the first time a newspaper was suppressed by the government in Turkey.

In the preceding section we have tried to give an account of the first attempts to establish a press throughout the Muslim world, necessarily devoting most attention to the publications directed by foreigners in the various Islamic countries, since they played a considerable part in the rise of journalism. From about 1860 there began a new period during which journalistic activity developed to the point at which it becomes necessary to relegate newspapers published in European languages to second place, despite their importance, and to trace the history of the press in the various Muslim countries separately, with due regard to the language in which publication was made.

i. ARABIC LANGUAGE PRESS

A. MIDDLE EAST.

*Egypt.*—The history of the Arabic press of Egypt can be divided into four periods. The first lasts until the time of the British occupation. After *al-Wakā‘i‘* *al-Mṣīriyya*, it was only in 1866 that the *Wādi‘ *‘I-Nu‘* appeared, founded in Cairo by ‘Abd Allāh Abu ‘l-Su‘dī; in 1859, the *Nuzhāt al-Afšār* was started by two Egyptians, Ibrahim al-Muwāylyhī and ‘Ulgmān Dżādlāl, but it was between 1876 and 1878, under the impulse of Syro-Lebanese journalists who were unable to follow their career in their own countries in freedom, that the great organs of the press came into being. At their head we must note *al-Aḥrām*, founded by Sālim and Bīghārā Takhāl, and making a modest start in 1876 at Alexandria in the form of a 4-page weekly, dependent upon French cultural influence but paying close attention to the policies of the caliph in Constantinople; it was later issued daily and, maintaining its high literary standards and scrupulous presentation, was to remain until our own time as the greatest newspaper in the Arabic language. In addition to *al-Iḥtīāl al-Mṣīri‘*, a bi-weekly founded in Alexandria in 1879 which lasted until 1892, we should mention the Cairo Coptic newspaper *al-Wālīt* (founded in about 1876, and still recorded in 1929), and the interesting attempt at nationalistic propaganda by Ya‘qūb Sanīfī, known as Abū Naḍārā [q.v.] who had to continue his activities in Paris.

The second period lasts from the British occupation to the first world war. It was in about 1885 that the Şarṭīf-Nimr-Maḳāryos consortium was set up for a group of publications, the most important of them being the fortnightly review *al-Muḥtāṣaf*, founded in Beirut in 1877 and moving to Cairo, and *al-Muḥāfṣām*, a daily paper with political news which was pro-British and in sympathy with reform; after 1889 it became an opponent of *al-Aḥrām* which still supported the policies of Constantinople. A third party, opposed to reforms and advocating traditional Islam, was formed and, after 1890, represented by a daily newspaper, *al-Mu‘ayyad*, under the remarkable and skilful direction of Shaykh ‘Ali Yūsuf. The Syro-Lebanese, who until then had had a monopoly of the press, were gradually replaced by Muslim Egyptians, mostly conservative and orthodox—*al-ʿAddā*, founded in 1897, took over the rôle held by *al-Mu‘ayyad* as soon as the latter began to become more moderate and, during the last decade of the 19th century, there appeared a considerable number of newspapers also belonging to the conservative party, and of varying degrees of fanaticism. The growing nationalism was defended at first by Abī Ḫishāk, one of the chief editors of the daily *Mṣīr* (1896), and later by Muṣṭafā Kāmil whose principal organ was *al-Li‘ād*. It was during this period that another large newspaper appeared in Cairo, *al-Dżārida*, which took account of the effective domination of the British. Mention must also be made of the review of *al-Hilāl*, directed in Cairo (1892) by Dżīrīj Zaydān, which has survived until our own time, and of the *Manār*, founded by Raṣḥīd Rūdā in 1897. For that same year Washington-Serruys (XVII-XIX) lists 52 different publications in Cairo, more than half of which date from 1895 at the latest, and 6 in Alexandria, including *al-Aḥrām*. In 1909 there appeared in Egypt 144 reviews and various newspapers, 90 of them in Cairo and 45 in Alexandria (see *RMM*, xii, 308).

During this second period, therefore, we see the expansion of a powerful press, still producing many non-political publications, but tending, when entering the political arena, to express the still vague aspirations of the Muslim peoples, to formulate them more precisely, and to stimulate the con-
centration of the divergent trends in an Arab and Muslim nationalism. In the third period of the Egyptian press, after the dismemberment of the Ottoman Empire, came a new generation for independent statehood and gathering momentum, though not without the accompaniment of violent crises. In 1922 the "Liberal-Constitutional" Party started a weekly publication, al-Siyasa, under the direction of Husayn Haykal; after 1926 it was duplicated by a daily edition, and it shows signs of an Egyptian particularism. The Walid Party in its turn owned a group of newspapers representing the opposing opinions of Sa'd Zaghlul and his successors: al-Balagh, Kawakb al-Shark and al-Misri are the most important.

During the second world war and the years following, the Egyptian press took a more active part in the political struggle which culminated in the evacuation of British troops. From October 1944 the different parties created new organs: al-Kulla (the Wafdist "Bloc"), Ballad (Sa'dist weekly), al-Lisna al-Djumadi (Nationalist Party weekly), to which was added a weekly review of news, Akhbar al-Yawm. This upsurge of newspapers does not include the rise of extensive undertakings made by the press: Societe Orientale de Publicite, Ahrab, Ddr al-Hildl, all of whose publications cannot be listed (for the state of the Arabic press of Egypt at the end of 1944, see COC, No. 1, 116-6; at the end of 1946, ibid., No. 4, 517, giving a detailed list).

The final period opens with the suspension of the political press as a result of the revolution of 25 July 1952. The political parties having been dissolved and replaced by a single party, the "National Union", in 1958, the press was reorganized in May 1960 and the ownership of newspapers was transferred from the hands of private individuals or companies to the National Union, with the result that the whole press was subject to a single official administration. Of the principal newspapers which continued to appear, mention may be made of al-Ahram, al-Djumahriyya, al-Mas'a, and al-Akhbar.

The Sudan.—The Sudanese periodical press originated during the Anglo-Egyptian Condominium (1899-1955). The earliest Arabic newspaper, al-Suddan, was first issued on 14 October 1899 by the London Sudanese editor, under the auspices of Dr. Farris Nimr. Four or five other papers appeared during the next thirty years, the most successful being Hadrat al-Suddan, which ran from 1919 to 1938. The rise of Sudanese nationalism in the 'thirties resulted in a greatly increased output of newspapers, chiefly as organs of political comment. In 1958, out of a total of 35 papers, mostly dailies or weeklies, 5 had been founded between 1935 and 1945, 20 between 1946 and 1955, and 10 under the Republic. There has also been a succession of English and Greek journals from 1903 and 1909 respectively. Since the establishment of the military régime in November 1958, the Sudanese press has not enjoyed freedom of expression.

Lebanon.—It was only in 1869 that the first real Arabic newspaper appeared in Beirut, al-Raqib, a weekly published by the Jesuits which survived until recent times. Before that, Butrus al-Bustani had founded the modest Nafir Saraya as far back as 1860, but it was from the middle of 1870 that, to interest public opinion in the cause of general education and national literature, he brought out the bi-weekly al-Djama' which his son Salim continued to publish until 7 July 1886. Its vogue was such that djama' became synonymous with newspaper in Lebanon. Al-Bustani also published al-Djumayna, which only lasted three years, and al-Djinin.

Not wishing to be left behind, the Muslims of Beirut in 1874 founded the weekly Thamarit al-Funun which carried on until the Young Turk revolution and then took the name of al-Istidhd al-Uthman, this newspaper was conspicuous for its poverty and the turgid prose of its pedantic conservative contributors. The same year saw the foundation of al-Takaddum, which declared itself the earnest champion of progress and the inveterate enemy of all reactionary elements in the country; Adib Is'hak was a notable contributor.

On 18 October 1877 Khaled Sarkis, son-in-law of Butrus al-Bustani, brought out the first number of the Lisin al-Hal, a daily and, to some extent, a rival to al-Djama'. The two newspapers hardly concerned themselves with politics and presented events in as colourless a form as possible, while paying particular regard to the government's opinion. The Lisin al-Hal mainly concerned itself with scientific and economic matters, but nevertheless it fell foul of the Ottoman Government which suspended it for some months, during which Sarkis published another newspaper, al-Mishkil; but that did not stop him from resuming publication, and he became the doyen of the Lebanese press in our day.

In 1880 a new party took shape: the Maronites, who opposed the encroachments of the Roman Curia, founded a small newspaper al-Misbih, while Protestantism was supported by the reviews Kawakb al-Suhb al-Munir and al-Nashra al-Ushairyia; the Greek Orthodox church, for its part, also had a newspaper, al-Hadiyya.

An important addition to the press came in 1885 with the weekly Bayrut which, with government support, served as a counterpoise to the Thamarit al-Funun. When in March 1888 Beirut became the chief town of the wilayet, an official governmental organ was set up under the name Bayrut al-Rasmiyya. At the end of the century (see Washington-Serruys, XIX, XX), 9 periodicals were being published in Beirut and 3 elsewhere in Lebanon; for 1912, the figures are 8 dailies, 17 weeklies and 12 reviews. Since 1941, and especially in the years following the second world war, a considerable number of newspapers and reviews were introduced; the situation of the Arabic press of Lebanon in 1946 was the subject of a survey in COC, No. 4, 809-12, which noted 29 dailies and 25 periodicals appearing in Beirut, and 16 other periodicals elsewhere in the country.

In 1956 the Lebanese press consisted of 27 dailies and 37 periodicals, figures which are explained only by the extreme complexity of the social, religious and political structure of the country, as well as by the great liberty enjoyed by the press. To these figures should be added 18 periodicals from inland districts,
2 dailies in Armenian, 2 publications in English and 10 in French, of which UOrient (1924), la Revue du Liban (1928) and Le Jour (1934) date from the time of the mandate, and reacher circulation figures that were high for this country (up to 7,000 or 8,000 copies); Le Commerce du Levant (1928), on economic and financial subjects, had a wide distribution.

Syria.—It was only in 1865 and 1866 that there appeared, in Damascus and Aleppo respectively, the first newspapers to be printed in Arabic and Turkish and founded by the Ottoman Government, Sûriya and al-Sabdh', the foundation of these publications were correlated with the reorganization of the Turkish administration; it was decided at the same time that the authorities of all vilayets should have a newspaper printed, and this fact explains the bilingual nature of these publications. Other instances which may be quoted are Dimâşq, set up by the Turkish Government in 1879, and the Mîrîdd al-Ashâb, which appeared in 1886. An independent political weekly, al-Shâm, came out in Damascus in 1896, whilst in Aleppo the weekly al-Shahâdâ was published from 1893, and al-I'tidâd from 1879, and in Tripoli Tariibulus al-Shâm, a weekly publication, from 1892.

In Syria, however, as in Lebanon, the press had a precarious existence, all the more since the government treated any independent criticism of its actions with the greatest severity. Consequently we find that a good many Syro-Lebanese journalists took refuge in Egypt. After the setting up of the French mandate, the Damascus press underwent a very extensive development and a large number of newspapers made their appearance, but for the most part circulation figures remained very low. In 1939, 9 Arabic and 2 French dailies, not counting a varying number of periodicals, appeared in Damascus alone; the number is obviously excessive since an output of this order was in no way justified by the same reasons as at Beirut; and yet this number actually increased after the second world war. In 1946, 19 dailies are recorded at Damascus, 7 at Aleppo and 1 at Hamást, as well as 3 Damascus periodicals (COC, No. 4, 812-3). From the period of the mandate the only survivors in 1956 were Alif Bâl (1920) and al-Ayyûm (1931), both moderate, al-Kabas (1928), al-Asîbâr (1929), and al-Mâwslî (1940), both organs of the Christian party; in addition those veteran dailies which appeared, representing every sort of political opinion. At the same time half a dozen periodicals also sprang up and, elsewhere in Syria, about ten other publications, the organs of the various parties. We may note that an independent Aleppo paper established in 1928 and published in French, "L'Éclair du Nord", in 1945 became the Birûn al-Shâmî.

Palestine.—The development of the Arabic press in Palestine was slower and later than in Egypt, Syria, or Lebanon. Syrian and Lebanese publications did not circulate in Ottoman Palestine, but apart from a few mission sheets and school publications, the first Palestinian Arabic newspaper was al-Karmal, founded in Haifa in 1908 by Nadîb Nasârî, an Orthodox Christian. It lasted until 1942. In 1921 another orthodox Damascus, Istiklâl al-Shanîî, started the newspaper Falasît in Jaffa. Both papers appeared at somewhat irregular intervals, and during the first world war were suppressed by the Turkish authorities. After the war, they resumed publication, and were accompanied by many new journals, expressing Arab political reactions to the British Mandate and the policy of the Jewish national home. Among these were Sûriya al-Djânâbiyya (ed. 'Arib), al-'Arîf and Muḥ. Hasan al-Budayrî and Mîrîdd al-Shârkh (ed. Bûlus Shehâdâ); both were started in 1919, and were of brief duration. Al-Sâbîh (ed. Muḥ. Râmîl al-Budayrî and Yusûf Yâsîn), founded in 1921, became the organ of the Arab executive.

The first daily newspaper in Arabic was the old Falasîtîn, which began regular publication in 1929, and has continued to the present day in the old city of Jerusalem. Other dailies were al-Sînîf al-Mudâšîkîm (founded 1925, daily from 1929, edited by Shaykh 'Abdallâh al-Kašîkhî) and al-Dîfâ'î (founded 1934, ed. İbrahim al-Shanîî). Both papers were owned and edited by Muslims; the former was markedly Islamic in tone; the latter expressed strong Arab nationalist views, at first connected with the Istîhadî party, later with the groups led by the Husâynîs. It is still published in Jordanian Jerusalem. The weekly al-Wâhida, founded in 1945, became a daily in the following year.

During the nineteen-thirties and forties there was a very rapid development of the periodical press, notably of political weeklies and fortnightlies. Modelled on the Egyptian weeklies, some of them offered their readers feature articles, film news and other lighter entertainment, sometimes with pictures, in addition to political news and comment. Two papers, the weekly al-Iltîkî (founded 1944) and the fortnightly al-Qâdâî (first published irregularly in the twenties, re-started 1945) represented communist or pro-communist views; the remainder expressed various shades of Arab nationalism and factions among the Arab leadership. The press in languages other than Arabic was mainly Jewish. The first Hebrew journal, the Havaâdîîleh, began publication in Jerusalem in 1871. Other Jewish papers, in Hebrew and other languages, followed in great numbers.

After the termination of the Palestine Mandate, the major Palestinian Arab journals continued or resumed publication in Jordan where, according to the Middle East for 1961, there were 7 daily newspapers in Jerusalem and Amman, and 14 periodicals, in Arabic and English. The same source cites one Arabic daily newspaper and 6 Arabic periodicals in Israel.

'Irâq.—The liberal Ottoman governor Midhat Pâsha in 1868 set up the first newspaper in Irâq, al-Zawarî, which appeared in Arabic and Turkish and, while supporting the government's policy, published official texts and news in general. In 1875 the government started another newspaper in Mosul, al-Mawsîî, and, in 1895, a third entitled al-Bâsra, in Basra.

Among the many newspapers which sprang up after the promulgation of the Constitution of 1908, the following may be mentioned: Baghdâd (1908), al-Ra'îfî (1909), Bayn al-Nahr-ya (1909) in Arabic and Turkish, al-Ri'ayûd (1910), al-Ru'sîfî (1910), and al-Nahkâ (1913). Under the British mandate a great number of new newspapers appeared, notably al-Wâhâdî al-Irâbiyûsî, al-Mawsîî, al-Irâq and al-Shârkh. After the second world war the many newly established political parties owned their own organs and until the revolution of 14 July 1958 practically every town in Irâq had a daily or weekly newspaper.

Arabia.—In the Arabian peninsula the oldest newspaper, Saâdîtîs, dates back to 1877 and, like so many official publications under the Ottoman régime, was printed in Arabic and Turkish. It was only in 1908 that Mecca had its first newspaper, al-Hisâ'îsî. The press is now represented by the official newspaper which appears once a week in Mecca, Umm al-Kurîs, and by al-Bûlîdî al-Swâ'dîyûsî (bi-weekly,
Mecca), al-`AdiDā (monthly, Mecca) and al-Madīna (weekly, Medina). In 1953 a more modern newspaper, al-Riyād, made its appearance at Djeddah but it was compelled to stop publication as a result of the hostilities.

The Colony of Aden has six Arabic publications, among which al-`Abūrār al-Adānīyya and Fātūl al-Dīazārīa may be noted. In Kuwait the most important newspaper is al-Kuwāyti al-Ya`um (1953), but it also produces a monthly review with coloured illustrations, al-`Āsāfī, published by the government.

B. — North Africa.

Paradoxical though it may appear, it was Algeria, at present the Maghribi country which is poorest in Arabic newspapers, which was the first of them to put into circulation a modest periodical, al-Mubāhahār, from 1847 to 3 December 1926; this was an Arabic edition of the official Moniteur founded at Algiers on 27 January 1832 (see H. Fiori, in R.Afr., ixxii (1938), 173-80; G. Sers-Gal, in Documents algériens, 8 December 1948). As well as official information, the Mubāhahār carried news, historical, architectural, and medical studies, etc. Its example was not immediately followed, and it was necessary to wait until the beginning of the 20th century for an independent press to appear, edited by Muslims indeed, but directed in many cases by Europeans who were desirous of informing and educating the Arabic-reading public; in this way al-Nāṣib (1899), al-Dīazārī (1900), then al-`Iyād (1905), Tiimsān (Tlemcen), Kawkab Ibrīhiyya (Algiers, 15 March 1907), al-Dīazārīv (Algiers, 1908), al-`Afrāb (Algiers, 1909), al-Raghādī (Djadjelii), etc., were founded. These publications, however, had only an ephemeral life and disappeared before 1914.

The inter-war period was the second in the history of the Muslim press in Algeria. This saw the birth, on the one hand, of a series of newspapers edited in French by Muslims, such as La Voix indigène, La Voix des Humbles (1923), L’Entente, La Défense, La Justice, Le Réveil de l’Islam (Bône, 1922), etc., all intended for the expression of popular aspirations and various political tendencies; and, on the other hand, of a periodical press in Arabic, of a distinct political-religious character. This period was, in fact, dominated by the struggle which opposed two active groups and caused heated polemics: the reformist Ḥumām (Oulémas), hostile to the Brotherhoods (see Tā`ifa), and to the bidda (see Bi`a), etc., relied on al-Ṣaḥāb (daily, then monthly; Constantine 1924-39), then on al-`Iyād (Biskra 1929-42), and finally al-Dājīra (Algiers, 27 December 1935-56); and the Marabout party, generally favourable to the Franco-Muslim entente, which had as its organs al-Naḍījāb (tri-, then bi-weekly, Constantine, 1919-50) and al-Balāgh al-Dīazārī (Mostaganem, 1927-47). The most notable was al-Dīzīrah (Algiers, 1906-53): it is also worthy of mention, among about ten papers which flourished during this period.

In 1945 only al-Balāgh al-Dīzīrah, al-Baṣā`ir (prohibited 5 April 1956), and al-Naḍījāb (which ceased to appear from 1 September the same year) remained. The organ of the `Ummānīya had been supplemented from 15 December 1949 to 8 February 1953, but it was weekly published at Constantine, al-Sawīl, while the Marabout party published a monthly, al-Dīzīrah, at Tlemcen from 15 December 1954 to August 1955. However, during this third period, Muslim predilections perceptibly changed, and some essentially political newspapers (al-Dīzīrah, January 1946 to 14 September 1955, communist; Sawīl al-Dīzīrah, from 21 November 1955, which became Sawīl al-Sūrī from 21 August 1954 to 5 November 1956: MLTD) made a timid appearance. All have now (1960) ceased to appear, or have been prohibited by the authorities; for its information the public depends on a highly developed French-language press. It must be noticed, moreover, that none of the Arabic dailies has ever held good in Algeria, and that the papers mentioned above have, in many cases, known only an irregular appearance. It should be said that they were published by amateurs, with precarious financial resources and rudimentary technical means.

In Morocco, the first newspaper was founded at Céuta on 1 May 1820, but was in Spanish; and in this language or in French the press developed, particularly at Tangier, in the course of the 19th century. In 1889 an Arabic paper (al-Magrib) appeared a few times, published by an Englishman in that town, where, at the beginning of the 20th century, many European journalists tried to reach the Muslim population by supplementing their papers with an entire or partial Arabic edition. Thus, thanks to European initiative and the collaboration of editors from Syria and Lebanon, the weeklies al-Sa`īda (1905), al-Ṣabh (1906), Lissān al-Magrib (1907), the Arabic supplement to El Telegrama del Rif (1907), and the Istiqlāl al-Magrib, Arabic edition of the bi-monthly L’Indépendance marocoine (1907), were able to appear at Tangier. The first Muslim newspaper was al-Tā`ādhāb ("The Plague," sic), a monthly controlled by the sharī`i al-Kittānī (March 1908). In the same year the Moroccan government had an official newspaper published, al-Fādyr, edited by a Syrian Christian, which was transferred to Fez in 1909. Other weeklies also were founded at Tangier, notably al-Halāk (1911) and al-Tarābīkh (1912).

After the inauguration of the Protectorate, al-Sa`īda was transferred to Rabat, where it became first tri-weekly, then daily; this semi-official newspaper, edited with care, beautifully printed, graced with numerous illustrations, anxious to inform its readers of events in Moroccan life, and widely circulated in all Morocco, played an undeniable educative and political rôle. In other towns the Arabic press hardly developed at all. Al-Wīdād had only a restricted number of readers; a daily, al-`Akkār al-ta’ṣīlīyya, was started at Fez, while a weekly, al-`Akkār al-Maghrībiyya, supplemented L’Information Marocoine at Casablanca; at Marrakesh al-Dīzūb had only a short life, but in the north, at Tetuan, several political newspapers met
with some success (al-Islāh, al-Istiklāl, I'hār al-
I'laẖ).

The accession of Morocco to independence (1956) saw the renewal of the Arabic press in the country, although the French-language newspapers had received authority to continue publication, at least provisionally. Three daily papers: were produced: the unofficial al-'Akhār al-Dżādād (Rabat), supplemented since 1 September 1960 by al-FAżfr, which was des- tined to replace it, al-'Alām (Rabat), and al-Talābīr (Casablanca), these two latter being organs, with some bias, of the Istiklāl party. The total circulation of these three dailies was less than 25,000. The Democratic Party of Independence (FDI), which has on occasion published a weekly in French (Démocratie), relies on a bi-weekly, al-Ra'y al-'Amīm.

The Moroccan Union Labour (UMC) and the Moroc- can Union of Commerce, Industry and Handicrafts (UMCIA) own two weeklies at Casablanca, al-/al'sal và’al-līthābād and al-Istiklāl respectively. In 1959 four other political weeklies were also published: al-diyyām (Istiklāl, Casablanca), al-Maqārūb al-'^Aralībi (Moroc- can Popular Movement, Rabat), al-'Nīdāl (independent Liberals, Rabat), and Ḥayāt al-Sha'b (com- munist). Finally, a monthly literary review at Marrakesh, Risālat al-'Adīb, must be mentioned.

It is, naturally, in Tunisia that the Arabic press has reached its greatest development; the two world wars, bringing about some flexibility, would make it possible for three periods to be distinguished, but on the whole one can consider that the end of the French Protectorate and the advent of the country's independence (1955) mark the limits of two well-differentiated periods.

As early as 1861 Tunisia possessed an official newspa- per, al-Raḍī' al-Tunūsī, and, from 1890, a daily news-sheet, al-Zuhrā, which was to survive more than 60 years; a second daily, al-Kuḥdīyya, appeared from 1904 to 1910, and a third, al-Nakhḍa, was founded in 1912. To these publications a crowd of periodicals of political, religious, commercial, etc., character, and of more or less ephemeral duration, was early added. Among the weeklies may be mentioned the unofficial al-Hādīra, from 1888 to 1910, then the liberal al-′Azmān (1930), the Pan- Arabist al-Sawdb (1904-11, 1920), the (Archaeo-DESTUR) Destourian Līsān al-Sha'b (1920-37). In the inter-war period a few weeklies appeared in the provinces; of a sharply marked political character, they were divided between Archaeo-Destourian (al-'Aṣr al-Dżādād, Sfax 1919-25, 1936; al-Dījār, Kayrawān, 1937) and, especially, Neo-Destourian tendencies (at Sfax, Ṣadd al-Ummā, 1936-7; al-Antīs, 1937; al-Inqūṣrār, 1937; al-′Aṣr al-Sha'bī, 1936-7. At Sūsa: Fātā al-Sabīl, 1936-9. At Kairouān: Sabra, 1937).

In 1937 G. Zawadowski (see Bibliography) col- lected 161 titles and presented a very striking diagram: from 1861 to 1903 the number of Arabic journals varied between one and six; it reached 23 in 1907, after the relaxation of security on 2 January 1904, fell to four during the first world war, to attain 32 in 1921; it fell again to eleven in 1928-9, following the measures taken for the suppression of criminal and political offences, and finally reached the figures of 57 in 1937. The same author indicates, moreover, 13 periodicals published in French by Tunisians, and, no less interesting, 73 titles of Judaico-Arabic publi- cations, in Arabic but in Hebrew characters, the oldest of which, al-Mukhābrāt, appeared in 1884-5. Flourishing until the first world war, this Jewish press afterwards continually declined until in 1937 there were only three miserable papers, at Tunis and at Sūsa.

The Arabic press of the capital played an important part during the years which immediately preceded the country's independence; depending on financial resources and skilled techniques, directed and partly edited by professional journalists, it became the herald of nationalism, endeavoured to bring its public round to the idea of independence, and spread the themes of anti-French propaganda in the towns and villages. Their end achieved, or on the point of being so, some papers, among the most important, went into opposition and tried to outbid the govern- ment; they had finally to cease publication, so that there remained of the former press only al-'Aṣmāl, a bi-weekly founded 1 June 1934 by the future president of the Republic, al-Hābīb Abū Ḳuraykāba (Bourguiba), and now a daily; and the communist weekly al-Talāsī, founded 1937. A new daily, al-Šabāb, has been started, while the weekly al-Īrādā, organ of the Archaeo-Destourians since 1934, has been replaced by al-Istiklāl. A few other nationalist periodicals such as al-'Alām, al-Nīdāl; and al-Dżumākhirī appear more or less regularly. The organ of the FLN, the weekly al-Mukhwāwama al-Dżādāsī- riyya, has become al-Mudājāhīdā. Finally must be noticed a monthly cultural review, since 1 October 1955, al-Fīhr, which young Tunisians of university education maintain at a respectable standard. Three French dailies, the oldest of which is Dēptīcī tunīssīn, and one Italian, now (1960) appear at Tunis.

Worthy of mention is a political weekly l'Action (now Afrique-Action) which won some renown abroad.

Libya.—In 1871 the first Arabo-Turkish newspa- per, Tarābulus al-Qāhir, was started in Tripoli; it was of an official character. It still continues to be published in Arabic and forms the chief organ of information for the Federal Kingdom. A second, of a scientific and political nature, al-Tarābbītī was published from 1897. Other news- papers were published during the period of Italian domination but are of only the slightest interest. Since the country became independent various newspa- pers have made their appearance, notably the periodicals al-Raḥīm and al-Talāsī (the organ of the Federal Union of Workers). (Ed.)

C. — Arabic-speaking Emigrants.

In the course of the last decade of the 19th and the first of the 20th centuries colonies of Arabic- speaking emigrants (dżādār, q.v.) sprang up in large cities of North and South America, Australia and West Africa. The main source of emigration was Lebanon and Syria, where the Arabic press was cradled and
Arabic journalism, in the proper sense, was born and nurtured. Prior to 1890 Ottoman authorities in the area permitted emigration nominally only to Egypt, but Lebanese and Syrian emigrants had found their way, even earlier, into numerous European capitals where a rash of Arabic papers and magazines made its appearance. The census of the historian of the Arabic press, Tarrázi (iv, 490), for the period ending 1929 makes the number in Constantinople 49, Russia 5, Switzerland 2, Germany 7, Italy 4, France 43, Great Britain 14, Malta 8, Cyprus 2, Egypt 34, to which were added papers issued in 14 other countries of origin. As a liaison agent it kept alive the ties of relationship between emigrants and old folks and meanwhile interpreted the new culture and helped adjustment to it. It contributed generously to the enrichment of modern Arabic literature—prose and poetry—in vocabulary and ideas and to the enhancement of the Westernization of the Arabic East.

Most of these papers began as and remained personal sheets with the founder, editor and publisher as one person. They were more concerned with politics and literature than with news and, with no local colonies to support them, they were destined to be short lived. None survived.

The New World papers likewise began as personal sheets. Most of these founder-editor-publisher sheets but the founder, editor and publisher as one person. They were more concerned with political and literary matters than with news and, with no local colonies to support them, they were destined to be short lived. None survived.

The New World papers likewise began as personal sheets. Most of these founder-editor-publisher sheets. Though short lived, the paper was distinguished itself in its vigorous defence of Islam and attack on the British in Egypt and India. A Beirut deputy in the Ottoman parliament of 1876, Khallî Ghânîm, incurred the anger of the British for his liberal views and fled to Paris, where he started (April 1881) al-Bâzîr, which exposed the massacre of Armenians. Like other anti-Ottoman publications al-Bâzîr was banned by Turkish authorities and thus doomed to early death. With Amlî Arslân, a Lebanese Druze, Ghânîm issued (1890), partly in French, Turkiyd al-Fatdt. Of a different character was the only known paper in West Africa, Ifritiya al-Tididriyya (commercial Africa, Dakar, 1951-5).

The language of the press has already been studied in the art. 'Arabiyya, II, 4, but one cannot emphasize too strongly the part taken by the various newspapers, and particularly the Egyptian ones, in the evolution, development and enrichment of the so-called modern or contemporary Arabic which is indebted to them, far more than to actual literature, for its ability to express a multitude of new ideas, most of which have been imported from the West.

Basically, the Arabic press has made enormous progress; for a long time the only material that it had presented to the public, apart from news from abroad that was already stale, had been such information as would please the Ottoman Government or the notices provided by it; al-Dinawrb alone perhaps constituted a fortune exception. From the beginning of the century and especially since the first world war the main daily newspapers have explored a wider field, giving their readers information of every kind, concerning themselves with social, economic, literary and artistic questions, and shaping, orienting or arousing public opinion by means of commentaries which are not always dictated by the most praiseworthy objectivity. Side by side with this press, which in certain respects is comparable with the Western press and has at its disposal powerful technical and financial resources, a large staff and modern printing presses, there exists a swarm of minor publications whose preparation is entirely the work of craftsmen, when their frequency of publication does not depend upon the more or less acknowledged resources of their proprietors. While a larger number of illustrated magazines like al-Musawwar (Beirut) are enjoying an undeniable success.

The first printing press was set up in about 1817 in Tabriz, followed by one in Tehran; but in about 1824 lithography quickly and almost completely eclipsed printing for over half a century. From 1848 the first newspapers appeared, first in Tehran, then in Shiráz, Isfahán and Tabriz; in about 1860 portraits and illustrations were introduced; the first periodical of scientific character dates from 1863; the first daily newspaper from 1898; the first humorous and satirical newspaper from 1900. In 1875 the first of the newspapers established outside Iran appeared in Constantinople; others appeared in London, Paris, Cairo, Beirut and Bombay (Bahá'í).

In its early period the press was literary rather than political; the opposite was true after the Constitution of 1906. The development of the press was caused by the spread of printing which little by little replaced lithography. From 1910 to 1912 it underwent various changes caused by the political turmoil in the country. Nevertheless, E. G. Browne (The Press ...), completing the list drawn up in 1911 by H. L. Rabino, named 371 daily publications and periodicals in 1914 (see his summary of the development of the press, 7 ff.); many periodicals are of literary or scientific character; it is important to add that political newspapers very frequently ranked as literature: so too the numerous political poems and satirical articles in prose which, besides their literary value, also possess actual historical interest (see Rabino, op. cit., introd., xvi and the anthology, 167 ff.).

If the newspapers of the early period were often unofficial and poorly supplied with information, they provided a wealth of instructive articles, edited in excellent style: "they inspired a taste for reading and thus contributed to the progress of general instruction" (Rabino). As for the press which prepared for and followed the Constitution of 1906,
Browne, the eminent authority, states: "Several of these newspapers, in particular the Şü-r-İsrâ'îl, the Ḥabî ol-maṭâin and the Mâsdûdât were indeed of a superior sort and serve as models of a vigorous, nervous and concise style which until then was virtually unknown" (The Persian Revolution, 127); later he defined his views (Lit. History). To the bibliography which he drew up (in The Press) can be added the lists of newspapers and periodicals compiled by 'All Nî Rouze (Nawrûz) (1914-1925) and the Annuaire du monde musulman (1929). It is also worth recalling various newspapers published in French, Armenian and Chaldean.

In 1930, in his supplement to the Persian translation of Browne's Literary History, Rashid Yâsmî makes a stand against the increasing disregard for literary form in many newspapers, the result of the enforced speed of publication, and of the invasion of foreign words introduced in information and articles translated from European newspapers; he provides a list of newspapers (among which he singles out Ra's "The thunder", İran, Şafâ-kâşî-surk "The red twilight", İjtehad "Information", Nâhid and a list of periodicals (among which he notes Armaghân "Gift", Bahâr and Naqahâh "Spring", Ayanda "Future", İrân-i ğâwad "Young Iran", Şahr "East!", Mîhr "Sun"); to these periodicals should be added those published by the Ministry of Public Instruction and the Universities (Tehran and Tabriz) and, though it is not possible to mention them all, the literary review Yâgdâr "Memorial", the critical review Rûh-nâma-yi kûtûb "Guide to [new] books", and several scientific and technical reviews; finally he mentions some annual publications with a wealth of information as important as it is varied (Persî, Gûhânama). Several newspapers listed by the Annuaire du monde musulman have disappeared; to the list should be added, among others, Kayhân "The world", (Tehran), Azâdî "Liberty" (Maşqhad) and the remarkable reviews Farhang-i İrân zamin "Iranian culture", Madjdalla-yi mâstû, Sukhan" The world", Yâgdâr Ùyâni "Booîy".
Muslims against foreign (Christian) encroachment and in the face of presumed official lethargy. The proclamation of 1876 order led to the flight abroad of members of the “Society of New Ottomans” (Yeşil Othmānîlîlar Diyetîyesîti), including ‘All Su‘āwî, Nâmîl Kemâl, Ziya (Diýâ?) Paşa, Ağâh Efendi and others. With financial help from the Egyptian prince Mustâfa Fâdîl Paşa they undertook the publication of revolutionary newspapers directed against the policy of ‘Âlî Paşa. ‘All Su‘awî restarted the Mukhâbîr in 1867 in London. In 1868 it was followed in Constantinople by the short-lived newspaper İnkîldîb, designed by Ziya Paşa, Nâmîl Kemâl as a weekly organ of the New Ottomans. Nâmîl Kemâl left the paper in 1869, while in the following year Hûrrîyyet moved to Geneva, where another 11 issues were published, making 200 in all, ‘All Su‘awî had in the meantime moved to Paris, where in 1869 he published Ulûm, which was the first newspaper in Turkish to advocate Turkish nationalism. Another revolutionary sheet, İnkîlah, published in 1870 in Geneva by Husayn Wasfi Paşa and Mehmed Bey, is noteworthy for the fact that it attacked not the Sultan’s Ministers, but Sultan ‘Abd al-‘Azîz himself.

In the meantime there was an increase in Press activity in Turkey, particularly between 1868 and 1872; new publications included important organs of opinion like Terâbbî, İhsan, İbret and Hadîkha and humorous publications like Diogène and Khayyâlî, which registers the outspokenness of what the author of the proclamation of 1867 no longer applied. Terâbbî, which first appeared in 1868, had the first weekly supplement for women, while Miûmeyyis, which followed, in 1869, had the first children’s supplement in the country. Diogène started publication in Greek and in French, appearing later in Turkish. Hadîkha was started in 1869 by ‘Ashîr Efendi, as a scientific publication passing in 1871 under the control of Ebu ‘l-Izîyâ (Abu ‘l-I-diyâ?) Tewfîk [g.v.] (who had collaborated earlier with Terâbbî) and in 1873 under that of Şems al-Dîn Sâmîl. İhsan, which carried articles by the Pole Karski, by Ahmed Midhat Efendi and also by ‘All Su‘awî, can be considered as the most successful newspaper of the time, coming second in popularity after the official police sheet Version-i E[vêlî]. İbret, first edited unsuccessfully by Ahmed Midhat Efendi, passed in 1872 under the control of Nâmîl Kemâl, Ebu ‘l-Izîya Tewfîk and Reşâh Nûrî. In it Nâmîl Kemâl attacked the Grand Vizier Mahmûd Nedîm Paşa, who in consequence had him exiled to Gallipoli, suspending the newspaper for four months. Nâmîl Kemâl returned from exile and resumed editorship after his enemy’s fall from favour. The newspaper suffered one more suspension and was then permanently closed down in 1873, as a result of the excitement caused by Nâmîl Kemâl’s play Wâtan wegî Silîste, the author being exiled this time to the castle of Famagusta. In all 122 issues of İbret appeared, and this newspaper can be considered as the best propagator of liberal ideas during the period of the Tanzimât. The period saw the birth of many short-lived journalistic ventures of predominantly political character, as well as of organs of more enduring importance, like the best-selling newspaper Wâkit, which owed its popularity to the political commentaries of Sa‘îd Bey; Mehmed Tewfîk Bey’s Sabâhî, first published in 1876 and noteworthy for its courage in being the first newspaper to appear with several blank columns as a protest against the censors; and finally, the high-minded İstîkbâl which devoted much attention to educational matters. Mention must also be made of the Mehmed-i-i Ebû ‘l-Diyâ, published by the prolific journalist and author Ebû ‘l-Izîyâ Tewfîk (1860), and of the first children’s magazine, Eflîl.

The return to absolutism under ‘Abd al-Hamîd II was marked administratively by the transfer of Press affairs to the Ministry of the Interior in 1877; in 1878 newspapers came under the joint censorship of the Ministries of Education, Interior and Police; in 1881 an “Inspection and Control Commission” (Enfîjîmân-i Teftîf we Mu‘âdînî) was formed and charged with preventive censorship, an even higher authority, the “Commission for the Examination of Compositions” (Tedâhî-i Mu‘âlîfîlî Komisyonu) being formed in 1897 and supplemented for religious publications in 1903 by the “Commission for religious and legal books” (Kutubi-i Dinîyye we Şerîyye hîyetî). Public newspapers issued outside the borders of the Empire were dealt with by the Foreign Press Directorate (Ma‘bû‘û’l-Èı Eglînîyye Müftîrîlîqîlî) formed in 1885. All these measures were taken in spite of the 1876 Constitution which, in article 12, guaranteed the freedom of the Press “within the bounds of the law”, and in spite of the rejection by Parliament of the draconic Press Law of 1877. Press censorship under ‘Abd al-Hamîd II was supplemented by control of printing presses (1888) and of book sellers (1894).

All this limited the number and contents of publications, although it did not stop the development of the Turkish Press. Important dailies included Mîhrân Efendi’s Sabâhî, founded in 1876 and already mentioned, which included the young and later famous journalist Hüseyn Dîlâhî Bey among its contributors; Ahmed Dîjwêt Bey’s İdâm (1890), which had a semi-legal correspondent in Paris in the person of the later famous ‘All Kemâl Bey, and Ahmed Midhat Efendi’s (known as “the typewriter” for his prolific writings) Terîjîmânî-ı Hıkbatî, which between 1882 and 1884 had a passing literary phase thanks to Mu‘âlîmî Nâdîlî. Important periodicals included Mûrâd Bey’s political weekly Mîzân (1886-90 with interruptions), and above all ‘Ahmed Ihsân Bey’s Terîwêts-i Fîwânî, standard-bearer of a new literary school (Tewfîk Fikret, Dîjwêt Fikret, Dîjwêt Dîvân, Dîjwêt Sâmîl, Dîjiyâ, N. Sabînî, Rida Efendi and also by ‘Ali Shefîq, Ahmed Midhat Efendi’s (known as “the typewriter” for his prolific writings) Terîjîmânî-ı Hıkbatî, which between 1882 and 1884 had a passing literary phase thanks to Mu‘âlîmî Nâdîlî. The last decade of the 19th and the first years of the 20th centuries saw a host of short-lived publications in 1903 by the “Commission for the Examination of Compositions” (Tedâhî-i Mu‘âlîfîlî Komisyonu) being formed in 1897 and supplemented for religious publications in 1903 by the “Commission for religious and legal books” (Kutubi-i Dinîyye we Şerîyye hîyetî). Public newspapers issued outside the borders of the Empire were dealt with by the Foreign Press Directorate (Ma‘bû‘û’l-Èı Eglînîyye Müftîrîlîqîlî) formed in 1885. All these measures were taken in spite of the 1876 Constitution which, in article 12, guaranteed the freedom of the Press “within the bounds of the law”, and in spite of the rejection by Parliament of the draconic Press Law of 1877. Important periodicals included Mûrâd Bey’s political weekly Mîzân (1886-90 with interruptions), and above all ‘Ahmed Ihsân Bey’s Terîwêts-i Fîwânî, standard-bearer of a new literary school (Tewfîk Fikret, Dîjwêt Fikret, Dîjwêt Dîvân, Dîjwêt Sâmîl, Dîjiyâ, N. Sabînî, Rida Efendi and also by ‘Ali Shefîq, Ahmed Midhat Efendi’s (known as “the typewriter” for his prolific writings) Terîjîmânî-ı Hıkbatî, which between 1882 and 1884 had a passing literary phase thanks to Mu‘âlîmî Nâdîlî. The last decade of the 19th and the first years of the 20th centuries saw a host of short-lived Turkish revolutionary sheets in Paris, Switzerland, London and Egypt. They included organs of the Committee of Union and Progress, such as Othmânîlî, published by İshâk Sukkârî and Abdullah Dîjwêt, Habîb ve Şairî-i İmâmî, published in Cairo with the cooperation of Ahmed Rîzî Bey. In the same year as the latter, in 1902, Prince Sabâhî al-Dîn published his newspaper Terâbbî. Another influential newspaper published abroad was Terîjîmânî, which Gasprîlîlî İsmâmîl (Gasprîlîlî) founded in the Crimea in 1883.

When the Constitution was once again put into practice on 24 July 1908, the Turkish Press attained
to unlimited freedom for a period of some eight or nine months. The three main newspapers of the Hamidian era (İydám, Şâbâh and Terciğümân-ı Hâkimât) were soon joined by a daily edition of Terciğümân-ı Funâm, by the Yenî Gazete of Abdullah Zuhdi and Mahmûd Şâdik and, most important, by Tanîn, published by Tewfîk Fikret, Hüseyin Kâzîm and Hüseyin Dîjâhid. In all more than two hundred newspaper licences were granted in the first few weeks of the constitutional régime, while the number of periodical publications in 1908-9 amounted to 355. This number decreased constantly in subsequent years: 130 in 1910, 124 in 1911, 70 in 1914. The fortunes of the Press were linked closely with the course of the political struggle between the Committee of Union and Progress and its opponents. In the months between the restoration of the Constitution and the “11th March Incident” (13 April 1909) the Committee was opposed by Əğtîmînîf, the organ of the Liberal Party of Prince Şâhâb al-Dîn, by İydám, which carried articles by Əli Kemâl, by Yenî Gazete, Terciğümân-ı Funâm and others. It was supported by Şâhâr-i Millat, Ebi l-Zîyâ Tewfîk’s Yenî Taşvîr-i Efâh, Millîyeyet, Hurrîyeyet and other publications. The religious opposition was led by Derwîsh Waḥdât’s newspaper Volkan and by the magazine Beyân al-Əbâh. After the “incident” censorship was re-imposed by the military administration. The Press was largely inoperative the 1909 liberal Press Law, which was in any case amended in 1913, the amendment granting wide powers to the authorities in cases where publications were deemed to endanger the security of the State. A Directorate-General of the Press was formed at the same time. Opposition newspapers tended in these conditions to be short-lived. Among the few which deserve mention one could include Seâlat-i Ətûmâmîye (1910) which carried articles by Abdullah Eddewât, signed “A Kurdî”,” and also Terciğümân-ı Funâm in 1912 by Ḥakkî Əbâh on behalf of the Party of Freedom and Concord (Hurrîyeyet ve Əlîlâ). The years before the First War also saw the birth of some important literary and scientific magazines, like the journal of the Ottoman Historical Society (Ta’rîhî-ı Ətûmâmî Enğîsîmî Medîmûsî) (1910), Türk Yurdû, the organ of the Turkish Hearths (Türk Oğlaklûr), and the literary avant-garde papers Ənîs Kâlamîr and Rubâb. One must also point to the existence of a numerous religious periodical Press. In 1913 Əli Kemâl founded the daily Peyâm, which was to amalgamate after the war with Mîhrân Efendî’s Şâbâh and, under the name of Peyâm-ı Şâbâh, to be in the forefront of the opposition to Mustâfa Kemâl in Istanbul during the Turkish War of Independence. The last years of the 1914-18 War witnessed the first ventures of journalists who were to become famous under the Republic. It was then that Ahmed Emin (Yalman) and Ḥakkî Əbâh (Us) started Waḥît, that Yûnus Ənî entered the field with Yenî Ənî and Seddâm Simâfî with the humorous magazine Diken; it is also to those years that the important daily Abaşâm goes back. Newspapers published in Istanbul at the end of the war included also Saîd Möllû’s İstanbul, Reîf Dîjâhid’s Əlemâr and Mehmed Əzzetîyê (Settel’s) Buşûk Gazete.

In Anatolia the nationalist movement was first defended by İrîdî-ı Millîyî, the organ of the Sivas Congress, which first appeared on 4 September 1919. A fortnight after his arrival in Ankara on 27 December 1919 Mustâfa Kemâl Əbâa founded his organ Hâkimiyet-ı Millîyî, which was renamed Ulus in 1928, Halek in 1955, reverting to Ulus in 1956. In 1920 Yûnus Nâdî transferred his Yenî Gûn to Ankara, returning to Istanbul in 1923 to found Dîmâhrîyeyet (Cümhuriyet), which then became the main Kemalist newspaper in the old capital. Note-worthy magazines founded or published in the years between the end of the war and the proclamation of the Republic included the Communist Aydınlîk, the literary Dergâh, which carried articles by Yaşkâ Kadîr (Karacoşunağa) and Ziya Gökâpî’s Külêk Međîmâ, started in Dîyarbekir (Diyâr-Bakr) in 1922.

Censorship ceased with the entry of the Turkish Army into Istanbul on 7 October 1922. The 1924 Constitution re-asserted the existing constitutional assurance that the Press was free within the bounds of the law and could not be subject to pre-publication censorship. Powers of suspension were, however, assumed by the authorities the following year under the Maintenance of Order (Tabrîr-i Suḥûn) law which remained in force for two years. Suspension and confiscation by Government decision were also allowed by the Press Law, which was later repeatedly amended, Press offences, penalties and other provisions being several times re-defined. The Directorate-General of the Press which had been disbandied in 1931 was re-formed in 1933, becoming in 1940 the “Directorate General of Press, Broadcasting and Tourism”, attached to the office of the Prime Minister, and, towards the end of the Democ-ratic Party administration (1950-56), the Ministry of Press, Broadcasting and Tourism.

The Turkish Press was faced with great difficulties in 1928 when the Arabic alphabet was replaced by the Latin alphabet. Newspapers appeared for a time printed in both alphabets. Circulations dropped and the Government had to come to the assistance of the Press with subventions which were continued for three years. The development of the Press under the Turkish Republican People’s Party administration (1923-45) saw the appearance of a number of distinguished journalists and journalistic dynasties. They include Ahmed Emin Yalman who, after leaving Vakît, founded Vatan in 1923, İnhîlbî in 1934, was associated with Tan in 1935, then restarted Vatan and remained in control of it until 1956 when he founded a new paper İnhîlbî; the Nâfî family who retained control until the present day of Cümhuriyet; the Simâvi family who own the best-selling Hürriyeyet, founded by Sedad Simâvi; the Settel family who edited Tan until 1946 when the newspaper’s left-wing views provoked official displeasure and student demonstrations, as a result of which the paper’s offices were wrecked; the Ali Nâfî family, associated with İnhîlbî, İydâm and, at present, with the successful Millîyî etc. An important part was also played by the veteran journalist Hüseyin Çabîd (Yalman) who, after having made his peace with the Republic, resumed journalistic activity in Yeni Şabab (started in 1958) and then re-started Tanîn, in whose columns he defended the Allied cause during the Second World War and the policy of the Turkish Republican People’s Party after it.

Important political and social developments in the Republican period were reflected largely in political, social and literary periodicals: the People’s
Houses (Halkevleri) organization had its organ in Ulkii; new ideas of social development which inspired the pages of Esatime, were championed in Kadro (1933); a popular conception of literature took shape in the columns of Varik (1933); the revival of racistian and Pan-Turanian ideals, particularly noticeable in the years of the Second World War, was marked by the appearance of the reviews Baskuri, Çinaraltsi etc.; the vogue for extreme left-wing views at the end of the war had its counterpart in the periodical Görişler (and the short-lived newspaper Gerekti); the influence of American news magazines led to the appearance of their Turkish equivalents, such as A网讯 (Ankara) and Kim (Istanbul); the influence of serious British political weeklies made itself felt in the fortnightly Forum (Ankara) etc.

The years after the Second World War were marked by the political struggle between the Republican People's Party and its opponents, a struggle in which the Turkish Press played a prominent part. Between 1950 and 1960 the Democratic Party administration had an organ in Ankara in the daily Zafer, while in Istanbul the Government cause was defended by Havadis and criticized by the majority of the other dailies. The Turkish Press, as a whole, played an important part in preparing the ground for the military coup d'état of 27 May 1960 as well as in the political struggle which has followed it. Just as important, however, as this political rôle has been the increasing professional competence of the Press: equipment and lay-out were much improved, circulations soared (reaching the 300,000 mark), the industry became highly capitalized with a growing tendency to produce mass-circulation, non-political newspapers, providing not only news, but also entertainment. This tendency can be expected to gather strength, with a consequent Muslims in Russia, since the severity of the Russian authorities in 1877.

The Muslim press of Russia only reached international rank with the famous Terdijdun, published at Baghce-Saray in 1883 by Isma'il Bey Gasprinski (see GASKRINSKI ISMA'IIL), in the Crimean Tatar language strongly influenced by Ottoman Turkish. The Terdijdun survived until 1918. For some forty years it was the mouth-piece of the reform movement and of pan-Turkism in Russia, and for over twenty years remained the only press organ of the Muslims in Russia, since the severity of the Russian censorship over the Muslims, until 1905, prevented the rise of the national press. The Terdijdun, in 1905, in fact, apart from the above-mentioned news-papers there were only six organs of local significance. Four were in Asharfi Turkish: Diva* (1879), Diva Kafkasizy (1880), Kegkül (1884), and Shark-l rüs (1903) at Tiflis; one in Kazak (Kirghiz): Dildi Wildiyet, published in 1899 at Omsk (Siberia); and one in Kazan Tatar at St. Petersburg: Nür, in 1904.

After the publication of the Manifesto of 17 October 1905 granting liberty of the press to all the peoples of Russia, periodicals sprang up throughout all the regions of the Empire inhabited by Muslims, representing every sort of political opinion from right-wing conservative to left-wing socialist. Thus, from 1905 until the revolution of February 1917, Muslims in the Russian Empire published 159 periodicals (newspapers and reviews) in the following languages: Kazakh, Tatar, and Azerbaijani. From the edict of the First World War, the principal centres for the editing and publication of the press were Tiflis (19) and Grozny (5), Orenburg (13), Tashkent (12), St. Petersburg (9), Astrakhan (8), Ufa (6), and Baghce-Saray (5). Periodicals and newspapers were also published at Tiflis, Ural, Tomsk, Samarkand, Ashkhabad, Bukhara, Samara, Karasu-Bazar, Omsk, Erevan, Kokand, and Petrograd.

The majority of the Muslim newspapers had only an ephemeral existence because of their very slender finances, lack of subscribers and, above all, the interference of the censorship which after 1906 again became very vigilant. Some of them, however, played
a leading part in developing a national feeling among the Turkish peoples of Russia.

Among the most remarkable which were read far beyond the frontiers of the Russian Empire, we should mention the liberal organs Wakhit and Şürah of Orenburg which, from 1906 to 1917, made themselves the disseminators of pan-Turkism in Russia; Kızân Muğhbire (1905) and Yilduz (1906) in Kızân; Hayat (1904), İrush (1905) and Fuxudull (1906) in Baku; Moğul Nasreddin (1906) in Tiflis; the last-named, a satirical weekly, had a fairly wide circulation in Caucasian Adharbaydjan. Other organs of local importance and with a more restricted circulation, also exerted a lasting influence on the cultural life of the Muslims, such as the Kâzâk of Orenburg (1913), published in Kızak by Ahmed Baytursunov. In Turkestan alone, where the Russian authorities maintained a very close watch on the cultural development of the Muslim population, there existed no real press, all the organs which made their appearance there being swiftly banned by the censorship.

The overthrow of the monarchy in February 1917 introduced a new chapter in the history of the Muslim press in Russia. The earlier, and often apolitical, periodicals were succeeded by a "committed" press reflecting the opinions of the various political groups of Muslim society which, after October 1917, whether from irritation or force of circumstances, were to be involved in the Revolution and civil war. From February 1917 to the end of 1920, 256 periodicals made their appearance on Russian territory, spread over 53 towns and large villages. Inferior in quality to its predecessors, the press of the revolutionary period attempted to reach wider circles, both by a larger circulation and also by the use of a language nearer to popular speech. Kızân Tatar enjoyed unrivalled supremacy since nearly half (139 exactly) of the periodicals published during this period were in this language, Adharî Turkish coming far behind with only 39 organs, followed by Uzbek (37), Kazak (21), and Crimean Tatar 71. In 1917 other newspapers also appeared, in Turkish (2 at Batum), Kumik (3 at Temir Khan Şürah), in Avar, Abkhaz and Lak.

In 1921, with the victory of the Red Army in the civil war, a new era began, that of the Soviet press, distinguished from earlier periodicals by its monolithic character, its very wide circulation and, lastly, by the appearance of new languages. Under the Soviet regime, six Turkic languages, two Iranian languages and nine Ibero-Caucasian Muslim languages became literary languages. Until 1924-8 they existed no real press, all the organs which made their appearance there being swiftly banned by the censorship.

Information on the history of the press in the Crimea, with more particular reference to the Tercüman, is contained in the work of Cäter Seydahmet, Gazprals Ismail Icy, Istanbul 1934, and in the study of Ahmed Ozenbashlı, Cenên devari mishene tenkitî bir bâbî, in Ösu Içleri, Bagchê-Saray June 1925.

For the press of Turkestan, we possess an excellent monograph of Zyia Safarov, Uzbek xalitî matbû'âtînî tarihsî mâtî'îyyalar, Samarkand-Tashkent 1927. For the Turkmen press, a number of comprehensive studies have been devoted to the review Molla Nasreddin, among them being A. H. M. Ahmedov, Molla Nasreddin'nin 300 Yıldırı, in Yuraktau Tercümanı, 1917-30, and for the press of Daghistan, that of Sh. Magomedov, Kumiskiyya periodikaları, Baku 1926-7.

v. — THE MUSLIM PRESS IN CHINA AND JAPAN

(a) China.—China has a Muslim population of some ten to twelve million persons according to the census of 1959. About two-thirds live in Sinkiang province where they constitute an overwhelming majority. The following table contains data on the geographical distribution of Chinese mosques in 1935 and on Muslim periodical publications during the period 1908-39. We may assume that an average Chinese mosque serves 200 to 250 people. In the absence of precise statistics, the table therefore indicates the distribution of the Muslim population in the mid-Thirties.

Biography: No comprehensive study on the Muslim press of Russia exists, but only monographs or articles for certain regions. For the Tatar press, besides the basic work of Ismail Ramiev, Wakhit Tatar Matbû'âtî, Kızân 1926, fragmentary information is contained in Elif-Bi, Ta tarskoy musul'manskoy pechati, Kızân 1908; Fedovot, Peçat' Tatarskiy, in Bulletin d'in-formation du V.O.K.S., Moscow 1927, no. 23-5; T. Nasirov, Svet slavstvennîn berenç elçirda tatar matbû'âtî, in Sovet Addbiyati Kazan, no. 9 1956; A. Saatî, Tatar âdabiyyat tarihî, Kızân 1926; A. Safarov, Z istorii tatarskoy periodicheskoy pre my 1905-25, in Shidny Svit, Kharkov 1928, no. 34 (in Ukrainian); D. Validov, Ölçeri istorii obrazovannostî i literaturî Tatar do revolyutsii 1917 goda, Moscow 1933; P. Ūze, Musul'manskaya pečat' v Rossi, St. Petersburg 1911.

A total of 100 Chinese-Muslim papers have been located. One was published abroad (1908), and for 13 the dates of origin are unknown. The remaining 86 were founded between 1913 and 1939; 18 magazines were being established between 1913 and 1926. In the decade marked by the establishment of the Chinese Nationalist Government in Peking (1927) and the beginning of the Chinese-Japanese conflict (1937), the press expanded rapidly, and 63 new journals came into being—38 after the capital was moved from Peking to Nanking (1932). The outbreak of enmity between China and Japan brought repressions and most of the papers disappeared. The five new periodicals which were issued during the next two years were actually official publications of the two combatants aimed at gaining increased Muslim support of the war effort.

The frequency of issue is known for 71 magazines: 12 appeared at least weekly; 50—monthly or semi-monthly; 9—quarterly or annually. One magazine had a circulation of more than 3,000 copies; eight others ranged from 1,000 to 2,000 copies, while the remainder served local needs and ran to a few hundred copies only. Not more than six periodicals exceeded 40 pages.

Most of the publications appeared in Chinese, though a few were written partly or entirely in Japanese, Arabic, Uyghur (Eastern Turk), and English. The great majority were religious in content, while the remainder in addition dealt with historical or contemporary problems. Most of the magazines were printed and circulated in the cultural and national centres of Peiping and Nanking, and in large port cities, such as Tientsin, Shanghai, Canton, and Hongkong.

**Yüeh Hua (月華),** Peiping, was the leading Muslim national magazine with a circulation of 3,000. It was begun in 1929 under private subsidies and attempted to represent all factions fairly. In its columns were domestic and international news items pertaining to Islam.

**T'u Chieh (突崎),** Nanking, was established in 1934. It was the most substantial Muslim organ in the capital area, and advocated the "Three People's Principles", improvement of education, domestic unification, and contacts with co-religionists abroad.

**T'ien Fang Hsüeh Li Yüeh K'an (天方學理月刊),** Canton, was founded in 1929. It was distributed monthly without charge, but financial support was solicited. **T'ien Fang** dealt chiefly with contemporary issues, and the editor answered readers' queries in a special column.

The Muslim communities in the large cities during the 1930's organized protest demonstrations against **Ahungs (Muslims)** whenever Islam was slandered in the Chinese press. In some instances the offices and printing plants of the offending newspapers were wrecked. The Nationalist government, needing the good will of its Muslim subjects, took prompt action to prevent further insult.

During the first decade of the twentieth century, in addition to native papers, some liberal Arabic and Turkish journals advocating constitutional reform were imported from Constantinople. The need for them was gone after the revolution of 1911.

The Muslim press in China was late in developing because of low educational and economic standards and because of language difficulties. Arabic was known only to religious leaders and to a few theologically trained laymen. The **Ahungs,** on the other hand, had often only a rudimentary knowledge of the Chinese script. Most of the population were illiterate. The declining Manchu dynasty was suspicious of any particularistic or sectarian tendencies, especially in the Turki-speaking north-west borderland. One might say that the revolution of 1911 paved the way for the Muslim press in China, while the Communist revolution of 1949 decisively ended it. Muslim publication efforts were fragmentary. Most magazines were too small or too ephemeral to have a lasting influence. In contrast to the Protestant and Catholic missions in China, the Muslims lacked a centralized organization and adequate funds.

(b) Japan.—Japan has very few Muslims, but Japanese interest in Islam dates from the invasion of China (1937-45) when efforts were made to win over Chinese Muslim minorities. Prior to that date Japan experienced three private attempts to publish Muslim papers. **Hsing Hui (醒“Muslims Awake”)** was established as a quarterly by Chinese students of the Muslim College in Tokyo for distribution in China; it dates back to 1908. In 1925, I. T. Sakuma, a Japanese business man and convert to Islam, founded in Shanghai the progressive **Mu Kwang (穆光 “Light of Islam”)** with articles in Chinese, Japanese, and English. He desired an Islamic revival in China, Korea, and Japan and even advocated the translation of the Qur'ān into Chinese; **Mu Kwang** survived only three issues. **Hui Chiao (回教 “Islam”)**, a Peiping monthly devoted to social and historical problems, was published in Japanese between 1927 and 1929. The
issues also contained biographies of Chinese Muslim leaders.

Following the actual occupation of Chinese territory, Japanese military authorities launched new Muslim papers, or adapted existing periodicals to their own purposes. The Japanese took over the ten-year old illustrated monthly Chen Tsung Pao (震宗報) after they occupied Peiping in 1937. Thereafter it assumed a strongly anti-Soviet character. The Hsing Shih Pao (醒時報), a non-political monthly, first appeared in M Mukden, Manchuria, in 1925. It was revived by the Japanese in 1937, reporting mainly on Muslim life in Japan. Copies were distributed locally free of charge. Another monthly by the name of Hui Chiao (回教 "Islam") began to appear in April 1938 under the auspices of the Japanese-sponsored United Chinese Muslim Association, Peiping. This was a Japanese propaganda organ, but it was printed in Chinese. The Hsin Min Pao (新民報), official Chinese newspaper of the Japanese occupation authorities in Peiping, launched in October 1939 a weekly supplement, the Tsung Chiao Chow K'an (宗教週刊), which furnished historical and religious information on Islam.

Japanese research on Islam and Islamic peoples is scattered among numerous academic journals. Only two Japanese periodicals are entirely devoted to this topic. Both are published in Tokyo and date from 1959 and 1960 respectively. Chū-Kindō geppo (中近東月報 "Middle and Near East Monthly") is issued in mimeographed form by the Ministry of Foreign Affairs. The Ajia Rengo Yuko Kyokai (アジア連合友好会) publishes Arabu (阿拉伯 "Arab") reporting on Arabs and Arab countries.

RUDOLF LOEWENTHAL

vi. — THE HAUSA PRESS

There is a regular weekly newspaper in Hausa, Gaskiya ta fi kwabo, printed in Zaria, which began publication in January 1939. In addition, news sheets in the main recognized Hausa dialects are also published, while the Kano Times includes articles in the Hausa language.

It was on Saturday 14 November 1931 that there issued from the newly built printing house at Kaduna the first number of The Northern Provinces News. It consisted of sixteen pages of items in three columns, printed respectively in English, in Hausa in a roman orthography, and in Arabic, together with a page of photos of stallions and agricultural subjects. The reader is told "Mallams of the Secretariat have written the Hausa and Arabic translations, and compositor sent to the Press by the Emir of Kano have set up the Arabic type". This number was produced "as a basis for discussion as to whether Residents and Native Chiefs would desire the regular issue of a News Sheet of this or a similar type in the future".

The next issue was on 9 April 1932, and had the Hausa title added, Jaridar Nigeria Ta Arewa, together with an Arabic title. It consisted of twenty-six pages of print and three pages of pictures. The third number also included items translated into two other Northern vernaculars, Tiv and Fula (Fulawi). By July 1934, when number eight appeared, the paper was of a smaller format, and was printed only in Hausa, having no longer bore titles in English and Arabic. The tenth issue, 1 June 1935, included an article by R.M. East, of the Translation Bureau, Zaria, on the subject of Hausa books and writing. The spelling included new letters, ṅ, ƙ and ƙ. After the Translation Bureau in Zaria began publication of Gashiy at fi kwabo, it also produced a smaller news sheet jakadiya, in a simpler form of the language, as well as a news sheet in Tiv. In addition, it undertook the production of a large number of cheap pamphlets in Hausa on a wide range of educational topics, from top-digging to baby care. More literary works in Hausa were produced, as well as books in other Nigerian languages, such as Igbo. The Hausa newspaper has helped to develop the written language and has set a standard for the importation into Hausa of a large number of borrowed words—mostly from English. The printing of the news also in the chief dialects is now enriching the standard language, by enabling people from all over the Hausa-speaking area to share and enjoy the different forms, expressions and idioms of this widely used and colourful language.

vi. — INDIA AND PAKISTAN

vj. — EAST AFRICA

[see supplement].

DIJARIMA (,), also djurm, a sin, fault, offence. In Ottoman usage, in the forms djermine and djermene, it denoted fines and penalties (see ñürm). In the modern laws enacted in Muslim countries it has become a technical term for crime (ñürm in Pakistan).

For the corresponding Islamic concepts, see Hadd, and for penal law in general, Tazība. (Ed.)

DIJARIR B. 'AT'YA B. AL-KHATFA (HUDAYFA)

DIJARIR was among the most important hijdi- writers of the Umayyad period (the other two were his rivals al-Akhaltal and al-Farazdak [qq.v.], and may be considered one of the greatest Islamic-Arabic poets of all time. He belonged to the clan of the Banū Kulyab b. Yarbā' an, a branch of the Mudari Tamīn who were widespread in the eastern part of central and northern Arabia. He was born in the middle of the 1st/7th century and began by entering into verbal disputes with second class writers in his own district, ostensibly because he himself had been attacked but in fact because of his naturally argumentative disposition. In 64/683-4 or shortly afterwards he began his famous forty-year-long dispute with al-Farazdak, who was a foe worthy of his steel. It was caused indirectly by a long quarrel between the Banū Bahrām and a branch of the Banū Qayba and the Mudjashī, also Tamīnī and the tribe to which al-Farazdak belonged, over the theft of a camel. After they had abused each other from a distance for some time, Djarīr went to 'Irāk and met al-Farazdak for the first time in Baṣra. There were such scenes that the authorities had to put a stop to the meetings—although without any lasting success.

Djarīr began his public career by writing poems
in praise of al-Hakam b. Ayyub, an official of
the governor of Iraq, al-Hadjdjadj. Al-Hakam
recommended him to his master who invited him
to Wasit. After staying with al-Hadjdjadj for
some time and writing a series of kadis of praise
to him, Djariir was sent with his son Muhammad
to 'Abd al-Malik's court in Damascus. He was first
rejected, then graciously received by 'Abd al-Malik.
But in the long run their relationship was not
particularly good, for the caliph favoured the
Taghibi Christian al-Akhtal ('al-Akhtal is the poet
of the Umayyads) who took al-Farazdak's part
against Djariir. Djariir's relations with 'Abd al-
Malik's successor al-Walid were even worse; the latter
supported his favourite 'Adl b. al-Rikāf against
Djariir's attacks. In fact Djariir and his friend Ladjīra
ta Harley are still said to have been whipped and
publicly stripped on account of some satirical lines
on the court ladies. However he was on a rather
better footing with 'Umar II who, as a pious man,
took no very passionate interest in either eulogies or
satires, and remained courteously neutral. Never-
thless he does seem to have preferred Djariir to his
rivals. Djariir also attempted to win the favour of
the latter caliphs Yazīd II and Hishām by writing
poems in praise of them. Finally, in old age he
retired to the Yamama where he owned property
(in Ughayfiyya). He died there when over eighty, in
110/728-9 or a little later, shortly after the death of
his opponent al-Farazdak. Among his numerous
descendants were three sons (Bilāl, 'Ikrima and Nūh) who also produced poetry but did not, how-
ever, approach their father's importance.

In Djariir's diwān, collected by Muhammad b.
Habīb (died 245/859), the satirical poems occupy
the most space, and of them the larger number are
directed against al-Farazdak. The extent to which
contemporaries were interested in this poetic battle
is shown by a report of a quarrel which broke out
among soldiers in al-Muhallab’s camp during the
Azraki war—a quarrel eventually decided (thanks
to one of the Khāridji soldiers) in Djariir’s favour.
The total number of poems satirized by Djariir is
something over forty. After the satirical poems, the
poems of praise form the largest category in the
diwān, but it contains some fine elegies. Accord-
ing to his adversary al-Akhtal, Djariir was particularly
skilled in the nasīb and the ṭashbih. The Arabic
literary historians and critics rightly praise Djariir’s
fluent diction.

Djariir’s work does indeed show him to be a true
descendant of the old Bedouin poets, with all their
strong points and weaknesses. In his work and that
of his rivals al-Akhtal and al-Farazdak, the old
Arabic form of kāfīda—poetry underwent an ‘Indian
summer of undeniable loveliness’ (G. E. Von
Grünebaum).

There are several editions of Djariir’s diwān in which the poems are sometimes arranged according to the
rhyme-letters. Mahmūd ‘Abd al-Mu’min al-Shawārīb
is the man chiefly responsible for the first of these
editions (Cairo 1333); its sources are not given. The
editions of Muḥammad al-Sawī (Cairo 1353), and
Karam al-Mustāni (Beirut 1359/1940) are more
widely representative of criticism. The Nābūt, however,
of Djariir and Farazdak, as collected by Abū Ubayda
(d. ca. 210/825) and revised by others, have been
published in a model edition by A. A. Bevan (Leiden
1905-12), and furnished with a glossary and indexes. Finally, the Nābūt of Djariir and Akhtal have
also been published, according to the recension of Abū Tammām, by the Aljīra scholar Shalbānī (Beirut
1922). Both Nābūt also contain poems attacking
other persons and their answers.

Kutayba, al-Shihār, 283; Aghāshī, viii, 3-89;
Marnabān, Muṣnad, 112, 120 and passim, cf.
Brockelmann, II, 53-5; S I, 8-6. Cf. also Rescher,
Abris, i, 265-74 and A. Schaade, Djariir (supple-
ment to the German edition of EP).

(A. Schaade-H. Gätje)
al-Hadrami retreated with a group of 70 followers to a fortified Sasanid castle, belonging to a Tamlmi called Sunbul (or Sunbil). Dhariya besieged the castle, ordered wood to be placed around it and set the wood on fire. Ibn al-Hadrami and his followers were burnt alive. There are controversial traditions about the course of the encounter between Dhariya and Ibn al-Hadrami. According to a rather curious tradition (reputed by al-Baladhuri) Dhariya came to Basra as an emissary of Muawiya and described him as the "righteous servant" (al-'abd al-sadiq). He dispatched Dhariya with a troop of 2000 men to pursue Burd (another troop under the command of Wahib) and also despatched by 'Ali. Dhariya, following Burd, reached the Yemen (so al-Baladhuri, Ansab, fol. 318b). Dhariya arrived at Mecca and was told that 'Ali had been killed. He compelled the people of Mecca to swear allegiance to the Caliph who would be elected by those followers of 'Ali. In Medina he compelled the people to swear allegiance to Hasan b. 'Ali.

In the time of Muawiya there was a reconciliation between Dhariya and Muawiya. Anecdotal stories report about the talks between Dhariya and Muawiya (al-Nabati'd, ed. Bevan, 605; al-Baladhuri, Ansab, fol. 358b; al-Dhahabi, al-Kamil, ii, 168; al-Mubarrad, al-Umda fi sindat al-djirdha, ed. Wright, 30). According to Ibn Katir (cf. Ibn al-Athir, al-Kamil, iii, 165) the revolt was caused by the brutal action of burning (al-Biddya, fol. 208b). According to a fairly accurate story of the encounter between Dhariya and Ibn al-Hadrami, but forsook him however in Basra (al-Balaq, fol. 2009a). After the victory of Dhariya, Ziyad returned to the residence of the Governor of Basra.

The authority of 'Ali was thus secured in Basra. Ziyad b. Abi Jafir praised in his letter to 'Ali the action of Dhariya and described him as the "righteous servant" (al-'abd al-sadiq). Dhariya died in Basra. His funeral was attended by the followers of 'Ali. Dhariya was buried in Basra.

Djarrah 481

Djarrah, "he who heals wounds", "surgeon"; djiraba, "the art of healing wounds", "surgery", from djirdh, "injury", "wounds"—like the German "Wund", whence "Wundartz", "Wundarztei", etc. In the time of the Arabic versions of the Greek texts on medicine, another expression corresponding exactly to djiraba made its way into Arabic medical language and was adopted by the classical authors, namely: 'amal bi l-yad (Ibn Sinâ) or 'amal al-yad (al-Zahrâwî), "work, action performed with the hand" or "by hand" (which was only a literal translation of γυμνουγεία). But this last expression, perhaps for practical reasons of usage, was gradually to lose ground in the course of centuries and ultimately to be replaced by the first, which is the only one to have remained in use until today, with all its derivatives. However, it is under the title 'amal bi l-yad or 'amal al-yad, in classical texts, that we find mentioned many expressions relating to medical-surgical techniques. From general surgery we may note such terms as rabt "ligature" (of veins), katf "excision" (of soft diseased substance), batf and batr "incision" (for the removal of morbid matter), kasy "cauterization by fire (from xâfetn "to burn")", with the object of surgical excision; from specialized surgery such terms as kadh "operation for cataract", "reclination"; from minor or simple surgery, djâb "reduction" of a fracture (khatr) or luxation (gâh); from manual practices having medical purposes, like kadjin "cupping" without or after the sharj "scarification", fâsîd "bleeding", kasy itself as a revulsive or stimulating remedy, etc.

From 'amal al-yad there remain in modern Arabic only the words 'amaliyya, followed by the adjective djirishiyya, "operation", or "surgical operations" properly speaking, and 'amali, "operative" or "operational".

In old texts one very often comes across the forms 'ilidh bi l-hadid or bi l-illa, the [cura] cum ferro et cum instrumento respectively of the Latin translators of the Middle Ages, referring specifically to surgical operations which necessitated the use of cutting instruments.

Djirabi occurs for the first time in Arabic literature in translations of the 3rd/9th century, and from there the expression made its way into medical literature. As the name of a well-known family we find the word in the 4th/9th century [see Ibn al-Djarrâh]. However, in contradistinction to the custom of the Hellenistic-Roman period, in Islam, as in mediaeval Europe, the surgeon has always been regarded as a worker of an inferior order. It is probable that this point of view derives in essence from the Islamic aversion from any interference with the condition of the human body, and even with the bodies of animals (the prohibition of vivisection of animals). With regard to the most celebrated and distinguished doctors in Islam such as Ibn Sinâ and Ibn Zuhru, we know that they vigorously expressed their dislike of every sort of surgical treatment, which they left to the djirabi and muqâbhar (bone-setter and bone-healer). In spite of that, Ibn Sinâ devoted a large part of his works to the art of surgery ('ilm al-djirbi), and his precursor 'Ali b. al-Abbâs al-Madjûsi (d. 384/994) treated surgery in great detail in the ninth book of his work Kâmûn al-sinâ'î, devoting no less than 110 chapters to it, and added to the tenth book a special theory of surgical therapy.

The only specialized surgical manual of any importance in Islamic medical literature seems to be al-'Umda fi sindat al-djirba of Ibn al-Kuff.
DJARRAH — DJARRAHIDS

(Syria, 7th/13th century). The work which exerted the greatest influence on the West was the part on surgery by Abu 1-Kásim al-ZahráwI (Cordova, 4th/10th century), section XXX of his Kitáb al-Tasrlf. This part was translated into Latin at a very early date and was studied with great enthusiasm in the West, although close links between this work and Paul of Aegina's surgery can be noted. It is illustrated with drawings of instruments. In the works on hísha [q.v.] one frequently finds a section devoted to doctors, occultists and surgeons, as for example in the unpublished book of al-Shayzari. In it the surgeon is required to be familiar with the anatomy and therapy of Galen (Djallnus [q.v.]) and to possess a well-assorted set of instruments which must include methods for checking bleeding. The work of the bone-setter (mudjábbr) is given special attention by al-Shayzari: he is required to know the number and shape of all the bones as well as Paul of Aegina's chapter on bone fractures and sprains.

Throughout the Middle Ages, Arab surgery was always advanced over its corresponding European surgery, and indeed it helped the latter to make great advances (it is known that Lanfranc of Milan, a famous exponent of surgery in Paris in the 13th century, had based his theories almost exclusively on the Makhlá fi 'amal al-yad, the famous treatise De chirurgia of Abu 1-Kásim al-ZahráwI). But Arab surgery avoided every kind of destructive operation (amputation), even apart from prohibitions or scruples of a religious nature. Nor did it fail to contribute as well to the knowledge of the human body, replacing anatomical dissection, however, casually and in a limited way. Incidentally, 'ilm al-tasrlf "anatomy" was always regarded as an indispensable science even in the practice of specialized surgery. In this connexion one may recall the apecdote of al-Rází dismissing the man who was to have operated on him for cataract, but who had been unable to answer the questions on ocular anatomy previously put to him by the great doctor (Ibn Abí Usaybi'a).

AL-DJARRÁH B. 'ABD ALLÁH AL-HAKAMI, Abí 'Ukbá, an Umayyyad general, called Batal al-Islám, 'hero of Islam', and Fáris Abí al-Shám, 'cavalier of the Syrians'. He was governor of al- Başra for al-Walid (Caliph 86-96/705-15) under al-Hadíddj, then governor of Khorásan and Sidistán for ʿUmar b. ʿAbd al-ʿAzìz, till deposed by ʿUmar after a year and five months (99-100/718-9) for harsh treatment of the new converts to Islam in Khorásan. In 104/722-3 al-Djarráh was appointed governor of Armenia with orders to attack the Khazars, who at this time were threatening the lands south of the Caucasus. Advancing from Bárđďa, he occupied Báb, the frontier town (see BÁB AL-ABWÁB), near which he defeated a large Khazar force under 'Bárđďk, the son of the Khákán'. Continuing his advance round the eastern end of the Caucasus, al-Djarráh captured the Khazar towns of Balandjár and Wabandar, and reached the neighbourhood of Samandar, probably Xílar (Kizíyar) on the Terek, before withdrawing. Some time later he was recalled, but was reappointed in 112/729-30. Next year the Khazars appeared in force in his province and were met by al-Djarráh with an army of Syrians and local levies in the plain of Ardabal (Mardí Ardabíl). Here for several days in Ramadan 112/November-December 730, a great battle was fought, which ended in the total defeat of the Muslims and the death of al-Djarráh. In the course of time the name of the whole of Hjarbáýdóljan, their cavalry raiding as far south as Mosul. The loss of al-Djarráh caused widespread consternation and grief, especially among the soldiers. He is said to have been so tall a man that when he walked in the Great Mosque of Damascus, his head seemed to be suspended from the lamps. Bibliography: al-Dhahabi, Taβír al-Islám (Cairo, A.H. 1367-9), iv, 237-8; al-Ṭabárí, ii, 1352-6; D. M. Dunlop, History of the Jewish Khazars, Princeton 1954, index; F. Gabrieli, Il Califato di Hishâm, Alexandria 1935, 74 ff. (D. M. Dunlop)

DJARRÁHIDS OF BANU 'l-DJARRAH, a family of the Yemeni tribe of Ṭayy which settled in Palestine and in the Balkár region, in the mountains of al-Sharút as well as in the north Arabian desert where the two hills of ʿAgíd and Salmá, known also as the mountains of the Banu Ṭayy, are part of their territory. This family attained some importance at the end of the 4th/10th and 5th/11th centuries, but without ever succeeding in creating a state as the Banu ʿālib tribe did at Aleppo, or in having a capital, except for a very short time at Ramla. The Banu ʾl-Djarráh followed a policy of vacillation between the Fatimids and the Byzantines, at times supporting one side and at times the other, not hesitating to flatter abjectly either of them when danger threatened, or to betray them, and only abandoning these equivocal tactics to seize the chance of plundering towns or the countryside or caravans on pilgrimage. In general they remained essentially Bedouins, with the qualities and failings of the Arabs of the desert, and their activities were far from glorious. The first of the Banu ʾl-Djarráh to figure in the chronicles was named Daghfal b. al-Djarráh and was an ally of the Karmatians. At the time of his expedition against Egypt in 361/971-2, the Karmáthb [q.v.] left one of his officers with Daghfal at Ramla. During the second Karmatian invasion of Egypt in 363/974, a Djarráhid named ʿAbd Alláh b. al-Djarráh was in the Karmatian army, and it was thanks to his defection, in return for a bribe of money by the Califá al-Muʿizz, that the Karmatian force was routed after reaching the gates of Cairo. Daghfal and ʿAbd Alláh were possibly one and the same person.

Some years later Daghfal's son Mufarríd made his appearance, and was to remain in prominence until 404/1013-4; certain texts give his name wrongly as
Daghfal b. al-Mufarridj. At the time of the caliph al-'Aziz's expedition against Alptekin, a Turk who had seized Damascus and allied himself with the Karmatians, in the battle which took place outside the Ramla in Muharram 369/August-September 977, Alptekin took to flight and was found dying of thirst by Mufarridj with whom he was on friendly terms. He had promised 100,000 dinars to anyone who handed over Alptekin to him, Mufarridj, whose allegiance at that moment is not specified in the records, had Alptekin kept in custody at Lubnā. He then went to the caliph and received an assurance that the offer of the reward still held good, betrayed Alptekin and took him to the caliph. Two years later we find him involved in the Ḥamdānī Abū Taghlib's venture in Palestine. For the moment he was in control of Ramla, a fact recognized by the head of an Egyptian army, al-Fadl, whom the vizier Ibn Killis had sent into Syria at that time against a usurper from Damascus, Kassām, and Abū Taghlib. Mufarridj was then on bad terms with the Banū 'Ukjayl; as they appealed to Abū Taghlib, war broke out between him and Mufarridj who was supported by Faḍl. Abū Taghlib was defeated and made prisoner by a supporter of Mufarridj. Faḍl asked the Diyarūḥids to surrender Abū Taghlib to him so that he might take him to Egypt. Fearing that the caliph might use Abū Taghlib against himself, Mufarridj killed his prisoner by his own hand.

The agreement between Mufarridj and Faḍl did not last long, and Faḍl turned against him. But Mufarridj was sufficiently adroit to persuade the caliph al-'Aziz to give orders to his general to leave him in peace, so allowing Mufarridj to become master of Palestine once again and to ravage the land (370/980). His excursions led the caliph to send troops against him in the following year. Being put to flight, he went off to raid a caravan of pilgrims returning from Mecca, probably at the end of 371/June 982. He was more fortunate against a second Fātimid force which he crushed at Ayla. He returned to Syria but was defeated and, taking the desert route, sought refuge at Himṣ with Bakdiur, the governor of the Ḥamdānī Sa'd al-Dawla, probably at the end of 982; from there he went on to Antioch where he was captured by the Byzantine governor. He appears to have received nothing more than gifts and fair words. It is not certain that he returned to Syria, for after 373/983 we find him accompanying Bardas Phocas the Domesticus when he went to the rescue of Aleppo with the help of the Byzantine troops. Bakdiur took to flight.

Mufarridj then seems to have rejoined Bakdiur, for when the latter received from the caliph al-'Aziz the governorship of Damascus, entering office in Rajjab 373/December 983, the vizier Ibn Killis put the caliph on his guard against a possible revolt by Bakdiur with the warning that he had Mufarridj with him, and that he was an enemy. He followed Bakdiur when the latter, threatened by a Fātimid army, left Damascus for Rakka in Rajab 984/October 988. In the following year we find him attacking a caravan of pilgrims in north Arabia. It is said that Ibn Killis regarded him as a dangerous individual and that on his deathbed in 380/991 he advised his master not to spare Ibn Diyarūḥād if he fell into his power. Nevertheless the caliph pardoned him, for next year he had a gift of apparel and horses sent him and invited him to take part in the expedition against Aleppo for which the Turkish general Mangūtekin was making extensive preparations. But we do not know if he took any part in the campaign of 384/992 or in subsequent campaigns. We find no other mention of him until 386/996, the year of al-Hākim's arrival.

At that period he was supporting Mangūtekin, the governor of Damascus, in his attempt to seize power from Ibn ʿAmmār and the Kutāmā, and took part in the fighting led by the Turkish general outside ʿAṣkalān against Sulaymān b. ʿAlī b. Fāṭār b. Faltāb. Following his usual tactics, however, he did not hesitate to desert Mangūtekin and to cross over to Sulaymān's camp. It was one of his sons, ʿAlī, who pursued and captured Mangūtekin when he took to flight.

In 387/997 he tried to take Ramla and laid waste the district. The new governor of Damascus, Djiysh b. Sāmsāma, having crushed ʿAlībābā's revolt at Tyre, attacked and gave chase to Mufarridj who took refuge in the mountains of the Banū ʿUjkāl. When on the point of being captured he took part in a little comedy, sending the old women of his tribe to ask for amān and pardon, which were granted. And thus in 396/1005-6 we find Mufarridj sending his three sons ʿAlī, Hassān and Māhāmūd with a large number of Bedouins to assist al-Hākim's troops against the rebel Abū ʿUjkāl. But in the following year he held up a pilgrimage from Bagdād north of Mecca, whilst al-Maghribī fled to ʿAṣkalān and Sulaymān's fortress and took refuge in the mountains of ʿAḍājā and Salmāt, that is to say in Tayyīl territory, and compelled them to pay tribute; as the enforced halt had made them lose time, they were obliged to turn back and to call off their pilgrimage.

Some years later, an opportunity occurred for Mufarridj to play a part of genuinely political significance. In about 402/1011-2 the Fātimid vizier Abu ʿl-Ḳāsim al-Ḥusayn b. ʿAlī al-Maghribī fled and took refuge in Palestine at the encampment of Mufarridj's son Hassān who gave him his protection. The caliph having given the governorship of Damascus and the command of troops in Syria to Yārūkh, a Turk, Mufarridj's sons were unwilling to submit to his authority, representing to their father the danger to which they would be exposed from this all-powerful governor and advising him to attack Yārūkh before he arrived at Ramla. The vizier al-Maghribī took up this suggestion with the result that the Diyarūḥids laid an ambush for him on the Ghazza road, took him prisoner and, at al-Maghribī's instigation, occupied Ramla. Hassān, fearing that his father would yield to the pleas of the caliph to have Yārūkh set free, had him beheaded. Urged on by this same al-Maghribī, Mufarridj took a further step towards rebellion against al-Hākim at the beginning of 403/July 1012 when, at Ramla, he proclaimed an anti-caliph in the person of the ʿAlīd ʿAlīrīf of Mecca. But al-Hākim knew that it was always possible to suborn the members of this family. He had already arranged for Hassān, who had been entrusted with the care of Djiwarāh's grandsons, to betray them to one of the caliph's officers who had them executed. He also succeeded in persuading Hassān and his father to abandon the anti-caliph who returned crestfallen to Mecca, whilst al-Maghribī fled to ʿTrāk.

The Diyarūḥids remained masters of Palestine for only two years and five months. During this period Mufarridj tried to win the favour of the Christians in Jerusalem, and perhaps of the Emperor also, by giving orders for, and helping with, the restoration of the Church of the Resurrection which had earlier been destroyed on al-Hākim's instructions.

At the beginning of 404/July-August 1013 al-
Hakim, changing his tactics, decided to treat the Djarrahids with severity and sent an army against them. All and Mamduh surrendered; at that moment Mufarrij died, possibly poisoned by order of al-Hakim; Hassans had who had taken to flight succeeded in obtaining a pardon from the caliph by sending his mother to beg the caliph's sister, Sitt al-Mulk, to intercede for him. The caliph pardoned him and allowed him to return to Palestine where he recovered his father's lands. Thereafter he refrained from stirring up trouble until the disappearance of al-Hakim. He even took part in the expedition against Aleppo. When Anushtekin al-Duzbari (Ibn al-Arwa'd), the former governor of Afamiya, at the same time as the Kalbids of Sinan b. Sulayman (Ibn al-Arwa'd), the two of them were twice attacked by Anushtekin al-Duzbari. The Tayyis pitched their camps in the neighbourhood of the Rodji, south-east of Antioch. They were twice attacked by Anushtekin al-Duzbari. The names of the places mentioned in this connexion (Kastyn, al-Arwa'd, Inab; for the identification of the last-named place, see Ibn al-Shihna, al-Durr al-munawakkab, 117; Dussaud, Top. historique . . ., 168; Guide bleu, 280) show that they were not in Byzantine territory. Hassan gave active support to the Byzantines, not only making a successful raid on Afamiya but also, according to the Byzantine historians, helping Theoctistus, Domesticus of the Scholae, to take the borders of Menikes (Mcunda) in the Diabul al-Rawdifi then held by Na'sh b. Musallar. It was on this occasion, so it is recorded in Scylitzes-Cedrenus, that his son 'Allaf (Allach to the Byzantines) was received at court and made a patrician. Hassan is called Pinzarachi (Ibn al-Djarra'h) or Apelzarach (by Kekaumenos), but Scylitzes incorrectly gives him the title of amir of Tripoli. According to these authors he was twice received at Constantinople, but Kekaumenos says that he did not always have cause to be satisfied with his visits.

Moreover we know that, at the time of the negotiations which took place between the caliph and the emperor, after the Byzantines captured the fortress of Siksar'All in the summer of 425/1032, Hassan was present in person at the discussions at Constantinople. One of the conditions laid down by the emperor for the peace settlement was that the caliph should allow Hassan to return to his country and to resume possession of the lands he held at the time of al-Hakim, except for those that he had appropriated since the coming of al-Zahir, in return for a promise of fidelity to the caliph. But the caliph refused.

When Anushtekin al-Duzbari, taking up a curious attitude, asked the emperor to send an expedition against Aleppo (which he did not enter until 429/1032-8), promising to hold it as a vassal of the empire, we note that with him was Hassan's son 'Allaf ('Allaan in Kamal al-Din). In 427/1035-6, when the Numayrid Ibn Wahib al-Mam and the Marwanid Na'sh al-Dawla attacked Edessa, a Byzantine possession since 432/1041, Hassan came to the rescue with 5,000 Greek and Arab horsemen. There is a further mention of him in 433/1041-2 (we are then in the reign of al-Mustansir, al-Zahir having died in 422/1031). It is said that at that moment he regained possession of Palestine, after al-Duzbari had been driven from Damascus, but that the new governor of Damascus continued the war against him. After that date we hear nothing more of Hassan. Much later he comes across his nephews, Humsay b. Mamduh and Hazim b. All, during the disturbances which Badr al-Djamali had to face in Damascus in about 458/1065-6, in the entourage of an 'Aliid sharif, Ibn Abi 'I-Djann, who tried to seize Damascus. They must have been arrested and imprisoned in Cairo, for in 459/1066-7 the amir Nasr al-Dawla b. Hamdan asked the caliph to free them from the Flag store where they were incarcerated.

Finally, in 501/1107-8 we find a certain Abu 'I'mran Fa'dl b. Rab'ba b. Hazim b. al-Djarra'h coming from Baghdad to enter the service of the Saljukid sultan. His equivocal behaviour in Syria —at times he was on the side of the Franks, at others on the side of the Egyptians—led the atabek Tughtekin of Damascus to expel him from Syria. In Baghdad he offered to fight the Mazaydid from Hilla, Sadaja, and to bar the desert route to him. He went to Anbar and nothing more is heard of him.

That, it seems, is all that we know of this turbulent family who were not without significance as pawns on the chess-board of Syria in the 4th-5th/10th-11th centuries, whom the Fattimids alternately attacked and wooed, whom the Byzantines succeeded in using, but whom who seem to have created for themselves,
in their own best interests, a rule of duplicity, treason and pillage.

**DJARUNDA** (Spanish Gerona), capital of the province of the same name, one of the four capitals of the principality of Catalonia. It stands about 25 km. from the sea, and its coastline extends along the well-known Costa Brava. Situated in the outer foothills of the Pyrenees, and surrounded by the Ter and Oñar rivers, it has at the present day about 40,000 inhabitants. By reason of its strategic situation on the eastern route between France and Spain it has throughout its history been subjected to sieges and constant attacks, from which it derives its name *Ciudad de los sitios* "the town of sieges". From a village of Iberian origin the Romans raised it to the rank of a town: it figures in the *Itinerary of Antoninus* as a halting-place on the first road to cross Catalonia. Falling in turn into the hands of the Visigoths, Arabs, Franks of the Spanish march and the Catalan-Aragonese, it became a great fortress known in the Middle Ages as *Força vella*. At the beginning of their occupation the Muslims, under the command of ʿAbd al-ʿAzīz, son of Mūsā b. Nusayr, took possession of the whole sub-Pyrenean region, including Gerona, passing through it on their way to invade the Narbonnaise. In the 2nd/8th century there was no fixed frontier on what was later the Spanish march. For this reason the inhabitants of Gerona in 169/785 entrusted their town to the authority of the Franks, under Louis the Pious, after the Amir of Cordova ʿAbd al-Rāḥmān I had been defeated in this region. The establishment of this Frankish enclave on Spanish soil foreshadowed the conquest of more extensive territories, that is to say Barcelona, in the near future. But the Muslims were not long in reacting, and in 177/793 ʿAbd al-Malik b. Mughīth, Hīshām I's general, laid siege to Gerona and, according to the Arab chroniclers, decimated the Frankish garrison and destroyed a large part of the towers and ramparts, but was unable to capture the town by assault and went on to raid Narbonne. In 178/798 the Franks occupied the mountain region between Gerona and the upper valley of the Segre, and surrounded Barcelona which they succeeded in capturing after a long siege. Among the feudal overlords taking part in this siege was Rostaing, Count of Gerona, at the head of one of the three corps which comprised the besieging army. In 212/828, a new *mandār* of the Franks having been consolidated, the Muslims were unable to reach Gerona, even when the *ḥājiḥ* of al-Manṣūr captured Barcelona. On the other hand, during the final period of the caliphate in Dhu ʿl-Kaʿda 400/ June 1010, a band of Catalans fought on the side of caliph Muḥammad al-Mahdī against the Berbers in the valley of the Guadairo, not far from Ronda; they were routed and suffered casualties, among them Otón, Bishop of Gerona, at the head of his contingent from Gerona. The county of Gerona, as a dependency of the principality of Catalonia, was the scene of a meeting on 1 November 1143 at which the Order of Templars of Catalonia was admitted. In 1205 Philip Augustus of France seized it. Thereafter, as the result both of civil wars provoked by the prince of Viana and also of struggles against France, the town had to endure numerous sieges and assaults; after being razed to the ground during the war of the Spanish Succession for declaring itself in favour of the Archduke, its tribulations reached their culminating point with the heroic resistance directed by General Alvarez de Castro when, for seven months, the town stood out against Napoleon's Marshals.

**Djassak** (Djasek or Djasik), an island in the Persian Gulf mentioned only by Yskshit, i, 9) and Kazwini (Kosmographie, ed. Wüstenfeld, 115) among Arab geographers. From their statements, it is probably to be identified with the island of Lārak in the straits of Hormuz 35 km. S.S.E. of Bandar 'Abbās [q.v.], and not with the large island of Kīsh as was done by Le Strange (266). In the time of these two authors Djasak belonged to the prince of Kīsh (Kish, the modern Kays), a small island in Lat. 26° 33' N., Long. 54° 09' E.

At the present time the name Djasak (now pronounced Djask) is borne by the flat, low-lying promontory on the Persian side of the Gulf of 'Umān in Lat. 25° 31' N., 57° 36' E. by the adjoining village. Early in the 10th/11th century Djasak is mentioned in a text translated from the Portuguese and in the following century the English East India Company established a factory there. There is a landing strip for aircraft south-west of the village. The population in 1951 was 3,115.

to obtain information about their subjects, their ministers and officials, their entourage and even their own family (see the Kitāb al-dāʿī of the Ps. al-
Dīnārī. On this point, cf. also al-Kalkashandi, Subh, i, 116, 167, tr. 184 ff.; al-Adīr al-wāḳal, of al-Ḥasan al-ʿAbbāsī, in the margin of Taʿrīkh al-ḥululās of al-Suyūṭī, 97 ff.; the Siyāsāt-nāma of Niṣām al-Mulk, tr. Schefer, 88, 99, 103 ff.; R. Levy, A mirror of Princes, tr. of Ibn Kābūs, 133). We know that the Postal Service (barīd) was made responsible for this surveillance. Thus the office of espionage was reflected in the rules relating to the dùng of al-Ghazzali, in which the five senses are the spies (djūwāsī) who bring to the imagination which is, so to speak, the sāḥīb al-barīd (Iḥyāʾ, iii, 5 and 8; cf. Kimiyāʾ al-sāʿāda, ed. 1343, 10 and tr. H. Ritter, Das Eissir der Gleichsetzling, 30). There are numerous accounts relating to the use of spies of this sort, for example al-Tanbih, 98, ii, 157–63, tr. 253–5 (al-Muṣafadād having his vizier spied on), Abū Shujāʿ al-Rūḍhāwārī, 59 (ʿAbd al-Dawla asking schoolmasters to seek information from the children about their fathers’ activities, and to pass it on to the sāḥīb al-barīd). For the spies in the Buwayhid period, sent out to search for fortunes to be con-
mended having them beheaded. If the spy is a Muslim the criterium is the harm caused in the event of a spy being a dhimmī, he is thus breaking the contract which binds him to the Muslims and he can be put to death; Abū Yūsuf, tr. 294, takes the same line. But al-Ṣaḥḥāf believes that he is only subject to an exemplary punishment since there is no breach of contract. Abū Ḥanīfa also maintains that there is no breach of contract and the dhimmī is only liable to corporal punishment and imprisonment. According to the Mālikis (Ibn al-ʿĀṣim), there is a breach of contract and the dhimmī is put to death (al-Khalil, tr. Guidi, i, 418). The Ḥanbalis (see, e.g., Ibn ʿAbdālāma’s commentary on al-Mukūnī in al-Rawd al-mubīrī of al-Manṣūr al-Bahītī, ii, 71) consider that there is a breach of contract: the criterion is the harm caused to the Muslims (for the whole question cf. Fattal, op. cit., 81 ff.).

When the spy is a foreigner who has entered Muslim territory without a safe-conduct he is put to death, and if he came with a safe-conduct without a formal objective he is simply expelled; if travelling for purposes of commerce, he is sentenced to corporal punishment and is expelled (Abū Ḥanīfa; cf. also al-Ṣaḥḥāf, Kitāb al-dimmī, iv, 167). According to the Mālikis, (Khallī, i, 392), it is permitted to kill enemy spies even though they have come unarmed with a safe-conduct, and Abū Yūsuf (tr. 294) also recom-
mends having them beheaded. If the spy is a Muslim guilty of corresponding with the Greeks and passing them information about the Muslims, according to al-Awāzī he is liable to corporal punishment, banishment and prison, unless he shows repentence; the same is true of Abū Ḥanīfa (cf. also Abū Yūsuf, tr. 294). In al-Ṣaḥḥāf’s view, since the action is not a characteristic act of khurṣ, punishment is therefore not inevitable and it rests with the ʿimām to decide. Mālik also states that the case is left to the free
decision of the imam (al-Tabari, Ikhhtldf, 172). It is probable that, in practice, and according to circumstances, greater severity was shown.

In 94/712, during the invasion of Muhammad b. al-Kasim when he marched upon Daybul (q.v.), some years prior to the invasion of Muhammad b. al-Kasim, and killed him, and again encountered the forces of Muhammad b. al-Kasim when he marched upon Daybul in 947/1212. A very large number of them was captured by the Muslims, and Muhammad b. al-Kasim sent ship-loads of them to al-Hadjldjf b. Yusuf (q.v.). Thereafter they seem to have taken to a settled and peaceful life both in Sind and abroad, as they figure in no further events until the time of Mahomed of Ghazni (q.v.) who had to fight a naval engagement with them on the Indus, where they troubled the victorious Sultan by attacking his rear and several times looting the baggage (see Gard6t, Zayn al-abddin, ed. M. Nazim, Berlin 1928, 87-9). The Dijfs, thereafter, suffered a long eclipse until the reign of the Mughal emperor Shdhlidjau (q.v.), when in 1647/1657 they broke out into a revolt and killed the fudldj (q.v.) of Mathur, Murshid Kuli Khan. During the reign of Awrangzib (q.v.), taking advantage of his preoccupation with the Deccan wars, the Dijfs of northern India, under their leaders Ruljd R6m and Rulm Cbrd, terrorized the population and even attempted to despoil the tomb of the emperor Akbar at Sikandra. They were, however, met with stout opposition from the local commandir, Mir Abu '1-Fadl (Jadunath Sarkar, History of Awrangzib, v. 297-9). In 1657/1658 Awrangzib, in a bid to crush them, deputed his general Khain-i Dihlw b. Kokaftsh, who was, however, defeated by the Dijfs in several engagements; this compelled the emperor to change the command, and entrust it to his grandson, Bid6r Bakht b. Muhammad A'zam. After the death of Awrangzib, when the Mughal empire had begun to disintegrate, the Dijfs of Bharatpur (q.v.) and the surrounding territory, under their leader Sirdd Mall, terrorized the entire country lying between Agra and Dihli. The atrocities perpetrated by them on the ill-starred inhabitants of Dihli have been vividly described by Shdhl Wall Alldh al-Dihlw (q.v.) in his Persian letters. The depredations of the Dijfs provoked Ahmad Shd Albd, when he attacked India, to say "Move into the territories of the accursed Jat, and in every town and district held by him slay and plunder .... Up to Agra leave not a single place standing" (cf. Indian Antiquary, . . . 58-9 and J. N. Sarkar, Fall of the Mughul empire, Calcutta 1950, ii, 61, 85). In 1171/1275, during his fourth invasion of India, Abdil marched against them but could not subdue them completely, and the Dijf chieftain refused to pay allegiance to the emperor, and so was utterly defeated by the Mar6has at his hands in 1757/ 1762 at the third Battle of Panipat practically broke the back of the Dijfs. Almost at the same time, a petty Dijf chieftain of the Pandjdb, Al6 Singh, received a number of villages from the retiring Shd as a grant, in return for military services rendered. Later these villages formed the nucleus of the former Indian princely state of Patil. Early in the 13th/18th century Randjit Singh Dijf succeeded in establishing a small and shortlived Sikh kingdom in the Pandjdb. Elsewhere the Dijfs kept quiet till the Mutiny of 1857 when, taking advantage of the general chaos at Dihli, they indulged in loot and massacre and became a terror to the neighbouring population and the refugees. The subsequent British occupation of India subdued them. During the disturbances of 1947 they were again active in and around Agra and Bharatpur (q.v.), taking a leading part in the loot and massacre that followed the partition of India. They are still politically active in the Indian Pandjdb and Uttar Pradesh. For their political organization, see Pradhan (in Bibliography).

In India some Dijfs appear to have embraced Islam during or soon after the Muslim conquest of Sind; in the Pandjdb most of the Dijf tribes were
converted either by Djalal al-Dīn Husayn Bukhari or by Farid al-Dīn Gandj-vShakar [qq.v.] of Pak-pattan (see Gazetteers of Muslim district and Bahawalpur); many further conversions are reported from the time of Awarangzīb.

Contrary to the popular belief that the Dījāts are deplorably lacking in common sense and are illiterate and uncultured, they have produced a number of people who have made a name for themselves in the field of learning. A Dījāt (Zutī) physician, who was apparently well-versed in witchcraft also, had embraced Islam at the following of the Prophet, and had been assigned in to treat ʿAṣāha, when she fell severely ill. The Indian Muslim writer and biographer of the Prophet, Shibli Nuʿmani, pertaining to Abu Hanifa. A Dījāt (Muhammad Zafar Allah Khan) till recently (1961) served as a judge of the International Court of Justice at the Hague.

Dījāwād Pasha, Ahmad (T. Ahmed, Cevat Pasa), 1842-1900, Ottoman Grand Vizier. Born in Syria, the son of the mirālāy Muṣṭafā ʿAšīn (whose family originated from Afyonkarahisar), he was educated at the Military College and completed the Staff College course in 1871. He served in the Russo-Turkish war as A.D.C. to the Commander-in-Chief Süleyman Pasha and as chief of staff of Naṣīr Pasha’s division. Rapidly promoted, he was appointed successively ambassador to Montenegro, with the rank of mirīāsī (1901/1884), chief of staff to the governor and military commander of Crete, Šāhār Pasha, with the rank of ferīk (1905/1889), and soon afterwards vice-governor of Crete and extraordinary commissioner. His services in Crete having commended him to ʿAbd al-Ḥamīd, he was appointed Grand Vizier on 29 Muharram 1309/20 February 1891 and held office for over three years.

During this period, when the Ottoman Empire was disturbed particularly by the Armenian question, Dījāwād Pasha tried to act justly, but he lost the favour of ʿAbd al-Ḥamīd, who was dissatisfied with his conduct of affairs. In memorials addressed to the Palace Dījāwād Pasha attributed the various revolts in different parts of the Empire to the ineffectiveness of the system of government, and proposed that the influence of the Palace in the government should be reduced and the authority of the Bab-i Aʿūl increased: these recommendations led to his dismissal on 9 June 1895. After a period in disgrace, he was again appointed military commander of Crete (14 July 1897) and soon after, when he was already a sick man, commander of the Fifth Army in Syria. His health worsened in Syria and he was recalled to Istanbul, where he died shortly afterwards (14 Rabī I 1318/11 August 1900).

Dījāwād Pasha, who had from his early days devoted himself to study, was a man of learning, and knew Arabic, Persian, French, Italian and Greek. Among his works are: Mawṣūmī-i hāfiyeye fi memālīk-i ʿOthmānīeye, Istanbul 1289 (a textbook for military iʿdādî schools); Taʿrīkh-i saskeri-i ʿOthmānī, Istanbul 1297, = Elat militaire ottoman ... , 1882, (on the history of the Janissaries); Riyādīyeyeyen mebābīgī dâbīq; Kimyeyeyen şakbīyeyeyen taftīb; Semd; Telefón.
He published a review entitled Yddigdr and founded a rich library.

(DAVID BAYSUN)

DAJAWALI, double plural of diwâli (through the intermediate form dišiîya which is also found, particularly in old papyrus), literally "émigrés", a term which very soon served to denote the dişîya [q.v.]. Ancient writers believed that the word had originally been applied to the poll-tax on the dhimmis who were émigrés (driven out) from Arabia; some modern writers have thought that it could have taken on its meaning, by extension, from a term used of the tax on the Jewish community in "Exile" dişiî: there is no trace of any such specific use. It would seem that, in order to understand the semantic development of the word, account should be taken of the distinction, going back to the Roman Empire, made between colonists attached to the soil, and consequently to an immutable fiscal community, and those men whom the efforts of the administration did not succeed in preventing from changing their place of residence and occupation, inşüîîn, quyâdsic. Muslim fiscal practice distinguishes, more sharply between, on the one hand, the tax due upon the land, which was immovable, from the community collectively responsible, irrespective of the actual whereabouts of each individual on the date of the assessment or payment, and, on the other, the tax due upon the person, which could only be paid by the individual in the place where he was. In the tax registers therefore an entry was made, among the theoretical inhabitants of each district, of the names of those who were "émigrés", together with their place of emigration, for the purpose of informing the authorities concerned. Since this procedure related more particularly to the dişîya, it might in consequence have led to the name dijâwâlî being given to this tax, meaning the individual tax paid also by the émigrés, or, to express it better, by all individuals irrespective of their place of residence. However, no text confirms the truth of this explanatory hypothesis.

Bibliography: see dijâya; more particularly Lokkegaard (index), and Fattal, 265.

(CL. CAHEN)

AL-DJAWALIKI or IBN AL-DJAWALIKI, ABU MANŞUR MAHÜB B. AHMAD B. MÜH. B. AL-KHADIL, so named according to Brockelmann, I, 332 and S 1, 492. Born in Bagdad in 466/1073, he died there on 15 Muhaarrâm 539/17 July 1144. According to Brockelmann, he belonged to an ancient family, but the nişâh al-djâwalîki "maker, seller of sacks", Persian gowdlâ(e) "sack", arabicized djâwalîk, pl. djâwalîkî, recorded in the Muṣarrab (48 end 49), pl. djâwalîka (Sibawayhi, ii (Paris), 205, allows us to suppose a humble origin.

He was the second successor of his master al-Tibrizî in the chair of philology at Nishâpayyá. A jealous Sunnî (Hanâbilî, according to Shaⴽhârat al-Ďhâbah, iv, 127 and al-Tanûkkî, in RAAD, iv, 164), he was appointed in place of ʻAli b. Abī Zayd (d. 516/1122), a too notorious Şiʻî who was compelled to resign.

The man was a conscientious teacher, prudent in his answers to questions and with a much admired calligraphy. His works deservedly take their place along with those of al-Tibrizî in raising the cultural level in the Arabic language from the depths to which it had fallen in the Saljûqí period: a) the K. al-Muṣarrab min al-ḵalâm al-šâṣîm al-Ďurāl al-muṣâdîm, to preserve the faith of collecting together words of foreign origin and recording them as such. This explanatory lexicon, which was highly thought of in its time, has proved to be very useful and made Ibn al-Djâwalîki's reputation. In fact, as was said by one of his pupils (Abu l-Barakât Ibn an-Ďanârî, Nushâ, 475), "the ghybîh was a better lexicographer than grammarian".

But it remained to determine the place of his predecessors' work: published by Ed. Sachau, from the Leiden MS, Leipzig 1867, x + 70 (notes) + 158 (Arabic text) + 23 (Index) pp. in 8°. W. Spitta filled the gaps from the two Cairo MSS (ĒDMMG, xiiii, 208-24); an edition in Cairo (Dar al-ḵutub al-Ḵiṣyâyâ), 1361 A. H. by Ahmad Muḥ. Şâikîr. Glosses originated by Ibn Barri (d. 582/1186) occur in an Escurial MS (H. Derenbourg, Les Manu̇skript arabes de l'Escurial, ii, 772, 5). b) K. al-Takmilî jâ ma yâlaθân jîk-amâma, the aim of this work on incorrect expressions is evident: published by H. Derenbourg, Morgenland. Forsch. (Fest-schrift Fleischer), Leipzig 1875, 107-66 (from a Paris MS, entitled: K. ḫâta al-Ďamâmî), published again in Damascus by īzī al-Ďin al-Ṭanûkî (RAAD, xiv, 1936, 163-226) from the Zâhiriyâ MS (with glosses by Ibn Barri), under the title Takhmil an-şâkh ma taghîth jîk-amâma. This complements the works of this sort, apart from the Durrat al-Ďawâwîd by al-Ḫârîf (al-Ṭanûkî, ibid., 167-168).

c) The Šâkh of the adab al-Ďâtî by Ibn Ḫubayyâ, a guide for the practice of the pure Arabic language, in fact an average work; printed, Cairo, Maktabat al-Ďudsl, 1350 A.H.

In manuscript (Kôp. 1501, Mux. xi, 16, 50), the K. al-MMuk̇dâdasl jîk-anâwî. Ibn an-Ďanârî (Nushâ, 474) attributes to him a K. al-Ďarūd written for the caliph al-Ďukâtî. Brockelmann lists as his work a Sharîk Muṣârâtîn Ibn Durayd (S 1, 492) and al-Ṭanûkî (loc. cit. 166) a K. ḡalâl al-Ďuwaʿîj min al-faḥîdis. The K. Āsma ʻakhîr al-Ďarūd wa-fursânîkâd is to be deleted from his works.

(H. FLEISCH)

DJAWÂN, MIREZ KAŞM ʻAllî, one of the pioneers of ʻUrdû prose literature and a munkâf at Fort William College (Calcutta), originally a resident of Dihlî, migrated to Lucknow following the break-up of the cultural and social life of the Imperial capital following the invasion of Ahmad Shâh Abdâlî in 1747/1750, and was living in Lucknow in 1760 when Ibrâhîm Khân Khâtîlî was busy compiling his tadkhîr (see Gulser-i Ibrâhîm, ʻAli-gâr 1352/1934, 93). A writer of simple, chaste and unornamented ʻUrdû prose and a scholar of Persian and Arabic (he revised the ʻUrdû translation of the Kurân, undertaken partially by Amnât Allâh and others), he was also conversant with Brâdî-bhâṣâ. He joined Fort William College on its establishment in 1800 as a teacher and settled permanently in Calcutta. He was alive in 1815 when he revised, in part, the second edition of ʻHaft al-Ďin's Kihrd Aftâs, an ʻUrdû translation of Abu l-ʻFâdîl's ʻSyrd-i Dânsîc.
In 1216/1801 he translated from a Bradj-bhasha version Kālidāsa's Sanskrit drama *Shakuntala* into Urdu at the instance of Dr. G. Gilchrist, head of the Hindustani Department of Fort William College and one of the early patrons of Urdu literature (ed. Calcutta 1804, London 1826, Bombay 1848 and Lucknow 1875). His second literary achievement is the *bārah-mīsa Dastār-i Hind*, a long poem in Urdu, arranged according to the Hindu calendar months, describing in detail the Hindu and Muslim festivals falling in those months, composed 1802 and published at Calcutta 1812. He also translated a shorter version of the *Ta'rikh-i Firuzgra*, comprising the chapters on the Bahmans [q.v.], and collaborated in the preparation of an anthology of the poems of Wall, Mr. Sawdā and Sōz [q.v.]. He also helped Munshi Lalluḍī Lāl, his colleague at Fort William College, in the translation of the *Simhāsana Dvārtimśika*, a collection of tales of Vikramāditya, from the Bradj-bhasha version (*Singhdsana Battisi*) of Sundar, a *kavi-raj* of Diwdhāj's court. He died some time after 1815.

**Djawan Mardi** [see futuwwa].

**Djawānrud** (local Kurdish *diwanrō*), a district of Persian Kurdistan lying to the west of Mt. Shāhū, between Avroman (Hawermān [q.v.] in the north, Shahzhūr in the west, and Zūhāb and Raw访谈 in the south and east. The country is generally mountainous and thickly wooded. The valleys are well watered and very fertile, being in effect the granary of the Avroman area.

There is no river now known by this name, but Minorsky derives it from *Djawanrud*, influenced by Persian *diwan* 'young'. A Kurdish tribe *Djawān*, listed by Masʿūdī (*Murādī*, iii, 253; Tāhū, 88), appears to be the same as the *Dīḏ*[q.v.]. Those sections of the *Dīf* still living in Persia are known collectively as *Dīf* *Djawānrd*. The Kurd-I *Djawānrd* proper occupy villages as far north as the river Sirwan, where this becomes the frontier of Iran, and thus surround the Hawramān villages of Pāwa.

There have been a number of poets of *Djawānrd*, the most famous being *Mawlawī* [q.v.].

**Al-Djawbarī** [see supplement].

**Djawdhār**, a *eunuch*—as is indicated by the epithet *ustād* generally appended to his name—and slave who played an important part under the first Fatimid caliphs. Even in the time of the last Aghlabid ruler he was already working in his service and, while still young, was marked out as al-Mahdī when he came of age. A Kurdish tribe *Diwanrū* proper occupy villages as far north as the river Sirwan, where this becomes the frontier of Iran, and thus surround the Hawramān villages of Pāwa.

There have been a number of poets of *Djawānrd*, the most famous being Mawlawī [q.v.].

**Al-Djawbarī** [see supplement].

Bakrī), Djawf al-Yaman, al-Djawf, and the two
Djawfs—Diawf Hamdan and Diawf Murād of the
lexicographers). Djawf Ibn Nāṣir of north-west al-
Yaman is a broad plain, roughly triangularly
bounded on the north by Djābals al-Lawḥū, Barāt,
and Shaʿāf; on the west by Djābals Maḥdāb, Khārid
Khabash, and al-ʿIṣḥāq; on the south by Diābal
Yām; and on the east by the sands of Ramlāt Dāh;m
of the south-western Rubʿ al-Ḥālī. Djawf Ibn Nāṣir,
which lies north-west of Maʾrib [q.v.], was the centre of the
Minaean Dynasty and abounds with archaeological
sites located notably Khārid al-Khabash, the plural
form of (Karibā) which were first described by Hamdānī
and later by Ḥāleʿy, Ḥābeṣhā, Glaser, Philby,
Fakhry, Tawfīq, and von Wissman, and which
include Maʿṣīn, al-Hazm, Bārakī, Ḥamnā (Kumān
in the local dialect), al-Sawdā, and al-Baydā. Among
the wādīs originating in the mountains to the west
and flowing into Wādī al-Djawf and thence to the
sands in the east, are Wādī al-ʿUla, Wādī al-Khārid,
and Wādī Maḥdāb. Two canals of ancient con-
bstruction, Bāḥī al-Kharida (which parallels Wādī al-
Khārid) and Bāḥī al-Sāliyā, are still in use to
irrigate the agricultural lands of al-Hazm and al-
Ghayl respectively, while al-Matimma is irrigated by
the seasonal waters of Wādī Maḥdāb. Al-Hazm, the
chief village of Djawf Ibn Nāṣir, is the markaz of
the nāḥiyā of Al-Djawf and seat of the ʿāmil, who
reports to the governor of the province in San.
Rūwala. Wādī Ibn Nāṣir produces wheat, barley, and
olives. Local industry is limited to
handicrafts and olive pressing. In the mid-nineteenth
century, the district was taken by Al Rashīd of Haʾil
who held it, in the face of internal rebellion and
threats from the Turks, until 1909. In that year,
Nūrī b. Shālān, the Rūwala chief, took al-Djawf.
There followed 13 years of struggle between the
Rūwala and Al-Sammar for mastery of the area,
with the town changing hands several times. The
āmilī levies of Ibn Saʿīd took al-Djawf in 1922
with the aid of local leaders who had adopted
Wahhābī tenets. The area has since remained a part
of the Saʿīdī state. Al-Djawf, now declining in
importance because of the rise of the new admini-
strative centre at Sakaka, has been a trading town
of the Shammar, Ruwala, and Shararat. It is still
threatened by the Turks, until 1909.

Hamdānī speaks of the bellicosity of the tribes of al-Djawf
and mentions two opposing groups, Hamdānī and Maḥdī, whence Djawf Hamdān and Djawf
Murād ibn Maḥdī according to Schleifer) of the
lexicographers.

DJAWF KUFRA is the chief oasis of the Kufra
oasis complex in the Libyan Desert and is located
about 575 miles SE of Benghazi. The 220 (1950
estimate) inhabitants of Djawf raise dates, grapes,
barley, and olives. Local industry is limited to
handicrafts and olive pressing. In the mid-nineteenth
century, the founder of the Sanūṣī Order, al-Sayyid
Muhammad b. ʿAlī al-Sanūṣī, established Zāwiyat
al-ʿUṣṭādī at Djawf at the request of the local tribe,
Zwyyya (Ziadeh 49, cf. EP), iv, 1106 which gives the
tribe's name as Zāwyya) and opened the Sahara and
the central Sudan to Sanūṣī penetration. Djawf
Amirate of the Northern Frontiers. The area is
relatively well watered, has many palm groves, and
is considered to have agricultural potential. The two
most important settlements of al-Djawf are the
towns of Sakkākā, now the administrative centre,
and al-Djawf. Kāra, al-Tuwāyr, and Djawā are smaller
villages. The total population of the district was
roughly estimated at 25,000 in 1961.

The town of al-Djawf, or Djawf ʿĀmir (29° 48′.5" N.,
39° 52′.1" E., elev. c. 650 m.), has historically been
the centre of the centre of al-Djūba and has been identified with
the Sāmata of Ptolemy. It was known to the early
Arab geographers as Dumat al-Dianda, [q.v.]. The
d name Djawf ʿĀmir (also Djawf Al-ʿĀmir, Djawf Ibn
ʿĀmir) is often used to differentiate the town from
the southern Djawf, Djawf Ibn Nāṣir, south-east of
Wādī Naḍīrān.

Muḥammad b. Muʿayyīl added al-Djawf to the
Wahhābī realm of ʿAbd al-ʿAzīz b. Muḥammad b.
Saʿīd in 1908-94, when the people of the area
surrendered to his combined forces from Najdī. In
c. 1853 the district was taken by Al Rashīd of Haʾil
who held it, in the face of internal rebellion and
threats from the Turks, until 1909. In that year,
Nūrī b. Shālān, the Ruwala chief, took al-Djawf.
There followed 13 years of struggle between the
Ruwala and Al-Sammar for mastery of the area,
with the town changing hands several times. The
āmilī levies of Ibn Saʿīd took al-Djawf in 1922
with the aid of local leaders who had adopted
Wahhābī tenets. The area has since remained a part
of the Saʿīdī state. Al-Djawf, now declining in
importance because of the rise of the new admini-
strative centre at Sakaka, has been a trading town
of the Shammar, Ruwala, and Shararat. It is still
known for its date market and crafts, while a
planned (1961) road system and development scheme
may make it an important agricultural centre.

(J. MANDAVILLE)
experienced a short period of prominence in 1895 when al-SanusI's son and successor, Muhammad al-Mahdi, transferred the capital of the Sanusi to Kufra. However, the capital was soon moved to the newly constructed Zawiya al-Taddji, also in the Kufra Oasis, and finally in 1899 was moved to the Central Sudan.

**DJAWHAR** "substance" (the Arabic word is derived from Persian *gawhar*, Fahlawi *göhr*, which has already the meaning of substance, although both in Fahlawi and in Arabic, it can mean also jewel) is the common translation of *wujud*, one of the fundamental terms of Aristotelian philosophy. "Substance" in a general sense may be said to signify the reality. Matter in its pregnant sense is prime matter, which has never exist by themselves, for only particular beings on which all other substances depend. The philosophers, indeed, tried to combine two contradictory theories: the super-naturalistic theory of a divine, eternally acting cause for all existence and the naturalistic theory of an eternal and independent matter in which lie the potentialities of all becoming. The theory of the Aššâri theologians, on the contrary, is frankly supernaturalistic. For them *gawhar* means simply the underlying substratum of accidents; one may regard it as matter—not of matter in the Aristotelian sense of an entity possessing potentialities, but only as that which
bears or carries accidents—or even as body for the substratum consists of atoms which by their aggregation compose the body. The term, however, is somewhat ambiguous, since often in Aghārī's terminology ḍjawhar means atom, although the full designation for atom is al-ṇajwahr al-jard or al-�ئًجعئر al-waḥīd. The atoms out of which the world consists have no independent existence; they rest only on the power of God who, continually, in every time-atom, creates and recreates his atomic world. And since ḍjawhar has in theology a purely material meaning it is forbidden to apply the term to God. On the other hand some deviates from Aristotle, should be still mentioned. Although Aristotle calls the soul a substance, since it is the formal cause of the living organism, he does not regard it as having an existence separate from the body, that is independent of the body and surviving it. The Muslim philosophers regard the soul as a substance subsistent by itself, ǧawhar kī'īm binafsihi, that is independent of the body, and they teach personal immortality. It is however somewhat difficult for them as Aristotelians to uphold this, since, according to Aristotle, matter is the principium individuationis—Avicenna gives this as an argument against the pre-existence of the soul—perception and representation are localized in the body and all thinking, according to Aristotle, presupposes preliminary perception and representation and is activated by the active intellect which is one for all human beings. Their theories are therefore not always consistent or easily understood.

**Bibliography:** al-Ghazālī, Tahfīz al-falāsifa (ed. Bouyges), Beirut 1927, where the philosophers' theories are exposed and critically examined; Ibn Rushd, Tahfīz al-tahfīz (ed. Bouyges), Beirut 1929.

(DJAWHAR — DJAWHAR AL-SIKILLI)

Near Tahart ḏjawhar had to measure arms against the possibility of the pre-existence of the soul—perception and representation are localized in the body and all thinking, according to Aristotle, presupposes preliminary perception and representation and is activated by the active intellect which is one for all human beings. Their theories are therefore not always consistent or easily understood.

(A. S. BAZMEE ANSARI)

(DJAWHAR AL-SIKILLI, general and administrator, one of the founders of the Fāṭimid Empire in North Africa and Egypt.)

His name was ḏjawhar b. 'Abd Allāh, also ḏjāhar together with the epithets of al-Sakhāli (the Slav), al-Sīkīli (the Sicilian) or al-Rūmī (the Greek) and al-Kātib (the State Chancellor) or al-Kādī (the General). The first two epithets cast some light on his obscure origin, the other two denote the two highest posts he occupied. His birth date is unknown, but judging by the date of his death (20 Dhū 'l-Ka‘da 321/28 April 991) we may guess that he was born sometime during the first decade of the 4th/10th century; he was in the prime of his activity between 340/950 and 366/975. From the parallel career of ḏjawhar, well known to us, thanks to his recently published biography, we may infer that ḏjawhar was a freedman of the Fāṭimid house, of Slav origin. (Leo Africanus, tr. Épaulard, 19, 503 = Esclavon; on this question see I. Hrbek, Die Slaven im Dienste der Fāṭimididen, in ArO, xxi (1953), 560-71. His father 'Abd Allāh was probably a slave, but ḏjawhar appears as a freedman from the very beginning.

The first time we hear of ḏjawhar he was a qulāmīm, perhaps also the secretary of the third Fāṭimid Caliph al-Mu‘āṣir. In 347/958 al-Mu‘āṣir decided to put all the power he possessed in a military venture to dominate the whole of North Africa, and chose for the leadership of this important campaign his secretary ḏjawhar, giving him in this way the opportunity to prove that he was the most talented soldier the Fāṭimidīs ever had.

Ḏjawhar's campaign in the Central and Far Magrib was perhaps the most resounding achieved by a Muslim army since that of 'Ukba b. Nāfi' some 284 years before, but in spite of the victories ḏjawhar gained, it was neither decisive nor of any lasting effect. This was due not to any fault of ḏjawhar, but to the difficulty of the terrain and to the greatly superior strength of the enemy. Near Taḥart ḏjawhar had to measure arms with a large army of Zanāṭīs, supporters of the Umayyads, under Yā‘lā b. Muhammad al-Yāfrānī, governor of Taḥart and Ifkan; according only to Ibn Abī Za‘rī, also of Taḥtā (Tanger). He won the day and killed Yā‘lā (347/958). Instead of marching on Fez and the other Umayyad strongholds in the region, he chose to use his small forces to realize easier gains. He turned south-east, invaded

(DJAWHAR — DJAWHAR AL-SIKILLI)

His claim to fame rests chiefly on his only work, the Taḥḥīṣ al-waḥīdī, whose value as a very useful source-book for the reign of Humāyūn has been fully recognized. The original Persian text is still in MS. although English and Urdu translations have since appeared; (C. Stewart, The Teskereh al-Vahad . . ., London 1832 Calcutta 1904; Mu‘ān al-Ḥakī, Tadhākirat al-waḥīdī, Karachi n.d.). At the request of ḏjawhar a reproduction in ornate prose was made by Ilāh-dād Fāydī Sirhindī the author of the Persian lexicon Madār al-afdilī for presentation to Akbar (cf. Rieu, iii, 927a and Etēh 222).

**Bibliography:** Tadhākirat al-waḥīdī (Urdu tr. Mu‘ān al-Ḥakī, Karachi n.d., index s.v. ḏjawhar; Storey, i, 536-7; Rieu, i, 246; Elliot and Dowson, History of India . . ., v, 136-60.)
the small principality of Sidjilmasa and put its prince Muhammad b. al-Fath b. Midrār to flight. Some days later this last of the Midrāris fell into the hands of Djawhar who killed him merci-
lessly. He spent more than a year in this region waiting for a suitable opportunity to move north-
wards. In the last days of Sha'bān 349/October 960 he headed towards Fez and laid siege to it. On 20 Ramadān 349/13 November 960 he stormed the city, thanks to the bravery of Zīr b. Manād al-Ṣanāḥīl who was under his command. Its Umayyad governor Ahmad b. Abi Bakr al-Djudhaml was taken prisoner and died in prison. This great victory brought all the Maghrib al-Aksā (except Tāŋžīja and Sabta) under Fāṭimid authority for a short time. Even the last of the Ḥabštids, al-Ḥaṣān b. Djānnān, who contended himself with a small principality around the city of al-Baṣrā under Umayyad vassal-
age, paid homage. To give al-Mu'izz a tangible proof of his victory he sent to him some live fish, taken from the Atlantic Ocean, in huge jars full of water. Some months later he returned victorious to al-Kayrawān with prisoners and rich booty.

These victories of Djawhar's opened the eyes of his master al-Mu'izz to his talents, and convinced him that with his aid he could realize the dearest Fāṭimid dream since the rise of their power: the conquest of Egypt.

Between 350/962 and 358/968-9 we have no information whatsoever about Djawhar. But in 358/968-9 he came to the fore once more as the general chosen by al-Mu'izz to lead the campaign in Egypt. Al-Mu'izz had such confidence in him that he is re-
ferred to have said: "By God, if this Djawhar were to go alone, he would conquer Egypt and we would be able to enter this land clad only in our simple clothes (i.e., without armour or shield) without war and we could dwell in the ruined abodes of Ibn Ṭūṭūn and build a city which would dominate the world." (Khitat, i, 378). As a sign of honour al-Mu'izz bestowed on Djawhar before his departure all his royal garments and apparel except his seal and his royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal and royal garments and apparel except his seal. (Khitat, i, 378). As a sign of honour al-Mu'izz bestowed on Djawhar before his departure all his royal garments and apparel except his seal and

During these four years Djawhar showed noteworthy capacity and foresight as administrator. Besides the sympathies of the people, which he later gained, he succeeded in putting order in the finances of the country which were in complete chaos during the last years of the Ḥshshidīs. It is known that Egypt had yielded since the time of Mu'āwiya an annual revenue of about 4 million dinars when well administered. Djawhar raised 3,400,000 dinars during the first year of his admin-
istration, almost the largest revenue of Egypt in the Fāṭimid period. Some 85 years later, the able-
vizier al-Yazūfī could raise only 800,000. Djawhar had more confidence in the Maghribi whom came with him than in Egyptians, and gave them almost all the important posts. He may have been following in this respect the instructions of al-Mu'izz.

Besides his work in the administration of the new province, Djawhar had to face the menacing peril of the ʿArnāts (q.v.), who in Dhu 'l-Hijjādja 358/September 960 defeated and took prisoner at Damascus his lieutenant Dja-far b. Fālḥāh, who had been placed in charge of the occupation of Palestine and Syria. During this conflict with the ʿArnāts and their allies, Djawhar was able to annex al-
Hidjaz to Fāṭimid rule. By 366/976 the khutba was read in their name in Mecca and Medina.

After 366/976 we hear no more of Djawhar till his death in 20 Dhu 'l-Ḥaadhja 381/30 April 992. He is said have passed those idle years of his life between 368 and 381 in works of piety and welfare. His son al-Husayn, commander-in-chief to the caliph al-
Ḥākim, was killed as a result of intrigues in which he took part against the Caliph.

Al-DJAWHARI, Ābu Nāṣr Ismā'īl (b. Naṣr?) b. Ḥammād, celebrated Arabic lexicographer of Turkish origin, born in the town (or: in the province) of Fārāb [q.v.] (whence his nisba al-Fārābī), situated east of the Sir-Daryā. In later times, Fārāb was called Otrār or Otrār.
The date of his birth is unknown. For the year of his death most sources give either 393/1002-3 or 398/1007-8, while others mention 397/1006-7 or about 400/1009-10. The first date (or even earlier ones; see Rosenthal) is made doubtful by the statement of Yakût that he had seen an autograph copy of Al-Djawhari's Sihäuser dated 396.

Al-Djawhari commenced his studies at home under his maternal uncle Abu Ibrahim Ishaq b. Ibrahim al-Fârâbî (Brockelmann I, 133; S I, 195 f.). The author of the *Dîwân al-adab*, an Arabic lexicon which greatly influenced Al-Djawhari's own dictionary al-Sihdh. In order to complete his education he went to Baghdad where he attended the lectures of Abu Sa'id al-Sirâfî [q.v.] and Abu 'Ali al-Fârisî (Brockelmann I, 116; S I, 175) and later travelled to the abodes of the Bedouin tribes of M murderer and Rabi'a (probably in Syria and 'Irak) and even to the Hijaz and Nadîd (see, e.g., Sihdh, s.v. 'Ahâ). He thus followed the habit of earlier lexicographers who attended to make linguistic investigations among the Arabs of the desert, and he seems to have been the last lexicographer of fame to maintain that tradition. After having spent a large part of his life on travel he returned to the east, stayed some time in Damâghân [q.v.] with the Kâtib Abu 'Ali al-Hasan (variant: al-Husayn) b. 'Ali and then settled in Nisâbûr, where he made a living by teaching and copying books, especially the Qur'an, and also devoted himself to literary activity. His beautiful handwriting was so much admired that it was put on the same level as that of the celebrated Ibn Mukla. He died in Nisâbûr either as the result of an accidental fall from the top of his house or of the old mosque, or else, in a fit of madness, while trying to fly with two wooden wings (or: with the two wings of a door) fastened to his body.

Besides some verses, part of which are preserved in a Berlin MS. (Ahwardt 759g) or quoted by later authors (e.g., al-'Hallibî and Yâkût), he wrote an introduction to syntax, *Mubaddima fi 'l-nahw*, and a treatise on metre, *Arûd al-varakhâ*, both of which appear to be lost. His distinction in the field of metrics, where he deviated in some respects from the system laid down by al-Khallî [q.v.], is pointed out by Ibn Ragîlî, the Egyptian scholar, in his dictionary *Tâdî al-bugha wa-sihdh al-'Arabiyya*, commonly known as al-Sihdh (al-Sabîh is also correct), which represents a milestone in the development of Arabic lexicography. For centuries it was the most widely used Arabic dictionary until, in more recent times, the *Kâmîs al-Firuzâbâdî* [q.v.] took its place. In addition to the important standing of Al-Djawhari's lexicography is attested to by the fact that, in the centuries following its appearance, it gave rise to a huge mass of lexicographical literature, part of which has been described and characterized by Goldzider. The Sihäuser was abridged, rearranged, supplemented, commented upon, and translated into Turkish and Persian; its contents, together with those of other dictionaries, were merged into new lexicographical works; the verses and hadîjs quoted in it as 'hashîd were assembled in special treatises; a versification of it was begun by Zayn al-Dîn al-Maghribî (Yâkût, ed. Margoliouth, viii, 292); and a considerable number of writings were devoted to criticism of its shortcomings. On the other hand, several authors made it a point to defend Al-Djawhari from the attacks of his critics.

As the title suggests, the Sihäuser was intended to contain only authentic lexicographical data, their authenticity, according to the notions of indigenous Arabic lexicography, being dependent upon their transmission through a continuous chain of reliable tradition (cf. *Suyûtî*, *Mubîrî*, I, 58). Hence, the same degree of authority was attributed to the Sihäuser in lexicography as to the two *Sabîh* of Buhârî and Muslim in the science of *hadîj*. In both cases, however, the formal principles adopted did not make for absolute correctness, and numerous errors were detected in the Sihäuser although the work as a whole was held to be highly reliable.

In his short introduction, Al-Djawhari claims that he arranged his subject matter according to an entirely new scheme. His innovations, however, are mainly a combination of various principles followed by his predecessors. The arrangement of the roots under the last radical, adopted, after the model of the Sihäuser, by the best known of later lexicographers, had already been introduced by Al-Djawhari's teacher and uncle, al-Fârâbî, in the *Dîwân al-adab*. The use of the common order of the Arabic alphabet, in contrast to the phonetical arrangement of al-Khallî which was followed by several of Al-Djawhari's forerunners and successors, had also been in vogue before the Sihäuser. As to the principle of authenticity, as understood by Arabic lexicographers, Al-Djawhari's older contemporary, Ibn Fâris [q.v.], had set the example in his *Mudjzal*.

The use of the last radical as the primary basis for the arrangement of the Sihäuser has been interpreted as being due to the author's intention to help poets find rhyme words. However, Sanskrit lexicography, which seems to have influenced Arabic lexicography in some respects, occasionally used the same principle, although Sanskrit poetry has no rhyme.

At Al-Djawhari's time, independent lexicological research had already come to a close. So the Sihäuser contains mainly an abstract from earlier lexicographical works, in the first place the *Dîwân al-Adab* (see Krenkow), while Al-Djawhari's own contributions are minimal. Being replete with grammatical discussions, the Sihäuser earned its author the reputation of being the outstanding expert in grammar among lexicographers. It is reported that Al-Djawhari compiled his dictionary for the *Usâ'îd* Abu Mansûr and Al-Rahîm, who had set his pupil Muhammad al-Bishâkî, with whom he became closely associated in Nisâbûr (cf. Yâkût, *Bulddân*, s.v. *Bishâk*). In the circulation of the work an important part was taken by the author's pupil Ismâ'îl b. Muhammad b. 'Abdus al-Dahhàn al-Nisâbûrî, the Egyptian philologist Abu Sahîl Muhammad b. 'Ali b. Muhammad al-Hârawî and, later on, the well known calligrapher Yâkût al-Mawâsîl. Variant readings in different MSS of the Sihäuser are frequently pointed out by later lexicographers.

According to a tradition which has never been doubted by Western scholars, Al-Djawhari did not live to finish a fair copy of his work, reaching only the middle of the letter *Dâd*, while the rest was completed from his rough draft by his pupil Ibrâhîm b. Sahîl (variant: Sahîl) al-Warrâk. This fact, according to tradition, is held responsible for the numerous errors and later scholars detected in the Sihäuser. The account, however, may have been a mere invention, probably designed to maintain Al-Djawhari's reputation as an unfailing authority. Doubts with regard to its correctness were already voiced by Yâkût and, more outspokenly, by *Râdjhî* Khalîta, since the existence of autograph copies of the complete work had come to their knowledge or
else since, according to some traditions, the entire lexicon had been handed down from al-Djawhari but also in the first which, as agreed by all, had been edited by the author himself. A similar account, probably resulting from the same tendency, exists with regard to the authorship of al-Khallī’s Kitāb al-‘Ayn.

The Ẓibāḥ is available in a Persian lithographed edition (1270) and two Būlāk prints (1282 and 1292), which, as agreed by all, had been edited by the authorship of al-Khātūsī, Leipzig 1846, 5). The Turkish version of Van Kulu [q.v.] was the first book issued from the Müteferri̇ka press in Istanbul, in 1141/1729.

(D. L. Kope)

DJĀWĪ, plur. Djāwā, Muslims from the Būlāk al-Djāwā. Bilād al-Djāwā was the collective name for the South-East Asian area used by the inhabitants of Mecca when C. Snouck Hurgronje visited it in 1845, and probably much earlier; it has remained in use. Djāwā means not only the Javanese, but also the linguistically related people from the other islands, the Philippines, and even the linguistically non-related peoples from the South-East Asian mainland. Generally well-to-do and pious, the Djāwā were welcome guests in Mecca, especially since they were less parsimonious than the pilgrims from various other countries and therefore more apt to provide the skayjās concerned with pilgrims with an easy income. Snouck Hurgronje took a particular interest in those Djāwā who came from the Netherlands Indies; to this circumstance we owe the valuable sociological treatise on the Djāwā group in Mecca in Mekha, ii, Aus dem heutigen Leben, The Hague 1889, ch. iv. The whole pattern of Djāwā life, e.g., their behaviour in their unfamiliar surroundings, how they spent their time in case of a prolonged sejourn, how they reacted upon international and pan-Islamic influences, is discussed here brilliantly and in a very illuminating way. This picture, however, needs to be completed by Snouck Hurgronje’s later studies of Islam in Indonesia [q.v.], and it is now of historical interest only owing to the considerable change in conditions both in Mecca and in South-East Asia. (C. C. Berg)

DJĀWĪD, Young Turk economist and statesman. Mehmed Djāwīd was born in 1875 in Salonika, where his father was a merchant, and received his early education both there and in Istanbul. He graduated from the Müktiyye in 1896, where he formed a lasting friendship with his classmate Hüseyin Edib [q.v.], the journalist. After a brief tour of duty with the Agricultural Bank, he entered the service of the Ministry of Education, resigning in 1902 as secretary of the bureau of primary education. Back in Salonika he became director of a private elementary school, Mekteb-i Teleyyüz, and joined the ‘Othmanī İttihat ve Terakki Ḍeṿṛi̇ȳyēṣi [q.v.], the Macedonian nucleus of the Young Turk conspiracy against the despotism of Abd al-Hamīd II. In 1908 he became lecturer in economics and statistics at the Müktiyye. During this period in Salonika and Istanbul he published several textbooks on economics (‘Im-ı ihti̇sād, 4 vols., 1905, 1912; İngiliȳȳḷi̇ȳ, 1909; and Mekted-i ihti̇sādîyye mağdersî ‘Im-ı ihti̇sād, 1909, 1913) and, together with Ahmed Şu’ayb and Rıza Tewfik [Bölükbaşi], edited a learned journal called ‘Ulm-ı ihti̇sādîyye ve Tiaṭiṃîȳē Meḍi̇ṃi̇’ası (1909–11). Following the 1908 revolution he was elected a deputy for Salonika (1908-12) and Bigya (Canakkale, 1912-8), and became minister of finance (1910, 1913–4, 1917–8), and a member of the general assembly (medddi-is ‘ummai) of the Union and Progress (İttihat ve Terakki) party (1912-6). In the Chamber of Deputies he soon distinguished himself as an eloquent orator and a competent rapporteur of the Budget Commission. During his years as finance minister he conducted delicate negotiations in Paris and other European capitals for public loans to the Ottoman Empire. Together with a number of other ministers he resigned from the cabinet after Turkey’s entry into the war, in opposition to the Germanophile policy of Enver Pasha; later he re-entered it on the plea of Ta’avat Pasha. He was the only Young Turk minister to retain his position in the İzzet Pasha cabinet (14 October to 14 November 1918). Subsequently he went into hiding and exile to escape the wave of prosecution of Union and Progress leaders; in July 1919 an Istanbul tribunal sentenced him in absentia to 15 years’ hard labour. In 1920 he married ‘Aliye, divorced wife of Burhān al-Dīn, son of the late ‘Abd al-Hamīd II.

Djāwīd returned to Istanbul in 1922, where he acted as representative of the Ottoman creditors of the Düfte públi̇que ottomane. According to Halide Edib, The Turkish Ordeal, London 1928, 74, Mustafa Kemal rejected Djāwīd’s suggestion that he be allowed to join the Anatolian movement. In 1923 he served as an adviser to the Turkish delegation to the Lausanne peace conference. He was arrested following the 1926 assassination attempt on Mustafa Kemal [Atatürk], and tried before the special Independence tribunal in İzmir (6 July) and Ankara (10 August) on charges of having conspired to resuscitate the Union and Progress movement and thereby to subvert the regime. Much of the questioning turned around a meeting of former Union and Progress leaders held in Djāwīd’s house in Instabul on 26 April 1923; yet no specific or overt acts of high
treason were alleged or proved against him. Together with three other ex-Unionist leaders he was sentenced to death and executed by hanging in the Djebelji quarter of Damascus on 26 August 1946.

(Danewart A. Rustow)

**Djawan** [see supplement].

**Djawān** [see Çawān].

**al-Djīawlān**, a district in southern Syria bounded on the west by the Jordan, on the north by the spurs of Hermon, on the east by the Nahr al-Allān and on the south by the Yarmūk. The northern part lies at a certain altitude and presents the appearance of a wild, hilly region, covered with blocks of lava and oak forests which were once magnificent but are now extremely impoverished. The southern part is fairly low-lying and differs but little from the plain of Ḥawrān, with a soil of volcanic detritus, more even and of greater fertility.

The territory of Djawlan corresponds with the ancient Gaulanitis of the Hellenistic period, which probably took its name from the town of Golan mentioned in the Old Testament. But it appears to have dwindled with time. At one period, continuing into the early days of Islam, this province included the country lying to the east of Nahr al-Allān, which can be inferred from the existence of places called Djabiyat al-Djawlan and Sahm al-Djawlan beyond that boundary. It was the latter village, which still keeps the same name, that Schumacher thought to be identified with the ancient Gōlān. A distinction may have been made later, from the 7th/13th century, between Djawlan and Djaydur where Yāḵit places al-Djīabiya [q.v.].

Djawn, which during the Byzantine period belonged to Palestina Secunda and which had then been the chief centre of power of the Ghasānids (Nābigha, ed. Derenbourg, iv, 4; xxiv, 25; 29; Ḥassān b. Thābit, ed. Hirschfeld, index) was conquered by Shurahbīl when he occupied Urdunn, but with the rise of Cunar, and not until the rebellion of Shurābīl in 944/1439, which overcame his brother Barbak as sultan of Dihlī in 933/1526-7 was once more taken for his father Adil Khan installed as viceroy in Dīnwāpur. The importance of Dīnwāpur declined with the rise of Cunār, and not until the rebellion of 974/1567 led to Akbar's temporary residence there and the government of Shāh-i Khan Muhammad Mun'mīr Khan. After the foundation of Allāhabād [q.v.] the importance of Dīnwāpur waned; it passed into the possession of the Nawābāds of Awadh in the early 17th/18th century, and into British hands in 1775. Dīnwāpur was long celebrated for its learning, and today still forms the main resource of the region.

**DIHLLI [Diāwān]**, city on the Gumti in the province of Dīnwāpur, and there established himself as governor under Ghiyāth al-Dīn Tughluk after 721/1321. Muslim historians derive the name Dīnwāpur from Dījūnahr, Shāh Muhammad b. Tughluk's city of the same name, which was his capital and the capital of the Khurūd after his accession; but Dīnwāpur is known as a by-form of the name of the town of Djūnahr, which has been suggested as the etymology, and this origin cannot be regarded as established.

In the confused conditions at the beginning of the reign of Āṣār al-Dīn Muhammad Tughluk [see DHIHLLN SULTNAT] the disaffected Hindūs of the eastern provinces rejected all obedience to Dihlī. The knawur Malik Sarwar, Khwāja Djīhan, persuaded Mahmūd to grant him the title of Sultan al-Shark and send him to crush the rebellion in 796/1394; having overcome his brother Barbak as ruler over Dīnwāpur with permission to use the royal title and to issue coin. After Sikandar overcame his brother Bārbak as sultan of Dihlī in 894/1489 Dīnwāpur was absorbed in the Dīnhlī empire. In 933/1526-7 Dīnwāpur was taken for his father Bābur by Humāyūn, and a governor was appointed; but the growth of the power of Shīr Khān (Shīr Shāh Sūrī, [q.v.]) and the disaffection of the Afgān faction on the death of Dīnwādy Birdān, the governor, compelled Humāyūn to march again on Dīnwāpur in 943/1536, with success; but Humāyūn's long absence from Dihlī lost him his hold on the eastern provinces, and even before his great victory of 884/1477 Shir Shāh Sūrī and his able general Khwāja Dābīdīa installed himself as viceroy in Dīnwāpur.

For the history of this kingdom see MAHRĀS. In 884/1479 Bahīl, the first Lōdī sultan of Dīnhlī, defeated the last Shārkī sultan, Husayn, and established his son Bārbak as ruler over Dīnwāpur with permission to use the royal title and to issue coin. After Sikandar overcame his brother Bārbak as sultan of Dīnhlī in 894/1489 Dīnwāpur was absorbed in the Dīnhlī empire. In 933/1526-7 Dīnwāpur was taken for his father Bābur by Humāyūn, and a governor was appointed; but the growth of the power of Shīr Khān (Shīr Shāh Sūrī, [q.v.]) and the disaffection of the Afgān faction on the death of Dīnwādy Birdān, the governor, compelled Humāyūn to march again on Dīnwāpur in 943/1536, with success; but Humāyūn's long absence from Dīnhlī lost him his hold on the eastern provinces, and even before his great victory of 884/1477 Shir Shāh Sūrī and his able general Khwāja Dābīdīā installed himself as viceroy in Dīnwāpur. The importance of Dīnwāpur declined with the rise of Āṣār and not until the rebellion (970/1561 onwards) of ʿAll Kull Khān, governor since 965/1558, does it again come into prominence; ʿAlī's final defeat in Dīnawar in 974/1567 led to Akbar's temporary residence there and the governorship of Khwāja-i Khān Muhammad Mun'mīr Khān. After the foundation of Allāhabād [q.v.] the importance of Dīnwāpur waned; it passed into the possession of the Nawābāds of Awadh in the early 12th/18th century, and into British hands in 1775.

Dīnwāpur was long celebrated for its learning, "the Shīrāz of Hind", from its foundation by Firūzī; certainly until the time of Shīr Shāh; some of its rulers—notably Ibrāhīm and Husayn—were cultured connoisseurs of more than mere scholastic learning; Khwāja schools still exist within the precincts of the mosque.

**Monuments.** The fort of Firūz Shāh, an irregular quadrilateral on the north bank of the Gumti, is of high stone walls built largely from local temple spoil, with a single gateway protected by tapering semicircular bastions; other bastions were destroyed in 1859 by the British, as were some of the
The Ašālā mosque, whose foundations were prepared on the site of the Hindū temple to Ašālā Devī by Fīrūz Shāh Tughluq, was not built until 810/1408 under Ibrāhīm Shāhī; its main feature, the central bay of the west liwān covered by a large dome which is concealed from the court-yard by a tall pyramidal gateway resembling the Egyptian propylon, is the special characteristic of the Djawnpur style under the Shārṣūni sultans. The Ašālā mosque is the largest (78.7 m. square) and most ornate: the liwāni on north, east and south are composed of five pillared aisles in two storeys, the two outer aisles at ground level being formed into a range of pillared cells facing the streets; in the middle of each side is an archway, with a single propylon on the outside, and with domes over the north and south gates; a dome covers the central bay of each liwān on the north and south of the main dome, each with its propylon facing the court-yard. Within each propylon is a large arched recess, with a fringe of stylized spear-heads similar to those of the Khaḍī buildings at Dihlī [q.v.], in which are pierced arched openings in front of the domes, and the main entrances beneath. The main propylon is 22.9 m. high, the dome behind being only 19.5 m. and 16.8 m. wide at its base. The dome is supported on a sixteen-sided arched triforium, on corner brackets over an octagon with pierced windows, supported on squinch arches. The bābla wall is relieved on its exterior by square projections behind each dome, the corners of each supported by a tapering buttress; later additions supported some of the smaller angles of the wall. There are no minārs, the top storeys of the propylons serving for the muʿadhdhin.

The masdjid Khālid Muḥīr, built by two governors of Ibrāhīm, is of the same period, only the central propylon and dome and western liwān remaining, all massive and without ornament. Of the contemporary Dhanḍhārī (dhanḍhārī "perforated") mosque only the screen of the central propylon remains, filled with the finest stone tracery in Djawnpur. The Lāl darwāza ("red gate"); near the gate of a former palace) mosque in the north-west of the city, the smallest of the Djawnpur mosques, was built c. 851/1447, the sole surviving monument of the reign of Mahmūd Shārṣūni, has a single central dome and propylon with tall treble transepts, and sarmānā galleries on a mezzanine floor flanking the central bay. The foundation of the main Dhanḍhārī Plate was laid in 842/1438, but it was not finished until the reign of Husain. The mosque stands on a raised terrace 5 to 6 m. above street level, with a single propylon in the west liwān, the transepts covered by fine barrel-vaults, and the façade entirely arcuate. These are the only remains of the Shārṣūni standing at Djawnpur, the rest having been demolished by Sīkandar Lūdī; all are of stone, largely pillaged from Hindū or Buddhist temples, and cement, the work of Hindū craftsmen. Echoes of the characteristic style of the capital occur in other places within the quondam Djawnpur kingdom, in the Arha’i Kangura masdjid at Bānhrāz (Benares), and in the Dāmī masdijds at Eţāwā and Kanawā [qq.v.].

By far the most significant monument of Mughal times is the great bridge of Munīm Khān, begun 932/1526 and finished 976/1568. Built by Afghan workmen under a Kābul architect, Afdāl al-Allāh, it consists of ten spans of arches—the four central ones of wider span than those at each end—the very massive piers of which now support pavilions at road level, partly projecting over the water on brackets; a further five spans carry the road over a smaller branch of the Gomti.

In the old town of Zafarābād, 6.5 km. south-east of Djawnpur, is the mosque of one Shaykh Bāhrā, converted c. 711/1311 from Buddhist temple remains, entirely trebated though originally with a large central arch between two piers which was probably the prototype of the propylons of the Djawnpur mosques. There are also many tombs, the most noteworthy being those of Makhūdī Sāhib Cīrāgh-i Hind (281/1389) and Sayyid Muṭaddā in the dargah-i shahād, the burial ground of the martyrs who fell in the invasion of Shīhāb al-Dīn Shūrī in 590/1194.

Bibliography: Khayar al-Dīn Muhammad Ilaḥābādī, Djawnpūr-nāma, ed. Djawnpur n.d., a late 18th century work which makes much use of the Tārīḵ-i Fīrūzān and Barānū’s Tārīḵ-i Fīrūz Shāhī, but is not entirely derivative; Eng.tr. R. W. Pogson, Calcutta 1814; for the monuments: A. Cunningham, ASI xi, Calcutta 1880, 102-26; A. Führer, The Shārqi architecture of Jaunpur (architectural drawings by E. W. Smith), ASI, NIS xi, Calcutta 1889: text very turgid; J. Ferguson, History of Indian and eastern architecture, London 1876, 522 ff. Illustrations of some buildings not available elsewhere in Markham Kittoe, Illustrations of Indian architecture from the Muḥammadan conquest ..., Calcutta 1838. A new monograph on Djawnpur is badly needed.

(J. Burton-Page)

AL-DJAWNPŪRī, Sayyid Muhammad al-Kāżimī al-Husaynī b. Sayyid Khan aliṣa Ḫān Afsa wife of the pseudo-Muḥammad, was born at Djawnpūr [q.v.] on Monday, 14 Djamīdā I 847/10 September 1443. None of the contemporary sources mentions the names of his parents as ʿAbd Allāh and Āmina, as claimed by the Mahdawī sources (e.g., Sīrādī al-Abīyār, see Bibliography), in an obvious attempt to identify them with the names of the Prophet's parents so that the prediction made in the abdīḏīk al-Mahdī (cf. Ibn Tāmīyāya, Minhāḏī al-Sunnah, Cairo 1321/1903, ii, 133) might fit his case. The Tuhfat al-kirām of ʿAll Shīr Kānī and the Djamārnumā of Khayar al-Dīn Ilaḥābādī, which mention these names, are much later complications and therefore not reliable.

A precocious child, gifted with an extraordinary memory, he committed the Kurʿān to memory at the early age of seven and received the title, according to the Mahdawī sources, of Asaf al-Umār? at the age of twelve from his teacher Shaykh dāniyāl ʿIyāḥ. At the age of forty he left Djawnpūr for Mecca and, after visiting a number of places en route such as Dānāpūr, Kālpī, Čandīrī, Djamānīrī, Māndū, Burhānpūr, Dālwaytābād, Āhadnagar and Bīdur, reached there in 901/1495. During his stay at Mecca, one day while performing the ṭawwaf, [q.v.], he suddenly announced that he was the promised
Čihil Satūn (destroyed 1858).

Djami' masjid.
Mahdi. He was not taken seriously by the Meccan cw/awa5, who simply ignored his claim. He returned to
sulama, who challenged his assertion that God could be seen with physical eyes. Finding the atmosphere hostile, he left Ahmadbadd and in 905/1499 reasserted his claim to being the Mahdi at a small place called Barhll near Pafan.

The same year he wrote to some of the independent rulers about his mission inviting them either to accept him as the Mahdi or condemn him to death if he were seen to be one. He never received any reply to these, according to Mahdawi sources, Ghayyah al-Din Khaldil of Malwa, Mahmd Begra of Gujrat, Ahmad NiZam Shd of Ahmadnagar, Shd Bg of Kandahar and Mr Dhu’l-Nun of Farah accepted his claim. This, however, failed to impress the *ulamd*, who challenged its validity, finding his influence overama an impostor. The majority of the people continued to regard him as the Mahdi. He was not taken seriously by the Meccan cw/awa5, who simply ignored his claim. He returned to

Sayyid, very rich in detail); Wall b. Yusuf, Insf ndma, Haydarabad 1367; cAbd ... orbit and the ecliptic: the ascending node or "head", ra*s, and the descending node or "tail", dhanab (soil, of the lineal ancestor of our Djawwanl. The latter was born CAH b. Abi Talib. This pedigree received by him personally from was appointed Alid Chief of Egypt, apparently by cAbd Allah b. al-Husayn d. 588/1192. The Djawwanl family claimed there as Arab genealogist and historian, b. 525/1131, (A. S. BAZMEE ANSARI) (the two diametrically opposite points of the sun's trajectory, the two lunar nodes, or to wara, ii/i, Cairo n.d. (1954), 83. The editor, Mustafa Djawad, adds detailed information on other sources at present unavailable); Ibn al-Sabunl, Takmilat Ikmdl...
dragon, al-tinni). In many cases it refers only to the "head"; in some mss. a special word, navbahr, is used. At the eclipse it is said to have "placed itself in the centre of the heaven, in the shape of a serpent (mâr, 'draco')."

The word Djawzahar, though explained differently in the Ma'âlih al-ulâm, clearly derives from the Avestan gao-êthra ( = Pahlavi gôchir = mod. Persian gawzahr), an (adjectival) epithet of the Moon meaning "forming the origin of the bull" (Bartholomaeus) or rather "preserving the sperma bovis". In the Bundâshiyn, gôchir, together with the tailed (dâmbomand) mâsh-parth, on one occasion appears as an antagonist of the sun and the moon, while, on another, it is said to have "placed itself in the centre of the heaven, in the shape of a serpent (mâr, 'draco')".

The complicated semiological development of the word and its various functions in mythology and early astrology can be understood only when seen in connexion with the myth of the eclipse monster (dragon), of wide distribution all over the Eurasion continent, and in particular the Indian Râhu myth: There the demon Râhu, immortalized by the forbidden amrita drink, from which he had sipped, is beheaded by Vishnu; but his two parts, the head (Râhu) and the tail (thenceforth called Ketu), having become stellified, incessantly try to devour the Sun and the Moon so as to take revenge for their having denounced Râhu's crime to Vishnu. Thus Râhu and Ketu are both identified with the eclipse monster, but the latter also appears at irregular intervals in the shape of a comet (dhumaketu, "smoke-cetu"; see also art. KAYD, under which name the cometary aspect of the Indian Ketu has survived in Islamic astrology).

In the later, "scientific" (i.e., computing) phase of astrology, in India, Râhu was identified with the ascending, and Ketu, with the descending, node, in view of the fact that eclipses can occur only when the two luminaries stand sufficiently near the nodes. In Arabic it is undoubtedly owing above all to Indian influence that the Gr. terms οδηγηται διὰ τὸν πλούσιον and οδηγηται διὰ τὸν πλούσιον (sicl. συνδεσμος) as found in the Almagest were replaced by al-ra's and al-dhanab; in particular, the synonym of al-dhanab: nawbahr, "the new part", clearly betrays its relationship with Ketu ("the old part"). In most manuscripts, it is regarded as a giant serpent or dragon (tinni), an (adjectival) epithet of the Moon; for its representation in Near Eastern art, see Hartner, opp. cit. below; for its appearance in Western art, see also Kühnel, op. cit. below. As indicated above, the Bundâshiyn identifies the gôchir with the constellation of the Dragon, which stands in fact "in the centre of the heaven", near the pole of the ecliptic; but in the same context it is said that "it retrogrades in such a way that after 10 years the head takes the place of the tail, and the tail of the head". This applies of course not only astrological but also astronomical purposes because they are needed for the computation of solar and lunar eclipses. 2. The following two meanings, encountered mostly in texts dating from the 11th century A.D. or later, are obviously secondary: (a) al-Djawzahar = the circuitus pareclipticus [see article "ILM AL-NA'AY'A, section on "Theory of planetary motion"] of the moon, Ar. al-munaththul bi-falak al-burâdî = οδηγηται διὰ τὸν πλούσιον κύκλος (Alm.), or in Ibn al-Haytham's theory of solid spheres, the spherical shell concentric with the earth, within which the excentric sphere (al-falak al-mdâil, "sphaera deflectens") is comprised. (b) al-Djawzahar = the nodes of the orbit of any of the five planets.

**DJAYASI** [see MALIK MUHAMMAD DJAYASI].

**DJAYB-I HUMAYUN**, the privy purse of the Ottoman Sultans. Under the authority of the privy secretary (Sirr kâtibî), it provided for the immediate needs and expenses of the sovereign. Its regular revenues consisted of the tribute from Egypt (see IRSALIYYE), the income from the imperial domains (see MUSADARA), the share of war-booty, and the proceeds of confiscations (see MUSADARA).

**DJAYHAN, (modern Turkish Ceyhan), the name by which the Arabs denote the ancient Pyramus, one of the two rivers which cross Cilicia and flow into the Mediterranean, the other and more westerly river being the Sayhân, the ancient Saros. The names Djayhân and Sayhân appear to have been chosen by the Arabs to these rivers which separate them from Greek territory, on the analogy of the Djayhân and Sayhân in central Asia, rivers which separate them from Turkish territory, and which owe their names to a corruption of the names of biblical rivers (Genesis ii, 8, 13), unless they are arbitrary translations of the Greek names (cf. Nöldeke, in *ZDMG*, xliv, 700 and the articles AMO DARYA, SAYHAN, SIR DARYA).

The Djayhân rises a little to the north-east of Elbistan, in the mountains which divide it from the valley of the Tohma Suyu, a tributary of the Euphrates. Its upper part is the Sêgûtül Suyu. Near Elbistan it is swollen by numerous secondary streams, one of the most important being the Hurman Suyu.
Below its confluence with the Göksün Çay, south of Aşafın (the old Yarpuz-Arabis-Abbasios), it flows southwards towards Marşin and on the outskirts of this town it is joined by the Ak Sö (Nahr Hūrīth) of Subrāb which comes from the north-east and flows past al-Ḥadāth. It then turns south-west, passing to the west of the Anti-Taurus, and reaches the edge of the Cilician plain after receiving tributaries from the region of Sīs (now Koçan). It makes its way to Missāl (al-Maṣṣila) where the main Adana road crosses it by an ancient stone bridge. The mouth of the Djayhān River in Cilicia has moved several times owing to the delta formed by alluvial deposits. At the present time, after bending sharply to the east, it comes into the sea in a bay lying to the west of Yumurtalık (the old Āyāk). Ḫabūr (‘I-Fidā) compares it in importance with the Euphrates.

The region of the lower and middle Djayhān formed part of the Ṭhawār (frontier districts). The name of the river consequently occurs more than once in poems of the ʿĀbdānī period, al-Muṭṭanabbī, Abū Fīrās and al-Sarī [for its history, see CILICIA]. In the Mamlūk period this region was conquered by Malik Nāṣir Muḥammad and was known as al-Futuh ḍ al-djāhdūniyya, following the Armenian corruption Djasān from Djayhān. The name Djayhān is sometimes used to signify the region rather than the river. This is so in Yabhā b. Ḥanīf al-Āshṭālī [for its history, see AMU DARYA].

This district was of great economic importance, especially in the 10th/16th century, shows: the Muslims caught fish in it, would be paid large sums of money not to kill them in the presence of devout Djayns, or threaten them in favour of the Djayns, or visit them as rat- or snake-catchers, and would be paid large sums of money not to do these things. They were, however, tolerated by the Muslims, since they were of economic importance as the money-lending community (cf. The book of Duarte Barbosa, ed. and tr. M. Longworth Dames, Hakluyt Soc., i, 111-2). Religious contact with the Djays was made by the Mughal emperor Akbar in 990/1582, who invited first Hījavīdījī and then the great Bāḥānūrdā to the Mughal court, and whose personal beliefs and habits seem to have been much influenced by the Djayn leaders (Bādaʿūnī, Muntakhab al-tawāriḥ, tr. Lowe, ii, 331, says with disgust of Akbar’s orders prohibiting the slaughter of animals on certain days—adding that disobedience was visited upon the entire state by being denounced as a heretic). Antagonists in favour of the Djays were confirmed by his successor Djasānī, on whom however the personal influence was never profound and who ended by condemning their character and morals (cf. Ṭāṣūkī Djasāngīrī, ed. trans. Rogers and Beveridge, i, 437-8).

(John Burton-Página)
his government. The city was planned on the model of Ahmadabād [q.v.] with broad boulevards and spacious bazaars. Even craftsmen skilled in various trades were sent for from that place, but the founder of Djaypur did not succeed in making the new city as prosperous as its model (‘Abd al-Hāyy Lakhnawī, ʿAlīgaḥ Ṣanḍah, ʿAlīgaḥ 1337, 30-1, in which the city is called Diya-nagar). The title Sandah, conferred on him by the Mughal emperor, and meaning ūhu, is not only indicative of the respect that he enjoyed at the Mughal Court but is also a tribute to his personal qualities as the scion of an illustrious ruling family. This ruler who ascended the qadiḥ of Amber in 1111/1699 and died in 1156/1743 was a remarkable and accomplished person. He made good use of his scientific knowledge and skill in constructing observatories at Djaypur, Dihīl, Banārās, Mathurā and Udīyān (see G. R. Kaye, A guide to the old observatories at Dihli, Jaipur, Ujjain and Benares, Calcutta 1920). The sun-clock, mounted on a triangular tower in the Dihīl observatory, gives accurate time even to this day. He also reconstructed the astronomical tables known after the reigning Mughal emperor of Dihīl, Muḥammad Shāh, as the Zīdī Muḥammad Shāhī. More illustrious and better known to history is, however, Djay Singh I who enjoyed a mansab of 6,000 and the imperial title of Mīrzā Rādīja, conferred on him by Awrangzib. Soon after Djay Singh’s death in 1156/1743 the Dhīks of Bharatpur [q.v.] succeeded in wresting, following a number of sharp encounters, a part of the state; the defection of the chief of Māčēri (now Alwar) about 1205/1790 further reduced the area of the State. By the end of the century Djaypur was in confusion, torn by internal strife and the extortions of the depredatory Marāthās. A treaty concluded in 1218/1803 with the East India Company, was dissolved only two years later. Another treaty was concluded in 1234/1818 putting a stop to the molestation of the Marāthās.

On the outbreak of a rebellion in 1820, during the infancy of Djay Singh III, a British Officer was posted in the state. In 1835 another rising took place resulting in the murder of a British political officer and injuries to the Agent to the Governor-General. Repression naturally followed resulting in the tightening of the administration and reduction in the state troops.

(A. S. Bazmee Ansari)

Djaysh, one of the common Arabic terms (with ḍund and ‘akshar) for the army.
owners to keep them against payment of taxes, which in turn served to provide the money for regular army pay (see ‘Arif, ‘AfAٌ, and biwán). In Syria, and later in the Islamic west, the coordinated provincial-military organization of the diwán [q.v.] was brought into being, an organization no precise equivalent of which ever appeared in the vast area of expansion in the east (ṣīrāq-Ṭrān).

Needless to say, this first, primitive army was entirely Arab-Muslim; in the former Byzantine provinces at any rate, this was all the easier to ensure, as the native populations were already accustomed to the habit of following the profession of arms. Nevertheless, soon enough, the Arab chiefs began to bring their masdil [q.v.] with them in a subordinate rank, while on the other hand, certain warlike border peoples (in Central Asia, northern Trān and Armenia, and in the Syrian Amanus), without embracing Islam, were associated with the military operations of the Muslims as auxiliaries exempt from taxes; only a little later the Berbers, superficially converted to the new religion, were to form the greater part of the army that set out to conquer Spain.

Fairly soon, a special corps under the name of ghuría [q.v.] was constituted which, more closely linked to the Caliph or the Governor, was basically concerned less with war than with the maintenance of internal order, and little by little became a kind of police force (see also amālik). From the time of the Umayyads onward, the conditions of military organization were very considerably modified. War, because of growing resistance and lengthening lines of communication, ceased to be as profitable as before. The result was that pay, which was not very high, now became the main source of income of the troops, if not of their commanders, and they therefore became all the more demanding. On the other hand, a new cleavage appeared between the reserve troops stationed at Baṣra, Kūfa, etc., living an increasingly civilian life, and the frontier elements who no longer came back but continued to live on the borders of Asia Minor, Central Asia, the Mağrib or Spain. Finally, the nature of military operations changed and demanded war-materials and methods adapted from those of their enemies. The adaptation from the Arab way of life to the esseцию of oil, which the Arab occupation had not succeeded in entirely effacing. In archery, in siege warfare, in the use of “naphtha” (Greek fire), they possessed skills with which the Arabs could not compete, and thus brought to the ‘Abbāsid an element of technical reform which had been missing in the Umayyad army. On the other hand, the Arabs divided their lives between civilian life and that of the camps, still closely linked to the quarrels of the tribes and the clans; the Kūrasānīs, however, formed a more clearly defined corps of professional mercenaries linked to the person of the sovereign. Actually, despite some brilliant exceptions, it was less in external warfare than in the repression of internal revolts that they were mainly employed. The Arabs themselves henceforth belonged to two categories: there were those who lived far away from the zones of military activity, who were above all the cause of disorders, and whom in Egypt the Caliph al-Mu’taṣīm was for this reason determined to delete from the registers of the adept; there were the frontiersmen who could not be demilitarized in the same way, but who organized themselves according to the autonomous new world of the ghāzās and murchubūtān, cutting themselves off from the regular army proper. The result socially was that the Arabs for the most part no longer formed the breeding-ground of the aristocracy and were lucky indeed if they did not relapse into a miserable Bedouin way of life.

Whoever its members were, the regular army was distinguished from other more ephemeral bodies of combatants, in that they alone appeared on the registers of the diwān as having a right to a permanent wage and a status which made a kind of state corporation out of them. The others, who were various kinds of free corps of “volunteers” (muqaf- wa’s), not only received less pay but, what is more important, only received it for the duration of the campaign for which their presence was required, and were not considered as professionals. As for the ghāzās, they lived on the combined profits of their non-military activities in the intervals between campaigns, on booty during them, and on pious foundations which the Muslims of the interior created in increasing numbers in their favour as a substitute for waging the ghāzd. They also did not appear in the ordinary registers of the ājāṣ and were clearly not professionals.

In its turn, the Kūrasānī army did not survive the first ‘Abbāsid century. When the Caliph al-Ma’mūn bestowed the autonomous government of Kūrasān on the family of the Tahirids, these tended to keep for themselves a large part of the Kūrasānī recruitment. Furthermore, if the ‘Abbāsid dynasty had owed its survival to the Kūrasānīs, more recently, in particular, al-Ma’mūn had owed his victory over his brother, al-ʿAmin, to them, they themselves were fully aware of this, and in Bagdād itself, where the Tahirids were responsible for keeping order, they came in the end to be resented as somewhat burdensome protectors. Al-Mu’taṣim, the same who had suppressed the regular Arab army in Egypt, also took the initiative in replacing the Kūrasānīs by Turks. Actually, it was at first mainly the Turks established within the frontiers of Islam who were referred to as such, above all the people of Farghāna whose social conditions resembled those of the Kūrasānīs; but soon young people born outside Islam and brought there as slaves (mamlūk) in this case rather than ’abād from Central Asia or what are now the Russian steppes by warriors or merchants, were to be recruited as Turks. The Turks, who above all excellent horsemen, not only had an apparently justified reputation for military, physical and moral courage, as is witnessed by a well-known short treatise of al-Dhāḥīz, but it was thought that they, linked to the person of their master by ties of slavery, acquired young enough to be formed in character by him, and being strangers to the aspirations and rivalries of the indigenous peoples,
would form a still more reliable army for the sovereign than had the first Khurasanis. In fact, experience was to prove that, having the sovereign in their power, they were to be far less tolerable and far more devoted to their own generals than to the Caliph (who, after al-Mu'tasim, never again commanded them directly). Nevertheless, because of their technical qualifications, because of the care bestowed by the Turkish chieftains on maintaining recruitment, and even because the acquisition of new slaves was the easiest remedy against the lack of discipline of the old ones (although in the long run, of course, it merely perpetuated the evil). It seemed no longer possible, right up to modern times, for oriental Muslim states to do without a Turkish army, and all of them, one after another, were to adopt one. At best, in the orient, they were counter-balanced by the calling in of other elements, rough, indigenous mountain people, skilled in fighting on foot in the mountains, such as the Daylams, or horsemen like the Kurds, or locally negroes (in Arabia) or Hindús (army of the Ghaznavids). In Egypt, the Fātimids, who conquered it with Berber contingents, reinforced as in Ifrikiya with negroes, Slavs and Rūmīs, themselves later tried to neutralize these by introducing Turks, whom in turn they sought to replace by Armenians under chiefs who could hardly be claimed as Muslims, and finally gave back some part in army affairs to the Arabs. The breaking up of the ʿAbbāsid empire also gave the opportunity of a military career to the Arabs of Mesopotamia and Syria, who gave support to the Hamdānīs [q.v.], Murdāsis [q.v.], ʿUkaylīd [q.v.] and other principalities. The Būyids in western Irān owed their specific strength to the Daylams, but the need for cavalry compelled them nevertheless to reinforce them from the start with Turks. But the racial differences of the contingents, which language and technical differences hindered from mixing easily together, were the cause of disorders, because they were jealous of each other, quarrelled over their share of the state revenues, and espoused the disagreements of their leaders; they made the streets of Baghādād and Cairo run with blood when they were not occupied in promoting their respective generals to power. Even when, later on under the Ayyubid dynasty, some Kurds, from whom the Arabs, assured them victory; but the new masters of the Muslim east re-organized their army in the traditional manner with Turco-Muslim forces recruited from slaves, and the Turkmans were only able to use their warlike qualities as ghāzīs in the outer battlefields of Asia Minor, which they had the relative proportions of the various arms, and technical progress, albeit of a secondary kind, could exercise some influence on the art of combat and the fortunes of war. The struggle against the Crusaders before the time of the Mongols possibly played a locally stimulating part in this respect.

Amongst the ancient Arabs the principal arms were the sword (sayf) and the javelin (rumh), as well as the lance (kaws), used by the Turco-Muslim infantry; the bow was not unknown, but little used on horseback; it served more as a weapon in hunting than in warfare, where it did not lend itself well to single combats of the traditional type. Here lay a difference between the Arabs on the one hand, and the Persians and Turks on the other: among the Persians the exercise of drawing a bow, which might be of any shape or size, was a living tradition among the whole population; the Turks excelled in the rapid shooting from horseback of a hail of arrows (nārah) in all directions, thus sowing disorder in the ranks of their enemies. The cross-bow (djīrkāh), often included also with the ordinary bow under the same name (baus), followed by a qualifying expression, seems to have been known in the orient since the 3rd/4th century. ʿAbbāsid and later cavalry made much use of the bow, but still also of the javelin, and the lance, too, now became a cavalry weapon; the infantry used the cross-bow while remaining faithful also to the sword which was was much improved by the quality of the so-called "Damascus" steel—in reality an Indian technique; amongst other weapons, the club (ʿamīd, Persian gurs) was still employed as well as the knife (sīkkhī). In defence, Arabs used the shield (darākah), the cuirass (īrs), various types of coats of mail (dsūr, zarrād, dīwāghan), and the helmet; they nevertheless
avoided armour that was too heavy, and the large shield does not seem to have been in current usage before the Crusades, the period when this size in shields became fashionable. The cavalryman was almost always mounted on a horse which was also protected by armour; in the armies of eastern Iran, the Indian elephant was used in some heavy corps; the camel, however, was only used for transport. The fully equipped horseman was given various names, one of which among the Ayyubid was taşdhi, a meaning which should be carefully distinguished from its other use as a synonym of "panhard".

The soldiers had to maintain their arms as well as their animals but, except in very early times, they were given to them in the first place and renewed in case of need; most of them came from state workshops which, in Egypt, held an almost complete monopoly in their manufacture. *A fortiori*, the state workshops alone dealt in engines worked by teams, that is to say, above all, siege artillery whose use developed increasingly: the heavy-beamed mangonels (*mandianik*), light ballistas, (*sarāda*, *q.v.*), battering-rams (*dabbāba*), etc. The Muslims did not take very long to pierce the secret of *tawdshi*, a meaning which should be carefully distinguished from its other use as a synonym of "panhard".

arms, the upkeep of armouries, fortresses, roads of military importance, transports, animals, etc. At 141/s, dirhams to the dinār, the legal rate of exchange in 'Abbāsīd times, the manufacture of arms, etc., may be estimated to have cost some five million dinārs, quite apart from the expense of an army of 50,000 men, whose overall budget at the zenith of the empire we know to have been in the neighbourhood of fourteen million dinārs. The two together presumably accounted for half the income of the state; a heavy burden, bringing with it heavy taxation, discontent and, in a vicious circle, revolts provoked by this discontent which lessened the chances of a decrease in taxes since military effort had then to be intensified and an ever-growing proportion of the budget be taken up by the demands of the army. Moreover, even when it had sufficient available funds on account, the Treasury did not always possess the liquid assets needed for the payment of the army at the time promised, and when this happened another vicious circle appeared, and the complaints of those concerned over the delays could only be appeased by means of increases which compromised the future even more. More and more often, the caliphs had to cede the government of provinces to generals on condition that henceforward they and not the state would pay their own army. It is hardly necessary to recall the way in which this development led to the formation of autonomous principalities, but all the same it did not solve the problem of finding by one means or another the resources needed for the upkeep of the whole army.

This was why very soon it was necessary to reorganize the system of payment completely by means of the spread and transformation of the system of ikṭā (q.v.; see also Ḍayās/)' which, to express it briefly, allowed the army to tax a village or a district and thus take directly from the source the sums which were due to them. It is not possible to dwell here on the alterations in the administrative order which resulted from this development, but it is worth remarking that the value of the ikṭā seems to have been considerably greater than that of their former pay (300-1,000 dinārs). This indicates clearly the growing social and political importance of the armament, taxation, discontent and, in a vicious circle, revolts that a cavalryman had to provide for some few retainers as well as to maintain an increasingly large amount of gear and secure the whole of his supplies in kind. It must be kept in mind, too, that in the district allocated to him, the muḥāḍā had now to take over the expenses which had formerly been the business of the state, so that the income of the ikṭā was not solely given up to covering the simple pay of earlier times. Such very varied applications of ikṭā were tried out under different states and in different periods, that only a brief enumeration of them is possible here. The system of ikṭā could be used for the whole army or for only a part of it; it could free the muḥāḍā or not from the obligation of paying the tithe, zakāt; it could be temporary and exchangeable or definitive and hereditary; it could be individual, that is to say formulated to assure the upkeep of each cavalryman or general and his fee generally, that is to say very much broader and put into the charge of an officer on condition of his being responsible for the supplies and upkeep of a whole contingent, a situation which, due allowances being made, amounts more or less to the grant of a whole district (for which see above). Finally, the ikṭā could to all intents and purposes free the muḥāḍā of all narrow governmental control within the extent of the jurisdiction assigned to him or, on the contrary, leave him under detailed supervision and subject to the intervention of an state administration. This was the situation in Egypt, and from it developed the organization of the Mamluks [q.v.]. It is possible that in Syria certain mutual influences occurred between the Muslim ikṭā and the fief of the Latins installed there following the Crusades.

Leaving aside differences of time and place, it can be seen that in almost every country of the Muslim east (rather less so in the west), the army has played an important and special political role of great real power and of growing fortunes based on landed property, it constituted more and more the true aristocracy superimposed upon the ancient native rural and urban aristocracies. By the manner of their recruitment almost foreigners to the native population, which in consequence paid little attention to their internal conflicts and changes of domination, the army imposed on this native population something of the régime of a military occupation which, nevertheless, was only upheld by the mutual support given to one another by the army and the orthodox religious framework of the régime which depended on it. This was a development whose scope, overflowing by far the domain of military matters proper, can in conclusion be no more than indicated here.

Bibliography: Most of the important information is to be found in the chronicles. However, ideas concerning certain aspects or problems of the army are to be found more explicitly discussed, from the first century of the 'Abbāsīds on, in treatises such as the Risālat al-sāhāba of Ibn al-Mu'ākkāf and the Risāla fi maktāb al-Turk wa 'dmatlu ḍawā' al-ḥīṣāf of al-Dījah (ed. Van Vloten 1903); and in some works on finance, certain chapters deal specifically with military administration, for example, the K. al-Kharājī of Abū Yūsuf and especially, the general treatise on state institutions with the same title by Kūdāma written at the beginning of the 4th/10th century; then in the 6th/12th century, the Minhājī of Makhzūmī for Egypt which enables us to complete the retrospective accounts in the Tadhkīra of Makrizī (i. 94 ff.) or the Fihrist of Ḍā'ūr, which, for instance, the Muḥīj al-Mulk (Sālīqīdīs), the Adab al-mulūk of Fakhr-i Mudabbīr Mubārak-shāh (representing the military tradition of the Ghāznawids and Ghūrids, still unpublished), the Dastūr al-khāṣīb of Hindūshāh Nakhdjāwānī (representing the military tradition of the Mongols of Persia), etc. On the other hand, according to the evidence of the Fihrist, there existed early enough a technical literature in Arabic concerned with the military arts and engines of war, which drew its inspiration from Greek and Iranān antiquity; however, no example of this has been preserved prior to the Ayyūbīd period which produced the Tadjhīra fi l-iṭiyal al-barbiyya of al-Harawī, ed. and French trans. J. Sourdel-Thomine in BEO, xvii (1962), the Tareesīt on swords attributed to Kindi, analysed by J. Heuzey in Arch. Orient. xi/3 (1854) and published by 'Abd al-Rahmān Zākī in Rev. Fac. Lettres Univ. Fuad I xlvii (1952), and especially, the Tarte de armureeput together for Ṣalāḥ al-Dīn by Mardār and Mardār Ṭarsūsī, ed. Č. Cahen in BEO, xii (1947), a type of literature which was to be developed further in the time of the Mamluks. On the Persian side should be mentioned the K. al-barb wa l-ḥīṣāf of Ghaz-
nawid), published by I. and M. Shafic in 1946. Earlier information about the Muslims’ manner of fighting has been preserved in Byzantine literature, especially in the Taktikon of Leon VI and the Strategikon of Kekaumenos, as well as in Armenian chronicles.

No general and thorough modern work exists on the Muslim army in the “classical” centuries. The account of A. v. Kremer in his Kulturgeschichte des Islam, i, remains useful; it should be complemented on several points by the corresponding chapters of R. Helly in his Social Structure of Islam, by A. Ibrahim Hasan and H. Ibr. Hasan in Al-Nassum al-Islamiyya, and by A. v. Pawlikowski-Cholewa in Die Heere des Morgenlandes, 1940; better, but more limited geographically, is the chapter, p. 485-508, of B. Spuler in his Iran in frühosmanischer Zeit; see also M. F. Ghazi, Rerum ac de Bellicos liber, 1961.

The following are monographs dealing with shorter periods: for pre-Islamic Arabia, F. W. Schwarzo, Die Waffen der alten Araber, 1886, which should be complemented by the studies on pre-Islamic Arab society of H. Lammens, B. Fares, etc.; for the period of the conquests, the considerations of Caetani in his Annali, iv, and the dissertation of L. Beckmann, Die mus. Heere der Eroberungszeit, Hamburg 1952; for the Umayyads, N. Fries, Das Heereswesen der Araber zur Zeit der Omeyyaden nach Tabari, 1921, and A. E. Kukkel, Sur certains traits du systeme militaire omayyade, in Palestinskiy Sbornik, iii, 66 (1958) (in Russian, with an analysis in French by M. Canard, in Arabisca, 1960, 219-21); for the Abbasids, W. Hoenerbach, Zur Heeresverwaltung der Abbasiden, Studie uber Qudama, in Isi., xxix (1950); and for some later states, the two important studies by C. E. Bosworth, Qasr al-Madinah military organisation, in Isi., xxxvi (1960), and H. A. R. Gibb, The armies of Saladin, in Cahiers d’Histoire Egyptienne, i. (1951); see also the chapter on military matters in B. Spuler’s Mongolen, 1955. For the political and social aspects, see Cl. Cahen, The body politic, in Unity and variety in Muslim civilization, ed. G. E. Von Grunebaum, 1955.

From a more technical point of view, K. A. C. Creswell’s Arms and Armour, 1946, gives considerable space to examples from the museums, for the most part of a later period than that which has been dealt with here; important is K. Huuri, Zur Geschicthe des mittelalterlichen Geschützweisen aus orientalischen Quellen, Helsinki 1941, which compares all the “oriental” societies; also A. Zeki Velidi, Die Schulter der Germanen (in fact, this speaks mainly of the Muslim world), in ZDMG, xc (1936), not used by A. Mazaheri, Le sabre d’Alger, 1908, 55 ff.; Augustin Bernard, Les confins algéro-marocains, Paris 1911, 95, 96; M. Bernard, Notes sur l’O. Gheris, in Bull. Soc. Géog. d’Alger, xxx, 373; Deschamps, Le Mérariste saharien, in Bull. Soc. Géog. d’Oran, xxix, 1955, and more particularly 283 ff.; A. Durand, Notes sur les Touaregs, in Bull. Soc. Géog. d’Alger, 1904, 691 ff.

1. Dījīsh, plur. Dīyūdsh means in the south of Algeria and Morocco an armed band to go out on a ghazw (ambush for purposes of plunder or of a holy war) against a caravan or a body of troops. When the dījīsh consisted of several hundred men, it was called a harka. The Dīyūdsh carried on their operation from the northern Sudán or the Niger valley throughout the Sahara and the south of Algeria and Morocco. They were composed sometimes of Tuaregs but more often of Berbers from the southern slopes of the High Atlas. The latter assembled on the Tm-Mayerd plateau in the valley of the Wèd Gheris.

When the formation of a dījīsh was decided upon, the Tuaregs who were to belong to it bound themselves together by an oath before setting out. Among the Awdād Dījīsh on the borders of Algeria and Morocco, two mounted marabouts were placed opposite one another. Between these two men of religion ran those intended for the foray, with a branch of the retém (Sahara broom) in their hands which they would throw into the air. Each dījīsh took with him some one to bring him luck, usually a marabout or a warrior who had already taken a successful part in several similar enterprises.

In the sandy plains of the Sahara or in the sand hills the members of the dījīsh walked in Indian file so that the enemy could not see their numbers from their tracks. They also made all sorts of deviations. When they came to the place chosen for the ambush, they lay in wait. The attack was usually made by night or in the grey of morning, a fierce onslaught, a hail of shot mingled with the shrill wild yells of people shrieking like demons, while the rifles poured forth bullets. All the forces of the attacking party were concentrated on the first onslaught. The terrified animals could no longer be controlled and often stampeded in all directions. Then began the second part of the fight, in which the best horsemen of the dījīsh played the principal part in driving their dismounted opponents into the desert to die. It was mainly to put down the dīyūdsh that the French military authorities instituted the corps of Méraristes Sahariens, who have succeeded in restoring order.

2. Dījīsh, or according to the pronunciation in western Morocco dījīsh, a kind of feudal organization in the Moroccan Army.

Historical. The dījīsh dates from the beginnings of the reigning dynasty. Previously the various dynasties of North Africa had succeeded to power with the help of groups of the people whose political and religious interests were their own. Revolutions not only overthrew the ruling families but forced them to maintain their power by force of arms and to spill their blood on countless battlefields. The great families, tribes and clans, who had accompanied the first ruler, became extinct. Lest they should become dependent on Berber clans, who could not be relied on to be faithful to a dynasty they had not created, the sultans had to surround themselves with foreign mercenaries, who had no connexion with the

The word dījīsh in north-west Africa has two further special meanings.
The organization of the new army was after many experiments finally entrusted to a body of French officers.

State of the Díjsh since the French Protectorate. The Díjsh still consisted of the Sheraga, Sherarda, Udáya and Bwákker with the half Díjsh-tribes of the plain of Marrákkush (Abda etc.). The tribes still had only the use of the lands occupied by them, except the Sheraga, who obtained the cession of most of their lands, and the Bwákker, almost all of whom had land around Meknès (Miknás). The Díjsh-tribes were divided into regiments of 500 men (ra). At the head of each ra was a rú'íd-asha, a kind of colonel. Below him were five •-Abd al-Bukhari, slaves of Bukhari, plur. Bwakher). The

When the Sa'dídids had become lords of the kingdom of Fás, they quartered the Arabs of their Díjsh in the garrisons of Fás, under the name of Ahí Súús; they were soon afterwards transferred to the strongholds on the coast called makhzen which had been formed by the Sa'dídids. As in the army, the Díjsh rose from their ranks. They lived on estates which formed a kind of fief in the kingdom of Fás. Mawlay Sliman was victorious but on his death his successor Mawlay Abd al-Rahmán was proclaimed sultan by the Udáya in 1822. The latter was almost overthrown by another rising of the Sherarda and had as a rule to reside in Marrákkush, the better to be able to control the tribes. But events in the north of his kingdom, a rising of the Udáya, the conquest of Algeria by the French and the wars of his representative Abd al-Kadhir against them, forced him to retire to Fás. He wished to take the field in person against the French. But after his defeat at Isly, he recognized how unequal to European armies his Díjsh was, and resolved to have an army modelled on those of Europe. His successor Muhammad carried out this plan by his edict of 22 Radjab 1277/18 July 1861. The organization of the new army was after many experiments finally entrusted to a body of French officers.

The history of Islamic armies in modern times is, in its most significant aspect, the history of their reform and westernization. The progress of the sciences in Europe enabled European Powers to wage war with increasing efficiency and their threat to the Islamic domain became progressively more difficult to contain. But it is only towards the end of the eighteenth century that Islamic rulers came to appreciate the threat in its full extent and began to take measures to cope with it. It is true that European techniques of war had been introduced here and there before that time, but the attempts were neither systematic nor long-lived. In the Crete campaign of 1644-46 the Ottoman Government employed English and Dutch instructors to train their sappers. At the end of the seventeenth century, the foundries for the manufacture of cannon were being supervised by a Venetian ex-officer of artillery named Sardi who had turned Muslim. In 1731, the French Count de Bonneval (1675-1747) who had adopted Islam and taken the name of Ahmad (see *AHMAD PASHA BONNEVAL*), was given the task of reforming the Corps of Bombardiers. He recruited and trained some 300 Bombardiers and built a foundry for cannon. He also introduced the use of the bayonet and set up a mathematical school for the navy. His work was taken the name of Ahmad (see *AHMAD PASHA BONNEVAL*).
a new model army, which itself came to be known by this very title. The advantages to be derived from a new model army may be gathered from a treatise published in translation to W. Wilkinson, *An account of the principalities of Wallachia and Moldavia ...*, London 1820. The treatise, which the author states to be a translation from a Turkish Ms., dating from 1804, when the Sultan was concerned to extend his military reforms, purports to be "An explanation of the Nizâm-y-Gedid institution", and to have been written on the Sultan's orders by "Tshelebi-Effendi", one of the Chief dignitaries of the Ottoman Empire, Counsellor, Mini-ter of State etc. [= Celebi Mustafâ Reshîd Efendi, known as Köse Kedîkhûdâ]. It is a long defence of the Sultan's policy setting out the evils of the old system and the reason for the superiority of European armies which it explains thus: "... their regular troops keep in a compact body, pressing their feet together that their order of battle may not be broken; and their cannon being polished like one of Marco- vich's watches [Markwick Markham, a London watchmaker in great esteem with the Turks] they load twelve times in a minute and make the bullets rain like musket balls". The advantages of the *Nizâm-i Gâyidid*, according to the author, are that the wearing of a distinctive uniform makes desertion more difficult, that the troops, drawn up in lines with the rear ranks parallel with the front, are easy to manoeuvre, that discipline is easier to enforce, and that defeats are not turned into routs. A British Admiralty handbook of 1920 summed up and contrasted, after a century or so of reform, the methods and aims of the old and the new model armies: "The chief features of the new methods were the systematic training of the soldiers in drill movements and in the handling of weapons; (2) their organization in symmetrical units (regiments etc.). The undrilled forces of the old armies fought to a large extent as individuals, and the military units, so far as they existed, lacked cohesion and discipline, and therefore full effectiveness in attack and defence. Under the new system the commanders exercised more control in battle and could better calculate the numbers of their troops and thus dispose them more advantageously. The recruit infantry units were not of uniform size, even approximately. Under the reformed system an army in battle order was arranged in two or three successive lines, the rear line acting in support and as reserves and each unit being of uniform depth. The ancient crescent movement of the front line was replaced by movement in straight lines". (Geographical Section of the Naval Intelligence Divison, Naval Staff, Admiralty, *A handbook of Syria*, 1920, 763). From all this it may be concluded that the objects of military reforms were threefold: the acquisition and manufacture of modern weapons, the inculcation of technical knowledge in the appropriate sections of the army such as sappers and artillerymen, and the creation of a disciplined body of troops easily manœuvreable by their commanders. The second requisite has always been, in the modern period, more difficult for the Janissaries than the first, and the third infinitely more so than the second.

Sellim III took up and amplified previous attempts at modernization. He introduced reforms in the artillery, tightened discipline, and increased the pay for privates from 20 to 40 aspers per day. The corps was put under the command of a *topçu bâshî* who was made a pasha of two tails, but administration, supplies and finances were separated from operational command and entrusted to a *nâdir*. In 1796, following earlier negotiations, the Ambassador of the French Republic Aubert-Dubayet brought with him to Istanbul a number of officers who were assigned to train the *Nizâm-i Gâyidid*. The new corps, composed of voluntary recruits, consisted of *topçi, sipâhs* and infantry. The recruits were drilled in the European fashion and taught how to manœuvre in a body on the battlefield. Seeking to avoid undue contact with the Janissaries who looked askance at these innovations, the Sultan housed the *Nîzâm* in barracks outside Istanbul. When the French, in Bonaparte's Egyptian campaign of 1798, marched on Istanbul in 1806, the new corps, which amounted by then to three or four thousand gunners and musketeers, was employed to help with the defence of Acre and gave a good account of itself. This raised its reputation particularly with the people of Istanbul and encouraged the Sultan to take a further step. He now desired to recruit troops for the *Nîzâm* by conscription both among the Janissaries and the general population. This new departure had the support of the Mufti, Welizade Mehmed Emin, and other high religious dignitaries who were convinced of the necessity of reform. It is presumably in aid of this policy that the treatise of "Tshelebi-Effendi" mentioned above was written. The Sultan promulgated a *bûhatt* on these lines in 1805, but strong opposition was soon apparent. The reading of the *bûhatt* was interrupted by a riot in Edirne, and one *kâdi* reading its text in Rodosto was actually killed. The Janissaries broke out in revolt in Rumelia and the authorities dared not have the *bûhatt* read in Istanbul. A regiment of *Nîzâm* sent from Anatolia against the rebellious Janissaries was decisively defeated. The Sultan had to appoint the *Agâ* of the Janissaries as Grand Vizier, to return the *Nîzâm* to Anatolia, and abandon for the time being the extension of reforms. But he does not seem to have given them up altogether for in 1806 an attempt was made to recruit for the *Nîzâm* in Karamân whose Wâlî, 'Abd al-Rahmân Pasha, had shown energy and loyalty in carrying out the Sultan's policy, and in 1807 auxiliary levies, Yamaks, were ordered to put on the *Nîzâm* uniform. This precipitated a revolt, the *Nîzâm* was overthrown, and the Janissaries were soon the masters there. The Sultan attempted to save his throne by decreeing the abolition of the *Nîzâm*, but he was deposed by virtue of a *fatwâ* which ruled that his actions and enactments were contrary to religion. The Janissaries burnt down the barracks of the *Nîzâm*.

Bayrådâr Mustafâ Pasha, who shortly thereafter procured the deposition of Selim's successor Mustafâ IV and the enthronement of Mahmûd II, attempted in 1808 to carry on with Selim's schemes, by recruiting troops for the new model army which he sought to disguise by giving its members the traditional title of *Saghas* [q.v.], but his ruin and death at the hands of the Janissaries ended attempts at reform for the time being. It was not until eighteen years afterwards, in 1826, that Sultan Mahmoud II (1808-39) was enabled, by a shrewd and lucky stroke, to end the power of the Janissaries. Mahmûd II left a regular army with a modern army. In 1826, having secured the support of the Mufti and the principal Janissary officers at a council held on 24-5 May 1826, the Sultan promulgated a *bûhatt* which, while speaking of restoring the traditional practices of the Empire, in effect proposed the continuation of Selim's reforms. A new force was to be formed by each Janissary battalion stationed in Constantinople providing 150
This latter exemption gives an indication of the kind of difficulty which stood in the way of uniform military administration. The heterogeneous character of the Empire, the multiplicity of its religions and sects, the survival of ancient privileges and the creation of new ones during the nineteenth century militated against uniformity. The law of 1886 which mentions the exemption of the inhabitants of Istanbul also lays down that inhabitants of the saṅghā of the Lebanon and of Samos would also be exempt. This law was not to be applied in Scutari (except for Durazzo), in the Yemen, the Hijāz, Nadīd, Tripoli and Benghzilla. These anomalies are a fair indication of the resistance which uniform European-style administration aroused.

The training and management of a conscript army and its performance in war depend on the existence of efficient health, supply and financial services, and on the orderly keeping of records. It was of course the case that such services had to be created at the same time as the army was being recruited and expanded, and it is to be expected that in time of emergency, particularly in the beginning, they would fall short of the need. In 1842, for instance, soldiers slept in their clothes and wore a heterogeneous collection of uniforms. Furthermore, the new model army depended heavily for training on a miscellany of foreign officers, French, English, Prussian, Austrian, who, as Christians, were treated with scant respect by the rank and file. Leadership at the top may have been energetic and knowledgeable, but subalterns and non-commissioned officers were scarce and inexperienced. This was the judgment of one observer in 1828 (C. Macfarlane, Constantinople in 1828 . . ., London 1829, 26). The judgement is echoed by the Marechal de St. Arnaud in 1854 who wrote that in the Turkish Army there were two things only: a commander-in-chief and soldiers and that there were no intermediary points, no officers, and even less non-commissioned officers (E. Engelhardt, La Turquie et le Tanzimat, Paris 1882, i, 116). In Helmut v. Moltke's judgment the advantages of European drill were lost by reason of the impersonality and mass character of the conscript army. The cavalry, he wrote, "... remained in masses, and did not acquire the individuality of the wild Turkish charge; and with their endurance of new customs, the old fanatical inspiration vanished. What was good in barbarian warfare was lost without gaining much benefit from the resources of civilization; popular prejudices were shaken, but the national spirit was destroyed at the same time, and the only change for the better was that the troops obeyed the orders of their leaders more than before". (The Russians in Bulgaria and Rumelia . . ., London 1854, 269.) The deficiency of officers was gradually made good. Māmādī K II sent military and naval cadets to European colleges in 1827, and in 1834 the military college at Pangalti (see Ḥarbīye) was opened. The following decades saw a steady increase in the number of Ottoman military students abroad. The Ottoman army ranks with their equivalents in the British Army is conventionally found in Captain M. C. P. Ward, R.A., Handbook of the Turkish army, London 1900. The 12,000 of Sultan Mahmūd's army were quickly reduced, but it was not until the educational reforms of Sultan 'Abd- al-Hamíd II that a notable extension of military education came about. The creation of this modern military elite, conscious of its superior knowledge and open, by virtue of its training, to European ideologies, was to have momentous consequences in the political history of the Empire and its successor states.
power in the country, Muḥammad ʿAlī determined on forming an efficient army. In 1815, after his return from his second expedient to Mecca, Muḥammad ʿAlī introduced European drill in his forces. The enterprise aroused great discontent and a mutiny broke out in Cairo; Muḥammad ʿAlī had to postpone his plans for the time being. In 1819 he obtained the services of Colonel Joseph Sève, a retired Napoleonic officer (who later embraced Islam and became known as Sulaymān Pasha [q.v.]) to direct training in a new military school which he established at Aswān, away from Cairo. The trainees were Sudanese slaves and 300 of Muḥammad ʿAlī's mamlūks. Sève encountered the same difficulties which European officers met in the Ottoman Empire: insubordination owing to contempt for the European Christian, and utter unfamiliarity with European techniques and drill. To start with, Muḥammad ʿAlī attempted to recruit Sudanese slaves for the rank-and-file, but their rate of mortality was extremely high: of the 24,000 slaves collected up to 1824 only some 3,000 were still alive by then. This method was abandoned and Muḥammad ʿAlī began recruiting from among the Egyptian peasantry. The mūḍir of the provinces were ordered each to provide a fixed quota of recruits. Press-gangs were first used to round up the recruits, an attempt was then made to substitute conscription by lot, by the method, but neither force not persuasion could overcome the peasant's repugnance for military service: resistance, flight, self-mutilation were his unavailing resort; recruitment by lot proving even more unsatisfactory, the press-gang was once again employed. After the Morea campaign, Muḥammad ʿAlī, seconded by his son Ibrāhīm, increased the facilities for the training of officers; an infantry school, a cavalry school and an artillery school, all directed by Europeans, were established, and the French military code was translated and adapted for use in the army. He entrusted the administration of the army to a naṣīr al-dīnḥādiyya, whose labours were to be guided and supervised by a council of officials, diwan al-dīnḥādiyya. By 1831 a disciplined force consisting of 20 regiments of infantry and 10 of cavalry was ready to take the field against the Ottoman Army in the Levant. At the end of the Levant campaigns in 1841 it was estimated that some 100,000 troops, including irregulars, were at the disposal of the Wāli of Egypt.

As part of the settlement between Muḥammad ʿAlī and the Ottoman Empire following his withdrawal from the Levant, the Egyptian Army was reduced to 18,000 troops, by a fermān of 13 February 1841. This figure was, however, informally increased by vizieral letters under the khidvate of ʿAbbās I and Saʿīd, the informal arrangement being confirmed by a fermān of 27 May 1866 issued to Iṣmāʿīl. This Khedive later succeeded in removing the limit on the number of Egyptian troops, a fermān to this effect being issued to him on 8 June 1873. But following his deposition, and consequently on the disturbed and enfeebled state of Egypt, the Ottoman Government was able to withdraw this concession on the accession of Tawfīk, and a fermān of 7 August 1879 once again limited the number of Egyptian troops to 18,000.

The second year of Tawfīk's khidvate saw the promulgation of a law (of 31 July 1880) which laid down that all Ottoman subjects in Egypt regardless of religion were liable, from the age of 19, to four years' active military service, followed by four years' service in the redif and a further six in the territorial reserve. The recruits were to be chosen by lot from among those liable to conscription. It seems that this law contributed to the discontent which led to the ʿUrābī movement, since ʿUrābī and his friends argued that four years active service were not enough to gain promotion from the ranks; they therefore considered this law as directed by the Turkish element in the Army against the Egyptian element. An indication of their feelings on this matter is the law of 22 September 1881, which they forced the Khedive to promulgate, and which made promotion regular and mandatory once the prescribed periods of service, and examinations, were passed.

Following the collapse of ʿUrābī's movement and the British occupation of Egypt, the Khedive, by a decree of 17 September 1882, disbanded the Egyptian Army prior to its reorganization. A Khedivial rescript of December 1882 provided for a new army to be formed limited to 10,000 men. This army was intended for internal purposes, its general officers were British and its methods of training and organization followed the British model. Khedivial decrees promulgated in 1886 reiterated the provisions of the Law of 1880 and further allowed exemption on payment of a bādal (a decree of 22 April 1895 disallowed exemption by payment of bādal after the holding of the annual recruitment ballot). At the reconquest of the Sudan in 1898, the Army was increased by the recruitment of Sudanese volunteers, and thereafter reverted to 10,000-15,000 men until the signature of the Anglo-Egyptian Treaty of 1936.

The attempts to reform military institutions in Persia during the nineteenth century were neither as sustained nor as systematic as in Egypt and the Ottoman Empire. Persia was drawn into European politics during the Napoleonic period, and both France and Britain attempted to acquire exclusive influence in the country. The French sent a mission to train Persian troops in 1807-8, as did the British in 1810. Thereafter a succession of foreign officers, Russian, French and Italian, attempted to introduce European drill and techniques, but their impact was neither profound nor lasting. In 1842 a modified form of conscription was introduced. The cultivated land was reorganized into paddies and districts, each unit (the amount of land which could be tilled by one plough) being liable to provide a soldier together with a monetary contribution, part of which went to provide for the conscript's family and part to the Government, to defray the expenses of the soldiers. The division of the country into British and Russian zones of influence following the Anglo-Russian Agreement of 1907, and the events of the First World War, prevented the Persian Government from exercising effective control over its armed forces, and it was not until after the coup d'état of 1921 that Riḍā (Rizā) Shāh, who then became commander-in-chief, was able to organize the Persian army on the European model. A Conscription Act passed in 1925 provided for universal military service for a period of 2 years. A military college was also set up in Tehran.

The successor Arab States which were set up after the defeat of the Ottoman Empire in the First World War had, under the mandatory régime, small volunteer forces organized and trained by the mandatory governments whose methods of training and organization tended to influence later practices. On attaining full independence these states speedily introduced universal conscription, the administration of which was still the object of the Government of ʿIrāq, the first to do so (by Law No. 9 of 1934), encountered armed resistance to conscription among
the Uplaphites tribes and the Yazidis of Diijal S judge.

A table of equivalent ranks in the armies of the Arab states is conveniently set out in 'Abdallâh al-

13.

Umar b. Hafsun broke out and the district of Jaen riha. The form Qlzan, which occurs on many maps, is spurious; it is said to be the plural of *saqar* (sand hill), whereas the plural of *faran* word is actually *al-faran*.

The name appears to have belonged originally to the wadi, which rises in Djabal Razih and the territory of Khawlan in the Yanam, flows south of Djabal al-Urr, and then turns south-westwards to empty into the Red Sea at the modern port (lat. 16° 32′ N, long. 42° 33′ E). A detailed list of tributaries is given in al-ʿUkyayl, i, 33-5, along with the names of 15 small dams (*ʿāhm, pl. ʿāḥām*). The *sayl*, with a volume of water reaching 500,000 gal, a second and waves over 10 m. high, make the lower reaches one of the most productive agricultural regions in Arabia, but without proper flood control much of the water is wasted. The principal crops are millets (*dhura* and *dakhn*) and sesame; other grains, cotton, and indigo are also grown. The soil is so rich that fertilizers are not needed, and four plantings a year can be raised. In 1360/1361 the Saudi Arabian Government, with technical and financial assistance from the United Nations, was implementing a scheme for erecting a large dam across the wadi, modernizing the irrigation system, and building good roads to link the port with its immediate hinterland.

Two channels, one of which is known as the Pearly Gates, lead from the open sea past the Farsan Bank to Dijayan port. The approach is beset with shoals, and large vessels must anchor a mile or more offshore. A haven for dhows lies inside the reefs. The town is built beside hills, the highest rising c. 60 m. Probably salt domes in origin, the hills are now capped with forts. There is no other port of this size in the Yemen. The high ground in the vicinity, and on the landward side the town is encircled by a salt flat. Round grass huts with conical roofs of African design prevail, but there are also a number of masonry houses, along with a new hotel, hospital, customs house, and school, all of modernistic aspect.

The climate is trying, with very high temperatures and humidity and fierce sand storms in summer, and the water supply is poor, the only sweet wells lying some distance out of town. Many inhabitants are stricken with malaria during the monsoon rains. Pearl fishing was once the occupation for which Dijayan enjoyed special fame. On the outskirts of the town a salt mine is exploited commercially; the open face of the salt is c. 5 m. thick.

Dijayan province, sometimes called Tihamat Ṣarīr [see Ṣarīr and the accompanying map], embraces, in addition to the lowlands, the mountains west of the continental divide on the crest of which stands Abhā. Among the mountains belonging to Dijayan are those of al-Kalur, Harūb, al-Rayth, Banū Malik, and Fayțā, all of which are 50 km. or more from the coast. The port of al-Kahma, cut off from the rest of the province by a lava field, its hinterland.

Adil, and allied good roads to link the port with its immediate hinterland.

The Almohads entered the town in 543/1149, but it was devastated the whole day since it was still in the summer of 557/1162 but failed to capture it; and Ibn Mardanish, irritated by the defection of some of these springs existed before the Arab period, i.e. before the 8th/13th and 9th/14th centuries the town was subjected to constant attacks by the Banū Marīn and the Nasīrs of Granada and, thanks to its powerfully-built castle, became the defensive bastion of Castile. Al-Idrīsi, and Ibn al-Rawd al-Mihr, noted the variety of springs, both hot and cold, within the town; but there are also a number of masonry houses, with conical roofs of African design prevail, but there are also a number of masonry houses, along with a new hotel, hospital, customs house, and school, all of modernistic aspect.

were Kināna, al-Azd, and Ḥawlān. It has been suggested that Ghassān [q.v.] once lived in this part of Arabia.

A comprehensive list of the modern tribes is provided by al-ʿUqayli, i, 83-93, including 12 tribes in the lower wadi with Diyāzān port as their headquarters and 17 in the upper wadi centered on Abu Ārīsh [q.v.]. Among the more important ones are the Maṣārīḥa near Abū Ārīsh, the Diyāzānīra along the coast of Saḥāy, and Banū ʿṢuḥʿa with their capital at Darb (or Darb Banū ʿṢuḥʿa, incorrectly shown on the map in ĖP, i, 708 simply as Darb). The province contains a noteworthy linguistic boundary: in Diyāzān port and Abu Ārīsh and to the south the old form am for the definite article is still common, while in Ṣawā and Bayḥā and to the north it goes way to al-

The information given here on the history of the province supplements the account in the article Sābīn.

The name Diyāzān (Dījāzān) occurs in a ḥadīth attributed to the Prophet, in which it is bracketed with Damād, the name of the wadi immediately to the north. Diyāzān when mentioned in the early geographers apparently refers to the wadi only, and not to a town.

The dates 573-93/c. 983-1003 are suggested by al-ʿUqayli for the rule of Sulaymān b. Tārīf (or Tārīf, the region or the coast of Bayḥā, but these dates are not certain. Possibly al-Husayn b. Saʿlām (d. 402/1011-2), the Ziyādīd vizier who improved the pilgrim road to Mecca, was the one who broke Sulaymān's power and brought al-Mīkhāfīd Sulaymānī back under Ẓiyādī rule.

Husayn al-Iṣām, 101-3, presents new evidence to show that ʿAbd b. Muḥammad al-Sulayhī was killed in 459/1067, not in 473/1081 (cf. ĖP, iv, 516). If this is correct, ʿAll's victory in the battle of al-Zārib could not have taken place in 460/1068; Husayn al-Iṣām, 83, dates it in 450/1058.

The time of the establishment of the Sulaymānīd sharīfs in the Mīkhāfīd is undetermined. One source states that Diʿūd b. Sulaymān, great-grandson of Muḥammad al-Dījāzāni, was the first of the line to migrate from the Hijāz to the Mīkhāfīd, in the days of the Rāṣid al-Hādī Yaḥyā (d. 298/910). However, the Sulaymānīds do not appear to have transferred the core of their power to the Mīkhāfīd until after the final defeat in Mecca, c. 462/1070, of their leader Ḥamza b. Wāḥḥās at the hands of the Hashīmīd Abū Ḥaḍīm Muḥammad. Ḥamza's son Yaḥyā and grandsons Ghānīm both held authority in the Mīkhāfīd. The Sulaymānīds from Ghānīm on are often called Ghanīmids (al-Ghawānīm), a name which has the advantage of avoiding confusion with Sulaymān b. Tārīf. Wāḥḥās b. Ghānīm was the Ghānīmīd killed in battle near Ḥarād by the Māḥīd ʿAbd al-Nabī b. ʿAllī in 560/1164.

Under the Ziyādīds, the Nāḏāḥīds, and the Mahdīs, parts of the Mīkhāfīd. If not the whole region, were at times brought under the nominal or real suzerainty of Zābīdī, the capital of all these dynasties (204-569/819-1174). For example, Surūr, who as vizier was the power behind the Nāḏāḥīd throne, 529-531/c. 1135-56, secured the Mīkhāfīd as a fief for himself. From time to time the Zāydi Imām, often reigning in Saʿda in the highlands almost due east of Diyāzān, intervened in the affairs of the Mīkhāfīd.

Under the Āṣyābīds the Ghanīmīds in the Mīkhāfīd were called the Shuṭṭūt, the meaning of which sobriquet is not given. Two sons of Kāsim b. Ghānīm in succession revolted against Āṣyābīd rule but were overcome.

The Rasūlīd al-Malik al-ʿAsfar ʿUmar b. Yūsuf (d. 696/1296) in his Tahrīf al-ṣūrābīd names Hāshim b. Wāḥḥās, a great-great-grandson of Ghānīm b. Yaḥyā, as lord of Diyāzān in his time. Other Ghanīmīds were lords of Bayḥā and Bāḥra, while members of collateral branches ruled in lower and upper Damād, Ṣawā, and al-ʿLūṭaʿa (al-Ṣukaykh).

In the early 9th/10th century a new branch of Ghanīmīds appeared, the Kutbids, the issue of Kutb al-Dīn Abū Bakr b. Muḥammad, who chose as their capital Darb al-Najīd, the ruins of which are still to be seen near Abū Ārīsh. The Kutbīds were usually subject to the Rasūlīds and later to the Tāhirīds. In 882/1477 or 884 the Sharīf of Mecca, Muḥammad b. Barakāt I, raid ed the Mīkhāfīd and carried off much loot, including precious books. The connexion of Barakāt II's brother and rival, Aḥmad Diyāzān (or al-Diyāzānī, d. 905/1505), with the Mīkhāfīd is not clear. He may have lived with his Ghanīmīd relatives there for a time and secured support from them. One of his descendants was ʿAbd al-Malik al-Diyāzānī. Some of the descendants of the Sharīf al-Ḥasan b. Muḥammad AbūNumayy (d. 1010/1601) were also known as Dhowā Diyāzān. Visiting Diyāzān in 909/1503, Varthema found 45 vessels from different countries in the port.

The time of the establishment of the Sulaymānīd sharīfs in the Mīkhāfīd is undetermined. One source states that Diʿūd b. Sulaymān, great-grandson of Muḥammad al-Dijāzāni, was the first of the line to migrate from the Hijāz to the Mīkhāfīd, in the days of the Rāṣid al-Hādī Yaḥyā (d. 298/910). However, the Sulaymānīds do not appear to have transferred the core of their power to the Mīkhāfīd until after the final defeat in Mecca, c. 462/1070, of their leader Ḥamza b. Wāḥḥās at the hands of the Hashīmīd Abū Ḥaḍīm Muḥammad. Ḥamza's son Yaḥyā and grandsons Ghānīm both held authority in the Mīkhāfīd. The Sulaymānīds from Ghānīm on are often called Ghanīmīds (al-Ghawānīm), a name which has the advantage of avoiding confusion with Sulaymān b. Tārīf. Wāḥḥās b. Ghānīm was the Ghānīmīd killed in battle near Ḥarād by the Māḥīd ʿAbd al-Nabī b. ʿAllī in 560/1164.

Under the Ziyādīds, the Nāḏāḥīds, and the Mahdīs, parts of the Mīkhāfīd. If not the whole region, were at times brought under the nominal or real suzerainty of Zābīdī, the capital of all these dynasties (204-569/819-1174). Under the Āṣyābīds the Ghanīmīds in the Mīkhāfīd were called the Shuṭṭūt, the meaning of which sobriquet is not given. Two sons of Kāsim b.}
mental in bringing about the capture by Muhammad 'Ali Pasha's forces of the Wahhabi highland chief, Tamí b. Suł'ayb al-Rufaydi, who recited the Kur'an as he was paraded through the streets of Cairo in a scene described by al-Djabarti, IV, 219-20.

Combes and Tamisier, visiting Djayzan in 1835, observed that the commerce of the port had greatly declined as a consequence of Muhammad 'Ali's monopolistic practices. Senna and coffee were sent from the mountains to Cairo.

The most powerful of the Khayratids who came after Hámid was his grandson nawab al-Hasuyan b. 'Abd (regn. 1840-8), who held Filutha as far south as Mocha and even occupied for a time Ta'if and other places in the mountains of al-Yaman al-A'asf. Beaten in battle by the Zaydi al-Mutawakkil Muhammad b. Yahyá, al-Hasuyan abdicated. Under Ottoman rule two of al-Hasuyan's sons served short terms as Ka'limaksams in Abu 'Arish.

The last Khayratid, a nephew of al-Hasuyan b. 'Abd, revolted against the Turks and ruled independently and oppressively for a brief span. His name is given by al-UqaylI as al-Hasuyan b. Muhammad, whereas Nayl al-watar, i, 356, calls him al-Hasan.

Having supplanted the Turks in the Mihlgah in 1909, Muhammad b. 'Abd al-Idris defeated them two years later at al-Hafah, close to Djayzan port. The capital was moved by al-Idrisi from Abu 'Arish to Sabýa.

Under Saudi Arabian administration the capital has been transferred to Djayzan port. The fullest description of the port and province in recent times is given by Pibby, who was there in 1936.

**Djazá (Ar.), recompense, both in a good and in a bad sense, especially with reference to the next world; thawdb (Ar.) means the same but usually only in a good sense. Opinions differed on its nature, duration, the recipients, and how men knew of it. The Mu'tazila held that God must reward goodness and punish wickedness; reason shows this though some held that the eternal duration of recompense was known only by revelation. The opposing view was that it is not a subject for argument; if He sends all to the fire, it is His justice, and if He takes all into paradise, it is His mercy. The Mu'tazila of Básha said that God must reward goodness but may forgive all sinners. Ibn Karrám taught that revelation told that reward may be merited. Some said that reward should be eternal because it is greater than man's merit but not punishment because of God's mercy, though wilful disobedience to Him deserves an eternity of penalty. The common view was that no believer would be kept in the fire for ever; God would at last deliver him. Most Mu'tazila and the Khawáwíl said that great sins sent the sinner to the fire for ever but Djibáli said that the fate of obstinate unbelievers only and that the fire drew such to itself by its nature, God did not send them. Ka'bí said that venial sins would not be punished in the fire but that they might add up to great. Múrdrá said that even venial sins sent to the fire for ever. Some argued that, if the penalty were limited, so should the reward be, for man's acts are limited. Another view was utilitarian; if God's threats were to be efficacious, they should be as wide as possible but, if encouragement were needed, the limitation of punishment should be stressed. The general view was that all infants would go to paradise though some made their lot depend on the religion of the parents.

Bíshr b. Mu'tamír [q.v.] said that God can punish infants without being unjust. Some held that believing djinn would be in paradise in both others thought there would be no resurrection for them, either because there was no resurrection except as a reward or no reward except after responsibility and on either ground djinn were excluded. Some said that useful animals would be in paradise in both more beautiful forms to delight the blessed while noxious beasts and insects would be in the fire, helping to torment the wicked but feeling no pain themselves. Paradise is a reward for merit or bounty to those without it, infants and madmen. The nature of recompense was in dispute, whether spiritual, corporeal or both; Nazám argued that bodies were needed if the blessed were to eat and drink. He also said that there were no rewards in this world as blessings were only for encouragement; he also said that God cannot lessen the joys of paradise nor the pains of the fire. Djabáli taught that the torments in hell were not profitable to any but were the result of wisdom and justice. A saint, seen in a dream, said that friends were eating and drinking before the throne but God knew that he cared for none of these things so granted him to look on His face. It was one of the challenges against the belief that the blessed only a resurrection of the spirit. Ka'bí said that if the hand of a thief were cut off and he died an unbeliever, it was given to one who had lost a hand but died a believer or was given to some other believer. The next world is dár al-djazá.

**ii.—Ottoman Penal Law**

In Ottoman usage, djazá means punishment and kánim-i djazá (cezai) a penal code.

The oldest Ottoman penal code so far discovered forms part of the kánim-námé of Memenreddi II published by Kraeltz (MOG, i, 1921, 13-48). It deals chiefly with those criminal offences that are to be punished by strokes and fines. Soon it was enlarged by an additional chapter, a siyásétnámé [q.v.] (see Belleten, vi, 1942, 37-44), which prescribes capital or severe corporal punishment (siyásel) and regulates criminal procedure. This enlarged code constitutes the first part of the so-called Kánimnámé of Süleyman I (TOEM, 1329, suppl.) which in its major parts,
however, seems to have been compiled already under Bayezid II. A third criminal code came into existence in Suleyman I's time. This *kônûnûmdeme*, which will be the most comprehensive penal code which followed French law until 1926. After a short time, however, they introduced their own penal code, proclaiming their wish to abrogate many *bidâ* of the previous rulers and alleviate the plight of the population by reducing penalties and abolishing abuses in criminal procedure. The numerous provincial *kônûnûmdemes* contain relatively few penal regulations, since in principle the same criminal law was in force in all parts of the Ottoman Empire. In some Muslim countries conquered early 10th/16th century the Ottomans at first confirmed existing secular, including criminal, law, such as the *Dhû 'l-Kadr* codes (Barkan, *Kanunlar*, 119-29). After a short time, however, they introduced their own penal code, proclaiming their wish to abrogate many *bidâ* of the previous rulers and alleviate the plight of the population by reducing penalties and abolishing abuses in criminal procedure. In Ottoman criminal codes wide use is made of *ta* zabir (i.e., discretionary punishment by the *kâdi*). In the form of corporal chastisement, generally the bastinado, [see *Falaka*]. For many offences the penalty is a fine (*belâlîk, *gîrîme*), with or without *ta* zabir and often in addition to damages. Fines are laid down either as fixed amounts of money (mostly graded in accordance with the financial circumstances of the offender) or set in a certain ratio to the number of strokes inflicted on the criminal. In many instances slaves and non-Muslims pay half the fine of a free Muslim, but in the case of the non-Muslims this privilege is partly cancelled out by their being graded differently. The fines constituted a considerable income for the fief-holders and/or governors (or their subordinates); in later periods *kâdis* often exacted fines for themselves. Many offenders were also condemned to be beheaded, ganching, strangling, etc. Other severe penalties, the cutting off of a hand or the nose, the emasculation, are rarer penalties; sending to the galleys, banishing, gaoling, strangling, etc. Other severe penalties mentioned in *kônûnûmdemes* are emasculation, the cutting off of a hand or the nose, the branding of the forehead, etc.

The *kânûn*, though pretending merely to complete the *şarî'a*, diverges from its criminal law in a number of important points. On the one hand, it commutes certain *hadd* penalties or seems to assume that they are commonly commuted to lighter punishment. On the other hand, it extends the range of many penal regulations of the *şarî'a* and adds a great many delicts not covered by it. With a view to serving, above all, the interests of the State and ensuring public peace and order, many more crimes are made punishable by death (*suyûdâlî kâllî*); many of the penalties are evidently meant to be preventive or intimidating. The monetary fines and some of the corporal penalties laid down in the *kânûn* are unknown to religious law. The treatment of attempt, complicity, and repetition of offences in the *şarî'a*. Most important, the *kânûn* frees criminal procedure from the latter's limitation and strict regulations. Similar to the earlier *muâlîm* (*şarî'a, *kâdis*) and *muflâsîb* jurisdiction in other Muslim countries, the Ottoman *kânûn* accepts evidence that is not admissible according to the *şarî'a*. This is not regarded by it as insufficient. Admission of guilt may be obtained by torture; suspicion and the criminal past of the accused are taken into decisive consideration. In several later *kônûnûmdeme* manuscripts, marginal notes, mostly ascribed to the Nişâbûrî, abolish some regulations of the criminal code because of their inconsistency with the *şarî'a*.

The Ottomans tried to eliminate the traditional dualism of *kâdis* and *muâlîm* jurisdiction by making the *kâdis* administer both *şarî'a* and *kânûn*. Ordinary citizens were generally to be punished by the governors, *subaşı*, veyravadis, etc. only after a trial by a *kâdis*, but in reality this rule was constantly violated. The clash between the authority of the *kâdis* and the governor in the administration of criminal justice remained a major problem throughout Ottoman history. Certain classes of the population (soldiers and other *hâshi,* şîmâr-holders, *şerîfs,* *ulemâ*, foreigners, etc.) were in many cases subject to special penal regulations and tried by separate tribunals. Trade delicts and certain religious and moral misdemeanours were dealt with by the *muflâsîb* (*q.v.*).

The Ottoman penal codes were not conceived merely as laws for the protection of society from the criminals but to a large extent also as a means of protecting the people from oppressive officials and fief-holders. Sultan Süleyman I ordered that a bound copy of the penal and feudal *kônûnûmdeme* be sent to every law-court, but to what extent its criminal regulations were actually enforced is not known. From the 11th/17th century, in any case, the *kânûn* for various reasons began to lose its practical importance. Criminal justice was henceforth based exclusively on the *şarî'a* as administered by increasingly corrupt *kâdis* or the arbitrary will of oppressive governors and their subordinates. Ottoman criminal justice, praised by European observers in earlier periods for its efficiency, degenerated completely.

Modern reform of Ottoman penal law began under Mahmûd II. After the destruction of the Janissaries (1826), governors were forbidden to inflict the death penalty without the formal sentence of a *kâdis*. A new penal code, published in 1840 in the spirit of the Gülûhâne Charter, still largely aims at curbing tyrannical officials. Penalties are reduced and procedure is to become more regular; every capital punishment has to be confirmed by the Sultan. This primitive and very deficient law was somewhat improved by the code of 1851, only to be replaced in 1858 by a completely different, secular and comprehensive penal code which followed French law and, with many amendments, remained in force until 1926.

*AL-DJAZA'I* is the name given to the islets just off the north-west coast of Algiers Bay,
and which now constitute the Admiralty of the town. The Arabs applied the name of the islets to the town, which was founded in the 4th/10th century on the mainland opposite them, and which the Turks later called the capital of Algeria, and has remained so ever since. It was the French who transformed its Arab name into "Algier" (Alger). It lies at a latitude of 36° 47' N., and a longitude of 3° 4' E. (Greenwich). In the census of 1954 a municipal population of 355,000 was recorded, of whom 162,000 were Muslims; in 1959, the population of Greater Algiers (city and adjacent communes) stood at 805,000, of whom 456,000 were Muslims.

The discovery in 1940 of an important collection of Punic coins, of lead and bronze, found in the district neighbouring the port (J. Cantineau & L. Leschi, "Monnaies puniques d'Alger," in Comptes Rendus Ac. Inscr. et Belles Lettres, 1941, 263-77), is ample proof of the existence of a Phoenician warehouse, probably on the islets, with the name Icosim (the isle of owls, or thorns).

The Latin form of the name, Icosium, was given to the Roman settlement on the mainland. It is not known at which date this was founded, but it was not an important settlement, although it was the seat of a bishopric. We find no more reference to it in historical documents after the fifth century.

According to al-Bakri (Desc. de l'Afr. sept., 1941, 263-77), is ample proof of the existence of a Phoenician warehouse, probably on the islets, with the name Icosim (the isle of owls, or thorns).

The Latin form of the name, Icosium, was given to the Roman settlement on the mainland. It is not known at which date this was founded, but it was not an important settlement, although it was the seat of a bishopric. We find no more reference to it in historical documents after the fifth century.

Very little is known of the town before the Turkish period. It is probable that the original city wall extended as far as the Turkish wall, but that the density of building within it was much smaller. The Turkish wall, 3,100 m. long, was continuous, even on the coastal side, and was equipped with towers and a moat. Five gates gave access to the city: the Fishery gate and the Fleet gate on the harbour side, Bab al-Wad to the north, Bab 'Aziz to the south, and Bab Djaddid to the southern side. Various other fortifications reinforced the protection offered by the city-wall: the Kasba, which in 1816 became the residence of the Dey of Algiers, was built in 1556 to replace a Berber stronghold on the summit of the triangle which the town then formed; the Fort l'Empereur, built on the site of Charles V's camp; several forts and gun emplacements between the Bab al-Wad and Bab 'Aziz gates along the sea-front, and on the rampart which circumscribed the port.

In 1554 a Spanish levy on the city occupied the islets in order to suppress the corsairs. When it was realised that this would seriously impair their prosperity, the inhabitants and their leader, Sallim al-Tamī, sought for an ally to help rid them of the Spanish yoke. When they summoned to their aid the Turkish corsair, Ḥarād [q.v.], who at that time ruled over Djedjelli, he did not succeed in expelling the Spaniards, but seized the town himself and established it as his principal base of operations. The Spaniards attempted to recapture Algiers in 1516 and 1519, but met both times with failure. After the death of Ḥarād in 1524/1518, his brother Khayr al-Din assumed power, but was not able to maintain control over Algiers, and fell back to Djedjelli, 926/1520-5. Then in 1525 Algiers once more sent out an appeal for assistance, and on 27 May 1529 he succeeded in capturing the fortress (Penon) which the Spaniards had built on the largest of the islets. The Penon was pulled down, and the materials served to construct the breakwater which henceforth protected the islets with the mainland. Such was the origin of the port of Algiers.

Meanwhile, Khayr al-Din had bequeathed his conquest to the Ottoman Empire, which was thus in possession of an important naval base in the western Mediterranean. It is therefore in no way surprising that Charles V attempted to capture Algiers in 1541. On October 23 his forces landed on the shores of the Bay of Algiers, and after crossing the Wadī Harrāsh, they set up camp on a hill overlooking the town, now known as the Fort l'Empereur but at that time called Kudyat al-Sābūn. But during the night of 24-5 October the weather quickly deteriorated, and half the landing fleet was lost in the consequent storm. Defeated as much by the element as by the Turks, Charles V was forced to abandon much material and withdraw from Algiers, leaving it with a legend of invincibility which remained intact until 1830.

Charles V's expedition served as a warning signal to the Turks, and they proceeded to extend and perfect the fortifications, especially on the seaward side, until Algiers literally was a stronghold. Moreover, it had become the capital of a considerable Turkish province, enjoying a de facto independence of Constantinople, and was the operating base for many corsairs. All these factors contributed to its great economic and social development, beginning in the 16th century.

The city of Algiers grew in size under the Ottoman rule. In the census of 1954, the population of Greater Algiers (city and adjacent communes) stood at 805,000, of whom 456,000 were Muslims.

long roots in the past, often of Andalusian or Moorish origin, forming the bulk of commercial and artisan classes; the numerous Kabyles, forming the labouring class; Saharanis from Biskra and the Maâb; Jews (4,000 in 1830), the richest of whom had come from Leghorn in the 18th century, and enjoyed the privileges of Europeans; some European business-men and consuls; finally, those taken prisoner from the Christians, numbering as many as 25,000 in 1834 (P. Dan). It is clear that the population was just as much Mediterranean as North African.

As far as is known, the town of Algiers was placed directly under the authority of the head of government. The judicial system was administered by two Kâds, one from the Hanafî school for the Turks, the other from the Mâlikî school for the Arabs. They worked together with a tribunal of rabbis and consuls representing the Jewish and Christian minorities. The police-force was staffed by Shaykh (Turkish cãdãh (q.v.)) under the command of a bâdoch shâhwîc. There was one force to deal with the Turks, and another to deal with the Moors. To complete the administration, there was a chief of municipal services (shaykh al-balâlu), and a mixwâr, more or less the equivalent of the mubâhâsh in Moroccan cities. The Jewish community had its own police force also and enjoyed the protection of their respective consuls.

Privatizing was the great industry of the Turkish era. After having taken the form of a holy war or of a conflict between the Ottoman Empire and the Austro-Spanish Empire of Charles V and Philip II, it became a profitable business and therefore the chief occupation of the inhabitants. All sections of the population benefited from it—the government, which received part of the takings, private individuals, who formed companies to arm the ships, and the general populace, who gained from the generosity of the privateers and wealthy ship-owners. It also led to an influx of adventurers, usually of European or Mediterranean origin, who ‘took to the turban’ to give vent to their spirit of adventure and taste for plunder, or simply to avoid falling into the hands of slave-traders. It has been estimated that there were 8,000 renegades in Algiers in 1634.

Such piracy often provoked reprisals from the European powers. They generally took the form of naval bombardments of Algiers, some of which caused serious damage. The Spaniards bombarded it in 1567, 1775 (the ensuing landing did not succeed) and 1783, the Danes in 1770. The main attacks came from France (1661, 1665, 1682, 1683, 1688) and England (1622, 1655, 1672). After having been largely suppressed by the end of the 18th century, privatizing experienced a revival during the wars of the French Revolution and the First Empire, and the British consequently carried out further shellings in 1816 and 1826.

The French invasion of 1830 had been prepared in 1808 by Major Boutin, an engineer officer sent by Napoleon to make a first-hand report of the conditions necessary to carry out such an operation successfully. The general lines of his plan were used by those who prepared the expedition of 1830; the French forces landed on the shore of the Sidi Farrãgh peninsula, to the west of the town, on 14 June, and by the 29th they had reached the defences of the Fort l'Empereur. It was captured on 4 July, and on the following day the town itself surrendered, without having suffered much damage.

For many years the French lived within the existing urban boundaries, although they did burst out at one or two points. But as the town’s population increased, it overflowed northwards (Bâb al-Wad quarter) and southwards (Bâb âAzîn quarter). Today the metropolis extends to the suburban districts of Saint-Eugène (N), Hussein Dey (S.-E.), Birmandres (Bîr Murâd Ra’îs) (S), El-Biar (S.-W.) and almost as far as Bouzareâ (W). Its growth remains uninterrupted, and is gradually spoiling the open spaces and gardens which formerly surrounded the town. The port has undergone a considerable expansion in recent years, and in 1955 it registered the movement of 9387 ships and 500,000 passengers. The airport of Maison-Blanche (25 kms. E. of the town) meets all the requirements of modern international air services.

The organization of local authorities has been modified since April 1959. The city, divided into arrondissements on the French pattern, together with the neighbouring communes, forms the single municipality of Greater Algiers.

After the Anglo-American landings of 8 November 1942, Algiers became the provisional capital of France until Paris was liberated in August 1944. Since the beginning of the Algerian revolution on 1 November 1954, Algiers itself has been the scene of political events of far-reaching importance, particularly those of 6 February 1956, 13 May 1956, 4 July, and on the following day the town itself surrendered, without having suffered much damage.
the sandjaks of Gallipoli (Gelibolu) with the khadijs of Galata and Izmid. Khayr al-Din Barbarossa, who submitted in 940/1533, and his successors were masters of three jadhig and members of the divan-i humayun. He already governed Algeria and Mahdiyya. His eyalet was extended to incorporate the sandjaks of Kodia-i, Sughla and Bigha in Asia, and Negropont (Ergibroz, Euboea), Lepanto (Aynakabdh), Karli-i, Mitylene (Midilli), and Mista (Mizistre) in Europe. Rhodes (Rodos) was added after his death and about 1027/1616 Chios (Sakli), Naxos (Naka) and Andros (Andhra). In 1052/1642 Algiers became virtually independent. Cyprus was added to the eyalet about 1080/1670 but was detached again in 1115/1703 when it became a kingdom of the Grand Vizier. It reverted to the Kapudan Pasha in 1199/1785. Mistra and Karli-i were attached to the eyalet of the Morea by Mehmet iivara Kara Mustafa Pasha, and by the time that the Tanzimat abolished the jurisdiction of the Kapudan Pasha the eyalet consisted of the six sandjaks of Bigha from which it was governed, Rhodes, Chios, Mitylene, Lemnos (Limni) and Cyprus. In 1876, after the transfer of Bigha to the eyalet of Kuhdvandirc, the centre was moved to Chios and later, in the course of further reorganizations, to Rhodes. Cyprus was occupied by Britain in 1878; Rhodes and the Dodecanese islands passed to Italy after the war of 1912-2, and were incorporated in the Greek kingdom after the second world war; the remaining islands were occupied by Greece during the Balkan war, and the ‘eyalet of the islands’ ceased to exist. The islands of Imroz (Imbros) and Bozdja-Ada (Tenedos) [qq.v.] were returned to Turkey by the treaty of Lausanne, 1923.

AL-DJAZARI, the historian Shams al-Din Abü 'Abd Allah Muhammad b. Majdi al-Din Abi Işhāq Ibrahim b. Abi Bakr b. Ibrahim b. Abd al-Rahman b. Abl al-Hasan, was born at Damascus on 10 Rabi i 658/25 February 1260. He studied with a number of teachers including al-Faîr 'Ali al-Buhārī, Ibrahim b. Almād b. Kāmil al-Takl al-Waszīṭī, Ibn al-Mugjāwīr and al-Dīnyāstī [q.v.]. Hard of hearing, he was a good conversationalist, pure of heart, sincere and upright; he liked the company of virtuous people, towards whom he showed great magnanimity. His fame chiefly rests on his historical work styled al-Ta'rihk al-musammam bi-hawdith al-samān wa-'nābdhikh wa-wafyādī al-a'ābīr wa-'l-'ayān min abnā'īh, better known by the shorter and simpler title of Ta'rihk al-Djazari. It is a large work of which only the last volume is preserved both in the library of Köprülüzade at Istanbul and in the Dār al-Kutub al-Miṣriyya. Several other copies are also to be found in European libraries; a detailed analysis of the Paris fragment was published by J. Sauvaget in 1951. The remaining portion, however, still awaits an editor. It is patterned more or less on the lines of al-Isbāhāni’s Ta’rihk al-Islām, arranged as a diary of events (annals). The latter’s work is apparently a continuation of al-Djazari’s. The Istanbul MS. has a detailed biography of the author appended to it in the hand of his friend and admirer the historian al-Kāsim b. Muhammad al-Birzālī [q.v.] who also compiled for him a Mabkha al-Mashrikha (Mashrikha) comprising the biographies of ten of his šayāḥ. The extant portion of his work is in three volumes and comprises the events of thirteen years (1052/1352) onwards until his death in 739/1338. He was rated very highly as a historian, and his work would have proved a mine of information had...
It consists of three districts (kāra), the Dayrābīra in the east, the Diyar Muṣṭar in the west, the Diyar Bākrist in the north. The Dayrābīra was the capital of the Dayrābīra. The whole of it survived. Al-Dhahabi and al-Birzall have both utilized it and extensively quoted from it. Al-Dhahabi however, is of the opinion that fathers who inhabited them in the pre-Islamic period and at the beginning of the Islamic period. But even in ancient times there were already Arabs in the Dayrābīra and one of its districts, that of Nisibis (Nāṣibīn) was called Arvastan by the Persians and Bēhq Arabābya by the Arameans. Apart from the Arabs, the Dayrābīra contained considerable Aramean elements, especially in the Tūrābīdān and a number of localities bear Aramean names, and there were Kurds in the Mosul region and Armenians to the north of the upper Tigrīs.

The Dayrābīra is of great importance historically, being astride the lines of communication between Ṭrāk and Anatolia (it is crossed by the Baghādād railway), Ṭrāk and Syria on the vast curve of the so-called Fortile Creṣcent, and between the Armeṇo-Iranian regions and Syria on the one side and Ṭrāk on the other. It contained many market-towns and cities on the banks of the two rivers and on their tributaries in the Tūr ʿAbdīn and along the Mawsil-Raḵkā road. In the Romano-Byzantine period it was divided between Persia and Rome-Byzantium. At the time of the Arab conquest, Byzantium held the region extending from the region of the Tigrīs to the plain of Iraq and the plain to the south of the Tūr ʿAbdīn. The frontier lay between Nisibib and Dāra, at the fort of Šardja (Yāḵūt, ii, 516; iii, 70; Abū Yūṣuf Yaṯākī, K. al-ṭhārdādī, ed. 1302, 22, tr. Fagan, 62). After the conquest of Syria the Byzantine garrisons were isolated, only being able to communicate with the Empire through Armenia. Ṭiyād b. Qhann therefore encountered no resistance; the western part was conquered between 18/639 and 20/641, and the eastern part in 20/641 by troops coming from Ṭrāk (al-Baladhūrī, 171 ff., ed. Cairo, 179 ff.).

In the Umayyad period the Dayrābīra was the scene of strife between the Syrians and the Ṭrākīs Sīḥīs: Sulaymān b. Ṣurād, supported by the Kaysīs Zuṭar b. Ṭaḥḥāth, was killed in 65/685 in a battle near Raʾs Ayn against a lieutenant of Ḫubayd Allāh b. Ziyād; after Mulṯṣār’s victory over the Syrians in 67/686 on a tributary of the Zāb, the victors occupied Nisibib, Dāra and Sindjar (see al-Ṭabarī and Ibn al-ʿĀṯīr under the years indicated). ʿAbd al-Malīk, before being able to go on to defeat Muṣʿab b. al-Zubayr at Dayr al-Dajjāl in Ṭrāk in 72/691, first had to conquer the Dayrābīra. It was also in the Dayrābīra that the fighting between the Kaysīs and Ṭaghlābīs took place before and after this date (cf. al-Ṭabarī and Wellhausen, Das arabische Reich, 126 ff.; Eng. tr. 202 ff.). In like manner numerous Khārdādīs revolted started in the Dayrābīra at the time of al-Ḥādhīdādī, and later in the reigns of the last Umayyads when the Khārdādīs of the Dayrābīra all but succeeded in seizing power (see Wellhausen, Oppositionsparteien, 41 ff.). It was in the Dayrābīra, at Harrān, that the last Umayyad, Marwān II, had his capital.

At the time when Muḥṣīya was governor of Syria the Dayrābīra was joined with it under a single administration. It later became a separate province comprising the three districts, responsibility for it being sometimes held by members of the Umayyad family, such as Muḥammad b. Marwān and Maslama b. ʿAbd al-Malīk who were at the same time governors of the neighbouring province of Armenia. Marwān was possibly called after Marwān II that it became the capital of the Dayrābīra.

The Dayrābīra did not submit to the ʿAbbāsids without resistance, and there were even grave in-
The Djazira is the home of the Hamdanid family who, after various wanderings (their ancestor Hamdan was himself a Khāridji), extended their power over the entire province which was divided between the two Hamdanid amirates of Mosul and Aleppo which, though recognizing the nominal authority of the caliph, were almost independent. It then passed under the domination of the Buwayhids of Baghdad after the conquest by Aḥmad b. Tahir, governor of Syria and the Djazira, particularly after al-Mahdī's reign. The province was known as a Kūfīa, and in the second part of the 3rd/9th century with Musāwir, and later with Harūn al-Ḥāshīrī [see the references given in diyār rabi'ā]. The caliph al-Mu'taṣim put an end to these revolts (same references).

In the 'Abbasid period Mosul was at times separated from the administration of the Djazīra, at other times the province was included in a larger grouping. Armenia, the neighbouring province, was often linked with it or on occasion united merely with the Djālār [see diyār bakr]. Among the governors of the Djazīra worthy of note, we may mention Tāhir b. al-Husayn and, later, his son 'Abd Allāh b. Tāhir in al-Muʾmūn's reign. In the second part of the 3rd/9th century the Djazīra for a time escaped from the central authority and became a dependency of the Tūlānīd ruler of Egypt, with 'Isḥāk b. Kundāğiḥ, then Muhammad b. Abī 'l-Sadāqī, and then 'Isḥāk's son. But it was recovered by the caliph al-Mu'taṣim after 279/892.

In the time of the Romans the present Algeciras was called Ad Portum Album, and in Christian sources there are references to two places with the name Algeciras, one on the island which was later deserted, the other on the mainland which kept its name and importance since its harbour and bay have from remotest antiquity provided a safe anchorage, even in winter, and it is the starting point for the crossing to Ceuta, a distance of only 12 miles. The Almohads almost always preferred to cross by the Tarifa-Alcazarseguir route, which is 14 miles across, and the Marinids followed their example.

The town is situated on a hill dominating the sea, and its walls go right down to the sea-shore; the citadel, built of stone, rises sharply above the ravine that lies alongside the town, to the East. Through the town runs a river, the Wadi 'l-'Asal — river of honey—which has kept this name in Spanish; its banks are covered with orchards and gardens. To the south-east, not far from the gate to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst to the sea, was the Mosque of Banners where the standard-bearers met before the invasion.

In 479/1086, al-Mu'izz delivered it to Yusuf b. Tashfin who went into al-Andalus to rout Abu'l-Va'il at al-Zallakka. Yusuf lost no time in fortifying the town and repairing the weak points in the walls; he had the town entirely surrounded by a moat, laid in stocks of arms and food, and installed a picked garrison of his best soldiers. On his second crossing he again disembarked at Algeciras, setting out from there to lay siege to Aledo. The Almohads occupied the place in 524/1130, but Abu'l-Va'il laid waste its territory and that of Ronda in 569/1173 and 578/1182. In 629/1231-2 Algeciras recognized Ibn Hūd. Alfonso the Learned blocked Algeciras by sea in the summer of 677/1278, and the Christian army camped there in March 1279; on 10 Rabī' 1/21 July the Castilian squadron was routed by the Marinids; Algeciras was taken by assault and its defenders put to the sword. In his four Andalusian campaigns Abū Yusuf made Algeciras the base and, after the crossing to Ceuta, a distance of only 12 miles, he disembarked there and set out to lay siege to Tarifa nearby; after being defeated on the Salado on 7 Dīnādā 1/29 October 1340, he returned to Algeciras where he had left his harem, and from there went back to Morocco. With him the Marinids' intervention in al-Andalus came to an end; two years later Alfonso XI laid siege to his seat naval base and, after twenty months of fierce fighting, succeeded in taking it. In 771/1369 the sultan of Granada recaptured it and completely destroyed it.

The territory was annexed to that of Gibraltar and it was not separated administratively from San Roque until 1755. Later, it developed rapidly in the 18th and 19th centuries and, in 1905, an international conference on the question of Morocco was held there.

Djazirat Ibn 'Umar [see Ibn 'Umar, Djazrat].

Djazirat Kays [see Kays, Djazrat].

Djazirat Sharīk, Name given by the Arabs to the small peninsula thrusting from the eastern coast of Tunisia between the two gulfs of La Goulette (El Jālk al-wādī) and al-Ḥammāmāt. As a physical continuation of the Tunisian Dorsal range, its surface is rather hilly and cut by ravines, but in its east and west and particularly its northern parts are wide plains famous since Roman times for their wheat and olives. Its area is about 600 square kilometres. Its farthest point in the north (Cap Bon, or Ra's Mādār, currently called al-Dalgha) is the nearest point of Africa to Sicily. The peninsula is actually a part of the province (wilaya) of Grombalia (Kurunbhālia). Its western and northern parts form a subdivision (delegation, muḥamadiyya) of that province called Kīlibiyya (Kīlibiyya). There are some middle-sized and small towns, such as Grombalia (capital of the province), Korbes (Kurbus), Sulaymān, Manzil Bū Zalfa, and Tazeqzhān; fishing-ports, such as Kīlibiyya, Manzil Tālim, Kūrba, Bāzdī Khātās, and two fairly important ports: Naheul (Nābl) and al-Ḥammāmāt. Communications are assured by railways between Nābil, al-Ḥammāmāt, Manzil Tālim, and Tunis.

Sharīk al-'Abī, after whom the peninsula was named, was one of the officers of the Arab army which conquered Ifriqiya under 'Abd Allāh b. Sa'd b. Abī Sarh in 27/647-9. After the victory of Subayṭīya (Sbeitla, Suffitulm), 'Abd Allāh b. Sa'd sent Sharīk to occupy the peninsula and nominated him its governor. 'Abd Allāh b. Sa'd evacuated Ifriqiya before the end of 28/649 and the Byzantines were able to reconquer the peninsula from their stronghold of Carthage (Kartdjanna). Some 32 years later Abū 'l-Muhāḍhir Dīnār, leader of the Arab troops in Ifriqiya between 55/674 and 62/681, was able to conquer Carthage and consequently assure permanent Muslim domination of this important bridge-head to Sicily.

Owing to its strategic importance, Djazirat Sharīk was always a target for all those contemplating the conquest of Ifriqiya from the sea, and hence for long periods of its history it was a battlefield between Ifriqiya and its attackers. The Normans dominated it after their conquest of al-Mahdiyya in 543/1151 and held it till 555/1160, when the Almohads under 'Abd al-Mun'im b. 'Ali expelled them and annexed Ifriqiya to their Empire. Later, during the 10th/11th century, Djazirat Sharīk, like the rest of
Tunisia, was one of the battlefields in the war between the Spaniards and the Ottomans in their fierce dispute for the hegemony of the Mediterranean [see TUNISIA].

Two other aspects are characteristic of the history of Djazirat Sharik during the middle ages: the first is that its hilly terrain offered refuge for rebels against the governors of Ifrikiya, especially under the Fāṭimids, when a group of the Nakkāriyya (a branch of the Khawārīd) allies of Abū Yazīd [q.v.] caused much trouble to al-Kāfīm; later, during the second half of the 6th/12th century, the Banū Ghāniya [q.v.] invaded Djazirat Sharik and committed atrocities against its inhabitants. The second aspect is that its coasts, as well as those of the adjacent islands of Kawsara (Pantelleria), Kīrkīnna and Dījārna were from the beginning of the 8th/14th century suitable lairs for pirates (ghudt al-bahr), which brought against Ifrikiya the wrath of the Normans, the Pisans, the Venetians, the Spanish, and almost all Europe, and were the cause of disastrous attacks on their part.

Djazirat Sharik was described by at least four of the leading Muslim geographers and travellers in the middle ages, namely al-Bakrī, al-Tidjānī, al-Idrīsī and Yaḥyā. All, except al-Tidjānī, agree that the peninsula was flourishing and rich. Al-Idrīsī calls it Djazirat Bashāsh, after its then biggest town Manzil Bashāsh. Al-Tidjānī, who visited it in 706/1306-7, gives in his Ṭibāḥa the most detailed description we possess, including a sad picture of the peninsula as a result of the devastations of the Banū Hīlāl and the Banū Ghāniya [q.v.]. A branch of the Hīlāliyya, the Banū Dalāḏ, were masters of Djazirat Sharik in his days. He mentions only three towns: Manzil Bashāsh, Shīlān and al-Fallāḥān.

**DJAZIRAT SIKKR** (see NABIR). Spanish Alcira, called by the Muslims the island of the Jūcār, since it is situated between two channels of the river Jūcār, in Latin Suco, one of which is now dry. 37 km. from Valencia, it has a population of about 30,000 and stands at the foot of a natural harbor known as the Ribera which includes the lower part of the Jūcār valley, from Jāttīa to Catarroja and from the sea to the valley of Cárcar. The fertile alluvial plain is one of the richest in the Peninsula. It is watered by the royal irrigation canal of the Jūcār which was constructed by James I the Conqueror in the second half of the 13th century, built up on the site of earlier irrigation works which were not mere ditches to the Arab period but to the Visigothic and Hispano-Roman periods. Orange-trees, rice and horticulture have brought prosperity. Al-Idrīsī praised it for its fertility and the distinction of its inhabitants; he said that in his time it was possible to reach it only by boat in winter, and by a ford in summer, but in 622/1225, according to al-Muʻāḍib, it had a bridge. It must have been inhabited even in prehistoric times, to judge by excavations made on its boundaries, on the mountain of Solā. Its identity with Suco or Sicania Iberica is open to question, and in the Roman period it must have been fortified, as a stopping place on the Via Augusta, to judge by the commemorative tablets found there.

During the Arab period and until comparatively recent times, timber felled in the great pine-forests of Cuenca was transported on the river Gabriel and, after being taken across the Jūcār was brought through Alcira to Cullera, with Denia as its final destination for ship-building and Valencia for building.

Throughout the amirate and Umayyad caliphate its history was uneventful; it was a dependency of Murcia or of Valencia at the time when the first kingdoms of Taifas were created, until the Cid took possession of it when conquering Valencia and its territories. Ibn ʿAbd Allāh b. Ṭaghīfīn, reconquered it and then routed and wiped out its division of the Cid's army. In 519/1125 Alfonso I the Warrior, when undertaking his celebrated expedition into Andalusia, tried to seize it; but after several days he was repulsed, and withdrew with heavy losses. In 523/1129 he once again invaded the region, and between Alcira and Cullera he routed another Almoravid army, thereby opening up the way.

When the Almoravids of al-Andalus disappeared and the second period of the kingdoms of Taifas started, Saʿd b. Mardanīsh succeeded in making himself master of Murcia and Valencia, and appointed as governor of Alcira a noble inhabitant of the town, ʿAbd Allāh Muḥammad b. Saʿd. During the amirate and Umayyad caliphate it was a dependency of Murcia and Valencia, and appointed as governor of Alcira a noble inhabitant of the town, Ṣufyān; the latter, after seeing Ibn Mardanīsh reinforce the Christian garrison of Valencia and, to make way for him, turn out a number of Muslims from their homes, and fearing that he too would be turned out in the same way, rebelled and joined the Almohads, as Ibn Hamūshk had done at Jaén and ʿAbd Allāh b. Saʿd at Almeria.

Believing that he could recapture the town and so set an example, Ibn Mardanīsh laid siege to Alcira in the middle of Shawwal 566/June 1171, helped by his brother Abu ʿl-Hadhīdājī Yūsuf, amir of Valencia; the siege lasted for two months until the middle of Dhū l-Hijjah/August. The caliph, who had been in Cordova since July, and the sayyid ʿAbd Ḥafṣ ʿUmar, who was besieging Murcia, came to the help of the inhabitants of Alcira; but they saw that they were being more and more closely confined, and appealed to Abu Ayyūb Muḥammad b. Hīlāl, the friend and colleague of Ibn Baṣīt during the relief of Almeria. Ibn Mardanīsh, unable to force the town, had to withdraw.

Under the Almohads the town enjoyed a period of comparative calm, but was so threatened by the advance of the Christians; and two celebrated poets, Ibn Khafadja and Abu ʿl-Mutarrif Ibn ʿAmira, sensing that its loss was imminent, wrote with nostalgia of its charms and the beauty of its surroundings. At the end of 1242 James I the Conqueror captured the town.

**DJAZM** (see NAHW).

**AL-DJAZR WA 'L-MADD** (see MADD).

**DJAZULA**. Arabic name of a small ancient Berber tribe in south-western Morocco, doubtless related to the Šāhādja group [q.v.]. In association with the Lamja [q.v.], their kinship they led a nomadic life south of the Anti-Atlas. But, at quite
an early date, some of them began to settle in the western part of this mountain (Djabal Hankisa); their chief settlement was at Tâqhîjizât, now known as Tâkîjîjî, 80 km. south-south-east of Tiznit. It was among them that 'Abd Allâh b. Yasîn was born, the originator of the religious and political movement of the Murâbiîn [g.v.]. The Dîjâzûla took an important part in it and some of them settled in the Moroccan plains.

At the time of the first reverses of the Almoravids in the Sûs, the Dîjâzûla rallied round the Almohads (1531/1532) and joined them with contingents. But the loyalty of the latter at Tlemcen, when faced by their kinsmen the Almoravids, was so suspect that the Almohads treacherously massacred them (533/1144). As a result, they gave a welcome to several persons who had revolted against the Almohads and were severely punished.

Later, for almost a century the Dîjâzûla were subjugated by the Banû Yadâr of Sûs. The latter having introduced Arab Bedouin from the group of the Ma’kîl as allies, the Dîjâzûla in the end united with one of their tribes, the Dîwâ’ûn-Hasûn. At the beginning of the 16th century, Leo Africanus described them as impoverished and bellicose villagers; it was from among them that the first Sa’dîd princes recruited their harquebusiers.

During the decline of the Sa’dîd dynasty, the Dîjâzûla’s country was governed by the Dîjâfîardî (?), the tribe of the Samlala, with Ilîgh as capital. Their domination lasted for about fifty years until 1080/1670; it extended over the Sûs and, for the time being, over Dar’a and Sidîmânas (period of Abu Hûssûn, surnamed Abu Dumay’a). At the beginning of the 19th century a new principality appeared, still with Ilîgh as its centre, founded by a sharîf of the Samlala; it was to be maintained until towards the end of the 19th century. Under the name of the “kingdom of Sidî Hûshem, or Hûshem”, it enjoyed among European travellers |.|.|.|.|.|.|.|.|.|.|.|.|.|.|.|.|

The ancient Arab historians of Morocco.

Today the name Dîjâzûla is no longer used except for one of the two ethnic-political clans (lajûf) between whom the tribes of the Anti-Atlas district were divided. The former Dîjâzûla are now the confederation of the Wâltûta (Berb. Idâ Ulîtî); the centre of this district is the Tâzawwâl.

In addition to ‘Abd Allâh b. Yasîn and the two persons who form the subject of the following articles, the Dîjâzûla have produced two other men of distinction: the great saint Ahmad b. Mûsâ al-Samlala (d. 971/1563), popularly known by the name Sidî Hûshem; or (Hûshem)”, it enjoyed among European travellers |.|.|.|.|.|.|.|.|.|.|.|.|.|.|.|.|.|

The Arabic orthography Dîjâzûla (sometimes Dîjâzûla) corresponds with the Berber plurals augûzûlan (archaic) and Iguêlên. Some have tried to identify them with the ancient Getuli. Bibliography: The ancient Arab historians and geographers, in the indexes (in particular those quoted in the bibl. to the article AL-SûS AL-AKSA); Leo Africanus, trans. Épâulard, i, 94, 115; Marmol, L’Afrique, trans. d’Abâlcourt, ii, 42, 75; Justinard, Notes sur l’histoire du Sous, in Archives Marocaines, xxix (1933), 59 and passim; also in Hârûpîûs, v (1935), 269 and vi (1926), 351; Ch. de Pourcâul, Reconnaissance de la carte de Marrûs, 378. (G. S. COLIN)

Dîjâzûla, Abû ‘Abd Allâh Muhammâd b. Sulaymân b. Aqîl Bâkî Dîjâzûla al-Samlala, although both his father’s name and, still more, his grandfather’s are in dispute, according to his biographers and associates was descended from the Prophet, like all founders of religious orders. He was born and bred in the Berber tribe of Dîjâzûla in Moroccan Sûs [g.v.].

After having studied for a time in his native country he went to Fas and entered the madrasa al-şa’îrîn where one can still see the room he occupied. Hardly had he returned to his tribe when he was compelled to go back to north Morocco, after charging himself with a crime he did not commit in order to avoid bloodshed. He went to Tangier, then he sailed for the East, spending forty years (?) there partly at Mecca and Medina, partly at Jerusalem. He returned to Fas, and it was during this second stay that, with the help of books from the library of al-Karawiyûn, he wrote his Dalâ’îl al-şayrî. He was then initiated into the order of the Shâhîlyya, then he withdrew into a hâlû Announcement of the Eternal fourteen years. On leaving his retreat he went to live at Asfî (Safi) where he soon had so great a number of proselytes that the governor of the town felt obliged to expel him. Al-Djâzûla thereupon appealed the help of God against the town which, as a result, was for forty years in the hands of the Christians (Portuguese). It even appears that this Djâzûla’s country was governed by the Dja-fardî (?), or ‘Abd Allâh b. Yasm and the two saints of Marrûs where they were both finally buried side by side, in the place known as Riyâd al-Ârûs where his mausoleum stands. It seems that when the Shaykh was exhumed from his first tomb, his body had suffered no change and it would have been thought that he had just died. Popularly known by the name of Sidî Ben Slûmânn, he became one of the patron saints (tabût al-riqûl) of Marrûkûsh.

There grew up in Morocco a sort of religious brotherhood called the Aşhâb al-Dâllî, whose essential function was the recital of the celebrated collection of prayers. This book of prayers is often carried as a talisman, hanging over the shoulder in an embroidered leather or silver case (lûhîl). Apart from his immense knowledge of Shî‘îsm al-Djâzûla was also a jurisconsult and knew by heart the Mawâdûnu and al-Mîdâshar al-‘arîf of Ibn al-Hâdîjîb. Of his numerous Şûfi works only the following are
now known: 1.—DAL‘IL AL-KHAYRAT WA-DHAWIRAT AL-
ANWAR FI DIKHAR AL-SALAT WALA‘NABI AL-MUQADDIR, a
collection of prayers for the Prophet, description of his
tomb, his names, etc., published several times in
Cairo and Constantinople, and in St. Petersburg in
1842; 2.—HIB AL-FALAH, a prayer, exists in MS. in
Berlin 3886, Gotha 820, Leiden 22003; and 3.—
HIB AL-DIAZULI, now called HIB SUBHAN AL-DI‘IM LA
YASR, which is found among the SHADHILLS, is in
the vernacular.

Al-Diazuli founded a SHADHILLI sect called al-
Djebe, whose adherents are required without fail
to recite the boldsma 14,000 times and the
Dal‘il al-khayrat twice a week, the Dal‘il once
and a quarter of the Kur‘an every night.

Of his disciples two in particular are noteworthy,
Zayn al-Din Abu ’l-Husayn Yabya b. ’Abd al-
Mu‘ti (or more simply Ibn Mu‘ti) b. ’Abd al-Rahman
al-Zawawi, the first grammarian to compose an
AIHFAYA, and Abu ’l-Umr b. Muhammad b.
’Umar b. ’Abd Allah al-Adzi al-Shalibui who
dited his master’s KANAN, copies of which survive in
the Escurial (Cat. Seren-
bour; no. 2, 36, 190).
Al-Diazuli composed the following works: 1.—
Commentary on the preceding work; 2.—
AL-MUKADDIMA AL-QIARZIYYA; 3.—Commentary on the preceding work;
4.—AMALI FI L-AHKAM (dictations on grammar); 5.—
An abridged version of the commentary by
Abu ’l-Fath Uthman b. Dinm on the dihwar
al-Mutanabbi; 6.—Commentary on the U Dil of Ibn
al-Sarradi (grammar).

DZAJZAR PASHA [see supplement].

DJEBELI [see supplement].

DJEHEL, also DJEHEL, in the Ottoman empire an
auxiliary soldier equipped by those to whom the
state assigned a source of income such as timar,
ilk akces, etc. were designated under the general
term of djebeli or ekgendik (q.v.). Certain wafts and
miliks also were required to send such djebeli to
the Sultan’s army (see for example, VAFSILAR DERGISI,
Istanbul 1280 H., 75). In the Ottoman army the djebeli-bashi
was the superintendent of the arms store at the
Porte, see I. H. USUNURULU, KAPTILIK OCAKLI, ii, Ankara
1944, 3-33).

In the 15th century the arms of the djebeli
decided mainly of a lance, bow and arrow, a sword,
and a shield (cf. KANANIM N SULTAN MEHMET DES EROBERER,
ed. F. Krallert-Greevenhout, MÖG, i, 28; B. de La
Broquiere, VOYAGE D’OUTREMERE, ed. Ch. Scheler, Paris
1892, 221, 269, 270). Soldiers equipped with such
arms and armor were known as djebe or djebeli, or
Ubayd Allah. While in Cairo he endured the greatest privations
and, to raise some money to meet his needs and
to be able to complete his studies, he was on several
occasions compelled to take on the duties of imam
in a mosque in the suburbs, refusing to go into a
madrasa.

On returning from the East, and still in the
grip of poverty, he stopped at Bougie for a time,
which he spent teaching grammar.

In 1543/1548-9 he was in Algiers where he taught
his KANUN to Abu ’abd Allah b. Muhammed b.
Kasim b. Mandas, a grammarian and native of
Ashur. Crossing into Spain, he stayed for some time
in Almeria where he taught grammar. It was in this
town that he was taught how to copy of the JSH by Ibn
al-Sarradji which he had studied with Ibn Barri and
which was in his own handwriting. His creditor to
whom this work was given as security disclosed his
plight to Abu l-’Abbas al-Maghribi, at that time
the greatest ascetic in the land, and he in his turn
approached the Almohad sultan on his behalf. The
latter entrusted al-Diazul1 with the khusba at
the great mosque at Marrakush. He died at Azamur
in 669 or 670 or 690, or else in 616 according to
Ibn KunfuS in his WaFAYAT.

1272
and inspection (cf. ʿAshikpaşazâde, Taʾrîkh, ed. ʿAli, Istanbul 1332, 135). Most of the ḍebelis in the ṭimār system were of slave origin. (Ḥāli l Nalâcîk)

**DJEEDA** [see YUDA].

**DJEK** [see SHAHDAG].

**DJELEN, son of Sultan Mehmed II, was born on 27 Şâfar 869/22 December 1459 in Edirne (cf. Wāḥîd-i Sultan Djem, 1). His mother, Čicîk Bâkûn, was one of the ḍebelis in Mehmed II's harem. She may have been connected with the Serbian royal house (cf. Thuasne, Djem, Paris 1892, 2). Her brother, ʿAll Beg, was with Djem in Rhodes in 887/1482 (Wāḥîd-i, 7).

Djem was sent to the sandjāk of Kastamonu as his governor with his two ḍalas in the first ten days (awdâl) of Radjâb 873/15-25 January 1469 (Wāḥîd-i, 1; according to Kemâl Paşâzâde, Tevdrîh-i ʿAlî Osman, ed. Ş. Turan, Ankara 1954, 316, 412, he was sent to Magnisa). There, in these early years, he showed a keen interest in Persian literature (cf. I. H. Ertaylan, Cem Sultan, Istanbul 1951, 11-4). He came back to Istanbul for his circumcision in 875/1470-1 (cf. Kemâl Paşâzâde, 316 and to Edirne (cf. Speculum, xxxv/3, 424) to safeguard Rûmâlî during Mehmed II's expedition against Uzun Hasan in 878/1473. A reliable source (Angiollo, 250-2) tells us about leaving his father for more than forty days, his two ḍalas made Djem decide to take the bayʿa (q.v.) of high officials. On his return Mehmed II, though he forgave the young prince, executed the two ḍalas, Kara-Sûkûmîn and Nasîfî (cf. his letter to Djem in Ferîdûn, Mungheʿûlî, 283). In the middle of Shaʿbân 879/20-30 December 1474 (Wāḥîd-i, 1) Djem succeeded his deceased brother Must‛afâ as governor of Karamân in Konya. Karamânî Mehmed Paşa, grand vizier from 881/1476 to 886/1481, favoured Djem (cf. Al-Šahâbî al-Nuṣâmînîyâ, tr. Mağdûl, Istanbul 1269, 285; Th. Spandouy Cantacasis, Petit traité de l'origin de Turchia, ed. Ch. Schefer, Paris 1896, 43). But Bâyezîd, his elder brother, had become virtually the leader of all the opponents to Karamân, which had been especially ruinous for the holders of wakfs and mulkhs in the empire (cf. art. Mehmed II, in IA). Mehmed II himself had serious complaints against Bâyezîd in the last years of his reign (see the documents in Ertaylan, 51, 53).

When Mehmed II died on 4 Rabî‘ I 886/3 May 1481 Karamânî's enemies, supported by the Janissaries, eliminated him, invited Bâyezîd to the throne and took all measures to block the way for Djem (cf. documents in I. H. Ertaylan, 82, 84). When Bâyezîd was in Istanbul Djem came to capture Bursa (Rabî‘ I 886/May 1481). He had the&qf;#8216;Bâbûl read and coins struck in his name (Neghrî, Qânûnmâmî, ed. F. Taeuschner, Leipzig 1951, 220; the silver coin described by H. Edhem, Mehmâh-i ʿOlgânmînîyê, i, Istanbul 1334, No. 447). He cooperated with the Karamânîs (cf. document in I. H. Ertaylan, 97). His proposal for dividing the empire was accepted by Bâyezîd (Neghrî, 22-3). Defeated by the regular forces of the empire under Bâyezîd at Yenissehir on 22 Rabî‘ I 886/20 June 1481 (cf. Wāḥîd-i, 2; Neghrî, 221, Ferîdûn, Mungheʿûlî al-Sâlûtîn, i, Istanbul 1274, 290). Djem fled to Konya (he arrived on 27 Rabî‘ I 886/16 June 1481 and took refuge in Tarsus, a town under the Mamlûks (I. H. Ertaylan, 12 Dümâs, i, 886/9 July 1481). Djem arrived in the Mamlûk capital on 1 Šâḥân 886/26 September 1481 and was received by Sultan Kâyîtbây as a prince (Wāḥîd-i, 3; Ibn Iyās, Bâdâ’î al-sūrâ, 211, 212; Bulûk 1311, 208). When he made the pilgrimage and returned to Cairo (cf. documents in I. H. Ertaylan, 12 Dümâs, i, 886/7 February 1482), the Karamânî pretender (see KARAMÂN-OGHLI) and Mehmedem, sandjâk-beg of Ankara, urged him to return to Anatolia. Despite the objection of the Mamlûk amirs, Sultan Kâyîtbây permitted him to leave Egypt for Anatolia (Ibn Iyâs, ii, 213; Wâḥîd-i, 5; document in Ertaylan, 121). Djem was in Aleppo on 17 Rabî‘ I 887/5 May 1482; Kâsim and Mehmed joined him in Mamlûk territory. While Djem and Kâsim came to lay siege to Konya, Mehmedem Beg, who had moved towards Ankara, was defeated and killed in Çubûk-Çva. They gave up the siege of Konya and went to capture Ankara, but, at the news of the advance of an army under Bâyezîd II himself, hastily retreated. Djem, changing his original plan of going to Iran, fled to Taš-êli in Karamân (29 Rabî‘ II 887/16 July 1482). There he entered into negotiations with Bâyezîd II who always rejected his demand for the assignment to him of at least a part of the Ottoman territories. He only promised a yearly allowance of one million akçe provided that he would retire to Jerusalem (cf. Wâḥîd-i, 5 and his letters in Ferîdûn, i, 291-2; Djem's original letter in Ertaylan, 127). Kâsim, who never gave up the idea of restoring his principality of Karamân, made Djem decide to pass over to Rûm-ei lel (sea). With this in mind Djem made an agreement with P. d'Aubusson, Grand Master of the Knights of St. John in Rhodes. While governor of Karamân in his father's time Djem had had close relations with P. d'Aubusson (cf. Thuausne, 11-7). The agreement of safe-conduct (text in Thuausne, 60, cf. Wâḥîd-i, 7) dated 24 Dümâs, i 887/10 July 1482 provided that Djem could enter, stay and leave Rhodes as he pleased. He arrived on the island on 13 Dümâs, i 887/30 July 1482 (Wâḥîd-i, 7). P. d'Aubusson wrote to the Pope that Djem should be used as an instrument to destroy the Ottoman empire (Thuausne, 68) while Djem hoped that he could at least reach an agreement to partition the empire with his brother. In Sha'ban 887/September 1482 Bâyezîd agreed to a peace treaty with the Knights favourable to the Order and at the same time his ambassador to the Grand Master made a separate agreement about Djem who was to be detained by the Knights so as not to cause any concern to Bâyezîd (Thuausne, 85; document in Ertaylan, 152). In return he was to pay 45 thousand Venetian gold ducats annually to meet Djem's expenses (24 Shawwal 887/December 1482) (Thuausne, 86; for the negotiations now see the documents in Ertaylan, 156-61). It was understood that the Grand Master had Djem's mandate on this matter (cf. Thuausne, 80, 86 and Bâyezîd's letter to the French King in Ertaylan, 180). With the promise of sending him to Hungary via France (cf. Wâḥîd-i, 8) d'Aubusson interned him in the Order's places in France and at the same time his ambassador to the Grand Master went to intercept him on the sea if he should leave Rhodes (see documents in Ertaylan, 142-3, 188). Actually the Venetians must have attempted to seize him on his way to France (doc. in Ertaylan, 158-9; in Wâḥîd-i, 8, Neapolitan ships). Worried lest Djem should proceed to Hungary, Bâyezîd sent envoys and spies to the West to prevent it (see documents in Ertaylan, 186, 189, 192, 193, 203). His envoy to the French King, Hûseyîn, ought to have sent to assure Djem's detention there (Wâḥîd-i, 12; Thuausne, 110).
As DJem was a valuable hostage bringing political prestige as well as money the rulers of the time were most anxious to have him and the Knights had to be always on guard. In 892/1487 they imprisoned him in the *Grosse Tour* or *Tour de Zeisim*, a fort especially built to intern him near Bourgneuf (*Wâhi'dât*, 16; Thuasne, 157). Sultan Kaytibây who had been at war against the Ottomans since 890/1485 and Matthias Corvinus, Hungarian King, maintained active diplomatic relations with the Knights and the Pope to get DJem (for Kaytibây's ambassadors in Europe see Thuasne, 174, 179, 337). DJem's early attempt to get into contact with Matthias Corvinus had failed (cf. *Wâhi'dât*, 11, in *Muhabarr* 888/February 1483).

When DJem was interned in France Bayezid II put to death Gedik Ahmed Paşa, the strong man of the empire, and DJem's son, Oghuz-khan, who was then only three years old (Shawwâl 887/December 1482) (documents in Ertaylan, 167-8).

Finally the Knights and the Pope Innocent VIII thought it necessary "for the general good of Christendom" to transfer DJem to Rome, where he arrived on 1 Rabî' II 894/4 March 1489. He met the Pope in a royal reception ten days later (description of the reception in *Wâhi'dât*, 21-2; Thuasne, 232) and in their private talk DJem complained that the Knights had lured him and imprisoned him in the *Grosse Tour* and treated him as a prisoner. He wanted the Pope to send him back to his family in Egypt asserting that he would never cooperate with the Hungarians against his co-religionists (*Wâhi'dât*, 21-3).

DJem's presence in Rome increased the international prestige and activities of the Pope who now planned a Crusade against the Ottomans for which, he said in the letters to the Christian rulers, the conditions were most propitious (Thuasne, 241, 260, 265).

Bayezid was most worried by DJem's transference to Rome and he protested against it as a breach of the pact on the part of the Knights. Actually Matthias Corvinus was now pressing the Pope and the Egyptian Sultan was offering 150-200 thousand ducats to have DJem. On 17 Muharram 896/30 December 1489 Bayezid's ambassador Kâtipzâde Mustafa Beg, came to Rome with a letter assuring the Pope of his friendship and asking him to stand by the agreement made with the Knights. He had brought with him 120 thousand ducats representing three years' pension for DJem which was to be delivered after Mustafa's seeing him alive. Mustafa saw him and delivered him a letter and presents from Bayezid. (*Wâhi'dât*, 234). On 23 Shawâb 896/9 June 1493 another ambassador of Bayezid came to Rome to renew the agreement about DJem with Alexander VI, successor of Innocent VIII, and delivered 150 thousand ducats as DJem's pension (Thuasne, 314). The Pope gave guarantees about DJem, and, on the other hand he assured the Christian powers that with DJem in his hands he could neutralize the Ottomans in their plans against Christendom. Soon afterwards he could even expect support from Bayezid II against Charles VIII of France who was about to invade Italy. The French King came to Rome in 898/1494 and compelled the Pope to hand DJem over to him for his plans of crusade (1 Diümâldâ I 900/27 January 1495) (*Wâhi'dât*, 30). He was taken by the king in his expedition against Naples. On the way he fell ill and died in Naples on the night of 29 Diümâldâ I 900/25 February 1495. Rumours spread that the Pope had poisoned him (Thuasne, 365-76; Sa'd al-Dîn, *tâdi al-tawârîkh*, ii, 37; but in *Wâhi'dât*, 30-5, the latter's source, there is no hint at DJem being poisoned; Sa'd al-Dîn must have taken this from Idris Bidal's *Islam i-Charbâyân*). The place of the Pope in the story in some Ottoman chronicles, see 'Ali, *Kunh al-akhbâr*, MS.). DJem left a testament (*Wâhi'dât*, 32) in which he expressed the wish that his death be made public so that the "infidels" could not use his name in their plans of crusade, that Bayezid should have his corpse taken to the Ottoman land, that all his debts be paid, and that his widow, daughter and other kin and servants receive proper care from the Sultan Bayezid.

Bayezid learned of DJem's death through the Venetians on 24 Radjab 900/20 April 1495. He made it known throughout the empire by public prayers for DJem's soul (Ferîdûn, 1, 294), and brought back his corpse, which was embalmed and put in a lead coffin (*Wâhi'dât*, 32), from Naples only in Ramadân 904/April 1499. Buried at last in the mausoleum of Mustafa, his elder brother, in Bursa (cf. I. Baykal, *Bursa ve Amillar*, Bursa 1950, 40), DJem's corpse, too, had been subject of high politics (cf. Thuasne, 378-87).

DJem's will was fulfilled by Bayezid II (an official record shows that his daughter Gawhar Malik Sultan was honored by the Sultan with presents in Ramdân 909/February 1504, cf. T. Gökbilgin, *Ednne ne Ede Lima*, Istanbul 1951, 474). His son Murâd, however, who took refuge in Rhodes, was captured during the conquest of the Island and executed with his son on 8 Safar 927/December 1522. Murâd's wife and two daughters were sent to Istanbul (Ferîdûn, i, 539; Thuasne, 389).

DJem, whose poems were collected in two *dwayne*, one in Persian (ed. in part by I. H. Ertaylan, *Cem Sultan*) the other in Turkish (ed. by I. H. Ertaylan, *Cem Sultan*) was considered as a distinguished poet (cf. Latifi, *Tedhkire*, Istanbul 1314, 64). He is also the author of a *Fâsi reyhdn-i Sultan* DJem (ed. by I. H. Ertaylan, *Fânâmne*, Istanbul 1951).

**Bibliography:** Documents connected with DJem and his own letters that are preserved in the archives of Tokapî Sarayî Müzeesi, Istanbul, have recently been published in facsimile by I. H. Ertaylan (Sultan Cem, Istanbul 1951). These original documents as well as the correspondence of DJem in Ferîdûn (*Muneg'eïl* al-Salâfîn, i, Istanbul 1274, 290-) have not yet been studied properly. They are mostly undated. The *lahir delters* of Konya and Karamans contain a number of documents given in the name of DJem (Bayvekâlet Arşivi, Istanbul, tapu def. No. 119, 392, 393, 32, 40, 58, 809). The *Wâhi'd-i Sultan* DJem (ed. M. 'Arîf, Istanbul 1330 H.) was written or dictated by one of the closest men to DJem, Haydar (cf. M. 'Arîf's introduction) Ayâs or Sinân, who had been with him from his childhood until his death. Sa'd al-Dîn (*tâdi al-tawârîkh*, i, Istanbul 1260, 8-40) reproduced it with a few additions from other sources. *Ghûrânâmne* (Ist. Universite Kutuphanesi, Hülas Etenli Kitapları) is an incomplete copy of the *Wâhi'dât*. The collections of poems of *Ayyun-i Tîrmdhî* (Konya Müzeesi Kutuphanesi 2420/16), of Hamîdî (ed. I. H. Ertaylan) and of Kabûlî (ed. I. H. Ertaylan) contain contemporary information on DJem's life in Anatolia. Donato Da Lezze, *Historia turchesca*, ed. I. Ursu, Bucarest 1917; I. Thuasne, *Djem-Sultan*, *Bcnde sur la question de l'esclavage à la fin du XV*-siècle*, Paris 1892; Hasan b. Mahmûd Bayâtî, *Dîmî-i Diem-dîyîn*, Istanbul 1313 H.; Ahmad Sayyid al-Darradî,

Djemal Pasha (Cemal Pas¸), Young Turk soldier and statesman. Ahmed Djemal was born in Istanbul in 1872. He graduated from the erkîn-ı barîsyey mektebi in 1895, was commissioned as a captain in the general staff, and posted to the Third Army in Salonika. There he joined the Macedonian nucleus of the Young Turk conspiracy, the Oldânmîl Ihtidas ve Terakkl Djemîyyeti (Fourth in Europe as the Committee of Union and Progress), using his assignment as inspector of railways in Macedonia to help spread and consolidate the Committee's organization. Following the 1908 revolution he became a member of the Ihtidas ve Terakkl's executive committee (merkez-i 'umami). He participated energetically in the suppression of the 1909 counter-revolution (the Othmdnli IttiJtdd we Terakkl Djem'iyyeti, [known in the West as the Sublime Porte Incident or Bab-i 'Ali Wab'âst]), Djemal Pasha became military governor and wddî of Istanbul. He strongly supported the Unionists' plans for recapturing Edirne in the Second Balkan campaign and, by his forceful measures in rounding up and deporting opposition leaders in the capital, contributed decisively to the consolidation of the new regime; he could not, however, prevent the assassination, in June 1913, of the sadr-ı umâm, Mahmûd Şhewket Paşâ. From this period onward and until the end of the World War, Djemal was widely considered, together with Enver and Talat Paşås, to be part of the informal dictatorial triumvirate ruling the Ottoman Empire. He was promoted to Lieutenant-General, in December 1913 entered the cabinet as minister of foreign affairs, for his mission of modernizing the Ottoman army. In 1917 he was commander of the Fourth Army; for the Arab point of view, see the memoirs of his chief of staff AH Fuad Erden, Birinci Dunya Harbinde Suriye hdtiralan, i, Istanbul 1954. The most detailed and reliable work on Djemal was the memoirs of his chief of staff AH Fuad Erden, Istanbul [1946], 82; Millî Newslî 132, 314 f.; Djemal's memoirs (Khdîrîd 1913-1922, Derne'dedet 1922, and modernized and annotated edition, Hatidar, ed. Behect Cemal (his son), Istanbul 1959; translations: Erinnerungen eines türkischen Staatsmannes, Munich 1952, and Memories of a Turkish Statesman 1913-1929, London, n.d.) are largely an apologia for his conduct in Syria, as is the "red book" La vérité sur la question syrienne, Istanbul 1916, issued by the Fourth Army; for the Arab point of view, see especially George Antonius, The Arab Awakening, London 1938, 150-52, 185-90, 202-2. On the war years in Syria much information will be found in the memoirs of his chief of staff Ali Fuad Erden, Birinci Dûnya Harbinbî Suriye hdtîralar, i, Istanbul 1954. The most detailed and reliable

works in the Syrian provinces and took an active interest in the archaeology of the region. But there were indications of political disaffection among the local Arab leaders, and to these Djemal reacted with characteristic severity. Eleven prominent Arabs were hanged after a summary trial in August 1915, and 21 more, including a member of the Ottoman senate (mejdîsis-ı 'âydn), in May 1916—this time without formal trial. A month later, the revolt in the Hijjaz under the Sharîf Husayn (with which some of the executed Syrians had been connected) was greatly weakened the Fourth Army's position. Early in 1917 the British began their attack on Palestine, and when Djemal was recalled from the Syrian front at the end of the year, his forces were retreating before Allenby's advance.

Djemal resigned as minister of navy along with the rest of the Talâf Pasha cabinet. On 2 November 1918 he fled with Enver and Talat, going first to Berlin and then to Switzerland. (In the meantime his case was tried before an Istanbul court-martial, and he was ordered to be expelled from the army and was later sentenced to death in absentia). While in Europe, Djemal took service with Amir Amân Allah of Afghanistan and upon the mediation of Karl Radek, travelled to Russia, where he secured the support of Chicherin, Soviet commissar of foreign affairs, for his mission of modernizing the Afghan army. While in Moscow, he offered his support to the Turkish nationalist movement under Mustafa Kemal (Atatiirk), with whom he carried on an intermittent correspondence by letter and telegram beginning in June 1920; together with Enver's uncle Khalil Pasha (Halil Kut), he facilitated the diplomatic contacts between the Bolsheviks and Kemalists, which culminated in the Treaty of Moscow of 1921. In the summer of 1920 Djemal stopped in Tashkent, where he recruited a group of interned Ottoman officers for his mission, and proceeded to Afghanistan to assume his post as inspector-general of the army. He returned to Moscow in September 1921 for further negotiations with the Bolsheviks, with Kemal, and with Enver Pasha (who tried to dissuade Djemal from his mission against Kemal and from his adventurous plans in Uzbekistan). On his way back to Afghanistan, Djemal was shot to death in Tbilisi (Tiflis) on 21 July 1922 by two Armenians, Kerekin Lalayan and Sergio Vartayan—his death apparently being part of the same assassination campaign to which Talat and Sa'id Hallim Paša had earlier fallen victim. He was buried in Tbilisî and later reburied in Erzurum.

**DJEMAL EFENDI** [see DJEMAL EFENDI].

**DJEMTYET-I-ILMIYYE-I-OTTOMANIYYE**, the Ottoman Scientific Society, was founded in Istanbul in 1851 by Munif Pasha [q.v.]. Modelled on the Royal Society of England, and perhaps inspired by the reopening of the *Institut d'Égypte* [q.v.] in Alexandria in 1859, it consisted of a group of Turkish officials, dignitaries and scholars, some of them educated in Europe. It was the third such learned society to appear in 19th century Turkey, having been preceded by the *Endümen-i Deryş* in 1851 [see ANQURAH], and by the "learned society of Beşhtik" in the time of Mahmûd II (see DÜJEDET, Ta'rihî, xii, 182; Lutfi, 168-9; Diewâd, 69, n. 1.; Mardin, 229 ft.). The Ottoman Scientific Society arranged public lectures and courses on premises assigned to it by the government, where there was also a reading-room with a small library. Its most important achievement, however, was the publication of the *Medîniyye-i Fânîn*, the first scientific periodical in Turkey, published monthly and dedicated with official support. Besides the natural sciences, history and geography, politics, economics and philosophy figured largely in the pages of the journal, which introduced its readers to classical and European achievements and writings in these fields, and to the scientific, non-dogmatic study of scientific and philosophical problems. Its rôle in Turkey has been likened by Ahmed Hamdi Tanpınar to that of the *Grande Encyclopédie* in 18th century France. It was of brief duration. During the cholera epidemic of 1865 the journal was compelled to cease publication, and after a brief resumption some years later was finally suppressed in 1882 by Sultan 'Abd al-Hamîd II. *Bibliography:* Mahmûd Dëwâd, *Madrî-n-i Ummîyye-Nâşirî-l-i'ilmîyî-yi-ta'rikhî* [see IDJAR]), Istanbul 1832, 369-72; Schelde, *Ueber den neuerschlossenen türkischen Gelehrten-Verein*, in ZDMG, xvi (1863), 682-4; cf. ibid. 711-4; Ali Fuad, *Mûnîî Paşa, în Türk tarik encümenî mecmaus, n.s.*, 1, 1930, 5-6; H. **DJERBA** [see DJARBA].

**DJERID**, the wooden dart or javelin used in the game of Djerd, i.e., Djerd Oyunu in Turkish and, in the Arabic of Egypt, La'b al-Djerid—a game which was popular and widespread in the Ottoman empire of the 10th/16th-13th/19th centuries. The actual form of the djerd or wooden javelin varied somewhat in the different parts of the empire; its length, moreover, seems to have ranged in general between one and two meters (von Oppenheim, 598-9). The Djerd, in Egypt, consisted of a palm branch stripped bare of its leaves, such being indeed the original sense of the Arabic word *djird*. At the court of the Ottoman Sultan in Istanbul the game of Djerd was much in evidence and never more so than in the second half of the 18th century. It afforded to the pages of the Sultan and to the other personnel of the court an admirable opportunity to show their physical prowess and dexterity. The Djerd Oyunu was in fact a mock battle in the course of which horsemen threw darts at one another, each participant in the game being now the pursuer and now the pursued. Some of the sources declare that the Djerd horsemen sought, during their mounted evolutions, to gain possession of the darts thrown earlier in the game and carried for this purpose thin canes curved at one end (Hobhouse, 634). At Istanbul large numbers of the court personnel often engaged in the *Djerid Oyunu*—indeed rival "factions" existed under the names of Lahanadîl (cabbage men) and Bamyadîl (gumbo men). The game of Djerd demanded a high degree of skill in horsemanship and in the throwing of the javelin or dart (Guer, *Mœurs et usages des Turcs*, ii, 252 gives an interesting account of the methods followed in order to acquire proficiency in this latter art). It meant also for the participants a considerable risk of serious wounds and even of death, since the head was a common target of attack. The Djerd Oyunu was abolished, however, by Sultan Mahmud II (1223-55/1808-39) after the suppression of the Janissaries in 1821/1836, but it survived long after in the provinces as a game popular among the mass of the people. *Bibliography:* Hafiz Khidr El å, *Ta'rikh-i enderîn*, Istanbul A.H. 1276, 6, 111 ff.; 389 ff.; 'Aâtâ, *Tawîk*, Istanbul A.H. 1291, 31 ff.; 127 ff.; E. DJEYED — DJEZAIRLI GHAZI HASAN PASHA

In July 1909, after the Sultan's abdication, Idjihād ceased publication in Cairo, reappearing in June 1911 in Istanbul, where Djewdet had taken up residence. But his troubles did not end with the abdication. In February 1910 the Young Turk cabinet of İbrahim Ḥakki Paşa banned 'the History of Islam' by 'Abd Allah Djewdet Bey, which is directed against the Muslim faith', though it was Dozy's original and not Djewdet's preface to his translation of it which most offended the authorities. He was imprisoned for a month in the winter of 1912, after the Turkish defeats in the Balkan War. His attacks on the official theologians in the pages of Idjihād led to its temporary suspension in 1913 and to a compulsory change in its title on three occasions in 1914. Djewdet's opposition to Turkish participation in the First World War caused the periodical to be suppressed again, from 13 February 1915 to 1 November 1918. Meanwhile he published several non-political works, among them his edition and translation of the Ruhāyyīdī Khayām.

During the grand-vizierate of Dāmmar Fatid Paşa he twice served as director-general of public health. But he again brought himself into conflict with the authorities by an article which he wrote in favour of Bahā'īsm; in April 1922 he was sentenced to 2 years' imprisonment for blasphemy (emhīyya fa'im), but the legal argument dragged on till December 1926. In the result he was discharged and the crime itself was dropped from the new Turkish code. He died on 29 November 1932, working to the end.

His published works, original and translated, number over 60. Among his translations are six of Shakespeare's plays: although all but Antūn ve Kle'opolīt suffer through being made from French versions, they are by no means without merit. He deserves great credit also for making the modern study of psychology known to his compatriots. The long article on Djewdet by K. Siissheim in Ein Suppl., on which the present article is based, gives a complete list of his works and a bibliography, to which may be added: Enver Behnan Şapolyo, Ziya Gökhal, Itibat ve Terakki ve Meşruyet tarikhi, Istanbul 1943, 30, 49-50, 70; Ahmed Bedevi Kuran, Inkillip tarikimız ve Йон Turkler, Istanbul 1945; idem, Inkillip tarikimiz ve Itibat ve Terakki, Istanbul 1948; E. E. Ramsaur, Jr., The young Turks, Princeton 1957; B. Lewis, The emergence of modern Turkey, London 1961.

(D. JERRY LEWIS)

DJEYED PASHA [see AHMAD DJEYED PASHA], one of the most famous kapudan paşas (Grand Admirals) of the Turkish navy. He was born in Tekfurdaği (Rodosto) on the Sea of Marmora, where he is said to have been a slave in the service of a Muslim merchant; on being set free, he took part as a janissary in the campaign against Austria in 1737-39. At the end of the war he went to Algiers where he was received by the Dey and in the end was appointed beg of Tlemcen. Some time afterwards, to escape from the persecution of the Dey of Algiers, he took refuge in Spain. In 1760 he returned to Constantinople and was put in command of a warship by Sultan Mustafa III. In 1766 and 1767 he obtained command of the kapudan (admiral's flag-ship) and in 1770 took part in the naval war against Russia in the Mediterranean. At the vaga
battle of Cæsme [q.v.] the kapudanpaşa of which he was in command caught fire while an attempt was being made to board the Russian flag-ship, and both ships blew up; Hasan Beg, although wounded, stood against Russia; a short time later the battle of the Dardanelles and from there embarked on a daring manœuvre, as a result of which he succeeded in capturing from the Russians the island of Lemnos which they had previously occupied (10 October 1770). For this brilliant feat he was awarded the title of Ġhazi and the position of kapudanpaşa. In 1773 and 1774 he took part, as serasker of Rustuç, in the continental war against Russia; on all counts he at least had the merit of rebordering the fleet which had been destroyed at the battle of Cæsme and of inaugurating the work of reorganizing the Turkish navy with the help of European technicians, a task which was to be continued by Kütük Hüseyin Paşa [q.v.]. His complicity in the fall and death of Khâlîm Paşa, though a proof of his own fidelity to his master, was nevertheless a dangerous action which delayed the revival of the Empire.

(by Uzunçarsîh). DÎJÎBÎL, plural of the Arabic djibal (mountain or hill), a name given by the Arabs to the region formerly known as Mâk (Mâda, Media), which they also called Irâk 'Adâmî, to distinguish it from Arabian Irâk, i.e., Lower Mesopotamia. The province came by its name of Dîjâbîl because it is, except in its north-eastern portion, extremely mountainous; it was bounded in the east by the great desert of Khûrâsân, on the south-east by Fârs, on the south by Khûzîstân, on the west and south-west by Arabian Irâk, on the north-west by Âdîbâyâyân and on the north by the Albuurz range. The boundaries were never well defined and therefore underwent frequent changes. According to Işâhêrî (203) and Ibn Hawkal (267) there were antimony mines at Isfâhân. Owing to the altitude, the climate is in general cold and there is much snow in winter.

border of the steppe desert, in a region where the Transjordan plateau perceptibly rises. Its tortuous relief, which makes it appear almost like a wall coloured with granites and porphyries on the east of Palestine, opens however by deep gashes on to the basin of the Dead Sea which receives most of the water of its streams, and for long supported by exports of bitumen the traffic of its commercial routes. It was always a region of communication, the strategic importance of which was plain at the time of the defence of the Roman times against the invasions of the nomads, and at the time of the struggles between the Franks of Palestine (fortress of Montreal or al-Shawbak built by Baldwin I in 1125) and the Muslim principalities of Egypt and Syria. But it was also, until the first centuries of Islam, a cultivated region where the relatively abundant springs permitted the development of small centres of settled population, still attested by numerous ruins although these have been little studied.

In the Hellenic period this ancient land of eastern Edom, separated from the country of Moab by the traditional frontier of the Wâdî al-Hasâ already mentioned, had seen the growth of Nabataean power, the apogee of which must have marked the first period of Arab penetration to the borders of Palestine. We know that entrepôts of Gebelein, like Bosra, the former Mibîsîr identified with the present-day Arandal (Arindela), provided the present-day al-Djîlani, whose school; almost the only exception are some Zaydi saints of either foreign or local origin are venerated almost everywhere; in the Afar country the (false) tomb of a certain shaykh Abu Yazîd, who is said to have however been conquered without a struggle by Yazîd b. Abî Sufîyân and would have been able to continue to live on its former prosperity. Even al-Makdisî (145) knows only al-Sharat, to which he attributes Zughar as its capital and cites Ma‘ân and Adhruh as its principal towns, and Yâkît does likewise, i.e. locating the village of ‘Arandal there. The term al-Djîlûd has then fallen into desuetude, and in the Mamlûk period writers, such as al-Kalkashandi and al-Umarî, only mention, in the niya‘a of al-Karak, the vilâyats of al-Shawbak, Zughâr and Ma‘ân, extending over all the southern part of the province of Syria.

be Abū Yazīd al-Bistāmī [q.v.] dominates the Goda mountain. Besides the veneration of local inhabitants, pilgrims from the Arab and Somali regions sometimes visit it. In Djibouti there are eight large mosques (djidīs) of masonry, and several other smaller ones of lighter construction. Several Somali tribes or tribal groups (Ise, Izaāk, Darōd) have dedicated small mosques or oratories in the town to their eponymous ancestors.

Since 1957, through the application of the law of 23 June 1956, Djibouti, an overseas territory of the French Republic, is administered, under the tutelage of a Governor representing metropolitan France, by a Council of Government, and possesses a Territorial Assembly elected by universal suffrage.

Conscious of the nobility and dignity of his thoughts and actions, of the beauty and the great usefulness of his art, and of the fact that he must be essentially serious and must reject any conduct incompatible with the impassivity which hilm requires, above all laughter and jocularity. This feeling, based upon a narrow interpretation of Kur'ānic provisions against laughter and jocularity, and on the needlessly stiff attitude of some of his contemporaries, and from the start he set out to justify laughter, and to show how it is the very opposite of this attitude. 

Laughing, according to the Koran, for the sake of the enjoyment of God (cf. XXIII, 112/11; XLIII, 46/47; LIII, 60; LXXXIII, 29), however, the Believers will be rewarded in the hereafter, they will laugh and their faces will be bright and joyous (LXXX, 38-9).

Conscious of the nobility and dignity of his religion, of the gravity of his most ordinary actions and the moderation which he must observe in all things the Muslim, when he does not consider himself compelled to shed countless tears [see bakrī], accordingly feels that he must be essentially serious and and should not fail to quote the favourable traditions at greater length and to repeat a certain number of droll anecdotes.

Indeed, the defenders of the joke are not short of arguments; the basic idea which would serve to justify complete condemnation are in fact contradicted by certain hadiths and reflections of wise Muslims, and it is easy to invoke the help of the Prophet himself who joked in various circumstances, as well as the pious forebears who hardly seem to have observed literally the Kur'ānic provisions against laughter and jocularity. The instance of the great imām of Medina is readily taken as a precedent, and one cannot forget the curious but explicable fact, from the 1st/8th century in the Holy Cities, especially Medina, of the rise of an actual school of humourists whose profession it was to bring laughter and who helped to raise the amusing anecdote, the nādira [q.v.], to the rank of a literary form. Irak was not unaffected by this movement, and it is only necessary to glance through the Fihrist (Caire ed., 201 ff., 435) to get an idea of the wealth of collections of anecdotes, either signed or anonymous, in circulation as early as the time of Ibn al-Nadīm; it is very probable that, insofar as they have a historical existence—and it is known that some of them did indeed exist—these entertainers and their aristocratic clients were scarcely embarrassed by prohibitions which others considered absolute. Collections of this kind, which certainly enjoyed a great vogue, have for the most part disappeared—like the imaginative writings, the richness of which is shown by the Fihrist—probably as the result of puritanical reaction, but they have been partly absorbed in more recent collections, and the literature of adab has preserved extracts from them which testify to the enduring though unacknowledged taste of Arab readers for the anecdote that is piquant, not to say obscene and indecent.

Situated on its moral aspect properly speaking, the comic element in fact raises a literary problem which al-Dījāzī appears, once again, to have been the first to define clearly. Inheriting a religious and literary tradition of long standing, he was shocked by the needlessly stiff attitude of some of his contemporaries, and from the start he set out to justify laughter, which he associated with life, and jocularity, stressing its advantages so long as it was not exaggerated, and showing that Islam was a liberal religion which in no way enforced reserve and severity; from there he went on to attack the boredom bred by most writings which, in his opinion, were too serious, and he suggested a levening of a little hāzī in even the most severe speculations; at times he did not hesitate to interrupt a learned argument to quote some anecdotes, at the risk of discrediting the rest of his work, but he succeeded in harmoniously blending together the serious and the comic in
several of his writings, among which the *Kitdb al-Tarbi* wa'l-tadwir is unquestionably the most perfect example; in a word, he wished the literary form of *adab* to instruct while it amused. On this policy of living in a peaceful harmony, as he has many imitators in both West and East, Going still further he put into practice, although unknowingly, the motto castigat ridendo mores, and wrote the *Kitdb al-Bukhald* in which he used laughter as an element in a moralizing design; in this case, however, his success is more questionable, and Ibn al-Djawz appears to be more or less the only other writer who tried to use laughter freely for a similar purpose (*Akbbr al-\hambd wa 'l-mughal-fjl\in*, Damascus 1345, 2-3). In general, comic writings and even contemporary theatrical comedies (a comedy is called *has\iy\ya*) are never looked on as more than an agreeable diversion, without any moral significance.  

(Ch. Pellat)

**Djidjelli** (see [Djoude]).

Djidjelli (so-called in Leo Africanus; Ziceri, Zigeri-Gigerry, Gigeri in western writers) was a coastal town in Algeria, 70 km. west of Bougie and 50 km. east of Collo. Geographical position 36° 49’ 54” N., 5° 44’ 38” E. Population 21,200 inhabitants (1955).

The ancient town of Djidjelli stood high up, where the citadel still stands, on a rocky peninsula which juts out between two bays, one to the west, small and very sheltered, the other lying to the east in a deep basin divided from the open sea by a line of reefs. The present town was built after the destruction of the Turkish town by an earthquake in 1856, and lies along the sea near to the large easterly bay. The port gains a certain importance from the export of cork which comes from the forests of the Little Kabylia.

Djidjelli is of very ancient origin. The Phoenicians in fact established a trading post at this spot, named Idgil, which later passed into the hands of the Carthaginians. During the Roman period the colony of Idigilii was included in Mauretania Caesariensis, eventually being restored to Setifian Mauretania in the time of Diocletian. It was the seat of a bishopric. It passed successively under the domination of the Vandals and Byzantines. When the Arabs became masters of the Maghrib, Djidjelli no doubt retained its independence. Ibn Khalidn tells us, in effect, that for the early centuries of the Hijira it was in the hands of the Berber tribe of the Kut\ama, who inhabited the nearby mountains (Ibn Khalidn, *Hist. des Berb\eres*, tr. de Slane, i, 198). It seems, however, to have been ravaged and in some measure depopulated, since al-Dakri describes it as a town "now inhabited" (*Description de l’Afrique septen- trionale*, tr. de Slane, 193). According to this geographer, some remains of ancient monuments still survived. The inhabitants exported copper ore from the surrounding mountains to Ifrikiya and to other even remoter regions (al-Idris, III* climat, tr. De Goeje, 214). The Hamm\amids who had incorporated it in their kingdom had a castle built there.

Like various other places on the coast of Africa, Djidjelli passed into the hands of the Christians in the 6th/7th century. In 537/H43 George of Antioch, an admiral of Roger II of Sicily, seized the town and juts out between two bays, one to the west, small and very sheltered, the other lying to the east in a deep basin divided from the open sea by a line of reefs.

The present town was built after the destruction of the Turkish town by an earthquake in 1856, and lies along the sea near to the large easterly bay. The port gains a certain importance from the export of cork which comes from the forests of the Little Kabylia.

Djidjelli is of very ancient origin. The Phoenicians in fact established a trading post at this spot, named Idgil, which later passed into the hands of the Carthaginians. During the Roman period the colony of Idigilii was included in Mauretania Caesariensis, eventually being restored to Setifian Mauretania in the time of Diocletian. It was the seat of a bishopric. It passed successively under the domination of the Vandals and Byzantines. When the Arabs became masters of the Maghrib, Djidjelli no doubt retained its independence. Ibn Khalidn tells us, in effect, that for the early centuries of the Hijira it was in the hands of the Berber tribe of the Kut\ama, who inhabited the nearby mountains (Ibn Khalidn, *Hist. des Berb\eres*, tr. de Slane, i, 198). It seems, however, to have been ravaged and in some measure depopulated, since al-Dakri describes it as a town "now inhabited" (*Description de l’Afrique septen- trionale*, tr. de Slane, 193). According to this geographer, some remains of ancient monuments still survived. The inhabitants exported copper ore from the surrounding mountains to Ifrikiya and to other even remoter regions (al-Idris, III* climat, tr. De Goeje, 214). The Hamm\amids who had incorporated it in their kingdom had a castle built there.

Like various other places on the coast of Africa, Djidjelli passed into the hands of the Christians in the 6th/7th century. In 537/H43 George of Antioch, an admiral of Roger II of Sicily, seized the town and
Dali (al-Hadidj Muhammad b. al-Harsh) attacked the town, and the Turkish garrison fled. Bu Dali proclaimed himself sultan and entrusted the government of the pedjelli—one of his supporters—with the title of agha. Sent with a squadron to punish the rebels, the Franks bombarded the town, without result (1805). But shortly afterwards, having been maltreated by the Kabyles, the inhabitants made their submission to the dey who set up a new garrison in the town.

The fall of the Turkish Government in 1830 gave the people of Djidjelli their independence which they kept until 1839, when the sack of a French trading-post made Marshal Vaëde, the Governor-General of Algeria, decide to have the town occupied, on 13 May 1839. But the garrison, having no communications with the hinterland, remained besieged by the Kabyles until the moment when an expedition led by general Saïd-Armand brought the tribes of the Little Kabylia to submission (1851).

**DJIHAD** etymologically signifies an effort directed towards a determined objective. (Cf. *idjihadh*: the work of the scholar-jurists in seeking the solution of legal problems; *mudjihada* or, again, *djihadh*: an effort directed upon oneself for the attainment of moral and religious perfection. Certain writers, particularly among those of Shi‘ite persuasion, qualify this *djihadh* as “spiritual *djihadh*” and as “the greater *djihadh*”, in opposition to the *djihadh* which is our present concern and which is called “physical *djihadh*” or “the lesser *djihadh*”. It is, however, very much more usual for the term *djihadh* to denote this latter form of “effort”).

In law, according to general doctrine and in historical tradition, the *djihadh* consists of military action with the object of the expansion of Islam and, if need be, of its defence.

The notion stems from the fundamental principle of the universality of Islam: this religion, along with the temporal power which it implies, ought to embrace to whole universe, if necessary by force. The principle, however, must be partially combined with another which tolerates the existence, within the Islamic community itself, of the adherents of “the religions with holy books”, i.e., Christians, Jews and *Madjus* [q.v.]. As far as these latter are concerned the *djihadh* ceases as soon as they agree to submit to the political authority of Islam and to pay the poll tax (*diyya* [q.v.]) and the land tax (*sharadj* [q.v.]). As long as the question could still, in fact, be posed, a controversy existed—generally resolved by a negative answer—on the question as to whether the Christians and Jews of the Arabian peninsula were entitled to such treatment as of right. To the non-scripturaries, in particular the idolaters, this half measure has no application according to the opinion of the majority: their conversion to Islam is obligatory under pain of being put to death or reduced into slavery.

In principle, the *djihadh* is the one form of war which is permissible in Islam, for, in theory, Islam must constitute a single community organized under a single authority and any armed conflict between Muslims is prohibited.

Following, however, the disintegration of Muslim unity and the appearance, beginning in the middle of the 19th century, of an ever increasing number of independent States, the question arose as to how the wars which sprang up between them were to be classified. They were never included within the strict notion of *djihadh*—even in the case of wars between states of different religious persuasion—at least according to the general Sunni doctrine; and it is only by an abuse of language that this term is sometimes applied to them, while those authors who seek for a precise terminology label them only as *kitāb* or *mukātāla* (conflict, war). There is even hesitation in referring to the struggle against the renegade groups in Islam as *djihadh*. The viewpoint of Shi‘ite doctrine is not the same, for, according to the *Shāfs*, a refusal to subscribe to their teaching is equivalent to unbelief (*kafr*). The same holds good, a fortiori, for the Khāridjite doctrine (see further *TAHKIR*).

The *djihadh* is a duty. This precept is laid down in all the sources. It is true that there are to be found in the Kur‘ān divergent, and even contradictory, texts. These are classified by the doctrine, apart from certain variations of detail, into four successive categories: those which enjoin pardon for offences and encourage the invitation to Islam by peaceful persuasion; those which enjoin fighting to ward off aggression; those which enjoin the initiative in attack, provided it is not within the four sacred months; and those which enjoin the initiative in attack absolutely, at all times and in all places. In sum, these differences correspond to the stages in the development of Muhammad’s thought and to the modifications of policy resulting from particular circumstances; the Meccan period during which Muhammad, in general, confines himself to moral and religious teaching, and the Medina period when, having become the leader of a politico-religious community, he is able to undertake, spontaneously, the struggle against those who do not wish to join this community or submit to his authority. The doctrine holds that the later texts may replace the former contradictory texts (the theory of *naskh* [q.v.]), to such effect that only those of the last category remain indubitably valid; and, accordingly, the rule on the subject may be formulated in these absolute terms: “the fight (*djihadh*) is obligatory even when they (the unbelievers) have not themselves started it”.

In two isolated opinions, however, attempts were made to temper the rule in some respects. According to one of these views, attributed to ‘Ata‘i (d. 114/732-3), the ancient prohibition against fighting during the sacred months remains valid; while according to the other, attributed to Sufyān al-Thawrl (born 97/715), the *djihadh* is obligatory only in defence; it is simply recommended (*li-'l-nadāb*) in attack. According to a view held by modern orientalist scholarship, Muhammad’s conception of the *djihadh* as attack applied only in relation to the peoples of Arabia; its general application was the result of the *idjamā‘* (general consensus of opinion) of the immediately succeeding generations. At root, of course, this involves the problem as to whether Muhammad had conceived of Islam as universal or not.

The opinion of al-Thawrl appears to have been adopted by al-Dhahī. The heterodox movement of the Ahmadiyya [q.v.], beginning towards the end of the 19th century, would go further than al-
Thawri inasmuch as it refuses to recognize the legitimacy of the *dżihād* even as a recommended activity. Cf., in the same sense, the doctrine of Bābism (see BAB).

According to the general doctrine of the Shīʿa, due account taken of their dogma concerning the absence of the Imam, who alone has the necessary competence to order war, the practice of the *dżihād* is necessarily suspended until the reappearance of the Imam or the *ad hoc* appointment of a vicar designated by him for this task. The Zaydī sect, however, which does not recognize this dogma, follows the same teaching as that of the Sunnī doctrine.

**Characteristics of the duty of *dżihād***. The *dżihād* is not an end in itself but a means which, in itself, is an evil (*jasād*), but which becomes legitimate and necessary by reason of the objective towards which it is directed: to rid the world of a greater evil; it is "good" from the fact that its purpose is "good" (ḥasan li-husn bayḥšīk).

A religious duty. The *dżihād* has the effect of extending the sway of the faith; it is prescribed by God and his Prophet; the Muslim dedicates himself to the *dżihād* in the same way that, in Christianity, the monk dedicates himself to the service of God; in the same vein it is said in different ḥadīths that "the *dżihād* is the first of the characteristics of Islam"; the *dżihād* is "an act of pure devotion"; it is "one of the gates to Paradise"; rich heavenly rewards are guaranteed for those who devote themselves to it; those who fall in the *dżihād* are the martyrs of the faith, etc. A substantial part of the doctrine reckons the *dżihād* among the very "pillars" (*arkan*) of the religion, along with prayer and fasting etc. It is a duty which falls upon every Muslim who is male, free and able-bodied. It is generally considered that non-Muslims may be called upon to assist the Muslims in the *dżihād*.

A "collective" obligation (*fard kifāya*) in contrast to *fard* (*ayn*). The *fard* (*kiṣyā*) is that duty which is imposed upon the community considered as a whole and which only becomes obligatory for each individual in particular to the extent that his intervention is necessary for the realization of the purpose envisaged by the law. Thus, as soon as there exists a group of Muslims whose number is sufficient to fulfill the needs of a particular conflict, the obligation of the *dżihād* no longer rests on the others. The general teaching is that the duty of *dżihād* falls, in the first place, individually as a *fard* (*ayn*), upon those who live in the territory nearest to the enemy, and that the same holds good in the case of the inhabitants of a town which is besieged. In the organized State, however, the appreciation of the precise moment at which the *dżihād* is transformed into an *ayn* obligation is a matter for the discretion of the sovereign; so that, in the case of general mobilization, the *dżihād* loses, for all the members of the community, its character of *fard* (*kiṣyā*), and becomes, instead, *fard* (*ayn*).

All this implies, however, that for those who hold the reins of authority and, in particular, the sovereign, the *dżihād* is always an individual duty, since their own personal action is necessary in every case. Where there are several independent Muslim states, the duty will fall upon the ruler of the state which is nearest to the enemy.

Further, the duty of the *dżihād* is relative and contingent in this dual sense that, on the one hand, it only comes into being when the circumstances are favourable and of such a nature as to offer some hope of a victorious outcome, and, on the other hand, the fulfilment of the duty may be renounced in consideration of the payment by the enemy of goods reaching a certain value, if such policy appears to be in conformity with the interests of the moment.

**Its subsidiary character**. Since the *dżihād* is nothing more than a means to effect conversion to Islam or submission to its authority, there is only occasion to undertake it in circumstances where the people against whom it is directed have first been invited to join Islam. Discussion turned on the question as to whether it was necessary, on this ground, to address a formal invitation to the enemy. The general doctrine holds that since Islam is sufficiently widespread in the world, all peoples are presumed to know that they have been invited to join it. It is observed, however, that it would be desirable to repeat the invitation, except in cases where there is ground for apprehension that the enemy, thus forewarned, would profit from such a delay by better organizing his defences and, in this way, compromising the successful outcome of the *dżihād*.

**Its perpetual character**. The duty of the *dżihād* exists as long as the universal domination of Islam has not been attained. "Until the day of the resurrection", and "until the end of the world", say the maxims. Peace with non-Muslim nations is, therefore, a provisional state of affairs only; the chance of circumstances alone can justify it temporarily. Furthermore there can be no question of genuine peace treaties with these nations; only truces, whose duration ought not, in principle, to exceed ten years, are authorized. But even such truces are precarious, inasmuch as they can, before they expire, be repudiated unilaterally should it appear more profitable for Islam to resume the conflict. It is, however, recognized that such repudiation should be brought to the notice of the infidel party, and that he should be afforded sufficient opportunity to be able to disseminate the news of it throughout the whole of his territory [see *ṣulh*].

A "defensive as well as offensive character". The *dżihād* has principally an offensive character; but it is equally a *dżihād* when it is a case of defending Islam against aggression. This indeed, is the essential purpose of the *ribāt* [q.v.] undertaken by isolated groups or individuals settled on the frontiers of Islam. The *ribāt* is a particularly meritorious act.

Finally, there is at the present time a thesis, of a wholly apologetic character, according to which Islam relies for its expansion exclusively upon persuasion and other peaceful means, and the *dżihād* is only authorized in cases of "self defence" and of "support owed to a defenceless ally or brother". Disregarding entirely the previous doctrine and historical tradition, as well as the texts of the Koran and the *sunna* on the basis of which it was formulated, but claiming, even so, to remain within the bounds of strict orthodoxy, this thesis takes into account only those early texts which state the contrary (v. supra).

A letter on leather, addressed in Arabic by the Sogdian ruler Diwatisht to the governor Djarrar b. 'Abd Allah about 1010/19, was discovered in 1932 in Zarafshan, Iran. A. Sprenger, 'Das Leben und die Lehre des Mohammed', iii, 240 ff. (E. Tyan)
The identification of this site is somewhat vague in the writings of Arab authors: according to some, it is a village in the Ghuta, where there is a statue of a woman from which a spring gushes forth; for others, the name covers the whole group of districts of Damascus together with the Ghuta. Finally, some writers, among whom are the mediaeval geographer al-Dimashki and the polygraph al-Kalkashandi, who is a pupil of the eye of the world”.

most precisely the limits and divisions of the Djíl-
likyya at his own time, that is to say when the
kingdom of the Taifas was at its height. In the
name from the river Ashtru, an unknown name which
cannot be identified phonetically with the Nalón,
the principal river in Asturias; the third zone is
south-west Galicia, and its inhabitants, owning only
the small enclave between Braga and Oporto, took
from the latter town the name "Portuguese"; the
fourth zone, situated in the south-east, was called
Castile corresponding with the kingdom of Leon
and Lower Castile, at that time with fortresses at
Grañón in the province of Logroño, 25 km. from
Najera, Alcocero on the Oca 30 km. from the same
town, and lastly Burgos caput Castellae. Al-Bakrí
was familiar with Constantine's division of the
Peninsula into six zones; in the second of these
zones, the centre of which was Braga and Britain, he
includet the kingdom of the Taifas; in the Célèsta
names Oporto, Tuy, Orense, Lugo, Britania—now
Santa Maria de Bretonia, in the partido judicial
of Mondoñedo—Astorga, in the province of Leon, St.
James of Compostella—which can only be the town
of the Golden Church (Kanisat al-dhāhab), although
Al-Bakrí makes them two distinct towns—and
lastly Iria—now Padrón in the province of La
Coruña—Batea, an unnecessary name; and Sarria,
35 km. south of Lugo. Ibn ʿAbd al-Mun'im, following
al-Bakrí, describes Galicia as a country with flat,
sandy ground while the inhabitants are depicted as unscrupulous warriors, highly primitive in their
customs. On the other hand al-Maḳḳari praises them
for their beauty and remarks upon the good qualities
of captives; but all are agreed in thinking their
reckless courage equal or even superior to that of
the Franks, and in striking contrast to the character
of the Visigoths and Hispano-Romans before the
Muslim invasion.
Under the one name Djjlikyya Arab historians
include the kingdoms of Asturias and Leon; in their
view, the kings of both are Galician, and the towns
Galician also, Oviedo and Leon like Zamora and
Astorga. Military expeditions by the Caliphate did
not succeed in reestablishing a firm hold upon the
territories south of the Duero which had been lost;
and although ʿAbd al-Rahmān III and al-hāḏiq al-
Mansūr were successful in imposing their authority
over the kings of Asturias and Leon and making them their vassals, the victorious campaigns of the
latter, which reached their apogee with the capture
and sack of St. James of Compostella, completed the
wide ring of devastating raids into the territories of
the Great Djjlikyya; and very soon afterwards,
when the Umayyad caliphate crumbled, it was these
kingdoms, springing from the nucleus of Galicia,
which carried the war into the Muslim territories and,
under Alfonso VI, even captured Toledo.

(A. HUCI MIRANDA)}
Sefarî-Ḥişâr. Mehmed Gûlghen Efendi (Kulliyât-i Ḥudrat-i Ḥuda‘î, 1338-40 A.H.) varies this to Sivri-Ḥişâr and gives the date of birth as 950/1543-4, but to Bursa where he was appointed madrası at the Kök-Ḥişâr of Konya, the latter bringing the date of birth forward to 948/1542-3. Ḥuda‘î studied in Istanbul before becoming an instructor (mu‘âlid) at the madrasa of Sultan Selim in Edirne, from where he went to Syria and Egypt as assistant kâdi (nd‘ib). He went next to Bursa where he was appointed mudarris at the Farhâdiyya madrasa and nd‘ûb at the Court of the Old Mosque (Djâmî-i ‘Attîk). Tradition has it that at this time that he saw in a dream a vision of some people whom he considered righteous tormented in hell, and others in heaven whom he had thought sinners. He thereupon made his submission to Shékîh Uftâde. The Ṭabîyân and the Kulliyât give the date of the conversion as 985/1577, the latter giving another version of the story, according to which Ḥuda‘î first served Uftâde for some three years and was then sent as the latter’s haľîfa to Sivri-Ḥişâr (op. cit., 4 ff.). Going later to Istanbul, Ḥuda‘î first settled in two rooms which he had built of stone next to the masdjid of Mustâlla in Camliçâ, moving on to a room near the mosque of Rûm (the Greek Mehmed Paşa), an area then occupied by the present Djilwatiyya mosque and tekke which was built between 997/1589 and 1003/1595. He also preached and taught in other mosques, chief among them the Conqueror’s mosque (Fatih Djâmi‘î, where, according to Pecevî (Tarîhî, 1283 AH, ii, 36, 357) he was appointed preacher at the instigation of Sunnî Allâh, the hadâ‘îker of Rumeli. This, Pecevî says, was the beginning of his fame. He enjoyed the favour and the respect of the Sultan Ahmed I, owing these, according to the Sişsilâmânâme, to a miraculous interpretation of the Sultan’s dream. This royal favour is corroborated by the respectful references to Ḥuda‘î in both Pecevî and Na‘îmî (Raedât al-Ḥusayn fi ḥukûdat ahbâb al-ḥâsîebîn, 1280 AH, i, 112 ff., 357; ii, 154, 158). Na‘îmî reports, for example, that he was asked to wash the dead Sultan’s body, but that by this time he had excused himself on the grounds of old age, entrusting the duty to his haľîfa Shâbân Dede (ii, 154). Ḥuda‘î per-formed the pilgrimage three times. He died in 1038/1628.

Na‘îmî describes Ḥuda‘î as an eloquent and soft-spoken man. The ḥâşî (continuation) of the Shâhâkî (i, 64) reports that he let his hair grow long, a habit which was imitated by his followers. Ḥuda‘î wrote 18 works in Arabic and 12 in Turkish. These are to be found in the Selim Âğh Library in Üskûdâr (for titles of lost works see Kulliyâtî, 607 note). Most of them are short treatises, including an unfinished Arabic commentary on the Kur‘ân entitled Mâjdûsî. His printed Kulliyât includes a dihâm, as well as an Arabic treatise entitled Risâla fi Tarikhî al-Muham- madîyya, a Turkish Tarikhâmâne and a Turkish rhymed treatise, entitled Nâşîlî al-qârik (Salvation of the Drowned). His most important work is undoubtedly the Wilîyât or collected sayings (in Arabic rendering) of Shékîh Uftâde (MS in the author’s hand, No. 574 in the Selim Âğh Library). Apart from its mystical interest, this contains many important historical references to contemporary men and events. Mehmed Gûlghen Efendi in his edition of the Kulliyât dates many of the devotional poems, one of which commemorates the death of Murâd III (p. 79), adding that many of them were set to music, some by Ḥuda‘î himself. Some of the poems are syllabic in metre and are strongly influenced by Yûnûs Emre. They show Ḥuda‘î as an orthodox箩ayekî, an ascetic (i‘âdî) within the limits of the shirk‘î, hostile to exalted and more-or-less free-thinking şâfs. He even petitioned the Sultan against Badr al-Dîn, the son of the kâdi of Simavna, and his followers, among whom he seems to have been numbered for a time (M. Şaraf al-Dîn (Serefeddin), Simavânlâlî-oghlu Shékîh Badr Badr, Istanbul 1927, 72 ff.).

The Djilwatiyya had an off-shoot in the Hâşîmîyya, founded by Hâşîm Baba (d. 1773), a Dijîwâtî shékîh who was simultaneously a Malâmî (even laying claim to the title of “Pole” or kûthub) and also a Bektâshî (among whom he was known as Baba or Dede and whom also he tried to split by devising an amended ritual).

Bibliography: in the article.

DJM, 5th letter of the Arabic alphabet, transcribed dj; numerical value 3, so agreeing, like dâl, with the order of the letters of the Syriac (and Canaanite) alphabet [see ABDJAD]. It represents a g (occlusive, postpalatal, voiced) in the ancient Semitic (and in common Semitic).

In Arabic, this articulation has evolved: the point of articulation has been carried forward, in an unconditioned way, to the middle and prepalatal region, as a consequence of which it readily developed elements of palatalization (g and d) and affrication (dj). A simplification of the articulation into a spirant became possible, through the dropping of the first occlusive phase in the affricated (dj > j) where j represents a voiced palatal fricative, as French j), through the weakening and disappearance of the occlusive element in the palatalized consonant (d > y). This course of evolution can be written out as follows:

\[ g > g' > d' > d > d' > j \]

It is probable that the sound g of the Semitic djîm began at a very early time to evolve in the field which we are now considering. In any event, from the traditional pronunciation of the readers of the Kur‘ân, from the basic ideas of the Arab grammarians regarding its articulation, and through the modifications in it conditioned by the proximity of other sounds which they have noted (assimilations and dissimilations), one can justifiably conclude that,

1) g is defined as: occlusive, postpalatal, voiced; but g and k (the corresponding unvoiced) are the consonants most influenced, as regards the point of articulation, by the adjacent vowel; they are brought forward to the mediodpalatal region with a palatal vowel, and carried back to the velar region with a velar vowel; postpalatal signifies a medial position: that of g, k, articulated with a vowel a.

2) It would be better to say: for reasons unknown, A. Martinet has tried precisely to discover the causes of this displacement by structural methods, in his study La palatalisation “spontanée” de g en arabe, in DDL, liv/1, 90-102; he has brought out the structural conditioning of the evolutionary processes, by starting from the concept that Arabic emphatics are derived from glottalized consonants. His analysis is original and instructive, but in its turn also is conditioned by the basic hypothesis described above.
from the dawn of the classical period, the occluded g in dilm was opened through palatalization, affrication or even complete spirantization, at least in certain dialects. Naturally, differences analogous to those existing today in spoken languages, concerning the pronunciation of dilm, must have existed between the various ancient languages; some of them had no doubt gone much further than others in evolving towards spirantization. Besides, this process of evolution is still continuing today, as we can see: in Jerusalem, for example, a European observer (Dr. Rosen) has noticed that the affricated d which, as a child he used to hear as the pronunciation of dilm has now, in the pronunciation of the present time, become a palato-alveolar j (see E. Littmann, Neurarabische Volkスポエティオ, 3 n. 1). In certain languages in which the current pronunciation of dilm is now j, dissimilations in d or g can only be explained as fixed survivals of a former condition, at a comparatively recent stage in the development of this consonant (cf. Brockelmann, Grundriss, i, 235-6).

Arab grammarians looked upon dilm as a shadida, and therefore an occlusive, which excludes an affricated d or spirant (j); and as a maghara, which means voiced (Sibawayhi, ii (Paris), 453 and 454; al-Zamakhshari, Muf., 2nd ed. Broch. § 734; etc.). As regards the maḥbraq, al-Khalil’s maḥširiyya (Muf., ibid.) is difficult to interpret, but the description given by Sibawayhi (ii, 453 l. 7-8) indicates clearly that the active organ of articulation is the middle of the tongue (that is to say, the front) and the middle of the upper palate. Elsewhere they rejected (Sibawayhi, ii, 452; etc.) the articulation of dilm like k j (usual in Bagdad and in the Yemen) and of dilm like g, that is to say like g for the first and j for the second, which is a quite justifiable interpretation (as in J. Cantineau, Cours, 72 and others); d (palatalized d) being excluded by the designation of the front (and not the tip) of the tongue, there only remains g*. Arab grammarians appear indeed to consider this to be the only correct pronunciation of dilm. This articulation fulfils the required conditions and in addition easily conforms with the passage of y to dilm practised in certain tribes (Rabin, chart 19). In the traditional reading of Arabic the pronunciation d (affricated, prepalatal, voiced) is generally adopted.

As regards the modern dialects, it is possible to draw up a table tracing the pronunciation of dilm in general lines as follows:

1. Retention of the original pronunciation g: this seems to have been known in Aden in the Middle Ages (according to al-Mukaddasi, 96 l. 14). It is found today in Muscat, in Yemeni dialects and in various Bedouin-dialects in central Arabia. In Dāthlān (south-west Arabia) it is found in the conjugation of verbs with dilm as first radical, when it forms a syllable with the prefixes (e.g.: yigaza*). In Dofār (south-east Arabia) this pronunciation no longer exists save in the recitation of poetry, that is to say it has an archaic and quasi-architectural character. This pronunciation is also the manner of articulation proper to the dialects of Lower Egypt, and of Cairo in particular. Finally, in most of the dialects of north Morocco and also in Nédroma (Algeria), g is by dissimilation the pronunciation of dilm when used in conjunction with a sibilant or palato-alveolar.

2. Pronunciation of dilm as g or d; this is the pronunciation found in the majority of Bedouin-

1) An occlusive dorsal mediopalatal with palatalization.

dialects in north, central and south Arabia. It is also the pronunciation used by the fellaheen and Bedouins of Upper Egypt. It occasionally occurs in Dofār. It is common but not regularly used in various dialects in south-west Arabia. It is attested in a certain number of north Arabian tribes (notably the Sardifye and the Sirhān) and in the Djof; for further particulars see J. Cantineau, Cours, 74; in the other Arabic dialects only a few sporadic examples can be observed.

3. Pronunciation of dilm as y: today this occurs widely in the lower Euphrates region. It is the most widely used pronunciation in Dofār. It is common but not regularly used in various dialects in south-west Arabia. It is attested in a certain number of north Arabian tribes (notably the Sardifye and the Sirhān) and in the Djof; for further particulars see J. Cantineau, Cours, 74; in the other Arabic dialects only a few sporadic examples can be observed.

4. Pronunciation of dilm as d: this pronunciation is already attested in Irāk in the golden age of classical literature (according to Brockelmann’s interpretation, in ZA, xii, 1898, 126 and Grundriss, i, 122). It is found in certain places in central Arabia, it is the form most widely used in the Yemen, it is current in Mecca, in Irāk, among the Muslims in Jerusalem, in Aleppo, and is most widely used in country districts in Palestine, Jordan and Syria; in the Syrian desert it is regularly used among the tribes of nomad-shepherds. In north Africa it is in almost general use in both rural and urban dialects in north Algeria (for more precise details see J. Cantineau, Cours, 75); it has remained in use in Tangier and perhaps in certain places in north Morocco, in cases of gemination (bijudda, "lock of hair", but p. 453)).

5. Pronunciation of dilm as j: in Syria, Palestine and Jordan this is the town-dwellers’ pronunciation: Damascus, Nablus, Jaffa, Jerusalem (Christians), etc. It is the pronunciation of the whole of the Lebanon (except to the north of the Bekaa: d), the Anti-Lebanon and the Djbal al-Drūz. In North Africa it is found in Tunisian, Tripolitanian, Moroccan and south Algerian dialects; it is found in certain places in northern Algeria. Probably it was the usual pronunciation of dilm in the Arabic dialect of Granada.

6. Pronunciation of dilm as z: it must, finally, be noted that in the towns of north Africa one can observe a tendency in certain individuals to open the palatalization of the dilm; this pronunciation appears to be limited to certain social groups (Jews) or to certain social classes (lower-class people in north Morocco), and is not sufficiently generalized to make it possible to refer to anything more than individual pronunciations.

All the pronunciations of dilm given above are voiced. Some unvoiced pronunciations are known, and are extremely local: d in Palmyra and in some villages in the Anti-Lebanon, g in Subhēne (between Palmyra and the Euphrates).

In classical Arabic dilm is subject to certain conditioned modifications (accommodations, assimilations), see J. Cantineau, Cours, 72-3; (for the various modifications in modern dialects, see ibid., 76-9). For the phonological oppositions of the phoneme dilm, see idem, Esquisse, BSLS, xxvi, 102, 18; for the incompatibilities, see ibid., 135.

In Persian the letter diim represents a voiced palatal affricate, which has a voiceless counterpart ć (ćim). The voiced velar occlusive is represented always by ć, although in Arabic loanwords from Persian diim is frequently represented by ć, e.g., ćimās “buffalo”, P. ċdādi-mīch. The letter ćim is formed on the model of diim, with three nūḥas instead of one.

In Ottoman Turkish, diim and ċim are written as in Persian and with the same values, except that in some morphophonemically conditioned situations the voiced/voiceless opposition disappears. In the modern Turkish orthography diim and ċim are replaced in general by ĉ and ĉ respectively with, however, account taken of phonetic values; hence ĉ can on occasion represent original diim.

In Urdu diim and ċim are palatal affricates as in Persian, frequently but not invariably uttered with dorsal contact with the tongue-tip behind the lower teeth. Among less educated speakers, especially in areas in India away from the main centres of Muslim culture, diim is also the pronunciation of the four sounds [džl], [džd], [zld], [zwe], as well as [zwe], which results in occasional false back-formations, e.g., mauzud for mauzud. Both diim and ċim occur with aspiration, written with ćim or čim with the “butterfly” (džačačmi) form of ĥā.

In Sindhi there occurs beside diim and ċim the voiced palatal implosive affricate, written with two nūḥas arranged vertically, ć. Other modifications of diim/čim are the aspirated čim, and the palatal affricate diim and ċim, both, however, written with the sign ć.

Bibliography: see Bibliography to Dal, ii, (J. Burton-Page).

DJIMAT (Malay), an amulet, more particularly a written amulet. The word is of Arabic origin = jism, “a body.” (Ed.)

DJIMMA, known also as Djimma Kakkā, “Djimmā of the confederacy”, and Djimmā Abbā Diiffār, from the name of its most famous king. This state lies in the angle formed by the Omo and Godjeb rivers in south-west Ethiopia, and was inhabited by Sidamā (Hamites) of the same stock as the neighbouring kingdom of Kafa; the south-east corner of Djimmā, called Garo, was inhabited by the Bogha, who are mentioned in an epigraph of Yeshak of Ethiopia (1412-27) together with the neighbouring state of Enäryā, later known as Limmu and Limmu-Enäryā (I. Guidi, Le canzoni gees-amarina, in Rend. Lim., ii, 1889). The Bogha were among the pagans forcibly converted to Christianity by Sarṣa Dengel of Ethiopia about 1850. When the Galla invaded Ethiopia they reached this region about the middle of the 16th century, and began to found small monasteries in the Gibb region, the first of which was Enäryā, where a Galla dynasty was founded about 1550-70. In Djimmā six tribes of the Djimmā group formed the basis of the Galla state, whence the name Djimmā Kakkā. Nominally Christian under Ethiopian rule, which ended about 1852, and pagan under the Galla founders of the new dynasty, a Muslim element soon entered, but died out together with Christianity during the 18th century. A monarchy is repugnant to the Galla, and its development was due to the influence of Islam. In Djimmā alone of the five Galla monarchies was the kingship allowed to survive after the Ethiopian conquest between 1891 and 1900. The language spoken here is Galla and there has been a blending of Galla and Islamic institutions. The king has both a Galla war-name, e.g., Abbā Dijfār, “owner of a dappled horse”, and a Muslim name, Muḥammad b. Dā’ūd. The kingship was hereditary, passing to a brother if there was no son. Owing to the influence of the monarchy, which was inconsistent with the Galla ideal of a tribal ruler who held office for only eight years, the Galla gada-system became much curtailed, and eventually the gada-grades were reduced from five to two. Islam was re-introduced early in the 19th century, and by the last quarter of the century Djimmā had become a centre of Islamic learning in western Ethiopia, though it caused no real anxiety to the kings of Ethiopia; nevertheless this did prevent Menilek II from annexing Djimmā to his kingdom, along with the rest of the tributary states that lay round Ethiopia. For the plan of the re-introduction of Islam till the end of the century the names of eight kings are preserved, the best known being Sanna Abbā Dijfār I; the last king was also called Abbā Dijfār. The trade route from Kafa to the coast lay through Djimmā; since it was a fertile land, the presence of traders from outside encouraged the development of agriculture; wheat, coffee, cotton, and aromatics were its chief products. It was also a centre of the slave-trade. Under Ethiopian rule the kingship was allowed to remain, the king being a vassal of the king of Ethiopia.

DJINAH (Indian-Pakistani equivalent of Djanāb; English spelling: JINNAH), MUḤAMMAD 'ALI Muḥammad 'Ali Djinah, known by his fellow-countrymen as the Khād-i A'īsam, was the founder of the state of Pākistān. He organized and led the Pākistān movement and became the first Governor-General of the new state.

It is generally accepted that he was born on 25 December 1876, though some records give dates in 1875 and 1874. His father was a moderately wealthy merchant, a member of a Khād family living in Karachi. His early education took place in Bombay and later at the Sindh Madrasat al-Islām and the Missionary School High School in Karachi. After matriculation he was sent to England in 1892 where he qualified for the bar (Lincoln's Inn) in 1896.

While in London, during the final days of Gladstonian liberalism, he showed a keen interest in public life, as an admirer and supporter of Dādābhā'ī Nawōrāji, the first Indian to be elected to the House of Commons. At this stage also he assumed the outward appearance of an Englishman. Until the last year of his life he normally wore immaculate English clothes and he used a monocle. All his important speeches were delivered in English and even his

Encyclopaedia of Islam, II
broadcast on 3 June 1947 on the acceptance of the partition scheme was translated into Urdu by others. In short, he had become "Mr. Jinnah".

He returned to India in 1896 and in the following year began to practise law in Bombay. After several lean years he became quite rapidly a leading member of the Bombay bar. His mind was always that of the lawyer. His speech aimed at precision rather than eloquence. He had little patience with those who used words as symbols to awaken emotions. He addressed himself to the British government or to the educated Indian minority. When he spoke to the masses it was in English and in the same terms he employed in writing a brief. If the masses responded it was to the man's intensity and uprightness, not to the warmth of his words.

Jinnah's first venture into Indian politics was as a member of the Indian National Congress. He attended the 1906 session as private secretary to Nawroji who was then Congress President. Three years later, in January 1910, he took his place as a member of the first Imperial Legislative Council. He was elected to represent the Muslims of Bombay, and he was the first non-official member to secure adoption of a legislative Act, in this case an Act validating Muslim waqfs.

In 1913, while remaining an influential figure in the Congress, Jinnah joined the Muslim League. He was to serve, said Gokhale, as the "ambassador of Hindustan-Muslim unity". He took the leading role in negotiating the "Lucknow Pact" whereby the Congress and the Muslim League agreed on a scheme of constitutional reform containing guarantees for the rights of the Muslim community. Jinnah presided over the 1916 session of the League which approved these proposals.

The years after 1918 brought a wave of radicalism and violence into Indian politics. Jinnah, with his repeated emphasis on what he called "constitutional lines" felt himself being supplanted by the extremists. In 1919 he resigned from the Legislative Council in protest against the extension of repressive police authority. The following year he parted from the Congress these proposals of non-cooperation. In addition to his break with the Congress, Jinnah found himself separated from many of his fellow Muslims who were ardent supporters of the Khilafat movement. The Muslim League declined in importance and was internally divided.

Jinnah was married for the first time as a child, before he left for England in 1892, but his wife died whilst he was away. His second marriage, to the daughter of a rich Parsi, took place in 1918. It was not a success and they had separated before her death ten years later. Throughout most of his life his sister Fatima looked after his domestic needs.

Between 1920 and 1930 Jinnah played a part in Indian public life but he cannot be said to have been a leading figure and certainly not the sole or principal spokesman for the Indian Muslims. He was elected to the new Central Assembly and was a delegate to the first two Round Table Conferences (1930-1). At this stage he began to practise at the Privy Council bar and established a home in London, paying only intermittent visits to India.

His final return took place in 1935, after the enactment of the new constitutional provisions of the Government of India Act. Almost at once he began to move toward control of the Muslim League and its role as the main instrument of Muslim nationalism. In 1936 he became President of the Parliamentary Board of the League, the committee that took charge of the election campaign. Their object was a programme of mass contact but they were not markedly successful as was shown by the poor electoral record of the League in 1937. The Congress, which had done well, now assumed power in the majority of the Provinces and seemed to have established a claim to be the sole heir to British authority. Jinnah, now President of the League, moved to dispute this claim, stating that no further constitutional steps could be taken without the consent of the Muslim nation, represented by the League.

Jinnah's first line of argument was that the Muslims could not expect full justice in a political society with a Hindu majority. The League gave much attention to Muslim grievances against Congress provincial ministries. In 1939, after the outbreak of war, the Congress governments resigned. Jinnah, giving cautious support to the war effort, was able to strengthen his organization and to bring about, during the war years, League participation in the government of several provinces.

The second main argument was now launched. It consisted in the assertion that a separate state for the Muslims of India was possible and necessary. Muhammad Iqbal had suggested such a scheme in 1930 but it was not adopted as a political programme until the meeting of the Muslim League in Lahore in March, 1940. This was the Pakistan Resolution.

It was not yet clear whether Jinnah could validly claim to speak for Muslim opinion. In Bengal, the Pandit, Sindh and the North-West Frontier Province, all Muslim-majority areas, the League was unable to exercise effective and continuous control. However, in the elections of 1946 the League won almost all the Muslim seats and Iqbal was to be nominated as spokesman for the overwhelming majority could not be denied.

He participated actively in the negotiations leading to the partition scheme, insisting always that the Muslims must be allowed to choose a separate state. In June 1947 his object was accomplished and the state of Pakistan came into existence at midnight on 14-15 August. Jinnah, General and President of the Constituent Assembly, was elected Governor-General and President of the Constituent Assembly. His first efforts were directed to ending communal bloodshed and hatred. He was, by this time, seventy years old and his health was showing signs of collapse. Nevertheless he presided over the establishment of the machinery of government and was in effective control of policy. During 1948 he became progressively weaker and on 11 September he died.

He was a man who changed the course of history, for, while there was Muslim national feeling before Jinnah, he gave it self-confidence and organization. He was a man of rigid integrity, perhaps hard to love but made for admiration. He was a nationalist who seemed at times to be more English than Indian; he was a Muslim who made few references to God or the Prophet or the Koran. He was not a deeply religious man. To him the Muslim heritage was a civilization, a culture and a national identity. And he founded a state just as surely as had Babbur.

**Bibliography:**
intelligent, imperceptible to our senses, capable of appearing under different forms and of carrying out heavy labours (al-Baydawi, Comm. to Kur'an, II, 32). Ibn Khaldün, for example, reckoned all references to the djinn among the so-called mulkubik passages of the Kur'an, the knowledge of which Allah has reserved to himself (Kur'an, III, 5). These different attitudes are excellently treated in the Dict. of techm. terms, i, 261 fl.; cf. also al-Razi, Majatis, lxiii.

III. The djinn in folk-lore. The transition to this division comes most naturally through the use of the djinn in magic. Muslim theology has always admitted the fact of such a use, though judging its legality varyingly. The Fihrist traces both the approved and the disapproved kinds back to ancient times, and gives Greek, Harránían, Chaldean and Hindú sources. At the present day, books treating of the binding of djinn to talismanic service are an important part of the literature of the people. All know and read them, and the professional magician has no secrets left. In popular stories too, as opposed to the tales of the professed littérateur, the djinn play a large part. It is so thorough a feature of the Thousand and One Nights, especially in that class of popular religious novels of which Well published two in his Translation of the Nights, namely the second version of "Dijujhar the Fisherman" and the story entitled "All and Zähir of Damascus". In the Thousand and One Nights, particularly in the first part, the djinni generally turns against any human being out of spite to get the better of him; roaming the world at night (Night No. 76), the djinni or fairy, pari transports a man for immense distances, to make him lose his way; he turns him into an animal (a monkey, in No. 48, a dog, in No. 5 and 66); but on the other hand he sometimes restores his human form (No. 5 and 34); he protects the man undeservedly duped by one of his fellows (No. 47); he teaches man how to free someone from bonds; he makes the world visible, by means of exorcism (ibid.); moreover, djinni and fairies sometimes join together to do good (No. 78); on the other hand, man can defend himself and by his cunning has the djinni at his mercy (like the fisherman who imprisons him in a jar, No. 11); and sometimes a man harms djinn unintentionally (a man eating dates throws away a stone which kills one of their children, No. 1). Still newer to the ideas of the masses are the fairy stories collected orally by Artin, Östrup, Spitta, Stumme, etc. In these stories the folk-lore elements of the different races overcome the common Muslim atmosphere. The inspiration of these tales is more characteristic of the peoples of North Africa, as well as of the Egyptians, Syrians, Persians and Turks rather than of Arabia or Islam. Besides this there are the popular beliefs and usages, so far very incompletely gathered. Throughout this field also there are points of contact with the official Islamic view. Thus, in Egyptian popular belief, a man who dies by violence becomes an 'ifrit and haunts the place of his death (Willmore, Spoken Arabic of Egypt, 371, 374), while in the Islam of the schools a man who dies in deadly sin may be transformed into a djinni in the world of al-Barzakh (Dict. of techm. terms, i, 265). Willmore has given no details on the djinni in Egypt. For South Arabia see Abdullah Mansur, The land of Uz, 22, 26, 203, 316-20. See also R. C. Thomson in Proc. of Soc. of

"djinn", and only constructed different theories of their nature and their influence on the material world. The Comm. to Kur'an, LXXII, 1; al-Damiri, Hayawán, s.v. djinn. They were created of smokeless flame (Kur'an, LIV, 14) while mankind and the angels, the other two classes of intelligent beings, were created of clay and light. They are capable of salvation; Muhammad was sent to them as well as to mankind; some will enter Paradise while others will be cast into the fire of hell. Their relation to Iblis the Shaytan, and to the Mutuza, ventured to doubt the existence of
**DJINN**

In Turkish folklore. Of the words used to denote these, *cin* (djinn) is the most common; *ecini* (edjinni) is a variation of it. The word *cin*, in use only in the form *cinh* or *cinne*, has in certain instances the same sense as *djinn*; it is a corruption of *ins*, from the group *ins wa djinn* (= "men and djinn"), which occurs frequently in the Küran. In everyday speech as well as in stories of fantastic adventures and tales of the supernatural, the word *peri* is often taken as a synonym of *djinn*; the two terms are often confused even in traditions, nevertheless the former really belongs to the realm of supernatural tales where the word *djinn* is less common. In parts of eastern Anatolia (at Tokat and Akalm, *iyi saatte olsunlar* have to be taken with regard to certain places such as water-clossets, remote corners where rubbish is piled or where dirty water overflows, at the foot of trees, quiet dirty corners on river-banks, the base of walls above the gutter, enclosed dark places in houses (like lumber-rooms) etc.

*Diinn* appear to men in many different forms, most often in the guise of animals, such as; — a black cat (without any light markings), a goat (kid, or he-goat), a black sheep, a duck, a hen with chicken, a buffalo, a fox; or else in human shape; either as men of ordinary size or dwarfs, and sometimes as men of gigantic stature (many who claim to have seen them describe them as quite white, thin, and as tall as a minaret or a telegraph pole); they also appear with the features of a baby wrapped in its swaddling-clothes. In the magic arts of the negroes in Turkey, the snake is regarded as the animal in which *diinn* are incorporated. Wolves and birds are the only other living creatures to whose attacks *diinn* are vulnerable.

Their behaviour towards human beings is of three sorts: if people understand how to refrain from irritating them, they do no harm: they are indifferent or, at times, are satisfied if they tease people by playing various amusements, street tricks, etc., whose actions deserve some reward they bring great benefits; the imprudent and insolent they punish by inflicting illnesses or bytorments. Some tales, and in particular some legendary stories, give accounts of happenings at certain places, in which persons who have suffered strange treatment by these supernatural beings are mentioned by name (for stories of this type see Eberhard-Doratay, Typhen türkischer Volksmärchen, Wiesbaden 1953, types no. 67, 67 III, 67 V, 118 and the words: Geister, Peri, Teufel in the index; Melahat Sabri, Cihner in Halk Bilgisi Geist, Peri, Teufel in the index, 143-51; the same article is repeated in the form of onion and garlic peel, the former into silver.

Interfere in family life and wreck marriages; such incidents are due to the young man or woman having irritated a *djinn* in some way, or else because one or other of them is loved—and indeed "regarded as a spouse"—by one of these supernatural beings, either by a male or female *djinn* according to the circumstances.

Methods of avoiding *djinn* and their misdeeds can be put into two categories: precautionary measures which anyone can take of his own initiative, and measures to be taken in cases requiring recourse to a specialist. Some of the precautions to be taken in order not to irritate *djinn* are as follows:—so far as one can, to avoid the places they frequent, never to "profane" those places (by soiling, spitting, urinating etc.), always to say a besmele (bišm-illâh) or a destâr (this word means "with your permission") before each action and before moving anything, never to forget to say these words, e.g., each time any object or article of clothing is put away in a chest or where any provisions are put in store etc., so that the *djinn* may not consume them.

In serious cases of illnesses or infirmities thought to have been incurred through *djinn*, recourse is made to specialists, who are *bhdóa* or *shaykhs* or even simple people without any religious title who have never received any training in the art of medicine. They are called *huddams*, "masters—or patrons—of servants", the *djinn* being considered as servants or slaves entirely subject to them. The procedure for exorcising takes various forms, but the principle is invariable: the sorcerer (who is also given such names as *cindar* [*djindár*] or *cinî* [*djindîl*], signifying the captor of a *djinn*), invokes the *djinn* or *djinn* thought to be responsible for the trouble, or to be able to reveal it; when he succeeds in calling up the guilty *djinn*, he negotiates with him, either with apologies or with threats, to free and cure the victim. Some of these exorcisms are carried out in the absence of the victims; others require their presence—as is the case in the magic arts of the Turkish negroes (natives of Africa) who, before 1920, and especially in big towns like Istanbul and Izmir, set up corporations of exorcisors under the godgias, their spiritual leaders; the efficacy of their magic cures was acknowledged by the white population also.

(On this subject see: A. Bombaci, *Pratichè magiche africane*, in *Folklore*, iii, no. 3-4, 1949, Naples, 3-11; P. N. Boratav, *The Negro in the Turkish folklore*, in *Journal of American Folklore*, lxv (1951), no. 251, 83-8; P. N. Boratav, *Les Noirs dans le folklore turc et le folklore des Noires de Turquie*, in *Journal de la Société des Africanistes*, xxviii (1958), 7-23. Bibliography: In addition to the works quoted in the text of the article, the author has made use of materials resulting from his own research, together with the texts of tales, legends and fantastic stories in his collection of manuscripts. The lack of any single comprehensive work on this subject is a gap in Turkish folklore studies.)

India: In India one encounters three distinct concepts of *djinn*—traditional or orthodox, based on literal interpretations of the Kur'anic verses; superstitious, as revealed in the popular superstitions; and rationalistic, as attempted by Sir Sayyid Ahmad Khân and others of his school of thought.

In traditional or orthodox accounts the *djinn* is represented as a creature created from fire, unlike man who has been created from clay. The *djinn* are invisible and aery (*Lughât al-Kur'ân*, 'Abd al-Rashîd Nu'mânî, ii, 254-6). Almost all the Indian scholars on exegesis have held this view. lnayat 'Ali mentions four types of *djinn*: (i) aerial creatures, without any physical form, (ii) snake-like creatures, (iii) those who shall be subjected to the same process of divine dispensation on the Day of Judgment as human beings, and (iv) creatures with beast-like features (*Mishbâh al-turûk fi lughât al-Kur'ân*, Dihl 1357 A.H., 85). Some jurists have, despite their belief in the supernatural character of the *djinn*, considered them so real as to deal with hypotheti-
cal problems arising out of human marriages with *djinn*. (b) It is popularly held that the *djinn* are invisible creatures with great supernatural powers and with an organization presided over by a king. Even in the educated circles of Muslim society, this concept was common in the middle ages. During the time of Ileîmîsh, an area in the vicinity of the Hawêl-i Shamsî of Dihlî had the reputation of being the abode of *djinn* (*Mishbâh al-falahat*, Ms personal collection). Djamalî [g.] refers to a guest house which was constructed by Ileîmîsh (607-33/1210-35) and was known as Dar al-Djinn because it was thought to be frequented by the *djinn*. A Shaykh al-Islâm of Dihlî, Sayyid Na'îm al-Dîn Şuğîra, accommodated Shaykh Djalal al-Dîn Tabrizî in this house in order to test his spiritual powers. The Shaykh sent his servant to place a copy of the Kur'ân in the house in the absence of the victims; others require their presence;(*Siyar al-Arîfîn*, Dihl 1311 A.H., 165, 166). This has given birth to a superstition that before a new house is occupied, a copy of the Kur'ân should be placed therein in order to expel the *djinn*. Since it was believed that the *djinn* could do harm to human beings and also cause serious ailments, many religious writers deal with incantations and litanies to counteract their evil effects. Şâh Wall Allâh (d. 1763) suggests methods to expel *djinn* from houses (*Kawal al-Djamiî*, Kânpur 1291 A.H., 96, 97).

(c) An attempt to rationalize the concept of *djinn* by divesting it of all supernatural and superstitious elements was made by Sayyid Ahmad Khân. He held the view that by the word *djinn* the Kur'ân meant Bedouins and other uncivilized and uncultured people. To him the expression *djinn wa l-'ins* which occurs fourteen times in the Kur'ân meant 'the uncultured and the cultured people'. The different contexts in which the word *djinn* is used in the Kur'ân have been explained by him as references to different qualities and characteristics of these 'people' (*Tafsîr al-Kur'ân*, iii, 'Allgaha 1883, 79-95); this point of view was subjected to criticism by the *ulamâ*.

for hantu (evil spirit); in some languages (e.g., Gayo) it is used as a general name for all kinds of indigenous spirits.

(DINN, yévo, genus, is the first of the five predicates al-alf ‘al-khamma (generic species, difference, property, accident) as given by Porphyry in his Introduction (Isagoge) to Aristotle’s Logic—introduction which is incorporated by the Muslim philosophers in Aristotle’s Organon—and its logical sense (for also its common sense of “race”, “stock”, “kin”, is mentioned by Aristotle, Porphyry and the Arab commentators) is said to be that which is predicated of many things differing in species in answer to what a thing is, e.g., animal. These predicables are also called al-ma‘sīni al-thi‘iya, “intentiones secundae” in scholastic terminology, to distinguish them from al-ma‘sīni al-‘alā, “intentiones primae”. According to the later Greek and to the Muslim commentators the first intentions refer to the particular things, the second intentions refer to the ten categories which are themselves the highest genera of particular things and to which the Muslim philosophers give the name of the al-adīnās al-‘azhara, the ten genera.

As to the problem of the objective reality of the genera, species and, generally speaking, of universals, it is not discussed as much in Muslim philosophy as in Scholasticism, although it is one of the fundamental problems in Aristotelian philosophy and constitutes one of its fundamental difficulties (cf. for this and the following the article DJAWHAR). There are three possible views, the realist view that universals exist objectively, the conceptualist view that they are but abstractions of the mind without a corresponding reality, the nominalist view that they are but names without any reality. Now Aristotle holds at the same time the conflicting realistic and conceptualist views. On the one hand he holds the immanent realistic view that universals form a constitutive part in individuals, Socrates, e.g., is a man because the specific, the universal form in his own nature is neither universal nor individual; if “animal” by itself were universal, there could not be several animals; if it were individual, there could not be the universal “animal”, individuality and universality are therefore accidents added to it, the former in the exterior world, the latter in minds (this passage has been discussed by I. Madkour in his introduction to al-Madhkal 63, and his L’Organon d’Aristote dans le monde arabe, Paris 1934, 185 f.). Although Averroës often polemizes against the transcendent realism in Avicenna’s theory of the dator fornumarum, he holds fundamentally the same position and he says e.g.: “Just as artificial products can only be understood by him who has not made them, because they take their origin in an intellect that is in the form which is in the soul of the artisan, so the products of nature prove the existence of supermundane Forms which are the causes that the sensible substances are potentially intelligible”. And he adds: “This is the theory to which the partisans of the ideas tended, but which they could not attain” (cf. my Die Epitome der Metaphysik des Averroës, Leiden 1924, 42). The Muslim theologians, generally speaking, are nominalists. They argue against the conceptualist side of the philosophers’ view by asking: “How can knowledge give any truth, if reality is individual and knowable universal, since truth is the conformity of thought with reality?” The theologians do not admit the objective reality of forms, all reality is individual, universals exist only in minds, they are sīāt nafsīyya, spiritual qualities which, however, are not wholly real, but something intermediate between reality and unreality, or unreal, that is to say they are hādīt, modi, or ma‘sīnī (the Stoic λεκτά or συμμακρομένα, ma‘nī in this sense is the literal translation of συμμακρομένον, meaning, something meant, cf. Lane, s.v.). We find also the absolute denial of universals. Since for their sensualism thinking is nothing but the possession of representations and you cannot represent a universal e.g., “a horse”, but only a particular, e.g., a definite horse, the universals are totally denied by then, (cf. Gazzzālī, Tahāfūt al-Falāfasīla (ed. Bouyges, Beirut 1927, 330).

DJINS is the Arabic word used at the present time to denote “sex”, the adjective djinsi corresponding to “sexual” and the abstract djinsīyya to “sexuality” as well as “nationality”. The juridical aspect of sexual relations has already been examined in the article BAH, and is to be subject of further articles, NIKĀH and ZINA; the present review will be limited to general considerations on the sexual life of the Muslims and the place that it occupies in literature.

Pre-Islamic poetry, in so far as it is authentic, indicates that a certain laxity of behaviour was prevalent among the Arabs of the desert (Lammens, Le berceau de l’Islam, 276 ff.), and the “reunions galantes” of the contemporary Touaregs, described by Father de Foucauld (in his Dictionnaire touareg-français, Paris 1952, ii, 559 ff., s.v. akhd), probably are not far removed from pre-Islamic practices. The nasib of the classical kāfīda, markedly erotic in character, is no doubt an indication of the existence of temporary unions in the encampments; in any case, its position at the head of the poem is evidence of the importance which the ancient Arabs attached to love, and especially sensual love, particularly since a number of lines of verse as realistic as those of Imru’ al-Kays have probably been deleted, through puritanical reaction, from the ancient poems collected in the 2nd and 3rd/third and
9th centuries; a further indication of this interest is shown by the richness of the vocabulary relating to the sexual organs, which is no doubt mainly due to the ubiquity of slang terminology, which is confirmed at this present time by an unpublished study by Dr. Mathieu on the prostitutes of Casablanca. Incidentally we know that prostitution (bigazah), which is to be discussed in the article zina, was already in existence and that prostitutes were distinguished by a special emblem which floated over their tents (see Caussin de Perceval, Essai). It does not seem that Islam has in practice made many changes from the earlier state of affairs. Certainly the Kur'an, in several verses (IV, 30; XVII, 34; XXIII, 5-7; 35; XXIV, 31, 33; LXX, 29-31), enjoins chastity, but only outside the bonds of marriage or concubining (see S. H. al-Shamma, The ethical system underlying the Qur'an, Tübingen 1959, 95 ff. and bibliography); it condemns prostitution (XXIV, 33) and, above all, fornication (see zina), but the conditions laid down by the fuhudah for the legal proof of zina are such that it more often than not escapes punishment. Marriage, as conceived by the Kur'an, has a two-fold object: it is intended to allow the male, who is largely favoured since it is he who benefits from the privileges of polygamy and repudiation (while women are in certain cases even deprived of the right of giving their consent), to satisfy his sexual needs lawfully, and to ensure the perpetuation of the race. That is why celibacy is in no way recommended, and it is even recommended to give the celibate in marriage (XXIV, 32). The Kur'an is realistic where it deals with sexual pleasures which it authorizes and the enjoyment of which it encourages, on the sole condition that Believers should make use of one or more partners (at their disposal, marriage and concubining [see 'abd]). The celebrated verse (II, 223; see also 183, 222) "Your women are a field for you. Come to your field as you will" may be compared with some of the suiras, such as that of Joseph (XII), or verses such as those which describe the delights of paradise and, above all, the after-life (LV, 56, 70, etc.).

The Prophet himself is quoted as having made use of one of the courtesans (at his disposal, marriage and concubining [see 'abd]). The celebrated verse (II, 223; see also 183, 222) "Your women are a field for you. Come to your field as you will" may be compared with some of the suiras, such as that of Joseph (XII), or verses such as those which describe the delights of paradise and, above all, the after-life (LV, 56, 70, etc.). The Prophet himself is quoted as having made use of one of the courtesans (at his disposal, marriage and concubining [see 'abd]).

The ethical system underlying the Qur'an, Tübingen 1959, 95 ff. and bibliography; it condemns prostitution (XXIV, 33) and, above all, fornication (see zina), but the conditions laid down by the fuhudah for the legal proof of zina are such that it more often than not escapes punishment. Marriage, as conceived by the Kur'an, has a two-fold object: it is intended to allow the male, who is largely favoured since it is he who benefits from the privileges of polygamy and repudiation (while women are in certain cases even deprived of the right of giving their consent), to satisfy his sexual needs lawfully, and to ensure the perpetuation of the race. That is why celibacy is in no way recommended, and it is even recommended to give the celibate in marriage (XXIV, 32). The Kur'an is realistic where it deals with sexual pleasures which it authorizes and the enjoyment of which it encourages, on the sole condition that Believers should make use of one or more partners (at their disposal, marriage and concubining [see 'abd]). The celebrated verse (II, 223; see also 183, 222) "Your women are a field for you. Come to your field as you will" may be compared with some of the suiras, such as that of Joseph (XII), or verses such as those which describe the delights of paradise and, above all, the after-life (LV, 56, 70, etc.). The Prophet himself is quoted as having made use of one of the courtesans (at his disposal, marriage and concubining [see 'abd]).

It is impossible in this brief account to mention all the anecdotes which cast a harsh light on the preoccupations of this leisurely society, and of certain caliphs too, but it will be recalled that temporary marriage (see mut'a) which the Kur'an had not suppressed (although Sunni Islam finally rejected it) allowed transitory unions at small cost and, along with female musicians and singers, true professionals of love gained lasting reputations; for example the woman of Sheba (see the interesting anecdotes which are related to us almost all belong to the same class of libertines, whilst persons of rectitude, especially the Hanbalis, protested vigorously against public immorality. Under the 'Abbábsides we see the development of a refined society, of luxury and pleasures (on the old Persian practice of incest, see particularly al-Djahiz, K. al-Bukhádì, 3-4). We have little information about the sexual life of the lower orders of Muslims, among whom there was apparently a certain degree of laxity, but it seems clear that if the members of the aristocracy and bourgeoisie married free women who gave them children, they went elsewhere in search of sensual pleasures; this is the reign of the kiyán [see kána], so magnificently described by al-Djahiz, bringing with them an atmosphere of distinguished sensuality. Although during the pre-Islamic period and in the early days of Islam men's tastes had favoured women of ample proportions, it was now slenderness of figure that no doubt escapes punishment. Marriage, as conceived by the Kur'an, has a two-fold object: it is intended to allow the male, who is largely favoured since it is he who benefits from the privileges of polygamy and repudiation (while women are in certain cases even deprived of the right of giving their consent), to satisfy his sexual needs lawfully, and to ensure the perpetuation of the race. That is why celibacy is in no way recommended, and it is even recommended to give the celibate in marriage (XXIV, 32). The Kur'an is realistic where it deals with sexual pleasures which it authorizes and the enjoyment of which it encourages, on the sole condition that Believers should make use of one or more partners (at their disposal, marriage and concubining [see 'abd]). The celebrated verse (II, 223; see also 183, 222) "Your women are a field for you. Come to your field as you will" may be compared with some of the suiras, such as that of Joseph (XII), or verses such as those which describe the delights of paradise and, above all, the after-life (LV, 56, 70, etc.). The Prophet himself is quoted as having made use of one of the courtesans (at his disposal, marriage and concubining [see 'abd]).

A text such as the one by al-Djahiz entitled Musákhárat al-dzawár wa 'l-kháshám, despite the obscurity of certain passages, is in this respect extremely instructive. The literary sources abound with anecdotes which relate to sexual abnormalities such as bestiality (al-Djahiz, K. al-Bukhádì, 53, §73, 67, §200) and sapphism. Prostitution, controlled, existed almost everywhere (Mez, op. cit, 432). In the account of Bashshár given in the Agháni, the most striking detail is the number of successes with women that this poet achieved, but it would be wrong to generalize too hastily and to conclude that debauchery had invaded the whole of society. The heroes of the anecdotes which are related to us almost all belong to the same class of libertines, whilst persons of rectitude, especially the Hanbalis, protested vigorously against public immorality.

119, n. 47) but which is often considered as more reprehensible than sodomy and bestiality (see Bouquet, Éthique sexuelle, 57).
On this question, an anecdote attributed to al-Asma'ī [q.v.] seems to show to what an extent certain Bedouins had succeeded in keeping their sober habits; the philologist having asked a Bedouin to give him a definition of love (fīkhā), the latter replied: "a glance after a glance and, if it be possible, a kiss after a kiss; this is the entrance to Paradise". The Bedouin's reply astonished al-Asma'ī who, when asked in his turn to give his own definition, drew this remark from his interlocutor: "But you are not in love! You are merely seeking to have a child!" (al-Washšā', Muwâwāshāt, 77).

Throughout the following centuries, interest in sexual matters continued, as can be seen from the copious literature devoted to these subjects. In this connexion we should note that, if writers and poets of restraint do exist in Arabic literature, many others practise complete freedom of language; the restrictions on the circulation of unexpurgated translations of the Arabian Nights are well known, and Das Buch der wunderbaren Erzählungen und seltsamen Geschichten edited by H. Wehr, Damascus-Wiesbaden 1956, again confirms the general tendency towards indecency, towards suhûf, later successfully cultivated by the poet Ibn al-Hāǧidḏāḏā and many others.

To meet the sort of demand that requires that serious matter should be interspersed with amusing passages, works of adab literature frequently contain smutty anecdotes, and even popular encyclopaedias indulge in scabrous sections; there is no reason to be shocked by this, for the prudishness displayed by some is often no more than hypocrisy, as al-Dāhib points out, who, in his introduction to the Muḫfīkātatar al-djwādī wa l-ḥilmāmin, after making fun of the Tartuffes who are too easily offended, recalls that the virtuous ancestors were in no whit so prudish and states that the words of the Arabic language were made to be used, even though they might seem shocking. The short work just referred to is particularly scabrous, dealing plainly with one aspect of sexual life and at the same time providing a sort of anthology of love, normal and abnormal; the author verges on obscenity without any sort of restraint.

Earlier works dealing with sexual life seem to have been quite numerous already, if we can judge by the references that Dāhib makes to the Kutub al-bah, of Indian origin, saying that these works are in no sense pornographic and that the Indians regarded them as manuals of sexual education with which they taught their children (K. al-Ḥayāmān, index); no doubt he is here alluding to the Kāmmuṭāra, of which, however, no Arabic translation has survived. Other and later works also appear to have inspired the Indian tradition, in particular the K. al-Aljīyya which the Fīhrist quotes, while Hāǧidḏī Khalīfa (see index) says that it was written by a certain al-Ḥakim al-Azrāk for the master of Nisābdūr, Tughān Shāh (569-81/1174-85), and embellished with suggestive illustrations. In its development, adab literature soon spread to sexual questions also, and two authors of the 3rd/9th century seem to have specialized in this type of writing. The first, Abu l-Ānas al-Šāmārī (d. 755/1358 [see AL-ŠAYMARI]), who had, however, been a kādāḏī and to whom are attributed books on astrology still preserved in mss., is the author of some forty works which include one treatise on onanism (K. al-Ḫalāṣkāda fi ḍiālāl ḥaymān) and one on sapphism (K. al-Sābīkāda fi l-ḥaymān). The second is a certain Muḥammad b. Ḥassān al-Nāmaḏī whose Fīhrist (217) devotes a passage, reproduced in full by Yākūt (Udābā, xvii, 119), and entirely taken up with the enumeration of titles relating to sexual questions, in particular a large work K. Barǧidḏ wa-bahbāḥīb in which the author makes a special study of the best ways to fascinate women. The Fīhrist (436) lists the titles of 12 works "on the Persian, Indian, Byzantine and Arab bāḥ", none of which appear to have survived, but it is probable that some of them were serious in purpose: a study of the harmony between men and women in relation to their physical charact-ers, female physiology, the mystery of generation, sexual medicine and hygiene, etc.

Subsequently, the literature that can be described as erotologic adab developed quite considerably; to modern eyes it may appear obscene in character, though it was not so regarded by its readers, since whole chapters characteristically combine verses from the Qur'ān and ḥadīṯs of the Prophet with obscene anecdotes or poems, while others on the contrary are merely inspired by the wish to popularize certain notions about medicine and hygiene. Ş. al-Munajḏīḏī (Ḫaydī džinisīya, 107 ff.) reproduces a list of the contents of several of these works which are mostly unpublished; we will name them briefly, noting the characteristics of the authors to whom several are, rightly or wrongly, attributed: Ḥaydūḏ (436) lists the titles of 12 works "on the Persian, Indian, Byzantine and Arab bāḥ", none of which appear to have survived, but it is probable that some of them were serious in purpose: a study of the harmony between men and women in relation to their physical charact-ers, female physiology, the mystery of generation, sexual medicine and hygiene, etc.

Bibliography: In the text. Two funda-
mental studies have been devoted to the subject discussed in this article; the first, by G.-H. Bousquet, La morale de l'islam et son éthique sexuelle, Paris 1953, is the work of a jurist and sociologist who does not neglect practical reality; the second, by Šalāh al-Dīn al-Munājjudīdīdī, al-Hāyāt al-dīnissiyyā 'ind al-'Arab, Beirut 1958, is an excellent exposé based essentially on literary sources; another work by the same author, Dīmāl al-marā 'ind al-'Arab, Beirut 1957, is also rewarding. Since then two works have appeared but which remain unavailing to me: M. ʿAbd al-Wāḥīd, al-ʾĪlām wa-l-muḥkīlā al-dīnissiyyā, Cairo 1939/1961, and Y. el-Masri, Le drame sexuel de la femme dans l'orient arabe, 1962. (Ch. Pellat)

Dījrīdā (see Dirāg). Dījrīdīn (in Arabic Dīrī-dīnīt and K. r. k. n.): we know of a niṣāb of Kīrkīnti, borne by a mystic of Sicilian origin, in the 4th/10th century, Agrigentum. Far removed from its ancient splendour, the town fell into the hands of the Arabs in 214/829 and was destroyed, or more probably dismantled, in the following year for fear that the Byzantines would return. It rose again, however, under Arab rule, and was frequently involved in hostilities with Palermo, which resulted in the bloody struggles of the first half of the 4th/10th century. It was taken into the territories of the amirs of Sicily, with a city of the same name south-west of Bam and came under the rule of the Kalbid (in Arabic Saḥīrīyā, ed. Sourdel-Thomine, Damascus 1953, 69; trans. Damascus 1957, 154), and which corresponds to a former Chaldaean church (F. Saar and E. Herzfeld, Archæologische Reise im Euphrat und Tigris Gebiet, Berlin 1911-22, ii, 236-8; A. Sioufi, Les antiques et monuments de Mossoul, Mosul 1940, 17-23; J. M. Pley, Mossoul chrétienne, Beirut 1939, 19-28). In Islamic times St. George is frequently confused with the prophets Khīḍr and Ṭāhīr (see Kīdīr and Qīdīrīlīzī).

Dījrīt (see DJISM). Dījrūf, a fertile, high lying district of Kīrmān with a city of the same name south-west of Bam and separated from it by the Bārīqān Mountains. There is no record of the city in pre-Islamic times and the first mention of the city is when Dījrūf was captured by Muḍīraḥ b. Masʿidū in 356/555 (al-Balāghūrī, Fiwa, 391). Thereafter the city is mentioned many times, especially in the Arabic geographies.

The Khāridjītes were active in Dījrūf but nothing is known of the history of the city. The geographer al-Muṣaddasī (461) praises the district highly in describing the fertility of its land and its beauty. The Šafrīl Yāʿkūb and his brother Ṭāmr are said to have embellished Dījrūf with buildings (Sykes, ii, 16). The city suffered much from the anarchy of the Mongol and post-Ikhnānī periods but it continued to exist in the Timūrid period after which Dījrūf disappears from the sources, although the district or Ḡakristīn retains the name to the present day.

The site of the old city of Dījrūf is unknown but it must be near the present town of Sabzāwarān, and some nearby ruins (Le Strange, 314) may be those of the old city.

Dījsīm (Ar.), body. In philosophical language the body (ṣawāṣ) is distinguished from the incorporeal (daşmāṣāt), God, spirit, soul, etc. In so far as speculation among the Muslims was influenced by Neo-Platonism two features were emphasized: (1) the incorporeal is in its nature simple and indivisible, the body on the contrary has a composite and divisible nature, (2) the incorporeal is in spite of its negative character the original, the causing principle, while the body is a product of the incorporeal.
The more or less naive anthropomorphism of early Islam, i.e., the conception of God after the analogy of the human form, is to be considered here. On it one may consult I. Goldziher, Vorlesungen über den Islām, 1910, 207 f., 120 f., and A. J. Wensinck, The Muslim Creed, 1932, 66 f. But from the usual taddīsm or tābqāhī we must distinguish the teaching of certain philosophers who called God a body; this is to some extent a question of terminology. According to al-Āṣfāri (Makhlūdī, ed. Ritter, i, 31 f., 44 f., 59 f., 207 f., iii, 303 f.), the Shī‘ī theologian al-Husayn b. al-Ashʿarī (first half of the 3rd/9th century) was the most important champion of the view that God is a body. He would not however (cf. 208 and 304) compare Him with worldly bodies but only describe Him in an allegorical sense as an existing being, existing through Himself. His description of God (p. 207) is thus to be interpreted: God is in a space which is above space; the dimensions of His body are such that His breadth is not distinguished from His depth and His colour is similar to His taste and smell; He is a streaming light, a pure metal shedding light on all sides like a round pearl. If we add that the qualities of bodies are also called bodies by Highām and others, then we must conclude with S. Horovitz (Über den Einfluss der griechischen Philosophie, 1919, 38 f.) that here Stoic terminology is present but with foreign additions. The doctrine of the spirituality of the soul of the incorporeality of God was recognized by Islam. Only the doctrine of the spirituality of the soul of man, held by many theologians, notably Ghazālī, did not find general recognition [cf. NAFS]. Ibn Hazm, for example (Kiāb al-Tabīfī, 80 ff.), calls the individual nafs a dišim, because it is distinguished from the souls of other individuals, because it has knowledge about much that another does not know, and so on.

A remarkable doctrine about the body had already appeared before Āṣfāri and then developed in his school, namely a theological atomism. Regarded from the philosophical side, the atomists and their opponents have at least one hypothesis in common: the body is composed of the incorporeals. How and according to the view of the atomist theologians, the body is composed of the smallest particles (atoms) which cannot be further subdivided, incorporeal themselves and not perceptible. They then fall out over the question how many atoms are required to make a body, in a way which reminds one of the old problem of how many grains of corn make a heap. A survey of this speculative atomism, the origins of which have not yet been fully explained, is given by D. B. Macdonald, Continuous re-creation and atomic time in Muslim scholastic theology (in Isis, no. 30, 1x/2, 1927, 326 ff.).

The philosophers, on the other hand, say with Aristotle and his school that the body is composed of matter and form (hayyālād or madda and sāra). Both are in themselves incorporeal, indivisible and imperceptible, but their combination, the body, is divisible because the body is a continuous magnitude. This is really a philosophically distanced cosmogenetic conception, the birth of the body from a male active principle (form) and a female receptive principle (matter). For Aristotle, who taught the eternity of a world order coming from God, the idea had hardly any importance; still less had it for the Stoics, who taught that matter and form are in reality separate beings which are separated in imagination (Arab. ji 'l-Dājīn, ji 'l-Wahim). But for the Neo-Platonists it became a gigantic problem, to derive the material, corporeal world from the incorporeal; it became still more difficult for the Muslim philosophers to effect a reconciliation with the absolute doctrine of creation.

Aristotle gives the following definition (cf. De coelo, i, 1, 268, 7 f., and Metaph., v, 13, 1020, 7): a body is that which has three dimensions (dimension = diātāsos, diāsētma, Arab bād, imtādād) and is a continuous, therefore always divisible, quantity (μονον συνεχες, kam mutāslīl).

A wordy dispute arose over this; the question was which is the most essential, the dimension or the magnitude, and how the magnitude is to be conceived (as incorporeal form). When the Neo-Platonists wish to "explain" something they make an abstract out of the concrete: σον becomes σοντις, kam becomes kāmiyya, magnitude becomes quantity and dišim dišimīyya (corporality). The following answer is then given to the question how a body comes into being: through corporality (= corporeal idea of form) being assumed by matter (also incorporeal by definition). When the absolute body or second matter is thus brought into existence, the dimensions and other qualities of the concrete bodies come into existence; the gap between in corporeal and corporeal is thus bridged.

As regards matter, this doctrine comes from the Enneads (eneides); the formulation that corporality is the first form of the body (ουςματικὸν εἴδως) is found in the Neo-Platonist expositor Simplicius (4th century) in his commentary on Aristotle's Physics (ed. Diels, 227 ff.). Hence in Arabic the expression sāra dišimīyya and in Latin forma corporis; because the body according to Aristotle is one of the five continuous magnitudes (like line, surface, space and time) one talks of continuity (ίττισι) as the form of the body.

The Ikhwān al-Safā, Ibn Sinā and al-Ghazālī adopted these subtleties, although in different proportions. The Ikhwān al-Safā place corporeality or absolute body (dišim mutlak) last in the series of emanations [cf. Fayd].

Ibn Sinā, who also distinguishes two matters, although he knows that the dišim is the translation of the Greek υπόμονη (hayyālād) and he regularly uses it synonymously, regards as the first form of existence of the body continuous quantity, in which the power is according to the dimensions, in other words, the dimensions are added like attributes or accidents (cf. hudud in isiṣ Rasûl, 58, 60 [thereon al-Ghazālī, Miṣṣār al-Simī, 180]; Ishdrat, ed. Forget, 90 ff.).

Ibn Rushd disputes (Metaphysics, Cairo ed., 37 ff.), as so often, the teachings of his predecessor without quite clearing up the problem.

When the Neo-Platonic philosophers and theologians talk of the body, it should always be asked what they mean by it: the divine original (= idea of the body) or its purest, unalterable copies in the heavenly spheres and constellations, or lastly the sublunar elementary bodies with their qualities, changes and combinations. This is the first step to comprehension, so far as this is possible.

The distinction between the heavenly bodies and earthly bodies influenced by them was very important for the natural philosophy of the period. The latter were composed of the four relatively simple bodies (elements, in Aristotle ἄρκλη σῶματα: Arab. al-bāṣāʾin). In the higher sense the heavenly bodies were simple; to describe them the term dišim (plur. aqīrīm) was used. In another respect they are synonymous with dišim. It is to be noted that the Theory of Aristotle (ed. Dieterici, 32, 40 f.) understands by
Djimmuntary those philosophers who as followers of Pythagoras teach that the soul of man is the harmony of its body (ψυκή, ψυκή, ψυκή). This was a theory particularly common among physicians.

Generally popular also was the distinction taken from Aristotle between the physical and the mathematical body (δασκάλια and δασκάλια). The geometricians are said to regard dimensions as ideal figures, abstracted from the many qualities possessed by natural bodies, with which the physicists deal.

Djimm. badan and djasad are used as synonyms of djism; the two last are usually applied to the human body, badan often only to the torso. While badan is also used for the bodies of animals, djasad is rather reserved for the bodies of higher beings (angels etc.). Djamid is an inorganic body, but adasid is used particularly for minerals. It may also be mentioned that haykal (plur. haykal) means with the gnostics and mystics the physical word as well as whole as the planets, because the world-soul and the spirits of the stars dwell in them like the soul of man in its body (cf. al-contains; Nicholson, Studies in Islamic mysticism, 110; cf. Theology of Aristotle, 167).

DJISR, pl. djisür (Ar., cf. Frankel, Arah. Fremdwörter im Arabischen, 285), "bridge", is more particularly, though by no means exclusively, a bridge of boats in opposition to חןעטר (q.v.), an arched bridge of stone.

An incidence of the history of the conquest of Babylonia has become celebrated among the Arab historians as yawn al-dj ISR "the day of [the fight at the bridge]": in 13/634 Abū 'Ubayd al-Thakafi was defeated and slain in battle against the Persians at a bridge across the Euphrates near Hira; cf. flere Hahaaus, Saker und Vorarbeiten, vi, 66 ff.; 73, Caetani, iii, 114 ff.

DJISR BANÂT YA'KÙB, the "bridge of the daughters of Jacob", name of a bridge over the Upper Jordan, above the sea of Galilee and to the south of the former marhsy depression of the lake of al-Hila, now dry. At this point, which was that of an old ford known at the time of the Crusades under the name of the "ford of Ya'kûtib" (Yadum Jacob of William of Tyre) or "ford of lamentations" (bakkahdad al-ahsān of Ibn al-A'thir and Yahkét), the 'a maris from Damascus to Saif and 'Akkā crossed the river, following a trade route which was especially frequented in Manllik times and which coincided also with a barid route. From this time dates the improvement of the crossing by the erection of a bridge of basalt of three arches, traces of which are still visible, and the construction nearby of a caravanserai, before 848/1444, by a Damascus merchant, who marked along with his foundations the route from Syria to Egypt (al-Nu'aymî, al-Darîs, ed. D. al-Hasani, ii, Damascus 1951, 290; cf. H. Sauvain, in J. d. 1895, ii, 262). Travellers and geographers, oriental and western alike, only rarely omit mention of this stage, sometimes under the designation also frequent, of Djrwr Ya'kûb or Pons Jacob.

The strategic importance of this crossing, again emphasized in 1799 when it marked the extreme point of the advance of French troops, was especially marked in the 6th/12th century when Franks and Muslims contested it furiously: Baldwin III was defeated here by Nūr al-Dīn in 552/1157; Baldwin IV built here in 573/1178 a fortress entrusted to the Templars, the Castellet of the ford of Jacob, whose ruins still remain on a knoll on the west bank 500 m. south of the bridge; this stronghold was taken and destroyed by Salāb al-Dīn a year later, in 575/1179. The favour enjoyed by the Biblical reminiscences centred on this locality even in the middle ages, and which seem to have resulted from a transfer to the Jordan of the tradition of Jacob's crossing of the Jabbok (now Nahr al-Zārkā), according to Genesis, xxii, 22, is attested by the toponymy of the region and by the mentions in Arabic authors of the 6th/12th century of a maghar al-Ya'kub, then a place of pilgrimage, and of a "castle of Jacob" (bašar Ya'kûb) or "house of lamentations" (bayy al-ahsān); the latter name refers to the lamentations of Jacob for the death of his son Joseph (recalled not far from there, at the place called Djubb Yosuf or Khân Djubb Yosuf, by the pit in which he is said to have been cast by his brothers). At the present day there further exists the "grotto of the daughters of Jacob" (magharat banāt Ya'kûb), a sanctuary whose name explains that of the bridge: cf. H. A. Wolfson, "iron bridge", name of a bridge across the Euphrates near Hira; cf. Wellhausen, in ZDMG, lxiv, 694-700; William of Tyre, xxi, 26; Ibn al-A'thir, xi, 301; RHC Or., i, 636; iv, 104, 203 ff.; Harawi, K. al-siyārāt, ed. Sourdel-Thomine, Damascus 1953, 20 (Fr. tr. idem, Damascus 1957, 52 and n. 57); Yakût, i, 775; Dimashqî, ed. Mehren, ii, 187; H. Grossen, in ZDPV, Paris 1934-6, index s.v. Ják Bandî Yaqûb and Gué de Jacob.

Ják Bandî Yaqûb and Gué de Jacob.

JISR AL-IJADID, "iron bridge", name of a bridge over the Orontes in the lower part of its course, at the point where the river, emerging from the valleys of the calcareous plateau and widening towards the depression of al-Amk (q.v.), turns sharply westwards without being lost in that marhsy depression whose waters it partly drains to the sea. The fame of this toponym, frequently mentioned in mediaeval documents but of obscure origin (perhaps local legend), is explained by the strategic and commercial importance of this stage, through which, in antiquity and in the middle ages, has always passed the route joining Antioch to Chalcis (Kinnasrin), and then Aleppo (a route frequently taken, at the time of Antioch's prosperity, by the caravan traffic descending from the col of Baylân [q.v.]). The bridge itself, defended by strong towers and fortified on various occasions (notably in 1162 by Baldwin IV), is known to have played a part of prime importance in the wars between Arabs and Byzantines as early as the 4th/10th century, later in the history of the principality of Antioch after its storm by the Franks of the first crusade. The present bridge retains no trace of the building of this period. In the neighbourhood is a raised site
which doubtless marks the position of the ancient Gephyra.

DJISR AL-SHUGHUR or DJISR AL-SHUGHAR, the modern name of a place in north Syria, the site of a bridge over the Orontes which has always been an important centre of communications in an area that is mountainous and difficult to traverse. It was in fact at this spot that the most direct route from the Syrian coast to the steppe in the interior and the Euphrates, passing over the Qalb al-Nuṣayr and the Limestone Massif, crossed the line of communications that ran north-south and followed the Orontes between Apamea/Kal'at al-Mamluk and Antioch/Anţūkiya. Of these two routes the second is today abandoned, its traffic having gradually declined during the Middle Ages, while swamps spread over the once fertile and cultivated plain of al-Qāb [q.v.]. But the valley of the Nahr al-Kabir and the depression of al-Rūj are still partly followed by the modern road from al-Ladhikyā towards Halab, crossing the Orontes by this bridge which has been so often rebuilt and altered, and across which the old trade route used to run, linking the coastal town of Laodicea with Chalcis/Kinnarīn and Berea/Halab, in one direction, and with al-Bāra'[q.v.] and Arra/Ma'arrat al-Nu'mān in the other.

There have long been attempts to identify this spot with the Seleucia ad Belum of Ptolomy, or Nicaea (corruption of Seleucobullos) of the *Itinerarium Antonini*, which in ancient times commanded one of the routes leading from the Limestone Massif. But the identification of this bridge with the one at Kasbah, so often mentioned in the fighting at the time of the Crusades, has given rise to much discussion. In the descriptions given by Arab authors, and also the modern aspect of the present village, only a caravanserais and a mosque of the Ottoman period testify to the fact that it was once a halting-place for pilgrims of the hadjdi coming from Anatolia and crossing Syria by the ancient road along the Orontes valley, and it is difficult to place at a date earlier than the Mamluk period (defaced inscription) the bridge with its assortment of materials and the sharp elbow projecting upstream. There seems however to be a convincing case, and on this point we follow R. Dussaud in his refutation of Max van Berchem's suggestion, for distinguishing the site of the cross-roads, the Kasbah, and the Kasbah, from the site of the twin castles of al-Shughur and Bakāṣ which stood in the same valley, but 6 km. to the north-west, and constituted one of the eastern defences of the Frankish principality of Antioch.

It is this fortress, whose ruins still crown a ridge of rock of which the central part has collapsed (hence the need to build two separate fortications) and dominate the village of Shughr al-Kadim amidst its gardens, which was conquered by Salāh al-Dīn in the course of the celebrated campaign of 1187-88, during which he first halted at Tall Kasbah. Later, this fortress formed part of the domains of the Ayyūbīd al-Mālik al-Zāhir Ghażāl and, after being captured by the Mongols, it became during the Mamluk period the centre of a military district ranking as one of the nīsabūs of the province of Aleppo. Its decline, from the time when it lost all its strategic importance, finally explains the subsequent rise of the modern Djisr al-Shughur and the return of a settled population to the neighbourhood of the bridge where, in the time of Abu 'l-Fidāʾ, there had only been a weekly market (crowded, however), and where caravanserais for foreign merchants were then built (the sovereign of Aleppo promised to put up a fondaco for the Venetians).

DJISS (A), plaster.—Muslim builders have generally shown themselves unanxious to use carefully chosen and worked materials in their constructions. Frequently walls, apparently hurriedly built, are composed of rubble (undressed stones) or even of pisé (compacted earth and lime) or mud-brick. This mediocre skeleton, however, is clad by facings which disguise its poverty and give it the illusion of richness. Just as the Byzantine builders decorated church sanctuaries and rooms in princely dwellings with marble plaques and mosaics with a gold ground, those of Persia, Egypt, or the Maghrib have covered the façades and interiors of their mosques and palaces with incised facyence or with sculptured and coloured claustra, wall-panelling, and windows themselves are adorned with perforated plaster *claustra*, their voids filled with coloured panes.

Plaster and stucco (made of a mixture of lime and marble or powdered eggshell, or else of pure gypsum and dissolved glue) are both of especial interest as the facings of exteriors and interiors. The plaster is carefully smoothed and decorated with paint, or, when it has been applied more or less thickly on the wall, sculptured by an iron tool whence the name of *naksh hadida* given in North Africa to work of this genre. In his book *L'Alhambra de Grenade*, 5, Henri Saladin has provided the following technical account [here translated]: "On a wall coated with plaster the craftsman would trace the intended design with a dry-point; then, with the help of chisels and burins, he would cut in the fresh plaster the ornaments which he had outlined. This procedure necessitated the use of a slow setting plaster, which could be obtained by the addition of gum or salt to plaster, as the Tunisian craftsman do today. Later this method was replaced by moulding, but this gives less delicacy. Mouldings of the Arab period may still be seen at the Alhambra. An examination of the ornamentation of the convent at S. Francisco, an old Alhambra de Grenade, 5, Henri Saladin has provided the following technical account [here translated]: "On a wall coated with plaster the craftsman would trace the intended design with a dry-point; then, with the help of chisels and burins, he would cut in the fresh plaster the ornaments which he had outlined. This procedure necessitated the use of a slow setting plaster, which could be obtained by the addition of gum or salt to plaster, as the Tunisian craftsman do today. Later this method was replaced by moulding, but this gives less delicacy. Mouldings of the Arab period may still be seen at the Alhambra. An examination of the ornamentation of the convent at S. Francisco, an old Alhambra de Grenade, 5, Henri Saladin has provided the following technical account [here translated]: "On a wall coated with plaster the craftsman would trace the intended design with a dry-point; then, with the help of chisels and burins, he would cut..."
can be seen, pierced by nails joined one to another by a network of string. One should add that besides the sculpture obtained by cutting away the field between the decorative elements one does also find moulded or impressed reliefs—particularly border mountings—level with and adhering to the ground-work, which has been cut back for this purpose.

The important role played by decoration of this genre in the Islamic art of the 8th/14th century, which saw the erection of the most notable parts of the Alhambra, is attested by a passage of Ibn Khaldun, who considers it as a branch of architecture (Mukaddima, ii, 327; Rosenthal, ii, 360-1): he remarks that the work is executed by iron tools (bi mathdkib al-hadid) in the still wet plaster. However, it goes without saying that plaster as an element of decoration is much earlier than the blossoming of Hispano-

Arabian art. To what period should one assign its adoption by the Muslims, and to what influence can it be attributed?

Hellenistic art, one of the essential sources of the Muslim arabesque, was not ignorant of stucco relief, which was often delicately modelled. It must not be supposed, however, that Islam has inherited the art of the Roman or Byzantine workers in gypsum plaster, for Islamic moulded-plaster decoration is very different, both as a technique and as a style. It is apparently towards Sasanian art that the search for its origin must be directed. The Syrian castle of Kašr al-Hayr, founded by the Umayyad Highām in 112/728, in the ornamentation of which Sasanian motifs preponderate, presents some panels which are indicative of this origin. A compact floral decor, wholly filling the geometrical frames which divide the panels, is treated without relief but by cutting out the plaster perpendicularly or obliquely to the surface plane. This sunken two-dimensional sculpture, in which there is no projection, is already that of the Islamic works in plaster of the succeeding centuries. It flourishes in the 3rd/9th century at Sāmarrā and, mixed with Hellenistic elements, gives rise to the linear undercut decoration of the 'Abbāsid palaces. This was transmitted, with many another fashion, from ʻIrāq to the Egypt of the Tūlūnids. From Egypt it reached North Africa, where it found a favourable soil. An extension towards the Sahara among the Khārijītes, who had taken refuge at Sedrātā near Warglā, must be mentioned. The plaster there, which mixed with sand is very durable, is used, under the name of tinšgēnt, for incised decorative facings, where the African Christian inheritance appears side by side with Mesopotamian reminiscences. However, it is especially in the Maghrīb and in Spain that sculptured plaster attains its greatest beauty. The 6th/12th century saw the birth in Marrakesh, Fez, and Tlemcēn, of facings with a floral decoration where the sculptor has given to this plastic decoration at richness of forms, a firmness yet a flexibility of composition, a vigour in relief (e.g., the Almoravid domes of the midāl at Marrakesh and of the Ḥarawiyyin of Fez, the Almohad capitals of the Kutubiyya etc.) which greatly transcend the usual frontiers of the arabesque. The rôle played by sculptured plaster in Hispano-

Arabian art in the 13th and 14th centuries is well known. It was to be maintained in Spain in the mudjār monuments, and to survive in the later Tunisia and Morocco, attesting less the decorative invention of the artists than their fidelity to tradition and their manual skill. (G. Marçais)

**BITAL** [see sīkka, ważn].

**AL-DJIWA** (also Liwā, probably derived from the local pronunciation of ǧ as y, resulting in al-yiwa > liwa) a district of many tiny oases in the heavy sands of south-central al-Ẓafra, the large, almost completely sand-covered region extending southward from the Persian Gulf between Sabbāḥat Maṭṭī in the west almost to Long. 55° E. The oases nestle in the hollows and passage ways of the northernmost sand mountains of al-Baṭin, with the greatest number lying between Lat. 23° N. and Lat. 23° 15' N. The eastern third of the oases, which are smaller and less frequented than the others, bear to the southeast below Lat. 23° N.

The word al-Djiwa, which lies only a few feet below the surface, supports numerous small groves of date palms growing on the sheltered side of great dunes. In many places the owners live above their gardens on the dunes themselves, where there is a chance of catching a cooling breeze. The ruins of several forts are scattered throughout the district, but today the inhabitants live only in palm-thatch huts. All but a few of the oases are uninhabited except during the summer when the date groves require attention. During the rest of the year most of the owners are in the desert with their herds or along the coast of the Persian Gulf. Among the settlements usually inhabited the year round are al-Māriya, ʻAtūf, Shīdh al-Kalb, al-Kayya, al-Karmīda, Shūh, and Thāwāmīyya.

The people of al-Djiwa belong, in roughly descending order of numbers, to the tribes of al-Manāṣir, al-Maṣrī, al-Hawāmil, al-Maḥārība, al-Kubahāt, ʻAl Bū Falāb, al-Marar, and ʻAl Bū Muḥayr. All but al-Manāṣir belong to the conglomerations usually referred to as Bani Yās [q.v.]. Sand-dwelling tribesmen, such as members of ʻAl Ṭaḥsid and al-ʻAwānim, of some whom even a few palms, are frequent visitors. A few residents of al-Djiwa own pearling boats, and every year some of the men journey north to the Persian Gulf to seek their fortunes on the pearling banks. Their number declines, however, as more find employment with the oil companies operating in various parts of Arabia.

Al-Djiwa lies within the more than 70,000 sq. km. of territory in dispute between Saudi Arabia and Abu Zaby. During the abortive arbitration of this dispute in 1945-4 (see al-Buraymi), both sides contended that they had historical rights to sovereignty over al-Djiwa and that they had exercised jurisdiction by collecting zakūt (Saudi Arabia on the Persian Gulf banks) and by maintaining law and order. Abu Zaby claimed the traditional loyalty of all the inhabitants of al-Djiwa, while Saudi Arabia maintained that the preponderance, including all of al-Manāṣir and al-Maṣrī, were loyal Saudis.

Al-Djiwa was unknown to the Western world until 1324/1906 when the acting British Political Resident in the Persian Gulf, F. Z. Cox, learned of its existence from a former inhabitant.

concerning Buraimi and the Common Frontier between Abu Dhabi and Saudi Arabia, 1955. The only detailed material on the district in Arabic is to be found in the Arabic and English versions of the Saudi Arabian and United Kingdom arbitration memorials cited above. (W. E. MULLIGAN)

djīwar, the 'urf of Mullā Ahmad b. Abī Sa‘īd b. ‘Ubayd Allāh b. ‘Abbāl-Razzāk b. Makhādum Khās-sa i Khudā al-Ḥanāfī al-Ṣāliḥī (he claimed descent from the Prophet Sāliḥ) was born at Arba‘ī, near Lucknow, in 1047/1637, as he was 21 (?) lunar years old in 1065/1645 when he completed his Al-Tafsīr al-Āhmadī (cf. Ḥadīth al-Ḥanāfīyya, 436). The same year of age, that states he was 35 years of age at the time of his death in 1130/1717. Gifted with an extraordinary memory, he was taken to the Kur‘ān by heart at the age of seven. Studying in his early years first with Muhammad Šādik al-Sītārkī, he completed his education in rational and traditional sciences at the age of sixteen with Luṭf Allāh Šūṭa-Dājahnābādī. Contrary to the historical opinions such as the ‘Ālamgir-nīmā and the Mu‘āthār-i ‘Ālamgīrī, all his biographers unanimously agree that he was appointed as one of his ‘teachers’ by Arwaẓnizībī who greatly respected and honoured him. This must have happened between 1064/1653 and 1068/ 1657, the year Arwaẓnizībī ascended the throne. Most probably, the emperor, on his accession, read certain books in a small Mullā, Šūṭa ‘Ālan I, the son and successor of Arważnizībī, like his father, also held him in great esteem. The Mulla must have attained high proficiency in fiḥk as, at the comparatively young age of 21, he compiled his Arabic Tafsīr dealing with those akhān ghar‘iyya that are deducible only from the Kur‘ān. After completing his education, he began to teach at his home-town. He left for Adīmīr and Dīhil in 1071/1660, where he stayed for a considerable time teaching and preaching. In 1102/1699 he left on a visit to Mecca and Medina for the first time and after a stay of five years there returned to India in 1107/1695. He then joined the imperial service and spent some six years with the armies of Arwaẓnizībī who was then engaged in fighting against the Deccan kingdoms. In 1112/ 1700 he returned to India the second time for Al-Dīgāz and after twice performing the Ḥadīẓ and its šiyārah returned to Arba‘ī in 1116/1704. After a short stay of two years, during which he received the Šu‘fī hikmā from the Shāhīy Yāsn. b. ‘Abbāl-Razzāk al-Kādirī, he repaired to Dīhil with a large number of pupils. He was received in audience at Adīmīr by Šu‘ī ‘Ālan I (1119-24/1707-12) who took him to Lahore. He returned to Dīhil on the death of Šu‘ī ‘Ālam and engaged himself again in his favourite profession of teaching. He had also established a madrasa in his home-town Arba‘ī. A detailed account of this institution appears in the Urdu work Tārikh hasaba-i Arba‘ī by Khāṣīm Huṣayn (ed. ? date ?). He died in his niyāra in the Dīhil masjīd of Dīhil in 1130/1717 but his dead body was later disinterred and taken to his home-town for final burial.

He is the author of: (i) Al-Tafsīr al-Āhmadīyya fi bayān al-ayāt al-ṣahr‘iyya, compiled in five years 1060-9/1650-8 while he was still a student (ed. Calcutta, 1263 A.H.); (ii) Nār al-‘umma‘r, a commentary on the Nasfa‘ī’s Manṭari al-‘ummar on the principles of jurisprudence, written at the request of certain students of Medina in a short period of two months; also frequently printed; (iii) al-Samā‘īk, on the lines of Dīhil’s ā‘āl al-Lawābī written in the Hikmat during his second visit in 1112/1700; (iv) Manātīb al-‘ulayhiyya, biographies of saints and ḥadīth which he compiled in his old age at his home-town. The work contains a supplement by his son ‘Abbāl-Kādir and a detailed autobiographical note (for an extract see Nasfa‘ī’s Tafṣīr al-Nakhrā, vi, 21); (v) Edībī-Aḥmadī, on sā‘īf and mystic stations, compiled in his younger days.

Ind., iii, 794; M. G. Zubaida Ahmad, Contribution of India to Arabic literature, Allāhābad 1946, index; Brockelmann, ii, 1164-5; Muhammad b. Mu‘atamār Khān, Tārikh-i Muḥammadī (Ethe 2834), contains a short but useful notice in Arabic; Ḥabīd Huṣayn, Ṣubḥ-i Bahār (MS. in Urdu).

A. S. Bazmool Ansari, Dīhil, “protection, residence” and “neighbourhood”, nown of action of the 3rd form to which only the second meaning corresponds, as in the grammatical term dijarr al-dīhil “attraction of the indirect case” (syn. dijarr al-mudjādāra, cf. Wright, Gr. Ar. Lang., 1955, ii, 234 B). Dīhil “protection” corresponds to the 4th form adījār, and particularly to the substantive dijār “one protected, client” coinciding with the Hebrew gār “one protected by the clan or community”. Noldeke in his study of the Addād noted the identity of the institution “in the same juridical sense” (in wesentlich demselben rechtlichen Sinne, Neue Beiträge zur sem. Sprachw., Strasbourg 1910, 38). The religious suggestion of “protection of a holy place”, so frequent in Arabic, strangely recurs in the Hebrew gār and especially in the Phoenician equivalent which, in numerous proper names, denotes one protected by a sanctuary or divinity, as well as in a text of Ras Šhamra kindly brought to our attention by M. Ch. Virolleau, the eminent pioneer in this field of study: “gār already figures in the 14th century B.C. in a poem containing the expression gr t l which I translated in 1936, in my Légende de Danel, 165, as ‘hôte de la maison de Dieu’ . . .” (Cyrus H. Gordon, Ugar. Manual glossary no. 357, rendered it by ‘a person taking asylum in a temple’). The evident relationship of the term to the religious vocabulary is further emphasized by the later evolution of the Hebrew gār in the well-known sense of “converted to Judaism”. Noldeke’s remark (loc. cit.) giving precedence to the sense of “one protected” presupposes, in accordance with a well-known law, a term of socio-religious significance, owing its survival to the importance of the institution in nomadic customary law. Despite the Arab lexicographers, and also Gesenius, who wish to derive from a primitive meaning “to deviate”, the meaning “to stay in the house of a host”, it may be a question of the almost universal semantic link between “foreigner, enemy” (cf. Latin hostis) and “guest, client”, for the root gār in both languages also has the sense of hostility, injustice. Gesenius compares the Arkaian gār, which is rather “guest, enemy”, which would agree with the suggested etymology.

DJIZA [see AL-KĀHIRA].

DJIZAN [see DJAYZĀN].

AL-DJIZIL, Abū Muḥammad al-Raḥf b. Sulaymān b. Dāwūd al-Azdi al-Aṣrāfī (died in Djiza, Egypt, in Dhul-Hijjah 256 or 257/870 or 871), an eminent follower of al-Shāfī‘ī and most probably a direct disciple of his. Like a good number of early Shāfī‘īs he was originally a Mālikī and disciple of ‘Abd Allāh b. ‘Abd al-Jahm. After his adherence to Shāfi‘īsm he devoted himself to making an accurate compilation of Kitāb al-Umm. Together with that of al-Buwayfī, his version of this master work of Shāfī‘īsm is the most trustworthy. It may be considered as representing the second phase of Shāfī‘ī jurisprudence known as the Egyptian. His compilation was rewritten at a later date with insertions of another Rābi‘ī (Abu Muḥammad b. Sulaymān al-Murādī, d. 720/833). It is difficult to distinguish in Kitāb al-Umm things attributed to our Rābi‘ī from those of the other. Zaki Mubārāk, in his study of Kitāb al-Umm has tried to find characteristics of both, but his reasoning is not convincing. Al-Rābi‘ī al-Dīzīl counts among his disciples Abū Dāwūd and al-Nasrī. Ibn Khallikān illustrates him as a most virtuous and modest man.

Bibliography: Al-Subkī, Tabābāī, Cairo, i, 53; Ibn Khallikān, Wālayjāf, Cairo 1948, i, 53, no. 220; Ibn al-Zayyāt, Al-Kawākbī al-sayyārā bi tartīb al-siyāra, Cairo, 155; Zaki Mubārāk, Taḥlīl nasab Kitāb al-Umm, Cairo 1932, 73; M. K. Husayn, Adab Muṣr al-Islāmīyya, Cairo, 58, 95 (note).

DJIZYA (i)—the poll-tax which, in traditional Muslim law, is levied on non-Muslims in Muslim states. The history of the origins of the djizya is extremely complex, for three different reasons: first, the writers who, in the ‘Abbāsīd period, tried to collect the available materials relating to the operation of the gīyūrā and the khardā used for taxes which in these texts were used with different meanings, at times in a wide sense, at others in a technical way and even then varying, so that in order to be able to complete a reasonable picture they tended to interpret them according to the meaning which had become current and best defined in their own time; secondly, it is a fact for which due allowance is not made that the system which sprang from the Arab conquest was not uniform, but resulted from a series of individual, and not identical, agreements or decisions; finally, this system followed after, but did not overthrive, earlier systems which themselves differed one from another and which, moreover, in the period immediately before Islam, are imperfectly understood and a subject of controversy. In these conditions, the account that follows can do no more than serve as a provisional guide.

The word gīyūrā, which is perhaps connected with an Aramaic original, occurs in the Kurān, IX, 29 where, even at that time, it is applied to the dues demanded from Christians and Jews, but probably in the somewhat loose sense, corresponding with the root, of "conversation" (for non-adoption of Islam), and in any case as collective tribute, not differentiated from other forms of taxation, and the nature of its content being left uncertain (the examples given in the works on the biography of the Prophet are very variable; tribute was adapted to the individual conditions of each group concerned). It is possible that, mutatis mutandis, precedents can be found in pre-Islamic Arabia outside the religious sphere, in the conditions of submission of inhabited oases to more powerful tribal groups, in return for protection; but as a result of their conquests the Arabs, heirs of the Byzantine and Sasanid régimes, were to be faced with new practical problems.

Naturally there was no hesitation over the fact that the dhimmīs [q.v.] had to pay the Muslim community a tax which, from the point of view of the conqueror, was material proof of their subjection, just as for the inhabitants it was a concrete continuation of the taxes paid to earlier regimes. This tax could be of three sorts, according to whether it was levied on individuals as such, or on the land, or was a collective tribute unrelated to any kind of assessment. In the ‘Abbāsīd period, the texts show us a clear theoretical distinction between taxes levied on the one hand a tax on land, the khardā, which except in particular instances could not be suppressed since the land had been conquered once for all for the benefit of the permanent Muslim community, and a tax on persons, the gīyūrā, which, for its part, came to an end if the taxpayer became Muslim. But it is far from being the case that such a distinction was always made, either in law or in fact, in the first century of Islam, and the problem is simply to determine what was the primitive practice, and how the ultimate stable system was gradually attained.

Starting from the indisputable fact that in the very early texts the words djizya and khardā are constantly taken either in the wide sense of collective tribute or in apparently narrower but inter-changeable senses (khardā on the head, gīyūrā on land, as well as vice versa), Wellhausen, and then Becker and Caetani etc., built up a system according to which the Arabs, at the time of the conquest, are alleged to have levied collective tribute on the defeated, without taking the trouble to distinguish between the different possible sources of tax, and it was only the multiplicity of conversions which, at the very end of the Umayyad rule, led, particularly in Khurāsān, to a distinction in the total revenues being made between two taxes, the one on the person, ceasing with the status of dhimmī, the other on land which remained subject to the obligations placed upon it by the conquest. This theory, apart from the prejudicial question that it contradicts the opinion of all classical jurists, in fact comes up against numerous difficulties and recently has been severely breached, especially by Løkkegaard and even more by Dannet whose conclusions, in their general lines and inspiration, no longer seem to be refutable, although even they do not answer all the problems which they in their turn raise. They have demonstrated completely that the texts often make an effective distinction between the tax on land and the tax on the person, even if the term denoting them is variable, and have stressed the improbability that a reform which covered the whole empire should have started in the remote province of Khurāsān
during the final anarchic years of the Umayyad dynasty, and (especially Dennett in a closely reasoned analysis of the situation region by region) that one could not speak of a uniform system immediately after the conquest, since neither the earlier institutions nor the conditions of occupation had been everywhere the same.

The Sāsānid empire had possessed a fiscal system which distinguished between a general tax on land and a poll-tax, at rates varying according to the degree of wealth, but from which the aristocracy were exempt. The Christian Byzantine empire had a more complex system about which we still remain uncertain on many points. A personal tax did exist, but was scarcely used, except only for colonists and non-Christians. The general tax made no distinction; in the case of a small property fiscally subject to the direct administration of the State, it was apparently levied on agricultural cultivation, on the basis of a unit of measurement or jāwām; on the other hand, in large estates enjoying a certain autonomy it appeared to be more practical to base the calculation on the number of persons working; but if the tax was in this way proportional to the size of the population, it was still in no way a specific poll-tax since it was not added to another tax which was apparently based on the land. This precise point must be kept clearly in mind if we wish to understand the subsequent developments.

Now in some instances the conquest was effected purely by force, in which case the system established was at the conqueror's discretion, at other times as the result of a treaty of capitulation, and in this case, when the native population kept its fiscal autonomy, a particular fiscal system might be merely stipulated, or else a certain sum might be fixed in advance as tribute to be paid, with allowances being made for considerations of assessment.

In Irāk, the province to which most of the ‘Abbāsid jurists refer, the conquest was in general effected by force, or at least with the abandonment of the Sāsānid administrative services; with the help of native subordinates the Arabs controlled the institution and collection of taxes which followed the traditional lines. The poll-tax was still distinct from a land tax, though its rate was probably increased (1, 2, 4 dinārs = 12, 24, 48 dirhams), but the grading of wealth was maintained. To remain exempt from this poll-tax, the members of the aristocracy declared their allegiance to the Muslim faith; one cannot say if at the same time they were freed from the land tax, though subject to it in the modified form of the tithe levied on Muslims' property.—In most of the towns of Syria and Upper Mesopotamia, the Arab occupation was carried out by means of treaties which distinguished them from the large autonomous estates of the previous regime; although temporary agreements at the very beginning had established collective tribute, the system which was set up was one of autonomous control, but with the tax defined by the conqueror and usually calculated (as at Hira in Irāk) on the basis of a fixed contribution (generally 1 dinār) per head, and thus a tax proportional to the population, as was the case before on the large estates; the same method of calculation may have continued on the large estates, but under the direct control of the conqueror, since most of the great Byzantine landowners had disappeared, and with the addition of the poll-tax on the colonists (?); incidentally the conquerors often found it advantageous at that time to accept the peasants' payments in kind. In Egypt most of the Christian communities were taxed under a system which united payments in kind, a land tax of 1 dinār per faddān (unit of cultivated land) and a specific poll-tax of 1 dinār per head, this last fast, however, being based on the calculation of the sum which the community had to pay, on the condition that the total amount would eventually be divided among the inhabitants in the most equitable proportions (as papry show); contrary to previous belief, this poll-tax must in practice have constituted for the mass of the inhabitants a burden almost as heavy as the land tax. Finally, in the greater part of Irān and central Asia, as well as in some places in Cyrenaica, the system established was of fixed tribute to be paid by the local rulers who were maintained in office, with no interference from the conquerors either in declaring or collecting the tax; in Khorāsān in particular, taxpayers continued to be charged on the basis of the Sāsānid dual system of land tax and poll-tax, apart from any questions of conversion or non-conversion to the new religion. Whatever uncertainties remain in particular systems (especially in Syria, it seems), it will be seen that, in general, the duality of land tax and poll-tax existed at the taxpayer's level, under various conditions, for the greater part of the peasant populations, while on the other hand a system of unitary contribution prevailed throughout the town population of Syrian towns and in Upper Mesopotamia; the conquerors, particularly in the East, held aloof from these distinctions so long as the tribute was paid.

However, difficulties very soon appeared. In Egypt monks were exempt from poll-tax; the Copts, who since Roman times had been past masters of tax evasion, noted that the taxpayer could escape payment of poll-tax if he left the district where he was enrolled or, better still, if he entered a monastery. It therefore became necessary to make all monks in their turn subject to poll-tax (a much more probable explanation than the alternative upon which one is driven back if one accepts that the poll-tax was a tax at the beginning of the Muslim régime: since it was later found applied to monks, the argument runs that it made its original appearance in the form of a tax on the monks). It was necessary to apply for authorization for removal, and to mark taxpayers with an indelible stamp, hence all those passports, seals etc. of which archaeologists have provided us with so many unimpeachable examples. Phenomena of the same sort must have existed in many places, and are for example recorded in Upper Mesopotamia and also in Irāk.

There, however, matters are presented to us somewhat differently. In Irāk, in fact, evasion of taxes took the form of conversion to Islam, the convert believing that his new status would free him from the whole fiscal complex levied on the non-Muslim, that is to say the land-tax and the poll-tax. In reality what happened at the beginning —and the Muslim administration did not look upon it amiss—was that the convert abandoned his land, with no thought of it ceasing to be subject to the kharājī, to a non-convert who guaranteed its cultivation and fiscal capacity. The thing was possible so long as it happened infrequently and the treasury had little to fear, for the new régime had inherited from its predecessors, both Byzantine and Sāsānid, the idea of the joint liability of each locality in regard to taxation, and those who remained therefore paid for the land which had left the owners and was now being exploited. However, by the time the terrible governor al-Hadidjadi came to Irāk the matter had
already assumed dangerous proportions as regards the development of land, and hence also threatened the treasury. He then took the draconic decision to send back the peasants to the land, to subject them to taxation again, including poll-tax, and, in practice, to forbid them to be converted to Islam.—A similar problem arose in Kfarasân; but there it was the native aristocracy who persecuted the peasantry who were guilty of conversion to Islam: since every conversion risked increasing the burden of taxes on non-Muslims and compelling the aristocracy to make good from their own pockets any short-comings in payments, they tried wherever they could to impose still heavier taxes upon the Muslims, at least the poorer ones, rather than on the non-Muslims: inequality in reverse ... It is clear that these repressions also could not last. It was somehow inadmissible, in a Muslim State, virtually to penalize entry into Islam. The pious 'Umar b. 'Abd al-'Aziz is credited with an attitude of absolute reaction to the policy, and he is said to have gone so far as to encourage conversions by the remission of the whole complex of taxes levied on non-Muslims. The most authoritative texts recently discovered or interpreted do not confirm such a Utopian outlook (H. A. R. Gibb, The fiscal rescript of 'Umar II, in Arabica, ii, (1955)). It seems that the law clearly differentiated the doctrine of fāy (q.v.), there was a move towards the idea of dissociating from the complex of taxes imposed on the non-Muslims the kharāj, which from this time on was regarded rather as being levied specifically on land and not on the person, and hence was compatible with the status of Muslim: the poll-tax, as such, was to disappear, but the treatment did have been undertaken from the time of 'Abd al-Malik (Abū Yusuf, 24; cf. Løkkegaard, 133), to give a truly personal character to it of the dhimmis, as earlier in Saljukid Asia Minor (for this point see in particular Kermitüddin Aksarayi, Musâmeret 'il-âhab, ed. O. Turan, 153, with analysis of F. Isiltan, 1943, 81), once again confers considerable importance on the dījziya, although the word often bestowed on it is kharāj (the land-tax at that time bearing other names; see below). A certain number of rules formulated during the 'Abbasid period appear to be generally valid from that time onwards. Dījziya is only levied on those who are male, adult, free, capable and able-bodied, so that children, old men, women, invalids, slaves, beggars, the sick and the mentally deranged are excluded. Foreigners are exempt from it on condition that they do not settle permanently in the country. Inhabitants of frontier districts who at certain times could be enrolled in military expeditions even if not Muslim (Mardaites, Armenians, etc.), were released from dījziya for the year in question. A personal fixed contribution, the dījziya was levied by lunar years (generally just before or just after the beginning of the year; sometimes in Ramadân under the Ma'mûls), unlike taxes connected with agriculture; it could thus be dissociated from them in tax-farming and 'idâ concessions. Money was stipulated, and normally payment had to be made in it, but payment in kind was admissible, under an officially determined scale of equivalent values. According to the Kur'ânic text, one must give al-dījziya 'an yad, which has since been interpreted, perhaps wrongly, to mean "by hand" and personally (on this point see F. Rosenthal, Some minor problems in the Qur'ân, in The Joshua Starr Memorial Volume, New York 1953, 68-72, and Cl. Cahen, Coran IX-29, ...), in Arabica, ix (1962), 76-9); administratively, this meaning suggests the need to count the non-Muslim population, hence for instance the forbidding of all village notables to accept a lump payment of dījziya from their subordinates. Furthermore it was desired to have confirmation given to every individual concerning his status as a subject of Islam or, more accurately, as a member of an inferior social class; it is apparently in this way that we must interpret the Kur'ânic formula (which
follows the one given above) wa-hum sdghirun (sometimes glossed as abār ibi ʿi-ṣaḥābir), in connection with the well-known instances of notables or Arabs refusing, although Christians, to pay the "dijiza of the 'ulūdāt", rather than as implying the necessity for a humiliating procedure, which later rigorists claimed to find in it. Actual censuses were apparently undertaken, especially at the time of the differentiation between dijiza and kharradī (by 'Abd al-Malik in Syria, Yazid II in Egypt, etc.), and, reciprocally, the evaluation at 130,000 dinārs of the total return from dijiza levied in the time of Saladin, for example, at the average rate of 2 dinārs, allows us to estimate the Christian population then in the country at about 65,000 heads of families.

In principle, the dijiza, like the sakāt, had to be used for pensions, salaries and charities. But under this pretext it was often paid into the Prince's private treasury. Malik and al-Shafīʿī admit that the rate of tax could be increased; with or without doctrinal justification, arbitrary demands appeared at times during the economically difficult and religiously strict period of the Mamluks; however, we must take count of the fact that the growing scarcity of gold and the devaluation of the dirham had often brought the dijiza to a level lower than was stipulated by doctrine; moreover the monks, or at least those in poor monasteries, found a way to reduce their returns.

In the territories directly controlled by the Mongols, before their conversion to Islam, the original fiscal system abolished the poll-tax on non-Muslims; when they adopted the Muslim religion, zealous agents sought to make the Christians pay all the arrears (forty years...) (al-Dijazārī, Chronique, ed. Sauvaget, 48, Nr 307).—In Sicily, after the original fiscal system abolished the poll-tax on non-Muslims, we find a way to reduce their returns.

The dijiza has naturally disappeared from modern Muslim States as a result of the growing equality of religions, the introduction of military service and the modernization of new fiscal systems.

**Bibliography:**
Almost the whole bibliography of sources, al-Baladhuri, Abū Yūsuf, al-Mawardi and other chroniclers, recorders of traditions, just as the material collected together in Caetani, quoted infra; to it should be added Abū 'Ubayd b. Sallām, K. Al-Amwili, and, for the K. Al-Khardī of Yahyā b. Adam, the annotated English translation by A. Ben Shemesh, 1958; for papyri see, besides Becker and Grohmann quoted infra, C. Becker, Papyrī Scholii-Rheinhardi, 1906, and H. I. Bell, Greek papyri in the British Museum, iv, 1910, as well as R. Rémondon, Les papyri d’Apollonios Ano, 1953, and C. J. Kraemer, Excavations al Nessana, iii, Non-literary papyri, 1958.

It is not possible here to give the very extensive bibliography of works relating to poll-tax and the associated problems in the Roman-Byzantine Empire; the latest restatements will be found in the bibliography of R. Palanque's edition of the posthumous Histoire du Bas-Empire of E. Stein, i, 1959, and in Karayannopoulos, Das Finanzwesen des frühbyzantinischen Staates, 1958; the outstanding works are still those of Pignol, J. Lot and E. Delage; for Egypt, A. Ch. Johnson and L. C. West, Byzantine Egypt, 1949.

(C. L. CAHEN)

**Dijiza**

The word kharradī was used for preference instead of dijiza by the 10th/11th century, later dijizārī or dijizārī-šerī (cf. indexes in R. Anhegger-H. Inalcik, Kanunname-i Sultān..., Ankara 1956; Tāyīb Gökbgil, Pata Livan, İstanbul 1952; F. Kraeilletz, Ör. Urvuhendes in türkischer Sprache, Vienna 1922; Ö. L. Barkan, Kanunlar, İstanbul 1943). Bahṣ-kharradī for dijiza was occasionally found in the documents (cf. T. Gökbgil, 158, and B. Lewis, in BSOAS, xiv (1952), 553, 559) to distinguish it from land-kharradī. For the collector of dijiza, khardrādī or khardrādī is used in the first period, dijizārādī later.

The payment of dijiza was sometimes dependent on the land possessed: anyone, Muslim or non-Muslim, who possessed a bāghīna, land recorded under the possession of a dāmmī (cf. Ćitlik), was to pay dijiza (cf. the regulation of Ohri dated 1022/1613 in Ö. L. Barkan, 295; that of Avlonya in Sürer-i Defter-i Sanack-i Arannd, ed. H. Inalcik, Ankara 1954, 124). The reason given for this was the treasury's concern to protect the dijiza revenues.

Following a conservative policy in the conquered lands, the Ottomans identified certain pre-Ottoman poll-taxes with dijiza. Upon the request of their new subjects in Hungary (Barkan, 304) they accepted for dijiza the old tax of one flori, gold, paid per family to the Hungarian kings before the conquest (cf. Barkan, 303, 320). Previously in the Balkans the Ottomans, under their post-conquest poll-tax, probably of the same origin as the Hungarian one flori tax, in their own taxation only as an nurī poll-tax under the name of ispendje (cf. H. Inalcik, Osmanlîlarda razıyet rüşûmî, in Belleten, xiii, 602). They ruled that anyone subject to dijiza was to pay ispendje (Belleten, xiii, 602). But the latter was ordinarily included in timār [q.v.]. It can be supposed that the Ottomans, like the first Muslim conquerors of Egypt and Syria, found in the Balkans and Hungary a poll-tax of one gold piece, probably from a common Roman origin (cf. P. Løkkegaard, Islamic taxation, Copenhagen 1950, 134-5). Sanctioned by māṣ and idiftyād as asserted in the firmans, dijiza was for the Ottomans a religious tax the collection and spending of which had to receive special care. It was collected as a rule directly for the state treasury by the Sultan's own kâds [q.v.]. It was exceptional to grant dijiza revenues as timār or mākul. Also it was farmed out only in special cases (cf. Anhegger-Inalcik, 39). As a garbi tax belonging to the bayt māl al-muslimin its administration was put under the supervision of the kâds and not infrequently its actual collection was made by them (cf. Gökbgil, 158).

The dijiza revenues were spent usually for military purposes or assigned to the regular pay of a military
unit as qiyalik. Mahmud II raised the rates of diizya and assigned it to the upkeep of his reformed army of tasdir-i mansura, claiming this as a religious use for ghazd. As a result, diizya was drawn up defter-i Ajizya-i gahrdn book called defter-i Ajizya-i gabrdn. But, as we read in the defter of Buda and Pest in L. Fekete, Die Systgat- schrif in der türkischen Finanzverwaltung, Budapest 1955, i, doc. 8, 20 pp. 176-98, 350-5; ii, facsimiles, Tables XI, XXXVI). Referred to also as asi defter, original defter, this book was made in two copies, one for the central treasury, the other for the provincial administration. The census was to be renewed. But, as we read in the nishdn of 22 Dju- mādā II 1102/23 March 1691 such censuses were not renewed for long periods and as a result of deaths and births, flights and conversions the books did not reflect the actual situation. In the reign of Mehmed II half of the diizya due from the fugitives of a village was to be made good by its timār-holder and the other half by the remaining diizya-payers (R. A. Becq, Imam al-Malik, 176). But, with the collapse of the timār system in the late 16th/17th century the whole burden fell upon the latter. Finally by the reform of 1102/1691 each diizya payer was made responsible only for his own personal diizya and a paper, kāghdī or warāk, was delivered to certify its payment. On the other hand the fugitives were pursued, (ibid.) or, sometimes, the authorities would try to bring them back by promising a reduction in the rate of diizya, as was done to repopulate the deserted villages in the province of Manastir (Monastir) in 1117/1705.

As a rule every third year, called new-yafste (Nau- Yâfiya) yilli a general inspection was made to cross out the dead, mirde (murde) and to add new-yafste (new-yafste), those who were omitted from the defter for one reason or another, among them the bāshis, kethals, kheidżis, Dīzva ʻil-i harān, in the time of Mehmed II and Helge Ingelhart, Fikh (Al-Durar, 212; Mewkufatī, 1, 351) distinguished two kinds of diizya, that fixed by suh, agreement, the amount of which could not be altered, and that levied by the prince, al- diizya ʻala ʻl-ruṣūs. The former, called in Ottoman official terminology diizya ber wehz-i makhṭūt or simply makhṭūt, was extensively applied and found two different fields of application in the Ottoman empire: (a) The submission as a vassal of a Christian prince always implied the payment of an agreed yearly tribute however small the amount might be. Then the Sultan censored the non-Muslims under the prince as the Sultan’s own khardi-paying subjects (see Boğqdan, Raguza) and the yearly tribute which was usually paid in gold pieces as a khardi-i makhṭūt (see Dār al-Šahād); (b) In some cases the qimmi under the Sultan’s direct rule were permitted to pay their diizya in a fixed sum, ber wehz-i makhṭūt, as a community. The qimmi ra‘ayā applied for it mostly to escape the abuses of the diizya-collectors and their request was accepted by the government often to insure its payment, for other- wise they often threatened to abandon their villages and run away. On the other hand the Albanian mountain tribes of Klementi living in five villages were permitted to pay a nominal fixed sum of one thousand ake for their diizya in 920/1517, and in 1103/1692 the authorities were permitted to guard the highway passing through their area. Also in Kurvelesh, Albania, seventeen villages in rebellion agreed to submit on condition that they paid their diizya ber wehz-i makhṭūt at a fixed sum of 330 esed guhrūsh in 1106/ 1695. In these examples we see the government being rather forced to come to an agreement with its qimmi subjects. Sometimes the makhṭūt was agreed upon between the diizya-collectors and the bāshis, kethals, Christian notables, who thus being able to distribute the diizya in their communities them- selves expected to have some advantages such as to alleviate their own share, as actually stated in a document. But this practice was denounced by the government.

The makhṭūt system gave the Jewish community of Safad the opportunity to save their clerics from paying diizya by paying bagnis. Note and documents from the Turkish Archives, Jerusalem 1952, 11; U. Heyd, Ottoman documents on Palestine, Oxford 1960, 121; cf. idem on the Dīzva-registers for Palestine in Jerusalem, iv (1952), 173-84 (in Hebrew, with Turkish documents).

Considering its basic character of a poll-tax, however, the government often insisted on its payment individually. On the other hand the makhṭūt, fixed sum of diizya for a group, might become too onerous when the number in such a group for one reason or another decreased. In such cases a new census was often asked for, to reduce the amount or to return the payment to individuals.

The makhṭūt system in diizya, however, came to be more and more extensively applied in the period of decline during which the central government had increasingly lost the control of tax collection in the provinces. The bagnis-bagnis, khowšs and kæne then took over, as the a'jān among the Muslim population, the collection of taxes within their communities, and this prepared their rise as a local aristocracy in the Balkans in the 12th/13th century. In the belief that the makhṭūt system was favourable for the ra‘ayā the government continued to apply the system (the circular of 25 Muḥarram 1257/17 March 1841 in Mühimmе no. 13663 Malıyе Yeni
It was the Sultan's responsibility to declare every new year the rates of diizya to be collected on the basis of a fatvad (q.v.) given by the Shaykh al-Islam who determined it according to the shar'i scale. In Ottoman terminology the grades were adNı, avsaJ and adadı corresponding to şahısr al-şhmadh muñafirin, wealthy, mutassaawat al-bal, medium status, and fahır muş'taman, working poor man, who were to pay, 48, 24 and 12 dirham-i sharfi (see DIRHAM) of the coins in circulation. In a document of 6 Dümâdâ II 896/16 April 1491 (Gökbilgin, 159) we find diizya applied according to the shar'i scale. But in a firman of 880/1475 the collector was accepted to accept payments over fixed rates (Anhegger-Inalcık, 78).

Payment could be made in silver and gold coins in circulation, and rarely the rates were also shown in current copper coins. In a firman of 1101/1690 the rate for the lowest grade was fixed as one Egyptian gold piece, shahi fru'mun, or 2 1/2 esedl (Dutch) ghurush, or 90 para or 1170 copper manghir. But payments were mostly made in silver akçe (q.v.) until the late 16th century, and in ghurush or para in later periods. The recurrent devaluations and depreciations in coinage (cf. H. Inalcık, in Belleten, lvii, 676-84) of the Ottoman Empire, mainly because of the need of the Ottoman government to declare in the firman of diizya-collection every year (cf. examples in Hadźibegić, doc. nos. 1, 2, 4, 5, 6, 10, 12, 14, 19, 22, 25) a schedule of the official rates of the coins in circulation. But disparities between the official and current rates often gave rise to disputes between the tax-payers and collectors, and the treasury sometimes resorted to accept only gold pieces. At other times, on their own initiative, the collectors forced the tax-payers to pay only in gold with the intention of exchanging this later for their own profit. To prevent this the Sultan often had to send special orders to the collectors to accept silver coins too (the Aĥkâm deferferler in the Bayvekâle Archives, Istanbul, are indeed full of such orders). The assessment of diizya in the Ottoman silver coinage went up from 1102/1691 to 1249/1834 as shown in the following table (Hadźibegić, in Prilozi, v, 102).

Mahmud II emphasized in his firman that the increases, adNıvım, were not newly assessed taxes, muhdadhx, but simply the result of a necessary adjustment of the fixed shar'i quantities of silver to be paid as diizya in the currency of the day (cf. Hadźibegić, v, 69, 79). But these increases, even if they were not in real value, gave rise to widespread discontent among the dhimmis in the Ottoman empire.

It must be remembered that until the introduction of radical changes in the Ottoman finances in the 11th/17th century, diizya was levied in some large areas of the empire only at one single fixed rate (cf. the Sandjak regulations in Barkan, 83, 201, 226, 316); for the dhimmis subject to diizya of all classes 25 akçe in the province of Yeni-i in Süleyman's time, 40 akçe in 991/1583, 35 akçe in some provinces and 55 akçe in others in the province of Bitlis 30 in the island of Taşhöv, 46 in the province of Mosul in the 10th/16th century. It was 80 akçe in the lands conquered from the Mamlûks, namely in the provinces of Adana, Damascus, Safad; the rates here, except for the latter, were less than the normal lowest rate (one gold piece was 60-70 akçe during this period). The reason given for this special treatment in the provinces of Eastern Anatolia was the poverty due to the physical conditions of the area. As for the islands, similar conditions together with the special defence responsibilities imposed on the population accounted for it. The dhimmis of the island of Imbros were even exempted altogether from diizya (Barkan, 257). The single rate of 80 akçe in Syria and Palestine appears to be a survival from the last phase of the Mamlûk period during which diizya was for all classes one gold piece plus a fraction to cover collection costs (B. Lewis, Notes, 11). Being considered too low as compared to the shar'i rates, these fixed single rates of assessment were raised on the accession of a new Sultan to the throne (on Selim II's accession an increase of ten akçe was made; cf. Barkan, 318).

The assessment of diizya was made per family in Hungary, Palestine in the 10th/16th century (cf. B. Lewis, Notes, 10; idem, Studies in the Ottoman Archives, in BSOAS, xvi, 1 (1954), 484-5), in the province of Salonika, and many other places in the Balkans (cf. Gökibilgin, 155-7) before the reform nişan of 1102/1691.

Also in the early period there were certain groups exempted from diizya. It was true, in principle, that the exemption from diizya was considered as a waste of a revenue belonging to the bayt māl al-muslimin; hence it was made only exceptionally and, if done, in return for military services. Thus the dhimmî population of a crucial fortress (cf. Barkan, 204; but in 835/1431 the population of Akbaḥisâr, Albania, was exempted from all taxation but diizya, cf. Sâret-i Defer-i Sanâa, v, 620, in charge of guarding a mountain pass (cf. H. Inalcık, Fatih devri, i, Ankara 1954, doc. i), relatives of the children levied for the Janissaries, diizya supplying sulphur for the powder factories in Salonika (deiter, K. Kepeci tasmii no. 3510, Bayvekâle Archives) were exempted from diizya. The Christian soldiers who formed part of the Ottoman fighting army in the 9th/16th century, namely Christian timâr holders, voynukuş (q.v.), martsîlos (q.v.) and efikas, enjoyed total exemption from diizya (H. Inalcık, Fatih devri, i, 176-9). The sons and brothers of voynukuş were subjected only to a bedel-i diizya, substitute of diizya, at a fixed rate of 30 akçe which was about half of the lowest rate of diizya by 922/1516 (Barkan, 396, 398). When these groups lost their military use in the 10th/16th century they were mostly made dhimmî râ'dîya and subjected to diizya. Those maintained were subjected to a fixed low rate.

At all times the Ottoman government granted partial exemption from diizya to the dhimmis of a particular position. Those living in the provinces in the borderland, i.e., Serbia, Bosnia, Hercegovina, Montenegro, paid diizya only at the lowest rate, adadı, and in time of war the dhimmis living nearest to the field of operation and on the military routes paid it as half (cf. Hadźibegić, in Prilozi, iii, doc. 2, 203).
The dhimmis having to abandon their homes because of enemy invasion were exempted from diizya for a certain period. The dhimmis migrants in some regions paid it at a very low rate (only six akçe in Silistre in the mid-16th century, cf. H. Inalcik, Osmanilarda raiyet rüşûmu, in Belleten, xcii, 608, note 173). As late as 1170/1757 the dhimmis of 21 villages in Chios who were engaged in the production of mastic paid it all equally at the lowest rate.

Under the capitulations the dhimmis terdijiman, dragomans, translators to the foreign embassies, enjoyed exemption from diizya. But many dhimmis had managed to obtain berâis of terdijiman by dubious ways to escape paying diizya (see Berâtî). If a musta'min (see AMAN) prolonged his stay in the Ottoman dominions longer than one year he was treated as a dhimmî, subjected to diizya, and could not leave the country for the Dar al-harb [q.v.] (cf. Al-Durar, 207). Though we find in the records, sidîdîât, of the kâdi of Bursa cases testifying the application of this rule, some ways must have been found to allow foreign merchants to stay as musta'min for longer periods in the great commercial centres even as early as the 9th/15th century (cf. documents in Belleten, xcii, 67-96). Later on under the capitulations the Ottoman government became more strict on this matter and levies were raised in several ways (cf. the Ottoman constitution of 1153/1740 to France, article 63). The Armenians of Persia, Arâmîm-n-i Âdâm, visiting the Ottomans lands usually as merchants, were also subject to diizya (the nişâhân of 1102/1691, and Hâdzâbegic, doc. 4, 10, pp. 107, 125).

The nişâhân of 1102/1691 provided that diizya was to be levied per head by all the dhimmis subject to diizya on the basis of the ârâfî scale, thus abolishing the mahlû akçe system and exemptions (cf. Fındıklılı Mehmed Âgha, Sûlîhidâr ta'rîkhî, i, ed. A. Refik, Istanbul 1928, 559). But many old practices and exemptions survived, and only in 1255/1839 was the proclamation of equality in payment of taxes all such exemptions and privileges abolished. Diizya-payers had always to pay two additional dâtîs, one for the living expenses of the collector and resm-i kitâbet (also called resmî hesab, adârât-i kitâbet, kâhrî-i mûhdsebe or kâlamîsîye) for the services of the central department of diizya (cf. Hâdzâbegic, iii, 112). Actually these were well established dues found with all the departments of the Ottoman finances. In the firman of 880/1475 on the collection of diizya (Anhegger-Inalcik, 77-8) we find a due of two akçe per family called resm-i kitâbet and a one akçe due levied formerly by the ilkehûdâs. In the 10th/16th century the collector and the scribe accompanying him each took one akçe for themselves (Barkan, 180; in Hungary, in addition, one akçe resm-i kâhsân, Barkan, 316). In 1102/1691 ma'shat was 12, 6 and 3 para for a'dâ, âsasal and adnî respectively and one para was paid for u'darat-i kitâbet by all alike. Four years later a new due, ma'shat for the kâhidî, was added, which was 9, 4 and 1 1/2 para for a'dâ, âsasal and adnî respectively. In 1106/1694, to prevent the abuses in collection of these dues, it was made clear that the collectors were to levy these not for their own account but for the treasury, and the remunerations were to be paid to them by the treasury from the diizya-revenues at the central department of diizya (Hâdzâbegic, iii-iv, doc. 4, 5, 10, 11, pp. 107, 112, 125, 131). The total sum of these legal dues amounted to 1/3 of the diizya itself and their rates were raised following the increases in diizya. From the same firmans we learn that the collectors were illegally subjecting the diizya-payers to some extortions under the names dâhânîn, kâhsânî, qârî'at-i diizya, koldî akçeî, kâhdî-i mûhdsebe (Hâdzâbegic, iii-iv, 112, 125), mum-akçeî buyûlûdî avâm-tîdî and others. With the proclamation of the Tanzîmât in 1255/1839 collectors with a salary from the treasury were appointed and were allowed to take from the tax-payers only a minimum of provisions for themselves and their animals (Hâdzâbegic, Prîlozî, v, doc. 25, 93). But the heaviest burden on the diizya-payers was the obligation to make good the diizya of the fugitive dhimmis, gûrîkhte (in Turkish gûrîkhate) and the dead, mûrda (in Turkish mûrdâ), which sometimes caused the depopulation and ruin of a whole village. As disclosed in the nişâhân of 1102/1691, in some villages the surviving quarter of the previous population was forced to pay the diizya of the missing three quarters too. On the other hand the collectors in cooperation with the local kâhidî sometimes tried, without official permission, to collect diizya from the new-yâfe (naw-yâfsa), those not yet recorded as diizya-payers in the official defters. They also collected bedel-akcesî, a lump sum for those names in the defter under which no one could be identified. The government almost never struggled to prevent such abuse and ended by assessing a fixed new tax, called gûrîkhtî, to and beyond the nişâhân of 1102/1691. This tax appears in the diizya accounts of 1102/1693 and it was then 40 akçe per head, a sum about one-eighth of the diizya itself. Also we find a similar tax called new-yâfe akcesî even at an earlier period. These proved to be only new burdens for the ra'dîyâ since the collectors continued their exactions according to the established customs. When in 1102/1691 the method of collecting diizya by distributing personal certificates of payment was established, the collectors, in an effort to use all the certificates delivered to them by the treasury, forced people not subject to diizya to accept them, or imposed certificates of higher rates to those subject to low rates. Some of the collectors were denounced as having accepted bribery from the wealthy to save them from the exerting rate of the new tax, and forced the poor to accept them. To all this must be added the common complaint about the ra'dîyâ having to provide the needs of the collectors' large suite of hâddîs, guardians, and many other exactions which were common in the collection of taxes in the period of decline. The collectors acted apparently even more harshly towards diizya-payers, since the firmans commanded, on the basis of the gûrîkhtî, that the dhimmis were to pay diizya in complete humiliation, dhûl wa sâghîr (cf. Hâdzâbegic, doc. 5, 10, pp. 112, 126). All this was no doubt mainly responsible for the discontented ra'dîyâs cooperating with foreign invaders from the late 11th/17th century on. The reform measures taken in 1102/1691 and later did not improve the situation, and it can be safely said that the abolition of the exemptions, especially those of clerics under the new system, ended by turning some influential groups among non-Muslims against Ottoman rule.

Bibliography: The Ottoman state followed the Hanafi school in the application of diizya; Al-Durar fi sharî' al-arâyir al-akhâmî by Molla Khûsrew (Istanbul 1258, 195-216) and later Mewkûhâtî's translation of the Mustâhid al-abhur (Istanbul 1318, 340-41) became the principal authorities for the Ottoman mu'âlemâ and administrators on these matters. For a statement of the sharî' principles in an official Ottoman regulation
see Ö. L. Barkan, Kanunlar, 331. The earliest firman on the levy of djizya that has come down to us is dated 580/1475-6 in R. Anhegger-H. Inalcik, Kanunlar-i Seld'lin ve defterleri, Ankara 1956, 76-8; facsimile in F. Babinger, Sultanische Urkunden zur Geschichte der osmanischen Wirtschaft und Staatsverwaltung am Ausgang der Herrschaft Mehmed II, des Er-oberers, i, Munich 1926, 270-80; French summary in N. Beldiceanu, Les actes des premiers Sultans, Paris-The Hague 1960, 149-50; H. Had&begic in his fundamental article on djizya in the Ottoman empire Djizya i li haraç, in Prilisi, iii-iv, 55-155; v, 43-102, published twenty-seven documents from the sigiflrd of the kâdis of Bosnia and Macedonia. Two berds dated 5 Ramaçan 1111/ 24 February 1700 and 1 Şabîn 1121/6 October 1709 published by B. C. Nedko in Sammlung orientalischer Arbeiten, xi, Leipzig 1942 and reproduced in Beirut; xxxi, 641-9, are transcribed with some errors.

The cizye muhasbe defterleri, maliye ahkâm defterleri and mukadad defterleri in the collections of Mâliye, Kâmil Kepeci and Yeni Seri, the Başvekâlet archives, Istanbul, constitute an inexhaustible source on the subject. The oldest defters in these series are a defter-i muhkadâ'ît of Mehmed II’s time, Yeni seri, nos. 176, 6222 and 7357, a defter-i ta‘ziye-i djizya-i gibrânî-i wîlâyât-i Rumeli wa Anatolu, dated 953/1545. K. Kepeci, no. 3532 and a defter-i ahkâm-i maliye, dated 971/1565 Mâliye Yeni Seri, no. 2775. The collection of defter-i muhasabâ‘i djizya, the most comprehensive source on djizya, start in 1101/1690, K. Kepeci nos. 3508-3799. (HAÎL İNÂLCİK)

iii.—INDIA

The question of the levy of djizya in India has provoked more emotion than scientific study, it being assumed that practice in India was closely modelled on the teachings of fiqh, or the precepts of Indo-Muslim scholars, or the policies of the Ottomans. The view taken here that djizya was not normally levied under the Dhyli Sultanate in the sense of a discriminatory religious tax may be contested; for this see below and page 325.

The earliest extant source for the Arab conquest of Sind, Balladurî, Futuḥ, 439, speaks of Muhammad b. Kâsim levying kharâdâ‘ as tribute upon the conquered. The Cal-nâma, said to be a Persian translation (c. 613/1216-7) of an early Arabic account of the conquest, speaks (India Office Library MS 435, 268) of the Sindhis being allowed the status of dhiyâ and of a graduated poll-tax being laid upon the people of Brâhmanbâd, the three classes paying at the canonical rates of 48, 24 and 12 dirhams respectively (MS. 261-262). This account, however, would seem more a reflection of later tradition than of events in 947/1202 which antedated the differentiation between kharâdâ‘ as land-tax and djizya as poll-tax under the late Umayyads which became the basis of fiqh teaching.

Under the Dhyli sultanate [q.v.], political conditions —the continued presence of armed Hindu chieftains in rural areas, the particularism of the period 801/1398-9 to 932/1526—do not appear apt for the imposition of a novel discriminatory tax by a minority upon a majority. Kâdî Minhadî al-Sirdâr Djüdrdjanî does not refer to djizya being levied in the period to 638/1240. Amir Khursaw, Kirân al-selâ‘yin, 4’Allagîrî, lith, 1928, 35, uses djizya to mean tribute from Hindu kings. References in the Khâlidî and early Tughluk period couple djizya indiscriminately with kharâdâ‘ to mean tribute or land revenue (e.g., Diyâ al-Dîn Barani, Ta’rîkh-i Firuz Shâhî, Bib. Ind., 291, 574; Baranî states also (Futuḥ-i Sultânî, iii, 345, India Office Library MS 11, fol 379a) that Hindûs and Rânîs were levied kharâdâ‘ and djizya from their own Hindû subjects). An anecdote in Amir Hasan Sifâ’î’s Fawzî’d al-Fawzîr (707/1307-722/1322) speaks (Dhîlî lit. 1865, 76) of a Muslim darbîh being required to pay djizya, in a context showing that tax in general is meant.

There are, however, for the reign of Firuz Shâh Tughluk a number of references, principally in works of the manâshîb idiom, stating that that Sultan levied djizya. The anonymous Sirat-i Firuz Shâhî, (727/1327-3, India Office Library Roto 34 of Bankpur MS, fol. 61b), claims that Firuz Shâh Tughluk ordered that only canonical taxes should be collected, a claim repeated in the Futuḥî-i Firuz Shâhî, ed. Shâykh Abdur Rashid, ’Allagîrî, 1954, 6. Shâms al-Dîn Sirâdî A’tîf, Ta’rîkh-i Firuz Shâhî, states (Bib. Ind. ed. 382-4) that Firuz, having obtained a fatwâ that djizya should be levied from the Brâhmins, ordered it to be levied, but reduced its incidence, after protest from the Brâhmins of Dihlî and petition from other Hindûs, from the three rates of 40, 20 and 10 tankas to 10 tankas of 50 fils. The contemporary collection of or- namental epistles, Inshâ’yi Mahrû (ed. Shâykh Abdur Rashid, ’Allagîrî n.d.), also mentions (41, 53-4) the levy of djizya, although the latter context suggests it was not distinguished from land revenue.

In the Sayyid and Lodî period nothing is heard of the levy of djizya. From the manner in which the historians of Akbar’s reign report its abolition by him, even the references to it in the Tughluk period may be largely panegyrical There is indeed no agreement on the date at which the abolition took place. Abu ’l-Fadî in the Akbar-nâma (Bib. Ind., ii, 203), places it in 171/1564, Bâdâ’înî in 987/1579 (Muntakhab al-tawdrikh, Bib. Ind., ii, 276). The latter, who is otherwise quick to condemn Akbar for any deviation from orthodoxy, mentions the event without comment. Nîzâm al-Dîn Ahmad does not refer to djizya but mentions an abolition of zakât in 1798/1950.

Following a number of orthodox measures discriminating against non-Muslims, Awrangzîb imposed djizya in 1609/1679, the Mirât-i Ahmadi states (i, 296-8), after a petition by (‘ulamâ’ and fahaid). Financial stringency as well as Awrangzîb’s personal inclination doubtless helped to prompt the decision, although this would not, of course, explain the discriminatory character of the tax. Isâr Dâs, Fustuhi-i ‘Alamgîri, (British Museum Add. 23884, fol. 748-74b), states that government servants were exempted and that there were three rates of tax—owners of property worth 2,500 rupees were assessed at 16 rupees, those worth 250 rupees at 6 rupees 8 annas, and those worth 52 rupees were assessed at 3 rupees and 4 annas, the blind, the paralysed, and the indigent being exempt. Its introduction encountered popular and court opposition at Dihlî, which was, however, overcome. The Mirât-i Ahmadi states that djizya brought in 500,000 rupees in the province of Gudjarat.

Djizya did not long survive the death of Awrangzîb in 1718/1707. Bahâdur Shâh, Dihândar Shâh, Farrukhsîyar and Muhammad Shâh are all said to have abolished it, although Farrukhsîyar had at one time struck a dirham shârîf to facilitate payment of the djizya at the canonical rates (see TAR-AL-BAR,
iii. Niẓām al-Mulk Āṣaf Dījāh attempted to revive it in 1135/1723, and Muḥammad Shāh nominally restored it in 1137/1725, but this restoration was never carried into effect.

**Djodhpur or Mansawā** was the largest of the former Indian States in the Rajputana Agency with an area of 36,120 sq.m. and a population of 2,555,904 (1941 Census). There appears to be no evidence to support the Rājpūt legend that the state of Djodhpur was founded by the Rājpūts of Kanawdī after their defeat by Muḥammad of Ghūr in 590/1194. Siyāḥjī, the founder of the Rāṯhōr dynasty of Djodhpur, was probably descended from Rāṯhōr rājās whose inscriptions were found outside Djodhpur as early as the tenth century. The city of Djodhpur dates back to 1459. Rāw Mālīd of Djodhpur, who refused to grant asulam to Humāyūn, was defeated by Shīr Shāh and by Akbar whose tributary he became. From this time the rulers of Djodhpur were closely connected with the Mughal emperors of Dīlī, giving their daughters in marriage to the imperial family and serving in the Mughal armies.

The most famous Rājpūt in the service of the Mughal emperors was Māḥārāḏā Ḍiasāwī Sinh (1048-9/1638-73). Because of Awrangzīb's orthodox religious policy war broke out in 1090/1679. Djodhpur was sacked, but guerilla warfare continued for many years. The Sayyids brothers forced the ruler of Djodhpur to give a daughter in marriage to the Emperor. Fūrūs in turn. The sovereigns bore the title of Bāb of Djodhpur. Quarrels that broke out between the various Ouolof communities led to the secession of the Lebou who crossed Cayor and went to settle on the peninsula of Cap Vert under the suzerainty of the dāmāl. In the 16th century a certain Kōumūbū Gūeīmū, with the help of the Lebou, started a revolt against Bour Bāmīr Dīm Kōumbara who crushed it, but was unable to prevent the chiefs of Cayor and Baol from seceding. In the middle of the 16th century, Lefleuf Fack was unable to withstand a further revolt, led by a certain Amanī Gōne Sohīl who was the true founder of the kingdom of Cayor, with M'Bour as its capital.

Probably as a result of the profoundly democratic temperamental of the Ouolofs, there is not a single sovereign from this period whose name is outstanding. But the linguistic and cultural mark had been set, and was later confirmed during the colonial period. Djolof, being situated inland, was affected by European colonization only at a late date. In the 16th century Islam had only superficially penetrated to this region where the pagan practices of the Ouolofs scandalized the pious Muslims. However, the progressive Islamization of the inhabitants was noted as early as 1445 by Ca da Mesto.

After settling on the coast from 1683, the French explored the interior. In 1682 Lemaire gave information about the Ouolofs, while three years later La Courbe sent his agents to make a treaty with the Bour de Guiolof. From 1749 to 1755, Djolof was visited by the French naturalist Michel Adanson. A century later it served as a place of refuge for the rebels during the campaigns conducted against Lat Dior, dāmāl of Cayor. In 1871 the Tīḏījī chief Aḥmadus Shevkhu invaded Djolof and Cayor, but was routed by an expeditionary force and killed in 1875.

In 1889, a force under the command of Colonel Dōods put the bour de Djolof to flight. The latter's brother acknowledged the French protectorate on 3 May 1890. Henceforth Djolof shared in the development of Senegal and, in 1931, a branch line of the east by Fūṭa Damga and Ferlo, on the south by Niani-Ouli and Baol, and on the west by Cayor and N'Dimbouar.
Dakar-Saint Louis railway reached Lingueré in the heart of the Djolof country. At the present time the region is almost entirely Islamized. In every village can be found a place reserved for communal prayer (djidma) and one or more marabouts. The Muslim Ouolofs are very strict in praying and fasting; the name tabashi (Touareg tafaski, from pascha) which they give to al-‘Ird al-kabir is evidence of their partial conversion by the Berbers; they are very ready to become members of a religious confraternity, usually the Čadiyya. It was from Djolof that Ahmadu Bamba, founder of the Murid sect, recruited his followers. This Muridism (in a peasant form) is regarded as a "Ouolofisation" of Islam.

Society.—According to tradition, the first villages are said to have been formed by gifts of land by the Burba Djolof to warriors who had distinguished themselves in expeditions. As in most of the Ouolof country, society is divided into endogamous groups which no-one can leave or join. The freemen (gor) are descendants of the founder of the village or marabout: artisans, cobblers (wound), blacksmiths (teugne), wood-workers (laod), sorcerers (gueule). The caste of the unfree (or diama) seems to have disappeared.

The place of habitation is the village (deub), formed of squares which house the scattered family. Although the ground-nut has noticeably improved living conditions, Djolof is one of the poorest regions of Senegal, and hence the temporary emigration of the men to the towns.

DUBAYL, a small port in Lebanon situated between Bayrut and Tripoli on the site of the ancient Byblos (or Gebal in the Old Testament), formerly a centre at once maritime, commercial and religious, closely connected with Egypt since the 4th millennium B.C., and as celebrated for the worship of Adonis, of a syncretistic nature, as for its specialization in woodwork and products from the forests on the mountains nearby. If Byblos remained truly prosperous in the Roman period and later became the seat of a bishopric, it appears to have greatly declined by the time when it was conquered by the Muslims, and when Mu‘awiya established a colony of Persians there, as in the neighbouring territories. Dubayl, which was attached to the ġund of Damascus, kept a small garrison until the 5th/11th century. At that period, when the Fātimids had extended their domination over the Syrian coast, it was under the direct dependency of the Shī‘i kādis of Tripoli, the Banū ‘Ammar. According to the traveller Nasir-i Khusrav who passed through it in 438/1047 the town, triangular in shape and surrounded by high walls, stood by the sea, whilst the surrounding plain lay to the foot of Mount Lebanon, was covered with date-palms.

Captured in 496/1056 by Raymond de Saint Gilles, Count of Tripoli, it became a feudal domain under the name Gibel, and was given to a family of Genoese origin who were known as the "lords of Gibel"; it remained in the hands of the Crusaders until reconquered by Saladin in 583/1189. Archaeological traces of the Frankish period can be seen in the castle which stands on a hill at the north-east angle of the enceinte, no doubt on the site of an earlier Muslim fortress, and in the church of St. John, most of which was later rebuilt, though the baptistery, a masterpiece of Romanesque art, has survived intact.

At one time reoccupied by the Franks, to whom the Kurdish garrison put there by Salāḥ al-Dīn had surrendered in 593/1197, the town was reconquered in 665/1266-7 by Baybars who restored the fortifications, and later made it part of the Mamlūk district of Bayrāt. Then, at the end of the 9th/10th century, it fell into the hands of the Banū Hamāda, a family of Mutawalīs dominating Upper Lebanon, and remained in their power until the 12th/13th century. The importance of its port had by then greatly diminished, its place being taken by Dūbih, a rival port from ancient times which had long been in control of the local coastal shipping.

At the present day Dubayl is merely a small village of about 1,500 inhabitants, almost all Maronite, and it is chiefly known for the ruins of the Phoenician town which have been methodically excavated since 1921 by the French mission under the direction of M. Montet and M. Dunand respectively.

and took the name 'Aynayn from its two flowing springs; it is also said to have been once occupied by the tribe of 'Abd al-Kays. In the early Islamic period 'Aynayn was noted for its plentiful date palms and for a poet, Khulayd 'Aynayn, who is chiefly remembered for exchanging lampoons with the famous Umayyad satirist Djarir b. 'Atiyaa. The site was later abandoned. The present town was populated about 1330/1912-1 by members of Al Bū 'Aynayn who emigrated from Kātar, with the permission of the Turkish authorities, as the result of a local dispute. The settlers were Mālik Sunnīs engaged in pearl fishing and other seafaring occupations. Al-Djubayl came under Sa'ūdī rule during the conquest of al-Hasā' by 'Abd al-'Azīz Al Sa'dūd in 1331/1913. The town was formally acknowledged to be Sa'ūdī territory in the treaty of 1334/1915 by which Britain recognized the independence of 'Abd al-'Azīz. During the consolidation of the Sa'ūdī kingdom, al-Djubayl became a port of entry for goods destined for Central Arabia. Its significance has since diminished as the result of the decline in the Persian Gulf pearling trade and of the development of modern communication routes through the port, rail, and road centre of al-Dammām [q.v.]. The population of al-Djubayl was estimated in 1960 at 4,200.

AL-DJUBAYLA, a small town of 30-60 dwellings located in Nadād at 24° 54' N, 46° 28' E, on the left bank of Wādī Ḥanīfah between al-'Urayyana and al-Dihriyya. Yākūt mentions a place called al-Dijubayla as the chief town of Banū 'Amir of 'Abd al-Kays, but there is no evidence definitely linking this place with the present town. According to Ibn Bulayhid and local tradition, the site of 'Akrābā [q.v.] is near the present town. Mounds on the right bank of Wādī Ḥanīfah, called locally ʿuqbūr al-ṣāḥib, are believed to be the graves of some of Banū 'Akrābā who fell in the battle of 'Akrābā, and 'Akrābā is the name of the garden area of al-Dijubayla, a small raudhah about one kilometre east of the town, which is said to be the actual site of the gardens in which the battle took place.

Ibn Bīshr relates that in 850/1446 al-Dijubayla belonged to Al Yazīd, whom Mūsā b. Rāfī's b. Mānī al-Muraydī, an ancestor of Al Sa'ūdīs, attacked and virtually exterminated shortly thereafter. Al Dughābahīr of al-Dihriyya claim descent from the survivors of Al Yazīd, who were a branch of the Banū Ḥanīfah (Hanīfī b. Lūjaym b. Wāḥīl), the supporters of Muṣaylima al-Raḍīʤābī at the battle of 'Akrābā and the tribe which gave its name to Wādī Ḥanīfah. The battle site of 'Akrābā was in ancient al-Yamāma, which is believed to have extended as far north as the present town of al-Dijubayla and its garden of 'Akrābā. However, in many cases the identification of ancient places by modern usage remains inconclusive.

Both al-Dijubayla and 'Akrābā are mentioned several times by Ibn Bīshr as the scene of clashes between the growing power of Al Sa'ūdī and the influential line of Banū 'Akrābā from al-Hasā' al-Aḥṣā' between 1331/1721 and 1172/1758-59. In 1253/1740 the young reformer, Shaykh Muhammad b. 'Abd al-Wahhāb, then virtually unknown outside of al-'Urayyana, destroyed the alleged tomb of Zayd b. al-Khaṭṭāb, the eldest brother of the Caliph 'Umar and one of the Companions who fell at 'Akrābā, as a step towards the obliteration of false worship in Nadjīd. Today the site of the tomb is forgotten.

Al-Dijubayla lies at the junction of two roads from al-Riyād to al-Hidjaz; one road winding across the rolling rocky country between the east bank of Wādī Ḥanīfah and al-Riyād, and a second road which is paved as far as al-Dihriyya [q.v.] and then follows the bed of Wādī Ḥanīfah to al-Dijubayla. These roads give the town access to al-Riyād for the sale of crops raised in the garden of 'Akrābā and a small steady income from trans-peninsular motor traffic. In 1961 a new road was completed which provides a paved all-weather route from al-Riyād to the Tuwayk escarpment at Sha'īb Lūhā (sometimes shown on maps as al-Ḥa) south-south-east of al-Riyād, whence it proceeds north-west, parallel to the escarpment, as far as Mārāh where it rejoins Darb al-Hidjaz, eliminating completely the difficult stretch of road between al-Dijubayla and the pass of al-Haysiyya at the head of Wādī Ḥanīfah. Bibliography: Ibn Bīshr; Ibn Bulayhid; Philby, Sa'dīd Arabia, London 1955; Yākūt. (R. L. Headley)

DJUBBA [see LIBĀS].

AL-DJUBBĀ'I, Abu 'Ali Muhammad b. 'Abd al-Wahhāb, one of the most celebrated of the Mu'tazilas [q.v.]. Born at Dijubba in Khuzistān, he attended the school at Başra of Abū Ya'kūb Yūsuf al-Ṣaḥḥām who at that time occupied the chair of Abū 'l-Hūṭhāyil al-Ṣaḩlāf. He succeeded al-Ṣaḩḥām, and it can be said that he added to give a final brilliance to the tradition of the masters, while at times he refreshed it and opened the way to new solutions. He died in 303/915-6.

He thus holds a place in the line of the Başra Mu'tazilas who, especially over the question of human actions, differ from the Baghdād Mu'tazilas. In Başra itself, he was particularly at variance with al-Nāẓẓām (whom he opposed) and al-Dībijīz, but he also differed from the two lines of thought of al-Āṣamm and Abū 'l-Ḥalīfah al-ʿAhrām, and these were closer to his own. The two last-mentioned both combined the influence of Mu'āmmar with the tradition of Abū 'l-Hudhayl, and the second former added to the Başra teaching influences deriving from Baghdād (school of al-Murḍār).

Al-Dijubba'i had two pupils who later became celebrated: his son Abū Ḥāşim (cf. below), and Abū 'l-Ḥasan al-ʿAshārī [q.v.] who, after breaking away, was to devote himself to refuting Mu'tazilism and to become the "founder" of the so-called school of the ʿAshāriyya [q.v.]. The traditions of the 'ilm al-kalām take pleasure in recounting the dialogue reputed to have brought al-ʿAshārī and his teacher into conflict on the subject of the fate of the "three brothers"—one pious, one impious and one who died in infancy. In this issue was posed the problem of the rational justification of the divine Decree. Al-Dijubba'i, it is said, was unable to reply, and al-ʿAshārī left him. W. Montgomery Watt has reminded us that the wish to "justify" absolutely the divine Decree in respect of every human destiny seems to derive perhaps from the Baghdād Mu'tazila rather than from the Başra school (Free will and predestination in early Islam, 137).

However that may be, no complete work of al-Dijubba'i has survived until the present time. We know that he left a Kitāb al-usūl, to the refutation of which al-ʿAshārī devoted several treatises (cf. in
the bibliography of McCarthy, *Luma*, Appendix iii, nos. 16, 61, 65, 78), and various polemical works against Ibn al-Rawandi and al-Nazām. But one of the best available sources allowing us to evaluate tendencies is still the *Makāli al-Islāmiyyin* of al-Asgh’arī (see particularly Cairo ed., ii, 181-2, 196, 199-201, 243, etc.).

The teaching given by al-Djubba’ī followed after the reaction by caliph Mutawakkil which dates from 235/850. Muḥazilism is no longer the official doctrine. As a criterion, and he continues to affirm the identity of the divine attributes and the divine essence; on the other hand, however, he tends to introduce once again the mystery of the divine Will and its action upon the world.—Two examples: (1) those of the Baghdād Mu’tazila, followed with certain modifications by al-Shāhīm, who adopted the idea of “acquisition” (*kabh, tkfisīb*), applied it only to involuntary human actions, God being, in their view, in no way the “cause” of free human actions; for al-Djubba’ī, on the contrary, God retains Supreme Power even over the actions which man performs freely. But, unlike the later Ash’arī solution, he refuses to apply the theory of the *kabī* to free actions; and he ceases the “creator *kadar*” of his actions, in the sense that man acts, or his actions proceed from him, with a determination (*kadar*) which comes from God.—(2) ‘Abbād objected to any association of God with evil, and for example refused to speak of *garr* or *kabī* as sickness or weakness; according to al-Djubba’ī, they can be called “evils”, provided that this term is taken metaphorically; similarly, he offers personal solutions to the problem of “divine aid” (*lutf*) and “divine favour” (*lutf*), which do not destroy the voluntary character of the action. What is more, foreshadowing certain Ash’arī theories, he breaks away from the Mu’tazila tradition of allotting merit and demerit according to an exact, rational criterion, and maintains that God grants to whom He will His favour or good-will gratuitously; the problem of *safā‘a* is of the action. What is more, foreshadowing certain Ash’arī theories, he breaks away from the Mu’tazila tradition of allotting merit and demerit according to an exact, rational criterion, and maintains that God grants to whom He will His favour or good-will gratuitously; the problem of *safā‘a* is

Al-Djubbā’ī was no doubt one of the Mu’tazila whom al-Asgh’ārī took the greatest pains to refute, all the more since he knew him better; but this did not happen without his influence being felt, and we have already noted al-Djubbā’ī putting forward certain Ash’ārī arguments. This complex relationship between al-Asgh’ārī and his former teacher helps us, to explain the paradox of Ash’ārīm in its infancy: claiming kinship with the “Ancients”, particularly Ibn Ḥanbal, but rejected, no less than Mu’tazilism, by contemporary Ḥanbalites.

Abū Ḥāšim ‘Abd al-Salām, son of al-Djubbā’ī, d. 321/933. He was a contemporary of al-Shāhīm, and his son thus exerted on Muslim thought an influence which far surpassed the direct role of Bara’ Mu’tazilism, considered as an independent school.

**Djūbūr** is a large and predominantly sedentary Sunni tribe of central and northern Iraq. A considerable community so named occupies land and villages in the Khālis *ḫāṣṭ* of the Divālā *luwād* and another on canals drawing from the Hilla branch (right bank) of the Euphrates, below Hilla. Minor sections calling themselves Djūbūr are also found elsewhere in central *Irāk*. But the largest body lives in riverside villages on the Lesser Zab between Altun Köprü and the Tigris, and on the latter river between the points south of Altun Köprü and north of Takrit. The former of these branches have habitually quarrelled with the ‘Ubayd of the Ḥawdīa west of Kirkūk
and the Djazira in the plain between the two Zabs; the latter have a longstanding history of bad relations with the Shammar (Djarbā) of the Djafara. All alike are in water-filled lands of the Zab and Tigris, there mechanical pump-irrigation and some flow-irrigation have greatly developed. Many from the latter districts work for the oil company whose pipelines from Kirkuk oilfields cross or skirt their territory.

The various Djuābūr sections have little cohesion, and have produced no unifying leader for generations. They consist of many unconnected elements with little bond save their name. The usual legend of Dioci or rather Djoči (ca. 580-624/1184-1227), the eldest son of Cingiz-Khan [q.v.], and the ancestor of the Khāns of the Golden Horde, Ķrīm, Tiemen, Bukhara and Khiwa. A depalatalized, perhaps Turkish, form of his name, Toshi or Doshi, is represented by the Tosh of Djuwayni and Diūjdānī, the Tosucchan (i.e., Toshī Khān) of Cappadocia and the Dūsh of Nasawi. The historical data on this progenitor of so many dynasties are sparse and contradictory. His very paternity is uncertain. It is implied in the Secret history of the Mongols that his real father was Olgīr Bokó of the Merkit, by whose tribe his mother Bőre Fuđîn was carried off into captivity shortly after her marriage to Cingiz-Khan. On the other hand Rashīd al-Dīn, who reproduces the Altan Deber, the official chronicle of the imperial family, specifically states that Bőre was already pregnant at the time of her capture. Contrary to the Secret history she was not, according to Rashīd al-Dīn, rescued by a joint expedition of Cingiz-Khan, Djamūka and Ong-Khan but was handed over by the Merkit to the last named, with whose tribe the Kereyt, they were then at peace. Delivered up by Ong-Khan to an emissary of Cingiz-Khan Bőre gave birth to Djoči in the course of the homeward journey; and the circumstances of his birth are in some way reflected in his name, apparently the Mongol word djoči "guest". Djoči is first mentioned in the Secret history, under the year 1207, as being sent on a campaign against the Oyrat and other forest peoples along the western shores of Lake Bāykal: after conquering these peoples he advanced in a westerly direction to receive the submission of the Khirghiz tribes in the region of the Upper Yenisey. Rashīd al-Dīn, whilst recording the submission of the Khirghiz in 1207, makes no mention of Djoči in this connection, though he refers to him as having suppressed a revolt of that people in the winter of 1218-19. Djoči took part in his father's campaigns against the Chin rulers of Northern China, being active with his brothers Čaghatay and Ŭgedē in Shan-hsi (1211) and Chīh-li, Ho-nan and Shan-hsi (1213). He likewise took part, in 1216 or 1217, in a campaign against the remnants of the Merkit which resulted in their defeat and annihilation in what is today the eastern part of the Khasik Government, there being a clash with Sultan Muhammad Khāsrizm-Shāh [q.v.] as the Mongols were returning eastwards from this campaign formed the prelude to the hostilities which broke out in 1229. Upon the arrival of Cingiz-Khan's forces on the Kura, probably in September of that year, Djoči was dispatched upon an expedition down the Sr-Daryā. The details of this expedition, which is passed over in silence by the contemporary Muslim sources, are given by Djuwayni, who refers to Djoči as Ulush-Idi, a title which Rashīd al-Dīn, in reproducing Djuwayni's account, takes to be the name of a general in joint command. Advancing down the Sr-Daryā Djoči captured Ūshagkn, Öskend, Bārūn and Ašgān. It had been his intention not to attack Dijand but to rest his troops in the Kara-Kum steppe to the north-east of the Aral Sea in what is now Central Kazakhstan. However a report on the conditions prevailing in Dijand caused him to change the direction of his march and lay siege to the town, which surrendered in April or May, 1220. Djoči now proceeded to the Kara-Kum steppe and seems to have remained in this region or in the Dijand area until the end of the year, when he was ordered by Cingiz-Khan to join Čaghatay and Ŭgedē in the siege of Gurgāndī [q.v.]. The siege operations appear to have been hampered by a quarrel between Djoči and Čaghatay: upon the fall of the town in Safar 618/March-April 1220 it became part of Djoči's yuri or appanage, which now extended from the region of Kayalîgh [q.v.] to the eastern banks of the Volga, competing with its limits almost the whole of the present-day Kazakhstan. From Gurgāndī Djoči withdrew northwards into this enormous territory, there to remain till the spring of .../1223, when he joined his father and brothers in the Kulan-Bašī steppe between the present-day Cīmikent and Djamīnlī in Southern Kazakhstan, driving before him, for the purposes of a battue, great herds of wild asses: he brought also with him, as a present for Cingiz-Khan, 20,000 grey horses. After the battue the princes passed the remainder of the summer in Kulan-Bašī and Djoči then returned to his own territories, where he remained for the rest of his life, apparently on bad terms with his father, whom he predeceased by several months. Upon his death his yuri was divided between his eldest son Orda and his second son [q.v.], the founders respectively of the White Horde and the Kanat Khānate or Golden Horde.

Bibliography: As in the article Cingiz-Khan with the following additions: Barthold, Turkestān; Pelliot, Notes sur l'histoire de la Horde d'Or, Paris 1950; J. A. Boyle, On the titles given in Juvaini to certain Mongolian princes, in HJAS, ix (1956) (J. A. Boyle).

Djuuddā (see gudālā).

Djuudda, pronounced Diudda locally, a Saudi Arabian port on the Red Sea at 22° 29' N., 39° 11' E. Its climate is notoriously poor. The town, flanked by a lagoon on the north-west and salt flats on the south-east, faces a bay on the west which is so encumbered by reefs that it can only be entered through narrow channels. By paved road, Djuudda is 72 km. from Mecca and 419 km. from Medina. Most Arab geographers and scholars maintain that Djuudda, signifying a road (Lane; al-Bakrī, ii, 371) is the correct spelling of the name of the town, rather than Djuudda or Diudda (grandmother) as claimed by Gautier, Philby (Heart, i, 221) and others (cf. Yākilū, li, 47; Hitti; Wahba) on account of the existence (until 1928), of the tomb of Eve not far from the town. For description and photographs, see E. F. Gautier, Moeurs et coutumes des Musulmans, Paris 1931, 64-6). The town dates
from pre-Islamic times. Ḥīdhām b. Muḥammad al-Kalbi in al-ʿĀṣim claims that ʿAmr b. Luhayy of the Khūzāʿa introduced idols from Ḍjūdā into Mecca several centuries before Islam (cf. al-ʿĀṣim in bibliography). According to Yākūṭ, Ḍjūdā b. Ḥaẓm b. Rabbān b. Ḥulwān of the Khūzāʿa took his name from the town which was part of the territory of the Khūzāʿa (q.v.). The foundations of Ḍjūdā’s importance were laid in 26/646 by the Caliph ʿUthmān, who chose it as the port of Mecca in place of the older port of al-Šuḥū’ayba a little to the south (al-Batānunī, 61, 156). As the focus of the Muslim world, Mecca became a great importing centre, its supplies coming from Egypt and India via Ḍjūdā.

By the 4th/10th century Ḍjūdā was a prosperous commercial town and its customs were a considerable source of revenue to the rulers of al-Ḥiḍjāz (Muṣādḍasī, 79, 104). In addition, taxes were levied on pilgrims at Ḍjūdā, for it was here that those who came by sea landed on Arabian soil. Nāṣir-i ʿAlīshāwur (ed. Scherer, 65; 181-3 of the translation) describes the city in the 5th/11th century as an unwalled town, with a male population estimated at 5,000, governed by a slave of the sharif of Mecca, whose chief duty was the collection of the revenues. A century later Ibn Ḍiʿbaʿyar (ed. De Goeje, 75 ff.) gives a picture of the town with its reed huts, stone dhonis, and mosques each built by these Sahīb al-ard. or having abolished the taxes levied by the ṣarīfīs.

With the decline of the ʿAbbāsid Caliphate, much of the trade formerly going to al-ʿAṣrāba was diverted to Ḍjūdā, where ships from Egypt, carrying gold, metals, and woolens from Europe, met those from India carrying spices, dyestuffs, rice, sugar, tea, grain, and precious stones. Ḍjūdā exacted about ten per cent ad valorem on these goods. After 828/1425 the Mamlūk Sultans of Egypt, whose cupidity had been aroused by Ḍjūdā’s prosperity, took the collection of customs at Ḍjūdā into their own hands (although they shared it with the ṣarīfīs from time to time), thus making Ḍjūdā politically as well as economically dependent on Egypt (Ibn Ṭaghribīrdī, iv, 21, 411 v, 79).

The coming of the Portuguese to eastern waters, and their attacks on Muslim shipping from 1502 onward, brought a new threat to Ḍjūdā, which the Mamlūks and after them the Ottomans made determined efforts to meet. Ḥusayn al-Kurdī, the Governor of Ḍjūdā, appointed by the Mamlūk Sultan Kānṣūf al-Γhdārī, built a formidable wall around the town in 917/1511 (al-Batānunī) erroneously states that it was in 915/1509) and made Ḍjūdā a base for attacks against the Portuguese fleet. Lopo Soares de Albergaria sailed to the Ḍjūdā harbour in 923/1517 in pursuit of the Mamlūk fleet commanded by Salmān Rāḥī, but declined to attack the city because of its powerful fortifications (Danvers, The Portuguese in India, 1894, 335). In 945/1538 the Ottoman naval expedition, on its way to India, called there, and collected masts and guns (Hammer- Purgstall, GOR, ii, 156-8; Uṣumcarnānī, Osm. Tar., ii, 170 ff.; 53; Fevzi Kurtoglu in Belleten, iv, 1949, 53-87; Stribling, 89-90). In 948/1541 the Portuguese made their last unsuccessful attempt to take the city, which was defended by the Sharīf Abū Numayy. The Sultan Sulaymān repaid him for his successful resistance by granting him half of the fees collected at Ḍjūdā (Ḍaḥlān, 53). The trade of the Red Sea did not, as was at one time thought, end with the Portuguese circumnavigation of Africa, but continued under Ottoman protection, right through the 16th/17th century. Ottoman sources of this period refer to the regular appearance at Ḍjūdā of ships from India, and a Venetian consul in Cairo, in May 1565, speaks of the arrival of 20,000 quintals of pepper at Ḍjūdā. It was not until the late 16th and early 17th centuries that the transit trade through the Red Sea began to come to an end (F. Braudel, La Méditeranne et le monde méditerranéen à l’époque de Philippe II, Paris 1949, 423-37; Hail Inalcik, in Belleten, xv, 1951, 662 ft.).

Little of importance occurred in the history of Ḍjūdā during the 11th/12th and 12th/13th centuries. Al-Ḥiḍjāz, under the suzerainty of the Sultan, was ruled locally by the Ḥasanīd family of the sharīfīs, who intrigued to their own advantage against the declining power of the Turks (Ḍaḥlān, al-Djabartī). The town of Ḍjūdā was a sandjak, for a while the centre of the eyālet of Ḥabesh, later part of the ʿulāiyet of Ḥiḍjāz. According to Ottoman sources, the Grand Vizier ʿAlaʾ Muṣṭafā Pasha (held office 1085/1676-1094/1685) endowed Ḍjūdā with a mosque, khān, hammām, and water supply.

During the 13th/19th century, Ḍjūdā passed through a number of vicissitudes. In 1217/1803 the Wahhābīs (q.v.) besieged the sharīfī Ḡālib in Ḍjūdā but were unable to take the town, which began to boast of itself as a Gibrailtar (Ibn Bighr, i, 122). Ḡālib later surrendered and Ḍjūdā was subject to the rule of the Wahhābīs until 1226/1811, when Muḥammad ʿAlī restored nominal Ottoman sovereignty. In 1229/1841 Burkhart described Ḍjūdā as a town with 12,000 to 15,000 inhabitants, among whom indigenous elements were scantily represented, while strangers from the Yemen and Hadramawt appeared to be numerous. Both Burton (i, 179) and al-Batānunī (6) mention the coral and mother-of-pearl taken from the Red Sea at Ḍjūdā and made into prayer beads at Mecca and crucifixes at Jerusalem. In 1256/1840 Egyptian rule was replaced by the direct rule of the Porte, represented by a wāli in Ḍjūdā.

On 3 Dhu-l-ʿKaʿda 1274/15 June 1858 Ḍjūdā was the scene of a massacre, instigated, it is thought, by a former Ḍjūdā police chief, and several dissatisfied Ḍjūdā merchants, in which about 25 Christians were killed, including the British and French Consuls and a group of wealthy Greek merchants. The British steamship Cyclops, anchored in the harbour, bombarded the city for two days and restored order without much damage (Isabel Burton, ii, 513 ff.).

Ḍjūdā was the first Hidjazī city to fall into sharīfī hands after Sharīf al-Ḥusayn’s proclamation of Arab independence in 1334/1916 (Nasif, 50). The Turks surrendered the city on 15 Shabīb 1274/17 June after a combined land attack by Sharīf al-Ḥusayn’s army and a six-day bombardment by the British navy. The port then became the major supply depot for the sharīfī forces operating behind Turkish lines during the Arab revolt.

Under the short-lived Kingdom of al-Ḥiḍjāz, Ḍjūdā was a focal point in the struggle between the Wahhābīs and the sharīfīs for control of al-Ḥiḍjāz. After the Saʿūdī occupation of Mecca in Rabīʿ I 1343/October 1924, Ḍjūdā became the capital of the government of ʿAlī b. al-Ḥusayn. The city was under siege by the Wahhābī forces, situated in the coastal hills ten miles from the town, for almost an entire year from Djiūmādā II 1343/January 1925 until its submission in Djiūmādā II 1344/December 1925. Defence of the city was hindered by the inadequacy of the sharīfī army, estimated by...
Phily (Forty Years, 114) at 1,000 regulars augmented by Bedouin recruits, and by the Ka'immaḳām, favoured negotiation with the Sa'ūdīs and the deposition of ʿAli (Naṣīf, 156 ff. Details of the town's history during this year are contained in the newspaper Barid al-Hadījā, ed. Muḥammad Naṣīf). In Ḍhuʾl-ʿKādā 1345/May 1927 ʿAbd al-ʿAzīz Ibn Saʿūd and Gilbert Clayton met in Ḍjudda and concluded the Treaty of Ḍjudda in which Britain recognized the "complete and absolute" independence of Al Saʿūd's territories.

Nallino, describing the town in 1938, mentions the site of the tomb of Eve, quietly demolished by the Saʿūdīs in 1928, the so-called European cemetery, which is thought to date from 1235/1820 and which contains the remains of some Jews and Asians, and the villages beyond the wall. These included al-Hindawiyya to the south, al-Nuṣla to the south-west, al-Baghdādiyya and al-Rūways to the north, and Nakatū, a reed hut settlement inhabited by Ṭakārīr (sing. Ṭakrūrī) (q.v.), all of which have become part of the enlarged city.

The city now has a population variously estimated at 106,000 to 160,000; it is governed by a Ka'immaḳām (the only local governor in Saudi Arabia who still retains the Turkish title), who is under the administrative authority of the Governor of Mecca. The town has an elected Municipal Council. Since World War II, Ḍjudda has experienced a commercial boom. Its wall was demolished in 1946-7, and the town block houses with their latticed balconies have been razed in the old section of the town to make room for modern office buildings. Ḍjudda is known for the cosmopolitan character of its populace: Buḥkārīs, Yamanīs, Ḥaḍramīs, and some tribal communities, notably Ḥarb, still live in separate quarters of the town.

Ḍjudda has numerous light industries including a cement plant and several marble cutting works. A new hospital completed in 1948 supplies the town with over 2,500,000 gallons of water a day, most of which is piped in from wells in Wādī Fāṭima. A modern port at the southern end of the city, A modern port at the southern end of the city, A modern port at the southern end of the city, A modern port at the southern end of the city, with an official air and sea port of entry for pilgrims, is the town with over 2,500,000 gallons of water a day, most of which is piped in from wells in Wādī Fāṭima. A modern port at the southern end of the city, A modern port at the southern end of the city, A modern port at the southern end of the city, A modern port at the southern end of the city, equipped with a two-berth pier 1,300 feet long, is still retained the Turkish title, who is under the administrative authority of the Governor of Mecca. The town has an elected Municipal Council. Since World War II, Ḍjudda has experienced a commercial boom. Its wall was demolished in 1946-7, and the town block houses with their latticed balconies have been razed in the old section of the town to make room for modern office buildings. Ḍjudda is known for the cosmopolitan character of its populace: Buḥkārīs, Yamanīs, Ḥaḍramīs, and some tribal communities, notably Ḥarb, still live in separate quarters of the town.

In 1949, forty years after his capture, Sir Richard Burton was brought to Djudda and concluded the Treaty of Djudda in which Britain recognized the "complete and absolute" independence of Al Saʿūd's territories.

Sir Richard Burton, 1893, ii, 513 ff.; Hopper, Ḽuddah, in Lands East, Feb. 1956; H. St. J. Phily, Forty years in the wilderness, 1957; idem, Arabian studies, 1952; idem, Saʿūdī Arabia, 1952; idem, Arabian Days, 1948; Snouck Hurgrignon, Mekka, ii, 1888; idem, in Bijdragen tot de taal-, land- en volkenkunde van Nederlandsch-Indië, 5th series, ii, 381 ff., 399 ff.; idem, in Verhandel. der Gesel. für Erdkunde, xiv, 141; ʿAbd al-Κuddūs al-ʿAnsārī, Ḍjudda ʿabī l-ṭalārīk in al-Manhāl, Ḍjudda Jān/Feb. 1962.—For the Ottoman period see Perīdīn, Manṣūra al-salīmī, Istanbul 1265, ii, 6 ff.; Ewilīyā Celebi, Seryāḥīnāmē, ix, 794 ff.; Ḥādamī Khalīfā, Diḥānnīnīm, 519; i. H. Uzun-ｃarsi, Osmanlı tarihī, i/i, Ankara 1934, 44-5; G. W. F. Strilling, The Ottoman Empire and the Arabs 1517-1874, Urbana 1942, index. (R. HARTMANN-PHEBE ANN MARR)
no way connected with the Flood. Ancient Ar-
menian tradition certainly knows nothing of a
mountain on which the ark rested; and when one
is mentioned in later literary sources, this is clearly
due to the gradually increasing influence of the Bible,
which makes the ark rest on the mountains (or a moun-
tain) of Ararat. The highest and best known mountain
there is Masik (Masis), therefore Noah must have been stranded
on it; the next stage in the growth of the Armenian
tradition is due to Europeans, who transferred
Ararat (Armen. Apobaterion), the name of a district,
to the south of Lake Van (cf. the mountain name Ararti
and the life of Noah after leaving the ark. Thus
the ark first settled; cf. Hiibschmann, xvi, 333-4).

The tradition that Masik was the mountain on
which the ark rested only begins to find a place
in Armenian literature in the 11th and 12th cen-
turies. Older exegetes identified the mountain now
called Djabal Djudi, or according to Christian
authorities, the mountains of Gordyene (Syri.
Kur'an (Sura XI, 46) mentions as the landing-place
of Noah, to Mount Kardu which had, from the
earby times, been regarded as the apobaterion".

We might further mention that Layard and
subsequently (1904) L. W. King discovered rock-
sculptures and inscriptions of Sennacherib in
the Djabal Djudi; King therefore proposes to identify
this mountain with the Nipur of the Sanherib
texts. Cf. Layard, Ninissu u. Babylon, 621; King
Jewish-Babylonian tradition was adopted by the
authorities, the mountains of Gordyene (Syr.
Kurdish, |, 564, = Yaküt, i, 270, 11 = Muchfarik, 111), which was probably
considered the highest mountain of all. It is also
possible that the Kürân in its localization of the
mount on which the ark rested had taken over some
older tradition current in Arabia. For this view
we might quote a remark of the apostle Theophylus
(Ad Autolycum, lib. ii, c. 12) who says that:
even in his time the remains of the ark were to be
seen on the mountains of Arabia. The transference of
the name Djudi from Arabia to Mesopotamia by
the Arabs must have taken place fairly early, as
has been mentioned, probably as early as the
time of the Arab invasion; even in the older poets, for
example, Ibn Kays al-Rukayyat (ed. Rhodokanakis,
cf. Nödeke, WZKM, xxv, 91) and Usayya b. Abi
I-Salt (ed. Schulthess, Beitr. 2. Assyri., viii, no. 3, 5)
Djabal Djudi is no longer the Arabian, but the
Mesopotamian mountain. The transference of the
name Djudi to the Kürân chain and the rapid
acceptance of the new name may probably have
been favoured by the circumstance that the land
south of Bohtan, towards Assyria, had often in the
Assyrian period formed part of the district of
Gutium, the land of the Gutí (Kutú) nomads,
and this, the name of a people and district, had
not quite disappeared in the early years of Islam.
On the geographical term Gutium, which is known
to have existed even in the early Babylonian
period, see Scheil, Compt.-rendus de l'Academie des
Inscript. et Bell. Lettres, 1912, 328 ff., 606 ff.

If we assume, as is obvious, that the term Ararat
(Assyr. Urartu) at one time also included an area to
the south of Lake Van (cf. the mountain name Ararat
in the Gordyene cuneiform inscription; see also
Şanda, in the bibliography) then Masik (Great
Ararat) and Djabel Djudi, both traditional resting-
places of the Ark, might each be called Mount
Ararat (in conformity to the Biblical account).

Like the whole country round Ararat, the neigh-
bourhood of Djabal Djudi is to this day full of
memorials and legends which refer to the Flood
and the life of Noah after leaving the ark. Thus
for example at the foot of the mountain is the village
of Karyat Thamânn = "the village of the
80 (Syri. Thamânn; Armen. T'mán = 8; now:
Bêt’mán) in which legend says the people saved in
the ark first settled; cf. Hübschmann, xvi, 333-4.
The Arab geographers also mention a monastery on
Djudi in their time, Dayr al-Djudi; on this cf.
Shâbûshî, Kitâb al-Diyârâ (J. Heer, Quellen, 1858,
96; Sachau, Vom Klosterbuch, Berlin 1919, 20, no.
49) = Yakûtî, ii, 653. The ruined sanctuary (known
today as Safina Nabi Nâî) is venerated by
Muslims, Jews and Christians (G. L. Bell, Amur-
rahâ, 293).

The name of a mountain is mentioned in later
literary sources as the apobaterion of Noah.

If we assume, as is obvious, that the term Ararat
(Assyr. Urartu) at one time also included an area to
the south of Lake Van (cf. the mountain name Ararat
in the Gordyene cuneiform inscription; see also
Ararat, the name of a district, had hitherto
been based on the principles of the school of Başra,
particularly the book of Shabûshî, Kitâb al-
Diyârâ, the name of a district, had hitherto
been based on the principles of the school of Başra,
the name of a district, had hitherto
been based on the principles of the school of Başra,
predominance of the Basrans, the Kufans found their way and gained disciples. The two schools were
a title which suggests an agreeable sense of humour. He died in 193/810.

When the Arab conqueror 'Ukba b. Nafi imposed his authority in 47/667 upon the local prince, the
latter was called the Waddān, after the name of his
principal oasis. It was inhabited by Mazāta Berbers. It was for a time Ibadite and belonged to the
district, or when the district took the
name of Djufra. It was comparatively independent,
being partly isolated by the powerful and dreaded
population consists of about 5,000 inhabitants;
half of them claim to be

Al-Mas'ūdī (d. 345/956) explained the term
'ahd which was translated into Arabic as Surat al-ard,
translated into Arabic as Shūratul 'ūlā, 'survey of the
Earth'. However, it was used for the first time in the Rasā'il Ikhwān al-
Ṣafā in the sense of 'map of the world and the
climes'. The Arabs did not conceive of geography as a well-defined and delimited science with a specific
connotation and subject-matter in the modern sense.
The Arabic geographical literature was distributed
over a number of disciplines, and separate mono-
graphs on various aspects of geography were produced under such headings as Kitab al-Buldān, Shūrat al-ard, al-Masālīk wa 'l-mamlāk, 'Ilm al-
frat*- al-ard, 'science which dealt with fixing the geographical
position of places. Al-Mas'ūdī considered al-Masālīk as
the science which dealt with fixing the geographical
position of places. Al-Muljaddāsī came nearest to
dealing with most aspects of geography in his work
Ahsan al-tahāsim fi ma'rifat al-aḥlāhīn. The present
use of the term diwāhrajīya for geography in Arabic
is a comparatively modern practice.

(II) Pre-Islamic and Early Islamic Periods

In pre-Islamic times the Arabs' knowledge of geography was confined to certain traditional and
ancient geographical notions or to place-names of
Arabia and the adjacent lands. The three main
sources where these are preserved are: the Kur'ān,

DIWĀHRAJĪYA, Geography.

(i) The term diwāhrajīya and the Arabs' conception of geography

The term diwāhrajīya (or diwāhrajīya, diwāhrajīya, etc.), the title of the works of Marinos of Tyre
(c. 70-130) and Claudius Ptolemy (c.A.D. 90-168) was translated into Arabic as Şūrat al-ard which was used by some Arab geographers as the title of their works. Al-Mas'ūdī (d. 345/956) explained the term as ha'f al-ard, 'survey of the Earth'. However, it was used for the first time in the Rasā'il Ikhwān al-
Ṣafā in the sense of 'map of the world and the
climes'. The Arabs did not conceive of geography as

(ii) Pre-Islamic and Early Islamic Periods

In pre-Islamic times the Arabs' knowledge of geography was confined to certain traditional and
ancient geographical notions or to place-names of
Arabia and the adjacent lands. The three main
sources where these are preserved are: the Kur'ān,
the Prophetic Tradition (hadīth) and ancient Arabic poetry. Many of these notions must have originated from Babylonia in ancient times or were based on Jewish and Christian traditions and indigenous Arab sources.

The geographical concepts or information contained in ancient Arabic poetry reflect the level of understanding of the pre-Islamic Arabs of geographical phenomena and the limits of their knowledge. The Kur'ān preserves traces of some geographical and cosmographical ideas which resemble ancient Babylonian, Iranian and Greek concepts and the Jewish and Christian Biblical traditions. Verses like ‘the heavens and the earth were joined together before we clove them asunder’ (XXI, 30); ‘God is He Who created seven Firmaments and of the earth a similar number’ (LXV, 12); ‘God is He who raised the heavens without any pillars* (XIII, 2); ‘He withholds the sky from guarding’ (XXI, 32); ‘He withholds the sky from being spread out and the mountains set thereon firm so that it may not shake, all form a picture which resembles the ancient Babylonian concept of the universe in which the Earth was a disc-shaped body surrounded by water and then by another belt of mountains upon which the Firmament rested. There was water under the Earth as well as above it’ (Agavi frescoes) were most probably of Iranian origin. Besides, certain terms in the Kur’ān, e.g., burūdi (= Gr. Πυργος, Latin burgus), baladun or baladatun (a Semitic borrowing from the Latin palatinum: Gr. Παλατίνον, karya (> Syriac kritha*, a town or village), indicate the non-Arab origin of the concepts with which these terms are associated in the Kur’ān. These terms are also attributed to ‘Abd b. Abī Tālib (d. 40/660), Ibn ‘Abbas (d. 66-9/686-8), and others, which deal with cosmography, geography and other related questions, but it seems that these traditions which reflect the ancient geographical notions of the Arabs were concocted in a later period to counteract the scientific geographical knowledge that was becoming popular among the Arabs of the period, although they were presented as authentic knowledge by some geographers in their works. Though scientific knowledge advanced, some of the traditions exercised deep influence on Arab geographical thought and cartography, e.g., the tradition according to which the shape of the land-mass was compared to a big bird whose head was China, right wing India, left wing al-Khazar, chest Mecca, Hidjaz, Syria, Ibrāhīm and Egypt and tail North Africa (Ibn al-Fakih, 3-4) became the basis of the geographical writings of the Balghī School. It is not unlikely that this concept had its origin in some ancient Iranian maps observed by the Arabs.

The political expansion of the Arabs, after the rise of Islam, into Africa and Asia, afforded them opportunities to collect information and to observe and record their experiences of the various countries that had come under their sway or were adjacent to the Arab Empire. Whether such information was gathered for military expeditions or for other purposes, it is very likely that it was also utilized in the topographical works that were produced during the early ‘Abbāsid period.

(III) The Transmission of Indian, Iranian and Greek Geographical Knowledge to the Arabs

It was not until the beginning of the ‘Abbāsid rule and the establishment of Baghdād as the capital of the empire that the Arabs began acquainting themselves with scientific geography in the true sense. The conquest of Trān, Egypt and Sind gave the Arabs the opportunity to gain first hand knowledge of the scientific and cultural achievements of the peoples of these ancient cradles of civilization, as well as giving them ownership of, or easy access to their centres of learning, laboratories and observatories. But the process of acquiring and assimilating foreign knowledge did not begin until the time of the Caliph Abū Dā‘far al-Maṣṣūr (135-58/ 753-75), the founder of Baghdād. He took a keen interest in the translation of scientific works into Arabic, which activity lasted for nearly two hundred years in the Islamic world. The Barmakids (= Gr. Ευγέρσης) also played an important role in the promotion of scientific activity at the court. Quite often the translators were themselves eminent scientists whose efforts enriched the Arab language with Indian, Iranian and Greek geographical, astronomical and philosophical knowledge.

Indian Influences. Indian geographical and astronomical knowledge passed on to the Arabs through the first translation into Arabic of the Sanskrit treatise Sūrya-siddhānta (not Brahma-phulasaridhānta as believed by some scholars) during the reign of al-Maṣṣūr. The work showed some earlier Greek influences (see A. B. Keith, History of Sanskrit literature, 517-21), but once translated into Arabic it became the main source of the Arabs’ knowledge of Indian astronomy and geography, and formed the basis of many works that were produced during this period, e.g., Kūdū al-Ẓīdī by Ibrāhīm b. Ḥabīb al-Fāsūrī (wrote after 170/390), al-Dār al-Burūj and al-Sayfī (wrote after 170/390) by Muḥammad b. Muṣa al-Ṭārārī (d. after 232/847), al-Sind Hind by Ḥabāsh b. ‘Abd Allāh al-Marwāzī, al-Baghdādī (second half of the 3rd/9th century) and others.

Among other Sanskrit works translated into Arabic during this period were: Āryabhātīya (Ar.: Aṛāgbhad) by Āryabhata of Kusumapura (b.A.D. 476) who wrote in A.D. 499; then, Khandakādīryaka of Brahmagupta son of Dīghu of Bhāllamāla (near Multān). He was born in A.D. 598 and wrote this work in A.D. 665. It was a practical treatise giving material in a convenient form for astronomical calculations, but this was based on a lost work of Āryabhata, who again agreed with the Sūrya-siddhānta. The Sanskrit literature translated into Arabic belonged mainly to the Gupta period.

The influence of Indian astronomy on Arab thought was much deeper than that of Indian geography, and although Greek and Iranian ideas had a deeper and more lasting effect, Indian geographical concepts and methods were well known. Indians were compared to the Greeks in their talent and achievements in the field of geography, but the Greeks were considered more accomplished in this field (al-Birūnī, al-Kūfīnī, 530).

Among the various geographical concepts with which the Arab scientists became acquainted were: the view of Āryabhata that the daily rotation of the
heavens is only apparent, being caused by the rotation of the earth on its own axis; that the mountain) on it directly under the North Pole; the water on all sides, and was shaped like a dome whose highest point had Mount Meru (an imaginary mountain) on it directly under the North Pole; the northern hemisphere was the inhabited part of the earth and its four limits were Dīnamūt in the East, Rūm in the West, Lanka (Ceylon) which is the Cupola and Sīlpūr, and the division of the inhabited part of the Earth into nine parts. The Indians calculated their longitudes from Ceylon and believed that this prime meridian passed through Udjadiyān [q.v.] (Ujjain). The Arabs took over the idea of Ceylon's being the Cupola of the Earth, but later believed that Udjadiyān was the Cupola, mistakenly thinking that the Indians calculated longitudes from that point.

Iranian Influences. There is sufficient evidence in Arabic geographical literature to point to Iranian influences on Arab geography and cartography, but the actual process of the transmission of Iran's knowledge to the Arabs has not been worked out in detail. J. H. Kramers correctly points out that during the 6th century Greek influence was supreme in Arab geography, but from the end of the 9th century onwards the Arab geographers adopted the system of the east from the west, and it was from Iran that these influences mainly came, for most of the authors came from the Iranian provinces (Analecta Orientalia, i, 147-8). Djundaysābūr was still a great centre of learning and research and there is little doubt that the Arabs were acquainted with some of the Pahlavi works on astronomy, geography, history and other subjects which were extant in some parts of Iran during this period. Some of these works were translated into Arabic and formed the basis of the Arabic works on the subject. Al-Masūdī ascribes to Hāshā b. 'Abd Allāh al-Marwazī al-Baghdādī an astro-nautical treatise Zīgī al-Shāh which was based on the Persian style. He also recorded a Persian work entitled Kāh-nāma which dealt with the various climates and formed part of the larger work entitled Ašīn-nāma, 'Book of Customs'. Again, he mentions having seen at Iṣṭakhr in 302/915 a work that dealt with the various sciences of the Iranians, their histories, monuments, etc. and other information that was not found either in Khudāi-nāma, Ašīn-nāma or Kāh-nāma. This work was discovered among the treasures of the Persian kings and was translated from Persian into Arabic for Hīshām b. 'Abd al-Malik b. Marwān (105-5/724-43). It is not unlikely that works of this nature formed part of the sources of the Arabs' knowledge on the geography and topography of Iran and on the limits of the Sasanian Empire, its administrative divisions and other details.

Among the various Iranian geographical concepts and traditions followed by Arab geographers, the concept of the Seven Kishwars (Haft Iklim) was the most important. In this system the world was divided into seven equal geometric circles, each representing a kishwar, in such a manner that the fourth circle was drawn in the centre with the remaining six around it, and included Trangshahr of which the most central district was al-Sawād. The Arab geographers continued to be influenced by this system for a long time, and in spite of the view of al-Bīrūnī that it had no scientific or physical basis and that the Greek division of the Climes was more scientific, the Greek division of the world into three or four continents never appealed to them. The concept of the two main seas, namely, the Bab al-Mūlīt (the Erythrean Sea, or the Indian Ocean) which entered the land from the Bab al-Mūlīt (the Encircling Ocean), one from the north-west, i.e., the Atlantic and the other from the east, i.e., the Pacific, but were separated by al-Barzakh ('the Barrier', i.e., the Isthmus of Suez), also dominated Arab geography and cartography for several centuries. As pointed out by J. H. Kramers, although it is very probable that the notion rests in the last resort on Ptolemy, the fact that the Indian Ocean is most often called Baby Fārs, seems to prove that this sea, at least, formed part of the original geographic sketch of the Persians. As to the origin of this sketch itself we find ourselves in uncertainty (Analecta Orientalia, i, 153).

Persian traditions deeply influenced Arab maritime literature and navigation also, as is evident from the use of words of Persian origin in the nautical vocabulary of the Arabs, e.g., bandar (port), nākhudd (shipmaster), rāhminī (book of nautical instructions), daftar (sailing instructions), etc. Certain Persian names like kham (rumb), kulb al-dījāh (pole), etc., also indicate Persian influences on the Arab windrose. Such examples can be multiplied. Persian influences are apparent in Arab cartography as well, an indication of which is of the system of the division of the inhabited world into two main seas, namely, the Bahr al-Pars, seems to prove to the existence of maps in ancient Iran (J. H. Kramers, op. cit. 148-9). As for the 'Indian map which is at al-Kawadhiyān' (Ibn Hāwkal, ed. Kramers, 2) Kramers pointed out that al-Kawadhiyān must contain here an allusion to more primitive maps of the Balkhī-Iṣṭakhrī series, because the maps of Ibn Hāwkal are partly in conformity with this series and partly different (Kramers, op. cit., 155). A correct identification of these maps or their discovery would certainly help to solve the problem of the origin of the maps of the Balkhī school. Here it may be pointed out that it was read Ibn Hāwkal's text as 'the geometrical map at al-Kawadhiyān' (a town near Timūrid in Central Asia), then he must have been referring to some map that was there and was used by geographers as a basis for cartography. It is quite likely that it was based on the Persian kishwar system, for al-Bīrūnī remarks that the term kishwar was derived from 'the line' (al-khufr) which really indicated that these divisions were as distinct from each other as anything that was drawn in lines would be (Sīfa't, ed. Togan, 61).

Greek Influences. More positive data are available on how Greek geographical and astronomical knowledge passed on to the Arabs in the mediaeval period. The process began with the translations of the works of Claudius Ptolemy and other Greek astronomers and philosophers into Arabic either directly or through the medium of Syriac. Ptolemy's Geography was translated several times during the Abbāsid period, but what we possess is the adaptation of Ptolemy's work by Muhammad b. Mūsā al-Khārūzīmī (d. after 232/847) with contemporary data and knowledge acquired by the Arabs incorporated into it. Ibn Khurradābhhīn mentions having consulted and translated Ptolemy's work (perhaps it was in the original Greek or in Syriac translation) and al-Masūdī also consulted a copy of Encyclopaedia of Islam, II
the Geography and also the world map by Ptolemy. It seems that some of these translations had become corrupt, and foreign material was interpolated into them which did not belong to the original work, e.g., the copy consulted by Ibn Hawkal (ed. Kramers, 13). Among other works of Ptolemy translated into Arabic and utilized by Arab geographers were: Almagest (Ar.: Almadisfi); Tetrabiblon (Ar.: al-Maßâliât al-arba'a); Apparitions of fixed stars, etc. (Ar.: Kûdû al-Anwâ').

Among other works translated into Arabic were: the Geography of Marinos of Tyre (c. A.D. 70-139) consulted by al-Masûdi who also consulted the world map by Marinos; the Timeaen (Ar.: Ta'mâ'da') of Plato; the Meteorology (Ar.: al-Akhâr al-ulâyiyya), De caelo (Ar.: al-Samâ' wa l-ilâm); and Metaphysics (Ar.: Ma' ba'd al-îabfa') of Aristotle.

The works of these writers and of several other Greek astronomers and philosophers, when rendered into Arabic, provided material in the form of concepts, theories and results of astronomical observations which ultimately helped Arab geography to evolve on a scientific basis. Persian influences were no doubt marked in regional and descriptive geography as well as in cartography, but Greek influence dominated practically the whole canvas of Arab geography. Even in fields where it may be said that there was a kind of competition between Persian and Greek ideas or methodology, e.g., between the Persian hizâvar system and the Greek system of Climes, the Greek were more acceptable and remained popular. The Greek basis of Arab geography was most prominent in mathematical, physical, human and bio-geography. The Greek impact had a very lasting influence, for it remained the basis of Arab geography as late as the 19th century (traces found in 19th century Persian and even Urdu works on geography written in India), even though on European minds Ptolemaic influence had decreased much earlier. It cannot, however, be denied that throughout this period there was an undercurrent of conflict between the theoretical concepts of the Greek masters on the one hand and the practice and observation of the merchants and sailors of this period on the other. Al-Masûdi himself refers to this in the case of the Ptolemaic theory of the existence of an unknown land in the southern hemisphere. On the other hand Ibn Hawkal considered Ptolemy almost infallible. The fact was that Greek information when transmitted to the Arabs was already outdated by about five centuries, and so difficulty arose when Arab geographers tried to incorporate fresh and contemporary information acquired by them into the Ptolemaic framework and to corroborate it with Greek data. The result was confusion and often misrepresentation of facts in geographical literature and cartography, as is evident from the works of geographers like al-Iдрîsî.

(IV) The Classical Period (3rd-5th/9th-11th centuries)

(a) The Period of al-Ma'mûn (157-218/832-33):

Over half a century of Arab familiarity with, and study of Indian, Iranian and Greek geographical science, from the time of the Caliph al-Ma'sûr (135-57/754-74) up to the time of al-Ma'mûn, resulted in completely revolutionizing Arab geographical thought. Such concepts as that the Earth was round and not flat, and that it occupied the central position in the Universe, were introduced to them for the first time properly and systematically. Henceforth, the Qur'anic verses dealing with cosmogony, geography, etc. and the Traditions were utilized only to give religious sanction to geographical views or to exhort the believers to study geography and astronomy. Thus, by the beginning of the 3rd/9th century the real basis was laid for the production of geographical literature in Arabic and the first positive step in this regard was taken by the Caliph al-Ma'mûn, who successfully surrounded himself with a band of scientists and scholars and patronized their academic activities. Whether al-Ma'mûn's interest in astronomy and geography was genuine and academic, or whether it was political is not certain. During his reign, however, some very important contributions were made towards the advancement of geography: the measurement of an arc of a meridian was carried out (the mean result gave 561/4 Arab miles as the length of a degree of longitude, a remarkably accurate value); the astronomical tables called al-Safû al-mamânisya (The verified tables) were prepared by the collective efforts of the astronomers; lastly, a World Map called al-Sârâ al-Ma'mânisya was prepared, which was considered superior to the maps of Ptolemy and Marinos of Tyre by al-Masûdi who had consulted and compared all three (Tanbih, ed. De Goeje, 33). It was most probably based on the Greek system of climes.

(b) The Astronomers and Philosophers:

The Arab astronomers and philosophers made equally important contributions to mathematical and physical geography through their observations and theoretical discussions. From the time of the introduction of Greek philosophy and astronomy in the second half of the 2nd/8th century up to the first half of the 5th/11th century a galaxy of philosophers and astronomers worked on various problems of mathematical, astronomical and physical geography. The works of the Greek scientists had already provided enough basis and material for this. Thus the results of the experiments, observations and theoretical discussions of the Arab scientists were recorded in their more general works on astronomy and philosophy or in monographs on special subjects like tides, mountains, etc. The contemporary and later writers on general geography in Arabic often, though not always, reproduced these results in their works and sometimes discussed them. Some of these writers reproduced various current theories, Greek or otherwise, about a problem in the introductory parts of their works. Thus a tradition was established of writing on mathematical, physical and human geography in the beginning of any work dealing with geography. This is noticeable, for example, in the works of Ibn Rusta, al-Ya'kîbî, al-Masûdi, Ibn Hawkal, etc.

Among the outstanding Arab philosophers and astronomers whose works were utilized and theories discussed by Arab geographers were: Ya'kîb b. Ishâq al-Kindî (d. 260/874), to whom two works on geography are attributed, (1) Rasm al-ma'ûnî min al-arâd and (2) Râsâla fi l-bîhâr wa l-mâdâ wa l-djaâs. One of al-Kindî's pupils, Ahmad b. Muham- mad b. al-Tayibi al-Saraghî (d. 286/899), is also said to have written two works, (1) al-Maddîk wa l-ma-mâlîk and (2) Râsâla fi l-bîhâr wa l-mi-yahî wa l-djaâs. Neither the works of al-Kindî nor those of al-Saraghî are extant, and what we know of their geographical views are from other sources which used them. It seems that the two authors utilized the works of Ptolemy and other Greek writers, as
we find in al-Masudi that their works did contain Ptolemaic information on physical and mathematical geography and astronomy. Ptolemy's work *Rasul ma'mar min al-ard* may have been a version of Ptolemy's *Geography* as the title of the work itself suggests; al-Masudi consulted a work of Ptolemy's entitled *Masihin al-ard* and a world map called *Surar ma'mar al-ard* (al-Masudi, *Muradi*, i, 275-7; Tanbih, 25, 30, 51).

Among other philosophers and astronomers whose writings served as a source of information on mathematical and physical geography were: al-Fazari (second half of the 2nd/8th century); Ahmad b. Muhammad b. Kâbir al-Farqbehni (d. after 247/862) author of *Al-Fusûl al-thalâkütn* (al-Masudi, *Muradi*, iii, 443; Tanbih, 199) and al-Muqadili dî 'ilm hay'âl al-afikâl; Abû Mas'har Dja'far b. Muhammad al-Balkhi (d. 273/886), author of *Al-Mushkil al-habîr dî 'ilm al-mudjamât*; al-Mas'udi consulted another work by him entitled *Kutub al-ulâf fi'l-payyâl wa 'l-bunyân al-azîm*; then Abû 'Abd Allah Muhammad b. Dja'far al-Batkî (d. 372/982) and others. The fourth *Risâla* of the Rasûlî al-Khâwân al-Safâ deals with *Djughrâfiya*. Written in about 370/980, it simply deals with elementary knowledge about mathematical and physical geography based on Greek geography, since the main purpose of the writers was to guide the reader to achieve union with God through wisdom.

(c) General Geographical Literature:

By the 3rd/9th century a considerable amount of geographical literature had been produced in various forms in the Arabic language, and it appears that the Arabs had at their disposal some Pahlavi works, or translations thereof, dealing with the Sasanian Empire, its geography, topography, postal routes and details essential for administrative purposes. These works may have become available to those interested in geography and topography. It is not surprising, therefore, to find that early writers like Ibn Khurradджîbîh, Kudâmâ and others were heads of postal departments or government secretaries, as a result of which they naturally occupied a central position in Arab geographical studies and covered mathematical, astronomical, physical, human and economic geography. Among the representatives of this class of geographers were: Ibn Khurradджîbîh, al-Ya'kîbîh, Ibn al-Fâkhîh, Kudâmâ and al-Mas'udi. Since 'Irâq was the most important centre of geographical learning at this time and many of the geographers belonged to it, we may for the sake of convenience use the term 'Irâqî School for them. Within this School, however, two groups of writers may be discerned: those who bring together the following four directions, viz., north, south, east and west, and tend to consider Baghdâd as the centre of the world, and those who arrange it according to various *iklims* (regions) and for the most part treat Mecca as the centre. (2) To the second category of works belong the writings of al-Istakhriî, Ibn Bânalî and al-Mukaddasî, for whom the term al-Balki School has been used, as they followed Abû Zayed al-Balkhi (see below). They confined their accounts to the world of Islam, describing each province as a separate *iklim*, and hardly touching upon non-Islamic lands except the frontier regions.

(i) The 'Irâkî School. The works of Ibn Khurradджîbîh, al-Ya'kîbîh and al-Mas'udi are distinguished from the writings of other geographers of this School by two special features: first, they follow the Iranian *higwar* system, and second, they equate 'Irâk with Irângâh and begin their descriptions with it, thus placing 'Irâk in a central position in Arab regional and descriptive geography. According to al-Birûnî the Seven Khîwaris were represented by and equal circles. The central *higwar* was Irângâh which included Khurashân, Fârs, Djîbîl and 'Irâk. He considered that these divisions were arbitrary and had been made primarily for political and administrative reasons. In ancient times the great kings lived in Irângâh, and it was necessary for them to live in the central zone so that they would be equidistant from all parts of the Empire, its geography, topography, postal routes and details essential for administrative purposes. Such a division had no relation either to the physical systems or to astronomical laws, but was based on political changes or ethnological differences (*Sîfa*, ed. Togan, 5, 60-62). With the foundation of Baghdâd as the capital of the 'Abbâsîd Empire, 'Irâk naturally occupied a central and politically important position in the world of Islam. Ibn Khurradджîbîh equated 'Irâk with Irângâh and the district of al-Sawâd which was called as-*li* Irângâh in ancient times occupied the central position in his system of geography, and he begins his account with its description. Similarly, al-Ya'kîbîh considered 'Irâk as the centre of the world and 'the navel of the earth' (*surrat al-ard*); but for him Baghdâd was the centre of 'Irâk, for he was not only the greatest city of the world unparalleled in its glory, but it was also the seat of government of the Banû Hâshim. Because it occupied a central position in the world, 'Irâk had a moderate climate, its inhabitants were handsome and intelligent and possessed high morals. But in his system of geography Baghdâd is grouped with Şamarrâ, and the description begins with these two towns. A similar note of the superiority of 'Irâk is struck by the historian and geographer al-Mas'udi, who thought of Baghdâd as the best city in the world (Tanbih, 34; cf. Ibn al-Fâkhîh, 195 ff.). As against these writers, Kudâmâ, Ibn Rusta and
Ibn al-Fakīh display no enthusiasm for ʿIrāq or ʿIrānšahr. In their system Mecca and Arabia are given precedence. In Kudāma Mecca is given absolute precedence and all roads leading to Mecca are described. A similar tendency is also noticeable in Ibn Rusta (beginning of 4th/10th century) who departed completely from the Iranian traditions and assigned to Mecca and Medina the foremost place in his arrangement of geographical material. In his description of the Seven Iḥlīms he prefers to describe them according to the Greek pattern and not according to the ḥighwar system. In the geographical work of Ibn al-Fakīh the description of Mecca takes precedence, but a considerable portion of the work is devoted to Fārs, Khurāsān, etc. and the Iḥlīms are described according to the ḥighwar system.

An important feature of the works of Ibn Khurradadhbih, al-Yaʿkūbī and Kudāma is that the material in them is arranged and described following the four directions, namely, east, west, north and south according to the division of the world into four quarters. Such a method of description must have had its origin in some Iranian geographical tradition, and the Arab geographers must have had some pattern before them to copy. According to al-Masʿūdī the Persians and the Nabataeans divided the inhabited part of the world into four parts, viz., Khurāsān (east), Bāḥrān (north), Khurbarān (west) and Nimruz (south) (Tanbīḥ, 32; cf. al-Yaʿkūbī, 268). However, Kudāma points out the arbitrariness of such a division. For him the terms east, west, north and south had only a relative value. In Ibn Rusta and Ibn al-Fakīh, the arrangement is by regions.

Ibn Khurradadhbih, who may be called the father of geography, laid down the pattern and style for writing geography in the Arabic language. But, as J. H. Kramers pointed out, he was not an inventor of this style or pattern. He must have had some pattern or sample of an earlier work on the subject as a part of history, which explains the fact that his writings in Arabic as well as upon contemporary events resemble that of al-Iṣṭaḥkhrī and Ibn Hawkal. He incorporated the account of the merchant Sulaymān on India and China, but the special feature of his work is that, along with trustworthy and authentic information, it records long pieces of verse, various traditions and information of a legendary character. The work is poor in the treatment of general and mathematical geography.

Abu ʿl-Ḥasan ʿAlī b. al-Ḥusayn al-Masʿūdī (d. 345/956), the celebrated historian, combined the qualities of an experienced traveller with those of a geographer of high distinction. Unfortunately his own account of his travels (Kitāb al-Kaḥfiyya wa l-taḥdīrāt) is not extant, but an approximate idea of his travels can be formed from his extant works, namely, Murājjud al-dhahab wa maʿādin al-dajawar and al-Tanbīḥ ʿl-taḥrīf (the work entitled Aḥkāḥ ar-ʾalāmān, etc. ed. ʿAbd Allāh al-Ṣāwī, Cairo 1938, and a MS of the Maulana Azad Library, Muslim University, Allgarh (Qutbuddin Collection, MS No. 561) entitled Kitāb Aḥdāb al-dunyā (in the colophon Kitāb al-Aḥdāb) are both wrongly attributed to al-Masʿūdī and have nothing to do with his great work Kitāb Aḥkāḥ ar-ʾalāmān (which is lost). Al-Masʿūdī regarded geography as a part of history, which explains the fact that his works deal with geography as an introduction to history. He drew upon the earlier geographical writings in Arabic as well as upon contemporary travel accounts and maritime literature. This he reinforced by the information collected by himself during his travels or from people whom he met. He does not give any systematic topographical account
of the 'Abbāsīd Empire or deal with routes of the kingdom or postal stations, but he presents an excellent survey of contemporary Arab knowledge on the geography of the Khorasan and al-Mas'ūdī's main contribution was in the field of human and general geography. He advanced geographical science by challenging certain theories and concepts of Arab geographers which he found baseless in the light of his own experience and observation. He did not hesitate even to question the age-old theories of the Greek masters like Ptolemy, e.g., the existence of land in the southern hemisphere. In the field of human and physical geography he emphasized the influence of the environment and other geographical factors on the physique and character of animals, plants and human beings. Al-Mas'ūdī was also influenced by Iranian geographical traditions, e.g., the Seven Highways system, considering 'Irāk as the central and the best iklim in the world and Baghdad as the best city, etc.

An outstanding geographer of this period whose influence on the development of Arab geography was as varied and deep as that of Ibn Khurradābdhi b. 'Abd Allāh Muḥammad b. Aḥmad al-Djayhānī (earlier part of the 4th/10th century). Unfortunately, his work Kitāb al-Madsālik wa 'l-maṭālik (the Kābul MS has nothing to do with the great work of al-Djayhānī, see V. Minorsky, A false Jayhnī, in BSOAS, xiii, 1949-50, 89-96) has not come down to us; but it is quite likely that al-Djayhānī used the original text of Ibn Khurradābdhi's Kitāb al-Madsālik. Being in the privileged position of a waṣṭ and writing in Būqhārā he 'could extend the field of his investigation much deeper into central Asia and the Far East than was possible for his Arab contemporaries' (Minorsky, Muluz, etc., 6-7, London 1942). He collected first-hand information from different sources, hence the importance of his work. A large number of later Arab geographers utilized al-Djayhānī's work which, in the opinion of al-Mas'ūdī, was 'interesting because of its novel information and interesting stories'.

The anonymous Hudād al-ʿālam, written in Persian in 318/930, is one of the earliest works in Persian on world geography. The author utilized numerous earlier Arabic authorities on the subject and he had undoubtedly a copy of the work of al-Iṣṭākhṛ before him. There is a tendency in the work towards completeness and numerical exactitude. Besides, the author is independent of other geographers in his geographical generalizations and terminology. The originality of the author lies in his conception of the division of the inhabited world into 'parts of the world' and separate 'countries' (see Barthold, Preface to Hudād al-ʿālam, 21-33). The work appeared in an English translation with an excellent commentary by V. Minorsky (London 1937), one of the most exhaustive ever written on any Persian or Arabic geographical work in modern times.

(ii) The Balkh School. To the second main category of writers on general geography belonged al-Iṣṭākhṛ, Ibn Hawkāl and al-Mukaddasī as well as Abū Zayd Aḥmad b. Sahl al-Balkhī (d. 322/934) after whom this School is named. Al-Balkhī wrote his geographical work Sawai al-ḥabīlim (primarily a commentary on maps) in 308/920 or a little later. He spent some eight years in 'Irāk and had studied under al-Kindī. He had travelled widely before his return to his native place and had acquired a high reputation for knowledge and erudition. However, probably in the later part of his life he held orthodox views and wrote several treatises which were highly appreciated in orthodox circles. Although the text of al-Balkhī's geographical work has not yet been separately established, and the MSS, at one time attributed to al-Balkhī, have now been proved to be of al-Iṣṭākhṛ, the view of De Goeje still seems to hold good that the work of al-Iṣṭākhṛ represents a second and greatly enlarged edition of al-Balkhī's work, compiled between 318/930 and 321/933, in al-Balkhī's lifetime.

The geographers of the Balkh School gave a positive Islamic colouring to Arab geography. In addition to restricting themselves mainly to Islamic lands, they laid emphasis on such geographical concepts as found concurrence in the Kur'ān or were based on the traditions and sayings of the Companions of the Prophet and others, e.g., they compared the land-mass with a big bird (see above). This was in conformity with a tradition attributed to 'Abd Allāh b. 'Amr b. al-Ḥāṣ (Ibn al-Fakhī, 3-4). Again, the land-mass, round in shape, was encompassed by the 'Encircling Ocean' like a neck-ring, and from this Ocean the two 'gulfs' (the Mediterranean and the Indian Ocean) flowed inwards without joining each other, being separated by al-Barzāgh (q.v.), the 'barrier' at al-Kulzum, a concept found in the Kur'ān (see above). Again, unlike some other School of Geography, the Balkh School, the geographers of the Balkh School assigned to Arabia the central place in the world, for it had Mecca and the Ka'ba in it. These new trends in the methodology and treatment of the subject-matter became the dominant feature of the geographers of this School, and must in all probability have been a culmination of the early process wherein Mecca was given precedence over 'Irāk by one group of geographers. The prime object of these later geographers was to describe exclusively the bilād al-ʾĪslām which they divided into twenty iklims, except that they discussed the non-Islamic lands in general in their introductory notes. The basis of the division of these 'provinces' was neither the Iranian highwar system nor the Greek system of Clines. It was territorial and purely physical. This was a positive advancement on previous methods and in a way 'modern'. As pointed out by Ibn Hawkāl (2-3) he did not follow the pattern of the 'seven iklims' (of the map at al-Kawāthiyyān, see above), for although it was correct, it was full of confusion, with some overlapping of the boundaries of the 'provinces'. Hence he drew a separate map for each section describing the position of each 'province', its boundaries and other geographical information. An important contribution made by these geographers was that they systematized and enlarged the scope of geography by including in it new topics with a view to making it more useful and interesting, for they believed that a much wider range of people were interested in it, like the kings, the people of murūma and the leading sections of all classes (Ibn Hawkāl, 3). In cartography, besides drawing the regional maps on a more scientific basis, they may be said to have introduced the element of perspective. They drew a round map of the world showing the various 'regions' of the bilād al-ʾĪslām and other non-Islamic 'regions' of the world. The aim was to bring them in proper perspective and to show the relative position and size of each. But since it did not represent the true size and shape (round rather than square) of each iklim, they mapped each in a magnified form. Their drawing these on a purely physical basis was
probably the first experiment of its kind in Arab cartography. The maps of al-Istakhri and Ibn Hawkal are, in this respect, superior to those of al-Farisi, who divided the seven latitudinal Climes into ten longitudinal sections of the world, drew a map of each section separately with the result that these sectional maps do not represent geographical units but geometrical divisions. Al-Istakhri, Ibn Hawkal and al-Mukaddasi present for the first time the concept of a country as defined in geographical terms, and even go so far as to delimit the boundaries of each, just as they define the boundaries of the four main kingdoms of the world.

Abū Ishāq Ibrāhīm b. Muḥammad al-Fārisī al-Iṣṭakhri (first half of the 10th/11th century) seems to have been mainly responsible for spreading the ideas of the Balkhi School. Little is known of his life, but he travelled a good deal and incorporated the experiences of his travels in his work al-Masa’ilīk wa’l-madmlik (a new edition of this work has appeared recently, ed. by M. Djabir c. 366/977). From his childhood, Ibn Hawkal was interested in geography and had travelled widely between 331/943 and 357/968. He was so devoted to geography that he found none of the existing works on the subject satisfactory. He claims to have written his work was that he found none of the existing works on the subject satisfactory. He claims to have improved the work of al-Iṣṭakhri whom he had met. However, the claims of Ibn Hawkal may not be accepted unequivocally, for the similarity between the two geographers itself suggests that Ibn Hawkal had been considerably indebted to al-Iṣṭakhri. There is little doubt, however, that he ranks among the most outstanding geographers of the period, for in cartography he shows independence and individuality and does not follow others slavishly. Besides, he incorporated new information based on his travels or acquired from hearsay. He remained an authentic source of information for the succeeding geographers for several centuries to come.

Abū ʿAbd Allāh Muḥammad b. Ahmad al-Mukaddasi (d. 390/1000), the author of Ahsan al-takāsīm fi maʿrījat al-akhlāṣ was a very original and scientific geographer of his time. He rightly claims to have put Arab geography on a new foundation and given it a new meaning and wider scope. Since he considered the subject useful to many sections of society, as also to the followers of various vocations, he widened its scope, including in it a variety of subjects ranging from physical features of the īklim (region) under discussion to the natural history of the inhabitants, customs and habits, religious and sects, character, weights and measures and the territorial divisions, routes and distances. He believed that it was not a science that was acquired through conjecture (ṣiyāt), but through direct observation and first-hand information. Hence he laid his main emphasis on what was actually observed and was reasonable. From the earlier writers he borrowed what was most essential ‘without stealing from them’. Thus, according to the nature of the sources of information, his work may be divided into two parts: what he observed himself; what he heard from trustworthy people; and what he found in written works on the subject.

Al-Mukaddasi is one of the few Arab geographers who discusses geographical terminology and specific connotations of certain phrases and words used, besides giving a synopsis and an index of the īklims, districts, etc., in the introduction of his work for the benefit of those who want to get an idea of the contents quickly or wish to use it as a traveler’s guide. Unlike Iṣṭakhri and Ibn Hawkal, al-Mukaddasi divided the Mamlakat ʿl-Īslām into fourteen īklims (seven ‘arab and seven ‘aṭjam) perhaps to conform to the belief that there were seven climes north of the Equator and seven others to its south, an idea attributed to Hermes, the legendary figure known to the Arabs as an ancient philosopher of Egypt. In this respect he differed from Abū Zayd al-Balkhī and al-Diyāhānī, whom he however considered Imāms (here authorities). An important feature of his work is that like a muṣaffār he discusses at length certain questions relating to general geography, e.g., the number of the seas, etc., in order to bring them into conformity with the ʿurūf verses relating to them.

(d) Trade and exploration: the maritime literature:

An important aspect of the development of Arabic geographical literature of this period was the production of the maritime literature and travel accounts, which enriched the Arabs’ knowledge of regional and descriptive geography. This became possible firstly, because of the political expansion of the Muslims and the religious affinity felt by them towards one another irrespective of nationality or race, and secondly, because of the phenomenal increase in the commercial activities of the Arab merchants. Incentive to travel and exploration was provided by several factors, e.g., pilgrimage to Mecca, missionary zeal, deputation as envoys, official expeditions, trade and commerce, and, last but not least, the mariners’ profession.

From very ancient times the Arabs played the rôle of intermediaries in trade between the East (India, China, etc.) on the one hand and the West (Egypt, Syria, Rome, etc.) on the other. But with the foundation of Baghād as the capital of the ‘Abbāsid Empire and the development of the ports of Basra and Sirāf, the actual and personal participation of the Arabs now extended as far as China in the east and Sofala on the east coast of Africa. They had learned and mastered the art of navigation from the Persians, and by the 3rd/9th century Arab navigators had become quite familiar with the monsoon and trade winds, and their boats sailed not only along the coasts but direct to India from Arabia. They had become intimate with the various stretches of the sea between the Persian Gulf and the Sea of China, which they divided into the Seven Seas giving each a specific name. Again, they sailed from Aden to East Africa as far south as Sofala and freely sailed on the Red Sea, the Mediterranean, the Black Sea and the Caspian and also on a number of navigable rivers including the Nile and the Indus. Although their boats were small as compared to those of the Chinese, and the Indian Ocean was infested with whales, they performed long and
hazardous voyages with courage and fortitude. They used sea-charts (rahmdnls and dafdtir). Al-Mas′ūdī (Murūdī, 1, 233-4) records names of certain captains of boats whom he knew and expert sailors of the Indian Ocean; similarly, al-Mukaddasī (10-11) gives the name of an expert merchant-sailor whom he consulted on the question of the shape of the Indian Ocean. Ahmad b. Māḏjidī (q.v.), see also below) speaks of an old rahmdān composed by Muhammad b. Shāhād, Sahl b. Abbān and Layth b. Kahān (lived in the later part of the 3rd/9th century), but he considered them much below the standard (see Hourani, Arab seafaring, 107-8). Since none of these charts is extant, it is not possible to make a correct assessment of the contribution made by these early Arab navigators to nautical geography.

With the development of Arab navigation, Arab trade also expanded. With a strong political power in the Middle East and a developing economy at home, the Arabs acquired considerable importance as traders in the East. The sphere of their trade not only widened, but became more intensive. They even traded by barter with the primitive tribes of the Andaman and Nicobar Islands, whose languages they did not understand. Arab trade with China declined from about the end of the 3rd/9th century, for it is said that in the peasant rebellion under Huang Chao (A.D. 878) large numbers of foreigners were massacred in China. From this time onwards Arab boats went only as far as Kala, a port on the western coast of the Malay Peninsula, no longer existing.

The Arabs' urge to explore new lands was mainly prompted by a desire for trade and rarely for the sake of exploration. Although some instances of early Arab adventures and exploration are recorded, many of them seem to have been 'wonder tales' (e.g., the interpreter Sallām's account of his trip to the wall of Gog and Magog under the orders of the Caliph Wāthik (227-32/842-7), see Minorsky, Haddād al-′ālam, 225). The story of a certain young man of Cordova (Spain) who sailed with a group of young friends on the Atlantic Ocean and then returned after some time, laden with booty, may have had some historical truth in it (al-Mas′ūdī, i, 258-9). On the whole the Arabs of this period did not make any substantial contribution to or improve upon the knowledge acquired from the Greeks. There is no doubt however that in regard to certain regions, viz., North and East Africa, West Asia, Middle Asia, India and a few other countries, their information was much more authentic and intimate.

The fact that the Arabs did not explore the regions unknown to them, even those of which they had a theoretical knowledge, may be explained by several factors: wherever the trade incentive was satisfied, they did not proceed beyond that point; secondly, certain notions or preconceived ideas continuously dominated their thought and dissuaded them from taking a bold step, e.g., the Atlantic was a Sea of Darkness and a Muddy Spring (al-′sāyn al-ḥamās′a). For the same reason they did not sail further south along the east coast of Africa, for they believed that there were high tidal waves and sea commotion there, although al-Bīrūnī, on the basis of certain evidence discovered in the 3rd/9th century, namely, the discovery in the Mediterranean of planks from boats of the Indian Ocean (see above), had conceived that the Indian Ocean was connected with the Atlantic by means of narrow passages south of the sources of the Nile (Sīfā, 3-4). Lastly, the fear of encountering aboriginal tribes and cannibals of the East Indies must have prevented the Arabs from sailing further east.

Among the travel accounts of this period that have survived, one of the earliest is that attributed to the merchant Sulayman b. b. Shahriyar, the captain of Ramhurmuz (299-399/A. D. 912-1009) who compiled a book of maritime tales, entitled Kitāb Qāwilat al-Hind in about 342/953. The book relates a number of very amusing and very strange stories concerning the adventures of the sailors in the Islands of the East Indies and other parts of the Indian Ocean. These were apparently composed for the general reader, and though mostly fantastic, they cannot be completely brushed aside as untrue and ignored in any serious study of Arab geography and exploration. It seems that during this period there was a great demand for wonderful and amusing tales, which fact is borne out by the existence of several MSS in Arabic dealing with ′adīb′ literature.

This period was on the whole marked by a spirit of enquiry and investigation and exploration among the Arabs. But the maritime literature, most of which seems to have perished, posed itself against the theoretical knowledge derived from the Greek and other sources. Hence at times there was a contradiction between theory and practice, and this was the fundamental problem with which the Arab geographers and travellers were faced. It was this conflict between theory and practice that finally determined the course of the development of Arab geography in the later period. When the 'practicalists' gave way to the theoreticians, the decline of Arab geography became certain. Why the word of the sailor, the traveller and the merchant was not
given due credence is difficult to explain, but a large amount of maritime literature must have perished through either neglect or animosity.

(e) Al-Biruni and his contemporaries:

The 5th/11th century may be taken as the apogee of the progress of Arab geography. The geographical knowledge of the Arabs, both as derived from the Greeks and others and as advanced by themselves through research, observation and travel, had, by this period, reached a very high level of development. Besides, geographical literature had acquired a special place in Arabic literature, and various forms and methods of presenting geographical material had been standardized and adopted. The importance of al-Biruni’s contribution to Arab geography is two-fold: firstly, he presented a critical summary of the total geographical knowledge up to his own time, and since he was as well-versed in Greek, Indian and Iranian contributions to geography and in that of the Arabs, he made a comparative study of the subject. He pointed out that the Greeks were more accomplished than the Indians, thereby implying that the methods and techniques of the former should be adopted. But he was not dogmatic, and held some important views that were not in conformity with Greek ideas; occasionally, as an astronomer he not only calculated the geographical positions of several towns, but measured the length of a degree of latitude, thus performing one of the three important geodetic operations in the history of Arab astronomy. He made some remarkable theoretical advances in general, physical and human geography. On the basis of the above-mentioned discovery in the Mediterranean of the planks of an Arabian Sea boat a hundred years earlier, he conceived the theoretical possibility of the existence of channels connecting the Indian Ocean with the Atlantic south of the Mountains of the Moon and the Sources of the Nile. But these were difficult to cross because of high tides and strong winds. He argued that just as towards the east, the Indian Ocean had penetrated the northern continent (Asia) and had opened up channels, similarly, to balance them, the continent has penetrated the Indian Ocean towards the west; the sea there is connected through channels with the Atlantic. Thus, although theoretically he laid down the possibility of circumnavigating the South African coast, in practice it was never accomplished by the Muslims. The idea, however, persisted until the time of the arrival of the Portuguese, when it was hinted by al-Nahrwalī that the Portuguese might have taken this route. Al-Biruni conceived that the land-mass was surrounded by water, that the centre of ‘Earth’s weight’ shifted and caused physical changes on its surface, e.g., fertile lands turned barren, water turned into land and vice versa. He described very clearly various concepts and the limits of the inhabited parts of the earth of his time, for which he seems to have had recourse to some contemporary sources which were not available to the earlier geographers. He made an original contribution to regional geography by describing India in detail.

Among the astronomers of the 5th/11th century who deserves mention was Ibn Yūnus, Abu ‘l-Hasan ʿAll b. ʿAbd al-Rahmān (d. 399/1009). While al-Biruni was working in India and other places, Ibn Yūnus made valuable observations in the observatory on the Mt. al-Mukattam in Egypt under the patronage of the Fatimid caliph al-ʿAzīz and al-Ḥakīm. The results of his observations recorded in the al-Zīj al-kabīr al-Ḥakīmi became an important source of up-to-date astronomical and geographical knowledge for the scientists of the Islamic East.

Among the geographers and travellers contemporary to al-Biruni there was the Iṣmaʿīlī poet-traveller Nasr-ī Khūsrow (d. 455/1060 or 453/1061) whose travel account entitled Safar-nāma written in Persian covers the author’s personal experiences in and descriptions of Mecca and Egypt. Abu ’l-ʿUbayd ‘Abd Allāh b. ʿAbd al-ʿAzīz al-Bakrī (d. 487/1094) was the best representative of lexico-geometry of the period in as far as place-names were concerned. His geographical dictionary Muwīj-dām mā sta’dām min ʿasāma al-sīlah wa l-mawādi is an excellent literary-cum-geographical work. It discusses the orthography of place-names of the Arabian peninsula mainly, furnishing literary evidence from Arabic literature, ancient Arabian poetry, Ḥadīṣ, ancient traditions, etc. His second geographical treatise Kitāb al-masdlik wa l-mamdlik wa l-masālik wa l-mamālik has not survived in its entirety. Al-Bakrī was, however, more a litterateur than a geographer [see Abū ’l-ʿUbayd al-Bakrī].

(V) The period of consolidation (6th/12th-16th centuries)

From the 6th/12th to the 10th/16th century Arab geography displayed continuous signs of decline. The process was accelerated and with some exceptions like the works of al-Idrisī and Abu ’l-Fida the general standard of works produced was low compared to those of the earlier period. The scientific and critical attitude towards the subject and emphasis on authenticity of information that was the mark of the earlier writers gave place to mere recapitulations and rapprochements of the traditional and theoretical knowledge found in the works of earlier writers. This was, in a way, the period of consolidation of geographical knowledge, and the literature may be divided into eight broad categories:

(a) world geographical accounts;
(b) cosmological works;
(c) the siyārāt literature;
(d) muwīj-dām literature or geographical dictionaries;
(e) travel accounts;
(f) maritime literature;
(g) astronomical literature;
(h) regional geographical literature.

(a) World geographical accounts:

The tradition of describing the world as a whole as practised by the geographers of the classical period continued to be followed by some geographers of this period, but works dealing exclusively with the world of Islam had become rare, for the ʿAbbasīd Empire had itself disintegrated. The pattern of description and arrangement was also different from the earlier works. There was a tendency towards rapprochement between astronomical and descriptive geography in these works, and Greek influence was still prominent in some works, while Persian influence had comparatively diminished probably because of the production of geographical literature in Persian as well. But geographical activity had expanded and places like Syria, Sicily and Spain had become important centres of geographical learning, and some very important works were produced there. Among very important works of world geography and astronomy produced during this period we may mention Munākah al-idrāk fi tabṣim al-afṣāk by

584 DJUGHRAFIYA
Muhammad b. Ahmad al-Kharakl (d. 533/1138-9); Kitab al-Djughrifya by Muhammad b. Abu Bakr al-Zuhri of Granada (lived towards 531/1137); Nukhbat al-^ad^ib fi 'l-akbat al-sab'a by Ibn Sa'id (d. 672/1274); and Takwim al-buldan by Abu 'l-Fida (d. 731/1331).

Al-Zuhri's work was based on the Greek system of ^ilims and represented the trend of rapprochement between astronomical and descriptive geography. The work of al-Idrîsî, which also represents this tendency, is a fine example of Arab-Norman cooperation in geographical activities. It was produced at Palermo under the patronage of the Norman king Roger II. Al-Idrîsî, who was a prince, and belonged to the Hammûdîdd dynasty, was neither a renowned traveller nor a trained geographer before he joined the court of Roger. The aim of Roger in calling him to his court seems to have been to utilize his personality for his own political objectives. There is little doubt, however, that Roger was interested in geography and he was able to collect a team of astronomers and geographers in his court. As a result of their efforts, for the first time in the history of Arab cartography, seventy regional maps based on the Ptolemaic system of climes were drawn, and a large silver map of the world constructed. The total geographical information acquired from contemporary as well as earlier Greek or Arab sources was classified according to the relevant sections of which formed a description of one of these maps. The work was an important contribution to physical and descriptive geography. The work of Ibn Sa'id was based on the clime-system. It also gives the latitudes and longitudes of many places which facilitates their reconstruction into a map. By this time Syria had become an important centre of geographical activities. Abu 'l-Fida, the Syrian prince, historian and geographer, completed his important compendium on world geography in 721/1321. The work gives latitudes and longitudes of places and treats the subject-matter on a regional basis. It is arranged in a systematic way and covers descriptive, astronomical and human geography. The author seems to have utilized some contemporary sources, for we find some new information which is not available in earlier works.

(b) Cosmological works:

During this period several works were produced which dealt not only with geography but also with cosmology, cosmogony, astrology and such other topics. The main purpose of these works seems to have been to present in a consolidated and systematic form world knowledge for the benefit of the average reader. No doubt the authors utilized earlier Arabic sources, but on the whole the material is presented uncritically, and there is hardly any question of investigation or research, and the zeal of enquiry is totally lacking. The tendency to produce such works was mainly due to the decline in education and learning which affected the progress of geographical knowledge. The following are some of the works that belong to this category: Tuhfat al-ahlâb (or al-akhkhâb) wa nuhkbat al-'adâ'ib by Abu Hâmîd al-Çhânrâtî (d. 565/1169-70); 'Adâ'îb al-buldan and Âhtar al-buldân by al-Kazînî (d. 682/1283); Nu'hkbat al-da'hâr fi 'adâ'îb al-bar'a wa 'l-âhtar by al-Dîmâshqî (d. 727/1327); Khâridat al-^adâ'îb wa farhâdat al-ghârâ'îb by Ibn al-Wardî (d. 861/1457).

(c) The sîyârat literature:

A special feature of this period was that a number of works dealing with the towns and places of religious significance or places of pilgrimage were produced. These were not purely descriptive or topographical works. They dealt with the holy spots of Islam, tombs of saints, the takyas of the sîfs and rûhâs along with educational institutions (madrâsas) specializing in various schools of the Sîrâfî and other such topics. One finds in them detailed accounts of place-names in various towns like Mecca, Damascus, etc. On the whole such works were meant to be religious guides for pilgrims and devotees, which represent the period of religious reaction in Islam. Among the representative works of this type of literature are: 'Îdârât al-mâ'ârif al-sîyârat by al-Hârâwî (d. 611/1214); al-Dîrisî ta'rîkh al-maddâris by 'Abd al-Kâdir Muhammad al-Nu'aymi (d. 684/1289); in the Maulana Azad Library, 'AÎlgârî Muslim University, there exists a MS (Sherwâni Collection, MS No. 27/54) which, in all probability, is an abridgment of al-Nu'aymi's original work, written 50 years after his death.

(d) Mu'jâm literature or Geographical dictionaries:

The traditions of geographical studies developed in Syria bore many fruitful results. Besides the compendium of Abu 'l-Fida' and the sîyârat literature, Yâkût al-Hâmawi (d. 626/1229) produced one of the most useful works in Arabic geographical literature, namely, Mu'jâm al-buldân. Completed in 621/1224, this geographical dictionary of place-names, which includes other historical and sociological data, was in keeping with the literary and scientific traditions of the earlier period, and represents the consumption of geographical knowledge of the time. As a reference book it is indispensible even to-day for the student of Arab historical geography. The fact that Yâkût crowned the work with an introduction on Arab geographical theories and concepts and physical and mathematical geography shows the depth of knowledge of the author. The work also represents that period of Arab geographical development when scholars thought in terms of compiling geographical dictionaries, which would not have been possible without the vast amount of geographical literature that had already come into existence by this time and without the geographical tradition that was present in Syria. Another important work of Yâkût is the Kitab al-Muqadarîs wa ad-dalîl wa'l-mukhtalif sakât, composed in 623/1226.

(e) Travel accounts:

During this period the Arabs' knowledge of regional and descriptive geography was considerably enriched by the production of travel literature in Arabic on a large scale. Besides the usual incentives for travel like the pilgrimage to Mecca or missionary zeal, the extension of Islamic political and religious influences, especially in the East, had opened up for Muslims new vistas of travel and more opportunities for earning a livelihood.

Among the outstanding travel accounts may be included the work of al-Mâzînî (d. 566/1170); the Riha' of Ibn Djughayr (d. 614/1217); Ta'rîkh al-Mushtarsîr (written in c. 627/1230) by Ibn Mudjalawîn; then the Rihas of al-Nâbîtî (d. 639/1240), al-'Abdârî (d. 688/1290), al-Tayyibi (698/1200) and al-Tâjînî (700/1300) and others. Whereas these accounts are of great importance for the Middle East,
North Africa and parts of Europe, for they furnish contemporary and often important information, the work of Ibn Baiṭūṣa [q.v.] (d. 779/1377) entitled Dāfaq al-nugṣūr remains the most important medieval travel account in Arabic for the lands of India, South-East Asia and other countries of Asia and North Africa.

(f) Maritime literature:

During the period under consideration Arab maritime activities were confined to the Mediterranean and the Arabian Seas. In the Mediterranean the Arab navigators, piloting the boat of Vasco da Gama from Malindi on the east coast of Africa to Calicut in India in 1498. This incident indeed marks the turning point in the history of Arab navigation and trade in the East. The advent of the Portuguese had an adverse effect on the trade and commerce of the Arabs. Their maritime strength was destroyed and their trade systematically ruined by the Portuguese.

Ibn Mādījīd, who spent more than fifty years of his life on the high seas, may be considered as one of the greatest Arab navigators of all times. He wrote thirty nautical texts and was one of the most important Arab writers on oceanography, navigation, etc. His contributions bring him in line with the leading scientists of the period. His most important contribution is the work Kitāb al-Fawa'id fi usūl 'ilm al-bahri wa l-kaqd'id.

Sulaymān b. Ahmad al-Mahfīr, a younger contemporary of Ibn Mādījīd, was another important navigator of this period. He was also author of five nautical works written in the first half of the 10th/16th century. Among these may be mentioned of special importance: al-'Umda al-makriyya fi dabī al-'ulmām al-bahriyya compiled in 971/1561-2 and Kitāb Schākh tūfṣat al-fuḥūl fi tamhid al-usāl.

The works of Ibn Mādījīd and Sulaymān al-Mahfīr represent the height of the Arabs' knowledge of nautical geography. These navigators used excellent sea-charts, which are supposed to have had the lines of the meridian and parallels drawn on them. They also used many fine instruments and made full use of astronomical knowledge for navigation. There is little doubt that their knowledge of the seas was considerably advanced, especially of the Indian Ocean, for in their works they describe in details the coastlines, routes, etc. of the countries they visited. They were familiar with the numerous islands of the East Indies.

(g) Astronomical literature:

During this period some very important works were produced on astronomy, and one of the most outstanding astronomers of this period was the Timūrid prince-mathematician Ulugh Beg (d. 853/1449). But with the death of Ulugh Beg Muslim astronomical literature may be said to have come to an end, for this was the last scientific effort on the part of a Muslim prince, before the period of decline in the work of astronomy in Islamic society set in, to revise the data of Ptolemy and to perform independent astronomical observations. The results of Ulugh Beg's observations in which his collaborators also participated were included in the Zid-i ḍāid-i Sulṭānī.

(h) Regional geographical literature:

Between the 7th/1st and the 10th/16th centuries a large amount of geographical literature, both in Arabic and Persian, came into existence on a regional or 'national' basis. Although no outstanding contributions were made by the geographers of this period, regional geographical knowledge was enriched by the efforts of several historians and geographers. Geographical traditions of the classical period were kept up, but there was no originality in thought or practice. The astronomical, physical or human geography of the world was produced in consideration of the geographical literature of this period was closely connected with the extension of Islam and Muslim political power in the East, and due to the attention paid by Muslim potentates to historiography and geography mainly for political purposes.

In 'Irāq and Mesopotamia, the old centre of geographical activity, little was produced in geographical literature; Maʿrūth Kūdshī by Bar Hebraeus (d. 685/1286) showed much influence of Islamic tradition and has a semi-circular world map. In Egypt and Syria the Muṣaf literature was produced under the Ayyūbid and the Mamlūk. Interest in the Muṣaf literature and ancient Egypt from the time of the Ayyūbids culminated in the production of and collection of some fantastic accounts and stories about ancient Egyptian kings (!) and other tales of common interest. However, some new and fresh information on the Muslim states of the East, India and other countries was also incorporated in these accounts. Authors who wrote on such subjects were Ibrāhīm b. Wāṣif Shīr (wrote in 605/1209); Nuwayrī (d. 639/1242); Makrizī (d. 645/1249-1250); Ibn Fadl Allāh al-Umārī (d. 749/1349); al-Kalkaghāndī (d. 821/1418) and others. In North Africa, al-Ḥasan b. Abī l-Marrākūshī wrote Dājmūs al-mabādi' wa l-ghāydūl which gives latitudes and longitudes partly compiled by the author. Ibn Ḥulaidhīn Muḥaddīmī contains a chapter on geography, representing the tradition of some Arab historians of describing the world as a prelude to history.

In Īrān, Central Asia and India some historical works in Persian dealt with regional and descriptive geography, and some monographs on world geography were also produced. The geographical works were mainly based on earlier Arabic authorities; additional contemporary information was included in general histories and accounts of conquests. Among the important works we may mention: Ibn al-Balḥī, Fārs-nīma, written in the beginning of the 6th/12th century; Ḥamdallāh al-Mustawfī (d. 740/1340), Nuzhat al-balūb; Muḥammad b. Nadjīb Bakrān
(wrote for the Khwarizm-Shah Muhammad, 596-617/1200-20), Djihan-nama, which contains some interesting information on the geography of Transoxania; Djihanndma, which contains much valuable geographical information.

Bibliography: Arabic geographical literature is too vast to allow any brief survey here. Hence only a select bibliography is given below:

(S. Maqbul Ahmad)

VI. The Ottoman geographers

The Ottoman Turks do not seem to have begun to write geographical works until the middle of the 9th/14th century. The first of these were some small cosmographies in the style of Books of Marvels, which treat of the wonders of Creation. The best known of these works is probably the ‘Well-preserved Pearl’ (Durr-i meknun) by YazgHl-oglu Ahmed Bidjan (d. ca. 860/1456) [s.e.], the brother of the early Ottoman poet YazgHl-oglu Mehemmed (died 853/1453). The same Ahmed Bidjan was also the first to make a translation of extracts from an Arabic cosmographical work, the ‘Adidiuh al-makhbakHt of Kazwin (1203-1283), under the same title, in which the stress likewise is less upon scientific knowledge than upon the wonders of Creation (see Rue, Cult of Turkish Miss. in the Brit. Mus., 106 ff.). Kazwin (‘Adidiuh al-makhbakHt) was translated several times into Turkish (Brockelmann, S I, 888, indicates four Turkish translations of the work). Likewise under the same title there were in circulation Turkish translations of Ibn al-Ward’s (d. 1457) Khtarat al-‘adidiuh (indicated in Beitrige zur historischen Geographie ... vornehmlich des Orients, ed. Hans Mlck, Festband Eugen Oberttumner, Leipzig and Vienna 1926, 86 ff.), among them one with some contemporary additions by a man of the early Ottoman period called ‘Ali b. ‘Abd al-Rahman (see my articles Der Bericht des arabischen Geographen Ibn al-Wardiiber Konstantinopel in Festband Eugen Oberttumner, 84-91, and Ein altosmanischer Bericht fiber das vorosmanische Konstantinopel in AION, N.S., i, 1940, 291-9). Further, after SipHdHaze Mehemmed b. ‘Ali (d. 997/1588) had produced a new Arabic edition of Abu ‘I-Fidas ‘Tabarim al-bulbdn under the title AwlaHd al-masahik ilâ ma’refat al-bulbdn wa’t-malmakHt with the material arranged in alphabetical order and supplemented (Brockellmann, S II, 46), he translated extracts of the work into Turkish under the same title (Brockelmann, S II, 44).
One of the last of the translations from earlier geographical works is the "Views of the Worlds" (Menâsir al-tauâdim) by Mêhemîd b. 'Omer (not exclusively of theology and mythology. But this first part is actually only an introduction. The bulk of the work is contained in the second part, which describes the "world below", that is, the earth and its inhabitants. It contains first a universal geography, that is, a little general knowledge of the earth, followed by separate descriptions arranged in the mediaeval manner according to natural objects: oceans, islands, swamps and lakes, rivers, springs, warm springs, mountains and finally, comprising the main section of the descriptive geography, cities. In this section all of the geographical material is arranged according to the seven climates of Ptolemy, the "actual climates" (âklâm-i hâkîyye). Within this framework the localities represented are arranged according to the 28 "traditional climates" (âklâm-i ursîyye) of which 4 Ashîk borrowed from the work of Abu 'l-Fidâ', which result that some of the cities treated, according to their location, appear in more than one of the âklâm-i hâkîyye, the applications of the two principles thus overlapping. Under each heading 4 Ashîk indicates in order the reports of his authorities translated into Turkish, of the mediaeval Arabic and Persian writers such as Ibn Khurradadhîbû, Ibn al-Djawâlî, Yâkûtî, Kâzîmî, Hamdûlî, Manûshî and Ibn al-Wardi, each with a precise indication of the source. 5 Ashîk supplements these with his own reports, especially for Anatolia, Rumelia and Hungary, also with precise indication that this particular information derived from the "writer" (râkim-i bûrûfî), with the date of his visit to the city in question, thus affording a chronological sequence of his travels.

The geography is followed by an encyclopaedic descriptive natural science, that is, the solid, liquid and gaseous minerals, scents, metals, plants, animals and man. The work in its totality is a broadly sketched compendium of traditional geography and natural science.

Belonging in a wider sense to the translations of geographical literature is the manual of astronomy and mathematics written in Persian by 'Ali Kushbî (d. 873/1467), formerly director of Ulugh Beg's observatory in Samarkand and later the court astronomer of Mêhemîd II, which was several times translated into Turkish (see ZDMG, lxxxii, 1923, 40 note 2). To this category also belongs the "China Book" (Khîyât-i-nâmâ) originally written in Persian by Seyiid 'Ali Akbar Khihitî in 916, in which the author describes his journey to China in 912-14506-8 and his stay of three years there, and which he dedicated to Selim I. Under Murâd III, probably in 990/1582, it was translated into Turkish (see P. Kahle in AO, xii, 91 ff, and Opera Minora 322-3).

In the fields of marine geography and navigation the Ottoman Turks produced original works. In this respect special mention should be made of the work of Pîr Muhyî 'l-Din Re'sî (d. 962/1554), a nephew of the famous naval hero Mêhemîd Re'sî who knew every corner of the Mediterranean. In 949/1542-3 he produced a map of the world in two parts, of which only the western part has been preserved, which he presented to Sultan Selim I in Cairo (923/1517). For that portion of his work treating the west Pîr Re'sî used as sources maps containing the Portuguese discoveries up to 1508, as well as a map, since lost, containing the discoveries made by Christopher Columbus during his third voyage (1498). He had got the latter from a Spanish sailor who had gone with Columbus to America three times and who in 1501 at Valencia had been made a Turkish prisoner by Pîr Re'sî's uncle Kemal Re'sî (see P. Kahle, Die verschiedene Columbus-Karte vom Jahre 1498 in einer türkischen Weltkarte vom 1553, Berlin-Leipzig 1933; idem, A lost map of Columbus, in Opera Minora, Leiden 1956, 247-65; Ibrahim Hakki, Eski Harâstar, Istanbul 1936; Aet, Un Amiral Géographe turc du XVe siècle, Piri Reis, auteur de la plus ancienne carte de l'Amérique en Belletten, 1 (1937), 333-49; Sadi Selén, Die Nord-Amerika-Karte des Piri Reis (1528), ibid. 519-23).

Pîr Re'sî then wrote a nautical handbook of the Mediterranean, the Bahriye, containing 129 chapters each provided with a map in which he gives an exact description of the Mediterranean and all its parts. His models are Italian portolans and other navigational handbooks, the major part of which have disappeared. He first dedicated the work to Sultan Selim I in 927/1521. After the latter's death he prepared a second edition with many additional maps, a modified text, and a poetical introduction of some 1200 verses in Turkish on the lore of the sea and the sailor, which he presented in 932/1525-26 to Sultan Suleyman by means of the Grand Vizier Ibrahim Pasha (see P. Kahle, Piri Re'sî und seine Bahriye in Beiträge zur historischen Geographie ... Festband E. Oberhummer, Leipzig-Vienna 1929, 60-76; idem, Bahriye, das türkische Segelhandbuch für das Mittelmeer vom Jahre 1521, the first part of an unfinished edition, Berlin-Leipzig 1926; the complete work in facsimile, Kitâbi Bahriye, Istanbul 1935). A similar work of marine geography and navigation on the Indian Ocean was written in 961/1554 by Seyyidî 'All Re'sî b. Hüseyn, known as Katîb-i Rûmî (died 948/1542), entitled "the Ocean" (al-Muhît). 'All Re'sî made use of the experience of South Arabian sailors who had served as guides for Vasco de Gama on his voyage to Calicut, and also translated parts of Suleyman al-Mahîrî's al-'Umda al-Mahriyya into Turkish in his work (see W. Tomaschek and M. Bittner, Die topographischen Kapitel des indischen Seespiegels Mokhî, Vienna 1897; for the Arabic precursors see Gabriel Ferrand, Relations de Voyages et textes géographiques ... ii, Paris 1914).

Yet another work of marine geography from a later period is the "Book of the Black and White Seas" (Kitâb Bahr al-aswad wa l-'abâyad) written by Seyyidî Nûh during the reign of Mêhemîd IV (see F. Babinger, Seyyidî Nûh und die Türkische Segelhandbuch in Imago Mundi, xii (1955), 180-2). A kind of terrestrial counterpart to these works of marine geography is the "Collection of Stations" (Mefîm-i mendîlî), an illustrated book by Nâşûb al-Matrâkî (dates unknown) in which he describes briefly and depicts separately the stages of Sultan Suleyman Kânûnî's first Persian expedition (940-2/1534-5). It exists only in a single manuscript, in all probability the dedication copy for the sultan, in the University Library in Istanbul, and constitutes an important source for the military routes used by the sultans for their eastern expeditions (see Albert

The campaign itineraries of sultans Selim I and Süleyman I, as well as those of Murad IV are contained, moreover, in the collection of documents called Münchebât al-Salātīn of Feridūn Ahmed Beg (d. 991/1583), or his continuator (only the two volume second edition of the Münchebât contains the itineraries, Istanbul 1274-75/1857-59; the itineraries there are enumerated in F. Taeschner, Das Anatolische Wegenetz nach osmanischen Quellen, i, Leipzig, 1924, 20).

The most important comprehensive geographical work, constituting at the same time the transition in Turkey from the mediaeval oriental to the modern European point of view, is the "View of the World" (Diyahnumā) of the famous scholar Muṣṭafā b. 'Abdallah, known as Kātib Ṣelebī [q.v.] or Ḥadhīlī Khalīlī (1017-67/1609-57). The work has a complicated history. Kātib Ṣelebī began it twice and twice it remained uncompleted. In 1053/1643 he finished it in a form based on the model of such works as the one mentioned above of Mehmed ʻĂshīlī, which he used and acknowledged. After he had described oceans, rivers and lakes, he started on lands, of which the western came first, Muslim Spain and North Africa. The lands of the Ottoman Empire were to follow as the influx of original European literature in the face of which Turkish productions in the geographical field lost in originality and thereby in interest.

Concerning travel descriptions those of 'Abī Akbar from China and his sojourn there have been mentioned. Worthy also of indication is the brief description of Katib Celebi's Dijihnumā with the title Rawdat al-anfus. But the work was never printed owing on the one hand to the death of Ḥūdābādī, the work was never printed in originality and thereby in interest.

When Kūsa, the envoy of the sultan, had reached the headlands of Java, he began writing the description of Hungary. He came across a copy of the Atlas Minor of Gerhard Mercator, edited by Jodocus Hondius in 1621 at Arnheim. He abandoned the Diţihnumā and from 1064/1654 on, with the help of a French renegade, Ḥūdābādī, he worked at a translation of the atlas, to which he gave the title Lewadī al-nūr fi tafyrir-i Atlas Minur.

When this work was two-thirds finished Kātib Celebi began again to write his Diţihnumā, according to a new plan based on the western model. This time however he began in east Asia for which he used, in addition to European, Oriental sources as well, such as the Khidāy-nāme of 'Abī Akbar; these preponderated the further west he moved. When he had progressed in his description from east to west as far as Armenia (Eyālet of Vān), death hastened on by an accident stayed his hand (1067/1657). Thus the second version of his work also remained unfinished.

Yet another European work was to provide the impulse for the continuation of the Diţihnumā and eventually its completion. On 14 August 1668 the Dutch envoy Colier presented to Sultan Mehemmed IV in Edirne on behalf of his government a copy of the Latin edition in eleven volumes of Blaeu's Atlas Maior sive Cosmographia Blaviana (1662). A few years later, in 1686/1675, the Sultan had this work translated into Turkish by Abū Bakr b. Bahram al-Dimashkī (d. 1102/1691). Abū Bakr published his translation under the title Nyuçrat-al-Islām wa l-sūrūr fī tābrīr-i Atlas Māyūr, and based on it, with the further use of other, especially, Oriental sources, produced a "Major Geography" (Djughṛāfiyā-yi kehī) (see P. Kahle, The Geography of Abu Bekr Ibn Behram ad-Dimashki: Ms. A.S. 575 of the Chester Beatty Collection).

When later, in 1140/1728, the Hungarian renegade Ibrāhīm Mütəfērīka ǧašīda the first printing-press in Istanbul, the Dijihnumā of Kātib Celebi became the eleventh product (in 1142/1729) in the new Turkish art of printing. As a basis for this edition Ibrāhīm used the second version of the work, that is, the description of Asia begun by Kātib Celebi, and supplemented this with the corresponding portions ("insertions", ʻĀtīqah) from the work of Abū Bakr, so that the printed edition included the complete description of Asia. In the introductory chapters containing astronomical, mathematical and geographical data, he brought the work up to date by means of series of "printer's addenda" (tāghyī al-tābī) (see F. Taeschner, Zur Geschichte des Dijihnumā in MSOS ii, 29 (1926), 99-111; idem, Das Hauptwerk der geographischen Literatur der Osmanen, Kātib Celebi's Gihnumā in Imago Mundi 1935, 44-7; Kātib Celebi, Hayatis ve eserleri hakkında incellemeler, in But the work was never printed owing on the one hand to the death of Ibrāhīm Mütəfērīka (1157/1744) after which the press was silenced and, on the other hand, to the influx of original European literature in the face of which Turkish productions in the geographical field lost in originality and thereby in interest.

Concerning travel descriptions those of 'Abī Akbar from China and his sojourn there have been mentioned. Worthy also of indication is the brief description by Seyyid 'Abī Re'īs of his journey to India and after the unsuccessful Ottoman naval expedition against the Portuguese in the Indian Ocean, his fortunate return to the sultan's court in Edirne. These are contained in the tiny book Mir'āt al-mamālik (completed 964/1557 and printed Istanbul 1315; Eng. tr., A. Vambéry, Travels and adventures of the Turkish Admiral Sidi Ali Reis . . . during the years 1553-1556, London 1899). The major work, however, in the field of travel description is the great, ten-volume "Travel Book" (Seyhātanāme) or "History of the Traveller" (Ta'virīh-ye seyyah) of Ewliyā b. Derwīš Mehemmed Žilli, usually known as Ewliyā Celebi [q.v.]. It is a unique work in the entire literature of the Islamic peoples. For forty years (1631-1670) Ewliyā Celebi travelled in every direction throughout the Ottoman Empire and its neighbouring lands, largely as field chaplain in the retinues of dignitaries, governors and ambassadors, as well as with divisions of the army. His work is thus a kind of memoir and contains in addition to a knowledge of the lands which he visited many insights into the higher politics of his period. Besides his own experiences he has mingled the results of his reading and the manifold products of his lively imagination in the work. Through his contacts with political personalities and the eleventh edition of this work, Ewliyā Celebi's book has become an important record for the history of his times.
A stimulation to travel description was provided by the annual pilgrimage to Mecca. There are indeed, especially from the 18th century, a series of texts which describe the journey from Úskudar, the point of departure on the Asiatic coast of the Bosphorus for pilgrims to Mecca, and the ceremonies accomplished in Mecca. Most of the pilgrims limited their descriptions to the latter and touched only in passing the voyage itself. Some, however, did describe the journey and for that reason are of importance from the point of view of geography. The most detailed of these is the "ceremonies of the pilgrimage" (Manṣūk al-ḥadīd) by Meḥmeṃd Edīb (1173/1779) (printed in Istanbul 1322/1816-17; Fr. tr. by M. Bianchi, Itinerario de Constantinople à la Meccé in Recuei des Voyages et des Mémoires publiés par la Société de Géographie, ii, Paris 1825, in which the work is wrongly dated 1093/1682 instead of 1173/1779).

To travel literature in a certain sense belong also the reports from the ambassadors of the Porte to European courts (Sefeşetnâme). These belong at the same time to the category of historical literature, for which reason they are generally included by the historiographers of the Empire in their works (enumerated by me in ZDMG, lxxvii (1923), 75-8; more completely by Falk Reṣṭ Unat in Tarḥ Veshkalan, reprinted in Reşmi Tarḥ Mecmuası, 5 August 1969, and further in ZDMG).

A brief word may also be said concerning cartography. Pīrī Reş's world map of 1513, originally in two parts, has already been described above. In his sailing manual for the Mediterranean (the Bahriyye), Pīrī Reş included in each chapter, after the时尚 treated in the respective chapter. The late editor of the periodical İtınrares, Istanbul 1943; idem, Osmanh Türklerinde Him, 2nd/8th century, particularly Abu Muslim and al-Adhay, Nathr al-tdurar, the latter quotes three anecdotes and adds that Djuha was a member of the Bańu Fazāra bearing the kunya of Abu U'l-Ghusn; this is also mentioned in other works: the Nâẓîr al-durar, the Şahâb (s.v.) by al-Djawhari (d. 400/1009), the Aχâb ar-hamkâ wa 'l-mughaffalin (Damascon [1861]) by Ibn al-Dirawi (d. 597/1200), the 'Uyun al-tawdrikh (Paris MS. 1588, s. 160) by Ibn Shâkir al-Kutubi (d. 716/1316), the Hayâl al-hayawann (s.v. ādâgin) by al-Damîrî (808/1403), the Kamiš, the Mâsidh close to the Mediterranean with parallel meridians, based on them, a map representing the region of the "The ceremonies of the pilgrimage" (Manṣūk al-ḥadīd) by Meḥmeṃd Edīb (1173/1779) (printed in Istanbul 1322/1816-17; Fr. tr. by M. Bianchi, Itinerario de Constantinople à la Meccé in Recuei des Voyages et des Mémoires publiés par la Société de Géographie, ii, Paris 1825, in which the work is wrongly dated 1093/1682 instead of 1173/1779).

To travel literature in a certain sense belong also the reports from the ambassadors of the Porte to European courts (Sefeşetnâme). These belong at the same time to the category of historical literature, for which reason they are generally included by the historiographers of the Empire in their works (enumerated by me in ZDMG, lxxvii (1923), 75-8; more completely by Falk Reṣṭ Unat in Tarḥ Veshkalan, reprinted in Reşmi Tarḥ Mecmuası, 5 August 1969, and further in ZDMG).

A brief word may also be said concerning cartography. Pīrī Reş's world map of 1513, originally in two parts, has already been described above. In his sailing manual for the Mediterranean (the Bahriyye), Pīrī Reş included in each chapter, after the fashion of the Italian portulans and probably based on them, a map representing the region of the Mediterranean, which describes the journey from t)skiidar, the point of departure on the Asiatic coast of the Bosphorus for pilgrims to Mecca, and the ceremonies accomplished in Mecca. Most of the pilgrims limited their descriptions to the latter and touched only in passing the voyage itself. Some, however, did describe the journey and for that reason are of importance from the point of view of geography. The most detailed of these is "The ceremonies of the pilgrimage" (Manṣūk al-ḥadīd) by Meḥmeṃd Edīb (1173/1779) (printed in Istanbul 1322/1816-17; Fr. tr. by M. Bianchi, Itinerario de Constantinople à la Meccé in Recuei des Voyages et des Mémoires publiés par la Société de Géographie, ii, Paris 1825, in which the work is wrongly dated 1093/1682 instead of 1173/1779).

To travel literature in a certain sense belong also the reports from the ambassadors of the Porte to European courts (Sefeşetnâme). These belong at the same time to the category of historical literature, for which reason they are generally included by the historiographers of the Empire in their works (enumerated by me in ZDMG, lxxvii (1923), 75-8; more completely by Falk Reṣṭ Unat in Tarḥ Veshkalan, reprinted in Reşmi Tarḥ Mecmuası, 5 August 1969, and further in ZDMG).

DJUHA
al-mizdn, s.v. Dudjayn), but an earlier and clearer
passage from al-Kutubi (op. cit.) hints at the solution
to this problem: it says in effect that Dudjayn,
surnamed Djuha, died in 160/777 but adds, according
to Ibn Hibban, that two men, one the traditionist
[of Basra] Dudjayn, and the other Nuh = Diuha
[established at Kufa], have been confused because
both died in 160. This coincidence is, to say the
least, strange, and it is not impossible that the
traditionist of Basra was a victim of the spite of the
inhabitants of Kufa, but, until we are better informed,
there is no reason to doubt the historic existence of
Diuha, who might, moreover, have been called Abu
'1-Ghusn Nuh al-Fazari. Some Shlci authors regard
Djuha as a Shici and consider him as a traditionist
together with Abu Nuwas and Buhlul [qq.v.]; as a
matter of fact, al-Astarabadhi, Minhddi al-makdl,
Tehran 1888, 258, mentions a Musnad Abi Nuwds
wa-Diuhd wa-Buhlul. . . wa-md rawaw min al-hadith,
which was in the hand of Abu Paris Shudjac alArradjanT, d. 320/932 (cf. J. M. Abd-El-Jalil, Breve
histoire de la Hit. ar., Paris 1943, 169).
Al-Suyuti (d. 911/1505), who must have had at
his disposal sources inaccessible to us, saw in Diuha,
(in Kdmus) an open-hearted labial and declared that
most of the stories of which he is the hero are without
foundation; this proves that the character was well
known in Egypt, but throws no light at all on the
problem which now presents itself; which is, that
at an undetermined date towards the end of the
Middle Ages there appeared among the Turks another
symbolic figure who, under the name of Nasr al-Dm
Khodja [q.v.], partially and at least locally took the
place of Diuha. Indeed the first Arabic edition of
the collection of anecdotes published in lithograph
about 1880 at Bulak bore the unexpected title of
Nawddir al-Khudid Nasr al-Dln al-mulakkab biDiuhd al-Ruml, and the Egyptians again turned
Nasr al-Dm and Diuha into one and the same
person.
For R. Basset (in Fourberies, see Bibliography],
this confusion arises from the fact that the primitive
K. Nawddir Diuha was translated into Turkish in
the 9th/i5th or ioth/i6th century, and that this
Turkish version, adapted and amplified, was in turn
translated into Arabic in the nth/i7th century;
if this latter assertion corresponds with reality,
the first is not entirely accepted, and there is
every reason for believing, with Christensen (see
below), that the "follies" of Nasr al-DIn were an
independent collection into which were incorporated
the stories of Diuha which had been handed down
orally. This problem, already complex enough, will
be examined in the article NASR AL-DIN. We should
however note here that the introduction of the figure
of Djuha among the Turks may have been accomplished through the intermediary of Persia, where
A. Christensen (Juhi in the Persian Literature, in A
Volume . . . presented to E. G. Browne, Cambridge
1922, 129-36) discovered some early evidence of
Diuha (Djuhl/ Djuhi), notably in the Mathnawi of
Djalal al-Dm Rumi (d. 672/1273) and the Bihdristdn
of Djaml (d. 898/1492).
The method advocated by Christensen, consisting
in the search for stories about Djuha in literature
prior to the presumed appearance of Nasr al-Dm, was
recently applied independently and successfully by
c
Abd al-Sattar Ahmad Farradj, in his Akhbdr Diuhd
(Cairo n.d. [1954])- Taking advantage of the article
NASR AL-DIN in the El1 (by F. Bajraktarevic), he
took as his starting point R. Basset's thesis, without,
however, referring to the works of that distinguished

orientalist, and attempted partially to restore the
original K. Nawddir Diufyd, by a searching analysis
of early literary works in Arabic; he thus discovered
about 166 anecdotes of which two-thirds (107)
appeared in the edition of the collection of Nawddir
Diuhd', of the other 241 anecdotes of this latter
collection (which he had not immediately eliminated
on account of their manifestly recent insertion), he
counted 217 for which he could discover no early evidence, 17 in which Timur Lang (8th/i4th century)
appeared, and finally 7 which contained Turkish
words. From these figures, which are by no means
final, two provisional conclusions may be drawn: the
first, that the proportion of anecdotes attested at an
early date is comparatively considerable (40%), and
the second, that the additions of undoubted Turkish
origin are rather few (6%). These proportions are
given here only as an indication, for the published
collection which served as a basis for the calculation
is very far from containing all the stories in circulation under the name of Djuha which in fact belong
largely to the world's folk-lore. Farradj moreover
has not examined all the works, as a matter of
fact the more recent, which contain further stories
about Diuha, whether or not the name appears
therein, in particular Ibn Hidjdja (d. 837/1434),
Thamardt al-awrdk, Bulak 1300; al-Ibshihi (d. after
805/1446), Mustatraf,
Cairo n.d. ; al-Kalyubi,
Nawddir, Cairo 1302 (see O. Rescher, Die Geschichten
und Anekdoten aus Qaljubi's Nawddir, Stuttgart
1920); al-Balawi, K. Alif bd>, Cairo 1287; Nuzhat
al-udabd*, B.N. Paris MSS 6008, 6710.
The jests of Djuha are known outside the Muslim
world (see NASR AL-DIN), and on the east coast of
Africa they are attributed to Abu Nuwas [q.v.] but
the character is popular in Nubia (Djawha), in
Malta (Djahan), in Sicily and in Italy (Giufa or
Giucca) and, with greater reason, in North Africa,
where he was certainly introduced at an early period
(al-Husrl [d. 413/1022], Diamc al-Diawdhir, Cairo
I
953> 82, knows that a wit of the 3rd/9th century,
Abu 'l-cAbar, wore a ring on which was engraved
"Diuha died on [a] Wednesday"; in the nth/i7th
century Yusuf b. al-Wakll al-MIlawi wrote an Irshdd
man nahd ild nawddir Diuhd, see L. Nemoy, Ar.
MSS in the Yale Univ. Lib., New Haven 1956,
no. 1203). Some vestiges certainly remain, in Arabic
or Berber, of the primitive Arabic version, amplified
doubtless by folk-lore elements from other sources.
A. Moulie"ras (see Bibliography) has succeeded in
mustering 60 "fourberies" in Kabyle, and some of
them can be found in several studies of Berber dialectology (H. Stumme, Mdrchen der Berbern von Tamazratt, Leipzig 1900, 39-40; R. Basset, Zenatia du Mzab,
Paris 1892, 102, 109; idem, Recueil de textes . . . .
Algiers 1887, 38; idem, Manuel Kabyle, Paris
1887, 37*; B. Ben Sedira, Cours de langue kabyle,
Algiers 1887, passim; S. Biarnay, Dial, berbere des
BeVVioua du Vieil Arzeu, Algiers 1911, 130; E. Laoust,
Dial, berbere du Chenoua, Paris 1912, 185, 190). The
personality of the Berber Djuha formed the subject
of a rather detailed analysis by H. Basset, Essai sur
la litte'rature des Berberes, Algiers 1920, 170 ff.,
which for the greater part holds good for the Arab
Djuha. In dialectal Arabic, most manuals reproduce
some anecdotes (see especially F. Mornand, La vie
arabe, Paris 1856, 115-24; F. Pharaon, Spahis et
Turcos, Paris 1864, 174-210; Abderrahman Mohammed, Enseignement de Varabe parU. . ., Algiers 2i9i3,
1-28; Allaoua ben Yahia, Recueil de themes et versionst
Mostaganem 1890, 1-66, passim; L. Machuel, Mtthode
pour T^tude de Varabe partt, Algiers 5i9oo, 210 ff;.


references in H. Pérès, L'arabe dialectal algérien et saharien, bibliographic . . ., Algiers 1958, 111). For Morocco, there is a series in G. S. Colin, Chrestomathie marocaine, Paris 1935, 87-114, and Recueil de textes en marocain, Paris 1933-35. The Moroccans claim that the authentic Djiha (Zha) was originally from Fas, where a road bears his name (L. Brunot, Textes arabes de Rabat, Paris 1931, 118); as opposed to this Zha 'l-Fasi, malicious and humorous, there are some secondary characters, also called Zha, but who symbolize the gullible provincial. The Moroccans make a sharp distinction between their national and multi-form Zha and the "Egyptian" Djiha (Goba), confused in the printed collection with Nasr al-Din.

The Goha who was the hero of a tale by A. Adès and A. Josipovici, Le livre de Goha le simple, Paris n.d. [ca. 1916] has just (1959) made his appearance in the cinema in a film in two versions, Arabic and French, based on the above-mentioned novel and entitled Goha (although pronounced Zha by the Tunisian actors).

There the popular figure of Djiha can hardly be rediscovered. Of him al-Suyuti (in Kdmus) said: "No-one should laugh at him on hearing of the amusing stories told against him; on the contrary it is fitting that everyone should ask God to allow him to profit from the boraqah of Djiha [as a tábî’]; he was a little ingenuous, simple and sometimes clumsy, but in his expediences, capable, through his knack of doing the right thing, of extricating himself from the most delicate situations, he reminds us less of Gribouille than of Panurge and, to all the professional humorists (see F. Rosenthal, who are now forgotten; that it has gathered round his name of Djiha from among so many figures who were its the heroes, and that it has preferred him to all the professional humorists (see F. Rosenthal, Humour in early Islam, Leiden 1956) who flourished in the 2nd/8th and 3rd/9th centuries and vied with them in inventing droll stories [see NADIRA].

Bibliography: The first Arab edition of the Naswâd was followed in 1299/1883 by the Naswâd Djiha, then by the Kissât Djiha, Beirut 1890, and by a series of popular editions in booklet form. A translation of the Turkish collection was elaborated by Hikmat Şarîf al-Ta’arabulusî who published it under the title Naswâd Djiha al-kubrâ, Cairo n.d.; also to be noted are Hasan Huşni Ahmad, Djiha, ta’rîkhî, naswâdîn, bâsîcî, mimârî, fâjlâ, fitârî, Cairo 1950; ‘Âta’ Allah Tarîzî Fasga, Djiha al-kubrâ, in al-Rízâla, no. 993 (4 July, 1958). R. Basset has explained his thesis in an introduction to A. Moulières, Les fourberies de Si Diêk’a, Paris 1892, 1-79 and 183-7, which comprises a comparative and abundantly annotated table of the three versions, Turkish, Arabic and Berber; there are also some studies by the same author, published in the Revue des traditions populaires, as well as 1951, Contes, récits populaires, anecdotes, Djiha (Goba), pasîm, where some stories are translated. For

translations, see Galland, Les paroles remarquables, les bons mots et les maximes des Orientaux, Paris 1964, the works cited by R. Basset, in Fourberies, 12, and especially A. Wesselski, Der Hödscha Nasreddin, Weimar 1912, 2 vols. and T. García-Figuera, Cuentos de Jêhâ, . . ., Jerez 1934. —see also the Bibliography of the article NASR AL-DIN. (CH. PELLAT)

DJIHAYNA [see Supplement].

DJIŁAMARG [see GÖLEMREK].

AL-DJULANDÀ (also AL-DJULUNDÀ, according to TA and al-‘ibâb) b. MAS‘ÜD b. DIJAFAR b. AL-DJULANDÀ was the chief of the Ibâdî Azd in ‘Umân. During the caliphate of the Umayyad Marwân II al-Djulandà supported the claims of ‘Abd Allâh b. Yahyâ, known as Ta’lîb al-‘Askâr, who was defeated and killed in 139/752. When the ‘Abbâsîs came to power the Ibâdîs tried to assert their independence in ‘Umân and elected al-Djulandà as their first imâm, but in the year 134/752 al-Saffâh sent an expedition under Kházîm b. Khuzaym al-Tamîmi against the Khâridjîs in the ‘Umân region. He first drove the Suîfîs out of Djizlrat Ibn Kâwân (Kîshm [q.]); they took refuge in ‘Umân which was routed by al-Djulanda, so that when Kházîm crossed to ‘Umân he had only the Ibâdîs to subdue. They refused to pay homage to al-Saffâh and resisted successfully until Kházîm adopted the stratagem of setting fire to their huts, thus causing them to abandon their positions and rush to save their women and children. In their panic they were cut down with an estimated loss of 10,000 men, including al-Djulandà.

DIJALFA [i] [see Supplement]. (ii) [see ISPÂHÂN].

DIJULUS [see KHLAPA, SULTân, TÂRÎD-I SAYF, TA’RÎH].

DIJUMÂ (Yaum al-), the weekly day of communal worship in Islam. The only reference to it in the Kur‘ân, LXII, 9-11, clearly indicates that the term is pre-Islamic, for v. 9 says: "When you are called to prayer on the day of the assembly", and not "to the Prayer of the Assembly". The decisive proof for the correctness of this interpretation is the fact that Ibn Ubayy read yaum al-‘arâbî al-kubrâ for yaum al-‘umma, the former being another pre-Islamic name for Friday, meaning eve of the Sabbath, cf. A. Jeffery, Text of the Qur‘ân, 1937, 170; R. Blachère, Le Coran, 1950, 825.

The expression yaum al-‘âjumâ’a, “the day when people come together”, an exact equivalent of Hebrew (and Aramaic) yôm hak-kenêsâ, designated the market day, which was held in the oasis of al-Madinah on Friday, “when the Jews bought their provisions for the Sabbath”, cf. Kâshânî, Badâtî al-‘ânâhâ, Cairo 1327/8, i, 268 and Ibn Sa‘îd iii, i, 83, where tâjîh (tâjîhâ) is to be read for ydhîr, as in Kâshânî. It is natural that the day preceding the weekly holiday of the Jews should have been chosen as the market day in a place like Medina, which had a large Jewish population. Similarly, in Islam, Thursday served as a weekly market day all over Arabia, cf. H. St. J. Philby, Arab travesties, Edinburgh, 1935, 25, 120, 235, 350, 5-6, 185-7, 357-9. This market day is well attested in pre-Islamic Jewish literature.
According to the unanimous testimony of the ancient Muslim sources, no Friday service was held in Mecca, cf., e.g., al-Ṭabarî, i, 1256. However, even before Muhammad arrived in Medina, the Muslims convened there for public worship, but it was Muhammad who ordered that it should be observed regularly on "the day when the Jews prepared for their Sabbath", cf. Ibn Sa'd, quoted above, and parallel sources. The Jewish and Christian institutions of a weekly day of public worship might have served as an example in general, as suggested by al-Rastabâlî, ii, 176. However, the reference to the Jews in the ancient account of the inauguration of the Friday service betrays no particular dependence on Judaism, nor a polemical tendency against the older religions—two assumptions in vogue in modern research on the subject, cf. D. S. Margoliouth, Mohammed, 1905, 258-9; M. Gaudfroy-Demobynes, Mahomet 1957, 522, and the works of Wensinck, Buhl and Watt quoted in the bibliography. It was Muhammad's practical wisdom, which decided for Friday, as in any case on that day the people of the widely dispersed oasis dwellings of Medina gathered regularly for their weekly market.

This origin of the Friday service explains one of its most puzzling aspects: It is held at noon, a very inconvenient time in a hot climate. The market is dissolved early in the afternoon, see, for Arabia, e.g., Philby, Arabian Highlands, 234. In classical times, ṣaẘaṣa dālāwats, the breaking up of the market, was a term designating the early afternoon, Liddell and Scott s.v. Thus noon was the reasonable time for the public prayer.

The admonition of the Kur'ān, not to leave the prayer and to run after business and amusement, LXII, 24, is to be understood against this background. The people of Medina were farmers, not business men; but Friday was their market day, on which also, as everywhere at fairs, amusements were provided.

The main feature of the Friday service is the khutba [q.v.], a sermon, the preacher of which holds in his hand a rod or sword or lance. These were originally, as C. H. Becker has pointed out, the insignia of the pre-Islamic Jews. Market days provide the community with an opportunity for the people gathered there to settle their law suits. Philby describes the sitting of the judges on the weekly markets and the same custom prevailed in the Greek world and on the yom hak-kenisa of the ancient Jews. The ancient epiphany yaum al-harba "the Day of the Lance", see TA, i, 206, s.v. ḥrb, may have had its origin in this aspect of the yaum al-djum'a. However, the biographies of the Prophet do not seem to stress that he preferred Friday over other days for sitting as a judge.

From its very inception the Friday service had a political connotation. In early Islam it was a proof that the participants had joined the Muslim community; later on, it implied a manifestation of allegiance to the caliph or governor who conducted the service, or whose name was mentioned in the sermon. This religious-political background explains why attendance at the Friday service—as opposed to the daily prayer—is a duty incumbent on all male, adult, free, Muslim good men; why, according to the Shāffis and many others, it should, if feasible, be held only in one mosque (the ḍjum'ā) in each town; and why it required a minimum attendance of 40 according to the Shāffis, or at least a sizeable number according to others.

The fully developed Friday ceremonial consists of an aṣkān, which is proclaimed inside the mosque, a khutba, which follows two sections, during which the preacher is standing up, interrupted by an interval, during which he is required to sit down, and a salāt, consisting of two rak'ās, which follows the sermon. Usually, a salāt of two rak'ās is performed also before the khutba. According to C. H. Becker, some of these features follow the pattern of the mass in the ancient Oriental churches.

The yaum al-djum'a is not a day of rest. According to Mâlik, the aṣkāb did not disapprove of the practice of some Muslims who refrained from doing work on Friday in imitation of the Jewish and Christian weekly holidays (al-Tartûshî, K. al-Hawâdîthî, Tunis 1959, 133). In general, the Sabbath institution is foreign to Islam (for a socio-economic explanation of this difference between Islam and the older religions cf. S. D. Goitein, Jews in the Arab World, New York 1955, 39-40). Still we have reports about government offices and schools being closed on Fridays in 'Abbâsîd times, and a query addressed to Maimonides around 1200 speaks about Jewish and Muslim partners in a jewellery workshop, who replaced one another on Fridays and Saturdays (cf. Mosâhe ben Maimon, Responsa, Jerusalem 1934, 62). In modern times most Muslim states have made Friday an official day of rest. Turkey has chosen Sunday, while in Pakistan Friday is a half-holiday, Sunday a full day of rest.

As a holiday, Friday is honoured by special food—already referred to in the Ḥadîth—and better clothing. The night preceding it is set aside for the fulfilment of matrimonial duties, to be followed on Friday morning by a bath, as well as perfuming. The Sabbath should be a foretaste of the world to come, where the righteous are granted the beatific vision of God. This idea, prevailing in ancient Judaism, was enormously expanded—or perhaps developed independently—by Islamic mysticism and religious folklore. In Heaven, Friday is called yaum al-mazîd, the day of Allah's special bounty (cf. Sûra L, 35). On it, Allah sends to each of the pious Muslims in Paradise an apple. When they take the apple in their hands, it splits in two, and out steps a beautiful maid with a sealed letter containing a personal invitation from Allah. Soon the general move of those who are thus invited begins. The men on horseback, the women in littles, the men led by Muhammad, who is accompanied by Adam, Moses and Jesus, the women led by Fâṭima and other women saints, all move towards the Holy Enclosure, where a gorgeous meal, described with glowing details, awaits them. At its conclusion the pious call on Allah asking Him to show them His face. Allah lifts His veil and reveals Himself to them (cf. al-Ṭabarî, Tafsîr, 1326, xxvi, 108; Abû Tâlib al-Makki, Kûl al-kulâb, i, 72; Abu 'l-Layth al-Samârâkî, Kurrât al-'uyûn, 130-1 and the extensive literature quoted in C. D. Goldin, Beholding God on Friday, in IC, xxvi, 1960, pp. 63-8).

Bibliography: in addition to that indicated in the article: The chapters on Dju'mâ in the collections of Ḥadîth and Fikî: Dimîşghi, Rahmat al-umma fi-khâlîlî al-umma, Bulûk 1930, 29 ff.; C. H. Becker, Zur Geschichte des islamischen Kultus in Islamstudien, Leipzig 1923, i, 472-500; Iden, Die Kanzel im Kultus des alten Islam in Nildelta-Festschrift, 1906, i, 331-51; now in Islamstudien, i, 450-71; I.
The modern word dümhüriyya—which is simply dümhür with an abstract ending—was coined, like many other Islamic neologisms, in Turkey, the first Islamic state to encounter the ideas, institutions, and problems of the modern world, and to seek and find new terms to denote them. It was at first used as an abstract noun denoting a principle or form of government, and meaning republicanism rather than republic, the usual term for which was still dümhür (for see for example ‘Atif Efendi’s memorandum of 1798, in Djewdet, Ta’rikh, vi, 395, speaking of ‘equality and republicanism’—mussawat wa-dümhüriyyet; the documents on the Septinsular republic (Jijes’-i Seb’a-i Müjdems’a Dümhür) of 1799 published by I. H. Uzunçarsılı in Belleten, i, 1937, 633—dümhüriyyet veğildikle iditme); the dispatches of Halet Efendi from Paris to E. Z. Karal, Halaft Efendimn Paris Büyük Elciligi (1802-06), Istanbul 1940, 35; cf. ‘Asım, Ta’rîkh, i, 61-2, 78-9, and the Turkish translation of Botta’s Storia d’Italia, Cairo 1249/1834, repr. Istanbul 1293/1876, passim. Şahîç Rûf‘a Râfî—Subh, ii, vii, 46-8. Turkish used dümhûr. Perhaps this was the word chosen by the dragomans of the Porte as equivalent, for official usage, to the Latin res publica. Thus, Venedik Dümhûru served both for democracy in both senses. From Turkey the term spread to the Arabs, Persians, Indians, and other peoples, and was used in the new political literature inspired by western liberal and constitutional ideas. In the 19th century republic and democracy were still regarded as broadly synonymous terms, and the same words were often used for both. It is instructive to trace the renderings of the terms democracy and republic in the 19th century dictionaries from English or French into Arabic, Turkish etc. Bocthor (1828) translates the two terms by Khâmad al-dümhûr bi-l’-hukâm and dümhûr or masyahyâ; Handjerî (1840) by hukâm al-dümhûr al-nîs [sic] and dümhûr; Redhouse (1860) translates democracy as dümhûr or dümhûriyyet ‘âsîla, republic as dümhûr, and republicanism as dümhûriyyet. Zenker (1866) and Smi Frasheri (1873) already identify dümhûriyyet with republic. In Urdu the same word, with a minor variation, has served both for democracy (dümhûriyyat) and republic (dümhûriyya).

Republican ideas are rarely expressed in the writings of the 19th century Muslim liberals, even the most radical of whom seem to have thought in terms of a constitutional monarchy rather than a republic. Even where the terms dümhûr and dümhûriyya do occur, they often connote popular and representative rather than republican govern-
ment (see for example the instructive comments of 'Ali Su'ud in 1876 on the 'true meaning' of djumhûrîya, cited in M. C. Kuntay, Cumhuriyet Halk Partisi, Ankara 1957, 32 ff.; cf. Akif Al'î, Al-fikr al-'arabi al-hadîth, Beirut 1943, 94). During the 20th century, however, republicanism developed rapidly. The first republic to be established was in the Muslim territories of the Russian Empire, when the temporary relaxation of pressure from the centre after the revolutions of 1917 allowed an interval of local experimentation. In May 1918, after the dissolution of the short-lived Transcaucasian Federation, the Ağharbâyânjân members of the former Transcaucasian parliament, together with the Muslim National Council, declared Ağharbâyânjân an independent republic—the first Muslim republic in modern times. In April 1920 it was conquered by the Red Army, and a Soviet Republic formed. The same pattern was followed by the Bashkirs and other Turkic peoples of the Russian Empire, who set up their own national republics, all of which were in due course taken over and reconstituted by the Communists, and incorporated, in one form or another, in the U.S.S.R.

The first Muslim republic to be established outside the Russian Empire seems to have been the Tripolitanian Republic, proclaimed in November 1918 by Sulaymân Paşa al-Bûrûnî [i.e. documents in 'A. K. Ghatrâ'îa, Dirâ'si fi ta'rikh 'Irîkîya al-'Arâbîyya, Damascus 1960, 105 ff.], and later incorporated in the Italian colony of Libya. The first independent republic to remain both independent and a republic was that of Turkey, proclaimed on 29 October 1923 (for texts and debates see A. S. Gözûbûyîk and S. Kili, Türk Anayasa metinleri, Ankara 1957, 95 f.; K. Arıburnu, Millî Mücadele ve inkişafîlarla ilgili kanunlar, i, Ankara 1957, 32 ff.; cf. E. Smith, Debates on the Turkish constitution of 1924, in Ankara Univ. Siyasat Bilg. Fak. Derg., xiii (1958), 821-23). In Syria-Lebanon republican ideas were current in some circles at an earlier date, and the forms of government set up by the French as mandatorial power were generally republican in tendency. The republics were not, however, formally constituted until some years later; Greater Lebanon was proclaimed a republic on 23 May 1926, Syria on 22 May 1930.

The ending of West European colonial rule in Islamic lands under the second World War brought several new republics into being. The republic of Indonesia was proclaimed in August 1945; Pakistan, independent since 1947, introduced a new theme by declaring an 'Islamic Republic' in November 1953. In Africa, the Sudan became a republic on attaining independence in January 1956; Tunisia, already independent, abolished the monarchy and proclaimed a republic in May 1959. Among the older Arab states in the Middle East two new republics were established after the revolutionary overthrow of the existing monarchical regimes—in Egypt in June 1953, in 'Irâk in July 1958. A union of Egypt and Syria, called the United Arab Republic (al-Djumhuriyya al-'Arabîyya al-Mutâhâdâ), was formed in February 1958 and dissolved in September 1961. The name United Arab Republic has been retained by Egypt.

An anti-monarchist revolution began in the Yemen in September 1962. At the present time the majority of Muslim states are called republics, though the common designation covers a wide variety of political realities.

Djumhuriyyet Khalk Fırkası (modern Turkish Cumhuriyet Halk Partisi, Republican People's Party), the oldest political party in the Turkish Republic, was organized by Mustafa Kemal [Atatürk] in Ankara on 11 September 1939/1923. It was successor to the Society for the Defence of Rights of Anatolia and Rumelia (Anadolu ve Rumeli Mîdûja'a-i i-Hukuk Djumhûrîyyetî), the organization formed by Kemal in 1919 as the political instrument to fight the War of Independence. The party's original name was Khalk Fırkası. On 10 November 1940/1924 the name was changed to Djumhuriyyet Khalk Fırkası, and at the 4th National Congress in 1935, in connexion with the language modernization programme, became the Cumhuriyet Halk Partisi [CHP].

Few exact membership figures for the party are available. Membership in 1948 was estimated at 1,898,000, or about 10% of the population.

The party is organized vertically beginning with the branch (ocak) in villages, localities and subdivisions of towns and cities. The number of these local branches was estimated to be about 23,000. The organization continues at the county (mahâye), district (kaza), and province (mülûkî) levels, and culminates in the national organization with head-quarters in Ankara. The party is headed by a General Chairman (Genel Baskan), a post occupied from 1923 to 1938 by Atatürk, and since that time by İsmet İnönü. In 1927 Atatürk was made "unchanging" (değişmez) General Chairman, and after his death the Special National Congress of 1939 proclaimed him "eternal" (ebedi) General Chairman. Most of the day-to-day work of the party is directed by the General Secretary. General Secretaries have included Recep Peker (1923-5 and 1931-6); Sükri Kaya (1936-8); Refik Saydam (1938-9); Dr. Filikr Tuzer (1939-42); Memduh Şevket Esenadal (1942-5); Nafl Atuf Kansu (1945-7); Tevfik Fikret Silay (1947-50); Kasim Gülek (1950-9); Ismail Rüstü Aksal (1959-62); and Kemal Sait (1962—). The National Congress meets periodically to make general policy and elect a 40-member Executive Committee. Fifteen regular Congresses were held between 1919 and 1961. The Sivas Congress of the Defence of Rights Society in 1919 is generally called the first Congress of the party. In addition there were special Congresses in 1939 and 1946. The 2nd National Congress in 1927 was the occasion of Atatürk's Six-Day Speech (Buyûk Nutuk).

Party organization has vacillated from time to time between tendencies toward more or less centralization. In the 1920's the national organization controlled its branches tightly through a network of Inspectors and sub-Inspectors. In 1930 maximum authority and responsibility were given to local and provincial party officials. The period of greatest centralization was between 1936 and 1939 when the Interior Minister was concurrently CHP General Secretary, and governors of the provinces were also
From 1923 to 1946 the CHP was the sole party in the Grand National Assembly, except for two occasions when opposition was permitted but then eliminated after short periods. The opposition were the Republican Progressive Party (Terakkiperver Düşünürler Vakfı) of 1924, composed of a group of constitutional conservatives who split off from the CHP when Atatürk began his personal direction and domination. The Progressive Party was closed by the government in 1925 in reaction to a resurgence of conservative sentiment in the country. In 1930 another attempt at opposition took place when Atatürk persuaded several close friends to form the Free Party (Serbest Fırka), but this party also was dissolved after three months when it became the rallying ground for counter-revolutionary groups. Neither of these parties contested a general election. After the failure of the Free Party Atatürk introduced several "independent deputies" into the 1931 and 1935 Assemblies. They were to criticize and to be free of party discipline, but not to organize as an opposition or oppose basic aspects of the CHP program. By 1939, these independents were limited to a token representation of non-Muslim minorities.

In the 1939 party Congress decided on the formation of an Independent Group of 21 members selected from among the already-elected CHP deputies. In the 7th Assembly in 1943 the size of the Independent Group was increased to 25. The Independent Group was abolished by the Special National Congress of 1946 when it was decided to permit opposition parties. Following the 1946 election a group of 35 young CHP deputies (the Otubâciler) rebelled against the policies of the Prime Minister Recep Peker, but did not leave the party. In 1945 opposition parties were again allowed, and four CHP deputies, Celal Bayar, Adnan Menderes, Refik Koraltan and Fuat Koprulu formed the Demokrat Parti (q.v.). In 1946 an election was held before the Democrats had time to organize in many provinces, and the CHP retained a heavy majority. In 1950, however, the Democratic Party won a majority, and the CHP went into opposition. In the 1954 election the CHP strength was reduced to 21, but in 1957 it again increased to 176. Following the overthrow of the Menderes government by the army in 1960, three opposition parties arose to compete with the CHP in the 1961 election, in which the CHP received 36.7% of the vote and returned 173 members to the 450-man Assembly, and to the newly-created 150-man Senate of the Republic. The CHP leader İsmet İnönü was appointed to head a coalition cabinet. The CHP's Assembly strength after each election since 1923 has been as follows:

The Nine Principles (Dokus Umde) proclaimed by the Defence of Rights Society in April 1923 were adopted by the CHP that September as its first programme. Its points proclaimed that sovereignty belongs unconditionally to the nation, that full authority is granted to the Grand National Assembly, and outlined political, social, and economic reforms to be undertaken. When Atatürk brought into the open his plans for rapid and radical transformation of the Turkish nation, the programme was expanded to include the principles which in 1931 became the Six Arrows (Altı Ok), Republicanism, Nationalism, Secularism (Lîdik), Populism (Halkevi), Etatism (Destetçülük), and Revolutionism (İhâlîdestâlûlık).

The CHP has published the proceedings of most of its Congresses, as well as numerous reports of programmes and activities. In the 1930's the Halkevi published a regular monthly magazine Ulku, and local Halkevi publications about the CHP. The central office today includes a Research Bureau which publishes analyses of political, social and economic problems. The party has published...
its own daily newspaper in Ankara since 1920 under the name "Hakimiyyet-i Milliyye" ("National Sovereignty"), and later as Ulus ("The Nation").

The modern Turkey, under the name of Turkey, was founded in 1923 by Mustafa Kemal Atatürk. Atatürk, who was the first president of the Republic of Turkey, established a new political system in Turkey and worked to modernize the country. He introduced many reforms, including educational and cultural changes, and paved the way for Turkey's transition from a traditional Ottoman society to a modern, secular nation.

The growing influence of the British in the internal affairs of Turkey is also evident in the document. The East India Company entered into an engagement with the rulers of Turkey to acquire the port of Veraval, 300 nautical miles from Karachi, which witnessed the murder of the Dlwan Amar-dji, who was thereafter turned out by the victorious armies of Abd al-Rahim Khan-i-Khâman (q.v.). As a part of the sâha of Gujârat it was conquered and annexed to the Mughal empire by the victorious armies of Abd al-Rahîm Khan-i-Khâmain (q.v.).

The sacred temple of Somnath, sacked and destroyed by Sultan Ghazâna in 416/1025, continues to be called Djinâgâh while the new town lower down was named Mustâfâbad, although this name was never popularly adopted.

The city was renamed Mustafabad and Sayyids, 'ulamâ', kâtibs and other notables mainly from Afghân stock, whose ancestors had migrated from the Kâltâ-Kandahâr region to the plains of Hindustân in search of employment during the beginning of Mughal rule, taking advantage of the enfeeblement of the central authority, expelled the local fawdîdr Mir Dûst Allî and founded his independent dynasty in 1150/1737-8. A shrewd military commander, he successfully kept at bay the marauding bands of the Mârâthâs, who in the glow of easy victories wanted to overrun the whole of Kâthiawâr. During his rule of 20 years, marred by minor clashes with the Mârâthâs, he consolidated his position and firmly established his rule.

On his death in 1727-28 he was succeeded by his son, Muhammad Mâhâbat Khan I, whose very first year of rule was marred by an abortive dynastic conspiracy to depose him. Afâ'is rule of 12 years he died in 1184/1770 and was succeeded by his minor son, Muhammad Hâmid Khan, all other rival claimants having fully recognized the title of the Shir Khan family to the rulership of the new principality.

An otherwise inconspicuous rule of 27 years, which witnessed the murder of the Dîwân Amaar-djî father of Ranîro-djî (see Bibl.), he died in 1226/1811. The East India Company entered into an engagement with the ruler of Djinâgâh for the first time in 1222/1807. A year earlier, a settlement had been arrived at between Djinâgâh and the vassal states of Manâwâdâr and Mangrol and other tâlûkas, recognizing the overlordship of Djinâgâh, regarding the amounts of zorâlbî (tribute exacted by force), a relic of Muslim supremacy, due from the feudatory states etc., with the active intervention of the British Resident at Baroda. This incident, small in itself, throws ample light on the growing influence of the British in the internal affairs of even as
remote a part of the country as Kathiyawaf, long before the final eclipse of the Mughal rule in 1857. In 1821 the ruler of Djügär was recognized as the paramountcy of the East India Company, who undertook to collect türkali on behalf of the ruler and pay it into his treasury. He died in 1840 and was succeeded by a minor son.

Among the later rulers, Muhammad Räsül Khān (1822-1911) deserves special mention as a progressive and enlightened chief. It was during his rule that a college, a library and museum, a modern hospital a water-works and an orphanage were established. Steps were also taken for the protection and preservation of the historic edicts of Ašoka and the temple of Somnath was repaired at considerable expense to the State. On his death in 1911, his son Muhammad Mahābat Khān being a minor, the administration of the State was taken over by the Government of India. On his attaining the age of majority the prince, the ninth in succession and the last of the line of descent from Shaykh Safī al-Dīn Ishāk, the founder of the Safawid tārika, succeeded his father Ibrrāhīm as head of the Safawid order at Ardabīl in 851/1447-8; the date of his birth is not known. Djünayd for the first time organized the Safawid murids on a military footing and, unlike his predecessors, clearly aimed at temporal power as well as religious authority. His political ambitions at once brought him into conflict with Ibn Saḥaḥ, the Kara-Koyunlu ruler of Ardabīl, which figures on the agenda of the Security Council of the United Nations. The chief city of the State, Djünagafh, is one of the most picturesque towns in India. Its ancient citadel, the Īpārkōl, is one of the strongest mountain fastnesses in the sub-continent. It has two large-size cannons dating back to the times of the Turkish Sultan Sulaymān the Magnificent, brought to Djünagafh by gunners of foreign origin who were in the employ of the ruler. The town has a number of stately buildings, including the mausolea of the former rulers, their wives and the Minister Shaykh Bahāʾ al-Dīn, which are fine specimens of a style of architecture similar to that of the Deccan, the minaret with an exterior winding stair-case, after the style of the minaret of the mosque of Ibn Tūlūn, found nowhere else in the subcontinent.

Bibliography: Ranbēj-i Amar dāj-i, Tāriḵ-i Sāraḥ or Wahbi-i Sāraḥ, Persian text still in manuscript, Eng. transl. Bombay 1882 (one of the earliest histories of Djünagafh by a native of the State, who like his father and brother was Djāwān of Djünagafh. Many statements of the author are, however, not free from bias, as he suspected that in the murder of his father Djāwar-Dāj-i the ruler of the State was indirectly involved. According to modern manuscript sources listed in W. Hinz, Die Aufstiege zum Nationalstaat im fünfzehnten Jahrhundert, Berlin and Leipzig 1936, which contains the best and fullest account of Djünayd's life. For a discussion of the question whether Djünayd was the first Safawī shāykh to adopt the title sultan, see R. M. Savory, The development of the early Safawī state under Ismaʿīl and Tahmāsp, unpublished University of London thesis, 1958, 54-5.

(D. A. Bazmee Ansari)
Djunayd, last of the amirs of the family of the Aydin-oghlu [q.v.]. Djunayd who is given in the Ottoman sources the surname of Izmir-oghlu, succeeded for nearly a quarter of a century in prolonging the existence of the Aydin amirate through intrigues as clever as they were bold and by turning to account the dynastic wars between the sons of Bâyazid I. The recent researches by Himmet Akin, whose efforts were directed mainly towards documents in Turkish archives, have helped to enrich the insufficient information from sources, and to shed light on the original of this figure who has been unjustly called an adventurer. The son of İbrāhīm Bahādūr, Amir of Bodemaya, and grandson of Mehmed Beg, founder of the Aydin amirate, Djunayd appears in history after the departure from Anatolia of Timūr-Lang. In 804/1402 Timūr had restored the Aydin amirate annexed in 792/1390 by Bayezyd I, and returned it to the sons of ʻĪsā b. Mehemmed, Müsā, then Ummur II. Djunayd and his brother Hasan Ağha, who had been the kara-subاشिय (the upper fortress of İzmir (the fortress of the port, occupied since 744/1344 by the Knights of Rhodes, had been retaken in 804/1402 by Timūr) during Ottoman rule, contended for power with their cousins and obtained respectively İzmir and Ayasoluk and the province of Aydin. After 805/1404 Ummur II sought the aid of his kinsman Mentegheoghlu İlyās Beg, who helped him to reconquer Ayasoluk and imprisoned Hasan Ağha in Marmaris. Djunayd succeeded in arranging the escape of his brother who was brought to İzmir by boat, and then, thanks to the intervention of the former governor of the province of Aydin, Süleyman Celebi, who was proclaimed Sultan at Edirne he regained Ayasoluk and made up in spades the allies that were defeated by Mehmed; ʻĪsā fled, while Djunayd asked for pardon and safeguarded his authority by submitting to the victor. The following year Süleyman led a campaign in Anatolia; Djunayd, allied with the Amirs of Karaman and of Germiyān, made preparations for resistance; but, fearing betrayal by these allies, they deserted their side to ask pardon of the sultan; Süleyman, who now mistrusted them, took him into Rumelia and made governor of Ochrida. In 814/1414, however, Süleyman was killed in fighting his brother Müsā, and Djunayd profited from the troubles of the period and returned to İzmir, expelled the governor of Ayasoluk, appointed by Süleyman and reconquered his former amirate. But when Mehmed I had triumphed over Müsā and consolidated his power in Rumelia, he turned against Djunayd and took the fortresses of Kyma, Kayadik and Nif; then he besieged İzmir where the population welcomed him with open arms. But not content with the region of İzmir, he expelled from Ayasoluk the son of Ummur II, Mustafā, who was subject to the Ottomans, and gradually reconquered the former amirate of Aydın. In 827/1424 Murād II turned against Djunayd; the Sultan who blockaded the town. But Djunayd did not stop raiding the Ottoman territories, and seized the title of the new governor. Murād II sent against him a new army under the command of the son of Timurtash, Oruç, beşler-beş of Anatolia; the region of İzmir was conquered, and Djunayd had to take refuge in the fortress of İpsili, situated on the coast opposite Samos; he put to death his prisoner, the sister of Yakhshi. From İpsili, Djunayd sent a petition to Venice, asking help for himself and for the son of Mustafā, brother of the Sultan Mehmed, who did not reply. Djunayd’s army, under the command of his son Kurt Hasan, was defeated in the plain of Ak Hisar (Thyatira), and Kurt Hasan was taken prisoner. On the other side, with the help of some Genoese from Phocea, İpsili was attacked from the sea. Blockaded on two sides, Djunayd had to surrender; but although he had obtained a safeguard for his life, Yakhshi, to avenge his sister, put him to death, as well as Kurt Hasan.
and all the other members of his family. Such was the end of the Aydınlıoğulları.

**AL-DJUNAYD.** **ABU L-KÂSIM B. MUHAMMAD B. AL-DJUNAYD AL-KHAZZAZ AL-KAWARIRI AL-NIHAWANDI,** the celebrated Sûfi, nephew and disciple of Sari al-Sakati, a native of Baghdad, studied law with Wândi, the celebrated Sufi, nephew and disciple of Al-Djunaíd al-Khazzâz al-Kawârîrî al-Nihâwândî, with whom indeed he is said to have discussed law among all the great questions relating to mysticism, Muhsâbi giving his replies extemporaneously (“Lord of the Sect”), and later writing them up in the form of books (Abû Nu‘aym, Ḥiyâyat al-auliya‘i, Leyden MS, fol. 284a). He died in 298/910. With Muhsâbi he is to be counted the greatest orthodox exponent of the “Sober” type of Sufism, and the titles which later writers bestowed on him—ṣayyid al-lâ’tîfa (“Lord of the Sect”), ta‘ās al-fîbarâ (“Peacock of the Dervishes”), šaykh al-masâdhîyih (“Director of the Directors”)—indicate in what esteem he was held.

The Fihrist (186) mentions his Rasâ‘îl, which have in large measure survived, in a unique but fragmentary MS (see Brockelmann, S I, 354-5). These consist of letters to private persons (examples are quoted by Sarrâjî, Kitâb al-luma‘, 239-43), and short tractsates on mystical themes: some of the latter are cast in the form of commentaries on Kur‘ânic passages. His style is involved to the point of obscurity, and his influence on Hallâlî [q.v.] is manifest. He mentions in one of his letters that a former communication of his had been opened and read in the caliph’s estmore (Rasâ‘îl, fol. 3a-b). Of his own mystical experience he says “This that I say concerning myself I have often written. (Rasâ‘îl, fol. 6a). His writings of al-Junayd, and the extravagances of language which on the lips of such inebriates as Abû Yazîd al-Bû’tâmî and Hallâlî alarmed and alienated the orthodox, Djunaíd by his clear perception and absolute self-control laid the foundation on which the latter systems of Sûfism were built.

**AL-DJUNAYD B. ‘ABBÂD ALLÂH, AL-MÔRÂR, one of the governors and generals of the Umayyad caliph Hishâm who in 105/724 appointed him governor of the Muslim possessions in India (Sind, and Multân in the south Pandjâb), conquered some years earlier in 924/711-3 by Muhammad b. al-Kâsim. ‘Umar II had recognized Dîshâbâ b. Dîshib, the Indian king who had embraced Islam, as sovereign of these territories. Al-Junayd evidently had doubts about this man’s loyalty for he attacked him, took him prisoner and put him to death; by subterfuge he also contrived the assassination of Ibm Dîbashb’s brother who was anxious to go to Irâk to protest against what he considered to be pernicious behaviour. Al-Junayd remained governor of Sind until 110/728-9, and during his tenure of office made several expeditions (e.g., against the king of al-Kirâdî who was compelled to flee) and occupied various towns the names of which are recorded in Arabic sources. Since the Muslim conquest of territories outside Sind only took place from the second half of the 4th/10th century, it should be noted here that from the time of al-Junayd the Muslim invasions in the south penetrated into Gujjarat, and in the east as far as the plateau of Mâlûwa in central India. Other expeditions in the north, according to Arabic sources, enabled al-Junayd to reach the country of the Ghuzz, and also a dependency of China where he captured a town and a castle.

In 110/729 al-Junayd was dismissed from his post, and after his fall a revolt compelled his successor to give up Sind. However, he had not forfeited the caliph’s esteem for he was appointed governor of Khurâsân by him in 111/729-30 (according to al-Balâdhûrî, in 112); his military skill was relied on to restore the foundations on which had become precarious through attacks by the Turks, and Ağbras b. ‘Abd Allâh al-Sulami, the former governor of the Khurâsân, was at war with them. Al-Junayd hastened to give help, joined forces with Ağbras at al-Bûkhdâr and fought a number of battles with the Turks, finally crushing them at Zarmân, not far from Samarkand. On his return to Khurâsân (where he selected his lieutenants from among the Mu‘jar), he invaded Tûkhrâristân, but was soon forced to return to Transoxiana, summoned to the aid of the prefect of Samarkand, Sawra b. Hûr al-Thanîmî, in face of the threats of the Turkish Mâhân. Al-Junayd hurriedly crossed the Oxus. From Kiss he had a choice of routes to Samarkand, either through the steppes or across the mountains; he decided to take the latter, but when he reached al-Şibîb (= Wârût), he was attacked by the people of Şugid, Şâsh and Farghânà. The battle, in which a great number of Muslims perished, has remained famous in the history of Islam under the name Wâkât al-Şibîb. However, it was not a complete disaster: al-Junayd sent a message to Sawra ordering him to leave Samarkand and come to his aid, and Sawra obeyed, although he realized the full extent of the danger to which he was exposing.
himself. As was foreseen, he was attacked by the Turks and fell in the melee; his troops were wiped out. But al-Djunayd succeeded in disengaging from the Turks and was in great danger. He organized an expedition to free it. He defeated the Turks near al-Tawâvis (Râmadân 112/730 or 113/731), and afterwards made his entry into Buğhêrâ. Transoxiana had been occupied only about twenty years earlier by Kûtayba b. Muslim, and the conquest was far from being final; the instability of the situation can be gathered from the fact that Hishâm had to send from al-Âsyr and al-Kûfâ 20,000 men who rejoined al-Djunayd on the way and were later left at Samarkand. At the beginning of the year 116/734 al-Djunayd was recalled, having incurred the caliph's displeasure by his marriage to al-Fâdîla, a daughter of the rebel Yazîd b. al-Muhâllab. He died at Marw from a severe attack of dropsy even before his successor Ǧâsim b. 'Abd Allâh al-Hîlîlî arrived in Khurâtân. The latter could persecute only al-Djunayd's relatives and employees.

The report according to which al-Djunayd, after being dismissed from the office of governor of Sind, supported the anti-Umayyad movement fostered by Kûtayba b. Muslim (al-Djunayd seems to be absurd in view of the fact that he was almost immediately appointed governor of Khurâtân, and that he even had the leaders of this movement arrested there. The information which al-Dinawârî (387 ff.) gives in this respect is suspect for it is wrong chronologically, as is also the information about the deposition of Asad b. 'Abd Allâh (337).

Al-Djunayd must have been a general of exceptional qualities, and it was probably to his merits that the Muslims were indebted for the stability of their authority in Transoxiana during a very strong Turkish counter-movement. It is more difficult to judge his qualities as an administrator since on this point we have only one detail at our disposal: al-Djunayd left in the Bayt al-mâl of Sind 18 million dirhams (1 dirham = 1/8 dirhams of fine silver; see the glossary to al-Baladhuri and Dozy, Suppl.), and his successor sent the whole sum to the caliph.

**L. VECCIA VAGLIERI**

**DJUND,** a Khurâtân word of Iranian origin denoting an armed troop. In the Umayyad period the term applies especially to military settlements and districts in which were quartered Arab soldiers who could be mobilized for seasonal campaigns or for more protracted expeditions. Quite naturally it also denotes the existence of the system or the term applied to Syrian administrative districts (Tabârî, iii, 1134) which survived until the time of the Ma'mûls, but the diwan al-djund, which can be proved to have been still in existence under al-Mutawakkîl (Ya‘qûbî, Buldân, 267, and Ya‘qûbî, Wiet, 61), administered the non-Arab contingents. (Tabârî, iii, 654, 815, 1369, 1479, 1736) while for the geographers of the 3rd/9th and 4th/10th centuries the agînîd, the equivalents of ansâr, denoted the large towns. The Umayyad organization of the djund seems to have been partly imitated in the province of Andalus. From 125/742 Arab, Syrian and Egyptian contingents received grants of land in nine districts (bâras), called mudjannada, in the Iberian peninsula [see ANDALUS, iii]. To the members of these djunds there were added, as in the East, enlisted volunteers (hâsham) who were all grouped together under the same denomination in the 4th/10th century and were distinct from the foreign mercenaries (hâsham) who gradually eliminated the old army. In Aghlabid Irîkîya the word djund, which at first denoted Arab contingents brought by the conquerors and successive governors, came ultimately to signify the personal guard, the nucleus of the new permanent army. Under the various dynasties connected with the Magrib, the term djund kept a restricted sense which is often difficult to define, rarely applying to the whole army. Similarly, with the Ma'mûls the word djund is sometimes applied to a category of soldiers in the sultan's service, but distinct from the personal guard [see HALKA].

DJUND — AL-DJURDJANI

DJUNDAYSABUR [see GOMBOHAPUR]

DJUND [see HALKA].

DJUNNAR, town in the Indian State of Bombay, 56 m. north of Poona. Its proximity to the Nana Pass made it an important trade centre linking the Deccan with the west coast. It was first mentioned by Malik al-Tujidjar in 840/1436. The district around Djunnar was one of the tarafs or provinces of the Bahman kingdom on the Deccan, during the administration of Ma'nud Gwân [q.v.]. It later formed part of the Sultanate of Ahmdnagar. In 1067/1657 the town was plundered by Shiwajid, the Marathé leader, who was born in the neighbouring hill-fort of Shiwnôr. The surrounding hills are famous for their Buddhist caves. These are described in great detail in the Gazetteer of the Bombay Presidency, xviii (Part iii), 140-231.

(C. COLLIN DAVIES)

DJUR [see FERUZABAD].

DJUR'AT, tahkalius of Kûndar Balîsh, an Urdu poet of Indian origin, whose real name was Yabûy Amân, son of Hâfiz Amân, one of whose ancestors Rây Amân, after whom a street in Old Dhiil is still known, suffered at the hands of Nâdir Shâh's troops during the sack of Dhiil in 1125/1719. The title of Amân or Man was conferred on the ancestors of Djur'at, according to Mirzâ 'Ali Lutf (Gulshan-i Hind, Hind, vii, 207, 73), by the Emperor Akbar. Born at Dhiil, Djur'at was brought up at Faydabad and later joined the service of Nawwâb Muhabbât Khân of Bareilly, a son of Hâfiz Rahmat Khân Rohilla [q.v.] at an early age. In 1215/1800 he went to Lucknow and ingratiated himself with prince Sulaymân Shukhô, a son of Shâh 'Alâm II [q.v.], titular emperor of Dhiil. The 'court' of Sulaymân Shukhô had become the refuge, after the sack of Imperial Dhiil, of great poets and writers like Mûshâfi and Insha Allah Khan [q.v.], included among his stipendiaries. Ten years later Djur'at died in that city in 1225/1810.

A pupil of Dja'far 'All Khan Hasrat, a poet of some note, he was a skilled musician and played on the guitar with dexterity. He was also a good astrologer and well-versed in social etiquette, qualities which made him extremely popular with people of high rank. On account of cataract, which afflicted him in the prime of life, he lost his eyesight; others say he feigned blindness in order to further his amours. Essentially a bon vivant, Djur'at was a lyrical and especially an erotic poet. Author of more than 100,000 lines (Ahad Dastur al-fasdhdt, Rampur 1943, 98 ff.), mostly passionate ghazals, he wrote some voluptuous mathnawis also, of which one, entitled Husna wa 'ishk, deserves mention. The well-known Urdu poet Mir [q.v.] spoke slightly of Djur'at whose compositions he described as mere bon mots, of the 'kissing and hugging type'. Mir's verdict has been characterized as wholly unjustified as he failed to appreciate the social and political conditions of Djur'at's times and the Lucknow of his days, where Mir was comparatively a stranger. It was Djur'at, who for the first time in Urdu poetry, addressed his ghazals to women, contrary to the time-honoured practice of showering praises on young, handsome boys and amrais. His divan was published in the now defunct Urdu-i Mu'âlîd (ed. Hâsalt Mohâhîl, Kanpur, October-December, 1927).

Bibliography: All the relevant hadîkhirs of Urdu poets (enumerated in Dastur al-fasdhdt, 99 n.); Muhammad Husayn 'Azâd, Abî haydî, s.v. Djur'at; Ram Babu Saksena, History of Urdu literature, Allâhâbâd 1940, 88-90; T. Graham Bailey, History of Urdu literature, London 1932, 55-6; Abu 'l-Layth Siddîq, Djur'at unka 'ahbâd aur 'iqbâliyya bâshârî, Karachi 1952 (the first critical study of Djur'at).

(A. S. BAZMEE ANSARI)

DJURAYDI, a saint whose story is said to be related by the Prophet himself and has therefore found a place in the hadith. The various versions differ in details one from another, but one motif is common to them all, that the saint is accused by a woman, who had had a child by another man, of being its father; but the child itself, on being asked by the saint, declares the real father's name and thus clears the saint from suspicion. "Djuraydî" is the Arabic reproduction of Gregorius, and one version rightly states that he lived in the prophetic period (fatra [q.v.]) between Jesus and Muhammâd. There is a similar episode in the biographies of Gregorius Thaumaturgus, and it may be assumed as probable that the story became known among Muslims through the Christian tradition until finally it was adopted in the hadith.

DJURBADHAKAN [see GULFAYMAGAN].

DJUND [see GURGAN].

AL-DJURDJANI, 'ARJ% AL-KHîR [see Supplement].

AL-DJURDJANI, 'ALL b. MUHAMMAD, called al-Sâyyîd al-Shâfî, was born in 740/1339 at Tâj'dîn near Astrâbâd; in 766/1365 he went to Harât to study under Kutb al-Din Muhammad al-Kâsî al-Tâhtânî, but the old man advised him to go to his pupil Mubârakshâh in Egypt; however he stayed in Harât and went in 770/1368 to Kârûmân where he heard Mubârakshâh and Akmal al-Din Muhammad b. Muhammâd, staying four years in Sâ'îd al-Sâ'îdâ'; he visited Constantinople in 776/1374 and then went to Shîrz where he was appointed teacher by Shâh Shujâ'î 779/1377. When Timûr captured the town, he took him to Samarkand where he had discussions with Sa'îd al-Din al-Taftazânî [q.v.]; opinions differed as to who was the victor. On Timûr's death he went back to Shîrz where he died 816/1413. The usual tales are told of his brilliance as a student. He wrote on many subjects, on grammar and logic in Persian. He belonged to an age which wrote commentaries on earlier works; as a theologian he allowed a large place to philosophy, thus half his commentary on al-Mawdûki of al-Tâjî [q.v.] is given up to it. On law, he wrote a commentary on al-Farâ'îd al-sirdâ'îyya of al-Sâjdawandî; on language, glosses on al-Mawwall a commentary on al-Taftazânî on Ta'khîs al-miftâh al-Sâkkâkî; on logic, glosses on a commentary by al-Kâzî al-Tâhtânî on al-Risâla. 
Mecca in the comparatively recent past (cf. Th. Noldeke, *Fiinfi Mo’allaqdt*, iii, 26 f.; Th. Noldeke, *ZDMG*, xi, 717; also *ZDMG*, lxx, 352; al-Hassan b. Thabit, *Chroniken der Stadt Mekka*, ed. Wüstfenfeld, i, 43 f. [= Ibn Hishām, 257]). This is further confirmed by the mention of the name of several localities in Iran.

**DJURM** (fine) (in the Ottoman Empire)

Though fines are known to the criminal law of the šarīʿa, some *jumah* admitted of monetary penalties in certain cases (e.g., Dede Efenidi, *Siyāsetname*, at end). The Ottoman *kanunnames* (*q.v.*; see also *DJAZA*), while pretending merely to apply and complete the šarīʿa, prescribed fines (*djīrma, ẓerme or ẓerme, ḥinlīk, ẓarīm̄et*) for a large number of offences. These even included crimes liable to *ḥadd* (*q.v.*), such as adultery, theft, the drinking of wine, etc. Generally fines were imposed in addition to corporal chastisement (*taẓlr*, *q.v.*), and sometimes in addition to blood-money (*diżya*), or damages (*tazmin*).

The fines of the third kinds: (a) a certain amount (one ʿākṣa, more rarely half an ʿākṣa or less) for each stroke inflicted on the offender; (b) a certain number of ʿākṣa for each ḍirham in the price of a price-controlled commodity; or (c) as usual in the *Dhi ʿl-Kadr* codes (Barkan, *Kanunlar*, 120-9) and many Ottoman provincial *kanunnames*—where no *lāzir* is mentioned, a fixed amount of money. The fines of the third group were, similarly to the poll-tax (*dziyāa*), mostly graduated in accordance with the financial circumstances of the offender—rich, medium, poor (and very poor), the ratio being 4:3:2, 8 (6):4:2:1, etc. They varied between 10 and 400 ʿākṣa, but a fifteenth century *fennān* (Anhegger-Inalok, *Kanunnames-i Sultanī, 58) and *kanunname* (*TOEM*, 1330, Suppl., 28) prescribed higher fines. In many cases non-Muslims were to pay only half the fine imposed on Muslims (*MOG*, i, 29; Barkan, 81), but this privilege was partly cancelled out by way of discrimination in the way they were depreciated. From the ioth/16th century, however, many offenders punishable with fines (and *lāzir*) were henceforth sent to the gallows or their money. In the early 12th/18th century several provincial *kanunnames* (Barkan, 333, 338, 354) abolished the fines, together with all other *risūm-ūršiyye*, as impositions contrary to the *šarīʿa*. In the first two modern Ottoman penal codes (1840, 1851) no mention is made of fines; in the latter (iii, 10) they are even expressly forbidden. The last Ottoman criminal code (1850) prescribed a great many fines (*diżyiyl-贴) naṣkā), now however in accordance with the French legal conception.

**DJURZ, DJURZAN** [see GURDASTAN].

**DJUSTANIĐS, DJUSTANĐS** [see DAYLAN].

**DJUWAYN**, name of several localities in Iran.

1. A village in Ardashir Khurra, five *farsān* from Shīrz on the road to Ardalan, usually called Djuiyamen, the modern Goyum, cf. Le Strange, 253; P. Schwartz, *Iran im Mittelalter*, 44, 173, 179 (not to be confused with Djuiyamen Abī Ṣaḥmād in the province of Dārābdīr, the modern Djuym, see Le Strange, 254; Schwartz, 102, 201).

2. Djuiyamen (also written Gūyān), a district in the Nīkpūr country, on the caravan route from Bīstām, between Dīlḡārm and Bayhak (Sabzawār). The district is next mentioned to this in Miskawayh, but later Fārīyūmād (see *J.R.A.S.*, 1902, 735) contained 189 villages according to Yāḵūt, ii, 164-6, whose
information is taken from Abu '1-Kasim al-Bayhaqi; they were all in the northern half, while the southern half was unsettled; cf. Le Strange, 392 ff. The plain of Djuwayn, enclosed on the north and south by ranges of hills, still forms a district of Sabzewar with about 65 townships, which lie along the river Djuwayn in a long series. In the middle of the valley, near the village of Azadhwur, lie the ruins of the ancient capital. The modern centre is Djugatay (Caghatay) which is situated to the south-east of it, at the foot of the hills on the south; cf. McGregor, Khorasan, ii, 145, 225; C. E. Yate, Khorasan and Sistan, 389 ff.

3. Djuwayn or Guvayn, a fortified place in Sidjistán, 3 to 5 km. north-east of Lâsh on the Farâhbrûd, appears under its modern name in ancient (see Marquart, Erdnahr, 198: Ta'arghî pôlîcî, emendation on Isidorus of Charax) and mediaeval itineraries (Istakhri, 248; Ibn Hawkal, 304). The importance of the sister towns of Lâsh and Djuwayn still rests on the fact that the roads from Kandhâr and Harât from the Afghan side, and those from Ma'hadâd, Yazd and Nasirâbâd on the Persian side, meet here. The Arab geographers say that Djuwayn was on the road from Harât to Zarandj was a Khârâzi stronghold (Mu'kaddasî, 306; Ibn Rusta, 174). It was sacked by Yakûhl, the Ghuzz leader, in 447/1055-6 (Tab., ii, 205-6); ed. Bahâr, 376 ff. Djuwayn, built on a slight elevation in the centre of a fertile plain covered with ruins, and surrounded by a quadrangular wall of clay, forms a striking contrast to the rocky stronghold of Lâsh; it appears to have considerably declined in the second half of the 19th. century. Cf. Le Strange, 341 ff.; Euan Smith in Eastern Persia, i, 319 ff.; A. C. Yate, England and Russia face to face in Asia, 99 ff.

Al-Djuwayn's researches were divided between the kalâm that Al-Djuwayn made his deepest impression on Muslim thought; and to him goes the glory of being the teacher of Abu Hâmîd al-Ghazâlî in this discipline. Unfortunately, his great work, the Shâmîl, has not been published. One manuscript (incomplete) is to be found in the National Library in Cairo (Al-kalâm, no. 1290), copied from a manuscript in the Kâhirî library; another copy, with extracts from al-Nasafi added, belonged to Dr. al-Khudayrî in Cairo. These manuscripts have been studied by G. C. Anawati (cf. Introduction à la théologie musulmane, Paris 1948, 183-5. On the other hand, the compendium K. al-’Irâdâd lâ kawdârî al-adilla fi usul al-’I’tikâd has been edited, and often studied and quoted. There are two modern editions: (1) by J.-D. Luciani, Paris 1958, with a French tr. (left unfinished by the death of the editor-translator); (2) by M. Y. Môsa and A. Abd al-Munjîm 'Abd al-Hamîd, Cairo 1950, which is the best critical edition.

Al-Djuwayn is important because he wrote in the intermediate period between the old Ashâ'irîm and the school which Ibn Khaldûn was to call "modern". This is marked by (1) a systematical enquiry, influenced—not without the introduction of new schemes—by that of the Mu’azzâm (where theories are rejected); (2) the emphasis laid, in the theory of knowledge, and with regard to the divine attributes, on the idea of "modes" (ahuîlî); thus taken over from the semi-conceptualist line initiated by the Mu’tazîlî Abu Hâshîm; (3) the importance attributed to rational methods, and the use of "reasoning by three terms" in the Aristotelian way: e.g. the proof of the existence of God, which is nevertheless a nusûlî (rather than a contingentia mundi). The Aristotelian syllogisms moreover remain affected by the inference "from two terms" (istîdîl), cf. Gardet-Anawati, Instr. à la théol. musulmane, 360-1. —The solutions to the principal problems are for the most part faultless to the Ashâ’irî tradition. Methodological trends proper to Al-Djuwayn exist, but they show themselves mainly in the presentation of the problems, the conduct of the discussions, and
the importance accorded to the channels (asbâb) by which conclusions are reached. In kaldâm as in fiqh, it was above all the question of the wâli that interested the Iâmâm al-Âlamârây.

Tornborg), x, 77 (ann. 485); Ibn Tağhrîrdî, 771; Wüstenfeld, Die Akademien der Araber, no. 38; idem, Shiâtîmîn, no. 365; Schreiner, in Gräts Monatschrift, xxv, 314 ff.; Brockelmann, i, 388.

ÂLÀD-ÂL-DIN AT-ÂL-MALIK B. MUHAMMAD (623/1226-628/1231), a Persian governor and historian, author of the Taârikh-i dijânâm-gûshây, a work which is almost our only source on the details of his life. His family belonged to Âzâd-wâr, then the chief town of Djuwaynî (q.v.), No. 2. According to Ibn al-Tîkakî (al-Fâhri, ed. Ahlwardt, 209) they claimed descent from Fâdî b. Râbî'î, the vizier of Hârûn al-Rashîd. 'Âlàd-al-Dîn’s great-grandfather, Bâhâ al-Dîn Muhammad b. 'Âlàd had waited on the Khârâzâm-Shâh Tékhî (q.v.) when in 588/1192 he passed through Âzâd-wâr on his way to attack Toghrîlî (q.v.), the last Saljuq ruler of 'Irâk-î 'Adîm. His grandfather, Shâms al-Dîn Muhammad b. Muhammad, was in the service of Sultan Muhammad Khârâzâm-Shâh (q.v.), whom he accompanied on his flight from Bâlkh to Nishâpûr. At the end of his life the Sultan appointed him Shêbîb Dîwân, a post which he continued to hold under Sultan Dijâlî al-Dîn: he died during the latter’s siege of Aklâtî, i.e., at some time between Shawwâl 626/August 1229 and Dijâmâdî i 627/April 1230. His son, Bâhâ al-Dîn, ‘Âlàd al-Dîn’s father, is first heard of ca. 630/1233-2 in Nishâpûr. Two of Dijalî al-Dîn’s officers, Yaghân-Sonkûr and Karâcâ, had been active in this area, and Cîn-Temûr, the Mongol governor of Khurâsân and Mázândarân, sent an army to dislodge them. Upon the approach of the Mongol forces Bâhâ al-Dîn together with some of the chief notables of the town fled to Tûs, where they sought refuge in a castle amidst the ruins of the city. The governor of the castle handed them over to the Mongols, by whom, however, they were kindly received: Bâhâ al-Dîn waited on a member of the conquering family, the chief notables of the town, and held the office of Shêbîb Dîwân not only under Cîn-Temûr but under his successors Körğûz and Arghûn Aka. In 633/1235-6 he accompanied Körğûz upon a mission to the Great Khan Ogedey, from whom he received a payza or “tablet of authority” and a yarîkh or rescript confirming his appointment as Shêbîb Dîwân. On several occasions he was left in absolute control of the occupied territories in Western Asia while the governor was absent in Mongolia. In 651/1253, being then in his 60th year, it was his wish to retire from the public service, but to this the Mongols would not agree, and he died during the same year in the Isfâhân region, whither he had been sent to carry out fiscal reforms.

‘Âlàd al-Dîn tells of himself that while still a youth he chose, against his father’s wishes, to take a position in the dijânâm. He twice visited Mongolia in the suite of Arghûn Aka, first in 647-91/1249-51 and then in 649-51/1252-3: upon the arrival of Hûlûgî in Khurâsân early in 654/1256, he was attached to his service and accompanied him on his campaigns against the Ismâ‘îlîs of Alamût and the Baghdâtî Caliphate. It was ‘Âlàd al-Dîn who drew up the terms of surrender of the last Ismâ‘îlî Grand Master Rûkûn al-Dîn Khur-Shâh, and it was through his initiative that the famous library of Alamût was saved from destruction. In 657/1259, a year after the capture of Baghdât, he was appointed governor of ‘Irâk-î ‘Arab and Khûzîstân, a post which he continued to hold for over 20 years, though under Abaḵa, Hûlûgî’s son and successor, he was nominally subordinate to the Mongol Sughûnchâk. During his tenure of office he did much to improve the lot of the peasantry and it was said, with some exaggeration, that he restored these provinces to greater prosperity than they had enjoyed under the Caliphate: at the expense of 10,000 dinârs of gold he caused a canal to be dug from Aûbâr on the Euphrates to Kûfâ and Nadjîf and founded 150 villages along its banks.

During the reign of Abaḵa both ‘Âlàd al-Dîn and his brother Shams al-Dîn (see below) the Sâbîb Dîwân were much exposed to hostile attacks, of which the consequences were more serious for the former than the latter. In the late autumn of 680/1281 he was arrested, at the instigation of a personal enemy, on the charge of embezzling from the Treasury the enormous sum of 2,500,000 dinârs. On 4 Ramâdân 680/17 December 1281, thanks to the intervention of certain members of the Il-Khân’s family, he was released from custody, only to be almost immediately re-arrested on a charge of maintaining a correspondence with the Mamlûk rulers of Egypt. His arrival in Hamâdân to answer this charge coincided with the Il-Khân’s death and he was retained in custody until the election of Abaḵa’s successor Tegûdîr or Ahmâd (1282-4), a convert to Islam, who at once gave orders for ‘Âlàd al-Dîn’s release and reinstatement as governor. He did not long survive his rehabilitation. Tegûdîr’s nephew, the future Il-Khân Arghûn (1284-91), arrived in Baghdât in the winter of 681/1282-3 and reviving the old charge of embezzlement began to arrest the governor’s agents and put them to the torture. News of these proceedings reaching ‘Âlàd al-Dîn in Arrân, where he then was, he had an apoplectic stroke and died on 4 Dhu ‘l-Hijâja 681/5 March 1283.

‘Âlàd al-Dîn’s references to the defects in his literary education must certainly be put down to conventional modesty; he is praised by his contemporaries as a highly cultured man and a patron of poets and scholars; and his history was held up as an unrivalled model of style. The work is divided into three main sections: I. History of the Mongols and their conquests down to the events following the death of the Great Khan Gûyûk, including the history of the descendants of Djiôtî and Câghatây; II. History of the dynasty of the Khârâzâm-Shâhs, based in part on previous works such as the Mağhûrî al-tadjârîb of Abu ‘l-Hasan Bayhâkî and the Diawâmî al-‘ulâm of Fâgîr al-Dîn al-Râzî, and a history of the Mongol governors of Khurâsân down to the year 665/1268; III. Continuation of the history of the Mongols to the overthrow of the Ismâ‘îlîs, with an account of the sect, based chiefly on works found in Alamût such as the Sargûhâsh-i Sâyîdîn; other works now lost are also quoted such as the Taârikh-i Diil wa Daylam and the Taârikh-i Sâlâmî (written for the Bûyid Fâgîr al-Dawla). The Taârikh-i dijânâm-gûshây, which has considerably influenced historical tradition in the East, is for us also a historical authority of the first rank. The author was the only Persian historian to travel to Mongolia and describe the countries of Eastern Asia at first hand; it is to his work and the Journal of William of Rubruck that we owe practically all we know of the buildings in the Mongol capital of Kara-Korum. The
accounts of Cingiz-Khan's conquests are given nowhere else in such detail; many episodes, such as the battles on the Sir-Darya above and below Otrar and the fact, pointed out long before by D'Ohsson (i, 232 ff.), that the citadel of Bukhārā according to Djuwaynī was defended by 30,000 men, all of whom were slain upon its capture, while Ibn al-Athlr (xii, 239), on the authority of an eye-witness, says the garrison consisted only of 400 horse. Again we find in Djuwaynī two versions of the struggle between the Kara-Khitay and Muhammad Khāzān-Khāzān, based apparently on different sources (written or oral). It was only by later compilers like Mirīkh and others that these contradictory accounts were woven into a uniform narrative, not, of course, in accordance with the more standards of modern criticism; European scholars, to whom such compilations were much more accessible than the original authorities, have been frequently led astray by them.

Towards the end of his life he composed in Persian (not in Arabic as stated by Quatremère and repeated by Barthold in El3) two treatises describing the misfortunes which had befallen him under Abaka, the first named Tashiyut al-dīn and the second bearing the same title: extracts from these short works have been published in the Persian introduction to Kazwinī's edition of the Ta'rīkh-i dīnān-gūzdā. Bibliography: The text of Djuwaynī's history is available in the edition of Mirza Muḥammad Kazwinī: The Ta'rīkh-i-yahūn-gūzdā of 'Alādīn 'd-Dīn 'Abd al-Malik-i-Djuwaynī, 3 vols., (GMS, Old Series, xvi, 1, 2, 3), London 1912, 1916 and 1937; and in the translation of J. A. Boyle, The history of the world-conqueror, 2 vols., Manchester 1958. On Djuwaynī as a stylist see Bahār, Sāhīb-i-Shamsā, iii, 57-100. (W. Barthold—J. A. Boyle)

Djuwaynī, Sha mans Al-Dīn Muḥammad b. Muḥammad, Persian statesman known as "Sāhīb Dīwān", brother of the historian 'Alādīn Al-Dīn Djuwaynī (difference in their respective ages unknown), was made Chief Minister in 661/1262-3, and in 676/1277 he was still working on it in 658/1260, for he refers to the state of Mā warā' al-Nahr in 658/1259-60 (Kazwinī's text, i, 75, tr. Boyle, i, 96) and also to a Georgian rising that took place in the autumn of that year (text, ii, 281; tr., ii, 525); but there are no references to subsequent events, nor indeed to the operations against the Caliphate 658/1259-60, and there are many indications that the history was left in a state of incompletion.

Like his brother, Djuwaynī patronized theology, science and art to the best of his ability, and gave a large proportion of his income to this end (Hamd Allah Mustawfi, Ta'rīkh-i guzida, i, 584). A number of learned men such as Nasīr al-Dīn Tūsī [q.v.], and theologians have dedicated their works to him or to one of his sons, and poets have composed basādas to him (e.g., Sa'dī, Ṣahābīyā). Djuwaynī himself wrote Arabic and Persian poetry with great command of language which (with reservations about Arabic: Waṣṣā'il, i, 58) was also recognized by his contemporaries (several published in the Tehran periodical Armāghān, v, 284 ff.; xiii, 379 ff.). Besides these some of his writings from government offices have been preserved in collections (munaštādī). Bibliography: M. Fuat Köprülü in IA, iii, 255-9; Spuler, Mongolen, Berlin 1955, index (here references to the original sources are also to be found). (B. Spuler)

Djuwz (pl. adizz), i) a "foot" in prosody [see 'ašrāf], (ii) a division of the Kur'ān for purposes of recitation, and its subdivisions, when it was necessary to protect them from many a despot act on the part of their heathen overlords. His fortune grew simul-
to describe the (philosophical) atom in the sense of the ultimate (substantial) part, that cannot be divided further, *al-djuz* al-wdhid alladhi Id yatadizzan* (cf. al-Djurdjani, Toeplitz, ed. Flügel, Leipzig 1845, 76); *al-djuz* al-wdhid is sometimes used. Synonymy: "elementary and indivisible matter"; *diawhar fard*; *al-gauhar al-wdhid alladhi Id yanbasim.* — For other definitions of vocabulary see *DHARRA.*

Atomistic conceptions of the world (philosophical atomism) existed very early in Islam, sometimes along heterodox lines, sometimes fully accepted by official teaching. Thus we have the atomism of Muhammad b. Zakarim al-Razi (q.v.), and of numerous trends from the ʿilm al-kalām. One of the first elaborations, as Horten has shown, was that of the Muʿtazilī Abu ʿl-Hujayl (contested by al-Nazzam and the Ismaʿili Abū Ḥātim al-Rāzī). — Al-Bākīllānī and his school inherited this atomism, modified it along Ashʿarī principles, formed from it a strict occasionalism, and organized it into a natural philosophy which has become famous. Many Ashʿarīs were faithful to it, in a rigid form in various manuals and later commentaries (al-Lakīm, al-Sanūsī of Tlemcen, al-Bāḫdārī, etc.)—sometimes in a mitigated form, e.g., al-Idjī and his commentator al-Djurdjānī (there is a similar tendency in the works of Avicenna and Fakhr al-Dīn al-Rāzī). — Al-Shahrastānī attemps to introduce an intermediate solution (see below). It would require revision. It is nevertheless an indication of the efforts of al-Idjī and al-Djurdjānī to give an account of all the theories—including the hylomorphic of the falsaṣa—in terms of atoms.

**Bibliography:** In the article. The fundamental work remains that of S. Pines, where essential references to Arabic texts and works in European languages are given. See in particular the article by O. Pretz, *Die frühislamische Tomismuslehre,* in Id., 1931, 117-30. Also Gardet-Anawati, *Introduction à la théologie musulmane,* Paris 1948, see index I, "Atomismes".

(L. Gardet)

**Djurdjānī,** Persian Gūzgān, the older name of a district in Afghanistan Turkestan between Murghāb and the Amīr Dāryā. Its boundaries were not well defined, particularly in the west, but it certainly included the country containing the modern towns of Maymana, Andkhūy, Shibargān and Sar-i Pul. Lying on the boundary between the outskirts of the Iranian highlands and the steppes of the north, Djurdjānūn probably always supported nomad tribes as it does at the present day in addition to the permanent settlements in its fertile valleys (cf. Ibn Ḥawqal, 322 ff.; Ḥādīṣī Khāṣṣa, *Dīkān-nām̄ád,* ed. 1145 A.H., 316). The principal wealth of the land lay in its flocks (camels: Ibn Ḥawqal, loc. cit.; Vāmberk, *Reise in Mittelasien,* 213; horses: Marquardt, *Erdbiographie,* 138, 147; Vāmberk, 222; sheep: Vāmberk, 213; Yate, *Northern Afghanistan,* 344; cf. ʿĪṣākhārī, 271; Ibn Ḥawqal, 322). Although the way from the highlands of Iran to Mā varḵān al-Nahr lay through Djurdjān, it was used not so much for friendly intercourse as for a military road for armies passing through it.

The district, which in the beginning of the 1st/7th century was attached to Tūkhāristān (see Marquardt, *op. cit.,* 67), was conquered on the occasion of the campaign of al-Ahnāf b. Kays in 33/653-4 by his lieutenant al-Akra. The marches suffered not only from the wars with the Turks but also from domestic differences within Islam. In the year 117/737 the Khākān was defeated by Asad b. ʿAbd Allāh al-Kāšī near the capital of Djurdjān (Shubīrkhān). In 125/743 the ʿAlīd Yahyā b. Zayd, whose tomb was revered longer afterward (cf. Wellhausen, *Arab. Reich,* 312), fell in battle here against the Umayyads. During the ʿAbāsīd period the governor's residence was in Anbār (probably the Djurdjānīn of Nāṣir-i Khurān, 2, possibly the modern Sar-i Pūl); the native ruling house of Gūzgān-Khūghā, the Afrīqūn dynasty, continued however to survive, and had its capital in Kundurm (cf. ʿĪṣākhārī, 270; Ibn Ḥawqal, 321 ff.; Yaʿqōbī, 287). Shubīrkhān occasionally appears as the political centre of Djurdjān, while Muḥammadī (297) and Yākūt (ii, 149 ff.) mention al-Yahūdiyya (= Maymana [q.v.]) as the capital. The ancient name Djurdjān appears gradually to have fallen into disuse, to survive in literature only for some time longer. The various towns in it continue to be repeatedly mentioned as the scenes of hostile
attacks; only the invasions of Cingiz Khan and Timur can be mentioned here. Nothing shows the importance of the district more clearly than the fact that a number of towns have survived all these vicissitudes until the present day.

In modern times a number of petty Uzbek Khânates (Akôe, Andîkhîy, Shîbargân, Sarî Pul, Maymana) have been established in the ancient DÏûzïdjan, but they were much harassed by raids of their more powerful neighbours such as the invasions of the Turkoman nomads. Since the time of Dïšt Muham- mad these Khânates have gradually been incorporated in Afghanistan Turkestan. Today remains a vestige of independence under Afghanistan suzerainty.

nistan, 334-52. [R. HARTMANN]

AL-DIUZDJÂNÌ, Abû 'Amr (not 'Umar as stated by Storey, i, 68) Minhâdî al-Djnî 'Ughmân b. Sâîr al-Djûzdjânî, Muhammâd al-Djûzdjânî, commonly known as Minhâdhî jirîrâdî, the premier historian of the Slave dynasty of India, was born at Frîrzûkûh [q.v.] in the royal palace in 589/1193, as, on his own showing, he was 18 years of age in 607/ 1210-1 when Malik Rûkn al-Djnî Muhammad was slain at Frîrzûkûh. His father, Sirâdî al-Djnî, a leading scholar and jurist of his day, and a courtier of Sultan Ghîyâh al-Djnî, in Dîhll, was appointed kâdî of the army stationed in India by the Ghûrî sultan Muîzîz al-Djnî Muhammad b. Sâm, also known as Shîhâb al-Djnî, in c. 582/1186. He seems to have returned to Ghazna and was subsequently summoned from Frîrzûkûh to Bîmîyân by Bahâ' al-Djnî Sâm b. Shams al-Djnî Muhammad who appointed him the kâdî and passûr of his kingdom. Being a state dignitary his father was held in great esteem by the members of the royal family. Minhâdhî al-Djnî consequently passed his childhood in the hârim of the princess Mâhî-î Mulk, a daughter of Ghîyâhât al-Djnî Muhammad b. Sâm, sultan of Ghûr and Frîrzûkûh (538-99/1142-1202). In 622/1225 at the age of 33 he was sent as an envoy to the court of Malik Tâdj al-Djnî Yânîltîgh (incorrect form: Nîylîyînî; see V. Minorsky in BSOS, viii/1 (1935), 257), at the age of 38 he was sent on a similar mission again the following year.

The same year, i.e., 623-4/1226-7, he left for India, most probably at the invitation of Nâsir al-Djnî Kâbdâ, ruler of Uch, where he was appointed, in view of his erudition and well learning, principal of the Madrasa-i Frîrzûkûh, the first of the earliest educational institutions in India established by the Muslims. On the overthrow of Kâbdâ by the Slave sultan of Dîhll, Shams al-Djnî Ilichâshî, in 625/1228, Minhâdhî changed his loyalty and accompanied the conqueror to Dîhll, where he held, under him, high legal and judicial offices, including that of the Chief Justice of the realm. A great orator and an accomplished scholar, his discourses and lectures were attended even by the highest nobles and the grandees of the Sultanate. In 635/1239-40 he was made kâdî al-khâsî of the Slave king Muîzz al-Djnî Bâhrâm Shâh (reigned: 637-9/1239-41). Disturbed by the pre- vailing political instability and confusion at Dîhll, al-Dijûzdîanjî decided to try his luck at the court of Lâkhnawtî, the stronghold of Muslim occupation in Bengal. However, he did not find conditions very congenial there, and after a stay of two years returned to Dîhll in 642/1244-5.

He was once more the recipient of royal favours and held the double appointment of the kâdî of Gwâliyâr and the principal of the Madrasa-i Mâsiyrya, a college named after the sultan Nâsir al-Djnî Mâjmûd Shâh, son of fîstûmîsh, who reigned from 648/1250-63.

The same Sultan, greatly impressed with his vast and varied knowledge of Islamic jurisprudence and the dispensation of justice, appointed him once again the Chief Judge of the realm. He, however, fell a prey to the machinations of a court clique, headed by 'Imâd al-Djnî Rûkhân, Wâkîlî-Djî, who compassed his ruin, and he fell from grace in 651/1253, after having been in office for two years only. He was reinstated upon the receipt of a token of the title of 'Sâ'dî Dîjânî was conferred upon him. The next year he was re-appointed Chief Judge of the realm, through the good offices of his patron Ulugh Khânî A'zám, the powerful minister of Sultan Nâsir al-Djnî. He was alive u til until 658/1259-60 when he completed tâbâka 22 of his work. He seems to have died some time during the reign of Sultan Ghîyâh al-Djnî Balban (664-1265-686/1225), full of years and honours, and was, in all probability, buried at Dîhll. His fame chiefly rests on his magnum opus, the Ta'bakât-i Nâsiri, written mainly during the years 657-8/1259-60, after his retirement from active life, and dedicated to Sultan Nâsir al-Djnî Mâjmûd. It is the main source of information for the early Sultanate period, the author having utilized some of the works which are now no more extant. Among its notable omissions is the total lack of mention of the embassy of Radl al-Djnî Hasan b. Muhammâd al-Sâghînî [q.v.], who was sent by the 'Abbaśîbî Câlîph al-Nâsîr li-Djnî Allâh as a special envoy to the court of fîstûmîsh in 616/1219-20 (see TA under the root K.N.Dj and the Udîr monthly Mâ'ârîfî, A'zâm-gaR, June 1959). A Sûfî and a poet given to wājûd and samââ', he has been mentioned by 'Abd al-Hâgh Mûhadîdî in his A bhâr al-akhyûr (see Bibliography), where one rubûdî of Minhâdhî has been quoted. Some other tâdkhîras of Indian Persian poets (see Hablî in the Bibi.) also mention him, but his poetry and other achievements have been overshadowed by his historical talents.

[A. S. BAZMEE ANSARI]

DO'ÂB, ('Pers.') 'two waters', corresponding to the Greek µεταπόταμος, is in the Indo-Pakistan subcontinent generally applied to the land lying between two confluent rivers, and more particularly to the fertile plain between the Dîhmân and the Ganges in Uttar Pradesh. The long tongues of land between the five rivers of the Pândjâb are also known as do'sûb. Between the Satlîjd and the
Bešas lies the Bist došab; between the Bešas and the Rawl, the Bari došab; between the Rawl and the Čenab, the Rečna došab; between the Čenab and the Dželam, the Čadi or Džel došab; and between the Dželam and the Indus, the Sind Sâgar došab. The names for these došabs are said to have been invented by the emir Akbar (šah-i Akbar, trs. H. S. Jarrett, ii, 311 ff.). The most famous došab in Southern India is the Rayštâr došab between the Kistna (Krishna) and the Tungabhadra rivers which formed a fluctuating frontier between the Hindu kingdoms of Vijayanagara and the Muslim states of the Deccan. (C. Collin Davies)

DOBRUDJA

The plateau between the Danube and the Lon river in the North, the Black Sea in the East and the Prowadijska river or the Balkan range in the North, the Black Sea in the South. Deli Orman in this area is distinguished from the steppe region, Dobrudja-Kîrîn, in the East which is considered as the Dobrudja proper. Called Scythia Minor in the Graeco-Roman period, it was included in the Byzantine province of Paristrion (Bardjan in Idrisi's world map) in 361/972. In Bulgarian Karvunska Chora, it was 'the land of Karbona' in the mediaeval Italian maps. Its modern name came from Dobrudja-eli (as Aydınl from Aydınl-eli) which in Turkish meant the land of Dobrudja, Dobrotic (as Karđica from Karłowicz) (cf. Scythia Minor, P. Raczynski, in Graeco-Roman period, ii, Berlin 1958, 305-6). The Cumans in the Kingdom, Sofia 1937, in Bulgarian). Furthermore Cuman Teli Orman (cf. G. Moravcsik, Byzantinoturcica, xvi, Cracow 1959, 499), an important town possessed by the Cumans from the 13th to the 15th century, became, primarily for the Barbarossa and the Mongols, a natural route leading to the invasion of the Baltic and the Carpathians. (C. Collin Davies)

DOBROiGA

From the early 5th century A.D. until the 13th/14th century Dobrudja became, primarily for the peoples of Turkic origin coming from the Eurasian steppes, a natural route leading to the invasion of the Balkans or a refuge for those pushed by their rivals beyond the Danube. Thus in the footsteps of the Huns (408 A.D.) came Avars (in 534 and especially in 587 A.D.), Bulgars (especially in 596-799) with their capital in Preslav, southern Dobrudja, Pećeneks (440/1048), Uz (456/1064) and Klîpcâks (Cumans) (484/1092). Among those the Klîpcâks appeared to play politically and ethnically the most important part in the history of Dobrudja until the advent of the Ottoman Turks. T. Kowalski finds (Les Turcs et la langue turque de la Bulgarie du Nord-Est, in AC. Pol. Mém. de la commission orientaliste, xvi, Cracow 1933, 28) linguistic remains of these early Turkish invasions from the North in the Gagauz Turkish (cf. Gagauz). The name Deli Orman comes from the Cuman Teli Orman (cf. G. Moravesik, Byzantinoturcica, ii, Berlin 1958, 305-6). The Cumans in the Balkans were mostly Christianized, and, mingled with the native Wallachs and Slavs, they continued to play the rôle of a ruling military class among them (cf. L. Rasonyi-Nagy, Valachoturcica, Berlin-Leipzig 1927, 68-96; P. Nikov, The Second Bulgarian Kingdom, Sofia 1937, in Bulgarian). Furthermore the Mongol invasion of the Dağh-î Klîpcâk in 620/1223 and the foundation of the Khânameh of the Golden Horde in 635/1238 caused large groups of Cumans to flee to the West (cf. B. Spuler, Die Goldenene Horde, P. Nikov, The Second Bulgarian Kingdom, Sofia 1937, in Bulgarian). Furthermore the Mongol invasion of the Dağh-î Klîpcâk in 620/1223 and the foundation of the Khânameh of the Golden Horde in 635/1238 caused large groups of Cumans to flee to the West (cf. B. Spuler, Die Goldenene Horde, Leipzig 1945, 19-20). As to the bulk of the Klîpcâks who remained in the Dağh under Mongol rule, they mostly adopted Islam and were to play a significant part under the name of Tatar in Dobrudja's history in the following periods. With their support Noghiy (q.v.) established his overlordship on the Bulgarian kingdom by 681/1282, when the king and many of his boyars were of Cuman origin. The lower Danube with Sakdîl (Isaccea) was reported in the Arabic sources (Baybars, Zubdat al-šikra, in W. de Tiesenhausen, Almora devitî tarshine ait méteirn, Turkish trans. I. H. İnanlı, ibid., 282) as one of the headquarters of Noghay. He was, Z. V. Togan thinks (Umumi Türk tarihine giris, Istanbul 1946, 256, 325), acting against the Byzantines under the influence of the ghaza preachers of Saru Şaltuk, who was active in Sakdîl and the Crimea during this period. After the suppression of Noghay by Tobgut, Khan of the Golden Horde (autumn 669/1269), Yukan Bogha, his son, was placed in the lower Danube and Sakdîl and Noghay's son Ceke came into Bulgaria to seize the throne for a short time (cf. Baybars and Nuwarîy, ibid.). As for the Anatolian Turks who were said to come with Saru Şaltuk in Dobrudja in this period, we are now in a position to assert after F. Witterk's comparative study of the original Turkish account of Yaradîjlîgölü 'Ali with the Byzantine sources (Yaradîjlîgölü 'Ali on the Christian Turks of Dobrudja, in BSOAS, xiv (1952), 639-68) that these came actually to settle in Dobrudja after 662/1263-4 with Sultan 'iz al-Dîn Kaykâus who was then a refugee in Byzantium. Michael VIII Palaeologus gave permission to Kaykâus's followers in Anatolia to come to settle in Dobrudja, then a no-man's-land between the Golden Horde, Bulgaria and the Byzantine empire (the arguments of P. Mutafciev, Überschreitung der Argumente von Togan, in Die angebliche Einwanderung von Seljuk-Türken in die Dobrudsha im XIII. Jahrh., in Bulg. Acad. Sci. Lett., lvii/1, 2, are not valid after Witterk's study; cf. also H. von Duda, Zeitgenössische islamische Quellen und das Opusname des Jazygyoghî 'Ali..., ibid., 131-45; see also Adnan S. Erzi, in IA, v, 270). These Muslim Turks from Anatolia, mostly nomads, formed there "two or three towns and 30-40 oba, clans" (Yaradîjlîgölü in Witterk, 648; von Duda, 144). Abu '1-Fida's note about the majority of the population of 'Sakdîl' being Muslims (Geographie, ed. Reinaud and de Slane, Paris 1840, 34) apparently referred to them rather than the Tatars settled under Noghay. With his headquarters in Sakdîl Noghay, then converted to Islam, must have become after Berke Khan's death (665/1267), cf. Spuler, the protector of the Anatolian Turks in Dobrudja (cf. Z. V. Togan, ibid.). It is interesting to note that the emigration of them back to Anatolia about 766/1365 followed the death of Noghay and the arrival of Tutkal Bogha, apparently a pagan like his father Tobgut Khan. In 699/1300 Noghay's son Ceke too was killed by Svetoslav in Bulgaria. Yaradîjlîgölü noted (Witterk, 651) that these Turks decided to emigrate because the Bulgarian princes had risen up and occupied the larger part of Rumelia. Those who remained, he added, became Christians. These people of Kaykâus were, as Witterk demonstrated after Balasçev, named Ghâghauz after their lord Kaykâus (cf. Witterk, ibid., 686). But in 732/1332 Baba Şaltuk (later Baba-dagh) was, Ibn Batuta reported (Voyages, ii, 416; English trans. Gibb, ii, Cambridge 1959, 499), an important town possessed by the Turks. By 766/1365 an independent despotate under a Christianized Turkish family rose in the part of Dobrudja where the Gagauz always lived (in the Ottoman defter of 1006/1598, Tapu Kadastro Um. Md, Ankara, no. 399, some Christians in the area still bore Turkish names such as Arslan, Karagöz). Balki (578/1187) (also Balka; the name is Cuman name, cf. L. Rasonyi-Nagy, ibid.) identified it with the Rumanian Balita; Notes d'un historien, in Acad.
DOBRUDJA

Roum. Bull. Sec. His. ii-iv (1913), 97. Colpan, an important man under the son of Dobrotisch, bore the name of Varna a despotate independent of Byzantium and Bulgaria. Its capital was at Kalliakra by 765/1362 to 767/1366 (Neshri, 68). It is most likely that Dobrotisch too had accepted Ottoman suzerainty as had Shishman since 773/1371. Under Yanko (in 758/1357, A eta Patr. Const., ii, Bucarest 1958, 242). Then Yanko who had refused to join as his vassals the Wallachians, attempted to take Kilia while the raiders devastated the land of Dobrudja. According to a Turkish source (des Roumains, i, 375, and iii, 401-2, GOR, Hist, des Roumanes, iii, 385, 386). Siileyman, Bayezid's successor in Rumeli, appears then to have recognized the fact. But soon the akindjis renewed their raids against Mirkca (Neshri, 150; P. §. Nastrul, Studia et Acta Orientalia, i, Bucarest 1958, 242). To free himself of them Mirkca invited and gave his support to Mousa Celebi, Suleyman's brother and ruler (Neshri, 130; P. F. Panaitescu, Mircja 1e Bdtam, Bucarest 1961, 214). The akindjis joined Mousa against Suleyman, and left Mirkca alone. In 819/1416 he supported Mufjafa, another pretender, and Sheyh Badr al-Din against Mehmed I (q.v.) in Dobrudja and Deli Orman. The akindjis, akindji leaders, ruled over large numbers of the akindji leaders, Sufi dervishes who were in this akind area in great numbers joined them (cf. §. Yaltkaya, Seryk Bedredin's dar bir biktaap, in TM, iii, 251; Ordu, ed. Fr. Babinger, 45, ii, 111). Though in their official titles Mirkca and Mihai, his successor, always mentioned 'the two sides of the Danube' among their possessions it was apparent that Dobrudja and Silistre were then actually in the hands of the akindjis, who in their antipathy toward Mehmed I must have continued their friendly relations with the Wallachian voivodas. Mirkca's death (819/1416) Yanko and the ensuing confusion provided the Sultan with the opportunity to establish his control in Dobrudja in 822/1419. After he subdued his rivals in Anatolia, the Djandarids and then the Karamandid (see Karaman oglu), Mehmed I organized a large-scale expedition against Wallachia in which both Anatolian principalities sent auxiliary forces. An Ottoman fleet participated in the operations. In the summer of 822/1419 he crossed the Danube, captured and fortified Yergogi (Giurgiu) and attempted to take Kilia while the raiders devastated the enemy's country. Mihai first took refuge in Arges and then perished in an skirmish. Before his return the Sultan strengthened Sakgji and Yeni-Sale against future attacks of the Wallachians. No mention is made of Silistre during this expedition. Dan I, the new Voyvoda, recognized Ottoman suzerainty, though the Emperor Sigismund had started southwards with the intention of invading the Dobrudja. He was delayed by the Ottoman action against Severin (autumn 822/1419). (Iorga, GOR, i, 375, and Hist. des Roumanes, iii, 401-2, dates this expedition 820/1417. In this year Mehmed I was at war against the Karaman oglu in Anatolia, cf. Ibn Hadjar, text in §. Inalci, Ibn Hacer'de Osmanlilara dair haberler, AÜDTCC Dergisi, vi/5, 525. Following Neshri's confused chronology, Uzuinclari, Osmanls tarixi, i, new ed. Ankara 1961, 356; and A. Decei, IA, iii, 615, adopted 819/1416 as the date of the expedition against Wallachia. For our dating see further O. Turan, Tarshhi tahvimler, Ankara 1954, 20, 56; Atsu, Osmanl1s tarixi, i, 356, 357; Sudan gazetesi, Istanbul 1961, 20; Ibn Hadjar, ibid., the years 821/1418 and 822/1419; and a letter of Mehmed I to the Mamlik Sultan in Feridun, Munsh6d'i al-salldr, ii, 164-5). The Wallachians under Dan attempted to take Silistre during the period of the renewed civil war in the Ottoman empire in 825/1422 (Iorga, Hist. des Roumanes, iv, 20; Neshri, 154; 1Ashtipaghazade, ed. 1950, 205). Against him Firuz (Periz) Beg was appointed in this expedition (q.v.).

Firmly established in Dobrudja since Mehmed I's expedition in 822/1419, the Ottomans used it as
a base to extend their control on the other side of the Danube. The imperial army under Mehemmed II invaded Bohgdan [g.v.] in 881/1476, passing through Dobrudja (see MEHEMMED II). Bayezid II using the same route took Kilia and Akkerman in 889/1484. During this expedition he built the great mosque and the zawiya of Şarş Saltuk in Baba Kapabasi (Babadagh) and endowed them with all the tax revenues of the town and surrounding villages (for these endowments a waṣf defteri exists in the Tapu ve Kadastro Um. Md., Ankara, nos. 397). In his expedition against Bohgdan in 945/1538 Süleyman I too showed the same interest in this pre-Ottoman Islamic centre (cf. Feridun, i, 602-3).

According to the defters (see DAPÇAR-I KHAN) of the 10th/16th century (in the Bayzekdiet Archives Istanbul, Tapu nos. 65, 542, 688, 304, 483, 732, and, in Tapu ve Kadastro Um. Md., Ankara, nos. 397, 398, 399) the sandjak of Silistre and Akkerman comprised the kadın of Akkerman, Djankerman, Kili, Bendi, Isakdji, Kavarna and Kavarnovo in the nahiyes of Varna, Pravadi, Yanbolu, Abu, Ra, Karin-abâd and Aydos. Balchik, Kavarna and Kavarnovo were included in the nahiye of Varna. The Ottomans applied in Dobrudja typical Ottoman laws and regulations with special provisions for such groups as çığkındıjs, müsellerem, Dilbeli-Tatars, Matrak-Tatarlar, djebel-Tatars, which provided an auxiliary force to the Ottoman army under a Crimean prince (Mustecib H. Fazl, DRUŠICA ve Türkler, Köstence 1940, 36). In 1007/1599 Baldasarius Walther reported that in the plain of Dobrudja lived 6000 Tatar families, Dobrudja Tartarlar, who provided an auxiliary force to the Ottoman army under a Crimean prince (Müstecheb H. Fazl, ibid., 37).

In the regions of Tekfur-gölü, Hırsıova, Silistre and Varna also lived the Yurük [g.v.] groups: those of Kınasqalı 44 odaqlık, each odaqlık being regularly 30 men, Naj-doken 34 odaqlık, Tash-doken about 95 odaqlık by 1009/1600 (cf. T. Gökbilgin, ibid., 56, 70, 76, 212-30). Each odaqlık furnished five fighters for the army.

Turkish Muslims made up, in the countryside too, the majority of the population. The study of personal names and village names (the above mentioned defters are müfassal defters in which the names of the heads of the households are recorded) shows that an overwhelming majority of the villages were the new ones founded by the Turkish Muslim immigrants from Anatolia. We know that the Ottoman state made from the early conquest onwards forced settlements of Anatolian Turks in this important udı area (cf. Barkan, Kanunlar, 273, 274).

As separate small communities gypsies lived in all these towns. They were mostly Christians. Only in Silistre 21 Jewish families were recorded. Here is a table of the ports in Dobrudja with their revenues from the dues on fish, salt, mills and the customs dues:

that they considered it as an important ud/i area, and the Anatolian immigrants were encouraged to engage in agriculture by the increasing demand for wheat. Muslim and Christian Turks and Wallachians settled in the Dobrudja from the east of Silistria to the south of Mangalya were annexed to Romania. The rest of the Dobrudja made the part of the Prin cipality of Bulgaria under Ottoman suzerainty (Art. 1-2). Under the Romanian administration emigrations of Muslim population into Turkey continued especially in 1300/1883 when these were subjected to compulsory military service and in 1317/1899 during the famine in the Dobrudja (M. H. Fazil, 109-10). In 1338/1910 in the Romanian Dobrudja only thirty per cent of a population of 210,000 and in the Bulgarian Dobrudja forty per cent of a population of 257,000 were Muslim Turks and Tatars.

The Bayvakelet Archives, Istanbul, Tapu Defterleri, nos. 304, 483, 732; Tapu ve Kadastiro Um. Md., Ankara, Kwadi-Kadime, nos. 9, 390; i, 556; v, 333). The towns of Hadjoğlu Pazarlık, Mangalya and Baba with their weekly fairs were important trade centres for the whole region (cf. Ewliya Celebi, Seyyahname, iii, Istanbul 1314, 392-71).

From 983/1575 onwards Cossack attacks became a constant threat to Dobrudja. In 995/1587 they burned down Baba (Babadag). In 1003/1595 Mihai, the rebellious Voyvoda of Wallachia, supported by the Cossacks, renewed Mircea's attacks on the Ottoman cities and fortresses in Dobrudja and caused a mass emigration (cf. A. Decei, in Hist. A., iii, 637). The continuing Cossack threat made the Ottoman government decide to create a new eyalet including the sandjaks of the Eastern Black Sea with Silistre and Özü as its capitals (cf. A. I. Manof, Gagauzlar, Acad. Roumaine, Bull. sect, hist., ii-iv (1914), 289-307; idem, Dobrotich, Dobrotich, in Rev. hist. du Sud-Est Européen, v (1928); Documente privind Istoria României, A. **DÖGER**, name of an Oğuz tribe (boy). They are mentioned in the Oğuz-name (the account of the life of the Oğuz people before they embraced Islam, see F. Sümür, Ögösler’a ait distant mahiyet eserleri, in Ank. Ün. DTCD, xv/iii-1934), where it is said that some prominent beys of the Oğuz rulers belonged to this tribe. According to the Syrian historian Şams al-Din Muhammad al-Dižari (658/1260-739/1338), the Artuk dynasty, ruling the Mardin-Diyarbekir region, belonged to the Döger tribe (F. Sümür, op. cit., iv, 172; must therefore have taken part in the conquest of the Seljuk Sultanate in the first half of the 8th/13th century an important branch of the Döger was living south of Urfa (Edessa) and
around Dja'bar; their leader was, in 773/1371-2, a bey named Salim.

Salim played a part in the events of North Syrian history and died towards the end of the century. Three sons of his are known. Dimaşq, Ködja, probably the eldest, was in 801/1398 appointed na'dib of Dja'bar by the Mamlûk Sultan; profiting from the anarchy left by Tlmur’s invasion, he brought under his control also Rakka, Sarudj, Harran, Urfa and Silerek, but was killed in battle with the famous Arab Amir Nu‘ayr (Muhammd b. Mu‘annâ) and his head was sent to Cairo (806/1404). He was succeeded by his brother Gökçe Müsä, his brother-in-law, and finally Dimaşq, was hostile to the Ak-koyunlu and friendly with the Kara-koynulu: in 807/1405 he entertained at Dja'bar the Kara-koynulu ruler Kara Yusuf, who was travelling home from Syria; he assisted the Kara-koynulu in various campaigns, helping Kara Yusuf’s son Iskender to defeat Kara Yûlûk ‘Otha’mân in the battle fought at Sheykh-kendi (between Mardin and Naşûbîn) in 824/1421. In 840/1436 he defeated Kara Yûlûk’s grandson, ‘Ali Beg-oghlu Djihângir, and sent him prisoner to Cairo, but died in the same year. Thereafter, under pressure from the Ak-koynulu, the Dja’bar lost even Dja’bar; their leader was, in 773/1371-2, a bey named Salim.

Salim’s lifetime his younger brother Hasan Beg had entered the service of the Mamlûk Sultan and became na’dib of ‘Âdilûn; Hasan’s son Amrîzâ was na’dib of Karkî in 890/1485.

Apart from Salim’s family, other beys of the Dja’bar—‘Ali, Muhammed and Katî—are found in Syria as leaders of Dja’bar clans among the Turkmen of Haleb; Katî was in 857/1453 na’dib of Buçhâyra for the Mamlûks. In the time of Suleyman I, the Dja’bar of Syria were divided in three clans (oymak) in the regions of Haleb, Hamî and Dimaşq. The tax registers show two small groups in Jerusalem residing in the Bâb al-‘Amûd and Bânû Zayd quarters (cf. B. Lewis in BSOAS, vi/3 (1954), 479). Other clans were found around Dîyarbîrek, among the Boz-Ulus (one remnant of the Ak-koynulu confederacy), at Karkîk, and even among the Turkish tribes in Persia. In the 10th/11th century the name Dja’bar was found in many toponyms, few of which have survived.

DOGHANDJÎ, Turkish term for falconer, from doghan, falcon (toğan in Kipcak Turkish, cf. al-Tuha al-zahiriya fi ‘l-ğha al-Turkıyya, ed. B. Atalay, Istanbul 1945, 260), and in general use any kind of bird of prey. Bâzîdurr, from Persian, was also frequently used for the doghandji.

In the Ottoman empire the term doghandji, in the same sense as in later periods was found as early as the 8th/14th century (cf. P. Wittek, Zu einigen frühosmanischen Urkunden, in WZKM, ix (1957), 240; Bvi (1961), 103; for doghandji lüfti see H. İnalıoğlu, Sâret-i defter-i sancaks-i Artuwin, Ankara 1954, 105).

Hawking, a favourite traditional sport at the Ottoman court, gave rise to a vast organization in the empire. There were doghandjîs at the Enderûn and the Birûn (q.v.), and in the provinces. The doghandjîs at the Enderûn, under a doghandî-bashi, were found in the different odas (chambers). They accompanied the Sultan in his hunting parties. Their number varied according to the reigning Sultan’s care for the sport (nine in 883/1478, forty in the early 17th century, cf. I. H. Uzunçarşılı, Osmanî devletinin saray teşkilatı, Ankara 1945, 422-23).

At the Birûn the doghandjîs, generally called shîkâr hâkîlî, made three different dijma’ât, groups, divided into bûlûks, cbâhrîgîyân, şakîngîyân and âmadjâdiyân, those taking care of bâhûrs, merlins and falcons, of şâhîn, peregrine falcons, and of âmadjâd, sparrow-hawks. They were under a cbâhrîgî-bashi, a şakîngî-bashi and an âmadjâdi-bashi respectively. The cbâhrîgî-bashi (q.v.) was the head of the whole organization, and in this capacity he was usually called mîr-i shîkâr. In the hierarchy of agâhs at the Birûn he stood in the fourth grade, the first being yenicerî-agâhs (cf. Kitânîmâne-i Âl-i ‘Othmân, ed. M. Ârif, in TOEM, 1330 H., appendix, 12). When promoted, the cbâhrîgî-bashi was made sandâq-begi under Mehemmed II (ibid., 13), and beglerbegi in the 11th/17th century. The şakîngî-bashi was then made cbâhrîgî-bashi, and the doghandî-bashi from the Enderûn şakîngî-bashi. The doghandjîs at the court all received ‘ulûfe, salary (cf. Ô. L. Barkan, H. 933-934 malt yîhna ait 15 H. 1330 H., TOEM, 260, 272, 280, 331). But in the 10th/16th century the name doghandjîs or bâzîdurr, cbâhrîgîs, şakîngîs and âmadjâdiyân under a doghandî-bashi. Their number with their dependents reached 2171 persons in Anatolia and 1520 in Rumeli in 972/1564 (Defter-i bâzîdûrîn-i vilayet-i Rumeli ve anadolu ve şeyhîrîn, in Belediye Küttîphanesi, Istanbul, Cevdet Kitaplarî, O 60. This important source gives in igmal, summary, the number of doghandjîs and the copies of the kümak, decrees, on them). They formed large groups especially in the sandjâks of Gallipoli (642), Vidin (706), Menteşeh (503), Mârâş (770) and Kârî (537). The local doghandî-bashi were appointed by the cbâhrîgî-bashi and were given timârs (q.v.). Under each doghandî-bashi there were two hânîs, şakîngîs, cbâhrîgîs (apparently from şare, wild) and mîr-i shikhân (q.v.) also held timârs and were in charge of training and taking to the court the birds of prey caught in their areas.

Under the doghandî-bashi there was a group of doghandîs living in the villages who were originally re’âyîs (q.v.), Christian and Muslim, to provide birds of prey. They were assigned to this service by the Sultan’s diploma, doghandî benî, which granted the possession for cultivation of a piece of land called doghandî ciftîlî or doghandî bâshînah (see ciftîlî) with the exemption from ‘ışshît, cbîrmîs (q.v.) and ‘awâmîr (q.v.) taxes. They paid the bîd-i hawâ (q.v.) taxes to their doghandî-bashi or to the Sultan’s collectors directly. If they cultivated any land outside their ciftîlîs they had to pay in addition the regular re’âyî taxes for it to the land-holder. Their sons had the right of inheritance on the ciftîlîs and, in their turn, became doghandîs (for all these cf. Ô. L. Barkan, Kanunlar, Istanbul 1943, 20, 272, 274, 280, 331). But in the 10th/16th century the re’âyî who were made doghandîs only one generation before were not granted these exemptions. The doghandîs of re’âyî origin were divided into different groups according to the kind of bird of prey they were to catch or train as bâzîdurr, cbâhrîgîs, şakîngîs or âmadjâdiyân. Also according to their functions they were divided into yavuzís, nest-tenders. The latter were in their
Turn divided into kayadís and dîdebanís, i.e., those who discovered the nests in the mountains and guarded them, and tuhákígis, those taking care of the nests in the mountains. The kayadís or yuwaadís delivered to the birds to the local doghandí-bâshî who were given a míhíralí tekbhiré certificate of delivery. Then at a certain time of the year the doghandí-bâshî and khasa doghandís took the birds to Istanbul to deliver to the akhrí-bâshî. Anybody who took a bird of prey from the guarded places or through a jayyád had to pay a fine of 500 akçe to the treasury. The ordinary ré'dây and 'ashteri were forbidden to hunt birds of prey.

From the 11th/17th century onward, the doghandí organization in the provinces was neglected, and, in most places, abolished. The doghandís were returned to the status of simple ré'dây with the abolition of their exemptions. But the organization in general survived until Rabî II 1246/September-October 1830 when Mahmûd II abolished it altogether.

(Hâhil Inâlcik)

DOLMA BAĞÇE [see İstanbul].

DONANMA, 'a deckling out, an adorning', Turkish verbal noun derived ultimately from ton, 'clothes'. The word is used in Ottoman Turkish in two restricted meanings:

(1) 'fleet of ships, navy' (presumably a calque of Itál. 'armata'), for which see art. BAHRIYYA, iii (adding to bibliography H. and R. Kahane and A. Tietze, The Lingua Franca in the Levant, Urbana 1958, 1-45).

(2) 'decoration of the streets of a city' (synonyms: şenilik, şehr-dým), for which see art. BAHRIYYA, iii (adding to bibliography H. and R. Kahane and A. Tietze, The Lingua Franca in the Levant, Urbana 1958, 1-45).

DONBOLİ [see KURDS].

DONGOLA (Arabic, Dunkula, Dunkulâ; obsolete forms, Dunkula, Damkala), the name of two towns in Nubia; more generally, the riverain territory dependent on these towns. All lie within the present Republic of the Sudan. The arabized Nubians of Dongola are called Danâlâ, a regional, not a tribal, designation.

(1) Old Dongola (Dunkula al-şajlûz), on the right bank of the Nile, is on the site of a pre-Islamic town, the capital of the Christian kingdom of al-Makûrra. It was besieged by an army under 'Abd Allâh b. Sa'd b. Abî Sarh [q.v.] in 31/652, but the Muslims withdrew after concluding a convention (bakâ, [q.v.]) which regulated relations between Nubia and Egypt for some six centuries. Mediaeval Dongola is described as a walled city with many churches, large houses and wide streets. The royal palace with domes of red brick was constructed in 392/1002. Within the royal residence (mudir) were added O. G. S. Crawford, The Fung kingdom of Senaar, Gloucester 1951, especially 33-6. Old Dongola in 1698 was described by Ch. J. Poncet, A voyage to Ethiopia, London 1709; reprinted by Sir William Foster (ed.), The Red Sea and adjacent countries at the close of the seventeenth century, (Hakluyt Society, Second Series, no. C); London 1949, 99-100. It was described in 1821 by L. M. A. Linant de Bellefonds, Journal d'un voyage à Méroud, (ed. M. Shinnie), Khartoum 1958, 32-4.

The official correspondence of the Mahdist period is preserved in the Sudan Government Archives in Khartoum.

(P. M. Holt)

DÖNME (Turkish: convert) name of a sect in Turkey formed by Jews upon their conversion to Islam late in the 11th/17th century in emulation of Shabbetai Tzvi whom they considered the Messiah.

The sect emerged out of mystic speculations justifying the conversion of Jews to Islam as a link in the chain of Messianic events, and served as a means to consolidate those who wished to emulate and remain faithful to the converted Messiah, even after his death. It attempted, in the spirit of the Messiah, to maintain secretly within Islam as much as possible of Judaism, its lore and rites, with sabbatian-messianic modifications. In the course of time the original concepts of the stormy period of messianism and conversion were largely blurred and forgotten, and the life of the group expressed itself in ritual peculiarities, social welfare activity, and basic devotion to the memory of the Messiah in expectation of his reincarnation or second advent, with subsequent dissensions concerning rightful succession to leadership.

Thus, intermarriage with Muslims was avoided; the fast-day commemoration of the destruction of the Temple (9th of Ab) became a day of rejoicing as the birthday of the Messiah; some knowledge of Hebrew was maintained; outward conformity with Islamic rites was encouraged while, in secret, Hebrew names were preserved and separate marriage and burial rites were observed. The group conversion took place, it seems, in Salonika in 1094/1683. Salonika became the centre of Judaism in the town, and the community maintained its identity and separate identity and life as, during the Condominium, it was fused with Wâdi Halfa and Beber [q.v.] to form the Northern Province.

The official correspondence of the Mahdist period is preserved in the Sudan Government Archives in Khartoum.

(P. M. Holt)
but there were branches in Edirne, İzmir, later İstanbul, and in Albania.

Inner squabbles, mostly engendered by various pretenders to Messianic succession and leadership, brought about the split into three sub-sects (the names vary: the recent being Hamdibeyler, Karakas, Kapancilar) all refusing intermarriage. This division may have been not unrelated to social divisions, and expressed itself in peculiarities of hairstyle and garb. The Dönme lived in separate quarters.

The sect considered itself the community of the believers (ma'amim). It maintained strict secrecy. After the initial period, its literary output appears to have shrunk to poems and prayers in Hebrew, Aramaic, Judeo-Spanish, and Turkish. Paucity of sources and secretiveness combine to make the study of the sect difficult, and its history obscure.

Around 1900, there were a few hundred families belonging to the central Salonika group. About 1900, the number of that group was estimated at 10,000. They were represented in trade, crafts, and the civil service.

Toward the end of the 19th century, a growing new layer of westernized young people came to the fore as teachers, doctors, lawyers, journalists, and these took part in Turkish public life, sometimes with considerable success. Most spectacular was the rise of İkândi Bey [q.v.] in the Young Turkish regime of 1908-09.

On the whole the Muslims were indifferent to the sect's existence, but from time to time there was a spurt of inquiry or persecution (e.g., in 1720, 1859, and 1875). Imputing Dönme origin to undesirables was not unknown.

A new phase began for the Dönme when, with the Graeco-Turkish exchange of population, the Salonika Dönme were forced to quit their ancestral town and to move into the Turkish Republic (1923-24). They settled mostly in İstanbul, smaller groups settling also in other cities. This change of domicile, the dispersal that followed, the loss of contact with the solid Jewish atmosphere of Salonika, the influence of the secular Turkish national school—all contributed to a growing loss of cohesion and indifference among the younger generation of the Dönme, although groups continued to exist in the area of social welfare, continued. The arrival in İstanbul of several thousand Dönme stimulated a discussion of sectarian segregation versus national assimilation in the Turkish press in 1924-5. Intermarriage with Muslims is slowly spreading and complete integration into modern Turkish society, despite setbacks, is on the increase.

DONMÜ [see MISRABA].
DOST MUHAMMAD [see DÖST MUHAMMAD].
DOUAR [see DAWAR].
DOWRY [see MAHR].
DRA'A [see DAR'].

DRAČ (DRAČ, DURĂ), Slavonic and hence Ottoman name for the classical Dyrrhachium (med. Latin Duraziacum, Ital. Durazzo, Alb. Durës), the principal port of modern Albania (41° 18' N., 19° 26' E.). The classical town was founded (c. 625 B.C.) under the name Epidamnus at the southern end of a narrow rocky peninsula (once an island) running parallel to the mainland coast, to which it was connected in antiquity at the North by a sand-spit and at the South by a bridge; the lagoon so enclosed has progressively contracted over the centuries. In Roman times, now known (perhaps after the Illyrian name of the peninsula) as Dyrrhachium, to its commercial prosperity was added immense strategic importance as the starting-point of the Via Egnatia, the continuation, after the short and easy sea-crossing from Brundisium, of the Via Appia, and the principal military road between Italy and the East. Hence in Byzantine times too Dyrrhachium was strongly fortified as the Western gateway to the Empire.

After falling to Venice at the partition of 1205, Dyrrhachium changed masters repeatedly, to be ceded to Venice in 1392 by the native Thopia dynasty, who were no longer able to protect it against the Ottomans. The Venetians rebuilt the walls on a narrower circuit and made vigorous but fruitless attempts to scour the lagoon, in order to arrest the silting of the harbour and the spread of malaria. During Mehmed II's Albanian campaign of 1467, Durazzo, practically deserted by its terrified inhabitants, escaped a determined assault (see F. Babinger, Mahomet II le Conquérant et son temps, Paris 1914, 311-3); the end came only in 1501 (17 August), when, the governor being temporarily absent, Durazzo fell to a night-attack by Ša Bag-oglu Mehmed Beg, sandjak-bey of the nearby Elbasan (Sa'd al-Din, ii, 113-4, following the contemporary account of Idris Bidili). Thereafter Durazzo was administered as a kad'a of Elbasan [q.v.]; its walls were reconstructed to enclose a still smaller area (600 m. x 250 m.) in the South-East corner of the antique city, leaving the ancient acropolis outside the enceinte.

Under the Ottomans practically nothing of Durazzo's old importance remained. Ewliya (1670) describes a small town of 150 houses with only one mosque; it had still (as in mediaeval times) a considerable salt industry and a not insignificant trade, and was administered as a voyvodalik under an emin (who, with the külli, resided at the more salubrious Kavaya, 20 kms. to, the South-East).

Durazzo's modern prosperity began shortly before the Second World War, with the construction by Italy of a first-class harbour; now linked by rail with Tirana and Elbasan, it has developed considerably both as a port and as a holiday-resort (pop. 30,000).

DRAÇUT [see TURGHUD 3 ALI PASHA].

DRAÇA [see MASRAH].

DREAMS [see TA'BIR AL-RU'YA].

DRESS [see LIPAS].

DRUZES [see DURUZ].

DU'â', appeal, invocation (addressed to God) either on behalf of another or for oneself (âi..., or else against someone (allâ...); hence: prayer of invocation, calling either for blessing, or for imprecation and cursing, connected with the Semantic function of the descriptive effective value of the spoken word. Cf. Kûrân XVII, 11: "Man prays for evil as he prays for good."—Du'â therefore will have the same sense of personal addressed to God, and can often be translated as "prayer of request".

1. The scope and practice of du'â. 1. In the Kûrân, du'â always keeps its original meaning of invocation, appeal, Man "appeals" for good fortune (XXI, 49), and "when misfortune visits him, he is filled with unceasing prayer (du'â')" (ibid., 51). To practise du'â is to raise one's supplications to God; du'â here assumes the general meaning of "prayer", of two categories in particular: (a) prayer (and especially prayer of request) made by the pre-Islamic worthy men and prophets; (b) the vain prayer of the infidels. In the first case, God is He who hears, who answers the du'â; it was so for Abraham (XIV, 39-40; XIX, 48) and for Zachariah (III, 38). In the second case, "the prayer of the infidels is but vanity" (XIII, 14; cf. XLVI, 5); and the false gods hear not part of the prayer addressed to them (XXV, 14, etc.).—Some shades of meaning should be distinguished: thus, in verse XXV, 77 (addressed to the opponents), du'â evokes any relationship of man to God; "Save my Lord will not become anxious save through your prayer"; whilst, XIX, 40, repeating a saying of Abraham, distinguishes between salât, a ritual and liturgical prayer to be "performed", and du'â, prayer, personal invocation: "Lord, make of me one who performs the salât and let it be so for my posterity, O Lord, and accept my prayer (du'â')".

2. There are numerous hadîths which speak of du'â. Traditionists and jurists define its significance, the principal ones being reproduced by al-Ghazâlî, Ihâyâ 'usîm al-dîn (Cairo 1352), i, 274-8. — Tradition attributed to 'All: "my followers are those who have taken the earth as their carpet, their water as their perfume, prayer (du'â) as their adornment".

Du'â must be clearly distinguished from salât, vocal fixed prayer, and du'â', mental prayer or orison. Ibn Taymiyya (Fâlâtû, Cairo 1326, i, 197) proposes this scale of values: "the salât constitutes a form (djina) which is superior to Kûrânic recitation (birda); recitation in itself is superior to dhâhir, and dhâhir to individual invocation (du'â')" (from the trans. of Laoust, Essai sur les doctrines sociales et politiques de Takl-d-Dîn Ahmad b. Taimûr, Cairo 1939, 328-9). A critical enumeration frequently mentions salât, dhâhir [q.v.] (incessant repetition, ejaculatory prayer), dhâhir and wîrd (supererogatory "liturgies"), du'â. Inward prayer would be suggested rather by the root and jhâr (meditation), du'â always connoting the idea of a formulated request, of an invocation either beneficent or imprecatory.

3. The request addressed to God in the du'â can be greatly varied according to the circumstances. It is in this sense that it is legitimate to translate it (cf. translation from Laoust above) as "personal invocation"; it can also assume a communal value and aspect. The choice of words is free, but Kurânic texts or traditional prayers already in existence will often be used.

Treatises which recommend du'â, and especially the Sûfis treatises, like to define the conditions which must accompany it and the rules of its adab. Both of these seek to provide a maximum guarantee of its being received by God. A brief summary (al-Bâdûjî, Fâhîshâ «... 'allâ suckrat al-tsâkit, Cairo 1355/1934, 90-1) gives them as follows. (a) Conditions: to eat only food that is legally permitted; to pray, feeling convinced that the prayer will be answered; not to be distracted during prayer; that any sinful act, or give rise to enmity between those of the same blood, or harm Muslims' rights; and finally, not to ask for anything impossible, for that would be a lack of respect for God's power, or would be a lack of need. (b) Adab (how to pray): to choose the best times, and al-Bâdûjî suggests during the sujdâd, when one is prostrate, or while standing upright (kibâma), or during the summons to prayer (âdâbâh); to precede the du'â with ablutions and the salât on the one hand, and on the other with a confession of faults and an act of repentance; to turn towards the kibla; to raise the hands towards heaven (rafâ al-yadâyûn); to pronounce the "divine praise" (al-handsu il'îlãh) and the "blessing on the Prophet" at the beginning, in the middle and at the end of the du'â.

These detailed recommendations are in some measure "advisory". In some cases, however, when the object of the du'â concerns the common good of the Community, it assumes a ritual, set form recognized by all; in these circumstances it makes use of the procedure for salât. The most notable example is that of the istiškâh ("prayer for rain"): for this, the du'â must be preceded by a ritual prayer of two rakûnas [q.v.], two khaibas ("sermons"), and the rite (sympathetic magic) of the "turning of the cloak". The "prayer for the dead" made communally (frequently during the "sessions" of the brotherhoods) also obeys various regulations.

These conditions and rules for the du'â are intended to surround it with guarantees of efficacy. And we see that to the power of the word there are added the effective forces of legal purity and of gesture. This last point provides matter for discussion. Texts which widely recommend the practice of du'â speak constantly of ablation and the rafî al-yadâyûn; in doing so they rely on hadîths before raising his hands in the du'â the Prophet had performed the ablation of wudâ (al-Bukhârî, Maghâzi, ii, 53). But al-Nâsâ'î and Ibn Hanbal (ii, 243) only accept the raising of the hands in the du'â of the "prayer for rain".

4. Islamic devotional trends insist on the du'â as being regarded as a prayer of request for well-being, especially the public weal of the Muslim community, and the personal spiritual well-being of oneself and others. Beautiful du'â texts are not rare in Shi'î works of piety. The popular pietism of the

617
Hanbalis often mentions it. It is to be seen mingled with the liturgies of hizb and wîrd in the handbooks of the religious brotherhoods. It is, then, much less an appeal of invocation (and of imprecation, especially) than an appeal trusting in the Divine Mercy. It is in this way that the utterance of the divine Names can turn either to the metrical repetition of the dhîkr or to a form of du\\u0627d\\u0646 which links its request with the evocation of each Name and each attribute, and thereby defines it; in this connexion, see the monograph written in the last century by Muhammad 'Ali Râqîâm al-Bukhârî, Klîbî mânhîyat al-sarîf fi shârîf al-du\\u0627d\\u0646 (ed. Haydarâbâd, 1337). The du\\u0627d\\u0646 becomes an equivalent of the spiritual impulse towards God.

II.—Questions raised in kalâm and falsafa.

The inculcation value and the effectiveness of word and gesture was no doubt the first consideration in the idea of du\\u0627d\\u0646, and derived from a Semitic understanding of the relation of man to what is holy. But the Hellenistic influence which moulded Muslim thought encouraged falsafa on one hand, and the 'ilm al-kalâm ("theology" or, more accurately defensive apology) on the other, to raise the question of the prayer of request and of its efficacy before the Almighty and the Decree of God.

The reply varies according to the school and the writer. Here are three typical examples. (A summary of the principles of kalâm is given by al-Bâdhîrî, loc. cit., among others).

(a). The Mu'tazila deny the uselessness of the prayer of request; in their eyes it would be derogatory to invoke Him, it is the attitude of adoration that He is guaranteeing.

(b). On the other hand the Agh\\u0614rî kalâm, centred upon the absolute and free will of God, was to restore its traditional value to du\\u0627d\\u0646. The "prayer for the dead" (al-salât al-mu\l al-

(c). Following quite different principles but a similar approach, the falsafa logically include the du\\u0627d\\u0646 in their universal determinism. The subject is treated on several occasions by Ibn Sînâ (e. g., Nâdijd, 2nd ed. Cairo 1357/1938, 299-303; Ma\\u0627n al-ayârû and Risâla fi mâhîyyat al-salât, ed. A. F. Mehren, Leiden 1894). The effective prayer of request is a result of the co-operation of terrestrial dispositions and celestial causes. The invocation by the du\\u0627d\\u0646 comes as a psychical influx which acts physically upon the phantasms of the celestial Spheres according to all the laws of the macrocosm, as inevitably as man's imagination acts upon his own body. Furthermore, it is these celestial Spheres which in reality gave men the suggestion to pray, this suggestion in turn taking its place in the universal chain of causes. And it can then be said, as a result in the interplay of causes, that the prayer is answered. The du\\u0627d\\u0646, according to Avicenna, puts man into direct relationship with the celestial Spheres alone. That is why "those prayers particularly which beg for rain and other such things" are found to possess "very great usefulness" (Nâdijd, 301; cf. L. Gardet, La pensée religieuse d'Avicenne, Paris 1951, 135-7).

These various attempts to provide a rational justification of the du\\u0627d\\u0646 testify to its importance in the religious life of Islam. But we must observe that the cosmological interpretation of an Ibn Sînâ does not in any way spring from the most current vision of the world. For the pious Muslim by and large, the du\\u0627d\\u0646 effects a relationship between the man at prayer and not the celestial spheres, but God, integrating and often sublimating the familiar conception of the power of the name (ism) over the one named (masamâma).

DUALISM [see KHURAMIYYA, THANAWIYYA, ZIYAD] (b.i.).

DUBAYES [see MAZYAD].

DUBAYTI [see RUBÀT].

DUBAYY (commonly spelled Dubai), a port (25° 16' N., 55° 18' E.) and shaykhdom on the Trucial Coast of Arabia. The town lies at the head of a winding creek (khawr) extending some eight miles inland; ferries ply between Dayra, the market quarter on the north-east bank, and al-Shandagha and Dubayy proper, quarters on the south-west bank. The population of the town, about 42,000, is predominantly Arab with some Iranians, Indians, and Balûcîs (Hay, 114). The Arab inhabitants of the principality comprise members of al-Sûdân, al-Marar, al-Ma\\u0627zarî, Aî Bû Mu\l liar, al-Hawâmîl, al-Kûmantân, al-Mahâribî, al-Sâbîyis, and Aî Bû Fâlîh, tribal groups considered components of Banî Yâs in the Persian Gulf area, as well as members of al-Manâsîr, primarily a Bedouin tribe. The ruling family, Aî Bû Falâsà, are members of al-Rawâshid and, like the majority of the inhabitants, are Mâlikîs.

The frontiers of the shaykhdom are not completely defined. The land boundary between the shaykhdoms of Dubayy and Abû Zaby has a coastal terminus between al-Dibâbi al-Àî (sometimes called al-Dibayy) and Khawr Ghanâd; the land boundary...
between the shaykhdoms of Dubayy and al-Shāriqa terminates just north-east of Dayra. Two small coastal villages, Umm al-Su‘aym and Dūmāyra, and the larger village of Ḥagjarayn, about 50 miles inland in Wādi Jā‘aştā and separated from the rest of the principality's territory, acknowledge the overlordship of the Ruler of Dubayy. Some date cultivation is practised, but water is scarce.

Little is known about Dubayy before 1213/1799 when it was first mentioned in available sources (Lorimer). Dubayy was considered a dependency of Ābū Zaby during the first third of the 19th century, with the exception of a period of several years after 1241/1825 when Shaykh Sulṭān b. Şāk of al-Kawāsīm, Ruler of al-Shāriqa, increased his influence over Dubayy by marrying a sister of its governor, Mūḥammad b. Ḥazza‘ b. Zā‘al (India, Selections, xxiv, 317).

Dubayy became an independent principality in 1229/1813 when about 500 members of Āl Bū Fālā‘ṣ, under the leadership of Maktūm b. Bāż b. Suhayyāl, left Ābū Zaby and took control of the settlement of Dubayy (al-Sāmīlī, 31). Rivalry between al-Kawāsīm and Bāni Yās for control of the shaykhdom continued throughout the 19th and early 20th centuries, but Dubayy preserved its independence by aligning itself sometimes with al-Shāriqa, sometimes with Ābū Zaby, and on occasion with the smaller shaykhdoms of ‘Ağmān and Umm al-Kaywāy. Dubayy increased in population and wealth, derived primarily from pearl fishing and entrepôt trade.

Like other Trucial States, Dubayy signed the General Treaty of Peace with Britain in 1235/1820 and the temporary Maritime Truce (later made perpetual) in 1251/1835 (see Ābū Zaby). In 1299/1882 the Ruler of Dubayy agreed not to establish relations with any foreign country except Britain without British consent, and in 1340/1922 he agreed not to grant rights to any oil found in his territory except to a person appointed by the British Government. The British Petroleum Exploration Company, Limited (formerly D'Arcy Exploration Company, Limited) holds a two-thirds interest, and Compagnie Française des Pétroles holds one-third interest in an offshore oil concession, while Petroleum Development (Trucial Coast), Limited, an Iraq Petroleum Company affiliate, holds an onshore concession. Until 1381/1961, no oil had been discovered.

The silting up of al-Shāriqa creek and the decline of Līnga [q.v.] have contributed to the recent prosperity of Dubayy. It exports pearls (a declining industry) and dried fish; it imports foodstuffs, textiles, and light machinery. A coastal route connects Dubayy with al-Shāriqa, nine miles to the north, and with Ābū Zaby town, about 80 miles to the south; desert tracks lead inland to al-Buraymi and to Muscat.

The administrative agencies of the shaykhdom have recently expanded and now include a Municipal Council, a Customs Administration, Courts, and Departments of Education, Health, Land Registration, and Water Supply. The town has a hospital, four schools for boys and two for girls, telegraph and telephone communications, regular mail service, and a small airport. The headquarters of the British Political Agent for all of the Trucial States except Ābū Zaby was transferred from al-Shāriqa to Dubayy in 1374/1954. The present (1962) Ruler of Dubayy is Shaykh Rāṣḥīd b. Sā‘līd b. Maktūm.

Berbers. Nevertheless, in the 19th century Debdu still possessed an autonomous administration; the Muslim population were dependents of the 'Amil of Taza. The year seen by his khatta (= receipt) was 1206. The Jews, while the Berbers. Nevertheless, in the 19th century Debdu still possessed an autonomous administration; the Muslim population were dependents of the 'Amil of Taza. The year seen by his khatta (= receipt) was 1206. The Jews, while the

Throughout the last centuries, Arab influence and the Arabic language have been dominant to such a degree that Berber is no longer used except in the surrounding mountains. The dialect of the Jews presents some interesting features (see Ch. Pellat, [see HARIR].

The tambourine of Islamic peoples may be divided into seven distinct types: 1. The rectangular form; 2. The simple round form; 3. The round form with jingling plates; 4. The round form with jingling rings; 5. The round form with small bells; 6. The round form with both jingling plates and jingling rings; 7. The round form with jingling plates and jingling plates.

1. The rectangular tambourine of modern times has two heads or skins with "snares" (aτατρ) stretched across the inside of the head or heads. We know from al-Mu'tarrazī (d. 670/1273) that the name duff was given both to a rectangular and to a round tambourine. According to the Arabic language of pre-Islamic Spain can be divided into two main types: 1. The rectangular form; 2. The simple round form; 3. The round form with jingling plates; 4. The round form with jingling rings; 5. The round form with small bells; 6. The round form with both jingling plates and jingling plates; 7. The round form with jingling plates and jingling plates.

1. The rectangular tambourine of modern times has two heads or skins with "snares" (aτατρ) stretched across the inside of the head or heads. We know from al-Mu'tarrazī (d. 670/1273) that the name duff was given both to a rectangular and to a round tambourine. As early as the 6th century A.D. we read of the duff in the poet Djabir b. Ḥuwayy and this was probably the rectangular instrument. The author of the Kashf al-nabīm says that the pre-Islamic tambourine (far dżhabīl) was different from the round Egyptian tambourine (duff misrī) of his day (fol. 193). Tuways, the first great musician in the days of Islam, played the duff murabbā or square tambourine (Aṣḥāni, i, 170). He belonged to the muḥammadīn and it was perhaps on that account that the rectangular tambourine was forbidden whilst the round form was allowed (al-Mu'tarrazī). At the same time the rectangular instrument was favoured by the dīth of Medina in the first century of Islam (al-Mufaddal b. Salamā, fol. 11).

We know also that the Syrians used this type of instrument since it is called r'dhi'ā (rectangular) in the Syrian version of the O.T. (Ezodus, xv, 20; judīth, iii, 7). To-day this form has fallen into desuetude in Arabia, Syria, and Persia, but may be found in the Maghrib. For designs see Christianwitsch, 32, pl. 11 where it is called a daff, and Höst, 262, Tab., xxxi, 11 where it is called a bandazyr. Actual specimens are to be found at Brussels, Nrs. 339, 340 (Mahillon, i, 400) and at New York, Nrs. 392, 1316 (Catalogue, ii, 52; iv, 50).

2. The simple round form. This was also called the daff (al-Mu'tarrazī) and it is said that this type, without jingling plates or bells, was considered "lawful" (Ewliya Čelebi, i, 226). Probably, this was the masbār or misbar of pre-Islamic and early Islamic times. It is true that Arabic lexicographers say that the misbar was a lute (ṣād), a definition borne out by Arabic writers on music (ʿIdār al-ṣārīr, iii, 186; al-Muṭafḍal b. Salamā, fol. 226, ʿIdār al-ṣārīr and al-ʿIntādā, fol. 131, Masʿūdī, Murādī, viii, 93) but it is extremely doubtful that the misbar or masbar was a lute. The mistake probably arose with an early lexicographer saying that "the misbar was a musical instrument (see the Mīṣbāh of al-Fayyūmī) like the ṣād (lute)" meaning "like the ṣād is a musical instrument". In the 11th century Glosarios Latino-Arabicorum the mazkar (502) or miskar (508) equates with tūfanum (tympanum). The type is still to be found under this name in Turkey (Lavignac, 3023) and in Palestine (ZDPV, i, 64, plate 8). The mazkar of Egypt has jingling rings attached to it.

3. The round form with "snares", This is similar to the preceding but with the addition of "snares" stretched across the inside of the head. We cannot be sure of its name in the early days of Islam but probably it was the ghirbāl, so-called because it was round like a sieve. Al-Ṣaghānī (d. 660/1261-2) says that this was the tambourine which was referred to by Muhammad when he said: "Publish ye the marriage, and beat for it the tambourine (ghirbāl)". Other accounts of this ghirbāl call this instrument the duff. In Algeria of modern times this type of instrument is known as the bandazyr or bandār, a name borrowed, seemingly, from the Arabic panderó, one of the instruments prevalent in Spain mentioned by Isidore of Seville. The bandazyr is
generally larger than the other types such as the duff, mazhar and tār, although in the Kashf al-

humum we read that tambourines were made in various sizes from the large tār (tār habir) to the small ḡarbāl (ḡarbāl ḍabhīk†). For the Egyptian instrument see Villoteau (1888), and for the Algerian see Christianowitsch (31, pl. 9), Delphin et Guin (37) and Lavignac (2931). In Morocco, according to Höst (261, pl. xxxi, 6), it was called the dīf (ديف). Actual specimens may be found at Brussels, Nrs. 308, 309 (Mahillon, i, 393, 400) and at New York, Nr. 452 (Catalogue, iii, 50).

4. The round form with jingling plates. This is similar to No. 2 but with the addition of several pairs of jingling plates (sunādī) fixed in openings in the shell or body of the instrument. This is the tār. Although the author of the Kashf al-
humum makes the name older than that of the duff, yet we have no substantial proof of this. We find the tār in the Yemen in the 6th/12th century (Kay, Yaman, 54) and in the 7th/13th century Vocabulista in Arabico it is given as tarr (= insignam). The Persian instrument is depicted by Kaempfer under the name of tār (741, fig. 7) and Niebuhr shows an Arabic example which he calls the duff (i, pl. 26). Höst (261, pl. xxxi) gives a design of a Moroccan instrument in the 12th/18th century under tīrā (تیر). In Algeria it is called the tār (Delphin et Guin, 42; cf. Taghbirat al-mizān, 93; Lavignac, 2844) and a design is given by Christianowitsch (pl. 10). The Egyptian tār is described and delineated by Villoteau (i, 988) and Lane (chap. xviii). Actual examples may be seen at Brussels, Nrs. 312-5 (Mahillon, i, 394-5) and New York, Nrs. 455, 1319, 1359 (Catalogue, iii, 51). In Egypt the smaller types were given the name of ḍīrīk (Villoteau, i, 989), by no means a modern name (Kashf al-humum, fol. 193). There are examples at Brussels, Nrs. 316, 317 (Mahillon, i, 395).

5. The round form with jingling rings. This is a similar instrument to the preceding but with jingling rings (ḏahlāḏīl) fixed in the shell or body instead of jingling plates. In Egypt, in the time of Villoteau (i, 988), it was known as the mazhar, but in Persia, a century earlier, Kaempfer calls it the ḍāʿirā (741, 4).

6. The round form with small bells. This is the same instrument as the preceding in regard to shape but the jingling apparatus, instead of being fixed in spaces in the shell or body, is attached to the inside of the shell or body. These small bells (adḏirās), often globular in shape like sonnettes, are sometimes attached to a metal or wooden rod fixed across the inside of the head. This instrument is popular in Persia and Central Asia where it is generally known as the ḍāʿira. An 11th/17th century instrument is shown by Kaempfer (741, 4). For a modern instrument see Lavignac (3976). Apparently ḍāʿira and duff became generic names for all types of the tambourine although the former must have been reserved for a round type.

7. The round form with both snares and jingling implements. In the Maghrib this instrument is called the ḍahāsāk (Delphin and Guin, 38, 65; Lavignac, 2932, 2944). In some parts, however, this type is called the ṭabla. In Egypt, according to Villoteau, it was the bandūyā.

If the drum (ṭabli) sounds the martial note of Islam, as Doughty once said, the tambourine sounds the social note. It is true that in the ḍāḥiliyya the tambourine was in the hands of the matrons and singing-girls (kānūdh) during the battle, sometimes in company with thereed-pipes (mīmār) as with the Jewish tribes (ʿAḏārān) to judge by the description (Haydar Mirzā, [q.v.]), a member of the tribe, provides information about them in his Taʻrikh-
DUGHLAT — DUKAYN AL-RADJIZ

Raghdi (ed. N. Elias and E. Denison Ross, London 1895). But his information is not everywhere reliable and, in the few places where the tribe is mentioned in other dynasties, contradicts the facts. According to Haydar a member of the Dughlat, Tulkic or perhaps his younger brother Bulaqi (the form Pulaudi printed in the edition of Abu ’l-Ghazz, 56 ft., does not appear in the manuscripts), is supposed in 748/1348-8 to have placed Khun Thughlu Temur on the throne at Aksu in the Tarim Basin. The latter in turn is supposed to have expressed his gratitude to the Dughlat by granting them “nine powers” and thus to have stabilized their power in the Tarim Basin. Haydar Dughlat claims to have seen this document “in the Mongol language and script” in his childhood, but says that it was lost during the reign of Shaybani Khân, d. 916/1510 [q.v.] (Ta’rikh-i Raghi, 54 ft., 305). But the inaccurate chronology of this historian in the pertinent notices tends to provoke strong doubt as to the genuineness of the document. Between 769/1368 and 794/1392 (?) power in Mogholistan (as eastern interior Asia starting at about Semiryce was at that time called) was wielded by Kamar al-Din Dughlat (Zharaf al-Din Yazdi, Zafer-name, ed. Bibl. Ind., Calcutta 1887-8, i, 78 ft.), a brother of Bulaqi according to the Ta’rikh-i Raghi. After an early period of cooperation with Ulugh Tughlu (q.v.) he was forced by the latter, after a long struggle, to flee across the Irtish into the Altai (Yazdi, i, 494 ft.). Two of his brothers remained in the service of Timur (Yazdi, i, 104 ff., 505). His younger brother Buladil (the form Puladil according to other sources, contradicts these. According to the historian Muhammad Haydar Mirza, left in 1541 his position as governor of Ladakh in the service of the ruler of the Tarim Basin to proclaim his independence in Kashmîr (see Haydar Mirza). With the elimination of this line and the end of Abû Bakr’s (see above) rule in 920/1514, the independence of the Dughlat in the Tarim Basin came to an end. They continued to support the Cingizids there and wielded considerable power into the 17th century.

A tributary of the “Great Horde” of Kazakhks between the II and the Jaxartes bore the name Dulał into the 20th century, obviously derived from Dughlat. At the end of the 19th century, they included almost 40,000 tents (see N. Aristov, Zametki ob etnoloskom sostave Tyuruskikh plemen i narodnostey, St. Petersburg 1897, 77).

Paris 1945); idem, Four studies on the history of Central Asia, tr. V. Minorsky, i, 1956, 54; R. Grousset, L’Empire des steppes, Paris 1939, index; P. P. Ivanov, Ocherki po istorii Sredney Asii (Outlines of the history of Central Asia), Moscow 1958, i and ii; B. Spuler, in Handbuch der Orientalistik, volume v, 5, index. The last two works named contain further detailed bibliography.

DUGHÂ (Ar.), “forenoon”, the hour of one of the prayers [see SALÂT].

DUKAYN AL-RADJIZ, the name of two poets who were confused by Ibn Kutayba (Shârîf, Zafar-nâmeh, ed. Bibl. Ind., Calcutta 1887-8, i, 78 ft.), his two sons being named Dukayn (Ta’rikh-i Raghi 100). His eldest son Muhammad Shakhs appointed tribal chief (Ulus Begi) by Khân Wa’Is (ca. 1418-29) and took up residence in Semiryce (Ta’rikh-i Raghi 78). His younger son was driven out of the western Tarim Basin by the Timurids (1416? Samarkand in I. Rashidi, Ta’rikh-i Rashidi 78, 99). He was succeeded by his two sons Sâiniz Mirzâ (until 869/1464-5) and Muhammad Haydar (until 885/1480), both of whom performed great services in the development of the region. Then Abû Bakr Mirzâ, the son of Sâiniz, drove his uncle and Khân Yûns of Mogholistan out of the western Tarim Basin, after which he took up residence in Yarkand and defended himself in 904/1509 against an attack by the Khâns of Mogholistan. Not until 920/1514 was he eliminated by Sa’îd Khân (Ta’rikh-i Raghi 293).

In addition to the principal line other branches of the Dughlat repeatedly established small principalities, occasionally at war with the former. Muhammad, the great-grandfather of the historian Muhammad Haydar, fought in alliance with the Cingizids Yûns and with the Timurids Ahmad Mirzâ against Abû Bakr Mirzâ (see above). His sons Muhammad Husain and SAYYID Muhammad Mirzâ vacillated continuously between the two dynasties and were even from time to time in the service of the Uzbeks. The former was finally killed in Herat at the command of Shaybani [q.v.] in 914/1508-9. His brother fell victim in 1533 to the hatred of Khân Abû al-Ra’dhi of Mogholistan, who had come to power in the same year (Ta’rikh-i Raghi 106 ft., 305, 450). Muhammad Husayn’s son, the historian Muhammad Haydar Mirzâ, left in 1541 his position as governor of Ladakh in the service of the ruler of the Tarim Basin to proclaim his independence in Kashmîr (see Haydar Mirzâ). With the elimination of this line and the end of Abû Bakr’s (see above) rule in 920/1514, the independence of the Dughlat in the Tarim Basin came to an end. They continued to support the Cingizids there and wielded considerable power into the 17th century.

A tributary of the “Great Horde” of Kazakhks between the III and the Jaxartes bore the name Dulał into the 20th century, obviously derived from Dughlat. At the end of the 19th century, they included almost 40,000 tents (see N. Aristov, Zametki ob etnoloskom sostave Tyuruskikh plemen i narodnostey, St. Petersburg 1897, 77).

Bibliography: the sources are mentioned above. Studies include W. Brass, Zu den Vorleisungen über die Geschichte der Türkischen Mitteleuropa, Berlin 1935, 209-14 (French tr. Paris 1945); idem, Four studies on the history of Central Asia, tr. V. Minorsky, i, 1956, 54; R. Grousset, L’Empire des steppes, Paris 1939, index; P. P. Ivanov, Ocherki po istorii Sredney Asii (Outlines of the history of Central Asia), Moscow 1958, i and ii; B. Spuler, in Handbuch der Orientalistik, volume v, 5, index. The last two works named contain further detailed bibliography.

(D. BARTHOLD-[B. SPULER])
Abū Dula...
bitumen deposits. The tribe has a record of bad relations with the Shammar of the Dżdżara, and of friendliness with the 'Anaza in the Syrian desert; but tribal disorders on the borders of military posts and khāns in the 13th/19th century. The tribal area was occupied by the British in 1917, and insurgent action in the turbulent year 1920 was limited to one section of the tribe. Since then, settlement and prosperity have increased.

The tribe has given its name to the Dulaym iteq (province) of Irāq (population in 1947, 193,000) which, with headquarters at Ramādi, contains the kūdeṣ of Safā, Fallājāda and Ramādi.

(S. H. LONGRIGG)

DULDUL, the name of the grey mule of the Prophet, which had been given to him by the Mu'akwīs [q.v.], at the same time as the ass called Ya'ṣūr/ Ufayr. After serving as his mount during his campaigns, she survived him and died at Yanbu' so old and weather-beaten in tooth and foot that he had to be put into her mouth. According to the Shi'ī tradition, 'Alī rode upon her at the battle of the Camel [see DILJAMAL] and at Siffin. As Duldul in Arabic means a porcupine, it is possible that she derived her name from her gait, but this is far from certain. For the names of the horses of the Prophet, see G. Levi Della Vida, Les "livres des chevaux", Leiden 1928, 8, 51; for his she-camels al-'Aqūba' and al-Kawsā', see al-Dājīḥi, Hayawan, index.

AL-DULFİN [see NUDJUM]

DULŪK, the name given by the Arab authors to a hawza named on the borders of Anatolia and Syria, in the upper valley of the Nahr Karzin, at the foot of the Anti-Taurus (Kurd nişābūr), north-west of ʿAynātāb. It was the ancient Dolichce, famous for the cult of a Semitic divinity who in the Graeco-Roman period received the name of Zeus Dolichenos. Being at the intersection of the routes from Germanicia, Nicopolis and Zeugma, it had been conquered by ʿĪyād b. Ḍānim and became one of the fortresses which since the earliest days of Islam had defended the frontier against the Byzantines (cf. the verse of ʿAdī b. al-Rikān in Yākūt, ii, 583, and Nöldeke's remark in ZDMG, xlv, 700); it belonged to the ḍumad of Kinnasrin before being incorporated in the territory of the āwāsim [q.v.] organized by Ḥārūn al-Rashīd. Dulūk also played a part in the Hamdanid-Byzantine wars at the time of Sayf al-Dawla and Abū Fīrās, and was conquered by the Byzantines in 351/962 (Ibn al-ʿAthir, viii, 404), the year in which Abū Fīrās [q.v.] was captured. The citadel at this time was supplied with water by an important aqueduct, and it was surrounded by rich orchards.

Having become during the Crusades the seat of a bishop of the province of Edessa (under the name of Tulup), it was the theatre for numerous engagements between the Turks and the Crusaders. In 1350/1931, a Turkish village named near the Syrian border, and in that of Tell Dūlūk situated to the south of this locality where there is now a monument erected for a waḍī.

(D. SOURDEL)

DUMAT AL-DJANDAL, an oasis at the head of the Wādī Sīrāh, which runs from south-east to north-west, linking central Arabia on one side and the mountainous region of Hādath and Syria on the other; it is thus situated on the most direct route between Medina and Damascus, being about 15 days' journey on foot from the former and about 7 days or rather more from the latter. The Oasis is in a ghāṭa" ["depression"] or ḥadbā ["vast, low-lying area"], the length of which, according to Yākūt, is 5 parasangs or, in modern terms, according to Hālīs Wahba, 3 miles, the width half a mile and the depth 500 feet below the level of the desert surrounding it. The morphology of the region has brought about a change in the name of the oasis which, at least since the last century, has become al-Dīwāf (el-Dīf), "vast depression", "round basin", "flat, spongy floor of a valley or region in which water collects". Yākūt, who describes the locality at some length, is unaware of this change in the name.

Dūmā (the spelling Dawmā is not acceptable) is perhaps an Aramaic word: according to the ancient Arab scholars Ibn al-Kalbī and al-Zaidījdī, this term derives from one of the sons of Ismāʿīl (Dūm or Dūmān or Dūmā): incidentally the name Dūmāh also occurs in the Bible (Genesis, xxv, 14; Chronicles, i, 30) as the name of an Ishmaelite tribe. The Arab writers say that, as the Thāmāhī no longer provided sufficient grazing for the too numerous Ismāʿīlī clan, the son mentioned above emigrated to this region which took its name Dūma from him, and there he built a fortress. In fact, a fortress was already in existence before Islam at Dūmat al-Djandal, and its name Mārid is mentioned in an ancient proverb deriving from a phrase said to have been uttered by al-Zahhābī (lammaraḍa Mārid wa ʿazza al-Abāh). The remains of an ancient fortress still survived in the last century, and Euting made a sketch of them in 1883. The fortress was built of stone and in addition there stood around it a wall also of stone; it was on account of these constructions that Dūma was given the additional epithet al-Djandal, a common noun signifying "stone". In the pre-Islamic period the idol Wādī was worshipped there.

Yākūt, in his geographers, tells us that three places bore the name Dūma, one near al-Hira, another near al-Hira,
and the one with which we are concerned, in northern Arabia. This identity of names has given rise to confusion in certain Arab historical sources; and there has been a tendency to ascribe to Dumat al-Djandal events which took place in the other localities.

The inhabitants of Dumat al-Djandal were the Banū Kināna, for the greater part of this sub-tribe of the Banū Kalb had, before Islam, spread into the desert of al-Samawa in northern Arabia, from the plain of Dumat al-Djandal in the north as far as the two mountains of the Tayy (Aḍja‘ and Salmā) in the south. This territory had been allotted to them as their pasturages at a general assembly of the Kalb, held in order to put an end to a civil war between two groups (F. Wüstenfeld, Register, s.v. Kalb b. Wabara; cf. al-Bakrī, Muḍjam, 33 ff.). But in the oasis itself a certain number of the ‘Ibād of al-Hira had settled (in Balāḏūrī, the name appears as ‘Ībād al-Kūfīya‘, but De Goeje corrected it to ‘Ībād al-Hīra), that is to say a certain number of Christians who lived in that town and who were distinct from the Taḥkīk, nomads from the surrounding districts. It may be conjectured that these ‘Ibād in the oasis practised trade as well as agriculture, for Dumat al-Djandal was one of the principal markets of northern Arabia. The oasis of Dumat al-Djandal enjoys a certain fame in the annals of ancient Islam, particularly on account of the three expeditions undertaken by Muhammad to conquer it; the first, in 5/626, led by the Prophet himself, achieved no results since the inhabitants of the oasis scattered before he arrived; the second, in 6/627-8, commanded by ‘Abd al-Rahmān b. ‘Afwī, brought about the conversion to Islam of the chief al-Aṣbaqā‘ī, (son of a chief of the tribe), probably an error; b. ‘Amr al-Kalbī; the third was organized by Muhammad at Tabūk and entrusted to Khālid b. al-Walīd. The latter took possession of the town, levied a heavy war indemnity on the population and compelled the chief Ukaydīr b. ‘Abd al-Malik al-Kindī al-Ṣakūnī (q.v.) to go to Medina to conclude a treaty with the Prophet; the text of the treaty is not preserved, al-Ṭabārī, with interpolations (al-Balāḏūrī, Futūḥ, II, 61 ff.; Ibn Sa‘d, i, 2, 36 ff.; Ṭākūt, ii, 627; see also M. Hamidallah, Waṭṭābī, i, 191; Wellhausen, Skitten und Vorarbeiten, iv, 133, n. 3, 404 n. 1; Caetani, Annali, 9 A.H. and 45, note 3). The difference in the names of the chiefs with whom the Muslims had to deal in 6 and 9, the difference in origin of these chiefs, one Kalbī the other Kindī, the diversity of certain details in traditions relating to Ukaydīr, led De Goeje to raise questions and Caetani to express doubts which appear to be excessive. In reality, various difficulties can be overcome if one distinguishes the Kalbī, nomads inhabiting a vast area and having their own chiefs, from the population of the oasis which was sedentary and composed of agricultural workers, merchants and artisans, and had immigrated even before Muhammad’s expeditions, as moreover al-Mas‘ūdī confirms (Tabābī, 248). In the account relating to Ukaydīr it should be noted that, according to al-Balāḏūrī (Futūḥ, 62) and Ṭākūt (ii, 626 ff.), Ukaydīr is said to have called his dwelling in Ṭarīq Dūma, in remembrance of Dumat al-Djandal, after leaving the oasis; another tradition also preserved by al-Balāḏūrī (ibid., 63) and Ṭākūt (ii, 627) relates on the contrary that Ukaydīr called the Arabian oasis Dumat al-Djandal in order to distinguish it from the Dūma near al-Hīra from which he came, but the first tradition appears to be the more probable, since there are grounds for maintaining that the name Dūma borne by the oasis is an ancient one.

References to Dumat al-Djandal occur in certain sources in connexion with the celebrated crossing of the desert made by Khālid b. al-Walīd in 12/633. Having been asked to rejoin the Muslim forces in Syria as soon as possible since they were in danger, Khālid set out, and is said to have attacked Dumat al-Djandal and killed Ukaydīr. De Goeje (op. cit., 15 ff.) considers al-Djandal here to be an interpolation, and supposes that the Dūma referred to by the sources is Dūma of al-Hīra; it seems impossible that Khālid could have made such a detour which would have taken him so far out of his way while delaying the accomplishment of his mission. De Goeje’s argument is very logical, and it has been accepted by Mednikov (Palestina, i, 453 ff.) and Caetani, so that the murder of Ukaydīr, if murder it was, would have taken place in Ṭarīq. Let us also add that ‘Amr b. c-Aṣ was ordered during the ridda to fight the Kalbī Wādī‘a who had revolted with some of the Kalb and entrenched himself at Dumat al-Djandal, whilst al-Aṣbaqā‘ī’s son had remained faithful to Islam (al-Tabārī, i, 1872, 1880); it was perhaps ‘Amr who conquered Dumat al-Djandal, but it is also possible to attribute this feat to Ṭayy b. ‘Amr. In fact, the latter, on an expedition under his command set out from Medina with this objective but ran into difficulties, but it is also related that Ṭayy was governing the oasis in 13/634 (al-Tabārī, i, 2136). In the same way, it was at neither Dumat al-Djandal nor Dūma near al-Hīra, but at Dūma near Damascus that, according to De Goeje (ibid., 16 ff.), the fair Laylā, the daughter of al-Dūmah, was governing of the oasis, and Mu‘āwiya, and it was there that they were to announce their verdict; but some sources place the meeting at Ṭadhrib (q.v.), and it has been explained supra, s.v. ʿAlī b. Aḥbār Ṭalḥa, that in fact there were two meetings, on different dates, one at Dumat al-Djandal and the other some months later and in very different circumstances, at Ṭadhrib (this point being established, the sequence of events becomes clear and the highly complicated question of their chronology becomes soluble). One of the actions which Mu‘āwiya took to harass ʿAlī was to dispatch a force to Dumat al-Djandal in 39/660; ʿAlī succeeded in driving it out, but the inhabitants of the oasis refused to recognize either his authority or Mu‘āwiya’s. When the centre of the Muslim empire was set up in Syria, under the Umayyads, and in ʿIrāk, under the ʿAbbāsids, Dumat al-Djandal lost all its importance; from then onwards it was no more than an oasis in Arabia inhabited by a poor sparse population of agricultural workers, since trade henceforth followed other routes; the Arab geographers in fact do no more than relate the historical events described above and quote from the verses of ancient poets.

We know that during the last centuries of Ottoman domination in northern Arabia anarchy was general and the situation only improved when the Wahhābīs imposed their authority over the country. They also
took possession of Dūmat al-Djandal which belonged to them until the time of Ta'llal, amir of Shammar, of the Āl Rašid, for in 1853 it became a dependency of Hāyāl. In 1909 it was occupied by Ibn Sa'ūd, chief of the Ruwālah tribes, in 1920 the amir of Shammar recovered possession of it, and finally ʿAbd al-ʿAzīz Ibn Saʿūd, when he overthrew the amirate of Shammar, added it to his domains (1921). Immediately afterwards, Transjordania attempted to move her frontier southwards to Nafūd, but Ibn Saʿūd held firm and at the Congress of al-Kuwayt (1923-4) the question was not resolved. Ibn Saʿūd also made incursions into Transjordania, within the framework of his much wider activities against the Hijāj and ʿIrāk. The frontier was established by the Ḥadda Agreement between Ibn Saʿūd and Sir G. Clayton (2 November 1925), and the Wādī Sirhān along with al-Djawi [q.v.] and Kurayyat al-Milh thenceforward became part of Najḍ (OM, i-viii (1922-8), index).

The nomadic or semi-nomadic tribes who inhabit the region between Ta'yma2 in the south as far as Kerak in the north, Nafūd and Wādī Sirhān in the east are grouped under the collective name of al-Kuwayt [q.v.]. During the last century several European travellers visited the oasis; an account of their explorations will be found in Hogarth.

DUNAYA (Ar.), the feminine of the elative adjective meaning 'nearer, nearest', is used in the Kurʾān, often combined with 'life' to mean this world. It had more or less this sense before Islam (Noelleke, Muʿallalahi ʿAmr und des Ḥārisīh, 49). The heaven of the dunyā is the lowest of the seven; dunyā is what is contained in the succession of night and day, is overshadowed by the sky and upheld by the earth, is all that the eye can see, the world of the seen (gahādā). In the realm of the spirit it includes all that Christians mean by the world and the flesh and it denotes the part of existence which is governed by desire or desire, even speech with friends, so long as they are not aimed at the service of God. Denial of the dunyā means putting less trust in what is in your own power than in what is in the hand of God. All this is only a development of what is said in the Kurʾān: Those who buy this world at the price of the hereafter (sūra II, 80/86) and, The hereafter is better (sūra LXXVII, 16). The truly religious man will have no desires (Muhammad b. al-Ḥāmid, Zayyāt, al-Kašākib al-sayyūrā, 130), and an extreme statement is ascribed to the prophet: Grant to one who loves me and obeys me little wealth and few children and to one who hates me and does not obey me much wealth and many children. At the judgement the dunyā will appear as a horrid old hag and will be cast into the fire (Ghazzālī, Ḥukumat al-Dīn (1312 A.H.), 3, 54, 148) an idea which contradicts the fundamental thought of Islam.

Without going into legal details, the dunyā consists of things allowed and things forbidden. Good Muslims avoided what was forbidden but many carried scruple to excess, e.g., by refusing to eat the food of one who might have made some money by sharp practice in trade or by acting as a government servant. Asceticism was often considered good in itself and some went so far as to say: Entrust your affairs to God and take your rest.

Bibliography: see ʿĀHĪRA, and in addition: Iṣbāḥī, al-Mustaṭara, last chapter.

DURAYD B. AL-ŠIMMA, ancient Arabic poet and leader of the Banū Dišshām b. Muṣrawīya, one of the most powerful Bedouin opponents of Muḥammad, born ca. 530. He is a prominent figure of Arabic pre-Islamic antiquity: later generations, ...
he was the embodiment of ancient paganism which fought stubbornly against Islam.

His father was Muʿawiyah b. al-Harīth, called al-Šimma, leader of the Banū Dughjan b. Muʿawiyah, who belonged to the group of the Hawāzin tribes, and lived between Mecca and Tāʾif. Despite the similarity in their religion, and their economic, political and social ties, there was an ancient rivalry between these two places, which also concerned the Bedouin tribes who lived between Mecca and Tāʾif. This antagonism was caused by the contrast between the urban Kuraysh, and the pre-Islamic nomad Hawāzin, the difference of their cultural standing, and their different economic and political conditions. This period of the Hijāz was characterized by the resultant battles. These disturbances are known as the battles of al-Fidjar.

Durayd b. al-Šimma did not take part in these battles for personal reasons arising from his links with the Kināna tribes, although he himself had fought earlier against the Kināna, and although his father had played an important part in the Fidjar war.

He did, on the other hand, play an important part in the battles between Hawāzin and Ghatafān, where he lost his two brothers ʿAbd al-Yaghūt and ʿAbd Allāh. It was particularly the death of ʿAbd Allāh which resulted in the renewed enmity and battles, in which the tribe of the Banū Dughjan again played a prominent part. It was the duty of Durayd b. al-Šimma to avenge his brother's death, and he fulfilled this duty in numerous raids against the Ghatafān.

Friendly ties linked him with Banū Sulaym. He also asked for the hand of the young poetess al-Khansa, if he was the instigator of the alliance—which never materialized—between the Hawāzin and the Kuraysh. After Muḥammad had left for his last battle against Mecca, the Hawāzin, the Thakīf, and the predominantly nomadic Hawāzin, the difference of their cultural standing, and the different economic and political conditions. This period of the Hijāz was characterized by the resultant battles. These disturbances are known as the battles of al-Fidjar.

vii, 778-9 (detailed notice with several quotations). For rods, staffs, etc., see ʿANAZA, i; ʿAṢAFA; KADĪN; ʿABDALLĀH AL-DURRĀNĪ (J. BOWEN-PAGE, Al-DURRĀNĪ, the pearl. The ancient legend of its origin is found at great length in the Arabic authors, first in the Petrology (Steinbuch, ed. Ruska) of Aristotle, then with variants in the Rāṣīāʿī ʿIkwān al-Šafā and the later cosmographers. According to it, the ʾaṣūrūs (ʾorṭoρευω) rises from the depths of the sea frequented by ships and goes out to the ocean. The winds there set up a shower of spray and the shells opened to receive drops from this; when it is collected a few drops it goes to a secluded spot and exposes the drops morning and evening to the breeze and the gentle heat of the sun until they ripen. It then returns to the depths of the sea where it takes root on the sea-bed and becomes a plant. If the sun or the air reach it at midday or in the night the pearls are destroyed; they are also ruined if they stay too long at the bottom of the sea, just as over-ripe dates lose their beauty and flavour.

Scattered among these fables we find a few real facts and critical observations, for example the statement that the shells, though rough and unclean outside, are smooth and brilliant within, or that the substance composing the pearl is identical with that which lines the interior of the shell, which points to its being produced from the lacrimation of the animal. The fact that it is also found in the oyster’s egg or with the child in its mother’s womb. Of particular interest is the statement that there is a worm in the pearl, since it is now established that pearls are formed by the oyster when parasitic worms are present.

Masʿūdī gives us the earliest account of the provenance of pearls in various parts of the Indian Ocean and of the pearl-fisheries in the Persian Gulf; in the Murūdī he refers to an earlier work of his in which he appears to have drawn upon Yahya b. Masawayh’s book on stones, which was extracted from al-Safdī al-Dimashkī in its mother’s womb. Of particular interest is the statement that there is a worm in the pearl, since it is now established that pearls are formed by the oyster when parasitic worms are present.

Of particular interest is the statement that there is a worm in the pearl, since it is now established that pearls are formed by the oyster when parasitic worms are present.
the power of the Durrani chiefs was further eroded by their virtual exclusion from administration and military employment, and by steadily increasing taxation and the government control of water distribution. This policy was continued after the incorporation of Kandahar into the Kabul dominions. Its success always varied inversely to the distance from Kandahar.

There is no recent information available about Durrani clan divisions and it is supposed that these have tended to be obliterated with settlement. There is information about the important period down to the mid-19th century. According to Elphinstone the tribe was nominally divided into two branches (Zirak and Pandjpay), although from an early period this division had lost all importance except to indicate the descent of the clans. The clans of the Zirak branch were the more powerful and wealthy. The Zirak branch included three important clans, those of Popalzay, 'Allokozy and Barakzay. The Akakays of the northern slopes of the Khudja Amran range in the Quetta-Pishin district of West Pakistan are a branch of the Barakzyas, supposedly separated by Ahmad Shah. According to Elphinstone the Pandjpay clans were those of Nurzay, 'Alizay, Ishakzay, Khugani, and Maku. There is little information about the last two although they still appeared as distinct entities on the Kandahar tax returns as late as 1784. The other Pandjpay clans lived principally in the more westerly areas—the 'Alizays in the fertile province of Zamin-dwar, where they settled in the early 19th century, the Ishakzays in Garmir on the lower Helmand and the Nurzays, who continued to live as nomads later also were found on the Halmand, and the Popalzays in other areas as well.

The clans of the Zirak branch, who were of the 18th-19th family of Ottoman descent of the clans, were the more powerful and wealthy. The Zirak branch included three important clans, those of Popalzay, 'Allokozy and Barakzay. The Akakays of the northern slopes of the Khudja Amran range in the Quetta-Pishin district of West Pakistan are a branch of the Barakzyas, supposedly separated by Ahmad Shah. The other Pandjpay clans lived principally in the more westerly areas—the 'Alizays in the fertile province of Zamin-dwar, where they settled in the early 19th century, the Ishakzays in Garmir on the lower Helmand and the Nurzays, who continued to live as nomads later also were found on the Halmand, and the Popalzays in other areas as well, e.g., the Barakzyas who originally settled in the Arghasun valley, south of Kandahar, also were found on the Helmand, and the Popalzays of the lower Tarnak and Arghasun valleys also moved into Tirin and the other districts in the hills north of Kandahar. The 'Allokozy lived in the Tarnak valley as far as Djaldak on the borders of the Ghilzays country and also were found down the Helmand as far as the Helmand. The various clans were divided into sub-groups, e.g., the Popalzays included the royal family of the Sadozays and possibly also the Bamaizays. These sub-groups, like some of the clans themselves, sometimes decayed or amalgamated to form new groups.

(To be continued.)

DURRIZADE, the patronymic of a famous family of Ottoman 'ulema of the 18th-19th centuries, five members of which attained the office of Shaykh-al-Islam (q.v.) on no less than nine different occasions between the years 1734 and 1815. Only these latter can be dealt with here, and details must be confined to the periods of their meshikhat, which, unless otherwise stated, was reached by the normal process through the offices of 'Adil-i Istanbul, 'Adil-i 'Askar of Anadolu and 'Adil-i 'Askar of Rumi. The second and last of these was a certain Ilyas, his date and place of birth are unknown. (The statement in the Sidilli-i 'Othmani that he was a native of Ankara probably derives from a misreading of the Dewah. While 'Adil-i 'Askar of Rumi for the second time, he was appointed Shaykh-al-Islam on 3 Djumada I H1181/26 January 1766, he was dismissed from office on the death of the incumbent Iskh Nd Efendi. In Shawkal 1148/February-March 1736 he was stricken with apoplexy, which in Dhu 'l-Hijja-April-May of the same year compelled him to retire from office. He died at his home in Usikdar in 1149/1736-7 and was buried in the cemetery of Karada Ahmed. (Subhi, 63b, 71b).

2. DURRIZADE MUSTAFA EFENDI. The son of the above by the daughter of the former 'Adil-i 'Askar 'Abd al-Kadir Efendi, he was born in 1127/1715. After having been 'Adil-i 'Askar of Rumi twice, he was appointed Shaykh-al-Islam on 21 Shawkal 1169/19 July 1756, but on 28 Djumada I of the following year (18 February 1757) he was dismissed from office and exiled to Gallipoli. His second occupancy of this office came on 5 Shawkal 1175/29 April 1762 and lasted until 24 Dhu 'l-Kada 1180/23 April 1767; and on 15 Dhu 'l-Hijja 1187/27 February 1774 he was appointed for a third time. Infirm with old age, he retired on 22 Rajab 1188/28 September 1774 and died the same year on 7 Dhu 'l-Hijja 1188/14 February 1775. He was married to the daughter of the former Shaykh-al-Islam Pashmakzade 'Abd Allah Efendi of a family claiming descent from the Khudja Afzal of the Kandahar beydd. In the cemetery of Karada Ahmed he retained the title of Dervis. In 1179/1765-6 he restored the mosque at Yefli Kapl (Hadikat ul-dewdmi, i, 237), and would also have appeared to have founded a family burial ground outside Edirne Kapl in the vicinity of the fountain of Laflzade. A work on the entitled Durr-i beydd is ascribed to him ('Othmanil muellifleri, i, 308), and his translation of a short Arabic tract is to be found in a manuscript in Topkapi, Emanet Hazinesi, no. 1308. (Wafa, i, 83a, 91a, 210b, 2003; ii, 285a; Djetwed, i, 72, 78.)

3. DURRIZADE SEYVID MEHME 'ATIR ALLAH EFENDI. The second son of the above, he was born in 1142/1729-30. After having twice occupied the post of 'Adil-i 'Askar of Rumi, on 17 Djumada I 1097/20 May 1783 he was appointed Shaykh-al-Islam and he retained this office until 20 Djumada I H1097/31 March 1785 when, suspected of complicity with the Grand Vizier Khalil Hamed Pasha in a conspiracy to depose Sultan 'Abd al-Hamid I, he was dismissed and sent to Gallipoli with orders to go on the pilgrimage. However, he died here of some dropsical affliction soon after his arrival, and the news of his death reached Istanbul on 6 Rajab 1199/15 May 1785. (Djetwed, ii, 71, 209, 317; i. H. Uzuncarh, in T.M, v (1935), 251, refers to a rumour that he was poisoned.)

4. DURRIZADE SEYVID MEHME 'ARAIF EFENDI. The younger brother of the above, he was born in 1153/1740-1 and reached the post of 'Adil-i 'Askar of Rumi on 26 Ramadam 1198/13 August 1784. On 17 Shawkal 1199/23 August 1785 he was appointed Shaykh-al-Islam, but was dismissed from office on 10 Rabii i II 1200/10 February 1786 because of his political activities, and after being ordered to go on pilgrimage, he was forced to live in exile in Kutahya. He was permitted to return to Istanbul in 1205/1790-1 when his enemy the Shaykh-al-Islam Hamidzade Mustafat Efendi was discharged from office, and on 22 Dhu 'l-Kada 1206/12 July 1792 he was again appointed to the meshikhat. Being held in some way responsible for this act, he received some years later when Napoleon launched his invasion, he was replaced in office on 18 Rabii i 1213/30 August 1798.
and after a few months' exile in Bursa, he returned to Istanbul where he died on 20 Džumada I 1215/9 October 1800 and was buried at Eşreфи Kapı. A collection of his fetwaş in Topkapı Sarayi, Yeniiler, no. 4493; and no. 4783 in the same library is a notebook he kept of appointments and disposals of the ʿulema in the years 1209–13 (Dînewet, ii, 299, 331, 347, iv, 456, v, 181; vi, 57, 68, 174).

5. Dürrizade Seyvind ʿAbd Allâh Efendi. The son of the latter, the date of his birth is not recorded. While nakib ʿal-ʾesrâʾî and a nominee (payyilî) for the post of ḥâdis ʿl-ʾasker of Rumeli, on 3 Shawwal 1223/22 November 1808 he was appointed Shaykh al-Islâm, remaining in office until 22 Shawān 1225/22 September 1810. His second term in the meşhikhat began on 30 Džumada I 1227/12 June 1812 and lasted until 10 Rabîʿ II 1230/22 March 1815. He died on 3 Džumada I 1244/11 November 1828 and was buried near his great-grandfather in the cemetery of Karadja Ahmed (Şanîzâde, i, 146, 399; ii, 114, 239; Lutfî Efendi, ii, 153; Khîrî Ilyâs, 8).

Bibliography: Details of about forty members of this family in the post of the nakib ʿal-ʾesrâʾî and to this family in positions of varying importance in the learned profession can be traced through the following references to the Sîdîjî-i ʿOthmâni, though the caution must be given that no detail, and in particular dates, can be accepted without verification from another source: i, 336, 399; ii, 338, 396; iii, 146, 242, 267, 363, 396, 476; iv, 75, 444, 556 (Nûr Allâh Efendi, 627. Mustaṣûm-zâde Şüleymân Saʿîd al-Dirî Efendi (with the combinations of Mûmîn Efendi and Rıfaʿ Efendi), Dewayât ʿal-mesâlîk, litho., Istanbul n.d., 91 (text corrupt), 100, 108, 112. Specimens of the fetwaş issued by all the individuals mentioned in this article can be found in the ʿIlmiyye Şânîzâmesî, Istanbul 1334, 515, 529, 551, 553, 575; i. H. Danışmend, İslâhî Osmanlı tarîhi kronolojisi, iv, Istanbul 1961, index; i. H. Unucaşîlî, Osmanlı tarihî, 192, Ankara 1959, 472, 484, 501, 502; F. E. Karataç, Topkapı Sarayi Müzesi Kutûphanesi Türkiye yazmalar kâtosluğu, 2 vols., Istanbul 1961. The works mentioned in the article are: Mehmed Şuhi Efendi, Taʿrîhâ, Istanbul 1198; Ahmed Wâṣîf Efendi, Taʿrîh, 2 vols., Istanbul 1219; Ahmed Dînewet Pashâ, Taʿrîh, 12 vols., Istanbul 1270-1301; Ayvansarayî Hâfiz Hüseyn Efendi, Halefa ve iqtidî-ı hâlâtÎn, 2 vols., Istanbul 1281; Mehmed ʿAṭâʾ Allâh Şanîzâde, Taʿrîhâ, 4 vols., Istanbul 1280-1; Ahmed Lutfî Efendi, Taʿrîhâ, 8 vols., Istanbul 1290-1306; Khîrî Ilyâs Efendi, Waḥdâʾ-i letâfiʿ-i Enderûn, Istanbul 1276. (J. R. Walsh)

Dürrizade ʿAbd Allâh Bey or Efendi (1809-1923), one of the last Shaykh al-Islâm of the Ottoman Empire, known for his fetwaş condemning the Turkish nationalist movement under Mustaṣûm Kemâl (Atatürk). He was born into a wealthy family claiming the title of the seyyid, most of whose male members belonged to the ʿilmîyye class, and five of whom had previously served as Shaykh al-Islâm (see preceding article). The son of the last there mentioned, ʿAbd Allâh, was Dürrizâde Mehmed Efendi, who rose to the rank of Kâdîʾasker of Rumeli, and was the father of the ʿAbd Allâh with whom this article is concerned.

ʿAbd Allâh attended secular elementary and intermediate schools, then studied at the Fâtih medrese, receiving his ʿidâyet from Eginî Khodjâ İbrâhim Hakî Efendi (d. 1894), at the time under-secretary (müsteşâr) of the Mescihhat. He received his first appointment as müdderîs (ibtidâ-i ʾkhârîdî) in 1881, and joined the Mescihhat in 1886, where by 1893 he rose to the rank of mûdderîs of the Sîlêymânîye. In 1897 he left the ʿilmîyye service to rejoin it in 1901 as member of the council for Şarîʿa studies (Medîlis-i Tedbîkhât-ı Şerîyye), and later as kâdıʾasker of Anatolia. Dismissed after the 1908 revolution, he joined the Kemalists and we Teraşkî (q.v.) movement and devoted himself to civilian pursuits (from which period he became known as ʿBeyʿ). After the armistice of 1918 he was placed in charge of a committee examining religious publications, became under-secretary at the Mescihhat on 1 February 1920, and Shaykh al-Islâm in the third cabinet of Damâd Ferîd (q.v. on 3 April, less than three weeks after the unaffiliated Allied occupation of Istanbul. In this office he signed on 11 April 1920 four fetwaş, of which the main one referred to the Kemalists as certain civil persons (who) have allied and united and chosen for themselves leaders . . ., with fraud . . . are deceiving . . . the loyal Imperial subjects and without authority are rising up to arms against the rebels and threatened eternal punishment for deserters from such any army and earthly penalties for those disobeying orders in this fight against the rebels.

For a brief period ʿAbd Allâh also became acting Minister of Education and, during Damâd Ferîd's attendance at the Paris Peace Conference, acting Grand Vizier (ṣâdeʾ aṣsam wekîlî). He was dropped from the cabinet upon its reorganization on 30 July 1920. At the time of the final nationalist victory in September 1922 he left Turkey for Rhodes and then Italy. On 23 March 1923 he left for Mecca where he died on 30 April in the act of performing the pilgrim's prayers at the Kaʿba. Although he died before the signature of the Treaty of Lausanne he was placed on the list of 150 persons (Yûzelliückler) excluded from its amnesty provisions.

For the original text of the fetwaş see Taʾwûṣ-ı Wâhîyû no. 3834 of 11 April 1336. (Faik Reşit Ünât and Dankwart A. Rustow)
The faith originated in the closing years of the reign of al-Hākim (q.v.), Fātimid Caliph of Egypt (386-411/996-1021). According to the Isma'īlī Shi‘ī faith then officially received in Egypt, al-Hākim, as imām, was the divinely appointed and authoritative guardian of Islam, holding a position among men and in his religious policy, which flouted alternately the feelings of Isma‘īlīs and Sunni alike. In his last years he seems to have wished to be regarded as a divine figure, above any rank which official Isma‘īlīs were in fact given, and of whom about 300,000, living in various parts of Syria, especially in the mountains of the Lebanon, Anti-Lebanon, and Hawrān, chiefly as cultivators and landlords.

The paramount shaykh is called al-tamīma. Chiefs of divisions or sections other than those of al-Mahāmīd may be given the title of shaykh, but the usual title is rasīl (pl. rūshādān).

AL-DURÚZ -- DURÚZ

The origin of the tribe is unknown. The similarity in name with Āl Dir‘, relatives of Āl Sa‘ūd who formerly lived in Wadi Sayfam and neighbourhood, is probably without significance. A popular tradition of the south says that al-Durúz have the same origin as the tribe of al-Manāḥīf—thence from Bani (or Ahl) al-Zannu. The frequency of naming from the mother—jalūn b. julāna—may be an indication of southern origin.

The paramount shaykh is called al-tamīma. Chiefs of divisions or sections other than those of al-Mahāmīd may be given the title of shaykh, but the usual title is rasīl (pl. rūshādān).

giving the current imām, al-Hākim, a supernatural status as embodiment of al-Čakl al-kulli, the highest cosmic intellect. But his public activity (408/1017-8) caused disturbances and forced al-Hākim to be more cautious. In 410, however, al-Hākim gave his support to another leader, Ḥamza b. ʿAll [q.v.] of Sūza in Irān, who gave to the Hākim cult its definitive Druze form.

Ḥamza had begun his mission in 408/1017 (the first year of the Druze era—the second being 410, when the public mission was renewed) and claimed to have been the only authorized spokesman for al-Hākim from the first. In 410, after al-Darazi’s death, he tried to rally the whole movement under himself. His doctrine was evidently more original than al-Darazi’s. It was, like Ismā’īlī doctrine generally, a doctrine of cosmic emanation from the One and of return to the One through human gnosis. But it was unique in its special emphasis on the immediate presence of the cosmic One and made correspondingly rather less of the subordinate emanations. Hence Ḥamza called his own followers “unitarians” par excellence.

For Ḥamza, al-Hākim was no longer merely ūmām, however highly exalted. Ḥamza himself was the ūmām, the human guide, and therefore al-Čakl al-kulli, the first cosmic principle; while al-Hākim was the embodiment of the ultimate One, the Godhead who created the Intellect itself and was accordingly Himself beyond name or office, beyond even good or evil. Compared to Him, ʿAll and the Ismāʿīlī ūmāms as such were secondary figures (though, since the One is ever present even when unrevealed, some of the latter, together with several obscure figures from earlier times, had also been embodiments of the One in their time). In al-Hākim, the One was uniquely present openly in history. The contrasting extravagances of his life expressed the workings of the ultimately Powerful, Whose acts could not be called to account, though they always revealed a meaning to His ūmām, the ʿabl, the cosmic intellect, Ḥamza. Al-Hākim was the present makām, locus, of the Creator; only in knowledge of Him could men purify themselves. Accordingly, Ḥamza’s teaching was no longer strictly an extremist Ismāʿīlīm, though it made use of extremist Ismāʾīlī conceptions and language; it claimed to be an altogether more moderate religion superseding both the Sunni taṣṣal and the Ismāʾīlī tawʾil.

Ḥamza evidently looked to al-Hākim to introduce, by his caliphal power, the messianic culmination of history, forcing all men to discard the various symbolisms of the old revealed religions, including Ismāʾīlīm, and to worship the One alone, fully revealed clearly in al-Hākim. In preparation for al-Hākim’s decisive move, Ḥamza, as ūmām, built up his own organization within the Hākim-cult circles to spread the true doctrine. Like al-Hākim and Ḥamza himself, the members of this organization embodied cosmic principles. There were five great huddād, cosmic ranks, adopted in a modified form from Ismāʾīlī lore: the ʿabl (Ḥamza—identical with ʿShā薪酬il, the “true Adam” during the current historical cycle, during which the One is also known as al-Bār); the Naṣir al-Kulliyiya, Universal Soul (Ismāʾīl b. Muḥammad al-Tamīml); the Čalima, the Word (Muḥammad b. Wāḥb al-Kurāshī); the Right Wing or the Sāḥib, the Preceder, in Ismāʾīlīm identified with the ʿabl but here denoted (Ṣalāma b. ʿAbd al-Wahhāb); and the Left Wing or the Tālī, the Follower, in Ismāʾīlīm identified with the nafs (Abū ʿl-Ḥasan ʿAll b. Aḥmad al-Samūkī, called Bahā’ al-Dīn al-Muḫtānā). Below these five ranks were a number of dāʾīs, missionaries; maḏḏāḥs, licensed to preach; and muḥāṣirs, persuaders—embodying respectively the cosmic ġidd, effort; āfīh, opening; and ṭayyār, fantasy. Subordinated to these were the common believers. In al-Hākim’s case, whatever was regarded as was not the individual person, the embodiment, but the unifying principle of which the embodiment was merely the current veil; in the ordinary person this implied an eternally reincarnated soul. To one or another of these ranks were attributed most of the titles or concepts that figured in the complex Ismāʾīlī system. Despite this hierarchy, however, the immediate presence of the One was kept primary and remained so in later Druzism.

Ranged in opposition to these true huddād, and equally the creatures of al-Hākim as the ultimate One, were a series of false huddād, accounting for the dark side of the cosmos, and embodied likewise in men of al-Hākim’s time—for instance, in al-Hākim’s Ismāʾīlī officials, teachers of the misleading doctrines of the old faiths. The eschatological drama was seen as the conflict between Ḥamza as Kāʾīm al-saʿāmīn, Master of the Time, with his true huddād, who would at last be openly supported by al-Hākim, and these false teachers whom al-Hākim would openly abandon. The followers of the Hākim-cult, whether under al-Darazi or under Ḥamza, seem to have been eager to precipitate events by proclaiming abroad the abolition of all the old faiths, including the gharī’s law of Islam and its Ismāʾīlī āfall interpretation. Despite Ḥamza’s relative caution, insults to the established faith were offered publicly, with al-Hākim’s tacit support, and riots ensued. The innovators, who regarded themselves as emancipated from the gharī, were accused of every sort of gross immorality. The Hākim cult seems to have contributed heavily to the growing political crisis of al-Hākim’s last years.

When al-Hākim disappeared, late in 411/1021, Ḥamza announced that he had withdrawn to test his adherents and would soon return to manifest his full power, placing the sword of victory in Ḥamza’s own hands. Soon after, at the end of 411, Ḥamza himself withdrew, to return with al-Hākim. The faith then entered into a period corresponding to the little gharīya of the Twelve ʿShīʿīs, with the Tālī, Bahā’ al-Dīn al-Muḫtānā [q.v.], as link between the absent Ḥamza and the faithful.

After al-Hākim’s disappearance, the Hākim cult seems to have gradually ceased activity in Egypt, but to have afforded the ideology for a wave of peasant revolts in Syria. There proselytizing was pursued actively by a number of missionaries, some of whose names have been preserved; the movement gained control of some mountainous areas, where they are said to have torn down the mosques and established their own new system of law. Presumably they dispossessed the old landlords in favour of a free peasantry. In 423/1032 the amīr of Antioch, aided by the amīr of Aleppo, suppressed a group in the Djabāl al-Summāk which included peasants who had gathered there from the vicinity of Aleppo.

In the midst of the turmoil, al-Muḫtānā at Alexandria (who had been appointed Tālī only at the last minute, in 411) tried to maintain Ḥamza’s authority and his own. He was evidently in touch with the absent Ḥamza and was preparing for his momentary advent from the Yemen. He encouraged the rebels in the Djabāl al-Summāk after their defeat. His many pastoral letters—some directed not only to Syria but to contacts and converts in all
Ismā’ili communities, as far away as Sind—served meanwhile to lay down Druze orthodoxy. He had to struggle against more than one claimant to leadership, of whom Ibn al-Kurdi, aided by one Sikkîn, seems to have been the most prominent; some of these seem to have encouraged a wide moral licence which he condemned. But with the years the general movement faded away and the Syrian peasant revolt seemed hopelessly torn by dissension; at last al-Muţkânat discharged all his di‘âs and, sometime after 425/1034, himself withdrew from the faith, as had Hamza; though he continued to send out letters as late as 434/1042-3.

Despite al-Muţkânâ’s discouragement, his work became the basis of such of the movement as did survive. Later Druzes have supposed it was al-Muţkânâ himself who compiled one hundred and eleven letters, many of them on his own, some of them by Hamza and by Ismā‘îl al-Tamîmî, and certain pieces by al-Ḥâkim, into a canon which has since served as Druze scripture, called Rasâ‘îl al-Ḥikma, the Book of Wisdom. From the time of al-Muţkânâ’s withdrawal began a period, lasting to the present among the Syrian Druzes, of passive expectation of Hamza’s and al-Ḥâkim’s return, which has corresponded to the greater sha‘bûs of the Twelfth Shi‘îs. Hamza’s hierarchical organization, including the di‘âs and lesser ranks, fell into disuse and the scriptural canon has served as guide in place of the absent ḥudûd. Though al-Muţkânâ had insisted on continuing proselytizing as long as possible, on his withdrawal it ceased and it was taught that thenceforth no further conversion to the unitarian faith could be accepted. (To this ban there have been a few exceptions). The Druzes became a closed community, keeping their doctrines secret, frowning on intermarriage and permitting neither conversion nor apostasy, and governing themselves as far as possible in such mountain fastnesses as they had seized, notably in the Wâdî Taym Allâh by Mount Hermon. These converts from the Syrian peasantry, led—according to tradition—by certain families from old Arabian tribes, formed in time a homogeneous people with distinctive physical features and social customs, possessing their own distinct political and ruling families. The aristocratic families have been noted equally for their habits of lawless raiding, for their uncompromising hospitality, and for their strict moral discipline which spared, for instance, the women of those who plundered and which was merciless toward unchastity in Druze women. (There is little foundation for the long series of Western speculations which assigned to the Druzes one or another exotic racial source, such as Persia or France).

During this period of autonomous closed group life there appeared a new system of religious practice strongly contrasting to the hierarchism which had disappeared. We know of a number of writers on the gnostic cosmology and cyclical sacred history implied already by Hamza, and commentators on the scriptural canon, but it is not known just when the new system took full form, though this was presumably at least by the time of the great Druze moralist (whose tomb is revered by both Druzes and Christians), ‘Abd Allâh al-Tânîkî [see al-Tânîkî, ‘abd Allâh], d. 885/1480. By this system the Druze community has been divided into ḫukkî (sing. ḫîl), “sages” initiated into the truths of the faith, and ḫîdîhî (sing. ḫîdhî), “ignorants”, not initiated members of the community. (Those aristocratic notables who are not initiated may be distinguished from the ordinary ḫâkîlî in their character of amîr). Any adult Druze (man or woman) can be initiated if found worthy after considerable trial, but must thereafter fulfill a number of obligations: regular daily prayers, abstaining from all stimulants, from lying, from stealing, from revenge (including raiding in feuds), and so on. The ‘ukkîl are distinguished by a special dress with white turbans. As long as one is still a ḫâhî, he is permitted more personal indulgences, within the code of honour of the Druze community, but he cannot look to spiritual growth; however, if he fails to be initiated in a given lifetime he can expect a renewed opportunity in a future birth.

The more pious or learned of the ‘ukkîl are accorded special authority in the community as sha‘bûs. In addition to what is required of the ordinary ‘ukkîl, they must be very circumspect morally, not making use of goods of a dubious source, avoiding any excess in their daily behaviour, keeping themselves on good terms with all, and ready to make peace wherever there is a quarrel. In each Druze district some one of these sha‘bûs, normally chosen from a given family, is recognized as holding the highest religious authority, as ra‘îs. The sha‘bûs are trained in a special school; they spend much time in copying religious works and especially the spiritual retreats in khâla, houses of religious retirement, built in unfrequented spots; some have even devoted their whole lives to such retirement. Preferably any ḡîl should support himself with his hands, but the sha‘bûs are a fit object of alms by the ḫâhîl, nevertheless. They are expected to offer spiritual guidance to their ḫîdîhî neighbours, presiding at such occasions as weddings and funerals.

All the ḫâhîl attend at least some of the mādîlis services, held on the eve of Friday in starkly simple houses of worship, though ḫîdîhî have been admitted to the least secret of these, when moral homilies are read in classical Arabic. The ḫâhîl alone are permitted to read the more secret books of the faith and to participate in, or even know about, its secret rituals—which the Druzes have allowed the outside world to suppose involves a metallic figure of a calf in some way, whether as representing the human aspect of al-Ḥâkim or possibly the animality of Hamza’s enemies. (The neighbours of the Druzes have not been slow to accuse them of licentious orgies at their secret services).

Hamza and al-Muţkânâ prescribed a sevenfold set of commandments, replacing the Muslim “pillars of the faith”, which have become the basis of the moral discipline of the ‘ukkîl and to some degree of all Druzes. They must above all speak truth among the faithful (or at least keep silent, but never misrepresent), a commandment which includes truth in the theological sense; but lying to unbelievers is permitted in defence of themselves or of the faith. This first commandment covers also any act, such as stealing, which must entail lying. The second commandment is to defend and help one another, and seems to imply carrying arms for the purpose. The other commandments are to renounce all former religions; to dissociate themselves from unbelievers; to recognize the unity of Our Lord (Mawlânâ, the general title given al-Ḥâkim as the One) in all ages; to be content with whatever he does; and to submit to His orders, particularly as transmitted through His sha‘bûs. Hamza prescribed, in addition, special rules of justice and of personal status to replace the
shari'a, notably insisting on equality of treatment between husband and wife in marriage; thus divorce was penalized in either partner unless for good cause. This principle is grounded under the general guidance of the ' ukhlād, but it is strongly affected by the principle of religious dissimulation—that to protect the secrecy of his faith, a Druze must affect to accept the faith of those in power about him; that is, normally, Sunni Islam. Druzes have accepted the Hanafi legal system, though with modifications such as permission of more unlimited bequests and placing of limitations on divorce. They celebrate the ' id—though not the Ḥajjdī or the Ramadān fast; many families use circumcision (or baptism), but attach no religious meaning thereto; at funerals they may use Islamic formulas but the key feature is the blessing of the ṣayyākhs. Like Syrians of other faiths, they visit the shrines of Khiḍr [q.s.] and the tombs of the prophets and saints. Nevertheless, even the ḡuḍḥāl know, and may freely speak of, the principle of their unitarianism. They possess a developed doctrine of creation and eschatology, which is founded in the teachings of the ' ukhlād. The number of souls in existence is fixed, all souls being reincarnated immediately upon death (unless, having reached perfection, they ascend to the stars); those which believed in Hamza's time are always reincarnated as Druzes, either in Syria or in the supposed Druze community in China. The variety of incarnations each soul passes through gives a thorough moral testing. (Some of the ḡuḍḥāl believe in reincarnation of the wicked in lower animals). In the end, when al-Ḥākim and Hamza reappear to conquer and establish justice in the whole world, those Druzes who have shown up well will be the rulers of all mankind. The best will then descend nearest to God—a notion which the ' ukhlād understand, like much else, in a spiritual sense.

(iii) — OTTOMAN PERIOD

When the Ottoman and the Mamlūk armies met in battle at Mārdj Dabīk in 922/1516, the Druzes fought on both sides. The Buhturids from the west of the country fought on the side of the Mamlūks, while the Ma'ānids of Shīb supported the Ottomans by allying themselves to Ghazālī, the nā'īb of Damascus. Under the Ottomans, the Druzes were governed by local dynasties, of which the Al Tanūqī, the Ma'ānids and the Shībābids, and particularly the last two (for whose genealogy see Zambaur, i, 108 ff.) were the most important. At the battle of Mārdj Dabīk the Ma'ānids were led by the Amir Fakhr al-Dīn I, who at the crucial point changed sides, abandoning the Ma'ānids Kānsī al-Ghūrī and going over to Sultan Selim I in Damascus. The Sultan rewarded him with overlordship over the amirs of Mount Lebanon, the Al Tanūqī dynasty being confined to Sayyād and Sūr (Blau, Zur Geschichte Syriens, in ZDMG, viii (1854), 480 ff.). In 931/1524 Ma'ānī rule passed to Fakhr al-Dīn's son Köķmaz. Druze attacks against the Ottomans led in 952/1545 to a punitive expedition by İbrāhīm Paşa, the wāli of Egypt. The son of Köķmaz, the Amir Fakhr al-Dīn
II [q.v.] challenged the wall of Tripoli, Sayf-oghlu Yusuf Pasha. He had some initial successes, but was eventually forced to withdraw to the Mountain, after the defeat of the rebels in 1016/1607 in the battle between Kuyudju Murad Pasha and Djanbulat-oghlu, the importance of whose family among the Druzes dates from this time. The Druze alliance dissolved as a result of the expeditions led by land the wall of Damascus, Hafîz Pasha, and by sea by the Kapudan Pasha Öküz (“The Bull”) Mehmed Pasha between 1028/1619 and 1022/1613. Fakhr al-Dîn requested permission to be present in 1021/1612 and on 30 Radjab 1022/15 September 1613 he went to Italy to seek help under the alliance, returning to the Djabal in 1027/1618. Ma’nid rule was preserved during his absence, particularly as his spies in Istanbul and Damascus gave preliminary warning of any Ottoman military measures. Although the Ottoman Sultan, by a fermand issued in 1034/1625, recognized Fakhr al-Dîn as Amîr of the Druzes from Aleppo to Jerusalem (Haydar, i, 715), the latter was subjected to constant pressure from Küçük Ahmed Pasha, who had been appointed wali of Damascus by Murâd IV. In 1044/1634 the Druzes were decisively defeated at Meğhrât Djazarin, the Amir and three of his children being carried off prisoner to Istanbul, where all but Usma’în disappeared. The death of Fakhr al-Dîn marked the end of Ma’nid ascendency. It was followed by Kayshî-yanamî dissension. Fakhr al-Dîn, like the ruling branch of the Ali Tanûq before the Ma’nid ascendency, belonged to the Yanamî clan (known as abî, “white” by the Ottomans, the Kayshîs being known as red, tabûlî, cf. Findikûlî Mehmed Ağâ, Taqwâ, Istanbul 1928, i, 215; C.-F. Volney, 1, 414, note 1). Amir Malham, who succeeded him in 1045/1635, represented the Kayshî clan and was opposed by the Amir Affâ’î Alâm al-Dîn on behalf of the Yanamîs. Dissension gave openings for Ottoman intervention, as in 1061/1651 by the wali of Tripoli, Hasan Pasha. In 1064/1654 Amir Malham extended his rule to Shadîf, by agreement with the wali of Damascus, Malham died in 1069/1659 and was succeeded in the Djabal by his brother Ahmad, the last Ma’mid ruler, who died in 1108/1697 and was succeeded by Shi’ahîds of the Kayshî clan. The latter had been protected by Amir Ahmad, who had refused to give them up to the wali of Damascus, Körpüli Fâdîl Ahmed Pasha, in 1070/1660. The wali of Damascus, helped by the wali of Tripoli, therupon defeated the joint Ma’mid-Shi’ahîd forces at Kasrawûn. The two dynasties later fell out, however, with the Ma’mids winning a short-lived victory at al-Fullû in 1076/1666 (Ibn Sabâtî, Şâlih b. Yahya, appendix, 237). After the death of Amir Ahmad, however, it was the Shi’ahîd amîr of Rusâ’îyâ, Bashîr b. Husayan, who was chosen overlord of the Djabal with the agreement of the Ottomans. The Yanamîs tried unsuccessfully to undo Kayshî ascendency: from the court in Istanbul Husayan, the son of Fakhr al-Dîn II, managed, for example, to relegate Bashîr to the position of regent to the 12-year old Haydar, of the family of the amîrs of Hasbeyâ, whose local supporters later poisoned Bashîr. But when Haydar became Amîr in his own right he crushed the Yanamîs at the battle of Ayîn-Dârâ which changed the whole feudal picture of the Djabal. Thereafter under the overlordship of the Shi’ahîds, who tried to prevent Druze-Maronite struggles, the Djanbulats reigned over Shûf, Abu ‘l-Lama’ held Matn, while at Shuwayfât the Arslan family of the Yanamî clan had to share their rule with Talmûn Yamanîs. In holding together the Djabal, the Shi’ahîds had to rely on the support of Ottoman Pashas, whose intervention led to the increase in the number of local sayyâhs, who in turn exerted pressure on the amîr. Thus, while the sayyâhs paid tribute to the amîr, it was they who decided in council whether to keep the peace or wage war. Amir Haydar died in 1144/1723 in the Shi’ahîd capital at Dayr al-Kamar, having in 1141/1729 abdicated in favour of his son Malham. Under the latter’s rule which lasted until 1167/1754, the port of Bayrût regained the importance which it had enjoyed under Fâkhr al-Dîn and became the second Shi’ahîd centre after Dayr al-Kamar. Many of Malham’s children were converted to Roman Catholicism, Christianity in general gaining ground in the Djabal. Malham and his successors generally tried to maintain a balance between local Muslims and Christians. Thus, when in 1171/1758 Greek pirates flying the Russian flag attacked Bayrût and when local Muslims retaliated by attacking the Franciscan monastery in the town, two of the Muslim leaders were hanged at the Amir’s orders. Malham was succeeded by his brothers Ahmad (the father of the historian Ahmad al-Shi’ahîd) and Mansûr, although Nûman Pasha, the Ottoman wali of Syûf, attempted to change the area from Shi’ahîd to ‘ale’âm, however, with the aim of having himself installed as amir. This, however, had to content himself with the area round Hasrî. Kûsîn died a Christian in 1182/1768, his son Bashîr II also making no secret of his Christian beliefs (Blau, op. cit., 496; Lammens, La Syrie, Beirut 1921, ii, 100 ff.). These conversions did not, of course, prevent the majority of Druzes from retaining their faith, a fact which sowed the seed of future trouble. Mansûr was dismissed in 1124/1715 by Derwîsh Pasha, the wali of Syûf, and replaced by Amir Yusuf. In 1185/1771 when the Russian fleet commanded by Alexei Orlov was encouraged by Zâhir al-Umar, the rebel ruler of Syûf and Acre, to bombard Bayrût, Mansûr sued for peace against payment of 25,000 piasters, while Amir Yusuf asked for Ottoman reinforcements, whereupon ‘Uglûn Pasha, the wali of Damascus, who had been despatched, Djarzor Pasha who occupied Bayrût in the name of Amir Yusuf. The latter succeeded, however, in ejecting this unwelcome deputy from Bayrût in 1187/1773 after a four-month siege, in which he was helped by the Russian fleet which he summoned from Cyprus. Nevertheless, Djarzor Ahmad Pasha continued to exert pressure from Acre and Syûf on the Shi’ahîds of the Djabal. Payment of a tribute and loyalty to the Ottoman cause in the face of the Napoleonic expedition from Egypt, did not shield Bashîr II from this pressure. Even although Yusuf Dîyâ Pasha, the commander of the Ottoman forces against Napoleon, confirmed Bashîr as ruler of the Djabal, Djarzor Ahmad Pasha had him expelled by forces commanded by ‘Usayn and ‘A’d al-Dîn, the sons of the Amir Yusuf, whom he wanted to appoint in his place. Bashîr sought refuge with the British admiral Sidney Smith, who took him in his flagship to al-Arîsh, returning later to the Djabal, Djarzor Ahmad Pasha contenting himself this time with keeping one of Bashîr’s sons as a hostage. Pressure on the Druzes decreased in 1804 with the death of Djarzor Pasha. In 1810 when the Wahhabîs threatened Damascus, the wali Yusuf Pasha asked the help of Sülâyman Pasha, the sandjak-beys of Acre, who in turn summoned the Druzes to Damascus. The Druzes forced the departure of Yusuf Pasha and were only with difficulty compelled to retire into the
Hawran by Suleymân Pasha's successor, 'Abd Allâh Pasha. Bashîr's absence from the Djaðbal had, however, caused so much resentment that the wills of Damascus and 'Abd Allâh Pasha were forced to allow the Shaykh to summon him back to the Lebanon. Bashîr thereafter sided with 'Abd Allâh Pasha, in his revolt against the Ottomans in Acre, whereupon his rival Shaykh Djândibûlî had 'Abbâs al-Shihâbî proclaimed amîr, while Bashîr and his sons had to seek refuge with Muhammad 'Ali in Egypt. Before long, however, Bashîr was back, defeated Djândibûlî at the battle of Barakû in 1844, and had him executed. In the following year, an attack on Bayrût by the fleet of the Greek insurgents led once again to a pogrom of local Christians, many of whom emigrated to the Djaðbal. Muslim feeling against Bashîr was also inflamed by the permission given to Melkite Christians to settle in the Djaðbal. In 1830 Bashîr once again helped 'Abd Allâh Pasha, this time to suppress a revolt in Nablûs. He then sided with Muhammad 'Ali against the Ottomans and helped the conquests of İbrahim Pasha.

(M. C. Şahîbeddîn Tekindâ) After the Kütâhây agreement of 1833 Bashîr did his best to help the Egyptians, securing in return a wide autonomy for the Lebanon. Egyptian rule was at first welcomed, particularly as certain impositions on non-Muslims were abolished, but difficulties arose when İbrahim Pasha tried to confiscate firearms and to call up Druzes. In 1835 İbrahim Pasha introduced troops into Dayr al-Kamar and tried to collect the arms of local Christians but preferred later to suspend his measures in so far as they affected the Druzes. Nevertheless a Druze revolt broke out in 1837 when an attempt was made to call up Druzes in the Hawran, who retaliated by assassinating İbrahim Pasha's emissaries. The Ottoman Government tried to stir up the Druzes and to supply arms to them, İbrahim Pasha retaliating by stirring up the Kurds and by closing Syrian ports to Ottoman shipping. A Druze revolt broke out in Ładji, but from his palace in Bayt al-Din, from where he exercised wide influence over the Maronites, Bashîr succeeded in preventing its spreading from the Hawran to the Lebanon, levelling charges that thanks to French support the Egyptians would be finally victorious. A general revolt in the Lebanon, including this time the Maronites, broke out again, however, when İbrahim Pasha made another attempt to call in arms and Egyptian forces in Bayrût found their communications cut. On 14 August 1840 the British naval commander Sir Charles Napier established contact with the rebels, who were supplied with arms after the joint bombardment of Bayrût the following month by British, Austrian and Ottoman ships. After vainly waiting for help from İbrahim Pasha in Dayr al-Kamar, Bashîr submitted to the Sultan, whose troops were in the process of reconquering Syria as a result of the London agreement. Bashîr's personal security was guaranteed, but he was nevertheless deposed in favour of a relative, Bashîr Kâsim. The Egyptian administration was on the one hand disorganized the feudal structure of the Djaðbal and, on the other, sharpened antagonism between the Druzes and the Maronites. Bashîr Kâsin's rule lasted for approximately one year and was underpinned by the Musâhir of Saydâ, Selîm Pasha, whose seat of government was transferred to Bayrût and who formed a mixed council of the various communities to advise the amîr. Taxation reform (the Egyptians had raised the taxation of the Djaðbal from 3,650 to 6,500 purses and this was then reduced to 3,500 purses) and the question of compensation led to communal friction, which erupted at Bayrût and Bâsfân, after which many houses and shops were set on fire at Dayr al-Kamar. Relative peace was restored after the Druze adventurer Şibäîl-ü Urûyân, who was in the service of the wilî of Damascus, was forced to return to that city from Zahbîa. These events caused much stir abroad and led to foreign complaints against the Ottoman administration. The Ottomans thereupon deposed Bashîr Kâsim, and entrusted the administration of the Djaðbal directly to the serasîker Mustaфа Nîrî Pasha, who in turn appointed to the amîrîate one of his infantry commanders, the mirîluwî Ğomer Pasha. Continued foreign displeasure led to the despatch to Bayrût of Sefîn Bey as an investigator in 1842, but the latter's report that the situation was satisfactory and that the appointment of either a Druze or a Maronite amîr was impossible, was disbelieved by foreign ambassadors at the Porte. Meanwhile new incidents were reported, whereupon Esâd Mukhîlî Pasha was appointed musâhir of Saydâ, and after his arrival at Bayrût the serasîker's mission was declared completed. Esâd Pasha appointed two kâ'im-makdîms, the Maronite Haydar from Bayt Abî 'l-Lâmî and the Druze Mir Ahmad from Bayt Arslân, and detached the northern districts of Djuñubayl from the Djaðbal, placing them under İbrahim Pasha. Another mission was then undertaken by the Foreign Minister Şehîb Efendi, who started by demanding that all arms should be handed in, an order which led to resistance and further complications. A further emissary, the ferîk (divisional general) Emin Paşa was sent to Bayrût in January 1846. He held secret talks with Şehîb Efendi in a kind of double organization, returning with him in June 1846. Şehîb Efendi's reforms provided for the retention of the two kâ'im-makdîms, advised by mixed councils, special deputies (wekilî) being elected in villages having a mixed population. The two kâ'im-makdîms were to receive a salary of 12,500 piastres a month each, and to be appointed and dismissed directly by the Sultan on the advice of the musâhir of Saydâ. The councils were given judicial as well as administrative and financial powers. Stability was thus established at the beginning of 1847, even although the failure to expel some trouble-making Druze leaders created difficulties. Taxes were apportioned between the two communities, the Maronites being asked to pay 1994 and the Druzes 1506 purses.

Peace was preserved until the khatt-i humdyun of 1856, which by its promise of concessions to non-Muslim subjects led to a more generalized Christian-Muslim rivalry. The first signs of trouble appeared in 1859. In the following year the Druzes and the Maronites clashed openly, whereupon Khuşhîd Pasha sent troops to the border between the two badas. This did not prevent the major outbreak of 1860: in May the Druzes attacked and set fire to villages in Matn; in June they were joined by Druzes from the Hawran, led by İsmûlî Atrash (the Djaðbal Druzes being led mainly by Saş Idjân-
bulat and Khaştār Ahmad). While the General Council of the province (Medjlis-i 'Umami) rejected the wālid's suggestion to send troops, the Druzes continued to demand the independence of the mutasarrifate of Djabal. At Rasheya, Ba'albak (where local government was overthrown by the Hārkūbīn family), Zaňla and Dayr al-Kamar. To crush the insurrection the Ottoman Government dispatched the Foreign Minister Fu'ād Pasha, arming him with emergency powers. His arrival coincided with a massacre of Christians in Damascus by the local mob, reinforced by Druzes and Bedouins. In the meantime Ḳurshīd Pasha had secured an armistice between Druzes and Maronites, of which Fu'ād Pasha did not approve, on the grounds that it compromised future judicial proceedings, but which he feared to denounce as bloodshed might then be renewed. France intervened directly by landing 5,000 troops and by suggesting the total expulsion of the Druzes from the Djabal. This Fu'ād Pasha succeeded in avoiding by taking firm action against guilty Druze leaders, pursuing and apprehending them, and finally putting them on trial at a court-martial at Muḥtārā, where some of them were sentenced to death. He also took severe punitive action in Damascus and had the wālid Ahmad Pasha sent under trial for trial in Ismā'īl Khusro Pasha having also been dismissed from Bayrūt. These measures made possible the evacuation of French troops from the Djabal. Under the agreement signed on 9 June 1861, the Djabal was completely detached from the wilayyats of Bayrūt and of Damascus and placed under a Christian mutażāsīrī, who was, however, to come from outside the district. The mutażāsīrī was appointed by the local government and not by the Ottoman authorities, as a result of incidents which were largely economic and social in origin. The Druzes rose up again and Shibli had to compromise future judicial proceedings, but which he feared to denounce as bloodshed might then be renewed. France intervened directly by landing 5,000 troops and by suggesting the total expulsion of the Druzes from the Djabal. This Fu'ād Pasha succeeded in avoiding by taking firm action against guilty Druze leaders, pursuing and apprehending them, and finally putting them on trial at a court-martial at Muḥtārā, where some of them were sentenced to death. He also took severe punitive action in Damascus and had the wālid Ahmad Pasha sent under trial for trial in Ismā'īl Khusro Pasha having also been dismissed from Bayrūt. The Druzes rose up again and Shibli had to
1839 by the forces of Shāh Shudīrāz and the English East India Campany he had extended his power over Balkh and Khulm (1266-7/1850), Shībargān (1271/1854), Maymana and Andkhuy (1271/1855) and Kunduz (1276/1859), although his authority was not entirely unquestioned. In the West he took Kandahār (1272/1855) and Harāt (1279/1863). At the same time he increased his power at the expense of the tribal chiefs, principally by developing a regular army to replace the feudal militia, which had been the basis of the Durrānī [q.v.] monarchy, and diverting to the support of this army the revenues which had formerly been appropriated by the tribal chiefs. He destroyed the power of the Khālsāyīs, murdered, imprisoned or exiled certain prominent tribal chiefs, and held both the Kizīlbaš and the Sunni elements, who had formerly made Kābul governments so unstable, under firm control. The weakness of his system was that it depended on the continuing co-operation of his sons, whom he employed as governors, a condition which was not maintained. None the less he established the geographical outlines of modern Afghanistan and laid the foundations of its internal consolidation. More than anyone else he deserves the title of the founder of Afghanistan.

Muhammad Akbar Khan, (d. 1848, wazīr Aḥmad Shāh) had numerous sons, the most important of whom was appointed governor of the Kandahār region and the leading figure in the disturbances of 1841-2), Ghulam Haydar Khan (d. 1274/1858), Shir Ālī Khan (the future amīr), Muhammad Amin Khān and Muhammad Sharīf Khān, who were all sons of a Bangash wife from Kurrām, and Muhammad Akbar Khān, (d. 1284, wazīr 1843-8), and the leading figure in the disturbances of 1841-2), Ghulam Haydar Khan (d. 1274/1858), Shir Ālī Khan (the future amīr), Muhammad Amin Khān and Muhammad Sharīf Khān, who were all sons of a Bangash wife from Kurrām, and Muhammad Akbar Khān, (d. 1284, wazīr 1843-8), and the leading figure in the disturbances of 1841-2). DÜSTÜR, in modern Arabic constitution. A word of Persian origin, it seems originally to have meant a person exercising authority, whether religious or political, and was later specialized to designate members of the Zoroastrian priesthood. It occurs in Kalila va-Dimna in the sense of “counselor”, and recurs with the same sense, at a much later date, in the phrase Döstür-i mürkerem, one of the honorific titles of the Grand Vizier in the Ottoman Empire. More commonly, düstür was used in the sense of “rule” or “regulation”, and in particular the code of rules and conduct of the guilds and corporations (see futūwā and sīneh). Borrowed at an early date by Arabic, it required a language of a variety of meanings, notably “army pay-list”, “model or formulary”, “leave”, and also, addressed to a human being or to invisible diwān [q.v.], “permission” (see further Dozy s.v.).

In modern Arabic, by a development from the general meaning of “rule”, it has come to mean constitutional law and government in various parts of the Islamic world.

i. — TUNISIA

Until the middle of the 19th century, the despotism of the Bey (bāb) [q.v.] was tempered only by the momentary power of some members of his entourage who governed as they pleased. The foreign consuls, alarmed by the dangers of the situation, accordingly advised Muhammad Bey [q.v.] to be guided by the provisions of the qāḥṣi-i humaydān [q.v.] which had been promulgated in Turkey on 18 February 1856, granting certain guarantees to non-Muslim subjects of the Empire; but the Bey turned a deaf ear, and a grave incident was needed to precipitate the course of events. It was in fact the summary execution in 1857 of a Jewish carver who, after knocking down a Muslim child, was said to have hurled insults and blasphemies at the crowd that was threatening him with violence. He aroused the European Powers and made them decide to instruct their consuls to make representations to the Tunisian Government. It was in this way that Muhammad Bey was led to make a formal announcement, on 9 September 1857, of the principles of the Fundamental Pact (*'Ahd al-amān; see L. Bercher, En marge du pacte fondamental, in RT, 1939, 67-86) which repeated in part the qāḥṣi-i skarīl of Gülhāne (26 Ša'ban 1255/3 November 1839; see B. Lewis, The emergence of modern Turkey, London 1961, 104-5 and bibl. cited there) and guaranteed complete security to all inhabitants of whatever religion, nationality and race; the equality of all before the law and taxation, as well as freedom to trade and work, were recognized. At the same date the Bey announced his intention of granting the country a constitution. Some partial reforms were actually introduced (notably the setting up of a municipal council [see baladīyya]), and preparatory work was in fact started on a draft constitution in which the French Consul, Léon Roches, took part. On 17th September 1860 Muhammad al-Sādiq [q.v.], who had succeeded his brother Muhammad on 24 September 1859, himself gave a copy of the constitution drafted in French to Napoleon III in Algiers, and received the Emperor's approval. The constitution, consisting of 13 headings and 114 articles, was promulgated in January 1861 and put into force on 26 April of the same year.

By the terms of this constitution, the hereditary Bey was supreme head of the state and of religion, but he no longer controlled the revenues of the State and was allotted a civil list; moreover he was responsible, as were the ministers whom he had to have at his side, to the Grand Council which consisted of 60 councillors nominated for five years and chosen by the Tunisian Government from the ministers, high officials, senior officers and notables. “The agreement of the Grand Council is indispensable for all the procedures listed below: making new laws; changing an existing law... enlisting the army, its equipment or that of the navy... interpreting... expenditure...
Thus the Grand Council participated in the preparation of laws which were made valid by the Bey and his ministers. The executive power reverted to the Bey and his ministers, whilst the independence of the judicial power in respect of the legislature and the executives was recognized. The kābīds continued to preside over police courts for the trial of minor offences, courts of first instance were set up and the court of the ṣarīr [q.v.] continued to function for all questions within its competence. A court of appeal was to sit in Tunis and the Grand Council was to act as Supreme Court of Appeal. Finally, the provisions of the Fundamental Pact with regard to the rights of Tunisian and foreign subjects were confirmed and continued to function for all questions within its competence. A court of appeal was to sit in Tunis and the Grand Council was to act as Supreme Court of Appeal. Finally, the provisions of the Fundamental Pact with regard to the rights of Tunisian and foreign subjects were confirmed and completed.

The establishment of the French Protectorate suspended the operation of the Constitution of 1861. From the earliest years of the 20th century a number of Young Tunisians, the spiritual heirs of the general Khayr al-Din [q.v.], endeavoured to raise the material, moral and intellectual level of their compatriots, and founded various associations [see DHA*MYYA, iv] of a more or less political character. In 1907 was created a Consultative Conference, considered inadequate, and from that time the idea of demanding the grant of a Constitution was in germination. After the war, on 4 June 1920, the Tunisian Liberal Constitutional Party (al-Ittāf al-Hurr al-Dustūrī al-Tunūsī) was founded, more commonly known as the Destour Party. The vade-mecum of Tunisian nationalism at that time was a collective work, La Tunisie martyre, which called for: the election of a deliberative assembly composed of Tunisian and French members elected by universal suffrage; the formation of a government responsible to this assembly; the absolute separation of powers; the access of Tunisians to all administrative posts; the election of municipal councils by universal suffrage; the respect of public liberties. In 1922 the authorities of the Protectorate set up the Great Council, an arbitral commission, councils of caïdat and regional councils [see TUNISIA]; but the conservative class of the nation, who would have been satisfied with gradual reforms, lost ground to a new petty bourgeoisie, on the whole of French and Arab culture, which tried to reach the public in greater depth; a split, the beginnings of which had been apparent in the Destour Party since 1932, came about on 1 March 1934 with the creation of the Neo-Destour (as opposed to the Arabo-Destour) Party, which called for full and complete independence and organized mass demonstrations to achieve it. The leaders of this movement were exiled, and the second world war silenced the demands for independence. They were renewed immediately after the restoration of peace, and independence was granted to Tunisia by France on 20 March 1956; this was a triumph for the president of the Neo-Destour Party, M. Habib Bourguiba (al-Ḥabīb Abū Ṭuqayba), the future President of the Tunisian Republic. (Biography on the nationalist movements is copious but scattered among many papers, periodicals, bulletins, etc.; in particular REI, passim; OM, passim; also Ch. Khairallah, Essai d'histoire et de synthèse des mouvements nationalistes tunisiens, Tunis n.d.; H. Bourguiba, La Tunisie et la France, Paris 1954; F. Garas, Bourguiba et la naissance d'une nation, Paris 1956; P. E. A. Romeril, Tunisian nationalism, a bibliographical outline, in MEJ, xiv (1960), 206-15; N. A. Ziadeh, Origins of nationalism in Tunisia, Beirut 1962). As early as 29 December 1955 the Bey promulgated a decree permitting the establishment of a National Constituent Assembly, which was elected on 25 March 1956 and drafted a new constitution, promulgated on 25 Dhū 'l-Ka'āda 1378/1 June 1959, with 10 headings and 64 articles. It is laid down in the preamble to this Constitution that the 'Umayyad whose religion is Islam, that it forms a part of the Greater Maghrib, that its motto is "Liberty, Order, Justice", and that sovereignty belongs to the people. The Tunisian Republic guarantees the dignity of the individual and freedom of conscience, and protects freedom of worship provided that public order is not disturbed (art. 5). All citizens are equal before the law and for purposes of taxation, and enjoy full rights which can be limited only by law (arts. 6-7). Freedom of opinion, of expression, of the press, of publication, of assembly and of association are guaranteed, as well as trade union rights (art. 8). Inviolability of domicile, secrecy of the mails and freedom of movement are assured (arts. 9-10); right of property is guaranteed (art. 14). Part II treats of the legislative power exercised by the National Assembly which is elected for 5 years by universal suffrage, at the same time as the President of the Republic. The right to initiate legislature belongs to the President or to the President and the members of the Assembly (art. 28); the President may enact, in the interval between two ordinary annual sessions of the Assembly, decrees, which must be submitted for ratification by the deputies in the course of the following session (art. 31); in addition, in the case of imminent danger the President may enforce exceptional measures and report them to the Assembly (art. 32). The State budget is voted by the Assembly (art. 35). Part III is devoted to the executive power exercised by the President of the Republic, who must be a Muslim, aged at least 40 years, of Tunisian father and grandfather and in possession of full civic rights (arts. 37-9). He is elected for 5 years by universal suffrage, and is not eligible for re-election for more than three consecutive terms (art. 40). He promulgates the laws and ensures their publication within 15 days in the official newspaper, during which time he has the power of referring a bill back for a second reading before the Assembly; if the bill then receives a two-thirds majority the law is promulgated within a fresh period of 15 days (art. 44). The President decides government policy, and selects the members of the government who are to be responsible to him (art. 43). He nominates holders of civil and military office and is the supreme chief of the armed forces (arts. 45-6). The rest of the chapter deals with foreign relations, the making of treaties, the granting of pardons, and the vacancy of the Presidency. Part IV, very short, relates to the judicial power. The Constitution assures the independence of the judiciary (art. 53) and sets up a Higher Judicial Council which supervises the application of the guarantees granted to judges (art. 53). Part V institutes a Supreme Court which is to meet to try a charge of high treason brought against a member of the government. Parts VI, VII and VIII treat of the Council of State, which is at once an administrative jurisdiction and an Audit Office, the Economic and Social Council, and municipal and regional
councils. Finally Parts IX and X provide for the conditions for amending the Constitution, initiative for which belongs to the President or to one-third of the members of the Assembly, as well as of interim powers.

ii. — TURKEY

The word düstür (modern Turkish form düstur) is used in Turkish in the general senses of principle, precedent, code or register of rules. It was applied in particular to the great series of volumes, containing the texts of new laws, published in Istanbul (and later Ankara) from 1279/1863 onwards. (An earlier volume of new laws, not under this name, had already been issued in 1267/1851.) Three series (terîbî) of the Düstür were published, the first covering the years 1839-1908, the second 1908-22, and the third containing the laws of the nationalist régime in Ankara and, after it, of the Turkish Republic, from 1920 onwards (see G. Jäschke, Türkische Gesetzesammlungen, in WT, N.S. iii (1954) 225-34).

Düstür has not been used in Turkish with its modern Arabic meaning of constitution, for which the normal terms are cânûn-ı esâsi (basic law) and mecbûriyet (conditionalness). The former term is applied to the constitution itself, and was replaced during the linguistic reforms in the Republic by Anayasa; the latter denotes constitutional government. In what follows a brief sketch is given of constitutional development in Turkey during the 19th and 20th centuries.

The Sened-i İttifâk

The modern constitutional history of Turkey is usually dated from the year 1808 when, shortly after the accession of Mahmûd II, the Grand Vizier Bayrâkîr Mustaøa Paşa (g.v.) convened a meeting in Istanbul, to which he invited a number of the local rulers and dynasts (see Â'yân and Dereküy) who at that time enjoyed virtual autonomy in most of the provinces of the Empire. A number of the leading Â'yân and Dereküy, from both Rumelia and Anatolia, came with large retinues and military forces (İsmâ'îl Bey of Sereç is said to have come with 12,000 men, Kâlyondu Mustaøa, of Bilecik, with 5000, and others with considerable but unspecified numbers), and camped at various places outside the city; others, though not attending in person, sent agents to represent them. After an interval of discussions and negotiations to prepare the ground, a general consultative meeting (enâhaîmen-i mecbûret-i 'umdüm-i sâhî) was held, at which the Grand Vizier presided; also present were the Şaykh al-İslâm, the aghas of the Janissaries and of the sipahîs, and other dignitaries of the central government, as well as the invited Â'yân. The Grand Vizier made a speech in which he described the weaknesses of the Ottoman state and army and set forth a programme of reform. His proposals were unanimously approved, and the meeting resolved that a "deed of agreement" (sened-i İttifâk) should be drafted, signed and sealed, expressing the points of agreement reached between the parties. Contacts between officials, Â'yân and the Sultan followed, and on 17 Şebîbân 1223/7 October 1807 the final draft of the Sened-i İttifâk was sent to the Sultan for ratification. Mahmûd II, despite his strong objections to the document, found himself obliged to ratify and authenticate it with his imperial signature. The Sened-i İttifâk consists of a preamble, seven articles, a conclusion and a signature. The signatures, after describing the decline of Ottoman power and the weakness of the Ottoman state, explains that the following articles represent the unanimous agreement of the signatories, reached after several meetings, on the need to strengthen the empire and the faith and on the means of accomplishing this. Article one begins with what might be called a pledge of homage to the Sultan by the Â'yân, who together with the officers of the central government, undertake not to oppose or resist the Sultan, and to come to his help if others oppose him. The signatories pledge themselves collectively to enforce this against offenders, including other parties who have not signed the document. They accept these obligations for themselves during their lifetimes, and for their sons and heirs after them.

Article two is concerned with military matters. Since the main purpose of the meeting and agreements was to restore the military power of the Empire, the signatories undertake to cooperate in the recruitment of troops, and to come to the Sultan's help when required, against both foreign and domestic enemies. They accept joint responsibility for dealing with offenders.

Article three is financial, and records the promise of the signatories to respect and observe the rules and regulations laid down by the government in financial matters. They undertake to show solicitude in collecting and remitting sums due to the government, and to refrain from abuses, for the punishment of which they accept joint responsibility.

Article four establishes the authority and responsibility of the Grand Vizier. The signatories recognize the Grand Vizier as the absolute representative (vekil-i mutlaka) of the Sultan, and promise to obey his orders in all matters, as if they came from the Sultan. Other functionaries are to keep within the limits of their own offices and jurisdictions. If they exceed them, the signatories collectively will stand forth as accusers. Similarly, if the Grand Vizier himself acts against the laws of the Empire (hâkal-î cânûnî) or violates this agreement, takes bribes, practises extortion, or commits acts harmful or likely to be harmful to the state (devellet-î 'alıyyeye .. mudûrîr), then all the signatories conjointly will stand forth as accusers, and secure the removal of such abuses.

Article five regulates the relations of the Â'yân with one another and with the officials of the central government, on a basis of mutual guarantees. If any of the signatories violates the agreement, the rest will be collectively responsible for his punishment. The article guarantees the Â'yân in possession of their lands, and confirms the rights of succession of their heirs, who are also to be bound by the agreement. The same guarantees are extended by the Â'yân to the lesser Â'yân under their jurisdiction; this appears to involve a kind of sub-infeudation. The Â'yân undertake not to attack each other's lands, nor to oppress their subjects, and in general to deal
DUSTOR 641

justly with the government, the people, and with one another.

Article six deals with the contingency of a further outbreak of disorder in the capital, whether due to a Janissary meeting or other causes. In such an event, the aâyân promise to come at once to Istanbul with their forces, to restore order and the authority of the central government.

Article seven is concerned with the protection of the subjects from extortion and oppression. The aâyân undertake to deal justly with their subjects, and to observe and report on one another.

The significance of the sened-i ittifâk has been variously assessed. Turkish constitutional historians have seen in it a kind of Magna Carta, an attempt by a baronage and gentry to exact from the Sultan a recognition of their rights and privileges, and thus to limit the authority of the sovereign power. Şerif Mardin takes a diametrically opposite view; according to him, the agreement was planned by officials of central government, for whom the Grand Vizier was no more than a "military figurehead"; it "was aimed at curbing the powers of the local dynasties . . . and . . . was one of the first steps towards the transformation of the Ottoman Empire into a modern centralized state". The recognition of the independence of the aâyân was merely "a temporary compromise due to the weakness of the central powers" (Mardin, 146-8).

From the historical evidence it would seem clear that this agreement was negotiated between the Grand Vizier and other dignitaries of the central government on the one hand, and the leading aâyân on the other. Neither side imposed its will on the other, and indeed it is difficult to see how the aâyân could have been compelled, in view of the impressive armed forces that they had brought with them. Djewdet remarks that the meeting and agreement were made possible because the aâyân trusted Bayraşdâr Mustafa Pasha—though apparently not far enough to come to Istanbul without armies, or to move into the city when they had got there.

One party to the agreement is known to have objected to it—the Sultan, who saw in it a derogation of his sovereignty. According to Djewdet he signed it unwillingly, and with the intention of annulling it as soon as he had got rid of the threat. However, he nourished resentment of his sovereignty. According to Djewdet he signed the agreement was freely negotiated between the Sultan and other dignitaries of the central government, for whom the Grand Vizier was no more than a "military figurehead"; it "was aimed at curbing the powers of the local dynasties . . . and . . . was one of the first steps towards the transformation of the Ottoman Empire into a modern centralized state". The recognition of the independence of the aâyân was merely "a temporary compromise due to the weakness of the central powers" (Mardin, 146-8).

The effective agreement is between the Grand Vizier and other dignitaries of the central government on the one hand, and the leading aâyân on the other. Neither side imposed its will on the other, and indeed it is difficult to see how the aâyân could have been compelled, in view of the impressive armed forces that they had brought with them. Djewdet remarks that the meeting and agreement were made possible because the aâyân trusted Bayraşdâr Mustafa Pasha—though apparently not far enough to come to Istanbul without armies, or to move into the city when they had got there.

One party to the agreement is known to have objected to it—the Sultan, who saw in it a derogation of his sovereignty. According to Djewdet he signed it unwillingly, and with the intention of annulling it as soon as he had got rid of the threat. However, he nourished resentment of his sovereignty. According to Djewdet he signed the agreement was freely negotiated between the Sultan and other dignitaries of the central government, for whom the Grand Vizier was no more than a "military figurehead"; it "was aimed at curbing the powers of the local dynasties . . . and . . . was one of the first steps towards the transformation of the Ottoman Empire into a modern centralized state". The recognition of the independence of the aâyân was merely "a temporary compromise due to the weakness of the central powers" (Mardin, 146-8).

Whatever the historical balance of forces that produced it, the constitutional significance of the sened-i ittifâk lies in its character as a negotiated contract—an agreement between the Sultan and groups of his servants and subjects, in which the latter appear as independent contracting parties, receiving as well as conceding certain rights and privileges (cf. the comments of Djewdet, ix, 6 on the infringement of the Sultan's absolute prerogative).

The effective agreement is between the Grand Vizier and the aâyân; the Sultan merely ratifies it, and is clearly expected to reign rather than to rule.

The text of the sened-i ittifâk will be found in Şahâzâde, Ta'rîhî, i, 66-78, and Djewdet, Ta'rîhî, ii, 278-83. For accounts of the events leading to it, see Şahâzâde, i, 61 ff.; Djewdet, i, 2 ff.; A. de Juchereau de Saint-Denys, Révolutions de Constantinople en 1807 et 1808, ii, Paris 1819, 200 ff.; J. W. Zinkeisen, Gesch. des osman. Reiches in Europa, viii, Gotha 1863, 504 ff.; and views of the pact see I. H. Uzuncarsili, . . .

The approach to constitutional government

The 'Deed of Agreement' was short-lived. Almost immediately after its signature the Grand Vizier Bayraşdâr Mustafa Pasha was overthrown and killed, and in the years that followed Sultan Mahmud II subjugated the aâyân and brought what remained of the Empire under the effective control of the central government. The great reforming edicts of 1839 and 1856 have sometimes been described as 'constitutional charters', in that they lay down such general principles as the security of life, honour and property of the subject, fair and public trial of persons accused of crimes, and equality before the law of all Ottoman subjects irrespective of religion. Some of the other reforms of this period may also be said to have a quasi-consitutional character, such as the councils set up by Mahmud II and his successors (see maglis and tanâme) and especially the Council of State (şâhârâ-yi Dâvlet), founded in 1868. Modeled on the French Conseil d'État, this was a court of review in administrative cases; it also had certain consultative functions, and was supposed to prepare the drafts of new laws. Though its members were all appointed and not elected, it has been described as "a kind of rudimentary chamber of deputies". In 1845 the government actually experimented—unsuccessfully—with an assembly of provincial notables in the capital (Lutfî, Ta'rîhî, vii, 15-17; Ed. Engelhardt, La Turquie et le Tansimat, i, Paris 1882, 76; Lewis, Emergence, 110-1); the provincial organization law of 1864 provides for elected councils in the provinces.

Despite these developments, the general effect of the Westernization of the apparatus of government was to make it more difficult than ever for the Sultan to limit the autocratic authority of the central power. The old and well-tried checks on the Sultan's despotism—the entrenched intermediate powers of the army, the 'âlemâ and the notables—were one by one abandoned or enfeebled, leaving the reinforced sovereign power with nothing but the paper shackles of its own edicts to restrain it; the new laws were too little understood, too freely supported, too ineptly applied, to have much effect.

The growing autonomy of the state—at times of the Sultan, at others of the ministers acting in his name—did not pass unnoticed. Towards the middle of the 19th century a libertarian movement of political thought began to gain ground (see buktiyva, ii), deriving its inspiration from European liberal and constitutional ideas, which Muslim writers tried to identify with the older Islamic doctrine of consultation (by the ruler of his councillors—see ma Şhârâ). In 1839 a Turkish translation appeared of the account by the Egyptian Şayḫc Râfi' Rifâ'â al-Tahtâwî [q.v.] of his stay in Paris; this included an annotated translation of the French constitution, with an explanation of the merits of constitutional government. Constitutionalism did not, however, become a political force in Turkey until the eighteen-sixties, when its development was

Encyclopaedie of Islam, II

41
The Ottoman constitution of 1876 (see above) brought the first precedent of a constitution in a Muslim state; the Egyptian legislative assembly of 1866 and the French constitutional reform of the same year provided examples nearer home. Muṣṭafā Fāḍil Paşa [g.v.], the brother of the Khedive Iṣmāʿīl of Egypt, and later the Khedive Iṣmāʿīl himself, gave encouragement to members of the group of liberal patriots known as the Young Ottomans (see veşi 'otqamânîlar), some of whom campaigned actively for the introduction of a constitutional régime in Turkey. At first they were strongly opposed by the government, and driven into exile; the Grand Vizier 'Āli Paşa himself wrote refuting the arguments in favour of such a change (Mardin, 19-20). The death of 'Āli Paşa in September 1871, however, and the growing influence of Midhat Paşa [g.v.] brought a change in attitude at the centre, while the mounting pressure of external events made a concession to liberal opinion seem desirable. In May 1876 the British Ambassador Sir Henry Elliott reported that "the word constitution" was in every mouth. As early as the winter of 1875, Midhat Paşa told Sir Henry that the object of his group was to install a constitutional régime, with ministers responsible to "a national popular assembly" (Sir Henry Elliott, Some revolutions and other diplomatic experiences, London 1922, 226, 231-2). The stages by which the constitution was prepared are still imperfectly known. The first steps seem to have been taken soon after the accession of Murâd V, when exploratory discussions were held. The sickness and deposition of Murâd delayed matters, but work was resumed after the accession of ʿAbd al-Ḥamīd II, who had promised Midhat his support for the constitutional cause. A new constitutional commission, this time led by Midhat himself, was appointed on 19 Ṭaʾādālân 1293/8 October 1876 N.S. It consisted initially of the chairman and 22 members, including a number of civil and military paghas, a contingent of ʿašelma, most if not all of them in government service, and some high officials, several of them Christian. Other persons, including some of the Young Ottomans, were later added to the commission or to its drafting subcommittee. After some delays, and disagreements between the members and with the Sultan, a compromise text was finally adopted, and promulgated by the Sultan. Midhat Paşa, as president of the Council of State, as chairman of the commission, and, since 20 December 1876, as Grand Vizier, had played a predominant rôle in securing this result. (On the preparation and adoption of the constitution, see Bekir Şükri Baykal, 99 Meşruyeti, in Belâlet, vi/2-1 (1942), 45-83; documents in idem, Birinci vi/2i-2 (1942), 45-83; see also: Bekir Şükri Baykal, Beyrûnt-i iktiddâr (1944), 15-9; Mithat Cemal Kuntay, Birinci vi/2 (1942), 45-83; Mithat Cemal Kuntay, Belleten, xxiv/96 (1960), 601-36; Mithat Cemal Kuntay, Numâz Kenâ, ii/2, Istanbul 1956, 55 ff.; Yu. The Constitution of 1876

The first Ottoman constitution (hâmîn-i esâsî) was promulgated by Sultan ʿAbd al-Ḥamīd on 7 Dhu 'l-Hijād 1293/23 December 1876 N.S. It is in form rather more than in content it was a constitutional enactment in the Western style, consisting of twelve sections with 119 articles, and accompanied by an Imperial Rescript (Khaṭā-i humâyun) of promulgation serving as a preamble. In framing their text, the Ottoman draftsmen seem to have been greatly influenced by the Belgian constitution of 1831, both directly and through the Prussian constitutional edict of 1850 which, while owing much to its Belgian model, adapted it to a number of respects to the more authoritarian traditions of Prussia. While the Belgian constitution was promulgated by a constitutional assembly representing the sovereign people, the Ottoman derived from the goodwill of the king, whose ultimate sovereignty was in no way thereby diminished. The Ottoman constitution also derives from the will of the sovereign who voluntarily renounces the exclusive exercise of some—though by no means all—of his prerogatives, and retains all residual powers. Again like the Prussian constitution, the Ottoman constitution gives perfunctory recognition to the principle of the separation of powers, but unlike the Belgian constitution does not apply it very rigorously.

The first section (articles 1-7) is headed "The Ottoman Empire" (Memâlîk-i Develî-i ʿOtqamamiyye); it defines the Empire, names its capital, and lays down the rights and privileges of the Sultan and the imperial dynasty. The Ottoman Sultanate, with which is united the supreme Islamic Caliphate (ḫilâfâ-i hubrâ-yi ʿislamiyye) belongs in accordance with ancient custom to the eldest member of the Ottoman dynasty (art. 3). The Sultan, as Caliph, is protector of the Islamic religion (din-i ʿislamiḫ hâmîsi) (art. 4. On the Ottoman claim to the Caliphate see Khilâfeh). The Sultan's person is sacrosanct (muekkadde) and he is not responsible (ḫâṣṣî-i muexâl) (art. 5). Article 7 enumerates some of the Sultan's prerogatives, in a form of words clearly indicating that the list is not intended as a complete definition, and that there is no renunciation of residual powers (iḥbâb-i muekaddes-i Pâdîgâhî dîvîmsînendî). In the official French translation "S.M. le Sultan compte au nombre de ses droits souverains les prérogatives suivantes . . . ". These include, together with such traditional Islamic rights as the striking of coins and mention in the Friday prayer, the appointment and dismissal of ministers, the making of war and peace, the execution (idjîr) of chartî and state law (akhbâm-i ʿerîfîyye ve hâmîmiyye), the regulation (nisâmîmâlerînî tânîmi) of public administration, the convocation and prorogation of parliament and, if he thinks it necessary (ladaʾ-ihkîddâ—i ḥâzîmatînî), to dissolve the Chamber of Deputies, on condition that new elections be held (aʾdâst yezîden intîkhâb olunmuş şartîlî). The second section (articles 8-26) deals with the public rights (iḥbâb-i ʿumâmîmiyye) of Ottoman subjects (lebaʿa). It defines Ottoman nationality, and affirms the equality of all Ottomans, irrespective of religion, before the law. Though Islam is the state religion, the free exercise of other religions is protected. Article 10 lays down that personal freedom is inviolable (hérrîyet-i şahbâsîyye ye türûlî taʾarrûdan maṣândur), and subsequent articles deal with freedom of worship, the press, association, education etc., together with freedom from arbitrary intrusion, extortion, arrest, or other unlawful violations of person, residence, or property.

The remaining sections deal with the ministers (articles 27-38), officials (1941), parliament (42-59), the Senate (60-64), the Chamber of Deputies (65-80), the judiciary (81-91), the high courts (92-95), finance (96-107), and provincial administration (108-112). A final section of "miscellaneous provisions" (mevûddî-i şetellâ) includes the notorious article 113, giving the imperial government the right to proclaim martial law on the occurrence or expectation of disorders, and giving the Sultan the exclusive right,
after reliable police investigations, to deport persons harmful to the state from Ottoman territory.

The executive power belongs to the Sultan, and is exercised in person or through a council of ministers (medjdls-i wishehd), presided over by the Grand Vizier, and including the Shaykh al-Islam. These two dignitaries are chosen and appointed by the Sultan; the appointment of other ministers is effected by imperial order (ir'ad-i akhkham). The ministers are individually but not collectively responsible—and to the Sultan if a government bill is rejected by the Chamber of Deputies, the Sultan can, at his discretion, either change the cabinet or dissolve the Chamber and order new elections.

The legislative power also belongs to the Sultan, but its exercise is shared, on a rather restricted basis, with a Parliament (medjdls-i umumtni). This consists of a Senate (hey'et-i d'uyd), nominated directly for life by the Sultan, and of a Chamber of Deputies (hey'et-i melb'itun), elected for four years on the ratio of one deputy for every 50,000 male Ottoman subjects. The Senate must not exceed one third of the numbers of the elected Deputies. The manner of election was fixed by an ir'ad of 28 October 1876, on a basis of restricted franchise and indirect elections. The power to initiate legislation in Parliament belongs to the government; proposals for legislation must first be submitted through the Grand Vizier to the Sultan, who may, if he thinks fit, instruct the Council of State to draft a bill. To become law, a bill must be passed by both Chambers, and receive the Sultan's assent. Bills rejected by either chamber cannot be reconsidered in the same session.

The judicial power is exercised through two systems of judiciary, the first (sher'i) concerned with the Holy Law of Islam, the second (mecmedî; in the official French translation rendered "civil") with the new laws made by the state. Judges are appointed by berdt; they are irremovable (la yaf'asil) but can resign, or be revoked after a judicial conviction. Article 86 guarantees the freedom of the courts from "any kind of interference".

The effective life of the 1876 constitution was of short duration. The first Ottoman parliament met on 17 December 1876 (11 Dehber 1294/11 March 1908 N.S.), with a Senate of 25 and a Chamber of 120 deputies. Its fifty-sixth and last meeting was held on 16 Djamâd II 1324/28 June 1877 N.S. [= 16 June O.S.]. After further elections, a second Parliament assembled on 13 Dhu 'l-Hijjah 1324/13 December 1877 N.S. [= 1 December O.S.], and soon showed unexpected vigour. On 13 February 1878 the deputies went so far as to demand that three ministers, against whom specific charges had been brought, should appear in the chamber to defend themselves (cf. article 38 of the constitution). The next day the Sultan dissolved the Chamber, and ordered the Deputies to return to their constituencies. In the words of the Proclamation "Since present circumstances are unfavourable to the full discharge of the duties of parliament, and since, according to the constitution, the limitation or curtailment of the period of session of the said parliament in accordance with the needs of the time form part of the sacred Imperial prerogatives, therefore, in accordance with the said law, a high Imperial order has been issued ... that the present sessions of the Senate and Chamber, due to end at the beginning of March ... be closed as from today". Parliament had sat for two sessions, of about five months in all. It did not meet again for thirty years.
The electoral law, the preparation of which was envisaged in the constitution, was drafted and debated in 1877, but did not become law until after the 1908 revolution. It improved and extended the framework of the *irade* of 1876, but retained the limited franchise and the system of indirect elections through electoral colleges. Elections under this law were held in 1908, 1912, 1914 and 1919. All but that of 1914 were contested by more than one party; none resulted in a transfer of power. In January 1920 the last Ottoman parliament, elected in the sixth and last general election in the Ottoman Empire, assembled in Istanbul. On 18 March the Chamber prorogued itself; on 11 April it was dissolved by the Sultan. Twelve days later the Grand National Assembly of Turkey held its opening session in Ankara.

The Republic and its antecedents

Almost from the beginning, the Grand National Assembly (Büyük Millet Mejlisi) convened in Ankara by the nationalists was concerned with constitutional problems. Its first formally constitutional enactment was the "Law of Fundamental Organizations" (*Teşkilât-ı esasiyye bânânı*) of 20 January 1921—in effect the provisional constitutional provision of the new Turkish state that was emerging (*Diistur*, 3rd series, i, 196; Gözübüyük and Kili, 85-7). The first article proclaims the revolutionary principle that "sovereignty belongs unconditionally to the nation" (hâkimiyet bîlî başydi şarq milletiîsrî), and that "the system of administration rests on the principle that the nation personally and effectively directs its own destinies". The second article declares that "executive power and legislative authority are vested and expressed in the Grand National Assembly (which is the only and rear representative of the nation". The third article lays down that "the state of Turkey (Türkiye devleti) is administered by the Grand National Assembly, and its government bears the name of "the government of the Grand National Assembly". The remaining articles are concerned with the holding of elections and the conduct of government business (text in *Diistur*, 3rd series, i, 196; Gözübüyük and Kili, 85-7; English version in D. E. Webster, *The Turkey of Atatürk*, Philadelphia 1939, 97-8). This enactment, with its equally revolutionary references to "the sovereignty of the nation" and "the state of Turkey", marked the first decisive step in the series of legal and constitutional changes that regulated the transformation of Turkey from an Islamic Empire to a secular national state. The next was a resolution adopted by the Assembly on 1 November 1922, after the final victory of the nationalists. It contained only two articles: the first declared that "the Turkish people consider that the form of government in Istanbul resting on the sovereignty of an individual [the Sultanate] had ceased to exist on 16 March 1920 [i.e., two and a half years previously, the day of the British military occupation of Istanbul] and had passed forever into history." The second recognized that the Caliphate belonged to the Ottoman house, but reserved to the Assembly the right to choose and appoint the most suitable Ottoman prince. This attempt to separate the Caliphate from the Sultanate proved a failure, and on 3 March 1924 the Caliphate was abolished and the last Caliph sent into exile. Meanwhile, however, another radical change had been accomplished. On 29 October 1923, after hours of debate, the Assembly passed a group of six amendments to the constitutional enactment of 1921. Their purpose, said Muşafa Kemal, was to remove ambiguities and inconsistencies in the political system of the caliphate, and to provide a new framework. The previous night, declared that "the form of government of the state of Turkey is a Republic... the President (re'is-i gümûrî) is elected by the Grand National Assembly in plenary session from among its own members... the President is head of the state... and appoints the Prime Minister...". The new order was confirmed in the republican constitution, adopted by the Assembly on 20 April 1924 (on republican ideas in Islam see gümûrîyya).

The republican constitution retains elements of the enactment of 1921 and even of the reformed Ottoman constitution, but introduces a great deal that is new. The constitution is promulgated by the Assembly, which can amend it by a two-thirds majority (art. 102). The only entrenched clause is article 1, stating that "the Turkish state is a Republic". "No amendment or modification" of this article "can be proposed in any form whatsoever". No article of the constitution can be disregarded or suspended for any reason or under any pretext, and no law may contain provisions contrary to the constitution (Art. 103; the constitution, however, provides no special machinery for testing the constitutionality of laws).

Both the legislative authority and the executive power are vested in the Assembly, representing the sovereign people. The Assembly exercises its legislative power directly, its executive authority through the person of the President, whom it elects, and through a Council of Ministers (articles 4-7). Article 7 also gives the Assembly the right—which it never exercised—to dismiss the Council of Ministers. Judicial authority is exercised by independent courts (art. 8). The Assembly consists of a single chamber, elected once every four years. The Assembly can, however, by a majority vote, decide to hold new elections before the expiration of its term (articles 13, 25). The President of the Republic is elected by the Assembly, by secret ballot and absolute majority, for the duration of one parliament. He is to promulgate laws passed by the Assembly within ten days but may refer them back, within the same period, with a statement of his reasons for doing so.
This right does not extend to the constitutional law or to budgetary laws. If the Assembly again passes a law which has been referred back, the President is obliged to submit it to the Assembly in case of high treason, but responsibility arising from decrees promulgated by the President devolves on the Prime Minister and the minister signing the decree (article 41). The Council of Ministers is collectively responsible for the general policy of the government, but each minister is individually responsible for executive matters falling within his jurisdiction and for the acts of his subordinates (article 46). The Prime Minister is chosen by the President, the other ministers by the Prime Minister. The remaining sections deal with the judiciary, which is free and independent, with "the public rights of the Turks", and with "miscellaneous matters", including provincial administration, officials, finance, and rules relating to the constitution.

The constitution was twice amended in matters of substance before its final abrogation. The first was in April 1928, when article 2 was amended by the deletion of the words "The religion of the Turkish state is Islam", with consequential changes in some other articles, to remove references to religion or holy law. The second was in February 1937, when article 2 was again amended, by the inclusion of the six principles of the Republican People's Party, declaring that the Turkish state is "republican, nationalist, populist, etatist, secular and reformist". Some other small changes were made at the same time.

The replacement of the text of the constitution by a 'pure' Turkish version in 1945, and the abandonment of the latter in 1952, are of purely linguistic interest.

General elections under the Law of Fundamental Organizations and the republican constitution were held in 1922, 1927, 1932, 1933, 1935, 1936, 1940, 1945, 1950, 1954 and 1957. Of these, only the last four were contested by more than one party; only one, that of 1950, resulted in an opposition victory and a transfer of power, bringing the Democrat Party to power. The political development of Turkey after 1945 gave reality to much that had previously been theoretical in the constitution. While the constitution itself was not touched, changes in the law of associations, the penal code, and the electoral law, accompanied by changes in administrative practice, made possible the creation and functioning of an effective constitutional opposition, which in 1950 became the government. The second electoral victory of the Democrat Party in 1954 was followed by a deterioration. Already before the election, on 7 May 1954, a new Press Law was passed, providing heavy penalties for libel against official persons, and for the publication of "false news or information or documents of such a nature as adversely to affect the political or financial prestige of the State or cause a disturbance of the public order". It was no defence to a charge brought under this law to prove the statements were true. After the election two new laws, of 21 June and 5 July, gave the government powers to retire judges after twenty five years' service, and to retire all officials other than judges and members of the armed forces after a period of suspension. At the same time, on 30 June, the electoral law was amended. On 27 June 1956 an amendment to the law of meetings and associations was carried against vigorous opposition in the chamber, placing severe restrictions on the holding of public meetings and demonstrations. In April 1956, during a period of mounting political tension, a parliamentary committee of the government party was formed to investigate the opposition, with legal authority. On 27 May the government was overthrown by a military coup d'etat. (On the period of transition from the Ottoman to the Turkish constitutions, see G. Jaschke, Die ersten Verfassungsentwürfe der Ankara-Türkei, in MSOS, xliii/II (1939), 57-80; idem, Wie lange galt die osmanische Verfassung?, in WI, N.S. v (1957), 118-9; idem, Auf dem Wege zur türkischen Republik, in WI, N.S. v (1958), 206-18; idem, Die Entwicklung der türkischen Verfassung 1924 bis 1937, in Oriental-Notizen, iii/9 (1937), 122-3; T. E. Webster, The Turkey of Atatürk, 297-306, also in Helen M. Davis, Constitutions, Electoral laws . . . of the states in the Near and Middle East, Durham N.C. 1953, and, with useful notes, in G. L. Lewis, Turkey, London 1955, 339-43. On the period of transition, the parliamentary debates on the constitution were published by A. Ş. Gözübüyük and Z. Sezgin, 1924 anayassas hakkındaki meclis görüşmeleri, Ankara 1957; documents and debates will also be found in K. Arıburnu, Milli mücadele ve inkltiplarla ilgili kanular, i, Ankara 1957; cf. E. C. Smith, Debates on the Turkish Constitution of 1924, in Ankara Univ. Siyasal Bilgiler Fak. Derg., xiii (1958), 82-105. On the constitution and its antecedents see further E. Pritsch, Die türkische Verfassung vom 20 April 1924, in MSOS, xxvi-xxvii/II (1924), 166-251; for a lexical study of the 'pure' Turkish text of 1945, M. Colombe, Le nouveau texte de la constitution turque, in COC, iv (1946), 771-808; on the two main parties operating in this period see DEMOKRAT PARTİ and GÜMÜŞHYURET HALK İNKİSAPİ.

The second Republic

At the beginning of June 1960 the National Unity Committee which had taken over the government of the country a few days previously, as a matter of urgency, to set up a provisional constitution for the transitional period until a new constitution was established. The new law, prepared with the help of a small group of jurists, was published on 12 June, and entitled "Provisional law for the abolition and amendment of certain articles of constitutional law no. 492 of 20 April 1924" (translation in COC, xliii (1960), 266-70). The law begins with a general statement giving the legal and constitutional justification for the army's action in overthrowing the previous regime, which had "violated the constitution ... suppressed individual rights and liberties ... made it impossible for the opposition to function ... and established the dictatorship of a single party". The Turkish army, in conformity with its duty to "safeguard and protect the Turkish homeland and the Turkish Republic established by the constitution", as entrusted to it by article 34 of the army internal service code, took action, in the name of the Turkish nation, to carry out this sacred duty against the former administration ... and to reestablish a state of legality. The army therefore dissolved the Assembly and entrusted
It completed its work on 26 May, and on the following day, the first anniversary of the revolution, Gen. Gürsel announced that the draft had been accepted by an overwhelming majority of the Assembly. The text was then submitted to the Assembly, and the constitutional reform was formally completed on that day. On 28 March, the Assembly had already passed a law requiring that the draft constitution be submitted to the nation by a referendum, conducted along lines specified in the law. The referendum was held on 9 July, and resulted in the acceptance of the new constitution; 61% of the voters voted yes, 39% voted no, and some 2½ million, out of a total qualified electorate of 24 million, abstained.

The constitution provides for a Grand National Assembly of two chambers, the Senate and National Assembly. The former consists of 15 members nominated by the President, and 150 members elected for a term of six years, one third every two years, by a straight majority vote. The National Assembly, of 450 members, is to be elected every four years by a system of proportional representation. The President is elected by the Grand National Assembly in plenary session from among its own members, by a two-thirds majority, for a term of seven years. He appoints the Prime Minister, who chooses the other ministers. The government is responsible to the Grand National Assembly. A noteworthy innovation is the establishment of a constitutional court (articles 145-52), to review the legality of legislation, with power also to act as a court of impeachment of Presidents, ministers and certain high officials "for offences connected with their duties". The constitution contains explicit guarantees of freedom of thought, expression, association and publication, immunity of domicile, and other democratic liberties (section 2, articles 14-34). In addition, it contains a section on social and economic rights, with provision both for the right of the State to plan economic development so as to achieve social justice, and the right of the individual to the ownership and inheritance of property, and to freedom of work and enterprise (section 3, articles 35-53). The right to strike is in principle recognized, within limits to be determined by subsequent legislation. Other clauses in the constitution seek to safeguard the secularist Kemalist reforms from reaction, and to replace the Kemalist system by the democratic basis of government from a new dictatorship. The constitution was promulgated as law no. 334 of 9 July, in the official gazette of 20 July 1961, and entered into effect immediately. (An official English translation of the constitution was published in Ankara in 1962 and reprinted in OM, xliii (1963), 1-28, and in MEJ, xvi (1962), 215-38, with a commentary by K. K. Key; for an analysis of the constitution, see Ismet Girtili, Some aspects of the new Turkish constitution, ibid., 1-17; on the constituent assembly see R. Devereux, Turkey and the corporative state, in SAIS Review, (Spring 1962), 16-24. A useful summary of constitutional developments in 1960 will be found in Middle East Record, 1, 1960, London [1962], 452-4. Exposed to European influence earlier than other Arab lands, Egypt followed an independent course of constitutional development, although her constitutional experiments were by no means entirely unrelated to those of the Ottoman Empire. The first elaborate constitutional charter, it is true, was not promulgated until 1882, but a number of constitutional instruments, providing either for the establishment of representative assemblies or responsible cabinets, had been issued since the beginning of the nineteenth century. Bonaparte, after his capture of Cairo in 1798, issued several orders establishing diwan councils, composed of Egyptian and French members. The significance of those diwans, though they were purely consultative in nature, lies in the recognition of the principle that the people's representatives should be consulted on public affairs. Muhammad 'Ali (1805-48) revived those diwans, in the form of a Mājlis al-Mu'āzama, a consultative council which assisted him in the administration of the country. These councils, lacking the support of public opinion, were of brief duration. It was not until the reign of the Khedive Ismā'īl that further constitutional instruments were issued. One of them (1860) created a council of representatives, called Mājlis Shūrā al-Nuwwāb; another (1878) established a responsible Cabinet, called Mājlis al-Nuwwāb. Ismā'īl's immediate purpose in issuing such decrees was not necessarily to introduce constitutional reform, but to resolve financial difficulties, which could lead to foreign intervention. Legislation could be initiated either by the Cabinet or the Chamber and had to be confirmed and issued by the Khedive. No new taxes were to be imposed or the Chamber and had to be confirmed and issued by the Khedive. No new taxes were to be imposed without the approval of the Chamber. The budget was to be submitted to the Chamber for discussion, but the Government was under no obligation to adopt the views of the Chamber, save those relating to matters where sums of money had already been approved in the budget. The Chamber of Deputies was to be an elective body for a period of five years, its meetings open to the public, and its members inviolable. Its President was to be appointed by the Khedive, chosen from three candidates nominated by the Chamber. The Chamber was to have the right to interrogate the Ministers, ask questions of information, and supervise "the acts of all public functionaries, that the interests of the country may be watched over by the provincial councils from among their members. One of them embodied a fundamental law (lašīha asūsiyya) made up of 18 articles stating the functions of the Chamber and the procedure for electing it. The other, made up of 61 articles, called the law of internal regulations (lašīha niṣāmīyya, or niṣāmānāme), providing rules for the debates and internal procedure of the Chamber. The Khedive retained complete control over the Chamber by his final approval of its decisions. The meetings of the Chamber began on 25 November 1866, but it was suspended in 1879. It resumed its activities during the 'Urābī revolt and the constitutional framework which lasted from the British occupation to World War I. This law provided for the establishment of a Council of Ministers (Mājlis al-Nuwwāb), by virtue of which he entrusted power in its hands. This executive body, the first in the history of modern Egypt, was responsible, relieving the Khedive of responsibility, with the consequent limitation of his absolute powers. However, the decree was revised by Tawfīk Pāsha, who succeeded Ismā'īl in 1879, making the Cabinet responsible to him. Tawfīk often held the meetings of the Cabinet under his chairmanship. Before Tawfīk could bring the Cabinet under his full control and abolish the Chamber of Deputies, the latter took the drastic step of drawing up an elaborate constitutional charter. It was during the 'Urābī revolt that this Chamber, meeting as a National Constituent Assembly in 1882, prepared and promulgated Egypt's first written constitution, called al-Lātīḥa al-Asūsiyya. The Chamber began to discuss the draft in January 1882; it was promulgated on 7 February 1882. The Constitution of 1882 provided for the establishment of a parliamentary system and a responsible Cabinet, appointed by the Khedive. The Chamber of Deputies was to be an elective body for a period of five years, its meetings open to the public, and its members inviolable. Its President was to be appointed by the Khedive, chosen from three candidates nominated by the Chamber. The Chamber was to have the right to interrogate the Ministers, ask questions of information, and supervise "the acts of all public functionaries, that the interests of the country may be watched over by the provincial councils from among their members. One of them embodied a fundamental law (lašīha asūsiyya) made up of 18 articles stating the functions of the Chamber and the procedure for electing it. The other, made up of 61 articles, called the law of internal regulations (lašīha niṣāmīyya, or niṣāmānāme), providing rules for the debates and internal procedure of the Chamber. The Khedive retained complete control over the Chamber by his final approval of its decisions. The meetings of the Chamber began on 25 November 1866, but it was suspended in 1879. It resumed its activities during the 'Urābī revolt and the constitution of 1882 was abrogated. In 1883, a year after the British occupation, Tawfīk Pāsha issued an Organic Law reorganizing Egypt's constitutional framework which lasted from the British occupation to World War I. This law provided for the establishment of the following bodies: First, a Provincial Council, composed of from 3 to 8 members, according to the size of the province, established in each province (muḍiriyā), presided over by the muḍīr. The functions of the Council were to deal with purely local matters. The total number of the Provincial Councilors was 70. Secondly, the Legislative Council, composed of 30 members. Of these, 14 (including the President) were appointed by the Government and 16 elected by the provincial councils from among their members. No law or decree relating to general administrative matters was to be issued without prior submission to the Council, but the Government was under no obligation to carry out the resolutions of the Council. However, if the Council's resolutions were not carried out, the reasons for rejection had to be communicated to the Council. The budget was to be submitted to the Council for discussion, but the Government was not obliged to adopt the views of
the Council, nor could the Council discuss any financial matters touching on Egypt’s obligations under an international agreement.

Third World Legislative Assembly, composed of 82 members, included the six Ministers, the 30 members of the Legislative Council, and 46 delegates elected by the people. Candidates eligible for election had to be not less than 30 years old, able to read and write, and paying direct taxes of not less than 30 Egyptian pounds a year. No new direct taxes could be imposed by the Government without the approval of the Assembly. Moreover, the Assembly was consulted on every public loan and on all public matters relating to canals, railways, lands and land taxes. It also expressed an opinion on other financial, economic and administrative matters. As in the case of the Legislative Council, the Government was under no obligation to adopt the Assembly’s views on any question discussed, for the functions of the Legislative Assembly were purely consultative; but the reasons for not adopting them had to be stated. The Assembly met at least once in two years and its meetings were not open to the public. An electoral law was issued on 1 May 1883 and the first elections for the Legislative Assembly were held in November 1883. The Assembly continued to function until World War I.

In 1913, the Assembly’s functions and powers were increased under a new law issued in 1913, revising the Organic Law of 1883. The new Legislative Assembly replaced both the Legislative Council and Assembly. This Assembly, composed of 17 nominated members and 66 elected by indirect suffrage, had the power to veto proposals for the increase of direct taxes, but in all other matters its functions remained consultative and deliberative. Its proceedings were open to the public, since criticism had been levelled at its predecessor for holding closed sessions. It could delay legislation, compel Ministers to justify their proposals, interrogate them and call for information. The Legislative Assembly was intended to represent more closely the mass of the Egyptian people, but it could hardly satisfy the political aspirations of the small educated class. It met for a short period during 1914 until its sessions were suspended in 1915, never to be resumed again.

After World War I, Egypt regained quickly from a dependent to an independent status, having achieved remarkable political and social progress. The British occupation was terminated and the country was declared independent on 28 February 1922, subject to four reserved points (relating to the defence of Egypt, security of British imperial communications, protection of foreigners, and the Sudan). The Sultan of Egypt assumed the title of King on 15 March 1922, and a constitutional committee, composed of 32 members, was appointed on 3 April 1922 to draw up a draft constitution. The constitution, though communicated by the Committee to the Government on 21 October 1922, was not promulgated until 19 April 1923. Based on Belgian and Ottoman models, it provided for a monarchy endowed with many powers, which reflected the traditional pattern of administration. The King not only enjoyed the right of selecting and appointing the Prime Minister (and upon the latter’s recommendation, the ministers), but also the right to dismiss the Cabinet and dissolve Parliament. He also appointed the President of the Senate and half of the Senators, presumably upon the recommendation of the Cabinet. The Cabinet was fully responsible, for its members were derived from both houses of Parliament and were collectively responsible to the Lower House. Its life was formally dependent on a vote of confidence of the Lower House, but the King could dismiss it by a decree at any moment. Legislative power was vested in Parliament and the King. The Lower House was an elected body on the basis of universal manhood suffrage, but the Senate was half elected and half appointed. Legislation could be initiated in either House, but it had to be confirmed by the King. The latter had the power to return draft laws for reconsideration by Parliament.

From the establishment of the Sultanate (1914) to the Declaration of Independence (1922), Egypt had 8 cabinets; and from the Declaration of Independence to the end of the monarchy, Egypt had 32 cabinets. Thus the average life of a cabinet was less than one year. Parliament met on the whole regularly since the first general election of 1924, although in almost all cases the Lower House was dissolved before it completed its regular term of four years. There had been ten general elections held from 1924 to 1952. These were the elections of 1924, 1925, 1926, 1929, 1931, 1936, 1938, 1942, 1945 and 1950. Only the ninth Parliament completed its term of four years, while the second held only a single meeting. The constitution of 1923 was partially suspended by a royal decree in 1928 and replaced by another on 22 October 1933. The new constitution made no important change in the structure of government, but restricted the powers of Parliament, especially its right to withdraw confidence in the cabinet, and increased the powers of the executive. It also provided for elections in two stages, regulated by a new Electoral Law issued in 1930. These restrictions prompted opposition parties to attack the new constitution and boycott elections. However, the Government firmly enforced the provisions of the new constitution until 1936.

In 1936 a national coalition government was formed and a treaty of alliance between Britain and Egypt was signed. The nationalists had already demanded the restoration of the constitution of 1923 as a condition for their participation in the treaty negotiation, and the King formally restored it on 22 December 1935. After the declaration of Independence, 1 January 1952, Egypt remained in force until it was abolished by the Revolutionary Government on 10 December 1952. Before the intervention of the army in politics, the parliamentary system had deteriorated, because of the intense competition among political parties, the rise of rival ideological groups, and the failure of the ruling class to make concessions to the rapidly increasing oppressed masses. The inability of civil government to maintain public order invited the army to intervene and put an end to internal conflict and instability.

The Revolutionary Government appointed a constitutional committee, composed of fifty members of various shades of opinion, to draft a new constitution. The new draft constitution, reputed to have included a progressive and truly parliamentary system, was never officially promulgated. Instead a provisional constitutional framework was adopted on 10 February 1953, entrusting virtually full power to a Revolutionary Council, to be exercised by its chief, who presided over the Council of Ministers. The monarchy was maintained, but owing to the minority of the deposed King Farid’s successor, its powers were exercised by a Council of Regency. On 18 June 1953 the monarchy was abolished and a republic, headed by Muhammad Naguib (Neguib), was proclaimed. It was not until 16 January 1959 that a
new constitutional charter, which proved to be of short duration, was issued, entrusting full executive powers to the hands of President Ḥamāl ʿAbd al-Nāṣir. This constitution, embodying several innovations, declared Egypt to be an Arab nation, and introduced the presidential system, replacing the parliamentary form of government. The President was elected by a plebiscite. He possessed the power to appoint a Cabinet responsible to him and to nominate the members of Parliament, subject to the approval of the nation by a popular plebiscite. The constitution was confirmed by a plebiscite on 23 June 1956.

The union between Syria and Egypt in 1958 called for another change in the constitutional framework of the two countries. This union, regarded as the first step toward a more complete Arab unity, was called the United Arab Republic. A provisional constitution of 73 articles was issued on 5 March 1958, providing for a central executive and a central legislature; but all essential local affairs remained in the hands of local executive councils. Before agreement could be reached on its internal constitutional structure, the constitutional instrument has yet been issued. After the dissolution of the Union with Syria President Ḥamāl ʿAbd al-Nāṣir made several references to the constitution of 1956, which indicated that this constitution was still in force, pending the promulgation of a new constitution. Egypt's rulers are inclined to defer the formulation of a new constitution, pending the emergence of new patterns of government, hoping that the emerging constitutional structure will conform to Arab aspirations to unity. (For the United Arab States, see below, xviii).

The Persian constitutional movement of the early 20th century was the result of a process which had been going on in Persia, largely silently, throughout the 19th century. Up to this time the basic theories of the state and of life generally were set in the frame of Islam. The intrusion of the West into Persia in the 19th century perhaps more than any other single event had persuaded the old theories and bases of the state and to seek some new or additional base for it. The disastrous wars with Russia in the early part of the century concluded by the Treaty of Turkomānchay in 1828 convinced Persians of the need for reform, military and otherwise. Further it was through the various military missions which came to Persia from 1807 onwards that Persians had first become acquainted with modern military and scientific techniques and with the political changes which were taking place in Europe. Mīrzā Šāhīb, the first Persian known to have written an account of British parliamentary institutions, was sent to England in 1813 in pursuance of plans for military reform. He also visited Turkey and Russia. Writing in his diary of the fārsīmāl he castigates obscurantist mullas who opposed them. He gives in his diary what is probably the first account by a Persian of the French revolution. Diplomatic travel also played an important rôle in the dissemination of knowledge of western institutes. Abu ʿl-Ḥasan Shḥrāzī, who was sent on a mission to England by Fath ʿAlī Shāh, wrote in his Bayrat-nāma an account of the justice and security which he found in England, comparing it with the tyranny which prevailed in his own country. Nāṣir al-Dīn himself made three journeys to Europe, the first in 1873. The Persian merchant communities, both inside and outside Persia, were another important channel through which modern ideas spread. The Persian press published by members of the Persian communities in Istanbul, Calcutta and elsewhere also did much in the latter part of the 19th century to encourage reform. The first attempts at administrative, as distinct from military, reform were made by Mīrzā Taqī Khān Amīr Nīzhām, the first prime minister of Nāṣir al-Dīn, but proved largely abortive. He, too, had visited Russia and Turkey and seen the fārsīmāl in operation. The next minister to attempt fundamental reforms was Mīrzā Ḥusayn Khān Sīpāshālī Mughāl al-Dawla, who had studied in France, and served in Tiflis, Bombay, and Turkey, where he was Persian minister from 1859 to 1871. He subsequently held various offices in Persia, including that of prime minister. While in Turkey he wrote numerous letters, official and otherwise, in which he discussed, inter alia, European politics, civilization, education, the need for reform in Persia, the desirability of a popular assembly, freedom, the rights of the people, and equality before the law. He maintained that foreign intervention in a country was brought about by the backwardness of that country. The main object of both Amīr Nīzhām and Mughāl al-Dawla in their advocacy of reform and modernization was to prevent foreign intervention; and in this they were the precursors of the constitutional movement, which, though it was provoked in the first instance by the tyranny and injustice of the régime, was...
directed also against the encroachment of foreign powers and the disposal of Persian assets to foreigners. Plans for reform were put forward by various writers in the latter half of the 19th century. The most important figure among them in the intellectual awakening of Persia was, perhaps, Malkam Khān Nāsim al-Dawla, a Persian Armenian of Djulfa (Ishāhān), educated in Paris, who became minister to the Court of St. James in 1872. He profoundly believed in the need for Persia to westernize and repeatedly emphasised the need for the supremacy of the law. In an essay entitled Daftar-i tanzimdt, apparently written between 1858 and 1860, he drew attention to the internal woes of Persia, the threat of encroachment upon Persia from St. Petersburg and Paris, and the squandering of Persia's assets to foreign merchants. In later essays written after 1882, and especially in the last years of this reign, he repeatedly emphasised the need for the supremacy of the law. In an essay entitled Daftar-i tanzimdt, apparently written between 1858 and 1860, he drew attention to the internal woes of Persia, the threat of encroachment upon Persia from St. Petersburg and Paris, and the squandering of Persia's assets to foreign merchants.

The next phase in the struggle against the despotism was marked by the spread of secret or semi-secret societies, which began to be formed by those who were dissatisfied with the existing state of affairs. Ayn al-Dawla, who at that time was in London, and Djamal al-Dīn Afghānī, who was in some measure, a forerunner of the constitutional movement. It was successful in its object; and in January 1892 the tobacco monopoly was resceded. This victory against the government was not, however, followed by any material lessening of the pressure to which the people were subjected or limitation on the arbitrary rule of the Shah. Those who advocated modernization had still to work cautiously.
Shah 'Abd al-Azim; and they returned to the city. No steps, however, were taken to implement the promises given; these had in effect amounted to a promise of equality before the law for the different classes but had in no way limited the absolute power of the Shah. Towards the end of April a petition was presented to the Shah praying him to give effect to his promises. This proved fruitless as also did remonstrances to Ayn al-Dawla. Public opinion, stirred up by denunciations of the despotism and tyranny from the minbars of the mosques by Aka Sayyid Djamal and others, and the efforts of semi-secret and semi-secret societies, which attacked the despotism and endeavoured to spread modernist ideas, became increasingly roused. Ayn al-Dawla expelled Aka Sayyid Djamal and another preacher, Shaykh Muhammad, from the city. In the riots which attended the attempted removal of the latter on 28 Rabii' II 1324/21 June 1906 a sayyid was killed. Further riots ensued and after some days a large number of the religious classes, merchants, artisans, and others took refuge in Kumm, this exodus being known as the kidrat-i kubrā, 'the great exodus'. Meanwhile the bādars were closed and about 15 July a number of merchants, members of the guilds, and others took refuge in the British Legation. Their numbers rapidly increased and by the beginning of August had reached 12,000 or 14,000. They demanded the dismissal of Ayn al-Dawla, the promulgation of a code of laws, and the recall of the religious leaders from Kumm. The Shah did not yield to their demands until the end of the month, when he dismissed Ayn al-Dawla.

On 14 Dūmādā II/5 August, an imperial rescript was issued to the new sād-r-i a'zam ordering the setting up of a national consultative assembly (muṭāmmim-i kāndūn-i asdsī), composed of representatives of the princes, 'ulamā', members of the Kādjar family, notables, landowners, merchants, and members of the guilds, to consult on matters of state, to give help to the council of ministers in the reforms "which would be made for the happiness of Persia", and, "in complete security and confidence, to submit through the sād-r-i a'zam to the Shah their views on the wellbeing of the state and nation, the public welfare, and the needs of all the people of the land, in such a manner as shall be published by the royal signature and duly put into operation". Regulations for the assembly were to be prepared and signed by the elected representatives and ratified by the Shah, and "by the help of God Most High, the aforesaid consultative assembly, which is the guardian of our justice, will be opened and begin the necessary reforms in the affairs of the kingdom and the execution of the laws of the holy shari'a". By this time, however, the popular party had been further provoked by the intransigence of the Shah and the court party. Profoundly mistrustful, they demanded a guarantee of the Shah's good faith. Accordingly a second rescript addressed to the sād-r-i a'zam, supplementing the rescript of 14 Dūmādā II, was issued. This stated: "In completion of our earlier autograph, dated 14 Dūmādā II 1324, in which we explicitly ordered and commanded the setting up of a consultative assembly of elected representatives of the peoples, in order that the generality of people and [all] the individuals of the nation shall be aware of our full royal care, we again command and lay down that you should set up the aforesaid assembly in accordance with the description explicitly laid down in the former autograph, and, after the election of the members of the assembly, you should draw up the sections and provisions of the regulations of the Islamic consultative assembly in accordance with the approval and signature of the elected representatives, as is worthy of the nation and country and the laws of the holy shari'a, so that having been submitted to us and adorned by our auspicious signature and in accordance with the aforementioned regulations, this holy intention may take shape and be put into operation". On the issue of this rescript the bādars returned from Kumm and the British Legation respectively.

After the official opening of "the House of Parliament" on 28 Dūmādā II 1324/19 August 1906 disputes arose between the popular party and the sād-r-i a'zam over the ordinances for the assembly which the latter had drawn up. The bādars were again closed and the people once more prepared to take bast. The Shah gave way and on 17 September accepted the proposed ordinance as to the constitution of the assembly, which was to consist of 156 members, 60 from Tehran and 96 from the provinces, elections to take place every two years and the deputies to be inviolable. The immunity of the deputies was subsequently affirmed in article 12 of the Fundamental Law. The voting in Tehran was to be direct, in the provinces by colleges of electors. Elections began and on 18 Shawābān 1324/7 October 1906 the assembly was opened by Muṣaffar al-Dīn without waiting for the arrival of the provincial deputies. The assembly proceeded to elect the president of the assembly and other officers, and passed on 18 October rules of procedure. On 23 November a proposal for an Anglo-Russian loan was submitted to it by the Minister of Finance; this was rejected and an alternative plan for an internal loan approved a week later. A committee was meanwhile set up to draft the Fundamental Law of the constitution (kāndūn-i asdsī). This was ready by the end of October; but the Shah procrastinated and did not sign it until 14 Dūh l-Kāda 1324/30 December 1906. Subsequently a supplementary Fundamental Law (Muṭāmmim-i kāndūn-i Asdsī) was passed by the Assembly and ratified on 29 Shawābān 1325/7 October 1907 by Muhammad 'All Shah, who had meanwhile succeeded Muṣaffar al-Dīn. The Fundamental Law consists of fifty-one articles relating to the constitution, and was promulgated by the National Consultative Assembly and the Senate. The Supplementary Fundamental Law contains 107 articles concerning the rights of the Persian people, the powers of the realm, the rights of members of the assembly, the rights of the Persian throne, the powers of ministers, tribunals of justice, public finance, and the army.

Muṣaffar al-Dīn died in January 1907, and with his death the first phase of the constitutional revolution came to an end. The movement, which had begun as a popular demonstration against the deplorable state of the administration and country, foreign loans and concessions which were thought to be leading or contributing to national bankruptcy and foreign control, had thus ended in the grant of a constitution and the setting up of a National Consultative Assembly, a result which had been achieved virtually without bloodshed. It had been a sense of intolerable injustice or tyranny (zulm) which had eventually provoked the nationalists to action and the aims of the movement had never been clearly formulated. The general aim was simply the establishment of the rule of justice (ṣaddālat), which, in the tradition of mediaeval Islam, they saw to be the basis of good government, rather than the establishment of constitutional government and
representative institutions. The second phase of the constitutional revolution began with the accession on 8 January 1907 of Muhammad Ali, who, with his Shah, promulgated from the first bitterly opposed to the constitution. Neither the Assembly nor the ministers had had any experience of constitutional government; they were, moreover, hampered in their conduct of affairs by lack of money and military forces and by the Shah's intrigues against the constitution. The Assembly was determined to prevent fresh foreign loans, and to get rid of the Belgians from the Customs. In these aims it was successful. It also pressed for further financial reforms; and a law for the resumption by the state of all land held as Hiyal [q.v.]. Numerous political societies or angiumans had meanwhile been formed in Tehran and the provinces to defend the constitution. On 2 May 1907 Mirzâ Ali Aşghar Khân Amin al-Saltân was appointed Prime Minister and with his appointment the struggle between the Shah and the nationalists was intensified. Disorders, in many cases instigated and fomented by the Shah and the court party, broke out in the provinces. Turkey invaded north-west Persia in August. Russia was suspected, not without reason, of aiding and abetting the Shah against the National Assembly. The belief grew that there was secret collusion between the Shah, Amin al-Saltân, and the Russians to sell the country to Russia. This second phase of the constitutional revolution was in a great measure the first phase anti-foreign in the sense that it was primarily concerned to check the growth of foreign control in Persia, especially Russian. On 31 August Amin al-Saltân was murdered by a member of one of the popular angiumans. On the same day the Anglo-Russian Convention was signed, which, when it was communicated to the Assembly a month later, aroused profound mingling. Meanwhile the authority of the central government in the provinces had been reduced to almost nothing. Provincial councils (angiumanâ-yi ayâlayt va wilâyât) had sprung up in many parts of the country; these had destroyed the moral authority of the old régime, and the framework of such elementary administration as had once existed had virtually disappeared. On 7 October 1907 the Shah promulgated the Fundamental Law (see below); and on 12 November he visited the Assembly and swore loyalty to the constitution for the fourth time. Nevertheless on 15 December he attempted a coup d'état, arresting the prime minister Nâşir al-Mulk and other ministers. The popular angiumans both in the capital and in the provinces rallied to the defence of the Assembly. The Shah was momentarily worsted, but the truce was temporary and hope of reconciliation between the Shah and the nationalists was finally dashed by an attempt made on the Shah's life in February 1908. In the following months tension increased and eventually on 23 June fighting broke out between the royalist forces and the nationalists. The assembly and the neighbourhood were cleared by the Shah's forces. Thirty of the most prominent nationalist leaders were arrested and two of them strangled. On 19 November, on the 19th anniversary of the-establishment of the constitutional revolution, the Shah declared the Assembly dissolved and the constitution abolished as being contrary to Islamic law. Thus ended the second phase of the constitutional revolution, with the temporary closure of the Assembly.

Fighting broke out simultaneously in Tabriz which, after Tehran, had been the main centre of the nationalist movement, and the Shah's forces were expelled. Resistance lasted until April 1909 when the siege was raised by the entry of Russian troops to protect foreign life and property. The action of Tabriz gave the nationalists time to reorganize their forces; and eventually in 1909 a Bakhtiyari force under Sardâr As'ad and another force from Rasht under the Sipahsâr-i A'zam, Muhammad Wâli Khân, advanced on Tehran which they entered in July. The Shah fled and took refuge in the Russian Legation. A council was then held which voted his deposition and the succession of his son, Sultan Ahmad, a minor, with a regency. On 9 September the ex-Shah and his ministers were subsequently held and on 2 Dhu 'l-Ka'da 1327/5 December 1909 the second legislative session of the National Assembly was opened. The tasks facing the new assembly were such as might have daunted a more experienced body than they. The treasury was empty; the provincial administration was in a state of chaos; and Russian intervention threatened. Cabinet crises were frequent and the Assembly, divided into numerous small groups, was split by dissension. Russian troops, which had been introduced into Northern Persia ostensibly for a temporary occupation to defend foreign life and property, were not withdrawn. The anti-Russian feeling engendered among the nationalists by this and other actions produced a state of friction with Russia which culminated in 1911. In 1910 a proposal for a joint Russo-British loan to Persia was rejected on the grounds that its terms were incompatible with Persian independence. The possibility of the engagement of foreign advisers to reorganize the administration was meanwhile under consideration by Persia; and in 1911 Americans were engaged for the finances and Swedes for the police and gendarmerie. Russia was from the outset displeased at the invitation to the Americans. In May 1911 Mr. Morgan Shuster, an American citizen, engaged on a private contract with Persia as Treasurer-General, reached Tehran, with a small staff. On 13 June the Assembly passed a law giving him very wide powers. On 17 June the ex-Shah suddenly landed on Persian soil in an abortive attempt to regain the throne. Simultaneously his brother, Sâlâr al-Dawla, raised the standard of revolt in Kurdistan. Fraction meanwhile increased with Russia over the Treasurer-General's independent attitude in working for Persian financial reform and refusal to consult Russian wishes. Finally Russia seized on an incident arising from the confiscation of the estates of Shu'âb al-Saltâna, a younger brother of the ex-Shah, as a punishment for the part he had taken in the latter's rebellion, to demand an apology from the Persian Government; this was followed by a 48 hours' ultimatum on 25 November to dismiss Shuster and Lecoffre, an Englishman of French extraction serving in the Ministry of Finance, from Persian government service, to engage no foreigners without the consent of Russia and Great Britain, and to defray the cost of the military expedition which Russia had sent to Enzell to reinstate the ultimatum. In the event of non-compliance Persia was threatened with an advance of Russian troops from Rasht and an increase in the indemnity. British diplomatic protests at St. Petersburg were overridden and Russia persisted in her demands. The Assembly refused to comply. Russian troops advanced to Kazwin. Skirmishes took place between Persians and Russian troops in Rasht, Enzell and Tabriz. Anti-Russian feeling ran high in Tehran; and finally to avoid disasters by impotent resistance to Russia, the regent, Nâşir al-
Mulk, and the cabinet forcibly dissolved the obdurate assembly on 3 Muharram 1330/24 December 1911. On the following day Shuster was dismissed. The third and final phase of the constitutional revolution thus ended leaving Persia once more in a state of virtual chaos. The constitution remained suspended until 7 July 1914, when the third legislative session was opened.

The later history of the National Consultative Assembly was not dominated, as it had been during the period of the revolution, by the struggle between the despotism and the nationalists. It became accepted as part of the institutions of the country, even if in the Pahlawi period its power was restricted. During the Great War of 1914-18 Persia was a cockpit for the intrigues and operations of the belligerent powers. The resentment entertained by the Persians against Russia and Great Britain as her ally was fanned by German intrigue and the majority of the deputies of the assembly were either neutral or pro-Central Powers. On 15 November 1915 when Russian troops advanced from Kâzwân the Assembly broke up, and most of the members evacuated Têhrân with the Turks and Germans and left for Kum. The constitution was, thus, again suspended; the fourth legislative assembly was not convened until 1921; since when, apart from a brief period in 1953 when Dr. Muşaddik dissolved the assembly, successive assemblies have sat until 1967, when the reigning Shah, Muhammad Rišâ Pahlawi, dissolved the Assembly and Senate by decree.

The nationalist movement had been supported by many of the leading members of the religious classes; and in the writing of many of those who had advocated reform, and 'the rule of law', the 'law' had been equated with Islam. Reference to this point of view is found in the preamble to the Fundamental Law, which states that the purpose of the National Council to be set up under the fârnâm of 24 Diumâdâ II 1324/4 August 1906 was "to promote the progress and happiness of our kingdom and people, strengthen the foundations of our government, and give effect to the enactments of the sacred law of His Holiness the Prophet". Article 1 of the Supplementary Fundamental Law further lays down that the official religion shall be Islam, and states that the "Shah and his successors shall be judges according to the Shari'a, which faith the Shah must profess. Article 2 states that "At no time must any legal enactment of the sacred National Consultative Assembly, established by the favour and assistance of His Holiness the Imam of the Age (may God hasten His glad advent), of the Shah Majesty the Shahinshah of Islam (may God immortalize his reign), the care of the Proofs of Islam (may God multiply the likes of them), and the whole people of the Persian nation, be at variance with the sacred principles of Islam, or the laws established by His Holiness the Best of Mankind, (on Whom and on Whose household be the blessings of God and His peace)". The same article lays down that a committee of not less than five mughâlanda shall be set up "so that they may carefully discuss and consider all matters proposed in the Assembly, and reject and repudiate, wholly or in part, any such proposal which is at variance with the sacred laws of Islam, so that it shall not obtain the title of legality. In such matters the decision of this committee of ulamâ shall be followed and obeyed, and this article shall continue unchanged until the appearance of His Holiness the Proof of the Age (may God hasten His glad advent). This article became inoperative during the reign of Rišâ Shâh, and up to the time of writing has not been revived. Article 27 of the Supplementary Fundamental Laws states that the judicial power "belongs to the shari'a courts in matters pertaining to the shari'a (shari'iyya) and to the civil courts (madhâhib 'adliyya) in matters pertaining to customary law (surfiyya)". This, while contrary to the conception of Islam, was a recognition of existing practice.

The drafters of the constitution, although they made concessions to Islam, were also considerably influenced by the example of Belgian Constitutional Law and French law; and the conceptions underlying the constitution were in many respects fundamentally new to Persia. Thus, Article 26 of the Supplementary Fundamental Law states "that the powers of the realm are all derived from the people"; and the Fundamental Law regulates the employment of those powers. Similarly Article 35 states "sovereignty is a trust, as a divine gift, confided by the people to the Shah" which implies a radical change in the conception of the ruler. The main concern of the drafters was probably to limit the arbitrary nature of the Shah's rule and to give the people some defence against the arbitrary actions of government officials. A number of the articles of the Fundamental Law clearly derive from the unhappy experiences of Persia in the late 19th and early 20th centuries, when the reigning Shah recklessly contracted foreign loans and gave concessions to foreign concerns. Article 24 states "the conclusion of treaties and covenants, the granting of commercial, industrial, agricultural and other concessions, irrespective of whether they be to Persian or foreign subjects, shall be subject to the approval of the National Consultative Assembly, with the exception of treaties, which for reasons of state and the public advantage, must be kept secret". Similarly Article 22 lays down that "any proposal to transfer or sell any portion of the national resources, or of the control exercised by the Government or the Throne, or to effect any change in the boundaries and frontiers of the kingdom, shall be subject to the approval of the National Consultative Assembly". Further Article 23 states that "without the approval of the National Consultative Assembly, no concession for the formation of any public company of any sort shall, under any plea soever, be granted by the state". The Assembly has shown itself jealous of the rights accorded to it under these articles, as is shown by its refusal to ratify the oil agreement concluded by Prime Minister Kâzwân and the Russian government in 1949. Articles 25 and 26 respectively lay down that state loans under whatever title, internal or external, and the construction of railroads and roads depend upon the approval of the Assembly. The latter of these two articles was included, presumably because of the experience of the Russo-Persian railway agreement of 12 November 1890, by which the Persian Government engaged for the space of ten years "neither itself to construct a railway in Persian territory, nor to permit nor grant a concession for the construction of railways to a company or other persons". Article 27 of the Supplementary Fundamental Law states that the legislative power is derived from the Shah, the National Consultative Assembly and the Senate, each of which has the right to introduce laws "provided that the continuation thereof be dependent on their not being at variance with the standards of the shari'a, and on their approval by the two Assemblies (i.e., the National Consultative Assembly and the Senate), and the royal ratification; but the enactment and approval of laws concerning the revenue and
The executive power, which belongs to the Shah, was carried out by the ministers and officials of the state in the name of His Imperial Majesty in such manner as the law defines’. Article 28, reflecting the influence of Montesquieu, lays down that these three powers shall always be separate from one another, a principle which has been much cherished by Persian constitutionalists. Article 39 states that no Shah can ascend the throne unless, before his coronation, he appears before the Assembly in the presence of its members and those of the Senate and the Council of Ministers and undertook by oath to defend the independence of Persia, the frontiers of the kingdom, and the rights of the people, to observe the Fundamental Law and promote Shi’ism of the Dja’farí rite. Similarly, by Article 40, a regent cannot enter upon his functions unless he repeats the oath above. Article 44 lays down that “the person of the Shah is exempted from responsibility and in all matters the ministers are responsible to the National Consultative Assembly and the Senate”. The appointment and dismissal of ministers, however, lies with the Shah (Art. 46); but not of other officials save where this is explicitly provided by the law (Art. 48). Article 49 states that the issue of decrees and orders for giving effect to the laws is the Shah’s right, provided that he shall under no circumstances postpose or suspend the carrying out of such laws. The supreme command of all military forces is vested in the Shah (Art. 50); as also it is the Shah’s right, provided that he shall under no circumstances deprive the Shah of his power, to dissolve the two chambers separately or together, subject to his stating the reason and simultaneously ordering new elections so that the said chambers may convene within a period of three months; dissolution may not be ordered twice for the same reason. On 9 May 1961 the Shah used the powers thus granted to him and dissolved the National Consultative Assembly, as emended by the Constituent Assembly of April 1949 enables the Shah to dissolve the two chambers separately or together, subject to his stating the reason and simultaneously ordering new elections so that the said chambers may convene within a period of three months; dissolution may not be ordered twice for the same reason. On 9 May 1961 the Shah used the powers thus granted to him and dissolved the National Consultative Assembly.

On 8 May 1957 a joint meeting of the National Assembly and Senate was convened. On 27 April 1949 a regent was appointed by royal decree (Arts. 80 and 83 of the Supplementary Fundamental Law); but by Article 81 judges are declared irremovable save with their own consent. The Shah was also given certain rights with regard to the Senate, which was to consist of sixty members, to “be chosen from amongst well-informed, discerning, pious, and respected persons of the realm”. Thirty were to be nominated by the Shah, fifteen from Tehran and fifteen from the provinces; and fifteen were to be elected from Tehran and fifteen from the provinces (Art. 45). Its sessions were to be “complementary to the sessions of the National Consultative Assembly” (Art. 43 of the Supplementary Fundamental Law). Because it was felt that the principle of nomination was undemocratic the Senate was, in fact, never convened until 1950.

In 1921 Riḍá Khan (later Riḍá Sháh Pahléwi) became Minister of War and shortly afterwards the de facto ruler of the country. In 1925 a constituent assembly (mjâlîs-i mun‘assîsân) was convened. On 31 October it declared the rule of the Kádjár dynasty terminated and that another Constituent Assembly was to be convened, to make the necessary changes in the laws; and on December 12 a single act suppressed Articles 36 (which had vested the monarchy in Muhammad ‘Ali Sháh and his heirs), 37 and 38 of the Supplementary Fundamental Law, substituting for these three others. The new Article 36 entrusted the sovereignty of Persia to Riḍá Sháh Pahléwi and his male descendants. Article 37 states “the heir apparent shall be the eldest son of the Sháh whose mother shall be of Persian origin. If the Sháh has no male issue the heir apparent shall be proposed by hand and approved by the National Consultative Assembly on the advice of the Shah and the cabinet shall not belong to the Kádjár family. But whenever a son is born to the Sháh he will become heir apparent by right”. Meanwhile a marriage was about to be arranged between the heir apparent and Princess Fawziyya of Egypt. Presumably with a view to the possibility of issue by this marriage the law of 14 Aḥád 1357 declared the expression “of Persian origin” to include a child born of a mother who before the marriage contract with the Shah or the heir apparent should, in accordance with the high interests of the country, on the proposal of the government and the approval by the National Consultative Assembly, have been given, by a farman of the reigning Sháh, the quality (ṣafí) of a Persian”. Princess Fawziyya was in due course declared an honorary Persian. The new Article 38 provided for a regency but excluded members of the Kádjár family from holding this office.

No further changes were made in the Constitution by Riḍá Sháh, who kept the National Consultative Assembly in being but reduced it to a mere cypher. In the early years after the Second World War Muhammad Riḍá Sháh, who had succeeded to the throne in 1941, and his advisers apparently believed that the National Consultative Assembly had become too powerful vis-à-vis the executive. In any case, it was decided to convene, for the first time, the Senate and to make certain changes in the Constitution. A Constituent Assembly was duly convened on 27 April 1949. Another additional article (aṣl-i šikáh) made provision in certain cases for revision of the Fundamental Law. The drafters of the Fundamental Law and Supplementary Fundamental Law had presumably included no provision of this sort in the Law (except Article 21 of the Fundamental Law, which permits the modification or abrogation of any article regulating the functions of the ministries with the approval of the Assembly), not because they were unaware of the fact that most western constitutions contained such provisions, but because they did not wish to give any opportunity to the court party to alter the constitution. Article 48 of the Fundamental Law, which gave the Senate the right in certain circumstances to dissolve the National Consultative Assembly, as emended by the Constituent Assembly of April 1949 enables the Shah to dissolve the two chambers separately or together, subject to his stating the reason and simultaneously ordering new elections so that the new chambers may convene within a period of three months; dissolution may not be ordered twice for the same reason. On 9 May 1961 the Shah used the powers thus granted to him and dissolved the National Consultative Assembly.
maximum figure of 200; Article 5 was emended, *inter alia*, to extend the legislative term of the National Consultative Assembly from two years to four. Article 7 concerning the quorum for debates was also emended. Lastly Article 49 of the Supplementary Fundamental Law was supplemented as stated above.

Article 46 of the Fundamental Law lays down that after the constitution of the Senate all proposals must be approved by both Assemblies. Article 34 of the Supplementary Fundamental Law, however, states that "the deliberations of the Senate are ineffective when the National Consultative Assembly is not in session". Proposals may originate in either assembly, except that financial matters "belonged exclusively to the National Consultative Assembly. The decision of the Assembly in respect to the aforesaid proposals, shall be made known to the Senate, so that it in turn may communicate its observations to the National Consultative Assembly, but the latter, after due discussion, is free to accept or reject these observations of the Senate". The responsibility of the National Consultative Assembly for financial matters is reaffirmed by Article 27 of the Supplementary Fundamental Law, which, as stated above, lays down that the enactment and approval of laws concerning the revenue and expenditure of the kingdom are among the special functions of the National Consultative Assembly. Article 27 also lays down that "the explanation and interpretation of the laws is among the special duties of the National Consultative Assembly". The debates of the Assembly are normally public (Art. 13 of the Fundamental Law); though Article 34 makes provision for secret sessions. Bills other than those on financial matters, which originate with the government, must first be laid before the Senate by the responsible minister or the Prime Minister, and after acceptance there by a majority of votes must then be approved by the National Consultative Assembly; when any measure is proposed by a member of the Assembly it can only be discussed when at least fifteen members shall approve the discussion (Art. 39 of the Fundamental Law); Article 13 of the Rules of Procedure of the National Consultative Assembly and Article 82 of the Rules of Procedure of the Senate lay down that Bills which originate in the Senate or the National Consultative Assembly must be signed by at least fifteen members, except that in certain cases a bill signed by less than fifteen Senators may be voted on after reference to a committee. By Articles 1, 2 and 3 of the Civil Code, bills passed by the two houses are published within three days of receiving the royal assent in the Official Gazette and become law ten days thereafter in Tehran and ten days plus one day for every six *farsakhs* in the provinces, unless special arrangements are laid down in the law itself.

One of the most important functions of the National Consultative Assembly is the fixing and approving of the budget, which power it is accorded by Articles 27 and 96 of the Supreme Fundamental Law and Article 61 of the Supplementary Fundamental Law. The Minister of Finance according to Articles 12-17 of the Law for the General Finances (Kānim-i mubāshāt-i 'umāmi) of 10 Isfand 1312/1 March 1934 must submit this to the Assembly annually by 1 Day (23-4 December) and they must pass the budget by 25 Isfand (6-7 March). During and after the Second World War this provision was often contravened in that the Assembly refused to pass the budget as a whole and merely authorized the payment of a proportion of the budget at intervals throughout the financial year. Under Articles 101 and 102 of the Supplementary Fundamental Law the National Consultative Assembly is given power to appoint a Financial Commission to examine and analyse the accounts of the Department of Finance and to liquidate the accounts of all debtors and creditors of the Treasury. It is especially deputed to see that no item of expenditure fixed in the Budget exceeds the amount specified, or is changed or altered, and that each item is expended in the proper manner. It shall likewise inspect and analyse the different accounts of each department of state, collect the documentary proofs of the expenditure indicated in such accounts, and submit to the National Consultative Assembly a complete statement of the accounts of the kingdom, accompanied by its own observations". Article 94 further states that "no tax shall be established save in accordance with the law," and Article 99 that "Save in such cases as are explicitly excepted by the law, nothing can on any pretext be demanded from the people save under the categories of state, provincial and municipal taxes". These provisions reflect the anxiety of the drafters of the Constitution to bring order into the financial affairs of the country and to relieve the population of the burden of extraordinary and irregular levies to which they had formerly been subject.

Article 69 of the Supplementary Fundamental Law gives both Assemblies the right to investigate and examine every affair of state. Ministers may be questioned by members of both houses, provided that the speaker gives the responsible minister prior information of the question; an answer must be given within one week. The government and individual ministers may be interpellated by members of both houses, provided a written request is made to the speaker. Article 67 of the Supplementary Fundamental Law states "If the National Consultative Assembly or the Senate shall, by an absolute majority, declare itself dissatisfied with the cabinet, or with one particular minister, that cabinet or minister shall resign their or his ministerial functions".

Ministers may not accept a salaried office other than their own (Article 62 of the Supplementary Fundamental Law). Their number is to be laid down by law according to the requirement of the time (Art. 62). No one may become a minister unless he is a Muslim by religion, a Persian by birth, and a Persian subject (Art. 58). Sons, brothers, and uncles of the Shah may not become ministers (Art. 59). Ministers are responsible, individually and collectively, to the National Consultative Assembly and the Senate (Article 61) and may be called to account or brought to trial by them (Art. 29 of the Fundamental Law and Arts. 65 and 69 of the Supplementary Fundamental Law). Article 64 states that Ministers cannot divest themselves of their responsibility by pleading verbal or written orders from the Shah. A tendency to do so nevertheless emerged during the reign of Rūdān Shah and has again appeared in recent years. The internal organization of the Assembly is not based on political parties; the deputies are divided into groups or "fractions". Moreover, since the government is not composed of members of the Assembly there is no clear-cut division into a pro-government party and an opposition. In the second and third legislative sessions the majority of deputies belonged either to the Pīdāalīyūn Party or the Democrat Party. An attempt was made in the abortive elections of 1956 to conduct them on a two-party basis, two parties
having been formed under the inspiration of the court, the Milll and the Mardum parties, whose functions were to be respectively that of His Majesty's Government and His Majesty's Opposition.

The experiment was not successful.

The regulations governing the election to the first National Assembly were laid down in the Electoral Law of 20 Radjab 1324/9 September 1906. The electors were divided into six classes: (i) princes and the Kâdîr tribe, (ii) notables (â'yân wa ahrâf), (iii) ulama and students of the religious schools, (iv) merchants, (v) landowners and peasants, and (vi) members of the trade-guilds. Each elector had one vote and could vote in one class only, but the classes were not compelled to elect a deputy from their own class or guild. The persons so selected then assembled in the chief town of the province and elected members for the National Consultative Assembly according to the number specified in the law for each province. In Tehran elections were direct, number of deputies at 120; and provided for one elected member for the National Consultative Assembly on 14 Urdibihisht 1328/4 May 1949 laid down inter alia that senators were to be elected "by two degrees" by male suffrage. The term of the Senate was fixed by this law at six years (whereas Article 50 of the Fundamental Law had fixed it at two years). The Senate is opened by the Shah as soon as two thirds of the members have been elected. On 23 October 1952 a bill was passed limiting the Senate's term to two years. According to this bill electors must be at least twenty-five years old and have lived in or have dwelt for at least the preceding six months in the constituency where they vote. Members of the armed forces may not vote. Senators must be at least forty years old; they must be Muslims, and live in or be known in a district for which they are elected. They must be chosen from (i) the religious classes of the first rank; (ii) persons who have been deputies for at least three legislative sessions; (iii) persons who have the position of minister, ambassador, governor-general, public prosecutor, head of a tribunal of the Court of Cassation, or had at least twenty years' service in the Ministry of Justice; (iv) retired officers of the rank of field-marshal (sipah-bud), general, or major-general (sarlashkar); (v) university professors who have held such office for at least ten years; (vi) landowners and merchants who pay at least 500,000 rs. in direct taxes; and (vii) certain classes of attorneys. Senators are precluded from accepting government appointments and must resign if they accept such offices.

The Supplementary Fundamental Law in Articles 90-93 makes provision for the establishment of provincial councils (andijumam-i ayâltâ wa wâliyatâ) to be elected by the people to "exercise complete supervision over all reforms connected with the public interest, always provided that they observe the limitations prescribed by the law". In the early period of the constitution provincial councils were set up in many areas but the practice fell into abeyance after the Second World War. The constitution passed by the National Consultative Assembly on 14 Urdibihisht 1328/4 May 1949 laid down inter alia that senators were to be elected "by two degrees" by male suffrage. The term of the Senate was fixed by this law at six years (whereas Article 50 of the Fundamental Law had fixed it at two years). The Senate is opened by the Shah as soon as two thirds of the members have been elected. On 23 October 1952 a bill was passed limiting the Senate's term to two years. According to this bill electors must be at least twenty-five years old and have lived in or have dwelt for at least the preceding six months in the constituency where they vote. Members of the armed forces may not vote. Senators must be at least forty years old; they must be Muslims, and live in or be known in a district for which they are elected. They must be chosen from (i) the religious classes of the first rank; (ii) persons who have been deputies for at least three legislative sessions; (iii) persons who have the position of minister, ambassador, governor-general, public prosecutor, head of a tribunal of the Court of Cassation, or had at least twenty years' service in the Ministry of Justice; (iv) retired officers of the rank of field-marshal (sipah-bud), general, or major-general (sarlashkar); (v) university professors who have held such office for at least ten years; (vi) landowners and merchants who pay at least 500,000 rs. in direct taxes; and (vii) certain classes of attorneys. Senators are precluded from accepting government appointments and must resign if they accept such offices.

The Supplementary Fundamental Law in Articles 90-93 makes provision for the establishment of provincial councils (andijumam-i ayâltâ wa wâliyatâ) to be elected by the people to "exercise complete supervision over all reforms connected with the public interest, always provided that they observe the limitations prescribed by the law". In the early period of the constitution provincial councils were set up in many areas but the practice fell into abeyance after the Second World War. The constitution passed by the National Consultative Assembly on 14 Urdibihisht 1328/4 May 1949 laid down inter alia that senators were to be elected "by two degrees" by male suffrage. The term of the Senate was fixed by this law at six years (whereas Article 50 of the Fundamental Law had fixed it at two years). The Senate is opened by the Shah as soon as two thirds of the members have been elected. On 23 October 1952 a bill was passed limiting the Senate's term to two years. According to this bill electors must be at least twenty-five years old and have lived in or have dwelt for at least the preceding six months in the constituency where they vote. Members of the armed forces may not vote. Senators must be at least forty years old; they must be Muslims, and live in or be known in a district for which they are elected. They must be chosen from (i) the religious classes of the first rank; (ii) persons who have been deputies for at least three legislative sessions; (iii) persons who have the position of minister, ambassador, governor-general, public prosecutor, head of a tribunal of the Court of Cassation, or had at least twenty years' service in the Ministry of Justice; (iv) retired officers of the rank of field-marshal (sipah-bud), general, or major-general (sarlashkar); (v) university professors who have held such office for at least ten years; (vi) landowners and merchants who pay at least 500,000 rs. in direct taxes; and (vii) certain classes of attorneys. Senators are precluded from accepting government appointments and must resign if they accept such offices.

Those who had prepared the way for constitutional reform in their published works and in the discussions of the secret societies which preceded the constitutional revolution had emphasized the need for equality before the law. This was provided for in the section of the Supplementary Fundamental Law which concerns the rights of the people (Arts. 8-25). Article 8 lays down that the people shall enjoy equal rights before the law. Article 9 that "All individuals are protected and safeguarded in respect to their lives, property, homes, and honour, from every kind of interference, and none shall molest them save in such way as the laws of the land shall determine". Article 10 lays down that "No one can be unreasonably arrested, save flagrante delicto in the commission of some crime or misdemeanour, except on the written authority of the president of a tribunal of justice given in conformity with the law. Even in such case the accused must immediately, or at latest in the course of the next twenty-four hours, be informed and notified of the nature of his offence". Further, Article 14 provides that "No Persian can be exiled from the country, or prevented from residing in any part thereof, save in such cases as the law may
explicitly determine”. It was, perhaps, a major advance that such principles should be clearly formulated and written into the constitution, even if, like various other provisions of the constitution, they should be from time to time ignored.

H.M. the Padshah (also called amir, etc.) is the servant and protector of Islam and the sovereign of all subjects of Afghanistan (art. 5); in consideration of his services, a hereditary monarchy is created, the nation agreeing to raise to the sultanate his male heirs in the male line (art. 4). The sovereign’s prerogatives are as follows: his name is mentioned in the Friday khutba, the coinage bears his portrait, he confers decorations, approves laws and announces their effective date, nominates and dismisses ministers, nominates to public office, is responsible for the exercise of the laws, commands the armed forces, declares war and concludes peace, and signs all treaties; he possesses the right of amnesty and pardon (art. 7).

The ministers are responsible to the sovereign (art. 31) and may be arraigned before the Supreme Court (arts. 33-4). They give a public account, at the audience which takes place before the independence festival, of work accomplished during the year (arts. 25-7).

For the details of ministerial organization the Fundamental Law refers to the Law of Fundamental Organizations, which provided for ten ministries including a Council of State and two autonomous administrations (Posts and Telegraphs, and Public Health); the Council of State is in charge of reform, services to the state, and tribunals.

The Fundamental Law makes no provisions for a parliament, but for a Consultative Council of State (hay’at-i shürā-i dawlat) at Kabul and Councils of Consultation (madžlis-i maṣḥawara or muqtabṣawara) with representatives of the government in the provinces, at all stages up to district level (art. 39); these latter Councils consist of officials set up by the Law of Fundamental Organizations and elected members in equal number, while the Council with its headquarters at Kabul is composed half of members nominated by the sovereign, the other half being also elected by the people (arts. 40-1). Art. 42 stipulates the functions of these councils: matters submitted to the government representatives are examined and, if necessary, transmitted to the ministry concerned; if the government representative does not wish to accept the decision, he may apply to the Consultative Council who examine the matters and transmit them, with their comments, to the competent ministry.

Laws, in the drafting of which it is necessary to take into consideration the practices, needs and provisions of the sharī’a, are examined by the Consultative Council, sent to the Council of Ministers, and put in operation after they have received the approval of the ministers and the sovereign (art. 46). The Consultative Council studies the budget prepared by the Finance Ministry, as well as foreign contracts and obligations (arts. 48-9).

As regards the judiciary power, the Fundamental Law confines itself to establishing certain guarantees (publicity of proceedings, the rights of the defence, the independence of the judges who are not to allow proceedings to be delayed, arts. 50-3), the competence of tribunals (art. 54) being established by the Law of Fundamental Organizations, which provides for: justices of the peace, tribunals of first instance, courts of appeal and a Court of Cassation. Extraordinary jurisdictions are forbidden (art. 55), but a Supreme Court is instituted for the trial of ministers (arts. 56-7).

Provisions relating to finance (arts. 58-62) and the institution of an Audit Office (art. 61) are followed by details on the administration of the provinces (arts. 63-7). The following articles treat of the revision of the Fundamental Law, which must receive two-thirds of the votes in the National Consultative Council (art. 70), and of the interpretation and drafting of laws (art. 71).

It is obvious that the constitutional work undertaken under the reign of Amān Allāh represented a considerable progress towards the modernization and democratization of the country. The people began to participate modestly in political life by the election of representatives to various councils, whose role was, it is true, merely consultative; on the legislative and executive sides the government and the sovereign exercised a preponderant power, and the judiciary itself, although more independent, was not free from governmental authority, since the Court of Appeal was presided over by the minister of justice and the chief hadī was an ex officio member of it. One may notice that this Constitution is not exactly a slavish imitation of western models, and has a certain originality; there is, indeed, no provision for assuring the Islamic nature of the laws, but the duty of conforming to the sharía is underlined at several places, and the provisions concerning the Hanafi practice are striking; even more striking is the xenophobia and the sort of rigorism which appear in the retention of the ḏiyya and the wearing of the ṣumūr imposed on some non-Muslims resident on Afghan territory.

To what extent this Constitution was applied is not exactly known, since many incidents followed in the country’s internal affairs. In the summer of 1928 after Amān Allāh’s return from a visit to Europe Afghanistan was troubled by a serious movement of revolt on the part of tribes instigated by mulūds hostile to certain forms of westernization, though not, indeed, to the provisions of the Constitution. The revolt soon spread to the eastern and northern provinces, and Kabul fell into the hands of Bāzā’-i Šaqaw who proclaimed himself amir and took the name of Ḥabīb Allāh. Amān Allāh having given up resistance and his throne, Nādir Šāh, who was related to the royal family, continued the struggle against the usurper and succeeded in recapturing Kabul. Under the new sovereign the title of Nādir Šāh, he made great efforts to govern the country with wisdom and prudence and, two years later, on 31 October 1931, promulgated a new Constitution (in Pashto and in Persian: waṣī-ī asāsī-yi dawlat-i ʿalîyya-i Afgānīsān), which reiterated the greater part of the provisions of the Fundamental Law of 1923, but differed substantially from it by the creation of a Senate (madžlis-i aʿyān) and the definitive institution of a National Consultative Assembly (madžlis-i shūrā-yi miill), already created by a Diqāga in August-September 1928, confirmed by another Diqāga in 1930, and inaugurated by the Šāh in October 1930.

The new Constitution comprises 110 articles (instead of 73) arranged in the following way: general provisions (arts. 1-4), rights and duties of the sovereign (arts. 5-8), rights of citizens (arts. 9-26), organization of the National Consultative Assembly (arts. 27-66), of the Senate (arts. 67-70), of the Councils of Consultation in the provinces (arts. 71-2), rights and duties of ministers (arts. 73-83), and of officials (arts. 84-6), tribunals (arts. 87-94), the Supreme Court (arts. 95-6), finance (arts. 97-101), provincial administration (arts. 102-3), the army (arts. 106-8), and miscellaneous provisions (arts. 109-10).

On the whole the Constitutional matters are
better arranged than in the Fundamental Law of 1923, but many articles are retained almost entirely. The general provisions differ little; however, art. 1 (old art. 2) imposes the obligation on the sovereign to follow the Hanafi school, and no longer speaks of djizya and the distinguishing emblems of ghimmis. The wording of art. 5 (old art. 4) is slightly modified: the monarchy is hereditary in the family of Nader Shah, and it is he who nominate his successor; he must now take the oath (art. 6) according to a solemn formula, and a civil list is allotted to him (art. 8). Art. 23 (old art. 11) is more liberal towards the foreign press, although art. 21 (old art. 14) provides that the teaching only of Islamic sciences is free.

The National Consultative Assembly is composed of 106 deputies elected for three years; they must take an oath and enjoy parliamentary immunity. The Assembly is charged with approving laws and regulations, financial laws, grants and concessions of all kinds, the construction of railways, etc. Members of the Senate (arts. 67-70) are nominated by the sovereign; they are a counterbalance to the Assembly in the approval of laws either before or after that body; this Senate was inaugurated in November 1937. The Councils of Consultation persist in the provinces, but they are now elected (art. 71) and the wording of art. 21 (old art. 61) is not expressly provided for; on the other hand three articles (106-8) are devoted to the army; it is there laid down that foreigners are not admitted to it except in the capacities of surgeons or instructors.

In general the second Afghan Constitution marks a noticeable progress from the former; it appears not only more liberal but also more democratic in that the people have their elected representatives in the assemblies which, indeed, have especially a consultative part to play but participate more intimately in the political life of the nation.

fifteen general elections held till the abolition of the Parliamentary system.

The revolution of 14 July 1958, produced by a growing dissatisfaction with the monarchy and the Parliamentary system, abrogated the Constitution of 1925. The newly established Council of Sovereignty, composed of three members, issued a decree establishing a republican regime for 'Irāq and promising the calling of a constituent assembly to draw up a new constitution for the country. In the meantime there is no parliament. Decrees, having the force of laws, are issued by the Cabinet and approved by the Council of Sovereignty. (On the Arab Union, see below, xviii.)

vii. — SA'ŪDĪ ARABIYA

As early as 31 August 1926 the kingdom of the Hiḍjāz provided itself with a "Constitution" comprising 9 sections and 79 articles, but this has few points in common with the constitutions of Arab countries studied in this article. By virtue of this text the Arab State of the Hiḍjāz was "a constitutional Muslim monarchy" (art. 2) in which "all the administration is in the hands of H.M. King 'Abd al-'Azīz I", but the latter is "bound by the laws of the gharī'a" (art. 5). The judicial norms must conform to the Book of God, to the sources, in addition to the usual constitutional assurances, between Zaydis and Shafi'i, is responsible to the king (art. 8). Section III deals with the affairs of the kingdom, which are divided into 6 groups: sharī'a affairs, internal affairs, financial affairs, financial affairs, public instruction, military affairs (art. 9). Sharī'a affairs include everything which pertains to religious jurisdiction (al-ṣa'dūq al-ṣharī'), the two Holy Cities, waqf, mosques and all religious establishments (art. 10). The laws of Islam, which comprise officials and notables nominated by the king, village and tribal councils (art. 11). A department of audit is provided for (art. 43) as well as a general inspectorate of officials (art. 46 ff.). Section VII deals with employees of the State, section VIII with municipal councils, and the last section with administrative committees of municipalities.

A royal decree of 29 January 1927 raised Nadīd to the status of a kingdom and unified it with the kingdom of Hiḍjāz. A further royal decree of 18 September 1932 created the kingdom of Sa'ūdī Arabia, changing the name of the original kingdom, and the succession to the throne. The 'imām was to hold absolute power, but with the aid of a prime minister and other ministers belonging to his family. After the revolution of September 1952, a constitutional document was issued by the revolutionary council (majlis al-thawra) setting forth the aims of the revolution and laying down general principles of government. The former begin with the restoration of the 'true Sharī'a', the abolition of communal discrimination and the equality of all Yemenites before the law, the removal of conflicts between Zaydis and Shafi'is, followed by a series of national, political and social objectives. The principles, in addition to the usual constitutional assurances, include the statements that the Yemenite people is the source of all authority (art. 3) and that all laws derive their validity from the Sharī'a of Islam, which is the official religion of the state (art. 6). The text of the document was published in Fatīḥ al-Djazlra, Aden, issue of 8 November 1962. (Ed.)
ix. — SYRIA AND LEBANON

Like 'Irāk, Syria and Lebanon began their constitutional life after their separation from the Ottoman Empire after World War I, although some of their leaders had taken an active part in Ottoman constitutional experiments. The first constitutional step undertaken by Syria took place after the capture of Damascus by Amir Fāsyl in 1918 with the avowed intention of establishing an Arab constitutional state. Fāsyl called a Syrian Congress in 1920, representing the whole of geographical Syria (later known as Greater Syria), including Lebanon and Palestine, on the basis of the Ottoman Electoral Law. This Congress, functioning as a legislative and a constituent assembly, laid down a draft constitution of 148 articles which, though no formal vote was taken, had been accepted in principle. The Congress was still considering the draft when the French army entered Damascus and it adjourned on 19 July 1920, never to meet again.

The constitution provided for a limited monarchy, a bi-cameral legislature, and a responsible Cabinet. Syria (i.e., Greater Syria) was to be an indivisible political entity, but its boundaries were left undefined. The Syrian Government was to be an Arab Government, its capital Damascus, and its religion Islam. The constitution included a Bill of Rights guaranteeing civil liberties and freedom of thought and of religion. Both the Senate and the Chamber of Deputies were to be elected bodies: the deputies by secret ballot in two degrees, and the Senators by the Chamber of Deputies of each province. The administration of the country was to be on a decentralized basis; each province was to have its own local administration with a single legislative body called the Chamber of Deputies. The judiciary was to be independent, with a High Court appointed by the King as the supreme judicial organ.

Syria remained under direct French control from 1920 to 1930 before another constitutional step was taken. While Syria was still in the midst of the revolt of 1925-7, the French came to an understanding with Lebanon and promulgated a constitution in 1926, thus providing a constitutional model for Syria.

LEBANON

The Lebanese constitution provided for a republican régime—the first to be proclaimed in the Arab East in modern times—and a bi-cameral Parliament, to be elected by a two-stage universal manhood suffrage. The Cabinet was to be individually and collectively responsible to Parliament. The President, elected by the two Houses of Parliament in a joint session, was given the right to appoint the Prime Minister and, with a vote of three-quarters of the Senate, to dissolve the Chamber of Deputies. This elaborate structure for a small state called for a constitutional framework for Lebanon prompted the French on the need for establishing a constitutional government. Elections for a Constituent Assembly were held in 1928. A drafting committee of 27 members was appointed and a draft constitution was ready in August before the Assembly. The draft stipulated that Syria within its “natural boundaries” (i.e., Greater Syria) would be an indivisible political unit and an independent sovereign state, in form of government republican, and the religion of its head Islam. The constitution also provided for a Bill of Rights, in which the principles of liberty, equality, private property, etc. were guaranteed. The head of the executive power was the President of the Republic, elected by Parliament for a period of five years, but he was not eligible for re-election until the lapse of five years from the expiration of his term. The President selected the Prime Minister and appointed the Ministers upon the latter’s recommendation. The President was not responsible, since his decisions were countersigned by the Prime Minister and the Ministers concerned. The Cabinet was composed of not more than seven members responsible to Parliament. The Ministers were not all members of Parliament, but they could attend and take part in discussion. Parliament was made up of one House (Madjlīs, or Chamber of Deputies), which was freely elected every four years. Every male Syrian who had attained his twentieth year was eligible to vote. The constitution provided also for a High Court composed of 15 members chosen from Parliament and from the judges of the courts. The constitution was ordinarily amended by two-thirds of Parliament upon the request of either the Government or Parliament. The draft constitution, ignoring the terms of the Mandate, prompted France to inform the Constituent Assembly that certain articles, such as the one dealing with the “natural boundaries” of Syria, which included Lebanon, and others which contradicted France’s international obligations, must be revised. Upon the Assembly’s refusal, the French dissolved the Assembly in 1928 and promulgated the Constitution in 1930, having revised the articles to which they had objected. The Syrians, tacitly accepting the situation, participated in the elections for Parliament in 1932. The first President of the Republic was elected in 1933. However, the Syrians and the French could not agree on a treaty regulating the relations between France and Syria after independence. Thus, when the war broke out in 1939, the French suspended the Constitution and governed the country through a “Council of Directors”.

The circumstances of World War II gave Syria an opportunity to achieve independence and resume constitutional life. In 1941, Syria and Lebanon were declared independent and elections for the resumption of parliamentary life were held in 1943, although the legal termination of the Mandate did not take place until 1946. The Constitution of 1930, revised by deleting the articles referring to the Mandate, was
restored and a new President was elected. This constitution remained in force until 1948, when a military coup d'état was led by Husni al-Za'im, who overthrew the Government and suspended the constitution. A new draft constitution, reputed to embody progressive principles, was not promulgated, since Za'im himself was overthrown by the army in August 1949. Elections for a Constituent Assembly were held in a relatively free atmosphere, although the army remained in control of authority. The assembly issued a new draft constitution, prepared by a committee of 33 members under the chairmanship of Nâmid al-Kudsi, on 3 September 1950, and promulgated on the same day by the President of the Republic.

The Constitution of 1950 made no fundamental changes in the form or structure of the government as it existed in the constitution of 1930. Its innovations were to be found in the general articles expressing the hopes of the Syrian people. Syria was declared to be "an indivisible political unity" and to form "a part of the Arab nation". The Bill of Rights, composed of 28 articles, defined in detail the fundamental principles of freedom and the social and economic rights of the citizens. The articles relating to land stated that "a maximum limit for land ownership shall be prescribed by law", but no such law was ever issued until Syria was united with Egypt in 1958. The constitution also provided that "the state shall distribute state lands to peasants to whom land is not available sufficient for their support, against small rents to be repaid in instalments" (Article 22). Labour was regarded as "the most basic factor in social life" and "the right of all citizens". "The state shall provide work to citizens and shall guarantee it by directing and promoting the national economy" (Article 26). Education was also declared a right of every citizen. Elementary education was compulsory and free in all government schools. Secondary and professional education, though not compulsory, was also free in all government schools. Military service was compulsory, and the family, regarded as the basis of society, was to be protected by the state. The state was also to encourage marriage and endeavour to remove the material and social obstacles thereto. The articles, regarded as the most progressive in Arab lands, were overshadowed by Egypt's more radical socialist measures when Syria joined Egypt in a union in 1958. However, before Syria joined that union, she had yet to experiment with a new constitutional charter, issued under the Shishakli regime in 1954, by virtue of which the presidential system of government was introduced for the first time in Arab lands. This short-lived constitution was abrogated soon after the collapse of the Shishakli regime and the Constitution of 1950 was restored. The latter constitution may well be regarded as still (1963) before the Japanese invasion in 1942.

(j. Khadduri)
ment, in the person of the Governor-General, of advice which he could ignore.

Reforms in the composition and powers of the Volksraad in 1920, 1922, 1925 and 1927 did little to transform the body into an effective legislature. After 1927 it had co-legislative powers with the Governor-General, but he retained a veto. The system of election remained indirect, and the franchise narrow.

When the Japanese sensed that their defeat was inevitable they acted to hasten Indonesian independence. On 1 March 1945 they appointed a joint committee, the majority on which was Indonesian, to discuss plans for independence. Meetings held from 28 May to 1 June and from 10 to 17 July reached general agreement on the basic political principles which should guide the future Indonesian nation. Sukarno, a prominent nationalist leader since the 1920s, and subsequently Indonesia’s first President, played a major part in the discussions. It was his speech on 1 June, expounding his panca sila (“five foundations”, five basic principles) which made possible a workable measure of compromise between those who wanted a theocratic Islamic state (the Indonesian population is 90% Muslim) and those who, though nominally Muslim themselves, feared extreme Muslim orthodoxy. It is significant that over 90 of the leaders of the national movement were drawn had had western as opposed to strictly Islamic educations (Soelaeman Soemardi, Some aspects of the social origins of the Indonesian political decision-makers, in Trans. 3rd World Congr. Sociology, London 1956).

Sukarno’s panca sila were: nationalism (kebangsaan); internationalism, or humanitarianism (perikemanusiaan); democracy, or representation (keadilan rakyat); social justice (keadilan sosial); and faith in one God (ke-Tuhanan, or pengakuan ke-Tuhanan Jang Maha-Esa). His exposition of the principles was subtle and persuasive, reassuring, for example, the strongest supporters of the concept of an Islamic state that their best guarantee of influence was by working through the elective and democratic institutions which were going to be formed. The text of the speech is to be found in Kemenkerian Penerangan, Lahirnya Pantjasila, 2nd Engl. edn. Djakarta 1952). The Djakarta Charter, signed by nine leading nationalists on 22 June 1945, is identical in wording with the Preamble to the 1945 Constitution, with the exception of the words italicized in the following extract: “The Republic is founded in the person of the Governor-General, of advice which he could ignore. The preamble paraphrases the panca sila, the concluding part reading: “We believe in an all-embracing God; in righteous and moral humanity; in the unity of Indonesia. We believe in democracy, wisely guided and led by close contact with the people through consultation, so that there shall result social justice for the whole Indonesian people”.

Art. 1 lays down that Indonesia is a unitary state with a republican form of government. Sovereignty lies with the people, and is exercised through a People’s Consultative Assembly (Madjesi Permusjawaratan Rakjat). Art. 2 stipulates that the Consultative Assembly is to consist of the members of the Chamber of Representatives (Dewan Perwakilan Rakjat), together with representatives of regions and groups. It is to meet at least once every five years, and to take its decisions by simple majority vote. Art. 3 entrusts it with the responsibility for enacting the permanent constitution and the main guiding lines of state policy. Art. 4 gives the President the power of Government, to be exercised in accordance with the provisions of the Constitution, and a Vice-President is elected by the Chamber of Representatives to assist him to enact laws in agreement with (persetujuan dengan) the Chamber of Representatives, and to issue ordinances for the proper execution of laws. Art. 6 stipulates that the President is to be an autochthonous Indonesian, and that he and the Vice-President should be elected by the People’s Consultative Assembly by a majority vote; art. 7 lays down his term of office at five years, with the possibility of re-election; art. 10 gives him supreme command of the armed forces; art. 11 empowers him to declare war, conclude peace, and to make treaties with foreign powers, all with the sanction of the Chamber of Representatives, while art. 12 gives him the right of proclaiming a state of emergency, the conditions and consequences of which are to be regulated by law.

Art. 16 provides for a Supreme Advisory Council ( Dewan Pertimbangan Agung), which is obliged to answer questions submitted by the President, and has the right to make proposals to the Government. Art. 17 provides for Ministers of State, whose function it is to take charge of Government Departments, and who are appointed and dismissed by the President.

Arts. 19-22 govern the Chamber of Representatives. It is to assemble at least once a year, and its sanction is required for all laws. If a bill fails to receive this sanction, it is not to be submitted again during the same session. Members of the Chamber have the right to initiate laws; if the President does not ratify these, they are not to be submitted again during the same session of the Chamber. Presidential ordinances during states of emergency require the sanction of the Chamber of Representatives in its next session, and if this is not obtained, the ordinances lapse. Art. 23 governs the financial arrangements. The annual budget is regulated by law. Arts. 24-8 govern the judiciary, and guarantee the basic human rights—freedom of speech, equality before the law, and the right to work. The remaining arts. deal with religion, national defence, social welfare, the national language, and the surrender of the Constitution. The last is effected by a two-thirds majority of the People’s Consultative Assembly
when at least two-thirds of its members are in attendance (art. 37).

Four transitional and two additional provisions complete the document. Of these, nos. 2 and 4 of the transitional provisions provide for the perpetuation of arrangements existing at the time the Constitution was drafted until the new ones proposed in it could be brought into being, and arrange for the President, assisted by a National Committee (Komite Nasional Indonesia Pusat—KNIP), to exercise the powers of the People’s Consultative Assembly, the Chamber of Representatives, and the Supreme Advisory Council until such time as they can be established.

The Constitution reflects a variety of influences. The American Presidential system has obviously been more attractive than the western European parliamentary system, even though the former operates in a federal nation and the latter mainly in unitary ones. Despite the determination of the nationalists to owe as little as possible to the Dutch, several features of the 1945 Constitution are reminiscent of the Constitution of the Kingdom of the Netherlands. The Supreme Advisory Council, for example, is not unlike the Dutch Council of State. The President and the Chamber of Representatives exercise legislative power under the Indonesian Constitutional System, whereas the States-General under the Dutch. Other influences suggested by commentators include that of the draft Chinese Constitution of 1936 (M. Yamin, *Proklamasi dan Konstitusi Republik Indonesia*, Djakarta and Amsterdam 1952, 139), the constitution of the former Netherlands Indies (J. H. A. Logemann, *Het Staatsrecht van Indonesië*, 3rd ed. Gravenhage and Bandung 1954, 34); and the Chinese Organic Law of 1931 (H. Feith, *The decline of constitutional democracy in Indonesia*, Ithaca, N.Y., 1962, 43).

The first Cabinet under the Constitution was appointed by President Sukarno on 31 August 1945. The chosen ministers were responsible to the President and not to the KNIP, which had been formed on 29 August. It consisted of the members of the dissolved PPKI, plus a further selection of outstanding nationalist leaders, and representatives of the main economic, ethnic, religious and social groups in Indonesia. Its functions were advisory, not legislative.

However, following a meeting of the KNIP on 16 October 1945, the Vice-President, Hatta, announced that, pending the formation of the Consultative Assembly and the Chamber of Representatives, the KNIP itself was to be vested with legislative powers, and was to participate in the working out of the general orientation of state policy. The functions of the KNIP were normally to be assumed by a smaller component of it, known as the Working Committee, whose size permitted of more rapid decision taking. The term “Working Committee” seems to have been taken from the Indian National Congress (G. McT. Kahin (ed.), *Major governments of Asia*, Ithaca, N.Y., 1958, 504 n. 9).

At the instigation of the Working Committee, the President decreed on 14 November 1945 that Ministers should in future be responsible to the KNIP. Since the Working Committee met a good deal more frequently than the parent body, in effect Ministers were now responsible to it. The old Cabinet was dismissed, and a new one, under Sjahir as Premier, was formed.

The change was the result of unease, in the first months of the new state, on the part of those nationalists who had served with the anti-Japanese underground, at the power and influence of nationalists who had worked with the Japanese during the war, and at the presence in the new Cabinet of a spokesmen of the ex-resistance nationalists. The consequence of the change was to substitute for a Presidential system a western European type parliamentary one. It is noteworthy that 94% of the cabinet ministers in Indonesia from 1945 to 1955 had been educated in Western schools and universities (Soemardi, *op. cit.*).

In the following four years the President assumed emergency power on three occasions (29 June to 2 October 1946; 27 June to 3 July 1947; 15 September to 25 December 1948), for the terms of which he exercised full personal control. On the third occasion, however, he did so, not on his own decree, but after an Act passed with the concurrence of the Working Committee and countersigned by the Ministers of Defence, Internal Affairs, and Justice.

Apart from the period before the modification of the Constitution in November 1945, there were two other Presidential Cabinets (26 January 1948 to 4 August 1949, and 4 August to 20 December 1949). In these, the Vice-President was premier, composition was not based on party political bargaining, and "... it was generally considered that a Cabinet so established could not be forced to resign by the President (working in the office of President in Indonesia as defined in the three constitutions in theory and practice, Ithaca, N.Y., 1957, 17).

At the time the KNIP was formed, the PPKI also decided on the formation of an Indonesian National Party (Partai Nasional Indonesia), which was to be the sole Indonesian political organization. However, government announcements of 3 and 14 November 1945 made it clear that all trends of democratic opinion were entitled to political existence and organized expression. Once again the defeat and discrediting of the former Axis powers was probably a consideration.

There were two abortive agreements with the Dutch before Indonesia’s independence was finally recognized. The Linggadjati Agreement (signed 25 March 1947) granted the Republic of Indonesia de facto recognition in Java, Madura and Sumatra, and provided for a “United States of Indonesia” to be formed with Dutch co-operation. The Renville Agreement (17 January 1948), which was concluded at the instigation of the United Nations, gave the Dutch the temporary right to hold the territory they had seized in the interim, on condition that they would hold plebiscites in these areas to determine the wishes of the inhabitants. The Dutch realized that the overwhelming majority of the people under them would opt for the Republic of Indonesia, so they ignored this condition, and instead set about fostering local states like the ones they had created and sustained in Borneo and the eastern islands. Throughout this period the Dutch worked unceasingly to create a viable federal structure in the areas they controlled, in contrast with their pre-war policy of maintaining a unitary structure in their colony, and rejecting federal proposals (see A. A. Schiller, *The formation of federal Indonesia, 1945-49*, The Hague-Bandung 1955, 14-25 et passim).

In mid-1949 delegates of the Dutch-fostered federal states and of the Republic of Indonesia met at an Inter-Indonesia Conference (Konferensi Inter-Indonesia) to begin planning the institutions of the state which would take over from the Dutch. In general the proposals which emerged from this, and
from the work of a technical committee set up to complete a draft constitution, were embodied in the 1949 draft Constitution of the Republic of the United States of Indonesia (RUSI). This was issued as an Annex to the agreements reached during the Round Table Conference at the Hague (23 August to 2 November 1949), granting Indonesia "unconditionally and irrevocably" sovereignty over the whole territory of the former Netherlands East Indies.

The Constitution was entirely the work of the two Indonesian factions, republican and federalist, but the Dutch expressed their approval. It was an unbalanced, and, as it was to transpire almost at once, an unworkable structure that the new Constitution envisaged. Since Indonesia had won unconditional independence, it was not of course in any way binding on her.

The main provisions were as follows. There was to be a President, who would act as Head of State, and had to be "an Indonesian" (art. 69). The President was "inviolable" and his Ministers responsible, jointly for the entire Government policy, and each individually for his part of it (art. 118). The Government consisted of the President and his Ministers by the provisions of art. 68. All Presidential decrees, with the exception of those nominating three cabinet formateurs, required the counter-signature of two Development Ministers or formateurs (arts. 74 and 119). The President remained in supreme command of the armed forces, but if necessary these were to be placed under the command of a Commander-in-Chief (art. 182). There was no provision for a Vice-President, but the Cabinet had to include a Prime Minister (art. 74).

There would be a bicameral legislature. The Senate was to have two representatives appointed by their respective governments, from each of the 16 component states, while there were to be 150 members of the House of Representatives (or more if that number did not include at least the minimum numbers of representatives of minority ethnic groups stipulated) (arts. 80, 81, 100). The first House of Representatives was to be appointed (arts. 109-10), and the provisions allowing for a minimum representation of minority ethnic groups (nine Chinese, six Europeans, three Arabs) were retained. Generally speaking, the provisions governing the legislative procedure were very much as in the Constitution of 1949, with the necessary modifications to allow for the disappearance of the Senate (arts. 64, 89-92, 94-5). The Chamber of Representatives (acting for the only two remaining Dutch-sponsored states) and leaders of the Republic of Indonesia agreed on the essentials of a new unitary state to replace the existing structure. It was also agreed that Sukarno should be President of the new state. The House of Representatives of RUSI and the Working Committee of KNIP were to draw up a new Constitution, on the basis of the 1949 document, but incorporating the basic provisions of the Constitution of 1945. For the following two months delegates worked on the detail of a new provisional Constitution, a task completed by 20 July 1950.

Once ratified by the respective legislatures, this document was signed for the two parties on 15 August, and came into operation on the fifth anniversary of the proclamation of independence in 1945, 17 August 1950.

It differed in important respects from the federal Constitution which had preceded it. It was unicameral, sovereignty being exercised by the Government and the Chamber of Representatives (art. 1). There was to be a Vice-President, appointed on the first occasion by the President on the recommendation of the Chamber of Representatives (art. 45). The President was specifically given the power to dissolve the Chamber of Representatives (art. 84), which he had lacked under the 1949 dispensations, but this power was circumscribed by the additional provision that his decree of dissolution had also to order the holding of elections for a new Chamber within 30 days. The Presidential supreme authority over the armed forces, reiterated in art. 127, was limited by art. 85 which made it imperative for military decrees to be counter-signed by the responsible Minister.

The Chamber of Representatives in the first place was to be made up of the RUSI House and Senate, plus the members of the Working Committee of KNIP and the Supreme Advisory Council (art. 77). Subsequently, at general elections, there was to be one representative for each 300,000 Indonesians (arts. 58-9), and the provisions allowing for a minimum representation of minority ethnic groups (nine Chinese, six Europeans, three Arabs) were retained from the 1949 document.

Generally speaking, the provisions governing the legislative procedure were very much as in the Constitution of 1949, with the necessary modifications to allow for the disappearance of the Senate (arts. 64, 89-92, 94-5). The Chamber of Representatives was not specifically barred from forcing the Cabinet or any member of it to resign. This was generally taken as tacit under-writing of full Cabinet responsibility in the western European manner. The usual guarantees of individual liberties and welfare were incorporated. The Preamble, as with that of 1949, echoed Sukarno's panca $ila.

The 1950 Constitution was, as originally envisaged, intended to be simply provisional, like its predecessors, pending the election of a Constituent Assembly to devise the permanent Constitution. But in fact it remained in operation until suspended in 1959.
An important source of operational friction lay in the disproportion between the duties of the President according to the Constitution and the personality, character and standing of the President. As Head of State, Sukarno was theoretically confined to the kinds of activities open to a constitutional monarch in western Europe. But he was also undistinguished leader of a long and arduous national revolution, invested thereby with tremendous prestige and capable of quite unique command of the loyalty of the mass of the people. It was impossible to keep him out of the political process to the extent that the Constitution assumed. His frequent policy speeches, critical of other parts of the state machine, were often taken as governmental pronouncements, and could seriously embarrass the Cabinet, who need not have been apprised in advance of their contents. If conflict developed between Cabinet and President it was the Cabinet that had to go. The President was in permanent occupation, inviolable by the terms of the Constitution (art. 83), had the power to dissolve the Chamber of Representatives, and was secure in the knowledge that nowhere in the Constitution (unlike that of 1949) was there any definition of "government".

Another serious impediment to the smooth working of the institutions devised was the increasing development of personal strains among the dramatis personae. The 1945-9 Government had functioned as well as it had done partly because of the intense pressure to which it was unremittingly subjected. Personal differences were secondary to the overall objective of independence. With the unifying factor of Dutch persecution gone, divergences of viewpoint and incompatibilities revealed themselves.

Another weakness lay in the great number and frequent irresponsible self-statements of the political parties. Before the elections of 1955, of the 236 seats in the Chamber of Representatives, no party ever held more than 52. Party discipline was almost completely lacking. The views of party members in a Cabinet and their colleagues in the national organization often diverged. Parties not represented in the Cabinet did not function as a restrained, constructive, responsible institution but patently in their actions suggested that habits of obstruction acquired in the long and bitter fight against the Dutch had become ingrained. The Cabinet time and again found itself under the necessity of acting by emergency decree in order to clear arrears of legislation over the heads of the Chamber (which had, of course, to ratify in its next session, but this it usually did). In this kind of situation, a great deal depended on personalities, their mutual compatibility, and in particular their relations with the one permanent feature of the political landscape—President Sukarno. No cabinet lasted longer than two years, and most a good deal less than that.

It is noteworthy that in his speeches and writings over many years Sukarno had made plain that his view of democracy did not coincide with traditional Indonesian patterns of decision making, expressed in the terms musjawarah (deliberation, discussion), muafaqat (agreement, deliberation), and golong rojong (mutual aid, co-operation). The first implies that the leader should act only after consultation with those led, and that his leadership should consist of guidance rather than dictation. The second has the connotation of decision reached not through majority, but by final arrival at the general will, the greatest attainable degree of consensus. The third emphasizes the co-operative aspects of economic and social life, and is implicitly critical of arrangements which encourage or condone the clash of vested interests, the spirit of competition, and the thrust of individualism.

Sukarno's political role, so circumscribed by the letter of the 1950 Constitution, as compared with that of 1945, grew progressively more significant and direct. The essence of his proposals was that the Cabinet should represent a broad cross-section of the parties, including the communists, and that it should work with a National Council, which would include key ministers, and representatives of different interest groups in Indonesian society—trade unions, youth movements, religious, artists, farmers and peasants, journalists, women, veterans of the revolution, foreign-born citizens, Indonesian business circles, the armed forces, and the outer islands. It would be the task of the National Council to advise the President and the Cabinet and to make recommendations.

His suggestions met with resistance, and regional rebellions, which had since Independence finally erupted and subsided, now flared. A state of War and Siege was declared, giving recognition to the exercise of civil authority by regional military commanders. As Sukarno was unable to find a politician who could form a Cabinet on his principles, he himself stepped in and established a "National Caretaker Cabinet" under a respected non-party man, Dr. Djuanda Kartawidjaja. Two of the members of the Cabinet were reputed to be sympathetic to the Indonesian Communist Party (PKI). The National Council, nominated by the President, further strengthened his hand. Although Djuanda told the Chamber of Representatives that the Cabinet, as before, would continue to be responsible to it, clearly a major change in the role and power of the Presidency had taken place.

In 1958 a revolt in Sumatra offered the most serious challenge yet to Sukarno, and an alternative Cabinet and Government were formed. The legitimate Government succeeded in crushing this revolt, and in the process effectively cleared its path of the individuals and parties hostile to it who had been unwise enough to become implicated. The Army, under the leadership of General Nasution, confirmed its growing authority and influence. The PKI, on the other hand, had shown in regional elections in Java that its strength, too, was increasing. Sukarno now favoured a return to the Constitution of 1945, with its basically presidential pattern. After considerable discussion and pressure, the Cabinet accepted his demand in December 1958. When the elected Consultative Assembly, whose function was the enactment of a permanent Constitution to replace that of 1950, failed to endorse the return to that of 1945, it was dissolved. The President

However, Sukarno's major concern in mooting guided democracy was that western democracy, with its counting of heads and statistical majorities, was not in accordance with traditional Indonesian patterns of decision making, expressed in the terms musjawarah (deliberation, discussion), muafaqat (agreement, deliberation), and golong rojong (mutual aid, co-operation). The first implies that the leader should act only after consultation with those led, and that his leadership should consist of guidance rather than dictation. The second has the connotation of decision reached not through majority, but by final arrival at the general will, the greatest attainable degree of consensus. The third emphasizes the co-operative aspects of economic and social life, and is implicitly critical of arrangements which encourage or condone the clash of vested interests, the spirit of competition, and the thrust of individualism.

Sukarno's political role, so circumscribed by the letter of the 1950 Constitution, as compared with that of 1945, grew progressively more significant and direct. It would be the task of the National Council to advise the President and the Cabinet and to make recommendations.

His suggestions met with resistance, and regional rebellions, which had since Independence finally erupted and subsided, now flared. A state of War and Siege was declared, giving recognition to the exercise of civil authority by regional military commanders. As Sukarno was unable to find a politician who could form a Cabinet on his principles, he himself stepped in and established a "National Caretaker Cabinet" under a respected non-party man, Dr. Djuanda Kartawidjaja. Two of the members of the Cabinet were reputed to be sympathetic to the Indonesian Communist Party (PKI). The National Council, nominated by the President, further strengthened his hand. Although Djuanda told the Chamber of Representatives that the Cabinet, as before, would continue to be responsible to it, clearly a major change in the role and power of the Presidency had taken place.

In 1958 a revolt in Sumatra offered the most serious challenge yet to Sukarno, and an alternative Cabinet and Government were formed. The legitimate Government succeeded in crushing this revolt, and in the process effectively cleared its path of the individuals and parties hostile to it who had been unwise enough to become implicated. The Army, under the leadership of General Nasution, confirmed its growing authority and influence. The PKI, on the other hand, had shown in regional elections in Java that its strength, too, was increasing. Sukarno now favoured a return to the Constitution of 1945, with its basically presidential pattern. After considerable discussion and pressure, the Cabinet accepted his demand in December 1958. When the elected Consultative Assembly, whose function was the enactment of a permanent Constitution to replace that of 1950, failed to endorse the return to that of 1945, it was dissolved. The President
re-introduced the 1945 Constitution by decree on 5 July 1959.

In March 1960 the elected Chamber of Representatives was dissolved, and an appointed gotong royong (mutual co-operation) one took its place. President Sukarno formed a new Cabinet, with a Chief Minister, Dr. Djuanda, but he himself added the Premiership to his other roles as President, Supreme Commander of the Armed Forces, Chairman of the Supreme Advisory Council (the name by which the National Council came to be styled), and Chairman of the National Planning Council. Parties which could not accept the new circumstances were banned. Civil servants were forbidden to join political parties. The formation of a National Front was announced.

The present (February 1963) Indonesian Constitution is, therefore, the one with which Indonesia embarked in August 1945. The personal primacy of Sukarno has been recognized and endorsed by making of the Presidency the key political institution, wielding executive and legislative power, the former with the assistance of Ministers appointed by and responsible to the President, the latter with the consent of the Chamber of Representatives. The President and Vice-President are responsible to the Consultative Assembly, which elects them, and in which resides the sovereignty of the people. Functional group elements are included in the Chamber of Representatives, the Consultative Assembly, and the Supreme Advisory Council. Ten political parties, including the PKI, have been accorded recognition. General elections, due to be held in 1962, were postponed until "after the return of Irian Barat". These would be the first elections under the 1945 Constitution.

**LI**

Libya proved to be the first North African country west of Egypt to be emancipated from foreign control and organized, despite her relative backwardness, as a modern constitutional state following World War II.

On 21 November 1949, the General Assembly of the United Nations passed a resolution declaring Libya, comprising the three provinces of Cyrenaica, Tripolitania, and Fazzan, to be established as a united and independent state. The resolution also provided that Libya shall be a constitution to be laid down by her people's representatives, meeting in a national assembly. The General Assembly appointed a United Nations Commissioner, Adrian Pelt, to advise Libya's national assembly in the drawing up of her constitution.

The national assembly met on 25 November 1950 and appointed a constitutional committee composed of 18 members (each province was represented by six members). The actual drafting was entrusted to a working group of six. The national assembly began its debate over the draft as soon as the constitutional committee had completed the first chapter. The assembly formally completed its work on 7 October 1951 and the constitution was promulgated on that day. A draft electoral law, based on several Arab electoral laws, was submitted to the assembly on 21 October and was adopted on 6 November 1951.

The Libyan Constitution provided the innovation of a federal system by virtue of which the three provinces of Cyrenaica, Tripolitania, and Fazzan agreed to join in a union under a single monarchy entrusted to King Idris I. This union proved to be a happy compromise, capable of development into a more intimate unity, as the amendment of 1962 demonstrated. Under the federal system, Libya possessed one national (federal) government and three state (provincial) governments. The powers of the national government, such as foreign affairs, defence, and matters relating jointly to the three provinces, were specifically stated; the residuary powers remained in the provinces. The national government is composed of a bi-cameral parliament, a Cabinet responsible to the Lower House, a supreme court to decide the constitutionality of laws, and a federal administrative system. Each state (provincial) government was composed of a wali (governor), an executive council, a legislative assembly, provincial courts, and a provincial administrative system. The wali was responsible to the King and the chief of the executive council was responsible to the provincial legislative assembly. The first amendment to the constitution, enacted in 1962, simplified this elaborate system of government by making the wali responsible to the federal government and abolishing the head of the provincial executive council, making the council responsible to the wali. The progress achieved under the Libyan federal system justified the steps undertaken by the national assembly to provide such an elaborate constitutional framework, without which the three provinces would, perhaps, have been unable to unite into one state, governed by one monarchical system. This system has proved to be fairly stable, for Libya has had only one sovereign since 1951, six Cabinets, and three Parliaments (1952, 1956, 1960). The Lower House proved to be quite vocal in its criticism of governmental measures and was capable of withdrawing confidence in one of the governments (1960), although Libya's parliamentary system, in the absence of a party system, was on the whole subservient to the executive.

(M. Khadduri)

xiii. — SūDAN

The convention of 19 January 1899 between Great Britain and Egypt, confirmed by the treaty of 26 August 1936, made the Sudan an Anglo-Egyptian condominium, but the British authorities tended, after the second world war, to lead the country towards autonomy and independence. Negotiations between Britain and Egypt were broken off on 27 January 1947, the Egyptian government making known its desire to submit "the cause of the Nile Valley in its entirety" to the Security Council.

From 1944, however, a Consultative Council of the Northern Sudan comprising 8 members nominated by the governor-general and 18 elected by the provincial councils established in the same year had been instituted. On 9 March 1948 the Consultative Council of the Northern Sudan had adopted an organic law providing for the creation of an Executive Council and a Legislative Assembly; this text, promulgated on 19 June by the governor-general, aroused protests from Egypt and the Sudanese protagonists of the unity of the Nile Valley, who refused to take part, on 15 November 1948, in the elections to the Legislative Assembly; the latter was to have included 52 elected members (for the North), 13 appointed by the provincial councils of the South, and 20 nominated by the governor-general.

In March 1951, at the request of the Assembly which had been constituted, the governor-general charged a commission of 13 members, all Sudanese, with the drafting of a Constitution, which was adopted by the Assembly on 23 April 1952 under the name of "Ordinance on Autonomy". This text was composed of a preamble and 21 chapters containing 105 articles. Chapter III deals with the governor-general and the executive, Chapter V institutes a Senate and a Chamber of Deputies; legislation is dealt with in Chap. VI, finance in Chap. VII; the following deals with the Controller-general, Chap. IX with the judicial power; a judicature administering the shari'a (art. 79) is maintained under the presidency of the Chief kālī; conflicts of jurisdiction are decided by a court of jurisdiction of which the Chief kālī and a judge of the High Court of the shari'a are members (art. 80). Chap. X creates a commission of public administration, while the last section deals with interim provisions.

This text should have become effective on 9 November 1952, but the Egyptian revolution had broken out in the meantime; on 29 October the Egyptian government had, however, published a memorandum recognizing the right of the Sudanese to self-determination, and finally the ordinance on autonomy was promulgated on 21 March 1953 after the signature of the Anglo-Egyptian agreements of 12 February envisaging amendments to be added. The Chamber of Deputies was to consist of 97 elected members, and the Senate of 30 elected and 20 appointed members; elections were therefore arranged for November and December 1953, and on 6 January 1954 the Chamber elected the president of the council who formed the first government.

After a period of transition, independence was officially proclaimed before the Senate and the Chamber of Deputies, in joint plenary session on 1 January 1956. On the same date a provisional Constitution was brought into operation comprising 11 chapters and 121 articles; it largely repeats the Ordinance on Autonomy, but Chap. III is completely modified, since it now provides for the election by parliament of a supreme commission of 5 persons which is to be the highest authority in the State (art. 10-1). Chap. IV deals with the executive power of the Prime Minister, appointed by the supreme commission, which also appoints ministers. The Council of Ministers is responsible to parliament (art. 27). The legislative body (Chap. V) continues to consist of the Senate (20 members appointed by the supreme commission, 30 elected) and the Chamber of Representatives, Chap. VI deals with legislative procedure, the following chapter with finance, property, contracts and lawsuits, Chap. VII provides for the appointment of a Controller-general of accounts by the supreme commission. Chap. IX deals with the judicial power, comprising a civil division and a shari'a division presided over by the chief kālī (art. 93). Art. 95 provides that the shari'a division shall consist of tribunals and shall exercise the powers provided by the ordinance of 1902 on tribunals of Sudanese Muslim law, and other modificatory laws. Chap. X treats of public offices, and the last chapter contains interim provisions.

On 22 May 1958 both chambers of parliament joined in a Constituent Assembly to examine the definitive form of the Constitution, and in spite of the opposition of the Southerners, appointed 40 members charged with preparing a new draft. The text presented did not obtain the approval of the Southerners since it provided for a unitary and not a federal State, and also because it provided that Islam should be the state religion and Arabic the official language. Finally the Constituent Assembly voted for a motion recommending that the constitutional committee should take note of the demands of the Southerners. It had however, no time to bring its deliberations to a satisfactory conclusion, since on 17 November 1958 a coup d'État put the government of the country in the hands of the army. The following day the high command of the armed forces published decrees by the terms of which the Sudan was a democratic republic whose supreme constitutional organ was the high command which delegated its legislative, executive and judiciary powers to General 'Abbūb. The constitution is suspended.

xiv. — PAKISTAN

Pakistan, on coming into existence on 15 August 1947, was governed by the Government of India Act 1935, as amended by the Indian Independence Act 1947, which repealed all provisions of the former statute authorizing control from England and the reserved powers of the Governors and Governor-General. The Constituent Assembly, summoned in July 1947, was not only to make new constitutional laws but also to exercise the powers of the Federal Legislature under the Act of 1935. Pakistan com-
mented as a federal state; in addition to the former British Indian territory, within the territory of Pakistan were the princely states of Bahawalpur and Khairpur (Bahawalpur, Khayrpur [q.v.]), the Balochistan states, and the N.W. Frontier states. The Independence Act had broken the link between these states and the Crown but they executed instruments of accession to Pakistan, surrendering powers over defence, foreign affairs and communications.

Legislative subject-matter was distributed between the centre and the Governor's provinces by three lists, one enumerating matters within the exclusive competence of the Constituent Assembly, another matters exclusively assigned to the provincial legislatures, and a third matters over which power was concurrent, though central legislation would prevail in case of repugnancy, unless assented to by the Governor-General. Administrative power generally covered the same field as legislative power, though most matters on the concurrent list were within the provincial power and the centre could direct a province to act as the instrumentality for execution of its laws and to take prescribed steps for the construction and maintenance of communications. Distribution of powers between the centre and the states was determined by their instruments of accession.

At the centre the Governor-General, though appointed by the Crown, was nominated by the Government. The Governor-General appointed the Provincial Governors. Ministers were appointed by the Governor-General and Governors; they could hold office for 10 months without being members of the appropriate Assembly. The Governor-General and the Governors could legislate by Ordinance when the appropriate legislature was not in session. The Governor-General could proclaim an emergency, if faced with a threat of war, rebellion, or mass-movement of population, which would have the effect of extending the federal power to all provincial matters; he could also, if he thought the security of Pakistan in danger or the provincial constitution could not be worked, direct the Governor to assume, as his deputy, all the executive and legislative powers of the Province.

The High Court at Lahore, the Chief Court at Karachi and the Judicial Commissioner in N. W. Frontier and Balochistan were, when Pakistan became independent, the highest tribunals in the provinces in which they were situated. A High Court at Dacca (Dhaka) for East Bengal and a new Federal Court were created. To the powers of the latter under the Government of India Act 1935 were transferred the appellate jurisdiction of the Privy Council by statutes passed in 1949 and 1950.

In 1952 a draft constitution was presented to the Constituent Assembly but discussion was postponed until September 1953 in the hope of reconciling conflicting views regarding it.

Before this constitution could be finalized, the Governor-General dismissed the Constituent Assembly on 25 October 1954 and litigation followed, resulting in this action being upheld. A fresh Constituent Assembly was summoned and first met on 5 July 1955. On 30 September it enacted the Establishment of West Pakistan Act which came into force on 14 October, integrating the territories of the west wing into a single province and amalgamating the High Court of Lahore, the Chief Court of Sind and the judicial commissioners in N. W. Frontier and Balochistan into a single High Court.

The Constitution of the Islamic Republic of Pakistan came into force on 2 March 1956. It was federal, in so far as relations between the centre and the two provinces were concerned. Legislative and administrative powers were distributed as before, save that the provincial power was to some degree enhanced by the transfer of some powers to the provincial list and by giving the provinces power over matters not enumerated in any list. The centre had exclusive power to impose certain taxes. All other taxing powers were assigned to the provinces, which were also entitled to a share in the proceeds of income tax, purchase tax and some export and excise duties, all imposed by the centre. Grants to provinces were also contemplated. These and the provincial shares in distributable taxes were appropriated on the advice of a National Finance Commission, consisting of the finance ministers of the Federation and the Provinces sitting with other members appointed by the President in consultation with the Governors.

The head of the state was styled "President"; he was to be elected by the members of the central and provincial legislatures; it was necessary that he should be a Muslim and not less than 40 years of age. His term of office was five years and he could not be elected more than twice. He was liable to impeachment only by a resolution supported by two-thirds of the members of the National Assembly. The Constitution contemplated that he would generally act on the advice of his ministers. He was obliged to appoint as Prime Minister the person most likely to command the confidence of a majority of the members of the National Assembly. Though he held office at the pleasure of the President, he could not be dismissed unless the President was satisfied that he had lost that confidence. Other ministers were appointed and removed by the President, but any minister who for six consecutive months was not a member of the National Assembly ceased to be a minister. The Prime Minister was elected by the President, though he could dismiss any minister and suspend him on a decision by an individual minister being reviewed by the whole cabinet. The purpose was to ensure collective responsibility of the ministers to the National Assembly.

All legislatures were unicameral. The National Assembly was composed of 150 members from each wing and, for the first ten years, five seats in each wing were to be reserved for women. A candidate for election had to be 25 or older and qualified for the franchise, i.e., he had to be a citizen of Pakistan, of sound mind, not subject to any disqualification and resident in the constituency for which he was enrolled. The National Assembly had a maximum life of five years; it was summoned, prorogued and dismissed by the President; two sessions in each year with a maximum of six months between sessions were obligatory. The Assembly elected a speaker and deputy speaker and was empowered to make its own rules of procedure. Ordinary legislation was passed by a simple majority, bills being presented to the President, who could assent, veto or return a bill for reconsideration. The veto could be overruled by a two-thirds majority and the President was obliged to assent to a reconsidered bill, passed by a simple majority, with or without amendment. The initiative in all financial matters was vested in the Executive. No bill or amendment dealing with taxation or appropriation or involving expenditure
from the revenues of the Federation could be moved except on the President's recommendation.

The President could legislate by Ordinance in emergencies, if the National Assembly was not in session; such legislation was subject to the same constitutional limitations as Acts of the National Assembly but would expire six weeks after the commencement of the next session of the National Assembly or earlier if disapproved by the National Assembly.

The powers to declare a national emergency and suspend a provincial constitution were retained but proclamation for that purpose had to be approved by the National Assembly. A new emergency power was created, to proclaim a financial emergency if the President was satisfied that financial stability was endangered; this also required the approval of the National Assembly. The effect of the first two powers was the same as before. The effect of the third was to empower the centre to control financial business in the Provinces.

The pattern of the central executive and legislature was reproduced in the Provinces with slight differences. The Governor occupied a position comparable to the President but was appointed by the President, holding office at his pleasure but normally continuing for five years. It was essential that he should have administrative experience but not that he should be a Muslim. Corresponding to the Prime Minister was a Chief Minister. Each Provincial Assembly had 300 members with 10 extra seats for women for the first 10 years. Nobody could be a member of the National Assembly and a Provincial Assembly.

There was no distribution of judicial power. The Federal Court became the Supreme Court. It had original jurisdiction in disputes between Provinces and between the Federation and a Province. Appeals lay from the High Courts on constitutional matters, in civil cases involving property worth Rs. 15,000 or certified to involve an important legal point and in criminal cases where a sentence of death or transportation for life had been passed in appeal from an acquittal to a High Court or by a High Court in the exercise of its extraordinary original jurisdiction, or when a High Court had overturned a conviction, or found a defendant guilty of contempt. The Supreme Court could also grant special leave to appeal from any order of any judicial or quasi-judicial tribunal other than a court martial. It also had an advisory jurisdiction to give an opinion on any point of law referred to it by the President. The High Courts' previous powers and jurisdiction were continued and they were empowered to issue writs for the protection of a Fundamental Right and "for any other purpose", which, as interpreted, meant in any matter where justice called for action and the petitioner had no adequate alternative remedy. The Supreme Court was also empowered to issue writs but only to protect a Fundamental Right. A Supreme Court Judge was only removable on an address supported by two-thirds of the members voting in the National Assembly; a High Court Judge could be removed on a report of the Supreme Court after enquiry.

A feature of the 1956 Constitution was its chapter on Fundamental Rights, which included a guaranteed legal remedy against any law infringing a Fundamental Right. This chapter demanded equality before the law and prohibited discrimination in respect of access to places of public resort and in appointment to government service on grounds of religion, caste, sex, place of birth or residence. No person could be deprived of life or liberty save by authority of law, and punishment under a retroactive law was forbidden. A person arrested on a criminal charge had a right to be informed of the grounds of his arrest within 24 hours and a right to consult and be defended by a pleader of his own choice. A person preventively detained had a right to the grounds of detention, a right to make a representation and, in case of prolonged detention, a right of recourse to an advisory board. Citizens were, subject to conditions, entitled to freedom of speech, assembly, association, movement, residence, religion and freedom to follow a profession and deal with property. Expropriation of agricultural land or any interest in a commercial undertaking, except for public purposes, under a statute providing fair compensation, was forbidden. Religious denominations could maintain religious institutions and provide religious instruction in their educational institutions. No person could be denied admission to an educational institution on grounds of race, religion, caste or place of birth but no student could be obliged to participate in activities connected with any religion but his own.

There was also a chapter of Directive Principles, not enforceable in the courts, but intended to be followed by the executives and legislatures. They enjoined the promotion of social uplift and the protection of economic well-being. Steps were to be taken to strengthen the bonds between Muslim countries, to promote international peace, to enable Muslims to lead their lives in accordance with Islamic principles, to see that Islamic institutions were properly managed, and to provide facilities for instruction in the religion of Islam.

Another chapter forbade the enactment of any law repugnant to the injunctions of Islam and the revision of the existing law to bring it into conformity with those injunctions. To effect these purposes a Commission was to be appointed to define the injunctions of Islam and to recommend measures for their enforcement, but an Act of the National Assembly would be necessary to implement any recommendation made. Nothing effective appears to have been accomplished in the exercise of these functions.

On 7 October 1958 the Constitution of 1956 was abrogated by the President, who placed the country under martial law. All legislatures were dismissed and political parties dissolved. The President exercised the federal executive and legislative functions, assisted by ministers appointed by him and responsible to him alone. Provincial Governors exercised the powers they would have had under the Constitution of 1956 on the suspension of a provincial constitution, but subject to control by the Martial Law Authorities. At first the distribution of powers was continued but in 1959 all matters on the provincial list were transferred to the concurrent list. The statute law previously in force was continued and protected from attack as repugnant to a Fundamental Right. The acts of the Martial Law Authorities were protected from review by the courts, whose powers, except to the extent indicated, remained intact.

It was not intended that the Martial Law experience was to continue indefinitely. In 1959 the Basic Democracies Order was promulgated, creating a hierarchy of local government boards, town and union committees, district committees and divisional councils. In the lowest tier, at least two-thirds of the members were elected by persons formerly entitled to vote at elections to the legislatures, but
the Sub-divisional Officer was chairman of the thana or taksil committee, and in the higher tiers the elected element would be diluted.

In the year 1960 the members of local councils elected under the Basic Democracies Order were required to declare by secret ballot whether or not they had confidence in the President. If the majority showed confidence, the President would take steps for the promulgation of a new constitution under which he would be deemed to have been elected President for the first term. The motion having gone in the President’s favour, he appointed a commission to make recommendations for the new Constitution. It was promulgated on 1 March 1962. There are at the centre the President, Ministers and a National Assembly and a Governor, Ministers and a Provincial Assembly in each province but it would be difficult to maintain that the Constitution is federal in fact. There is a list of central subjects. All other matters are within the provincial power, but the National Assembly may encroach on the provincial field on the grounds that the security of Pakistan demands it or that uniformity is necessary throughout Pakistan. It is no longer possible to impugn a law as ultra vires the enacting legislature, and the rule that, in case of conflict, a central law prevails over a provincial law is of universal application.

After the expiry of Field-Marshal Ayyub Khan’s term of office, the President, who must be a Muslim and have attained 35 years, will be elected by an Electoral College, composed of one Elector chosen by each electoral unit, of which there are 40,000 in each Province. The President’s term is five years; he is liable to be impeached for violation of the Constitution or gross misconduct, or removed for incapacity, by a resolution supported by three-quarters of all members of the National Assembly. But any such motion is discouraged by the threat that, if half the members do not support the resolution, those who gave notice of the motion will cease to be members of the Assembly.

The executive capital is Islāmābād and the legislative capital Dacca (Dhaka). Presidential government replaced parliamentary government, for the President appoints the Ministers, and may remove them without assigning reasons; they cease to hold office on a change of President. The original intention was that they should not be members of the National Assembly, but this is no longer compulsory.

The National Assembly, elected by members of the Electoral College, will consist of 156 members, half from each wing, from which three seats will be reserved for women. It has a maximum life of 5 years. It can be summoned not only by the President but also by the Speaker at the request of one-third of all the members. If summoned by the President, it is prorogued by the President; if the Speaker summons it, he prorogues it.

The President dismisses the National Assembly, but he may not do so if the unexpired portion of its term is less than 120 days or before a vote on a motion to impeach or remove him. The President ceases to hold office 126 days after the dissolution of the Assembly, unless his successor has earlier entered on his office. In case of disagreement between the President and the National Assembly, the President may refer the matter to the Electoral College. As under the 1956 Constitution, the President may assent to or veto a Bill or return it for reconsideration; if he takes either the second or third course and the Bill is again passed by a two-thirds majority of all members, he may refer the matter to the Electoral College, where he may be overruled by a simple majority of the total membership.

The President retains the power to legislate by Ordinance when the National Assembly is not in session. If the Ordinance is approved by the National Assembly, it is deemed to become an Act of the Assembly; in any other case it expires 180 days after promulgation or 42 days after the Assembly next meets, whichever is less. The President is also empowered to issue a proclamation of general emergency in the same circumstance as previously and it must be laid before the Assembly, which has no power to disapprove. While this proclamation is in force, the President may legislate by Ordinance, whether the Assembly is sitting or not. The Ordinance, must be laid before the Assembly, which has no power to disapprove. If it approves, the Ordinance is deemed to be an Act of the Assembly; in any other case it ceases to have effect when the President withdraws the proclamation.

Under the 1956 Constitution the power of the National Assembly to refuse demands for grants, except to meet expenditure charged on the revenues of Pakistan, was a powerful instrument whereby the legislature could control the executive, but under the 1962 Constitution the Assembly cannot refuse to meet demands for recurring expenditure, including an increase up to 10% of the expenditure incurred in the previous year.

As before, the pattern of the executive and legislature in a province is similar to that at the centre, but the Governor is appointed by the President and is subject to his directions; he may be removed at any time without reasons being assigned. Provincial ministers hold office at the Governor’s pleasure but cannot be removed without the Governor’s concurrence.

Each Provincial Assembly, elected by members of the Electoral College, consists of 150 members, five seats being reserved for women. Its maximum term is five years. In case of conflict with the Governor, he or the Speaker may request a reference to the National Assembly; if the National Assembly decides in favour of the Governor, then and only then can the Governor dismiss the Provincial Assembly. The Governor’s powers to legislate by Ordinance can only be exercised when the Provincial Assembly is not in session and, mutatis mutandis, resemble the powers of the President.

The Supreme Court no longer has powers to issue writs, and its appellate jurisdiction is limited to appeals from a High Court; while it still may grant special leave to appeal, an appeal only lies as of right against a sentence of death or transportation for life imposed by a High Court, a committal for contempt by such court, or on its certificate that a substantial question of constitutional law is involved. The High Courts have also lost their writ jurisdiction, but, where there is no adequate remedy, they may declare an act of a public authority illegal and direct such authority to act in conformity with law. A High Court may also satisfy itself as to the legality of the custody in which any person is held and the right of an incumbent to hold public office.

The old Fundamental Rights, revised and restated, appear in the guise of Principles of Law Making and the Directive Principles as Principles of Policy, but they are only binding on the consciences of legislators and public officials; no law can be impugned as violative of the Principles of
Law Making and no official act can be declared invalid as violating a Principle of Policy.

One Principle of Law Making is that no law shall be repugnant to Islam, and it is provided that any legislature, the President or a Governor may refer a proposed law to the Advisory Council of Islamic Ideology for opinion as to whether it violates any of the Principles. The members of this Council are appointed by the President, having regard to their understanding and appreciation of Islam and the economic, legal and administrative problems of Pakistan; they hold office for three years. Apart from the function involved above, they may make recommendations to the Governments on means of encouraging Muslims to live in accordance with Islamic principles. When a question of repugnancy of a proposed law to a Principle of Law Making is referred to the Council by the President or a Governor, he must inform the Assembly of the date on which the advice is expected, but, if the Assembly, the President or the Governor thinks immediate action necessary in the public interest, the law may be enacted before the advice is furnished.

(A. Gledhill)

XV. — MAURETANIA

On 28 September 1958 the Mauretanian people approved the French draft Constitution submitted to referendum, and chose adherence to the Communauté; on 28 November of the same year the Territorial Assembly opted for the status of Member State of the Communauté, proclaimed the Islamic Republic of Mauretania, and transformed itself into a Constituent Assembly. A committee prepared a draft which was adopted by the Assembly on 22 March 1959. This first Constitution comprised a preamble and 9 chapters, containing 53 articles. In the preamble the Mauretanian people proclaims its adherence to Islam, the principles of democracy. Art. 2 declares that Islam is the religion of the Mauretanian people, but guarantees to everyone freedom of conscience. National sovereignty belongs to the people, who exercise it through their representatives and by way of referendum. Chap. II treats of the government, which is composed of the Prime Minister and other ministers. The Prime Minister decides and carries out the policy of the State, exercises the power of making regulations, ensures the execution of the laws, appoints to offices of the State, negotiates and concludes agreements with the Communauté (art. 12), appoints the members of the government and dismisses them (art. 13). Before entering into office the ministers of the government must take an oath according to a formula designed only for Muslims. Chap. III relates to the National Assembly, which holds the legislative power (art. 17) and is elected for five years (art. 18). The deputies enjoy parliamentary immunity (art. 19) and take the oath in a prescribed form, although the text only defines these forms in the case of Muslim deputies (art. 21). Chapter IV deals with the relations between the government and the Assembly; chap. V treats of the constitutional commission, chap. VI with justice: provisionally, the control of justice is in the domain of the competence of the Communauté (art. 43), but the civil courts of Muslim law are to conduct enquiries and dispense justice according to this law in all civil and commercial matters. The organization of these courts is to be determined by law. Laws shall be introduced to codify the rules of Muslim law applicable in the Islamic Republic of Mauretania (art. 44). A High Court is provided for by art. 45. Chap. VII deals with territorial entities, which are the district and the parish; chap. VIII provides for the procedure to be followed for the revision of the Constitution, and chap. IX contains interim provisions.

The National Assembly elected on 17 May 1959 took office and prepared a new constitutional text necessitated by the accession of Mauretania to independence. This text was promulgated on 20 May 1961. It consists of a preamble and nine chapters including 61 articles. In comparison with the Constitution of 22 March 1959 it presents noticeable differences especially in the new provisions which relate to the President of the Republic, who is endowed with very extensive powers. He must be of the Muslim religion (art. 10); elected for five years by direct universal suffrage (art. 13), he takes the oath before the National Assembly in a prescribed form (art. 16). As holder of the executive power (art. 12) he decides the general policies of the nation and selects the ministers, who are responsible to him (art. 17); he possesses, moreover, the power of enacting regulations (art. 18), commands the armed forces (art. 20), signs and ratifies treaties (art. 22), and exercises the right of pardon (art. 23). In case of imminent danger he takes the exceptional steps required by the circumstances (art. 25). It is he also who declares a state of war or a state of emergency (art. 42).

Chap. III is devoted to the National Assembly, elected for five years and invested with the legislative power (arts. 26-7). Deputies enjoy parliamentary immunity (art. 29). Chap. IV deals with the relations between the President of the Republic and the Assembly, especially on matters which fall within the orbit of the law (art. 33) and those which refer to the power of regulation (art. 35). The President of the Republic may, with the authority of the Assembly, take measures by decree which are normally within the purview of the law (art. 36). The initiation of laws belongs to the President of the Republic and the members of the Assembly (art. 37). The President promulgates the laws and arranges for their publication in the Official Gazette within 15 days, during which time he has the power to refer back the draft or the proposal to the Assembly for a second reading. According to chap. V, international treaties and agreements can only be ratified by virtue of a law (art. 44). Chap. VI establishes the independence of the judiciary (art. 47), which dispenses justice in the name of the people. The superior council of the magistracy assists the president of the Republic (art. 50). The Supreme Court receives the
declarations of candidates for the presidency of the Republic (art. 13), declares when the Presidency is vacant (art. 24), and decides in case of dispute on the regularity of the election of deputies (art. 28), and scrutinizes the constitutionality of laws (arts. 41, 45); it also scrutinizes the correct functioning of the referendum and publishes its results. Its other powers, its composition, its rules of procedure and the procedure which are applicable before it are fixed by law (art. 57). In the case of high treason the President of the Republic and the ministers may be impeached by the National Assembly and sent before the High Court. Chapter VII concerns parishes, administered by elected councils. The following chapter provides for the procedure of revising the Constitution, and the last contains interim provisions.

xvi. — KUWAYT

On 16 November 1962 the amir of Kuwayt published the first Constitution of the amirate, voted by a Constituent Assembly who had spent the previous two months examining a draft prepared by specialists. Discussion had been lively, and many articles had been accepted only after long discussions. The discussion which holds most interest for Islamic scholars is that which arose on art. 2, which provides that “the State religion is Islam, and the ghar'a an essential source of legislation”; some members wished to say the essential source, and their opponents had to struggle to make them admit the impossibility of applying Islamic law to the letter (which for example provides that the thief is to have his hands cut off) and its incompatibility with the needs of a modern State as regards banks, insurance and other financial institutions.

This Constitution thus declares in its first articles that Kuwayt is an independent and sovereign Arab State, that its people are part of the Arab nation, that Islam is the State religion and that the ghar'a is an essential source of legislation, but that all matters relating to family law and personal status are excluded from the scope of this provision. The Islamic scholars who opposed the Constitution had wished to say the essential source, and their opponents had to struggle to make them admit the impossibility of applying Islamic law to the letter (which for example provides that the thief is to have his hands cut off) and its incompatibility with the needs of a modern State as regards banks, insurance and other financial institutions.

This Constitution thus declares in its first articles that Kuwayt is an independent and sovereign Arab State, that its people are part of the Arab nation, that Islam is the State religion and that the ghar'a is an essential source of legislation, but that all matters relating to family law and personal status are excluded from the scope of this provision. Section IV deals with the government, which is responsible to the King and to the Chamber of Representatives (art. 65); it is responsible for the execution of laws (art. 80) or by a vote of censure (art. 81).

Section VI lays down the principle of the independence of the judicial power and sets up a High Council of Judiciary. According to the provisions of Section VII members of the government can be impeached by the Chamber of Representatives and sent before the High Court of Justice. Section VIII deals with provincial and local government, and Section IX with the Higher Council for national development and planning. Section X treats of the constitutional chamber and the Supreme Court. Section XI provides for the possibility of revising the Constitution, but art. 108 declares that "the monarchic form of the State and the provisions relating to the Muslim religion cannot be the object of any constitutional revision". Finally, Section XII contains transitional provisions.

xviii. — **Federal constitutions**

The year 1958 was marked by three attempts to create unions or federations of Arab states: on 1 February, the United Arab Republic (al-Dwiąm al-arabiyya al-muttaḥida) of Egypt and Syria; on 8 March, the United Arab States (al-Duwal al-arabiyya al-muttaḥida), of the United Arab Republic (but more particularly the former Egypt) and the Yemen; on 14 February, the Arab Union (al-Ibtidāy al-arabī), of 'Irāk and Jordan. All three were ephemeral, but they lasted a sufficiently long time for them to provide themselves with federal constitutions, drafted within a remarkably short time.

Reference has already been made to the constitution of the UAR, to which a little must be added here. As early as 5 February 1958 detailed provisions on the future status of the new republic were presented to the Syrian Chamber of Deputies and the National Assembly of Egypt by the heads of the two states; on 21 February the populations of both countries were asked to approve by referendum the creation of the UAR and the choice of Diasmāl 'Abd al-Nāṣir as President of this republic: about 99.99% of the voters replied in the affirmative to both questions; on 5 March the provisional Constitution of the UAR was promulgated, providing for an executive council in each of the two provinces and a central government, in addition to the already elected President. This Constitution reproduced almost verbatim in its 73 articles the essential provisions of the Egyptian Constitution of 16 January 1956. It differed from the latter, however, by not declaring that Islam was the State religion and that Arabic was the official language, and moreover did not specify whether sovereignty belonged to the nation. Certain articles also were modified in a sense generally favourable to the common executive power; thus the cumulative legislative assembly were not elected by universal suffrage, but nominated by the president of the republic; the rights of the latter concerning the dissolution of the assembly were more extensive than in the Egyptian constitution; the Chief of State not only retained the right of direct government 'in case of necessity' by decree 'having the force of law', but all the restrictive conditions imposed on him in this respect in the Egyptian constitution disappeared in this provisional constitution; the President was not even obliged, when proclaiming a state of emergency, to refer this to the Assembly. The remaining provisions were in general similar at all points to those of the Egyptian constitution. The Syrian coup d'état of 28 September 1958 made an end of the Union and abolished the federal constitution on 29 September.

The very day after the proclamation of the UAR at Cairo, delegates of Egypt and the Yemen began talks which culminated, on 8 March, in the signature at Damascus of the charter of the United Arab States by the president of the UAR and the crown prince of the Yemen, the amīr Sayf al-Īslām Bahr. By the terms of this charter, which consisted of 32 articles divided into three chapters, each State was to preserve its international personality and its own government; no reference was made to the religion or language of the union. All citizens were to be equal and have equal right of work; they were guaranteed freedom of movement, guarantees of movement, and co-ordination of external policies, of diplomatic representation, of the armed forces, of economic activities, of the currency and of education were treated in chapter I. A supreme council, composed of the heads of member States, was to be assisted by a Council of the Union composed of an equal number of representatives of the member States. Presidency of this Council of the Union was to be assumed for a year at a time by the member States in turn. The supreme Council was charged with establishing the higher policy of the Union in matters of defence, economy and culture; it was to promulgate the laws, appoint the commander in chief of the armed forces, and draw up the budget of the union; the Council of the Union was to be its permanent organ; it would have to establish the final programme, which it would submit for ratification to the Supreme Council. A council of defence, an economic council and a cultural council were also instituted. Chapter III contained general and provisional regulations on the seat of the Council of the Union, the entry into force of the laws, the suppression of diplomatic representation between the member States, and customs regulations. The federation having been broken on 26 December 1961, the constitution lapsed on that date.

As an answer to these regroupings within the Arab world the Hāshimite sovereigns Faysal of 'Irāk and Husayn of Jordan announced, on 14 February 1958, the creation of a union between their kingdoms, and on 19 March following, the Constitution of the Arab Union, drawn up by a mixed 'Irāk-Jordanian commission, was promulgated simultaneously at Bagdad and 'Amman. It comprised 80 articles in 8 chapters. "Membership of the Union is open to any Arab State desirous of joining", but each State would retain its independent identity and its own system of government; any treaties previously concluded would affect only the States which had signed them. Here again there is no provision on the religion or language of the Union. The seat of government was to be at Bagdad and 'Amman alternately; a common executive power was to be established, but each State was to retain its own flag. Legislative power would belong to the president of the Union (the king of
DUSTÜR 675

Irak) and to an Assembly of forty members (20 from each State), who were to be elected for four years by a council of ministers. The President would nominate, dismiss and accept the resignation of the Prime Minister and conclude treaties, and would be the Supreme chief of the army. The ministers would be collectively and individually responsible to the Assembly of the Union; each ministry had, within a month of its formation, to define its policy in a declaration made to the assembly. In case of urgency, during the interval between sessions of the assembly, the president could promulgate federal decrees having the force of law, provided that he submitted them to the next meeting of the Council of the Union. Chapter IV, which deals with the judicial power, is almost exclusively concerned with the institution of a Supreme Court charged with the task of judging the members of the Assembly and the ministers, of settling any disputes which might arise, of giving its advice on legal questions submitted to it by the Prime Minister, of interpreting the Constitution, of giving its advice on legal questions and of hearing appeals on sentences of the federal courts. Chapter V deals with the powers of the Union as regards foreign affairs, security, customs, economic questions, and education. The finances of the union were to be furnished by the member states in defined proportions. The Assembly would discuss the budget, and a Court of Audit was to be instituted. Chapter VII envisages the conditions under which the Constitution could be amended. Finally, chapter VIII contains various provisions on the state of emergency, the first assembly, the first budget, the necessity of member States revising their own constitutions to bring them into line with that of the Union.

On 26 March the Jordanian and Iraki parliaments ratified the Constitution of the Union. At Baghdad the Chamber of Deputies decided to amend the Iraki Constitution of 1925, and was then dissolved to allow the vote on the amendment to be taken by a new assembly; on 10 May the latter voted the amendment, and on 12 May approved the text of the Constitution of the Union. On 18 May the first federal government was formed. On 14 July 1958 the Iraki Revolution put an end to the Union and in consequence to the federal Constitution.

The authors who have shared in the composition of this article DUSTÜR have made it their chief endeavour to trace the history of the constitutional movement in the countries concerned and to analyse more or less briefly the promulgated texts. This has the advantage of presenting the reader with a fairly complete synthesis, but also the occasional drawback of obscuring to some extent those points which must be of primary interest to students of Islam, namely the place accorded to Islam in the constitutions of the Muslim countries. We shall therefore set ourselves here to group together the common elements and to note the points of divergence, taking into account only those texts at present (beginning of 1963) in force (or suspended without being replaced), and disregarding constitutions that are too archaic (Sa'di Arabia), rigorously secular (Turkey), Soviet, or of a special local character (Lebanon, Indonesia). Thus we shall confine our attention to the constitutions of eight Arabic-speaking states (Egypt, Irak, Jordan, Libya, Morocco, Mauretania, Syria and Tunisia) and three non-Arab Muslim countries (Afghanistán, Irán and Pákistán).

The chronological order in which these eleven constitutions were promulgated is of no more than secondary interest, for all of them (except that of Afghanistan) can be regarded as recent and on the modern pattern, the oldest (Irán) having been revised and, so to speak, brought up to date. Both in the monarchies: Afghanistan (with qualifications), Irán, Jordan, Libya and Morocco, and in the repu-
blics, the uni- or bi-cameral parliamentary system has been universally adopted, though the sovereign or head of state enjoys powers that are generally very extensive and participatory in the country’s political life (we cannot fail to notice, moreover, that at the present moment (January 1963) three out of seven republics—not counting the Sudan—are headed by officers brought to power by the army in order to put an end to the abuses of a misconstrued liberal regime.

To the parliamentarianism of democratic tendency is added the solemn proclamation of the Rights of Man and the principles of liberty and equality, painstakingly included in the texts; the functioning of the institutions is minutely regulated, with the result that these constitutions, while far from being identical, are absolutely comparable to those of the Western countries which have more or less served as their models. The difference lies, on the one hand, in the fact that the Eastern Arab countries declare themselves to be “an integral part of the Arab nation” and that Tunisia and Morocco proclaim that they belong to the “Greater Maghrib”, on the other hand, and above all, in the provisions relating to Islam which they all contain.

To begin with, Islam is expressly declared to be the state religion in all the constitutions enumerated below. That exception is that of Syria. Morocco takes the precaution (art. 108) of excluding from any future revision the provisions relating to the Muslim religion, i.e., the second half of art. 6 (which additionally guarantees to all the freedom of worship). It goes without saying that in these countries the head of state could not belong to any religion but Islam; four constitutions make express provision to this effect: those of Syria (art. 3), of Pakistan (art. 10), of Tunisia (art. 37) and of Mauretania (art. 10). Art. 120 of the Egyptian Constitution of 1956 is silent about the religion of the head of state, but there can be no doubt as to the will of the framers of the constitution; in the monarchies it is evident that the sovereign must necessarily belong; in Afghanistan the sovereign must be a Muslim; in Iran (art. 1) the King must belong to the Hanafi school; in Iraq the state religion is Twelver Shi’ism to which the Constitution (art. 108), of Tunisia (art. 37) and of Mauretania (art. 10). Art. 120 of the Egyptian Constitution of 1956 is silent about the religion of the head of state, but there can be no doubt as to the will of the framers of the constitution; in the monarchies it is evident that the sovereign must necessarily belong; in Afghanistan the sovereign must be a Muslim; in Iran (art. 1) the King must belong to the Hanafi school; in Morocco the King is Commander of the Faithful (amir al-mu’minin); in Libya (art. 51) the representative of the throne, regent or member of the regency council, must be a Muslim.

Syria (but see also the Sudan) is thus the only Muslim country not to have declared that Islam is the state religion, but in this regard art. 3 of the constitution voted on 5 September 1950 (retained in that of 22 September 1953) is instructive; in effect, the original draft, which actually made Islam the official religion, has been modified by the Constituent Assembly in the following manner:

1. the religion of the President of the Republic is Islam;
2. Islamic fikoh is the principal source of legislation;
3. freedom of belief is guaranteed. The State respects all revealed religions and assures them complete freedom of worship on condition that they do not disturb the public order;
4. the personal status of the religious communities is safeguarded and respected.

This notion of respect for revealed religions only is unique in the constitutional system of the Muslim countries and has no parallel except in the clause of the constitution protecting the freedom of worship, on condition that it do not disturb the public order.

Moreover, this
The council is charged with giving its opinion on the "Islamicity" of the laws at the request of the President of the Republic or of a governor; and the Head of State, though he may respect the 'ulamā', knows that he can hardly count on them, and does not fail to invite them to become better informed of the requirements of the modern world. Their incapacity has been shown up clearly by the so-called Munir report, which has come to a conclusion revealing the incompetence of the traditional leaders of traditional Islam, were not only unfitted to run a modern state, but were deplorably unable under cross-questioning even to give realistic guidance on elementary matters of Islam. The court of inquiry, and subsequently the world, was presented with the sorry spectacle of Muslim divines no two of whom agreed on the definition of a Muslim, and who were yet practically unanimous that all who disagreed should be put to death. The application of Islamic law may be studied in the article şar'î (see meanwhile G.-H. Bouquet, Du droit musulman et de son application effectue dans le monde, Algiers 1949; J. N. D. Anderson, Islamic law in the modern world, London 1959), but we must notice here that the general tendency of the constitutions, even in Pakistan, is to institute civil courts charged with giving judgement, in matters of personal status and succession, on the basis of codes established according to the requirements of Islamic law. It is worth emphasizing, then, that of the modern institutions that of Jordan is unique, in the judicial sphere, in providing expressly for the maintenance of religious jurisdictions (art. 104) consisting in şar'î courts and in councils for the other religious communities. The competence of these latter councils in matters of personal status and mortmain property is fixed by the law (art. 109), while the şar'î courts are constitutionally considered consultative (art. 108) in the following matters: personal status of Muslims; claims for payment of diya [q.v.] between Muslims or parties consenting to this mode of settlement; questions concerning wakf [q.v.] property. In other countries the kâibs have been retained, but their existence is more or less precarious.

**DUYÜN-I 'UMMİYYE,** the Ottoman public debt, more particularly the debt administration set up in 1881. The Ottoman government had made its first attempts to raise money by internal loans in the late 18th and early 19th centuries (see şaham and kâ'im). The needs and opportunities of the Crimean War brought a new type of loan, floated on the money markets of Europe. The first such foreign loan was raised in London in 1854, the second in the following year. They were for £3,000,000 at 6% and £5,000,000 at 4% respectively. Between 1854 and 1874 foreign loans were raised almost every year, reaching a nominal total of about £200 million. Usually, since Turkey was regarded as a poor risk, the loans were granted on very disadvantageous terms; the money received was for the most part used to cover regular budgetary expenditure, or else spent on projects unconnected with economic development. The end came on 6 October 1875, when the Ottoman government defaulted on its payments of interest and amortization. A period of negotiations followed, and agreement was finally reached between the government and representatives of the European bondholders. This agreement was given legal effect in the so-called Muharrem Decree, issued on 28 Muharrem 1290 (20 December 1881), setting up an "Administration of the Public Debt" (*Duyûn-i ummiyye*—in French *Administration de la dette publique ottomane*), directly controlled by and answerable to the foreign creditors. Its primary duty was to ensure the service of the Ottoman public debt, which was consolidated at a total of £166,400,320, or £121,050,912, at the prevailing rate of 110 piastres to the pound sterling. For this purpose, the Ottoman government ceded certain revenues to the Council "absolutely and irrevocably . . . until the complete liquidation of the debt". These consisted of the revenues from the salt and tobacco monopolies, stamp-duities, and the taxes on spirits, silk, and fisheries, together known as the *rûstem-i sîte,* six taxes. In addition to these taxes, which it collected directly through its own agents, the Council was to receive tribute from the Balkan principalities, and, if necessary, a share of customs receipts. The executive committee, or Council, consisted of six delegates, representing British and Dutch, French, German, Italian, Austro-Hungarian and Ottoman bondholders, together with a seventh representing a group of priority bondholders, most of which were held by the Imperial Ottoman Bank. Already in 1861 the Council had over 3000 revenue collectors at its disposal. By 1911 its total staff stood at 8931—more than that of the Ottoman Ministry of Finance. The Council of the Debt had become a very powerful body, with far-reaching influence on the financial and economic life of the Ottoman Empire, and even, to an extent that has been variously assessed, on its politics.

The Debt Administration continued to function during the First World War and under the Allied occupation, in spite of the withdrawal of the British, French and Italian delegates during the war and of the German and Austrian delegates after the armistice. The work was carried on under the authority of the remaining delegates, and amounts due to enemy creditors deposited for future payment. It came to an end with the victory of the nationalists under Mustafâ Kâmil, and the creation of the republic. The treaty of Lausanne determined the share of the new Turkey in the debt of the defunct Empire. Negotiations followed, and agreements regarding liability and payment were signed in 1928 and 1933. The debt was finally liquidated in 1944. *Bibliography:* F. A. Belin, *Essai sur l'histoire économique de la Turquie,* in J.A., 1885; C. DÜZAKH [see DJAHANNAM]

DÜZME MUSTAFÂ [see MUSTAFÂ DÜZME]

DWÂRKÀ, a town in the Okhmandal district in the north-west of the Kâthiâwad peninsula of Gujârât, India, associated in Hindû legend with the god Krishna and hence considered to be of special sanctity by Hindus. It is known also by the name of Dârvakhâd or Dawin (K. Ta*rikh al-Hind, ccxvii/i (1930), 41 ff., of pre-Iranian origin). The origin of the name is uncertain. It was the seat of the Catholicos: several synods were held there, notably the one in 654 which made a final break with the Greek Church and established the Armenian era, beginning on 1 July 552. But its importance also came from the fact that it was a centre of transit trade between Byzantine Anatolia, Persia and the countries of the Caucasus. Together with Nisibis and Callinicos (Rakka) it was one of the customs-ports where a tithe was levied on the Romans' and Persians' merchandise (Menander in Constantine Porphyrogenitus, Excerpta de legationibus, ed. C. de Boor, i, 180 and Güterbock, Byzans und Persien, 75, in W. Heffening, Das islamische Fremdenrecht, 109-10).

Dvin was destroyed, Asoghik tells us (ii, ch. III, trans. 84-85), by Heraclius during his famous campaign against Persia. The Arabs, advancing from Mesopotamia which they had already conquered, captured the town on 6 October 640 (the date fixed in Manandeans work); it was pillaged, 12,000 Armenians were massacred and 35,000 were carried off as prisoners. Other invasions followed but did not reach Dwin; on the other hand, the invasion by Habib b. Maslama, which Arab sources place either in 244/645-6 or in 31651-2, and the historian Seblos in 652-3, ended in the surrender and capture of Dvin and a treaty, the text of which has been preserved by al-Baladhuri, and in which Habib granted "the Christians, Zoroastrians and Jews" of Dvin the amîn and security for their persons, goods, synagogues and churches, in return for payment of ḍizya and ḍjizya. The Armenian authors do not seem to have preserved any recollection of the agreement concluded with Dvin and the other towns (Nakhêwân, Têfîs, Şâmârî). Dvin was destroyed, Asoghik tells us (ii, ch. III, trans. 84-85), by Heraclius during his famous campaign against Persia. The Arabs, advancing from Mesopotamia which they had already conquered, captured the town on 6 October 640 (the date fixed in Manandeans work); it was pillaged, 12,000 Armenians were massacred and 35,000 were carried off as prisoners. Other invasions followed but did not reach Dwin; on the other hand, the invasion by Habib b. Maslama, which Arab sources place either in 244/645-6 or in 31651-2, and the historian Seblos in 652-3, ended in the surrender and capture of Dvin and a treaty, the text of which has been preserved by al-Baladhuri, and in which Habib granted "the Christians, Zoroastrians and Jews" of Dvin the amîn and security for their persons, goods, synagogues and churches, in return for payment of ḍizya and ḍjizya. The Armenian authors do not seem to have preserved any recollection of the agreement concluded with Dvin and the other towns (Nakhêwân, Têfîs, Şâmârî) and only mention the general treaty concluded between Theodore Reshtuni and Muṣâwîya. The capture of Dvin by Arabs did not signify a lasting occupation of the town by the Arabs; for some time it was subjected alternately to Byzantine and Arab domination. The emperor Constans II was able to have a synod held in Dvin in 645 (or 648-9), and even after the agreement between Muṣâwîya and Theodore Reshtuni, this same Constans II penetrated as far as Dwin where he summoned another synod. After this, the town was reoccupied by the Arabs, and then once again by the Byzantine general Maurianos; in 657-8, it was with the help of a new and temporary Byzantine domination that the Catholics Cereses, who had left Dvin, returned there. Arab sovereignty was finally established in Dvin and in Armenia when the authority of the new caliph Muṣâwîya was fully affirmed by the Arabs (416/601). Nevertheless, it is from the time of Habib b. Maslama's expedition that Arab sources mark the start of the administration of Armenia by Muslim governors. Dvin became the residence of these governors, and when, in addition to Armenia, they also had to rule the Dzâira and Ağharbaydżân and were not residing in Dvin, they had a deputy there. Thanks to the establishment of an Arab administration whose main task was the collection of taxes, and of a garrison, an Arab population settled in the town and grew constantly bigger. In fact, according to an observation of Markwart (Südarmenien, 175), the Arabs, unlike the Persians, caused wholesale evictions of the towns to be evacuated for their own use,
transforming them little by little into Arab towns. Dwin was given a governmental palace (dār al-imāra), a mosque, a State prison and a mint. The operation of (in Russian): Dwin is attested from the beginning of the 2nd/8th century, and it was one of the first to function in the caliph's territories. The place of origin, given on the coins as Arminiya, is Dwin (see Minorsky, Studies on Caucasian History, 117 and Kh. Mughedian, Contribution to the history of monetary circulation in Dwin, according to finds of coins, in Bull. Ac. Sc. Armenian S.S.R., xi (1956), 84-117).

Dwin was the scene of various events of greater or lesser importance during the Arab domination; it seems to have been a period of decadence for the town which was abandoned by part of its Christian population, especially the nobility, until the end of the 3rd/9th century and the establishment of the monarchy. In the Umayyad period, under the reign of 'Abd al-Malik, the governor 'Abd Allah b. Ḥattim b. al-Nu'mān b-Ṭalḥah caused the martyrdom at Dwin of a holy man named David and exiled several Armenian princes to Damascus (Asoghik, ii, ch. ii, tr., 73; see other references in Grousset, Histoire de l'Arménie, 309 ff.). His brother 'Abd al-'Aziz who was governor from 86-97/705-15, in the reign of al-Walid, restored Dwin, fortified it and surrounded it with ditch and walls on the mosque (al-Balādūrī, 204; cf. Asoghik, ii, ch. iv, tr., 529; Ghevond, vi, 34-5; Grousset, 314). During the Umayyad period, the Mamikonians were pre-eminent among the great families of the country; with the 'Abbasid period the Bagratunis took the lead. However, the rise of the Bagratunis did not affect the position of Dwin which, with Bardha and Arran, and where the governors and their deputies remained firmly established. In the reign of al-Manṣūr (316-58/754-75) and the rule of Ḥasan b. Kahtāba a revolt of Armenian nobles broke out. It began with an attack on a tax-collector by Artavazd Mamikonian who had taken up arms in Dwin under the very eyes of the governor; it was carried further by Mughēsh Mamikonian who, after seizing Dwin, was defeated and killed in the battle of Bagrevand in 775 (see Grousset, 324 ff.).

During the civil war between al-ʿAmīn and al-Maʿmūn, the Arab amīr in command at Manazgerd, al-Dḥāhrāf, of the family of the Kaisikīs' (Kaysites), and who was married to an Armenian princess, took possession of Dwin for himself, and his son ʿAbd al-Malik remained there until he was killed by the actual inhabitants of Dwin in 823-4 (Grousset, 345 ff.; Laurent, L'Arménie, 322). In the time of the caliph al-Wāḥidī (227-32/842-57), Ẓahlīl b. Ṭayyīd b. Mazāyid al-Shāhābī, governor of Armenia, died, possibly by assassination, during an expedition against the rebellious governor of Georgia; his body was brought back and buried in Dwin in 230/844-5 (Laurent, 345). After the assassination of the governor of Armenia Yūsuf b. Abī Saʿīd Muhammad in Mūsā in 237/852, the caliph al-Mutawakkil (243-7/857-61) sent into Armenia Būḥā detail ʿAlī ʿAbārī who wintered in there and elsewhere, as divulged in several massacres (Grousset, 355 ff.; Laurent, 120, n. 5 345-6).

After the recognition of Bagratuni Ashot (Ashūt) as prince of princes (baṣṭār b-al-baṣṭārka) in 862, and then as king in 886 (or 887: Asoghik, iii, ch. ii, tr., 735-7; Ghevond, vi, 375-379), Dwin was in theory included in his possession for which he regarded himself as the caliph's vassal; but in fact it was independent of him, and he did not establish his capital there. At the beginning of the reign of Ashot's son Sembat (Sanbat) the Martyr (890-914), subdued with Sembat, he intervened in Armenia. This was after the terrible earthquake which ravaged Dwin in 280/893 and destroyed the Catholicos' palace (the latter consequently decided to move to Etiāmzān). Afgān came and occupied Dwin. War with Sembat followed, in the course of which the wives of both Sembat and his son Mughēsh were sent as prisoners to Dwin, only being released in 896-9 (see Grousset, 402 ff., 413 ff.). Afgān was succeeded by his brother Yūsuf who captured Sembat, tortured him to death and exposed his crucified body in Dwin, where many Armenians were martyred. The Catholicos Ter Yohannes fled to Greek territory (Asoghik, iii, ch. v, tr. 123; for these events, see Grousset, 435 ff.). In opposition to Sembat's lawful successor Ashot II, Yūsuf gave his support to his cousin Ashot II, son of Shāhu whom he established in Dwin and recognized as king. In addition, in the canton of Goghān, situated on the left bank of the Araxa below Dwin, he set up an Arab amīr whose successors were subsequently to play a part in the history of Dwin. Yūsuf revolted against the caliph and was taken prisoner in 307/919. During his captivity one of his officers, Ẓubīk (Subuk), governed Adharbaydjan and Armenia; he re-established good relations with Ashot II, whose rival was compelled to give up Dwin, though it did not, however, return to Ashot's possession. In 921 the emperor Romanus Lecapenos sent an expedition against Dwin under the command of the Domesticos (Demeslikos). According to Asoghik (iii, ch. vi, 124), Subuk (Sphkhi) drove him back with the aid of Ashot whom he had called upon for assistance. When Yūsuf returned to Adharbaydjan in 310/922, Dwin was at first governed by Nasr Subuki, ghulmām to Subuk who had just died, and then, after Nasr's recall, by Bīgh (or Bāshīr) who started hostilities with Ashot but was defeated by him. In 314/926 Yūsuf left Adharbaydjan, the caliph having entrust him with the conduct of the war against the Karmanians, in the course of which he met his death in the following year. It was at this point, in 315/927-8, that a new Byzantine expedition took place, commanded by the Domesticos John Corecas, against Dwin which was defended by Nasr Subuk. It fell: the Greeks, with the help of siege-engines, breached the walls and succeeded in making their way into the town, but were driven out as a result of the assistance given to the defenders by the inhabitants. This is what Ibn al-Aṯīr relates (viii, 129-30). It may be questioned whether, in spite of the differences of names and dates, the two expeditions under discussion were not in fact one and the same.

The dynasty of the Sādiḏīs in Adharbaydjan came to an end in 317/929, though for a time it was continued by Sādiḏī officials. We then enter a confused period in the history of Dwin. We do not know which amīr was in command in 325/937 (see Grousset, 425-55) secured from him the release of the Christian prisoners, nor who was the Muslim personage who,
in about 937, came as far as Dwin and inflicted a defeat on Abas, but was then defeated by king Gagik of Vaspurakan, who compelled the Muslim population of Dwin to pay tribute and leave hostages. It is possible that at this time Dwin was more or less subject to the authority of Daysam b. İbrahim al-Kurdi, a temporary ruler of Ağharbaygân who was thus successor to the Sâdids and heir to their rights over Armenia; we possess a coin of his, struck at Dwin in 330/941-2. But at that about date, Daysam was driven out by Marzubân b. Muhammâd b. Muhammâd b. Musâfîr, the family of the Kangârisds of Tarenk who founded the dynasty of the Sassâlids or Musâ-fîrîds [q.v.]. Then, Marzûbân having been captured by the Buwayhid Rûkân al-Dawlâ in 337/948-9, Daysam succeeded in reconquering Ağharbaygân and made himself master of Dwin, expelling two adventurers, Fadl b. Dinâfar al-Hâmândânî and İbrahim al-Dâbbî, who had seized the town. But already a new power had appeared at Dwin, that of Muhammâd b. Shaddât, founder of the Kurdish dynasty of the Shaddâdids which was to rule over the territory between the Kûr and the Araxes. Muhammâd gained control of Dwin in about 340/951, by what means we do not know. İbrahim b. al-Marzûbân, acting in the name of his father who was still held prisoner, tried to drive him out of Dwin; the first attempt failed, and Muhammâd built a fortress at the gates of Adhrabâyân. A second attempt by İbrahim compelled Muhammâd to flee, and a Daylamite garrison was installed in Dwin itself. But soon the townspeople reconciled Muhammâd who triumphantly resisted an attack by king Aḫšot III the Charitable of Ani. Marzûbân, however, had managed to escape from prison in 341 or 342/952 or 953-4 (for the date, see M. Canard, Hist. de la dynastie des Hâmadânîes, i, 133). He disposed of Daysam in Ağharbaygân and came to attack Dwin. Muhammâd b. Shaddât, caught between Marzûbân’s army and the Daylamite garrison still in the town, and deserted by the inhabitants, took refuge in Vaspurakan and then in Byzantine territory where he tried in vain to enlist help to reconquer Dwin. He died in 344/955, leaving three sons, one of whom we shall see again later at Dwin.

From the time of Marzûbân’s reconquest, Dwin seems to have remained in the hands of the Sallârîds, although it does not occur in the list of regions paying tribute to the Sallârîd, given by Ibn Ḥawkal for the year 344, perhaps because it was administered directly by a deputy. İbrahim b. al-Marzûbân was deprived of Ağharbaygân in about 368/979 and died four years later. It is no doubt his son Abu ‘l-Hâyğî, the Enums of Delmangan in Aşogik, iii, 311, whom we find still in possession of Dwin in 982-3, but shortly afterwards the town was taken by the amir of Goghûn, Abu Dulaf al-Shaybanî (Aputlûf in Aşogîk). In 377/987, Abu ‘l-Hâyğî al-Rawwâdî al-Kurdi, the Arabo-Kurdish amir of Ağharbaygân and successor to the Sallârîds, took it from him, but Abu Dulaf reconquered the town from Mamlân, successor to Abu ‘l-Hâyğî. The Bagratunî king Gagik II of Ani in order to compel him to give his kingdom to the empire, promising to allow him to have the territories he conquered from Gagik. When Gagik finally abdicated (1055), the emperor wanted Abu ‘l-Awsâr to restore to him the regions taken from Gagik. He sent an army against Dwin, but it was defeated. Another expedition followed in 1046-7, commanded by the eunuch Constantine and a general of Armenian origin, Kekaumenos, grandfather of the historian Kekaumenos and, according to that writer, formerly ‘toparch’ of Dwin (for the difficulties raised by this point, see Markwart, Sûdarmenten 562 ff.). A further expedition was dispatched against Abu ‘l-Awsâr in 1048 or 1049 (rather than in 1055-6, see Minorsky, 55, 59 ff., as opposed to Honigmann, Östergren, 182). In both expeditions alike, the Byzantines failed to lay siege to Dwin. However, by this time the Turks were already invading Armenia. When, in 446/1054, Tughîrîl Bagran arrived in the territory of Adhrabâyân, Abu ‘l-Awsâr submitted to him and, in agreement with the Turks, made a raid on Ani, returning laden with booty. He died in 1067.

Dwin then passed into the hands of a branch of the Shaddâdids which settled at Ani, after the capture of that town by Alp Arslân (1064) in 1072. This situation lasted until 555/1165, when a Turkish amir seized the town. It then fell to Tughân Arslân, lord of Bitûs and Arzân and vassal of an Artûkîd. As a result of the struggle between Mâhmûd and Tughîrîl, it was recovered by the Shaddâdîs Fadlûn III, who died in 1130, but was recaptured at that date by a son of Tughân Arslân. According to Minorsky (op. cit., 131), it was at that moment that Salâdîn’s grandfather Shâdî, a Kurd born in a village near Dwin, is said to have left the country and gone to Takrit. (We know, as Ibn Khallîkân relates, i, 105, that Salâdîn’s family were natives of Dwin). In 557/1162 the Georgians sacked the town and destroyed the mosque. But despite repeated attacks they were not able to gain possession, since the town was taken by the atabeks of Ağharbaygân who were descended from Eldûgûz (Ildégis, vizier of Sultan Mâhmûd). In 1203 Dwin was captured by the Georgians, from whom it was taken by the Kârîz-imshâh Djalâl al-Dîn in 1225. Then came the Mongols, who destroyed the town between 1236 and 1239.

It will be seen from this sketch that, from the end of the 9th century, Dwin suffered ceaselessly from all the repercussions to the upheavals that took place in Ağharbaygân, that all the powers which had been built up in the neighbouring countries tried to get possession of it on account of its position and commercial importance, and that it was only in the hands of the Armenians in exceptional circumstances, despite the large Armenian population which no doubt formed the majority. However, several of the Muslim overlords were related by marriage to Armenian princely families, for example, even Abu ‘l-Awsâr, as son-in-law of king Aḫšot.

The Arab geographers have left us certain descriptions of Dwin. It was, Ibn Ḥawkal tells us, a larger town than Ardabîl, surrounded by walls,
inhabited by many Christians, and its cathedral mosque stood beside the church, as was the case in Muslim countries. All these products formed the basis of a flourishing export trade. Ibn Hawkal's Epitome boasts of the gardens, fruit, and the cultivation of cereals, rice and cotton in the locality of Dwin, the springs and flowing waters; and his account also mentions the destruction of the town by the Georgians. Al-Mu'izz ad-din says that Dvin is a very cold region, and speaks of its textile products, its gardens, the citadel built of stone and clay, and the markets "in the shape of a cross"; he gives the names of the gates of the town, specifies that the mosque stands high up on an eminence and that in his day the fortress was falling into ruin. According to him, the number of inhabitants, the majority of whom were Christian, was declining. He mentions the site which was used by the Muslims, that of Abu Hanifa, and says that there was a convent of St. Sis in Dvin.

Excavations have been carried out on the site of Dvin, now occupied by villages. The results will be found in a work of K. Kafadarian, La ville de Dvin et ses fouilles, Erevan 1952, in Armenian with a résumé in Russian (see also BSE, xiii (1952), 467). In the upper part of the town remains have been found of the governors' palace, built after the earthquake of 893 and, below the ruins, traces of a palace of the same sort but dating from an earlier period. In the centre of the town have been found the remains of the palace of the Catholicos, built in 467 or 485, and also of a church of basilian design with a single nave, dating from the 6th century A.D. But the most important building discovered at Dvin is the cathedral whose complicated history can be re-traced: originally a pagan temple with three aisles, it was built in the 3rd century inclusive and converted into a church at the beginning of the 4th century when an apse was added, and in the middle of the 5th century refashioned as a basilica with three aisles, and also possessing an external gallery; then, in the 7th century, with the building of lateral apses and a central cupola resting on four large pillars, it became a cruciform church with a cupola. This great church was destroyed in the earthquake of 933.

Remains have also been found of dwellings, workshops for weaving, jewellery etc., cellars, warehouses, tools (ploughshares, iron shovels, etc.), gold and silver articles, pottery, china, architectural fragments decorated with sculptures of secular subjects (grape-gathering) etc. The discoveries have shown that the economic life of Dvin was active particularly from the end of the 3rd/4th century until the 5th/6th century inclusive, that is to say until the rise of the Armenian kingdom.

Bibliography: The history of Dvin is described in detail in Markwart, Südarmenien und die Tigriquerellen, see index and in particular 562 ff. (cf. also, by the same author, Strefsehüge, 404-5), but the outstanding work is V. Minorsky, Studies on Caucasian history. London 1932, in which for the first time a study is made of the important historical source of Münedjidim Bagh, collated with the Armenian sources: see particularly 116 ff., Vicissitudes of Dvin; it is upon Minorsky's work that the present article has been based; it has been used in two studies of Ter Levondian entitled Dvin under the Sallarids and Chronology of Dvin in the 9th-10th centuries, included in the volume in honour of Dvin in Armenia, ed. M. Canard, Cambridge, Mass. 1950, 377-8; E. Honigmann, Die Ostgrenze des byz. Reiches 109-110, 107-11, 29, 158, 174, 175-7, 182; see also De Morgan, Hist. du peuple arménien (1910), 105, 116, 118, 123, 134, 135-6, 138, 244. References to the Armenian historians will be found in Grouset, Histoire de l'Arménie, Paris 1947, passim, and also in the works of Laurens and Minorsky given above. See also G. H. Sarkisian, Tigranakert (Tigranocerta), Hist. of the urban communities of the Byzantine Empire, Erevan, Russian ed., 19, 106, 135, and Ter Levondian cited above, see idem, The emirate of Dvin in Armenia in the 9th-10th centuries, (dissertation of the University of Leningrad, 1958), and On the question of the origin of the emirate of Dvin in Armenia, in the volume in honour of I. A. Orbeli, Researches on the history of the culture of the peoples of the Orient, Moscow-Leningrad 1950 (in Russian).

DYEING [see SABBAGH].

DŽABIĆ, ALI FEHTI, b. Mostar 1853, d. Istanbul 1918, from 1884 muf'ti in Mostar (Herzegovina). The Austro-Hungarian provincial government of Bosnia and Herzegovina re-organized Muslim religious institutions in order to keep them under its control. As early as 1886 the Muslims of Sarajevo aspired to religious autonomy, and the dissatisfaction of the Muslims in Herzegovina, under Džabić's leadership, steadily increased. Džabić sought religious autonomy at the conference of Bosnia-Herzegovina Muslim leaders in Sarajevo in 1893, but he remained in the minority. From the year 1899 onwards, the movement for the religious autonomy of the Muslims in Herzegovina, under Džabić's leadership, entered an acute phase. The movement had linked up with the struggle of the orthodox Serbs for religious autonomy. The Austro-Hungarian authorities persecuted
Džabić’s group so that Džabić was removed from his position of mufti (1900). In the meantime the movement had also begun to spread in Bosnia, so that the Austro-Hungarian authorities were compelled to enter into negotiations. No agreement was reached, because the Austro-Hungarian authorities were unwilling to accept certain paragraphs in the draft statute which related to the choice of organs of religious administration and to the attestation of the reis al-ulema on behalf of the shaikh al-İslâm in Istanbul. In 1902, when Džabić with five of his friends went to Istanbul for consultations, he was forbidden to return to his country, and stayed in Istanbul until his death. He lectured on Arabic language and literature at the university, and contributed to many journals. On the occasion of the annexation of Bosnia and Herzegovina (1908) he wrote a pamphlet in Arabic to the parliamentary deputies of the Arab countries, in which he attacked Austro-Hungarian rule in Bosnia and Herzegovina and the Turkish government because of its indulgence. As a result, he was removed from the university. He made an anthology of poems for the Companions of Muḥammad, which he wanted to publish in three volumes with his commentary, but he published only one of them: Ḥusn al-sababa fi sharḥ aqṣār al-sababa; he also wrote a commentary on Abū Tālib’s poem in defence of Muḥammad (printed in Istanbul 1327 A.H.).

**EBUZZIYA TEFVIK** (Ebu 'l-Diyāʾ Tewfik) (1848-1913), a well-known Ottoman journalist. Born in Istanbul, he had only a sketchy education, and was largely self-taught. At the age of sixteen or seventeen he met Nāmik Kemâl, and, through him, Shinās, and became a frequent caller at the offices of the newspaper Taṣwîr-i Ejbâr, where the literary avant-garde used to meet; he claimed to have been the sixth to register as a member of the Society of New Ottomans (Yeni 'Othmanîlar Diemîyyetî), founded in 1865, but this claim is questionable.

Tewfik started his journalistic career in 1868-9 by writing articles in Taṣawīr. When Shinās died, Tewfik and Kemâl (who soon gave up his rights in the venture) bought the printing presses on behalf of the Egyptian prince Mustâfâ Fâdîl Paşa (g.v.). The first three products of the newly-acquired press were a collection of the political writings of Reşîd Paşa, Nâmik Kemâl’s Salâh al-Dîn-i Eyyâbî, and Tewfik’s own first work, the play Edîjî Kâdâ. In his preface to this play, which was well received, Tewfik defends the realist thesis that a writer must describe the morals and customs of his age without projecting his own personality. Tewfik was also a regular contributor to Kemâl’s Übret, which appeared in 1872. He then took over the editorship of Ḥadîka, as from its issue dated 9 November 1872. When the latter was suspended for two months following its 56th issue, he issued the Sirâdî, for which he had earlier taken out a licence as a precaution. 25 issues of Sirâdî were published, the venture finally collapsing when Tewfik was exiled to Rhodes in April 1873. It was in Rhodes that Tewfik composed his anthology, Namâne-i Edebîyet-i Ottomanîyye, and a collection of encyclopaedic articles, entitled Mâhiyye, of which the historical portions were later printed in the magazine Muharrîr (vii-viii; 1295/1878). After the accession of Murâd on 31 May 1876, Tewfik returned to Istanbul and resumed his journalistic activity which continued under the new reign of Śāhāb al-Ḥamîd. When the latter had Kemâl exiled to

Midilli and Diyāʾ Paşa to Adana, Tewfik sought release from official pressure by making a journey to Vienna in 1877 on publishing business. In 1880 he obtained from the Minister of Education Mînûf Paşa the licence to publish the magazine Mîdîmûa-i Ebu 'l-Dîyā', which soon became an organ of the Taṣâvîrî "progressives". His annual calendars, called first Reşîb-i Mafrîj, then Newâlî Mafrîj, had a brisk sale. In 1882 he regained control of his printing-press and named it Matbâ-a-i Ebu 'l-Dîyā'. A flood of publications followed, the printing-press producing on an average one fascicle every five days. There included a series of short biographies, entitled Kutubkânâ-i meşhârî and modelled on the French La vie des hommes illustres, the hundred or so thicker volumes of the Kutubkânâ-i Ebu 'l-Dîyâ', modelled this time on the German Universal Bibliothek and written either by Tewfik himself or by other Taṣâvîrî intellectuals, as well as various magazines. Before long, however, the authorities began to interfere: in 1888 the publication of Nâmîk Kemâl’s 'Othmanîlar Diemîyyetî was stopped after the first fascicle had sold 6,000 copies. When the authorities demanded that pamphlets and magazines should be submitted for censorship before publication, Tewfik closed down his Mîdîmûa-i Ebu 'l-Dîyâ'. He was arrested twice, in 1891 when he was Director of the School of Arts and Crafts, and in 1893 when he was a member of the Court of First Instance of the Council of State, each time on trumped-up charges. Book censorship was relaxed in 1897 when Zâhid Paşa became Minister of Education, and Tewfik once again brought out his Mîdîmûa, which survived until 1900 when Tewfik was arrested and exiled to Konya, where he stayed for almost nine years, returning only after the Young Turk Revolution as parliamentary deputy for Antalya. In 1909 he brought out the new Taṣâvîr-i Es'hâr in which he described himself as an "independent and moderate progressive". He spent the remaining four years of his life in political discussions and polemics both in that newspaper and in the Mîdîmûa-i Ebu 'l-Dîyâ', which he also republished. The Taṣâvîr-i Es’hâr was closed down for a time, but allowed to re-appear on 25 January 1913 when Mahmûd Shewk Paşa
succeeded Kâmil Paşa as Grand Vizier. Tewfik died two days later having just delivered to his newspaper an article entitled "New Arrests" on the Government's new measures.

The importance of Ebu 'l-Diyâ Tewfik lies not so much in the literary quality of his writings (although he was a good stylist and helped in the development of simple and clear Turkish prose) as in his tireless work as a popularizer, journalist and above all publisher and printer. He was a good stylist and helped in the development of the first illustrated printed texts in Turkey. He was also the first to use Kufic type face. His memoirs about his journalistic articles are of simple and clear Turkish prose (and not so much contradictory, as in his tireless work as a popularizer, journalist and above all publisher and printer. He first to use Kufic type face. His memoirs about his journalist articles

EDIRNE, Adrianopolis—a city lying at the confluence of the Tundja and Arâ and the Merîç (Maritsa); the capital of the Ottomans after Burûs (Brusa), and now the administrative centre of the vilayet (province) of the same name and, traditionally, the centre of Turkish (now Eastern Turkish, Thracian (Trakya or Paşağel). Its historical importance derives from the fact that it lies on the main road from Asia Minor to the Balkans, where it is the first important staging point after Istanbul. It guards the eastern entrance to the natural corridor between the Rhodope mountains to the south-west and the Istrîncja mountains to the north-east. It also dominates traffic down the valleys of the Tundja and the Merîç and used to be the starting point of important river traffic down the Merîç to the Aegean. In later times the main weight of traffic was transferred to the railway passing through Edirne on its way to Istanbul. Edirne is particularly rich in Ottoman architectural monuments. Its importance, diminished by the transfer of the capital to Istanbul, received a great blow when the city was captured by the Russians in 1829. Since the Balkan Wars it has been a Turkish frontier city, which fell briefly under Bulgarian occupation in 1913 and was occupied by the Greeks between 1920 and 1922. The population of Edirne, which exceeded 50,000 in the middle of the 19th century, fell to 57,000 at the beginning of the present century (of whom 47,000 are Turks, some 20,000 Greeks, some 15,000 Jews, 4,000 Armenians and 2,000 Bulgarians), then again to 34,528 at the census of 1927 and, finally, to 29,400 in 1945, since when it has been rising. The population is now largely Turkish, with a small Jewish community.

The city is built inside a bend of the Tundja, just before its junction with the Merîç, on gently rising ground reaching a height of 75 metres on the hillock on which the great Selimiye mosque is built, and some 100 metres further to the east. The part of the city built on the lower slopes has often been flooded, sometimes catastrophically. The city consists of two main parts, Kâl's-îdîsh, in the western part of the river curve, the district surrounded by the walls, which have now almost completely disappeared, and rebuilt on a geometric pattern after being devastated by fire at the end of the last century, and Kâl's-îdîsh to the east. It is the latter which is the centre of the modern city.

The name of the city is given in old Ottoman sources as Edirnis, Edrune, Edrinhali, Endriye, as well as Edirne or Edrine, the latter form being used in the fethime sent by Murâd I the IIlkhânid sultan Uways Khân. Historical documents also use honorific names, such as Dâr al-Nazwr wa'l-Maymana (Abode of Divinely-Alr oned Victory and of Felicity), Dâr al-Saltana (Abode of the Sultanate) etc.

The city is believed to have been first settled by Thracian tribes, from whom it was captured by the Macedonians and named Orestea (or Orestias). It was rebuilt by the Emperor Hadrian in the 2nd century and named after him Hadrianopolis, Adrianopolis. Adrianopolis witnessed the victory of Constantine over Licinius in 323, the defeat of Valens by the Goths in 378; it was besieged by the Avars in 586, captured by the Bulgars in 914, besieged again by the Penegeins in 1049 and 1078. At the battle of Adrianople the last Emperor of Byzantium Baldwin was defeated and captured by the Bulgars who joined with the Greeks in resisting Catholic encroachment. The Byzantine Greeks then held the city against the Bulgarians. Turks from Asia Minor appeared on the scene in 1324-3 when Aydun-oglu Umûr Bey fought as an ally of Cantacuzenus against John Palaeologus, defended Dimetoka [q.v.] against the "prince" (tekhâr) of Edirne and is said to have killed the latter (see Mükrimîn Hallî, Dursâtâmâne-i Ensûri, Istanbul 1929, introduction 43-6). In 1354/1355 the Ottoman prince Sulayman Paşa joined the forces of Cantacuzenus in Edirne after defeating an army of Bulgars and Serbians. Three years before the final conquest of Edirne, the Ottoman Orkhan Bey advised Sulayman Paşa to keep a close eye on the castle of Edirne. The conquest was accomplished under Murât I by Lala Shâhîn Paşa, who defeated the tekhâr of Edirne at Sâkîl-Dere, to the south-east of the city. It is believed that on the banks of the Tundja and in Ramadân 763/July 1362 the inhabitants of the town surrendered on condition of being allowed to live there freely. Although Murât I left the administration of Edirne to Lala Shâhîn Paşa, pressure was to hold his court at Bursa or Dimetoka, the city of Edirne became almost immediately the forward base of
Ottoman expansion in Europe. It was from Edirne, furthermore that Yıldırım Bayezid set out to besiege Constantinople. After Bayezid's later defeat in the battle of Ankara, Süleyman the Magnificent transferred the treasury from Bursa to Edirne where he ascended the throne. He later lost the city to Mūsâ Celebi, who also ruled from Edirne and minted money there in his name. After his defeat and death, Sultan Mehmed I spent most of his eight-year rule in Edirne and died there, being buried like his predecessors in Bursa. It was in Edirne in 825/1422 that the Pretender Mustafâ was executed after his defeat by Murâd II. The latter's reign saw an increase in the prosperity of Edirne and its environs and the building of the town of Uzun-Köprü (Dîsr-i Eргene).

It was at Edirne that Murâd II received foreign ambassadors, it is from there that he directed his conquests, and it was also on the island on the Tungja that the circumcision-feasts of his sons ʿAlî al-Dîn and Mehmed were celebrated with magnificent pomp. His reign witnessed also a mutiny of the Janissaries at Edirne on the pretext of the fire in the city, a mutiny which was pacified by an increase in the soldiers' pay. Murâd II died in Edirne and was succeeded by Mehemed II who, however, did not return to the city until he decided to lay siege to Constantinople. The plans of the siege were worked out in Edirne, and the siege guns tested in its environs. After the conquest Mehmed II again held court in Edirne where he organized in the spring of 861/1457 magnificent circumcision celebrations, lasting two months, for the princes Bâyezîd and Mustafâ. Selim I also held court in Edirne, the city being left to the care of princes when the Sultan campaigned. The prosperity of Edirne continued to grow in the 16th and the 17th century; Süleymân the Magnificent often stayed there, while the city's greatest mosque was built under his successor. The tranquillity of the city was, however, disturbed by mutinies in 994/1586 and 1003/1595. From the time of Ahmed I, Edirne became famous for its royal hunting parties, royal celebrations and entertainments in and around the city, retaining particular brilliance under Mehmed IV (1481 — 1507). After the life of the city began to be affected by the successive defeats suffered by Ottoman arms. In 1115/1703, at the famous "Edirne incident", Mustafâ II who held his court in Edirne was deposed in favour of Ahmed III. The latter name of Palace of Khadija Sultan. In the later 19th century a military lycée was built on the site of the old palace.

The famous "Edirne incident", Mustafâ II who held his court in Edirne was deposed in favour of Ahmed III by malcontents from Istanbul. The subsequent decline of the city was hastened by the fire of 1155/1745 in which some 60 quarters were burnt down and by the earthquake of 1164/1751. In 1801 Edirne witnessed a mutiny of Albanian troops against Selim III's reforms. A second "Edirne incident" occurred in 1806 for the same reasons. On the other hands the abolition of the Janissaries occasioned only minor difficulties in Edirne. In the Russian-Ottoman war of 1878-9 Edirne was occupied by the Russians and this occupation deeply affected the local Muslim population. Muslims started emigrating from Edirne, their place being taken by Christians coming in from the surrounding villages. To raise the Muslims' morale Mahmûd II visited Edirne for some ten days, ordered a large bridge to be built on the Meriç (this, however, was only completed in 1842 in the reign of ʿAbd al-Medîd) and had commemorative coins struck. More devastations were caused by the Russian occupation of Edirne in 1878-9, and by the hostilities in the Balkan wars and following the First World War.

Monuments: Of the castle of Edirne, four of whose towers and nine of whose gates we know by name, only one tower, the Şâihat Kulesi (Clock Tower), originally Büyük Kule (the Great Tower), remains in existence, the other towers having been destroyed in a late 19th century addition. Greek inscriptions in the names of John V and Michael Palaeologus have disappeared.

Palaces: 1. Eski Sarây (the Old Palace). After the conquest of Edirne, Murâd I found the Tekfûr's palace in the castle inadequate, and built a new palace outside the castle, where he moved in 767/1365-6. Ewliya Celebi says that this was near the Sultan Selim mosque in the quarter of Kâvak Meydanı (the square) and that it was later used as a barracks for "adjemî-ogluans. During the Hungarian expeditions of Süleyman the Magnificent the old palace could accommodate 6,000 pages, while accommodation for 40,000 Janissaries was provided near by. Ewliya Celebi (iii, 456) says that the palace did not have its own gardens, that it was surrounded by high walls, measuring some 5,000 paces in circumference, that it was rectangular in shape and that it had a gate known as bâb-i humâyûn. Although the importance of the old palace diminished after the building of the Sultan Selim mosque, it was still used for the education of il-ogluans, the palace organization remaining unchanged from before the conquest of Istanbul. In 1068/1655 Sultan Mehmed IV allocated the old palace to his daughter Khaḍîja b. Musâ and Musâ Pasha, hence the later name of Palace of Khaḍîja Sultan. In the later 19th century a military lycée was built on the site of the old palace.

2. Sarây-i Djedîd-i ʿAmîre (the New Imperial Palace), built on an island on the Tungja and on adjoining meadows by Murâd II in 854/1450, partly with marble brought from some ruins near Salonica. Construction of the palace was continued the following year by Mehemed II who also had thousands of trees planted on the island, which he joined by a bridge to the main palace buildings to the west. Another bridge, this time between the palace and the main city, was built by Süleymân the Magnificent, under whose direction important additions were made to the palace. More pavilions were added in subsequent reigns until the palace grew to twice its size under Mehemed II. At the end of the 11th/17th century it contained 38 pavilions, 8 meşgîds, 17 large gates, 14 baths and 5 courts. Some six to ten thousand people lived within the confines of the palace. Dissolution was gradual: there were many attempts at restoration in the 18th century, but in 1827 an official survey said that most buildings were either completely in ruins or half-ruined. Much damage was caused to the palace by the Russian occupation of 1829, Russian troops camping in the palace gardens. More attempts at restoration followed, but the second Russian occupation sounded the death knell of the palace. The Ottomans themselves set fire to ammunition dumps in the palace before evacuating the city, and after returning they quarried the remaining buildings for stone.

Mosques: The first Friday prayers were said in Edirne in a converted church inside the castle, known afterwards as the Halâbiye, after its first mûderris, Sirâdî al-Dîn Muḥammed b. ʿUmar Halabi, a teacher of Mehemed the Conqueror, and also as Celebi Dîmî. Ruined in an earthquake in the 18th century and later repaired, it survived until the end of the 19th century. Another church in the castle was converted into a mosque under the name of Kilise Dîmî, but this was pulled down by Mehemed II and replaced by one with six
domes which disappeared in the second half of the 18th century. The oldest surviving mosque is that of Yıldırım, built in 801/1399, on the foundations of a church raised in the Fourth Crusade, so that the mihrab is built into a side wall. During their occupation of 1878 the Russians stripped the inside of the mosque of its tiles and of the two linked marble rings which had given the mosque the name of Küçüklı Dâimi (Ear-ring mosque). Another old mosque, the Eski Dâimi (or Old Mosque par excellence) was started in 804/1402 by Emir Süleymanı (hence the name of Süleymâniye given it by Mehemmed I, a name which was later changed into Ulû Dâimi, or Great Mosque, before the present one of Eski Dâimi or Dâimi 'Atîk was finally adopted) and completed in 816/1413 under Mehemmed I (Pl. X). The interior is square, 9 domes being supported by four columns. An inscription on the western gate, gives the name of the architect as Hadjdil Salâ (hence the name of the silver mines at Karatova in Serbia. Later allocated for the upkeep of this mosque the revenues. Another formerly rich mosque, the Dar medrese, was originally a harem, on the gate of the Üc-sherefeli Dâimi (Three-Balconied Mosque) started in 847/1447-8 and finished in 857/1447-8 (Pl. X). Ewliya Celebi says that it was built at the cost of 10,000 purses, being the proceeds of the booty captured at the conquest of İzmir. This mosque has also been known as the Murâdiye, Yeni Dâimi (New Mosque) and Dâimi-i Keblîr (Great Mosque). The building is rectangular, a great dome being held up by six columns, there being four medium-sized and four other small domes at the sides of the main one. Four of the columns (at either side of the main gate and the mihrâb) are built into the walls. The harem (sacred enclosure, i.e., court-yard), paved with marble, is regarded as the first harem of a mosque built by the Ottomans. The cloisters on the four sides of the harem are made up of 21 domed vaults, supported by 18 columns. The three-balconied minaret is known as the first Ottoman minaret of this kind. There is also one minaret with two balconies and others with one balcony. Murâd II first allocated for the upkeep of this mosque the revenues of the silver mines at Karatova in Serbia. Later Rûstem Pasha transferred these mines to the Treasury, allowing the mosque to draw money instead from the wakf of Beyazed II. An important event in the history of the mosque was the public condemnation in it by Fakhr al-Din Adjemi of the hurâfî followers of Fadl Allah Tahrîrî, who were believed to enjoy the support of the Sultan Murâd II and the Conqueror. Beyazed II built on the banks of the Tundja a mosque, baths, a hospital, a medrese and an almshouse (Pl. XI). A chronogram on the mosque gate yields the date 893/1488. The building was financed with the booty captured at Ak-Kerman.

The mosque of Süleymanı I, which was allowed an independent course, as in the case of the mosque of Sultan Selim (Selimîye Dâimi), which is the glory of Edirne and the last royal mosque in the city (Pl. XI). Built between 972/1564-5 and 982/1574-5 according to the chronogram on the gate of the harem, it cost, Ewliya Celebi tells us, 27,760 purses obtained from the booty captured in Cyprus. The great dome of the mosque, which rests on 8 columns, is 6 cubits higher than that of Saint Sophia in Istanbul. The mu'adhdhin's gallery under the great dome is supported by 12 marble columns, two metres high; under it there is a small fountain. The mosque library is on the right, and the royal gallery on the left. This mabûf, which rests on four marble pillars, used to be decorated by tiles, which were taken away by the Russians in 1878. The building is surrounded by cloisters, in which 18 domes are supported by 16 large pillars brought from the Kapî-Dağ peninsula and from ruins in Syria (according to Ewliya Celebi, also from Athens). Four three-balconied minarets stand at the four corners of the mosque, which have often been repaired. As for the mosque itself, it was repaired after the earthquake of 1752 and also in 1808, 1884, and in recent years. The Sultan Selim mosque forms an architectural whole with the adjacent medrese, Dâr Mürûd (Kurî's reciters' quarters), school and clock-house. The miiderris of the Selimîye medrese was considered the chief miiderris of the city. The medrese was subsequently used as a military detention centre and is now a museum of antiquities, while the Dâr al-kure of harem (Kurî's reciters' quarters), school and clock-house. The miiderris of the medrese was considered the chief miiderris of the city. The medrese was subsequently used as a military detention centre and is now a museum of antiquities, while the Dâr al-kure houses an ethnographic museum. The library was later enriched by many wakf books, but some valuable books were lost during the Bulgarian occupation.

Edirne was an important centre of Islamic learning, which was allowed an independent course, as in Istanbul and Bursa. Apart from those already mentioned, there were important medreses in the courtyard of the Üç-şerefi Dâimi (founded by Alaeddin Keyhüsrev Pasha), founded in the same place by Mehemmed I. These medreses, built in the classical Ottoman style, are...
today ruined, but could still be restored. Many markets were also built in Edirne, largely as a source of revenue for the upkeep of the pious foundations of the city. The first of these is the covered market of Mehmed I (14 domes, 4 gates), which was a 

wald of the Eski Dzami. The covered market built by Murad II, known as the Old Market, fell into ruin in the second half of the 17th/18th century. Murad III had a market built by Sinan, and known as Arasta (73 arches, 124 shops), to provide revenue for the Selimiye mosque. Sinan also built a market with six gates in Eminiz Ali Pasha, the city. The town also contained a large number of khans. Of these Sinan built the Large and the Small khans of Rustem Paşa and also the Tak Khan built for Sokollu. Another Khan which is still in existence is that built in the beginning of the 11th/17th century by Ekmekzade Ahmed Paşa. At the beginning of the 10th/16th century there were in all 16 khans and markets in Edirne. Later the number increased, French and English merchants also having their places of work. The trades practised in Edirne included dyeing, tanning, soap-making, distillation of attar of roses, carriage-building etc. Edirne was also famous for its own style of book-binding. The city’s water supply was ensured by the Khassee Sultan aqueduct built in 937/1530. There were also some 300 public fountains, most of which have now disappeared. Apart from the place bridges, there were in Edirne four bridges over the Tundja and one over the Meric, the oldest being the bridge of Ghazi Miñâl, built in 823/1420.

At first the administration of Edirne was in the hands of a bâdi and of a su-bashi (who was probably the same person as the agâh of Janissaries mentioned by Pococke). After the conquest of Istanbul the bostandzh-bashi was made responsible for the administration. The bâdi of Edirne, who had a daily allowance of 300 aspers at the beginning of the 10th/16th century, could expect promotion to Istanbul, and had, according to Ewliya Celebi, 45 deputees (nâqib). He was appointed and dismissed by the central government. One interesting local official was the Chief Gardener (khan melik-i vezir-i bégân-i bégân), responsible for the care of private gardens and orchards in the city. The first of these is described by George Keppel, Narrative of a journey across the Balcans, London 1728, ed. Ch. Schefer, Paris 1881; E. Chishull, Travels in Turkey, London 1747; Letters of Lady Wortley Montague, letters 25-34. The decay of the city in the beginning of the 19th century is described by George Keppel, Narrative of a journey across the Balkains, London 1831, and by Molilke, Briefe über Zustände und Begebenheiten in der Türkei, 150 ff.; Nicolas de Nicolay, Navigations ..., gives types of the inhabitants in the 10th/16th century. Views and plans of the mosques and other buildings are given by C. Sayger and A. Desarnod, Album d’un voyage en Turquie en 1829-1830, Paris n.d., fol., Thomas Allom and Robert Walsh, Constantinople, ii, 73, and by G. Gurlitt, Die Bauten Adria-

nepoleis, in Orientalisches Archiv, i, p. i and ii (cf. G. Jacob in Ist., iii (1912), 358-68). Works in Turkish include: the Selânames of the vilayet of Edirne; Rifat ‘Othmân, Edirne Rehnumâsî, Edirne 1335/1920; Oktay Aslanpaşa, Edirnedde Osmanlî devir abideleri, Istanbul 1949; M. Tayyib Gökbilgin, XIV-XVI asrârda Edirne ve Paşa lâlât, Istanbul 1952; idem, "Edirne" in IA. (M. TAYYIB GÖKBİLGIN)

EDREMIT, town of western Turkey, situated 8 km. from the head of the Gulf of Edremit (on the site of Homer’s Thebe) on the lower slopes of Pasja-
dag (a spur of Mt. Ida) overlooking the fertile alluvial plain to the south (39° 35’ N., 27° 02’ E.). The ancient Adramyttion was on the coast at Karataş (4 km. west of Burhaniye [formerly Kemére] and 13 km. south-west of Edremit), where remains of quays, etc., are to be found. The evidence of coins indicates that the city must have had its present site (not as Kiepert suggested) under the Commens but much earlier, perhaps in the 2nd century A.D. (W. Ruge, in Pauly-Wissowa, art. Thebe, col. 1597). Turkish attacks began at the end of the 11th century: in 1093 Adramyttion was entirely destroyed by Tsachas (Çaka), operating from his base at Smyrna, and re-built by Alexius’ general Philokales (Alexiades, ed. B. Leib, iii, 149); and towards 1150 Manuel I strengthened its fortifications against the Turkish danger (Nicetas Choniates, Bonn ed., 1914). In 1265 Michael Palaeologus ceded Smyrna to the Genoese, he granted them also extensive privileges in Adramyttion (W. Heyd, Hist. du commerce du Levant, i, 429), and early in the next century a Genoese garrison was defending the city against the Turks (Fachymeres, Bonn ed., ii, 58). Soon afterwards Edremit fell into the hands of the Karasi [q.v.] dynasty, to be occupied, along with their other territories, by the Ottomans in the reign of Orhan (Ahşâhpasazâde, ed. Giese, 41; Ahşâhpasazâde’s date, 735/1334-5, is too early, by ten years or more). For five centuries Edremit was administered as a bâdi of the sanjak of Karasi (for administrative changes 1841-1923 see IA, vi, 334).

Now the centre of a haza of the vilayet of Balikesir, it has a thriving olive-oil industry (population [1950] 12,700).

EFENDI, an Ottoman title of Greek origin, from αὐθέντης, Lord, Master, (cf. authentic), probably via by a Byzantine colloquial vocative form, asfendi (G. Meyer, Türkische Studien, i, in SBAR Wien (1893), 37; K. Foy in MSOS, ii (1898), 44 n. 3; Pschari, 408). The term was already in use in Turkish Anatolia in the 13th and 14th centuries. Efikí indicates that the daughter of Djalá al-Din Rúmi was known as Efendipoulo—the master's daughter (Cl. Huart, Les saints des derviches tournours, Paris 1922, ii, 429; on the later Karaiti family name Afendopoulo or Efendipoulo see Z. Ankori, Karaites in Byzantium, New York-Jerusalem 1959, 199-200). Ibn Bātūţa found that the brother of the ruler of Kastamoun was called Efendi (Voyages, ii, 345; Eng. trans. Sir Hamilton Gibb, The travels of Ibn Batutta, ii, Cambridge 1962, 463). This title was also used under the Ottomans (see, for example, ʻAshāpāshāzade, chapter 46, where Kara Rūstem addresses the Kāḏḏarisher Dandardin Ḳ̣hālī as Efendi), and in a number of terms issued in Greek from the chancery of Mehemmed the Conqueror the Sultan himself is called Ḳ̣ḏārisher Efendim—perhaps the original of Grand Signor (Hammer-Purgstall, Histoire, ii, 523; F. Babinger-F. Döger, Mehmēd’s II. frühester Staatsatrat (1445), in Orientalia Christiana Periodica, xv (1949), 234; A. Bombaci, Nuovi furmān ghanī di Maometto II, in BZ, xlvii (1954), 298-319; cf. Deny, Sommare, 183). In the late 17th century this title was not uncommon for Muslims to speak of the Prophet as Efendimiz—our master; but in the 19th century, it followed a somewhat different line of development, and came to designate the secular, literate townspeople, usually dressed in European style, as against the lower classes on the one hand, and the men of religion on the other. This European style, as against the lower classes on the one hand, and the men of religion on the other. This distinction between efendi and bey in Turkey finally came to be one between religious and secular, the former term being used primarily for men of religion or for the religious education, the latter for military and then also for civilian laymen. The title efendi was finally abolished in Turkey, together with other Ottoman ranks and titles, in 1934. In the form efendim (also Beye hendim and Hamsefendim)—sir, madam—it remains in common use as a form of address for both men and women.

In the Arab countries formerly under Ottoman rule, where the title Efendi came into general use in the 19th century, it followed a somewhat different line of development, and came to designate the secular, literate townspeople, usually dressed in European style, as against the lower classes on the one hand, and the men of religion on the other. This in contrast with the Turkish practice, which tended to apply the title more especially to men of religion. After becoming a rough equivalent of Mr. or Miss, the title Efendi is now dispersed among the various Arab lands, being replaced for the most part by Sayyid.

(John Lewis, Efleḵ, the Turkish form of the word Wallach, originally applied by Germanic tribes to Latin populations. The Slavs, the Byzantines and, later, the Ottomans used it to denote the Balkan Humani-ans and those north of the Danube. It is probable that it lost its ethnic meaning in certain parts of
the peninsula, and was applied simply to a pastoral population. Under the Turks, the Wallachians who were incorporated in the organization of the voivode [q.v.] provided light cavalry units.

The first mention of Rumanian political institutions south of the Carpathians occurs in the diploma granted by the king of Hungary to the Knights Hospitallers (1247). In 1330, Basarab reigned over the whole territory lying between the Danube and the Carpathians (Tara Românească) as an independent sovereign, after the victory over the Hungarian king Charles Robert. The dynasty founded by Basarab bore his name, which is of Kuman origin. Under his son Nicolaé Alexandru, the orthodox Rumanian Church was raised to metropolitan status. The first contact of Wallachia with the Ottomans took place in 1368 in the reign of Vladislav (1364-74 or 5). The reign of Mircea the Old (1358-1418) is memorable for a long series of struggles against Bâyezîd I. In 1391 Firuz Beg attacked Vidin and crossed the Danube into Wallachia. Enough booty was taken to provide endowments for charitable institutions in Bursa. In 1393 Mircea the Old lost Silistria. In the years that followed, war was waged between Wallachia and the Ottomans, and the monarch was temporarily replaced by a certain Vlad who recognized Ottoman suzerainty and, in 1394, paid tribute for the first time. After the battle of Varna, the resistance of Wallachia was only intensified by the sons of Bâyezîd I over the succession to the throne. The entry of Wallachia into the Turkish orbit gave rise to two political currents. In the struggle against Islam, some of the Boyars sought aid from the Magyar kingdom, and later from the royal houses of Austria or Russia; but rather than endure the war which this policy provoked, the others preferred to recognize Ottoman suzerainty. The whole course of Rumanian history was profoundly influenced by this conflict. In the 15th century Vlad the Devil (1436-49) struggled against the Turks, but in the end accepted their authority, thereby provoking a Hungarian campaign in the course of which he met his death. His son Vlad the Impaler (1456-62, 1476) fought against Mehemmed II without success. In the period of the Potocki princes (1527-92) the Turks were incorporated in the organization of the Ottoman Empire, as well as by printing religious books. It was at Bucharest that one of the oldest books in the Turkish language was printed in 1701.

The country received its first constitution in 1834; and this was replaced by a more liberal fundamental law in the anti-Russian revolutionary outburst of 1848. The Porte, urged on by St. Petersburg, quenched the revolution in blood. The Treaty of Paris (1856) was the origin of the union of Wallachia and Moldavia in a single state under prince Alexandru Ion Cuza (1859). As a result of the Peace of Berlin (1878), Rumania was recognized as an independent state.

The entry of Wallachia into the Ottoman system brought profound changes in its social and economic structure. The country lost the right to maintain commercial relations with other countries, and was compelled to provide Constantinople with a part of its supplies of cereals and live-stock. It must be emphasized that, despite the bonds of suzerainty, the Turks never had the right to establish themselves in Wallachia. This country played an important part in upholding eastern Christianity by large donations to the Orthodox Church. The intermingling of Rumanians with the Ottoman empire, as well as by printing religious books. It was at Bucharest that one of the oldest books in the Turkish language was printed in 1701.

EGÍR [see EGIN].

EGÍR (see EGIN). EGIN, now known as Kemâliye, a town in E. Anatolia on the right (west) bank of the Euphrates (Kara-Su), 40 kms. from ‘Arapkâr [q.v.], 130 kms. from El-Aziz and Malatya via ‘Arapkâr, and 150 kms. from Erzînjân [q.v.] (under which it comes administratively as the centre of a kâdd) from Erzindjan (under which it comes administratively as the centre of a kâdd) and 150 kms. from Erzînjân [q.v.] (under which it comes administratively as the centre of a kâdd) via the station of İilih on the Sivas [q.v.]–Erzurum [q.v.] railway. It is near the junction of the valley of the Euphrates narrowed by the outposts of the Monzur mountains of Dersim to the east and the Sarî-Çêkê mountains to the west. The valley which is situated here, at an altitude of 825 m. above sea level, is overlooked on the eastern side by a precipitous slope rising above it like a wall. The western slope is more gradual, rising like an amphitheatre round a small valley. It is here that Egin is built at an altitude of from 900 to 1000 metres. A spring higher up, known as Kâdd Gölü, waters the town’s gardens, feeds its fountains and turns its mills. It is said that the name Egin is derived from the Armenian word ագ (ahn), meaning “spring”, and that the town was founded in the 11th century by a group of Vaspurakan Armenians (see [q.v.]). In ancient times this district was ruled by local lords or changed hands in the wars between Rome and Persia (remains of Roman roads can still be seen). In Islamic times it was for short periods of time autonomous, before the foundation of the Saljûkî State and also after that State had become weaker. After the invasion of Tûmîr [q.v.], Egin was annexed to the Ottoman Empire in the reign of Sulṭân Mehmed I [q.v.]. It was for a long time attached to the liwâd of ‘Arapkâr in the eyvêt of Sivas [q.v.]. In the 19th century it passed into the vilayêt of Khârâbût [q.v.] and then into that of Mâ’mûret-ul-Azîz. After the foundation of the Turkish Republic the name of Egin was changed into Kemâliye after Mustafa Kemâl Pâsha (Atatîrkûr). The kâdd of Kemâliye formed part successively of the vilayêts of El-Azîz, Malatya and Erzînjân.

The Djîhân-nâmê, the Seyhâh-nâmê of Ewliyâ Çelebi [q.v.] and other 17th century sources mention Egin as a place of gardens and orchards producing an abundance of fruit. Ewliyâ Çelebi says that although Egin formed a kâdd of the eyvêt of Sivas, its taxes were collected by the mahkâtîl of Malatya. He adds that the castle of Egin had been surrendered to Sulṭân Mehmed I under a treaty and that the 300 Christians living there were immune from taxation. According to him, there were in Egin some 10,000 well-built houses with earth roofs. Sources in the first half of the 19th century praise the beauty of the town, whose houses were surrounded by greenery. Moltke, who visited Egin in April 1839, describes it as one of the most beautiful towns in Asia which he had seen, comparable to Amasya [q.v.]. Although he found Amasya a more pleasant and original place, he thought Egin more impressive and beautiful and its river more important. Although Moltke mentions Egin as a largely Armenian centre, Texier, as well as sources belonging to the second half of the 19th century, state that the Armenians were never in the majority there. According to Texier there were 2,000 Muslim households and only some 700 Armenian households in the town. Towards the end of the 19th century Yorke estimated the population of Egin at 15,000 and Cunet at 19,000, of whom some 12,000 were Turks and 7,000 Armenians. The Muslims of Egin were engaged in agriculture and particularly in cattle-breeding, as is the case today, while the Armenians were engaged in commerce and crafts. According to Ewliyâ Çelebi, the town was famous for its bows, bow-makers occupying most of the bazaar. In more recent times the town produced fine cotton goods, embroidered silks, embroidered head-cloths, handkerchiefs and towels. Moltke mentions that many citizens of Egin settled in Istanbul, where they found employment as butchers, porters, grocers, builders, merchants and money-changers, returning to their birth-place in their old age and building fine houses there. Some citizens of Egin reached high rank in the service of the State, including that of Minister. This custom of seeking employment outside their birth-place was also shared by the citizens of ‘Arapkâr, as well as by people from neighbouring villages. Some Armenians from Egin emigrated to America, returning occasionally to their town in their old age. Cunet writing in 1890 says that while some such Armenians returned rich and made fine houses for themselves their descendants wasted the money they inherited. Local industry declined as a result of European competition and the town lost its prosperity. Egin was badly affected by the First World War. According to the first results of the 1945 census the population of Egin amounted to 3,500 while the whole kâdd, which covered an area of 1333 sq. kms. and included 34 villages, numbered 16,900 people.

EGÎR (Turk., Egin; Hung., Eger; Ger., Erlau; Lat. and It., Agria), an old Hungarian town, 110 kms. to the north-east of Buda, situated close to the massif of Bûk, i.e., to the eastern foot-hills of the Matra mountains, and on the Ipoly or River Eger, which flows into the Tisza (Théiss). Egin was subject to Ottoman rule from 1005/1596 to 1699/1687. The Ottomans, in 955/1552, captured Temesvár and Szolnok (important in the future as a base for
the concentration of the men and supplies needed for the conquest and thereafter for the retention of Egrí) and then laid siege to Egrí itself, but in vain, all their assaults failing before the desperate resistance of the Christian garrison under Stephen Dobó (Ramaďán-Shawwál 999/September-October 1552).

Egrí was not in fact to come into Muslim hands until the long war of 1001-15/1593-1660 between the Austrian Habsburgs and the Ottomans. The first years of this war brought such disaster to the Ottoman cause that Sultan Mehemmed III (1003-12/1595-1603) was induced to take the field in person for the campaign of 1004-5/16/56. Near Szalánszéken the Sultan held a council of war, at which the decision was reached to make the capture of Egrí the main objective of the campaign (one of the Christian sources—Decsi, Commentarii, 252—notes that the “Begus Szolnokienisii”, i.e., the Sangaji Beg of Szolnok, in the spring of 1004/1596 (“sub idem ferme veris initium”), had reconnoitred and raided in force the lands around Egrí—a forerunner of the fate soon to befall the town). The decision of the Sultan and of the council of war rested on two considerations: that possession of Egrí would enable the Ottomans to threaten the narrow corridor of land through which ran the lines of communication between Austria and Transylvania, then in alliance with the Emperor against the Sultan, and that control of Egrí might bring under Ottoman dominion the mines located in the mountainous region to the north of the town (cf. Pečewi, ii, 191; Na'im, i, 146; HâgâdiMel KHALFA, i, 71; Decsi, Commentarii, 267; Hurnuzački, ii/2, 216. Marsigli, Danubius Pannonico-Mysicus, iii/2, Amsterdam 1726, 19 ff. contains a “Mappa Mineralogicalca”, which shows the mines existing in his own time to the north of Egrí). Egrí fell to the Ottomans after a siege of three weeks (28 Muharram-19 Şafar 1005/21 September-12 October 1596). Once the fortress was in their hands, the Ottomans began to repair forthwith the damage that it had suffered in the course of the siege, but their continued possession of Egrí was in fact ensured to them only by their defeat of the Imperialists in the great battle of Haci Ovasí (Mezo-Cserhát) fought not far from Egrí in Rabl (cf. also Giambattista Vico, Scriiti storici, ed. F. Nicolini, Barì 1939, index: 454) Français Forgacsii de Gymnes Pannomicii ... Narratio Historica, auctore M. by the 12th century currently used for the town; a of the narrow strait separating Chalkis from the ponte', the regular Western name for both town and produced from the ace. [si£ TOP] "EypiTCOv 'Negro-supposed connexion with the bridge over the strait chief town, the classical Chalkis. Originally the name the theme of Hellas. At the partition of the Empire 1957), and by the beginning of the Ottoman- of Umur Pasha of Aydin (see P. Lemerle, Leveltdri KQzlemenyek, i, Cassel 1887, Bibliotheca Historico-Militaris, 169 ff., passim; pa...
fell into the hands of the Saldjiiks. After the dissolution of the Rum Saldjuk Empire, Egridir became the capital of the Turkish principality of the Hamid-oghlu. One of the first rulers of this dynasty, Falak al-Din Dündur at the end of the 15th century, gave the town the name Felek-bâr or Felekabâd (Abu'l-Fida', Ta'ahir, 379; translation ii, 2, 134). In 783 or 784/towards 1281 A.D., the last Hamid-oghlu, Hüseyin Beg, sold his rights to the Ottoman Murâd I. Timur conquered both the town and the fortified island Nis-Adaš on his march through Anatolia (according to Şâhâb on 17 Şâhâb 805/11 March 1403, according to Şâhar al-Din on 17 Râdiâb/10 February). He left them to the Kara-mânis, whom he had restored, but they, in turn, had to cede them, together with the region of Hamid-eli, to the Ottomans in 1425. It now became a liwa in the eyalet of Anadolu. Later on, in the 19th century, Hamid-eli, or Isbarta, as it was temporarily known, became a sandjak of the vilayet of Konya.

The most notable building is the citadel, probably built by Keykubad I, at the tip of the peninsula of Egridir. It is separated from the town itself by a wall, and there is an inner wall protecting the innermost part of the citadel, which lies on the tip of the peninsula (where there are further fortifications, including two towers which lean against the inner wall of the citadel). The citadel, and the town, destroyed, were still intact in the 18th century (see Voyage du Sieur Paul Lucas fait en 1714 . . . . . , Amsterdam 1720).

There is a mosque, the Ulu Djami', with wooden buttresses, near the gate of the citadel in the outer town; its minaret stands on the actual gate of the citadel. Opposite the mosque, there is the Tasl al-Madrasa, a court madrasa with an aynân and a beautiful Saldjkuk doorway dated Shawwâl 635/May-June 1238 (RCEA, xi, 96, no. 4148); the aynân is dated 701/1301-2 (ibid., 227, no. 5138).

EGYPT [see MUSIR]

EKREM BEY, Reşâd-üâzâde Mahîmd (1847-1914), Turkish writer, poet and critic, one of the leading personalities in the victory of the modern school of poetry over traditional divân-poetry. Born in Vanîkoy, a suburb of Istanbul on the Bosphorus, he was the son of Reşâd-ü Efendi, director of the Government Press, and a poet and scholar of some distinction. He attended various schools until the age of fifteen and, like most of his contemporaries, continued his education as an apprentice clerk in the chancellery of the Foreign Ministry (where he met Nâmil Kemâl) and various other government offices. Subsequently he became a senior official of the Council of State (Şârâ-yi Devlet) and taught literature at the Galatasaray Lycée and the Imperial School of Political Science (Mûhiyye), two of the few leading institutions where the Turkish intelligentsia and ruling classes were educated, and exercised immense influence on the formation of the literary taste of the young generation. After the restoration of the Constitution in 1908 he became, for a short time, Minister of Wakfs and later Minister of Education in the Kâmil Paşa cabinet, but soon resigned as he disagreed with the policy of massive purges in the civil service. He was made a senator in December 1908 and remained so until his death. Ekrem Bey began by writing poems in the divân tradition until he came under the influence of the modernist Tâfâwyn school, particularly of Nâmil Kemâl and 'Âbd al-Hâqq Hamîd. Then gradually he developed a personality of his own and influenced even Hamîd's later work. His poetry is romantic, often over-sentimental and melancholy bordering sometimes on the junkârre (junkâr), constantly elaborating one of the three themes: nature, love and particularly death, helped in this by tragic circumstances in his life (he lost three children at a young age).

Although himself a poet of limited inspiration and not a very skilful versifier, he sincerely believed in a thorough revolution in the form and content of the Turkish arts, and became the pioneer fighter of modern Turkish poetry against the traditionalists headed by Mu'allim Nâdî. He was thus a link between the early modernists (Sîmsâ, Ziya (Diyâ) Paşa, Nâmil Kemâl, 'Âbd al-Hâqq Hamîd) and radical reformists of the Fikret school. The long and often bitter struggle, continued by the generation of Tevfîk Fikret (in the literary magazine Theresi-Fûnân where many young talents gathered first round Ekrem Bey), ended with the triumph of modernism during his lifetime, and Ekrem Bey's rôle in this, perhaps more as a critic and movement-leader than as a poet, is decisive. Hence the name Ustâd-â Ekrem given to him by his students and admirers. He was a friend and Art for Art's sake tendency of the Theresi-Fûnân school are also partly to be traced to Ekrem who was not as social or history-conscious as his predecessors.

Apart from articles and poems published in various reviews of the period and some booklets of minor importance, he is the author of Verse: (I) Nâmâs- seher (1871) and (II) Ya'dîghâr-i sebab (1873); (III) Zemâze in three parts (1885), the third of which contains his celebrated poem Yağmûrîhka 'or mazzarîl 'âlemî, considered his masterpiece; (IV) Nâfîls (1886) a collection of verse translations from the French romantics and La Fontaine; (V) Pejmûrdes (1894). Prose: (I) Muntahhabât meydân-ârisî (1873) a collection of his early writings, articles and translations, in the tradition of the old flowery style; (II) Mes Prisons Terdümess (1874), translation from the French of Silvio Pellico's Le mes prisonni, equally in the old fashioned ornate prose which was severely criticized by Nâmil Kemâl; (III) Nîdîjîd Ekrem (1900), in two volumes, interspersed with verse, some in syllabic metre. Into this book dedicated to his beloved son Nîdîjû, who died very young, the unhappy father put, in all detail, everything he remembered about him. It is on the whole written in a spontaneous and unadorned style and contains some of his best prose; (IV) Tezkeress (1858) contains his later, simpler and more personal prose; (V) Atala (1872), a translation, in bombastic and old fashioned style, of Chateaubriand's novel; (VI) Mukâsin Bey (1859), a rather mediocre sentimental novel; (VII) 'Araba sevâdî (1859, published 1896 and 1940), a much appreciated novel of emotional satire, in the manner of Turkish novels which attack and ridicule the aping of Western customs by snobs (cf. Ahmed Mîdhat's Felsefîn Bey ile Kâthîm Efendi (1875), Huseyn Rahîmîn Şîhî (1897) and Şîhîşerî (1900)); (VIII) Şemsâs (1856), a short narrative about the life and sudden death of a four year old peasant girl, adopted by the poet's family; (IX) Tâlim-î Edebiyâtî (1882), a book of arts poétique with examples, composed of his lectures at the Mûhiyye and first mimeographed in 1879, is his most important work, which revolutionized taste and literary theories and standards of the time. Contrary to tradition he gave in this book

**Elbasan (T. el-basam [fortress] which subdues the land),** town of central Albania (41° 06' N., 20° 06' E.), on the site of the ancient Scampis on the Via Egnatia, a strategic position controlling the fertile valley of the Shkumbi (anc. Genysos), which here emerges from the mountains. The fortress, round which the town grew up, was built with great speed at the command of Mejemmed II while Krujë (Kroya [q.v.]) was being unsuccessfully besieged in the summer of 1466, as a base for future operations against Iskandar Beg [q.v.; it resisted a siege in the following spring. At first administered as part of the sanjak of Öğür (Tursun, TOEM ilämme, 135), within a few years Elbasan was made the chief-lieu of a separate sanjak of Rumili, having (ca. 926-1520) four kâşâ: Elbasan, Çermeni, Ishqabat and Draça (Durazzo). In the later years of the Empire it formed part of the wilâyet of Yanya, and finally of İskôdrowa.

With the consolidation of the Ottoman hold on N. Albania and the Adriatic coast, the fortress rapidly lost its military importance (it was dismantled in 1870), but as a place of pilgrimage by the Muslims it continued to be revered (asbub al-kahf) until the 20th century. In 1920-1944, Elbasan belonged to the Albanian part of the Ottoman Empire as an independent (müssel mem) kâşâ in the iläm (region) of Elbasan, however, as the supposed place of rest of the Seven Sleepers (əşdb al-kahf) it was also revered as a place of pilgrimage by the Muslims (see F. Babinger, Die Ortlichkeit der Siebenschläferlegende in muslimischer Schau, in Anzeiger der phil.-hist. Kl. der Österr. Akademie der Wissenschaften, Year 1957, no. 6, 1-9). Elbasan, however, developed as the political centre.

In the years between 1097 and 1105, Elbistan (Plantania) was in the hand of the Crusaders. Subsequently it changed hands several times, belonging in turn to the Crusaders of Antioch, the Dânămehdids of Siwâs and the Sâlîd-iks of Konya, finally remaining in the hands of these last in 1201. During the Anatolian (Kayseri) campaign in 675/1277, the Mamlûk Sultan Al-Zahir Baybars gained a great victory near Elbistan over the Mongol army of the Ilhân Abâlkâ in 1264/1847, it was also revered as a place of pilgrimage by the Muslims (see F. Babinger, Die Ortlichkeit der Siebenschläferlegende in muslimischer Schau, in Anzeiger der phil.-hist. Kl. der Österr. Akademie der Wissenschaften, Year 1957, no. 6, 1-9). The most notable monument in Elbasan is the Ulu Dâji, which, according to an inscription on the gateway, was built in 659/1261 (CREA, x, 132, no. 4199) by the amîr Mubâriz al-Dîn Əfaw, but was later restored in the Ottoman style. On the way to Durazzo and Tirana, it is, after Tirana, the chief town of central Albania, with some 15,000 inhabitants.

ELÇİ, a Turkish word meaning envoy, from el or il, country, people, or state, with the occupational suffix -çi, to denote the ruler of a land or people; its normal meaning, however, since early times, has been that of envoy or messenger, usually in a diplomatic, sometimes, in mystical literature, in a figurative religious sense. In Ottoman Turkish it became the normal word for an ambassador, together with the more formal Arabic term sefîr. From an early date the Ottoman sultans exchanged occasional diplomatic missions, for courtesy or negotiation, with other Muslim rulers (in Anatolia, Egypt, Morocco, Persia, India, Central Asia, etc.) and also sent a number of missions to various European capitals. From the 16th century, in accordance with the growing European practice of continuous diplomacy through resident embassies, European states established permanent missions in Istanbul. The Ottoman government, however, made no attempt to respond to this practice until the end of the 18th century, preferring to rely, for contact with the European powers, on the foreign missions in Istanbul, and on occasional special embassies despatched to one or another European capital for some immediate and limited purpose. It was the custom for such envoys, in addition to their official reports, to write a general history of their travels and experiences. A number of these accounts have survived in part or in full, and some of them have been published. In 1792 Selim III decided to establish permanent resident embassies in Europe. The first was opened in London in 1793 (on the reasons for this choice see Djiedet, Ta’rîhî, vi, 257-60), and was followed by others in Vienna, Berlin, and Paris. This first experiment gradually petered out, the embassies, left in charge of Greek officials, being finally closed on the outbreak of the Greek War of Independence in 1821. A new start was made in the eighteen-thirties with the opening of permanent embassies in London, Paris and Vienna and a legation in Berlin, and the despatch of envoys extraordinary (fawk al-selîret) to Tehran and St. Petersburg. These were followed by further resident missions in Europe, in Austria (Tehran embassy 1849) and America (Washington legation 1857), and the organization of a foreign ministry. In earlier times envoys were usually chosen from among the bureaucratic and ulumî classes. A number of these accounts have survived in part or in full, and some of them have been published. In earlier times envoys were usually chosen from among the bureaucratic and ulumî classes. At first there was some uncertainty about grades and ranks; in the 19th century the European terminology of ambassador, minister plenipotentiary, and chargé d'affaires for heads of missions, was adopted. The first was rendered büyüük eller or sefîr-i hebîr, the second oria eller or simply sefîr, the third maslahat-gizî. ELDEM, KHALİL EDHEM, Turkish archeologist and historian, was born on 24 (?) June 1861 in Istanbul. He was the youngest son of the grand vizier Ibrahim Edhem Pasha [q.v.]. After completing his primary school course in Istanbul, he continued, from 1876, his secondary education in Berlin, and later studied chemistry and natural sciences in the University of Zurich and at the Polytechnic School of Vienna. In 1883 he received the Ph. D. degree from the University of Berne. Back in Istanbul he was appointed to an office in the Ministry of War and transferred later to the General Staff Administration of the Ottoman Empire. He found his vocation when he was nominated in 1892 as deputy administrator of the Imperial Museum, where his eldest brother 6ışmâl Hamdi Bey [q.v.] occupied the post of general director. Upon the death of his brother, he was charged on 28 February 1910 with the administration of the Imperial Museum, an important post which he held until his retirement, on 28 February 1931. His ability as administrator and scholar is shown in the organization of the Imperial Museum. He enlarged and classified the collections of the main Archeological Museum and founded in 1892, in a building in the Ancient Near Eastern Section of the Museum. He also organized the Topkapı Sarayı [q.v.] upon the opening of this palace as a museum under his administration. His publications cover the fields of archaeology, numismatics, sigillography, epigraphy and history (for his bibliography see Halil Edhem Hâsira Kitâbî, i, 299-302). His works on sigillography and epigraphy are the first studies in this disciplinary history of history published in Turkey. The book entitled Dâwel-i İslâmîyye, Istanbul 1927, a revised and enlarged translation of S. Lane-Poole’s Mohammedan dynasties, attests his wide knowledge of Islamic history. His scholarship won him a world-wide reputation: he was a member of national and foreign academies, honorary doctor of the Universities of Basle and Leipzig, and honorary professor of the University of Istanbul. He died 16 November 1938 in Istanbul, being a member of the Turkish Parliament. ELMA DÂGHÎ, name of several ranges of mountains in Anatolia; 1) south-east of Ankara, 2) north-west of Elmalı (2905 m. [see 8,218 ft.]). (F. TAESCHNER)
ELMALI — EMIN

ELMALI, earlier spelling Elmalu (Turkish = "Appletown"), a small town in south-western Anatolia, 36° 45' N., 29° 55' E., altitude 1150 m. (= 3,772 ft.), on a small plain, surrounded by high mountains (Elma Dağları 2505 m. (= 8,218 ft.) in the north, Bey Dağları 3086 m. (= 10,124 ft.) in the south-east), in the vicinity of the small lake Kara-Göl. This lake flows into a cave, Elmali Dündeni. Elmali is capital of a kaza in the vilâyet of Antalya, and has 4,967 inhabitants (1950); the kaza has 23,993 inhabitants.

Elmali, in the ancient region of Lycia, is a pretty little town among the mountains (Elma Dağları 2505 m. (= 8,218 ft.) in the north, Bey Dağları 3086 m. (= 10,124 ft.) in the south-east), in the vicinity of the small lake Kara-Göl. This lake flows into a cave, Elmali Dündeni. Elmali is capital of a kaza in the vilâyet of Antalya, and has 4,967 inhabitants (1950); the kaza has 23,993 inhabitants.

Elmali was the capital of the Turcoman principality of Tekke [q.v.], which was acquired in 830/942 by Murâd II, and henceforth became a liwâ of the eyâlet of Anadolu. The main centre of the liwâ of Tekke shifted to Antalya, and Elmali became a kâdâ. In the 19th century, it was a kâdâ of the sanâbî of Antalya (Adalia) in the vilâyet of Konya.

The so-called Tâbâkâdâ, woodcutters suspected of being Shia, have settled in the wooded surroundings of Elmali and they sell their wood in the entrance hall (reported by K. Erdmann).

In the north, Bey Dağları 3086 m. (= 10,124 ft.) are the highest peaks of Anadolu. The main centre of the liwâ of the Topkapi palace in Istanbul. The most important are a group of objects said to have belonged to the Prophet; they included his cloak (khîrîka-i sherîf [q.v.]), a prayer-rug, a flag, a bow, a staff, a pair of horseshoes, as well as a tooth, some hairs (see Lînyâ), and a stone bearing the Prophet's footprint. In addition there are weapons, utensils and garments said to have belonged to the ancient prophets, to the early Caliphs, and to various Companions, a key of the Ka'ba, and Kur'âns said to have been written by the Caliphs 'Uṯmân and 'Âli. Under the Sultans these relics were honoured in the annual ceremony of the Khîrîka-i sa'dâ'î, held on 15 Ramâdân.

EMESA [see Hîms].

EMIGRATION [see Îlîya, Hîdâra and Muhâdîrîn].

EMIN, from Arabic āmin [q.v.], faithful, trustworthy, an Ottoman administrative title usually translated intestine or commissioner. His function or office was called āmanî. The primary meaning of āmin, in Ottoman official usage, was a salaried officer appointed by or in the name of the Sultan, usually by bâdî, to administer, supervise or control a department, function or source of revenue. There were thus various kinds of stores and supplies, of mints, of mines, of customs-houses and other revenues, and of the tâbîr [q.v.], the preparation of the registers of land, tenure, population and revenue of the provinces and the distribution of fiëls (see Dâftar-i ẖârâ̄nî and Tâmârîn). In the words of Prof. Inalcik, "the āmanî of tâbîr required great knowledge, carried great responsibility, and at the same time was susceptible to corruption and abuse; usually influential beys and kâdis were appointed to it". In principle, the āmin was a salaried government commissioner, and not a tax-farmer, grantee, or lessee of any kind. His duty might be to represent the government in dealings with such persons, or himself to arrange for the collection of the revenues in question. When concerned with revenues, he was to have no financial interest in the proceeds, which he was required to remit in full to the treasury. The term āmin is also used of agents and commissioners appointed by authorities other than the Sultan—by the kâdis, for example, and even by the tax-farmers themselves, who appointed their own agents to look after their interests. At times, by abuse, the āmines themselves appear as tax-farmers.

In the capital, the title āmin was also borne by a number of high-ranking officers, in charge of certain departments and services. Such for example were the commissioners of the powder magazines (bâdîl-khâbân āminî), of the arsenal (târsânî [q.v.] āminî), and of the dâftar-i khâbân (defter āmin or defter-i khâbân āminî). The highest ranking holders of this title were the four emîns attested to the external services (bîrân [q.v.] of the palace: the city commissioner (Şehrî āminî [q.v.]), concerned with palace...
with Khartoum were cut after April 1883. The defeat of an Egyptian expeditionary force at Sha'kyakin (5 November 1883) was followed by the Mahdist conquest of the Bahr al-Ghazal [q.v.], the neighbouring province of Emin's. In May 1884, Emin received a letter from Karam Allâh Kurkurâshî, the Mahdist military governor of the Bahr al-Ghazal, demanding the surrender of his province. Emin's officers advised capitulation, and to gain time he sent a delegation to Karam Allâh, and moved his headquarters to Wadelai (Walad Lây) in April 1885. However, the Mahdist forces withdrew from the Equatorial Province. For over two years, Emin remained undisturbed, although with diminished and precarious authority. In March 1886, he received a despatch from Nûbûr Pangta, the Egyptian prime minister, dated 13 Shâbân 1302/27 May 1885, informing him of the abandonment of the Sudan, and authorizing him to withdraw with his men to Zanzibar. Meanwhile projects for relieving Emin were being mooted in Europe. An expedition was organized and partly financed by a British committee including persons interested in East African commerce. The Egyptian government also subsidized the project. The expedition was headed by H. M. Stanley, who was an agent of Leopold II of the Belgians. Taking the Congo route, Stanley met Emin by Lake Albert on 29 April 1888. Emin was most unwilling to leave his post, and Stanley put before him alternative proposals: that he should continue to administer the Equatorial Province on behalf of the Congo Free State, or that he should establish a station by Lake Victoria for the British East Africa Company. Emin rejected these proposals, and Stanley left to bring up the rest of his expedition. During his absence, mutiny broke out among some of Emin's troops, who were suspicious of recent developments, and unwilling to go to Egypt. Emin was held by the mutineers at Dufîle. Meanwhile, on 11 June 1888, a Mahdist expeditionary force under 'Umar Safîb had left Omdurman in steamers. This reached Lado on 11 October, and summoned Emin to surrender. The mutineers resisted the Mahdist forces, and on 16 November Emin was released. He withdrew to Lake Albert, where he was rejoined in January 1889 by Stanley. In April, Stanley began his march to the coast, unwillingly accompanied by Emin. Emin then entered the German service in East Africa. He led an expedition in what is now Tanganyika. Thence he entered the fringes of his old province, to try to attract some of his former followers. With his expedition reduced to desperate straits by smallpox, he endeavoured to reach the Congo, but was murdered by a tribal chief on or shortly after 23 October 1892.

EMIR [see AMIR].

EMIR SULTAN, SAYYID SHAMS AL-DIN, PUBLISHED as EMIR Seyyid, or EMIR Sultan, the patron saint of Bursa (Brusa). He is supposed to have been a descendant of the 12th Imam, Muhammad al-Mahdi, and hence a Sayyid. His father, Sayyid 'Ali, known under the name of EMIR Külü, was a Sufi in Bugha. He himself, born in Bugha (in 720/1320), joined the Nūr-bakshiyah and built one of the Kubrawiyya in his early youth. Some Mendkib-nâmes assert that he was a follower of the Imamiyya. After his hajjī, EMIR Sultan spent some time in Medina, and then went to Anatolia via Karaman, Hamid-eli, Küttahya and Ine-Göl. Finally he reached Bursa, where he dwelt in a cell (sa'ama), and led a life of good works. Within a short time, he gained great fame, gathered disciples around him, and entered into contact with the 'ulema and Shaykh of Bursa. He was highly esteemed by Sultan Bayazid I Yildirim, and married his daughter, Khundi Sultan, by whom he had three children (a son and two daughters). He was asked to invest the sultan with his sword when the latter went into battle, and his admonitions decided the sultan to refrain from excessive drinking (cf. the anecdote in Ewliya Celebi, Narrative of Travels, ii, 45; also it is said that EMIR Sultan successfully restrained Bayezid from the illegal execution of Timur's ambassadors (Ali, Künk, v, 83 f.). EMIR Sultan was captured when Bursa was taken by one of Timur's scouting parties in 805/1402, and brought before Timur, who gave him the choice of accompanying him to Samarkand, but EMIR Sultan preferred to return to Bursa (Sa'd al-Din, i, 188 f.).

Legend does not mention this incident; it does, on the other hand, report that the departure of Timur's troops from Bursa was a miracle worked by the saint (Sa'd al-Din, ii, 427). When Murad II began his reign in 824/1421, he asked EMIR Sultan to intercede with his sword and the saint is also said to have accelerated the defeat of the 'False Musafat' (Mustafat Düzme, [q.v.], who contested Murad II's right to the throne, by the force of his prayers ('Ali, 195 f.; Leunclavius, Hist. Mus., 493 f.). In the next year, he, and following a 200 dervishes, took part in the siege of Constantinople. The fall of the city, which he prophesied, did not, however, occur. Kanano, a Byzantine who took part in the siege, gives a detailed and vivid description of the appearance of the Mir-Sayyid (Musağat-i Beyza), the 'Patriarch of the Turks', as he calls EMIR Sultan (ed. Bonn, 466 ff., 477 ff.); the Ottoman historians, on the other hand, do not mention this lack of success. EMIR Sultan died in 833/1429 in Bursa, as a result of the plague. Soon afterwards legends told of miracles (Mendkib) wrought by the saint.

A splendid mausoleum (which became one of the most visited places of pilgrimage in Turkey) was erected over the grave of EMIR Sultan at the eastern end of the town. The mosque attached to it was built in its present form by Selim III (inscription of 1239/1824).

EMPEDOCLES [see ANDREUS].

EMRELI (EMRÊLî, IMRÊLî or IMRÊLî), a semi-sedentary Turkmen tribe which since the 10th/16th century has dwelt in Khorasan, in the region of Guran. Driven back at the end of the 12th/18th century by the Tekkes (Tekins), the tribe emigrated northwards and, in two successive waves, settled down in Khârîz (region of Hudjalay on the Amân Kül canal), the first in 1803 and the second in 1827 when they submitted to the Khâns of Khiva. In 1873 (I. Ibrahimov, Nekotore zamecki o Khovanskhî Türkmenê i Kırısâ, in Voenn. Sbornik, xcviii (1874), no. 9, 133-51), they owned nearly 10,000 tents. At the present time the Emrels inhabit the Ilyall region, west of Tashjaw, between the Yomuds in the south and the Goklens and Cowdors in the north. An isolated settlement exists in the Ashkâbêd region (district of Kaakhkha).

Since the Russian conquest the Emrels have been sedentary, and are engaged in agriculture and sheep-rearing.

Detailed information on the history of the tribe in the 19th century is contained in the recent work by Yu. E. Bregel, Khorezmski Türkmen v XIX vek. (Moscow (Acad. of Sc., Institute of Asian Peoples) 1961.)

ENAMEL [see MAI].

ENDERUN (pers. Andarun, "inside"; turk. Enderun). The term Enderun (or Enderun-i Hümâyûn) was used to designate the "Inside" Service (as opposed to Bürün, [q.v.], the "Outside" Service) of the Imperial Household of the Ottoman Sultan: i.e., to denote the complex of officials engaged in the personal and private service of the Sultan—included therein was the system of Palace Schools—and placed under the control of the Chief of the White Eunuchs, the Bâb al-Safa'det Aghas (the Agha of the Gate of the Court). On the other hand, report that the departure of Timur's troops from Bursa was a miracle worked by the saint (Sa'd al-Din, ii, 427). When Murad II began his reign in 824/1421, he asked EMIR Sultan to intercede with his sword and the saint is also said to have accelerated the defeat of the 'False Musafat' (Mustafat Düzme, [q.v.], who contested Murad II's right to the throne, by the force of his prayers ('Ali, 195 f.; Leunclavius, Hist. Mus., 493 f.). In the next year, he, and following a 200 dervishes, took part in the siege of Constantinople. The fall of the city, which he prophesied, did not, however, occur. ENOS (also İNOS), Ottoman name for the classical Ainos, now Enez, town on the Aegean coast of Thrace (40° 43' N., 26° 03' E.) on the east bank of the estuary of the Merić (q.v., anc. Hebros). From classical times until the late century it was a prosperous harbour, on an important trade route from the upper Merić Valley and across the isthmus from the Black Sea, with valuable and much-coveted salt pans. With Lesbos (T. Midilli, q.v.) it passed to Turkey in 1456, when Mehmed II with the pretext to intervene: at his death of Palamede Gattelusi in 1455, family quarrels ensued, and the region was thenceforth a kada of the sandjak of Gallipoli. The silting of the river (q.v.) of the upper Merić, and the complaints of neighbouring Muslims that the Turks were encroaching on it, the construction of the railway (now barely navigable), the construction of the rail-

G. Hirschfeld; F. W. Hasluck, Beyond the Sublime Porte, New York 1931, 47 ff., passim; (listing various European accounts of the Seraglio); Gibb-Bowen, i/1, 72, 77 ff., 331 ff.; B. Lewis, Istanbul and the civilization of the Ottoman Empire, London 1963, 65 ff.

The family was from Manastir (Bitolj) in Macedonia, and moved there again when Enwer was a boy. After completing his secondary schooling there, Enwer entered the military academy (Mekteb-i Harbiyeye) in Istanbul, completing both the regular officers' course and the advanced general staff course. He graduated second in his class on 5 December 1902 (the first was his close friend and life-long associate Hafiz İsmail Hakkı Pasha, 1879-1915; see Muharrem Azimzade (Iskora), Erkinkahramiye mektubi. Tarihi, Istanbul 1930, 240) as a general staff captain and was posted to the Third Army in Macedonia. He spent the next three years in military operations against Macedonian guerrillas. In September 1906, he was assigned with the rank of major to Third Army headquarters in Mimana. There he joined, as member no. 12, the "Oğlan Mülten İtilâh we Terakkl Djejmîyiyeti, the conspiratorial nucleus of the Young Turk movement, and in the following years helped to spread its organization. When the Istanbul authorities launched an investigation into these secret activities, Enwer, who with a group of soldiers had ambushed one of the investigating officers, deemed it wise to refuse a call for promotion and reassignment to Istanbul; instead, in late June, 1908, he escaped with a group of followers into the Macedonian hills, an example soon followed by Bolaghâşî (senior captain) Ahmed Niyâzi of Resne and Eyüby Sabîr (Akgül) of Ohri. Their action proved to be the prelude to the Young Turk revolution of 24 July, 1908. At only 26 years of age, Enwer was widely acclaimed as the foremost hero of revolution and liberty.

While on liaison service with Austrian officers in Macedonia Enwer had studied German and military tactics. In 1909 he was posted as military attache" to Berlin where he deepened his lifelong admiration for German military power and efficiency. In 1909 he briefly returned to Turkey to participate in the action of the Holy Erciyes in suppressing the Istanbul mutiny of 13 April 1909 (the so-called Oktûbâr Mart wakâlas). In the autumn of 1911, he resigned his post in Berlin to volunteer for service in the Libyan war, where he fought with distinction. On 5 June 1912 he earned a double promotion to lieutenant-colonel. In September he also was appointed mutasarrif of the sandjak of Benghzâ. Back in Istanbul, he participated actively in the politics of the Society for Union and Progress (İttihad we Terakkl Djejmîyiyeti [q.v.]) and at its 1912 congress helped secure the post of secretary general for his contemporary Talat Pasha. On 23 January 1913 he led a raid on the Sublime Porte by a group of Unionist officers and soldiers who forced at gun point the resignation of the aging Grand Wezir Kâmil Paşa (through the excessive zeal of one of the group, Muştafa Neşib, the war minister Nâzım Paşa and two other persons were killed). The major aim of the participants in this "Sublime Porte Incident" (Rûbeysi' Âli wakâlas) was the energetic resumption of the First Balkan War after the truce at Cataldja (3 December 1912 to 30 January 1913), but instead the campaign of the late winter of 1913 resulted in the complete evacuation of Macedonia and most of Thrace. The coup brought to power a Unionist party cabinet under Mâhmut Shewket Pasha and its long-range effect was the conversion of the constitutional monarchy of 1908 into a partisan and military dictatorship, with only a semblance of parliamentary institutions, which was to last until the defeat of 1918. In the Second Balkan War Enwer was the chief of staff of the left wing, and as such was in the vanguard of the troops re-entering Erdirne on 22 July 1913.
(under the Sultan's nominal authority). He became a lieutenant-general in 1915 and a general (birinci ferik) in 1917. After the accession of Mehemed V Wahid al-Din Altunshah, he replaced in 1918 as head of the Army's General Staff (erkan-i barisuye reisi). His nearly five years in the War Office and at General Headquarters were characterized by intensive efforts to increase the efficiency of the armed forces. In his first few months in office, he presided over a purge in which the aging generals of the 'Abd al-Hamid period, who were held responsible for the disastrous Balkan War defeat, were put on the inactive list and replaced by energetic younger officers. Enwer is credited with introducing the practice of appointing officers to temporary higher rank so as to test their ability. He also personally designed a new military cap (known as the Enweriyye) and invented a simplified Arabic script, based on disconnected letters, which, however, found no wide acceptance. On 5 March 1914, Enwer married Emme Nadjjiye Sultan, a niece of the reigning monarch.

In the Ottoman diplomatic moves of the spring and summer of 1914, Enwer was the most consistent advocate of a close alliance with Germany and the Central Powers. After fruitless negotiations by Djemal Pasha in Paris and Tal'at in Bucharest, Enwer moved to Berlin to negotiate with the German Ambassador, Baron von Wangenheim, with the proposal of a secret offensive and defensive alliance. On the Ottoman side the ensuing negotiations were conducted mainly by Enwer himself and the Grand Vizier Sa'd al-Hashim Pasha with the knowledge of only a few of their colleagues; they were kept secret from the other ministers and also from the francophile Ottoman diplomat to Berlin, Sadyk ibn Mehemet Turan. After the German Admiral Souchon in mid-August had entered Ottoman waters and succeeded in bringing to the German Ambassador the German request for a defensive alliance, Enwer obtained the German authorization on 14 September to carry out an encirclement manoeuvre against the advancing Russian forces in the Sarikamış region, which had become untenable, and on 14 October, the Grand Vizier Tal'at Pasha resigned with his Unionist cabinet so as to facilitate the impending armistice negotiations. On 2 November 1918, Enwer, Tal'at, Djemal [qq.v.], Dr. Nâzım and other prominent Unionists assembled at night in the house of Enwer's aide-de-camp Kârlımı [Orbay] in Arnavutköy on the
Bosphorus, and boarded a German naval vessel that brought them to Odessa. Although Enwer had plans to go to the Caucasus (Ziya Şakir, 156 f.), he later joined with others in Berlin, and Enwer, Djemal, and Dr. Nazım. Enwer spent the winter of 1918-9 in Berlin. Since the Entente powers were demanding the extradition of the Young Turks, they lived semi-legally; Enwer himself adopted the name "(Professor) Ali Bey", which he later also used in Russia. Whereas Taš'at and other civil leaders centered their political activities on Berlin and Munich, Enwer and Djemal proceeded at different times to Russia and then Central Asia, where they were joined by Enwer's uncle Khalil (see below) and other former associates in a complex web of political manoeuvres. In April 1919, Enwer secured the services of a pilot and airplane and with false Russian identity papers set out for Moscow. When mechanical trouble forced the plane to land in Lithuania, Enwer was detained for several weeks until his friends in Berlin established his identity and secured his release. After several months in Berlin, where he visited the Bolshevik leader, the Young Turk Khalil stayed on in Austria. In August 1920, Enwer on second try did make his way to Moscow where he arrived early in 1920. He took up contact with the Soviet Foreign Office, with Lenin, with a Turkish nationalist delegation under Bekir Sâmi which was then in Moscow, and, by correspondence, with Mustâfa Kemal. With the encouragement of the Soviet authorities, he proclaimed the formation of a "Union of Islamic Revolutionary Societies" (İslâm İktidâl Diyetleri Ittihatî) and of an affiliated People's Councils Party (Khalk Şhîrâlar Fîrçasî), the former intended as a Muslim revolutionary international, the latter as its Turkish affiliate. On 1-9 September 1920 he attended the Soviet-sponsored Congress of the Peoples of the East at Baku with the title of Delegate of the Revolutionary Societies of Libya, Tunis, Algeria, and Morocco (chosen perhaps because of his war record in Cyrenaica in 1911-2); a Kemalist Turkish delegation under İbrahim Tâlib (Öngören) also was present. In October 1920, Enwer was back in Berlin where he lived in a villa in the fashionable Grunewald section. He was confident that the Soviets would support nationalist movements in Turkey and other border states. To this end he asked Khalîl to secure approval from the Soviet Foreign Office for a plan whereby two cavalry divisions, to be formed among Ottoman war prisoners and Muslim residents of the Caucasian region, would, under Enwer's command, join the Anatolian resistance movement. Enwer himself, meanwhile, was trying to purchase arms in Berlin. That he had hopes of taking over the supreme command in Anatolia is indicated by Khalîl's statement to Karakhan, Soviet Deputy Commissar for Foreign Affairs, that "Mustâfa Kemal Paşa would not be in favour of creating divisiveness and is accustomed to obeying you [i.e., Enwer]"—an interpretation rather strikingly at variance with Kemal's record of near-insubordination to Enwer during the World War. (From Khalîl's letter to Enwer, 4 November 1920, quoted by Cebesoy, 165). Enwer's plans, however, were rejected by Karakhan. After Taš'at Pasha's assassination (15 March 1921), Enwer was the most prominent surviving Union and Progress leader in exile. At its 1921 annual meetings held in Berlin and Rome, the Union of Islamic Revolutionary Societies adopted a set of resolutions according to which the affiliated People's Councils Party was to be the legal successor of the Union and Peoples Society in Turkey; the Revolutionary Union itself was to work in close conjunction with the Third International and to secure further Soviet aid for the Nationalist struggle in Anatolia. (See Cebesoy, 224 f., who does not, however, give any exact date for the meetings). In Moscow, Enwer had several conversations with 'Ali Fu'âd [Cebesoy], the newly appointed Kemâliî ambassador (their first meeting occurred on 26 February 1921) and with Cîerîn, both of whom tried to dissuade him from interfering with the Anatolian movement; a protocol to this effect was drawn up by 'Ali Fu'âd, Enwer, and Dr. Nazım at one of these meetings. On 16 July 1921 Enwer sent a lengthy letter to Mustâfa Kemal complaining of groundless suspicions and assuring Kemal that he (Enwer) was content to support the Anatolian movement from outside. But the moves of Major Na'îm Djewdâ, whom Enwer sent from Russia to Anatolia with quantities of propaganda material for the People's Councils Party and who was arrested by the Kemalists at the Black Sea town of Amasra, indicated that he was pursuing his former plans. On 30 July, at a time when the Greek offensive toward Ankara was in full swing, Enwer proceeded from Moscow to Batumi where he gathered with other Unionists awaiting an opportunity to enter Anatolia. Close by, the Trabzon Defence of Rights Society was openly supporting Enwer, and in the Ankara Assembly a group of about forty ex-Unionists are said to have been working secretly to replace Kemâliî with Enwer. On 5 September, a congress of the "Union and Progress (People's Councils) Party" was held at Batumi which issued an appeal to the Ankara Assembly to abandon its hostility toward the Union and Progress exiles. Meanwhile, Kemal's victory at the Sakarya (2-13 September) consolidated his political position and by November his authority was restored in Trabzon. Deserting the Anatolian plan, Enwer left Batumi by way of Tbilisi, Baku, 4Ashkhabad, and Merv, and arrived in Bukhâra in October 1921 accompanied by Kushdubashhâde Hâjîdîjî Sâmi of the former Special Organization and others. He seems to have given the impression to Soviet authorities that he would rally Muslims of various parts of Central Asia in a struggle against the British; yet he soon was engaged in efforts to mobilize various Özbek factions into common resistance against Soviet rule and penetration of Türkistan. The major political groupings that he encountered in Özbekistan were (1) the Young Bukhara party under 4Othmân Khodîa, which in a revolution with Soviet support in September 1920 had deposed the Emir of Bukhâra, 4Abd al-Sâ'îd Mir 4Alîm forcing him into exile in Kâbul and (2) the tribesmen of the area who were generally loyal to the Emir, formed armed bands known as Basmadjîs, (i.e., Raiders), and fought both the Republicans and the Soviets. Enwer was welcomed by 4Othmân Khodîa's representatives, and took up close contact with Ahmed ZekiWelîfî [Togan], the exiled Bashkir leader, who was then trying to rally various Özbek factions against the Soviets. On 8 November Enwer left Bukhâra with thirty armed followers on the pretext of a hunting trip but actually so as to join the Basmadjîs. He proceeded to Şhîrâbâd and thence eastward
along the Afghan frontier, being joined by local armed groups along the way. In the vicinity of Dushanbe (later Stalinabad), he made contact with Ibrâhîm Lâkî, known as the Basmâdî leader most staunchly loyal to the Emir. Lâkî, who disapproved of Young Turk revolutionaries as much as he did of Young Russian revolutionaries, was a rather successful resistance to Italian penetration of the hinterland. In January 1918, he became commander of the Sixth Army of the Ottoman Army in Irâq, and in one of the more spectacular Ottoman victories, at Câseghe, he meted out and retired to the Caucasus area and occupied Baku in September. Following the armistice, he was interned at Batumi and escaped early in 1919 (see Taşkınpaşa, Istanbul, 4 February 1919). After only a few weeks in Istanbul he was again arrested and jailed in the Bekirâgha prison on charges of maltreatment of Armenians and others during the war. Once again he escaped (8 August 1919) making his way to Anatolia. Tentative plans to have him take a part in military operation in Anatolia (e.g., command of the Izmir front) were abandoned because of the political strain they would have placed on relations between Enwer and the Bolsheviks. In February 1921 he was interned in Moscow, where he participated intensively in the political negotiations between Enwer and the Bolsheviks. In February 1921 he was in Trabzon to try to build up the Peoples’ Councils Party, Enwer’s political organization in Anatolia. In 1922 he was expelled from Trabzon by the Kemalist lists and went to Berlin. After the nationalist victory he returned to Istanbul. His expulsion from the army, decreed by the Istanbul authorities on 16 February 1920, was set aside; instead he was retired in 1923 and took no further part in political and military affairs. Under the law of 1934 he took the family name of Kut after his victory at Câseghe.
half-brother). Toward the end of the World War he was in charge of guerrilla forces in the Caucasus. He hesitated to heed the advice of the Young Turks to organize the 1914 Ottoman revolution and instead stopped in Erzurum early in 1919. By January 1920 he was organizing guerrilla forces in Daghestan. Like Khalil, he returned eventually to private life in Istanbul. He was killed in an explosion of his munitions factory in Sütülpçe on 2 March 1949.

Enwer's younger sister Medihha Killigil (b. 1899) was married to Hiiveyda Mayatepek, a Turkish career diplomat and currently (May 1963) Ambassador to Copenhagen; and one son, Ali Enver.

ERDEL or ERDELSTAN, from the Turkish Erdel (Hungarian Erdély or Erdély, Latin Erdel) is a region in the middle of the 8th/14th century. In 769/1367, Denes (Dennis), who had become the vassal of the Hungarian king, was appointed as the first governor of Erdel. The prince of Erdel was nominated by the local Diet, the Sultan confirming the choice by sending him a special haráz (for the order of precedence as between the vassals). The first fixed at 10,000 ducats, was raised to 15,000 (pishkesh). The prince of Erdel, John Zapolyai ("Sapolyayi Yanosh" in Pecevi, i, 108), who, after the battle of Mohács, proclaimed himself King of Hungary at Istolni Belgrad (now in Hungary, Székesfehérvár, Ger. Stuhliwiesen) in 1526. Challenged, however, by the Archduke Ferdinand of Austria, Zapolyai fled to Poland, sending an ambassador to Istanbul to obtain the Sultan's support. This was granted in change for a recognition of Ottoman suzerainty, Zapolyai swearing allegiance to the Sultan in person during the Vienna campaign (Perfidün Bey, ii, 570; ᾳλ, ᾳοκ αλ-αλβπβαίη, i, 277). Ottoman supremacy was confirmed in the treaty of 948/1544, which preserved protection and payment of a tribute, which was first fixed at 10,000 ducats, was raised to 15,000, between 983/1575 and 1010/1601, was then remitted for ten years and later still fixed again at 10,000. In the second half of the 11th/17th century it was again raised first to 15,000 and then to 40,000 gold coins (altin, altum). It was also customary to give an annual present (pişkesh) of 10,000 to 60,000 coins. The prince of Erdel was nominated by the local Diet, the Sultan confirming the choice by sending him a captured horse, a standard, a sword and a robe of honour (for the order of precedence as between the prince of Erdel and the voivodes of Erdel and Bohgánd, see Nathnidi al-wazāʿid, i, 137). There were also cases of the Porte rejecting a nomination or dismissing a prince, as in 1022/1613 with Gábor Bátory and in 1067/1657 with George Rakoczi II. During the Budin campaign, the boy was shown to Süleyman the Magnificent who granted him a sandjak in the vilayet of Erdel, with the promise of a kingdom later (cf. ᾳλ, ᾳοκ αλ-αλβπβαίη, i, 277). Ottoman supremacy was confirmed in the treaty of 948/1544, which preserved protection and payment of a tribute, which was first fixed at 10,000 ducats, was raised to 15,000, between 983/1575 and 1010/1601, was then remitted for ten years and later still fixed again at 10,000.

The princes' foreign policy had to conform to the Ottoman army of King Yanosh of the vilayet of Engur (i.e., of the Hungarians), who is described as having been formerly the Bey of Erdel (cf. Perfidün Bey, Münkâdî, and ed., Istanbul 1375, i, 275). The variant Erdil-Stan occurs also in later sources (Na'ìmâ, i, loc. var.; Ewliya Celebi, Sezâbat-name, i, 181; Mustafâ Nûrî Paşa, Nâtâ'dâj al-wazâ'iât, ii, 72). Geographically speaking, Erdel is a basin surrounded by the Carpathians and the Transylvanian Alps on three sides, and separated from the Hungarian plain by the Erchegyseg (Rom. Munții Apuseni) mountains. Ottoman Erdel often exceeded, however, these geographical limits at the expense of neighbouring countries. Erdel can be subdivided into three main areas: the Erdel plain, higher and more broken than the Hungarian plain and crossed by the river Muregh and its tributaries; the country of the Selkets in the east, and, finally, the area of the southern Carpathians.

The first contact of the Ottomans with Erdel occurred in the middle of the 8th/14th century. In 709/1307, Dennes (Dennis), who had become voevoda (prince) of Erdel after being ban (lord) of Vidin, fought the Ottoman bey of Erdel, John Zapolyai, and being played by the Hungarian prince of Erdel, John Zapolyai ("Sapolyayi Yanosh" in Pecevi, i, 108), who, after the battle of Mohács, proclaimed himself King of Hungary at Istolni Belgrad (now in Hungary, Székesfehérvár, Ger. Stuhliwiesen) in 1526. Challenged, however, by the Archduke Ferdinand of Austria, Zapolyai fled to Poland, sending an ambassador to Istanbul to obtain the Sultan's support. This was granted in change for a recognition of Ottoman suzerainty, Zapolyai swearing allegiance to the Sultan in person during the Vienna campaign (Perfidün Bey, ii, 570; ᾳλ, ᾳοκ αλ-αλβπβαίη, i, 277). Ottoman supremacy was confirmed in the treaty of 948/1544, which preserved protection and payment of a tribute, which was first fixed at 10,000 ducats, was raised to 15,000, between 983/1575 and 1010/1601, was then remitted for ten years and later still fixed again at 10,000.

In the second half of the 11th/17th century it was again raised first to 15,000 and then to 40,000 gold coins (altin, altum). It was also customary to give an annual present (pişkesh) of 10,000 to 60,000 coins. The prince of Erdel was nominated by the local Diet, the Sultan confirming the choice by sending him a captured horse, a standard, a sword and a robe of honour (for the order of precedence as between the prince of Erdel and the voivodes of Erdel and Bohgánd, see Nathnidi al-wazâ'iât, i, 137). There were also cases of the Porte rejecting a nomination or dismissing a prince, as in 1022/1613 with Gábor Bátory and in 1067/1657 with George Rakoczi II. During the Budin campaign, the boy was shown to Süleyman the Magnificent who granted him a sandjak in the vilayet of Erdel, with the promise of a kingdom later (cf. ᾳλ, ᾳοκ αλ-αλβπβαίη, i, 277). Ottoman supremacy was confirmed in the treaty of 948/1544, which preserved protection and payment of a tribute, which was first fixed at 10,000 ducats, was raised to 15,000, between 983/1575 and 1010/1601, was then remitted for ten years and later still fixed again at 10,000.

In the second half of the 11th/17th century it was again raised first to 15,000 and then to 40,000 gold coins (altin, altum). It was also customary to give an annual present (pişkesh) of 10,000 to 60,000 coins. The prince of Erdel was nominated by the local Diet, the Sultan confirming the choice by sending him a captured horse, a standard, a sword and a robe of honour (for the order of precedence as between the prince of Erdel and the voivodes of Erdel and Bohgánd, see Nathnidi al-wazâ'iât, i, 137). There were also cases of the Porte rejecting a nomination or dismissing a prince, as in 1022/1613 with Gábor Bátory and in 1067/1657 with George Rakoczi II. The princes' foreign policy had to conform to the Porte's wishes, but they were free in their internal affairs. They were represented at the Porte first by special envoys, the first permanent agent (başba kahyâst = kadihüdâst) (in Erdel documents kapi-şâha), being appointed in 967/1560. This agent represented both the Bey of Erdel and the three local millets (Hungarians, Germans and Selkets, the Wallachian being played by the Archduke Ferdinand of Austria). His residence was in the Balat quarter of Istanbul, in a street known today as Macalar Yokuşu ("Hunga-
During John Sigismund's minority, the Diet agreed to the pretended monarch, friar George Martinuzzi-Utyeszenic (Utešenić) (in ‘Ali, f. 287, ‘brata’, i.e., "brother"). who, however, handed over Erdel to the Habsburgs in 1551. The beylerbey of Rûm-âli Mehmed Paşa Sokollu thereupon led an army into Erdel (‘Ali, f. 287). Martinuzzi made his peace with the Ottomans, but was then attacked by the Austrian General Castaldo and killed in 1552. A second army was sent to the Banat under Kara Ahmed Paşa who captured Temesvár (Timișoara). Castaldo withdrew from Erdel in 1553, the country being for a time ruled by voevodas on behalf of the Habsburgs, until in 1556 the Diet invited back the Queen Mother Isabella and John Sigismund, who, coming from Poland, established their seat of government in the Belgrade of Erdel (Erdel Belgrad, Rum. Alba Julia, Hung. Gyulafehervár, Ger. Karlsruhe). John Sigismund ruled alone from 1559 to 1571 both over Erdel and over the northern districts of Hungary in constant competition with the Habsburgs. Although by the agreement of Satmar in 1564 he recognized Emperor Ferdinand as King of Hungary, peace was not long preserved, John appealing to the Sultan for help (cf. Pecewi, i, 412), and the latter responding by undertaking a second expedition in 1561. John's reign witnessed also the revolt of the Sekels and the suppression of their traditional privileges in 1562 and the proclamation of religious toleration in Erdel by the Diet's decisions of 1564 and 1571. His successor Stephen Bâthory (1571-6) managed to preserve a precarious balance between the Habsburgs and the Ottomans, by recognizing the Emperor Maximilian as King of Hungary and thus becoming his vassal by the treaty of Speyer in 1571, while continuing payment of tribute to the Porte. In 1576 he was elected King of Poland by the efforts of the Porte and of the Grand Vizier Sokollu Mehmed Paşa (see Ahmed Rečik, Sokollu Mehmed Paşa ve Lehistan itibâbâbâlı, in TOEM, 6th year, 664 H.), Erdel being governed until 1581 by his brother Christ-opher Bâthory and then for 15 years (1582-97) by his son Sigismund Bâthory. The latter wavered in his loyalty to the Porte, entering the Holy League in 1593 and executing the leaders of the pro-Turkish party in 1594 at a time when he pretended to be getting ready to join the Ottoman army under Köşçe Sinân Paşa. He incited the voevodas of Bogdân and Eflâk against the Ottomans and defeated in 1600/1599 the Ottoman army sent to suppress their rebellion. After the severe defeat suffered by the Imperialist forces at the battle of Mező-Keresztes in the following year, he withdrew from Erdel, relinquishing the rule to his cousin Cardinal Andreas Bâthory, who had been brought up at the Polish court and was, therefore, pro-Ottoman. The latter was, however, defeated by the rebellious voevodas of Eflâk, Mihâil (Michael), who was in turn killed by the Austrians. The latter then occupied the country, foiling an attempt by Sigismund Bâthory to re-establish his rule. In 1603 a Sekel nobleman, Székely Mózes, made an unsuccessful attempt to outst the Austrians with Ottoman support. An Erdel nobleman, Stephen Bocskay, who had fled to the Ottomans (see Naţma, i, 386) was more successful, and by the treaty of Vienna in 1606, the Emperor Rudolf recognized him as prince of Erdel. His death was followed by a period of disorders which included the tyrannical rule of Gábor Bâthory (1608-13), known in Ottoman sources as the "mad king". The beylerbeyi of Kanlî, Iskender Paşa, succeeded in deposing him and in getting the diet at Kolovjâr to elect in his place Gábor Bethlen, whose rule marks the golden age of the principality of Erdel. His death in 1629 was followed by a short interregnum, his policy of safeguarding local autonomy through cooperation with the Ottomans being re-established by George Rákoczî I (1630-48). In 1646/1636 the Ottomans made an unsuccessful attempt to unseat him in favour of Gábor Bethlen's brother, Stephen Bethlen. George Rákoczî I was succeeded by his son George II (1648-57, 1658, 1659-60), whose unsuccessful attempt to gain the crown of Poland against the wishes of the Porte led eventually to his death, Erdel being occupied by Ottoman troops. One of the prisoners taken by the Ottomans in Kolovjâr was the young Hungarian who later embraced Islam and became known as Ibrâhîm Müteferrika [q.v.]. Ottoman supremacy in Erdel was re-established in the Köprülü period, the principality being governed from 1672-3/1662 to 1710/1700 by the Ottoman envoys of Oskar Bethlen and the suppression of their traditional privileges in 1712 and the proclamation of religious toleration in Erdel by the Diet's decisions of 1712 and 1721. His successor Stephen Bâthory (1721-7) managed to preserve a precarious balance between the Habsburgs and the Ottomans, by recognizing the Emperor Joseph II as King of Hungary and thus becoming his vassal by the treaty of Passarowitz he and his Hungarian companions had to withdraw and were settled at Tekirdag (Rodosto in Thrace) (cf. Râghîd, iv, v, passim; Ahmed Rečik, Memâliḳ-ı Oltâmâniyyeddâ Râkoçî ve tevâbî, Istanbul 1338; M. Tayyîb Gökîbîlgîn, Râkoçî Ferenc II ve tevâbîinde dair yeni vesikalar, in Belleten, v, 20, 1941). A similarly unsuccessful attempt was made by the Ottomans to make use of him in their war with Austria in 1727/1715, but, after the treaty of Passarowicz he and his Hungarian companions had to withdraw and were settled at Tekirdag (Rodosto in Thrace) (cf. Rashid, iv, v, passim; Ahmed Rečik, Memâliḳ-ı Oltâmâniyyeddâ Râkoçî ve tevâbî, Istanbul 1338; M. Tayyîb Gökîbîlgîn, Râkoçî Ferenc II ve tevâbîinde dair yeni vesikalar, in Belleten, v, 20, 1941). A similarly unsuccessful attempt was made by the Ottomans to make use of the latter's son Joseph, all Ottoman designs on Erdel being finally abandoned with the peace of Belgrade in 1712/1729. The main events in the post-Ottoman history of Erdel are the submission of a large number of local Rumanian Orthodox to the Pope (the Union of 1700), the Rumanian peasant rising of 1784, the decision of the Diet in 1848 to merge with Hungary and finally the accession of Erdel to Rumania under the treaty of Traros in 1920.

(A. Decker and M. Tayyib Gökbilgin)

**ERDIŞ** (see ARDIŞ.)

**ERDIYAS** (or ERĐIJYES) **DAGHÍ** (modern spelling Erciye), the Argaeus Mons of antiquity, referred to by Hamd Allah Mustawfl (Nuzha, 98, 181) as Arđşt-ış, the highest mountain in Central Anatolia. It is an extinct volcano, with a height of 3,916 m. (= 12,847 ft.), which rises rather suddenly from the surrounding plain of an average height of 1,000 m. (= 3,280 ft.). It is some 20 km. (12 1/4 m.) to the south of the town of Kayseri, almost precisely 38° 30’ N., 35° 30’ E., and covers an area of roughly 45 km. (28 m.) from east to west and 35 km. (21 1/4 m.) from north to south. Certain early sources say it was still active in antiquity. Today, the Erciyas-Dagh is completely barren and permanently covered with snow. In it there rises the Deli-Su, which flows into the Kara-Su, a tributary of the Lower Ceyhan, ca. 730 B.C.), the modern Bor.

South of Erciye, where the river emerges from a ravine in the Taurus, near Izvır, there is a famous late Hittite rock carving, depicting the river-god dispensing corn and grapes, and being worshipped by the king of Tyana (Assyr. Urballa, Hitt. Varpalawa, ca. 730 B.C.), the modern Bor.

In Byzantine times, Eregli was a frontier fortification on the way from Iconium to Cilicia. It was conquered several times by the Arabs, most notably by Harun al-Rashid in Dhu ‘l-Ka‘da 909/10 Sept.-Oct. 806 (Tabarî, iii, 799 ff. = Theophanes, loc. cit.), but remained Byzantine until the Seldjuk Turks conquered it (supposedly in 484/1091, see Ewliyâ Celebi, iii, 28). After the collapse of the Rum-Seldjuk empire, the town came under the rule of the Karamâns, immediately, together with the other Karaman regions, it came under Ottoman rule in 871/1465.

The Ulu Dâmûl is a rather remarkable mosque with a flat roof. The Dîhanûmûl claims that it was founded by the Karamân-çligî Ibrâhîm (but the Medâsk al-hadîd attributes its foundation to the Seldjuk Kâlid-Arslan). The Türbe Dâmî is a small mosque with an estrade built onto it, containing the grave of Şihâb al-Dîn Subbarwardî Maktûl which is also mentioned in the Dîhanûmûl) is also worthy of note. There is also a large bâhn in the town, supposed to have been built by Sinân for Rûstem Pasha in the 15th century.

Eregli is a half on the pilgrimage route, and since 1908 it has become an important station on the Bagdad Railway from Konya.

**ERELI**, Turkish adaptation of the place-name Heraclea, given to a number of places in Turkey, of which the most important are:

1) Karadeniz Ereğli (Eregli on the Black Sea), Heraclea Pontica, hence formerly (as in Dîhanûmûl, 633) known as Benderegî: a small town on the coast of the Black Sea, 41° 17’ N.,

31° 25’ E., in the region of the coalfields formerly named after it, but now called after Zonguldak.

The hâza, now in the vilayet of Zonguldak, was once in the sandik (or barâdî) of Bolu. This used to belong to the eyâlet of Anadolû, and in the 19th century to the vilayet of Kastamonu. The place has 8,815 inhabitants (1960) and the district 67,661.

**Bibliography:** Paulys-Wissowa, 8, 433; V. Cuinet, *La Turquie d’Asie*, iv, 512.

2) Konya (formerly Karamân) Ereğli, on the ‘Harkîlî-î Cûstîn in Theophanes, i, 482 (ed. de Boor), § 702 ‘Harkîlî-î Cûstîn’ of Michael Attaliata, 136 (ed. Bonn), the Hıraklya of the Arabs, Erâkîlya of Ibn Bibî (transl. Duda, 19, 238 f.), in Turkish occasionally in the more archaic form Hırâkîya or Hırâkîlya, Receli or Rechâia to the Crusaders (Tomaschek, *Zur historischen Topographie von Kleinasiis*, 84, 88, 92), Aracle in Bertrand de la Broquière (ed. Ch. Schefer, 104 f.): a town in south-western Anatolia, near the central chain of the Taurus, from which rivers flow in a northerly direction into the Ereğli plain. These rivers make the town an oasis of vegetation, but disappear further on into marshy ground. The position of the town is 37° 30’ N., 34° 5’ E. It is the capital of a hâza in the vilayet of Konya and has 32,057 inhabitants; the district has 46,524 (1960).

Opposite Eregli, where the river emerges from a ravine in the Taurus, near Izvır, there is a famous late Hittite rock carving, depicting the river-god dispensing corn and grapes, and being worshipped by the king of Tyana (Assyr. Urballa, Hitt. Varpalawa, ca. 730 B.C.), the modern Bor.
common among the Oyghur after the spread of Buddhism (communication from L. Bazin); this was of course no bar to the family becoming Muslim, like all the Mongols and Turks in the Ilkhanid state. Eretna, who was probably an officer in the service of Cihan/Cuban [see Čoban], settled in Asia Minor as a follower of the latter's son, Timūrtāḫ, was appointed governor by the Ilgān Abū Sa'id, and went into hiding during his master's revolt; after Timūrtāḫ had been compelled to flee to Egypt, where he was to meet his death (727/1326), Eretna was invested with the succession to the rebel, under the general suzerainty of Hasan the Elder, the master of Adharbāyjān. When, after the disorders which followed the death of Abū Sa'id, this Hasan was defeated by Hasan the Younger, son of Timūrtāḫ, Eretna sought and obtained the protection of the Mamlûk Sultan al-Nāṣir Muhammad (738/1337), and in 744/1343 defeated Hasan the Younger who had become master of Adharbāyjān, which certainly helped his prestige. After this he appears as an independent sovereign over all those territories of central Asia Minor which the Turkoman principalities that arose after the breakdown of the Saljuqid-Mongol régime had not divided among themselves; that is, in a more or less stable form, the provinces of Nigde, Aksaray, Ankara, Develi Karaβaš, Derende, AmASYA, Tokāt, Mervâs, Samsun, Erzincan, Bismil, Karaβaš, with first Siwâš and later Kayseri as capital. He called himselfultan, with the lakab 'Alla' al-Dîn, and struck coins in his own name. He knew Arabic, scholars call him a scholar, and his people, appreciative of an administration which maintained some order in a troubled world, called him, it is said, Kûse Peygamber, "the Prophet with the Scanty Beard". He died in 753/1352, leaving his principality to his son Ghīyâth al-Dîn Muhammâd (Mehmed) who, maintaining the Mamlûk alliance, successfully withstood the revolt of his brother Dîyâfar.

The begs, however, were here as everywhere undisciplined, and in 760/1365 Mehmed fell victim to an attack fomented by them; under his son 'Alla' al-Dîn 'All Beg, who is said to have cared only for pleasure, the begs of AmASYA, Tokāt, Şarkaş, Karaβaš, and later especially Siwâš, acted like autonomous or rebel lords, while the Karamânids and the Ottomans stripped the Eretnid principality of its western possessions, and the Ak-koyunlu of some of its eastern dependencies. In effect, government was now exercised by the kâdi Burhân al-Dîn [q.v.], son and grandson of the 'Abîs of Kayseri, who had already been influential under the previous princes. 'All was killed in 782/1380 in a campaign against the rebel begs; Burhân al-Dîn, during a struggle by rival claimants, eliminated the young heir Muhammâd (Mehmed) II, and proclaimed himself sultan directly, thus putting an end to the dynasty.

It is unfortunate that the state of the documentation allows us to form no precise idea of the Eretnid régime. At the most some inferences can be drawn from comparisons between descriptions (Ibn Baštûta, al-Umarî) dating from the dawn of the dynasty, and a chronicle (the Bezm u recâm) and travellers' accounts (Schliitberger, Clavijo) of ten or twenty years after its end. The originality of the system of government, the effective reality of which requires examination, lies in the fact that here, from the Mongol régime to the Ottoman conquest, there was no interlude of government by Turkoman dynasties as in all the surrounding territories. The Turkoman element in the central provinces was apparently less strong than the surviving Mongol tribes, and the towns seem to have enjoyed a certain prosperity. The culture of the aristocracy, and commerce also, were perhaps directed more than in the previous period towards the Arabic-speaking Syro-Egyptian domain, without however destroying the interest in Persian culture. The contrasts must not, however, be made too much of; in the Eretnid domain, as in the neighbouring small states, there developed the institution and power of the urban aibâ, the influence of the aristocratic (Mewlewl) and popular religious orders, literature in Turkish in the form of translations from Persian (Yûsûf Medâd of Siwâš), learned poetry (that of Burhân al-Dîn, with which in part the Eretnid period must be credited), and popular heroic romances (the second Dânishmandnâmâ, at Tokât, an adaptation of a Saljuqid original); the few extant specimens of art in the Eretnid regions call for no particular remark. It does not appear that the reign of Burhân al-Dîn, who was himself of Turkish birth, broke with the Eretnid traditions.

**Bibliography:** The only mediaeval author to give a general résumé of the history of the Eretnid dynasty is Ibn Khalîdîn, v, 538 ff., whose information on their relations with the Mamlûks is confirmed by the Mamlûk historians down to al-'Aynî. On the beginnings of the régime, valuable details are given by Ibn Baštûta, ii, 246 ff. (Gibb, ii, 433 ff.), and by Şihâb al-Dîn al-Umarî, ed. Taeschner, 25 et passim, and Eflâkî, ed. T. Yaziçî, Ankara 1959-61, ii, 978, = tr. Huart, ii, 415 (last chapter), and by the Şâfîî Tabâkî of al-Subkî. For the end of the régime, from the point of view of Burhân al-Dîn, see the history of the latter, under the title Bezm u recâm, by 'Azîz b. Ardashîr Astârâbâdî, [ed. Kilîsî Rifat], Istanbul 1928 (analysis and commentary by H. H. Giesecke, Das Werk des . . ., 1940), and, for the eastern frontier, the history of the Ak-Koyunlu expansion composed under the title of Kitâb-ı Divârâbrikîyâ of Abû Bakr Tîhrânî (2nd half of the 9th/10th century) and recently published by Faruk Sümer (i, Ankara 1962); see also the Persian (Hâfiz Abûrî, ed. F. Carême, Rome, 1841, with a general history; there are many mentions of the Eretnids in the historical romance of Şîkârî [ed. M. Mes'ûd Koman, 1946], devoted to the Karamânids; the Trebizond, Genoese and Armenian sources should also be examined.—A good inventory of the coins appears in the catalogue of the numismatic collections of the Istanbul Museum by Ahmed Tewîbî, iv, 346 ff.; the epigraphic material of the Eretnid regions is collected in vol. xv of RCEA, based especially on the researches of İsmâîl Hakki [Uzunçarşîli] (Siwâš Şehrî, Kayseri Şehrî, etc.), and Max van Berchem and Khalîl Edhem, CIA, iii, 40 ff. For the archaeology see also A. Gabriel, Monuments turcs d'Anatolie, 2 vols.—Here as elsewhere there is the possibility of extracting further information from later Ottoman texts, where traces of earlier institutions may be preserved; there are also waûkîyyes which might be published and exploited. Besides the tables of Khalîl Edhem, Dâwel-i İslâmîyye, and Zambaur, 155, the only modern general exposé is that of I. H. Uzunçarşîli, Anadolu beysikleri, chap. xv, based largely on Ahmed Tewîbî, Beni Eretna, in TOEM, v (1330), 13-22, and reappearing in the same author's résumés in IA and in Osmanlı
ERGANI (Argani, sometimes Argani, in European sources ARGHANA until recent times), called for a time 'Qołmnimiyāya (Osmaniye), situated on the highroad from Diyar-Bakr to Harput. 18 kms. to the north-west, on the river Tigris, lies the mining town of Ergani-Ma'dēn(i), which is the centre of a kaza of the vilâyet of Elazığ (El-Aziz) called after Ergani. Although the two towns lie apart, they are confused in some sources.

The name 'Qołmnimiyāya given to Ergani had to be abandoned because it gave rise to confusion with the town of 'Qołmnimiyāya (Osmaniye) in Diibel Bereket to the east of Adana [g.v.]. The town of Ergani is situated at an altitude of 1000 metres on the steep south-east slope, overlooking a deep gully (Hügüt Deresi), in a limestone mountain rising to a height of 1526 metres, 10 kilometres from the right bank of the Tigris. Below the town lie fields and gardens, while above on the slopes overlooking Ergani lies the old town. A near-by hill is called after Nabi Dhu 'l-Kifl [g.v.], who is reported to be buried there. The station of Ergani on the Diyar-Bakr—Malatya railway line lies in a valley, 6.5 kms. south of the present town of Ergani.

The town of Ergani, called Argani in Armenian sources, may have inherited the site of Arkania mentioned in cuneiform writings. It is also not impossible that this was also the site of one of the cities of Arsinia mentioned in the Peutinger Table. In Islamic times the fate of Ergani was linked with that of Diyar-Bakr (for history, see DIYAR-BAKR). After the victory of Caldiran [g.v.] won by Selim I in 920/1514, and through the services of İdris Bidilis, Ergani became a sandjak attached to the eyâlet of Diyar-Bakr, the district of Diyar-Bakr having been conquered for the Ottomans by Bilykil Mehmed Pasha. Cuinet, writing towards the end of the 19th century, gives the population of the town of Ergani as more than 6,000. It was at that time that the centre of the sandjak of Ergani was transferred to the township of Ma'den, in view of the importance of the copper mines there. After the foundation of the Turkish Republic, the bâbâ of Ma'den was attached to the vilâyet of El-Aziz, and that of Ergani (Osmaniye) was left in the vilâyet of Diyar-Bakr. The kaza of Ergani covers an area of 1955 sq. kms. and includes 68 villages. According to the results of the 1960 census, the population of the district amounted to 28,095 and that of the township of Diyar-Bakr. The district of Diyar-Bakr for A.H. 1319, 19; Ewliya Celebi, Seyhûddinname, Istanbul A.H. 1314, iv, 22; K. Kitter, Erdkunde, v, 701, 801, 913; xi, 14 ff.; E. Ergenekon, the name of a plain surrounded by mountains, mentioned in the legend of the origin of the Mongols.

An associated legend in the Chinese Chronicle of Pei-shih (ed. in about 629) explains the origins of the T'u-chiieh warriors who further explored the area of the Western Sea, Hsi-hai. They were massacred by a neighbouring people. Only a young boy survived,
although wounded. A she-wolf who protected and fed him became pregnant by him. She led him through the massacre and, following a narrow track, they took refuge in a plain surrounded by mountains, called Ergenekon. There they multiplied and when, four hundred years later, Ergenekon became too small for them, they contrived to make their way out by causing part of a mountain-side to crumble away by means of a huge fire, on the advice of a black-smith.

The day consequently became a festival and its anniversary was celebrated by the Mongol sovereigns.

ERGIN, OSMAN (OZM N NORT) Turkish scholar and publicist, was born in 1883 in Imrin, a village (now a district centre) in the vilayet of Malatya. His father Hâdidil Ali, of a family of humble farmers, tried his fortune in trade and after many journeys, including one in Rumelia, settled in Istanbul, where he opened a coffee-house. The little Osman, who had memorized the Kur'an in the Şehzade mosque. This type of training, which was very erudite. His life-long research in the subjects and his biographical and bibliographical monographs, some still unpublished, he was the author of the following major works:

1) Medjidije-i Umr-i Belysye, 5 volumes, Istanbul 1390-2 (1930-8), the first of which is a richly documented historical introduction to municipal institutions in Islam and in Turkey, particularly the city of Istanbul, a standard reference book on the subject; the other volumes contain a collection of laws, bye-laws, regulations, Council of State decisions, etc. concerning municipal administrative matters.

2) Türkiye maarif tarihi, 5 volumes, Istanbul 1939-43 (a promised sixth volume did not appear). Originally planned as a “History of schools and other educational and scholarly institutions of Istanbul”, it was developed later into a history of education in Turkey. This pioneer work, which is a mine of information, remains, in spite of some technical shortcomings, the only comprehensive work of reference on the subject. The history and development of all types of schools in Turkey are elaborately discussed: medreses, the palace school, military schools, old and new style technical and professional schools, semi-educational institutions and their auxiliaries in the Ottoman Empire, European types of schools of all grades, private, foreign and minority schools, universities and various institutions of higher education, etc., are amply treated. Special emphasis is given to the detailed and comparative analysis of the evolution of syllabuses in the many types of school. Many of the controversial educational problems arising from social change in Turkey are discussed at length and the book abounds in anecdotes and personal notes which make it extremely interesting reading.

3) Istanbul seheri robber, Istanbul 1934, is the outcome of his long research preparatory to the first modern census of the city of Istanbul in 1927 (as part of the first general census in Turkey). This is the best detailed topographical study of Istanbul with street names and thirty-eight maps.

4) Türkiye de şehircilik tarihi inkisafi, Istanbul 1936, a survey of most of the problems discussed in the Meşgell-i Umr-i Beledisyey.

Bibliography: A. Süheyl Ünver, Osman Ergin, câlisma hayat ve eserleri, in Belleten, xxvii 101 (1962), 163-79, with a bibliography including his unpublished works and a list of his articles in the journal of the municipality of Istanbul (Istanbul Şehremenci (Belediye) Meclisleri) from 1924 to 1936; Orhan Durusoy, Osman Ergin biyografyası ve ilmî tarihî tarihi, 1, Osman Ergin (Istanbul Universitesi Tıp Tarihi Enstitüsü nesriyatından, sayı 52), Istanbul 1958; Bedi N. Şehsvuroğlu, Osman Ergin‘in biyografyası, in the same publication. (FAHRI İZ)

ERGIRI (ARGIRI, ERGERI), Ottoman name of Argyrokastro, Alb. Gjonokaster, principal town of Albanian Epirus (40° 13’ N., 20° 13’ E.) near the foot of the eastern slopes of the Mali Gjere; overlooking the wide and fertile valley of the Drin, a tributary of the Voutsa (Vijose), it controls the route from Valona into Northern Greece. The town, near the site of the ancient Hadrianopolis, probably takes its name from that of an Illyrian tribe. The district came under Ottoman control in the reign of Bayezid I. In the defter of 835/1431 ‘Argiri-ı aşır’ (its district being called wildiyet-i Zenbiş, i.e., of the Zenbissi family) appears as the chef-lieu of the sandjak of ‘Arvanya’; later (certainly by 912/1506) it formed part of the sandjak of Avlonya; in the last years of the Empire it was again a sandjak, belonging to the wildiyet of Yanya. Ewliya (1670) describes a thriving, solidly-built town, with a predominantly Muslim population. Gjonokaster, now extending into the valley (present pop. ca. 12,000), is dominated by the mediaeval (Venetian?) castle, reconstructed by 4Ali Pasha of Tepedelen [q.v.]; many of its old houses
survive, built in the characteristic fortress-like style which impressed Ewliya.

**Bibliography:**

(V. L. MÉNAGE)

**ERITREA**, a territory with a sizeable Muslim population in North-East Africa, bordering on the Red Sea, since 1952 federated with Ethiopia, since 1962 fully integrated in the Ethiopian Empire.

(i) Geographically, historically, and ethnically Eritrea has generally formed part of a larger unit which will be treated under **AL-HABASH**. In the following, special emphasis will be placed on such features and Islamic manifestations as are peculiar to Eritrea in the narrow sense. 'Eritrea' (from *Mare Erythraeum*) was so named by the Italians in 1890 to describe their growing possessions (initiated in 1886 by the purchase of the port of Assab [q.v.]) on the Red Sea coast, the *Bab-El-Mandeb* ('sea country') or *Mareb Mellash* ('beyond the river Mareb') of the Abyssinians.

In the north and west Eritrea's triangular shape (enclosing nearly 50,000 square miles of extremely variegated country) borders upon the Sudan, in the east on the Red Sea, in the south-east corner upon French Somaliland whence the old frontier with Ethiopia proceeds in a north-westerly direction along the Dankali depression and then following the Mareb-Belesa line. The physical configuration of the country is marked by the vast central mountain massif (6500-8000 feet above sea-level) extending economically or politically viable. The large Muslim minority enjoys reasonable religious and political rights. The population of the port of Massawa (and to a much lesser extent of Arkiko and Assab) is cosmopolitan and includes tribesmen from the hills, Danakil, Sudanese, Arabs, Indians and groups of Turkish descent. The unifying factor is Islam. The people of the barren Dahlak [q.v.] islands off the Massawa coast were among the first in East Africa to be converted to Islam, and many tomestones in Kufic characters bear witness to this early Muslim connexion.

(ii) Population: With the exception of the Diabart [q.v.], the vast majority of Muslim Eritreans live mainly in the highlands and north. Their number reaches about half a million in a total population of approx. 1,100,000, among whom the monophysite Christian element wields most of the political power. While the Christians and Diabart, concentrated in the densely populated central highlands, speak Tigryna (see below), the vast majority of the Muslims, sedentary or nomadic in the sparsely inhabited lowlands, use Tigre (see below) and, to a very limited extent, Arabic. They are the descendants of Bedja [q.v.] or other Cushitic tribes and early South-Arabian immigrants. The Banû Âmir [q.v.] or Beni Amer are the largest tribal federation, numbering about 60,000 (with an additional 30,000 in the Sudan) and occupying a considerable portion of Western Eritrea. They owe allegiance to a paramount chief, the Diga Diga [q.v.], and acknowledge the religious leadership of the Mirgiani family. In the northern hills the Habab, Ad Tekles, and Ad Temariam form the tribal federation of Bet Asgede. The Ad Shaylîs have their encampments between the Habab and the Ad Tekles; they claim descent from a Meccan family, but most of these tribal memories are incapable of proof. The Bilen (or Bogos) in the Keren area consist of two large tribes (Bet Tarke and Bet Takwe). The Saho live along the eastern escarpment and the foothills leading to the tribal Confederacy of the Danakil who inhabit the vast arid depression behind the Red Sea coast, one of the hottest and most barren regions in the world. The population of the port of Massawa (and to a much lesser extent of Arkiko and Assab) is cosmopolitan and includes tribesmen from the hills, Danakil, Sudanese, Arabs, Indians and groups of Turkish descent. The unifying factor is Islam. The people of the barren Dahlak [q.v.] islands off the Massawa coast were among the first in East Africa to be converted to Islam, and many tomestones in Kufic characters bear witness to this early Muslim connexion.

(iii) Eritrea's history is so entwined with that of Ethiopia and South Arabia, on the one hand, and the Sudan, on the other, that it is difficult to disentangle the few independent facets of its past. South Arabian immigrants settled along that part of the western Red Sea coast which is now Eritrea. From here they subsequently penetrated into the interior and established the Aksumite Kingdom which has left so many traces within the soil of Eritrea. Later, Eritrea became the base from which the Aksumite hegemony over a large strip of the coast of south-west Arabia was launched. Here also was the avenue through which contacts, hostile as well as cultural, with Meroe and its civilization flowed. As Ethiopia's traditional maritime province and only outlet to the sea, Eritrea became the spring-board of both Muslim and Christian political ambitions first asserted themselves. A plan to do away with Eritrea as an artificial political entity (by incorporating the Muslim West with the Sudan and the Christian centre with Ethiopia) finally came to grief when the United Nations decided (1950) to constitute Eritrea as an autonomous federal unit under the sovereignty of the Ethiopian crown. This uneasy arrangement gradually led to Eritrea's full absorption, for no constitutional safeguards could make the territory economically or politically viable. The large Muslim minority enjoys reasonable religious and political expression in the Christian Empire.

(iv) Languages: Tigryna and Tigre are both successor languages of Semitic Ethiopic (Ge'ez); the former is spoken by the Diabart of the highlands, while the latter is the principal tongue of the Muslims in the western and eastern lowlands and the northern hills. In the Kassala province of the Sudan Tigre is called *Al-Kharj*; tribal distinctions within Tigre have not yet been fully worked out. Tigre cannot boast any written literature and it is
losing some ground in favour of Arabic, which among Muslims and traders enjoys a cachet which it does not possess. The decision of the Eritrean government, in 1952, declaring Tigrinya and Arabic the official languages of Eritrea (although most Tigre-speakers know little or no Arabic) was a political and prestige resolution—not a linguistic judgement. The two main non-Semitic languages spoken by the Muslims of Eritrea are Bedawiyte and Bilin. (v) Religion: Islam has been a force in Eritrea-Absiyinia ever since Muhammad sent some of his earliest followers to seek refuge with the Negus. Throughout the Middle Ages Muslim pressure from the Red Sea compelled Abyssyinians to fight for their own form of Christianity. But in Eritrea as well as Ethiopia, though nearly half the population are Muslims, Islam has not succeeded in piercing the defensive armour of monophysitism and in transforming its essential fabric. On the contrary, the Djasart have been so completely assimilated to the cultural, linguistic, and national pattern of traditional Absiyinia that their religion seems strangely disembodied. Islam is, however, still making progress among the Cushitic and Nilotic peoples in the lowland areas, but none among the highland population. The universal call of Islam has a special attraction in all those regions where the particularistic and national monopolistic Christianity has no genuine application.

ERIWAN [see REWIN]

ERENAK or ERMENAK, the ancient Germanicopolis in Isauria (see Pauly-Wissowa, vi, 1958), a small town in southern Anatolia, 36° 35' N., 32° 10' E., in the western Taurus mountains, at an altitude of ca. 1200 m. (3937 ft.), above the

confluence of two of the source-rivers of the Göküs, the Kalkbadnos of antiquity. It is the capital of a kaza in the vilayet of Konya, formerly in the sanjuban of I. in the vilayet of Adana. In 1960, it had 7,536 inhabitants and the district 36,380. Mediaeval Oriental writers put Ermenak two days' journey south of Lārend (the modern Karamān), and three days' journey east of Aţā'iyya (the modern Alanya). Its grotto with a spring was particularly famous.

Ermenak originally belonged to the kingdom of Lesser Armenia. It was conquered by the Rūm-Subagšak Sultan in 914, and then by the Al-Din Keykubād I in 625/1228. Later it became the seat of the Turkish dynasty of Karamān. After the collapse of the Rūm-Saljuk empire, the Karamānids set out from there to take possession of the southern part, with Lārend (subsequently Karamān) and Konya. Under Mehemmed II, Ermenak and the principality of Karamān came under Ottoman rule.

There are some remarkable buildings in Ermenak, dating from Karamān times. Of these, the most important is the Ulu Djamā', which was built by Māhmūd Beg b. Karamān in 702/1302-3 (cf. RECA, xii, Cairo 1944, 239, no. 5154). It is a simple building with three parallel vaults, thus built on the plan of the Umayyad mosque in Damascus.

ERSOY [see MEMMET AKIF ERSOY]

ERTOGHRUL (T. er ‘male’, toğrul ‘kite’.—1. According to tradition, the name of the ‘father of Oghmān (s.v.), the founder of the Ottoman dynasty; but it appears in no source, Byzantine or Islamic, before the end of the 14th century, when it is mentioned frequently and it appears in Timur (Ferddin, Munke d, i, 127) and in the Dāhī al-shifā (sub anno 699) of al-Dijzarī (s.v.). The traditions presented in the 9th/15th century Ottoman works, largely legendary in tone, fall into two main groups: (a) Ertogrul, together with Gündüz Alp and Gök Alp, accompanied Sultan Ṭal‘al Al-Din of Konya to Sultān Oyuqî (near Eskihisehr), performed great feats of arms thereabouts and, after Ṭal‘al Al-Din had returned to deal with a Tatar attack, conquered the district around Sogûd (s.v.) (Ahmedi, Islkender-nâme, ed. N. S. Banarû, in Tarihiyet Mecmuası, vi (1936-9), 113 f. and cf. 75-7): echoes of this tradition are given by Yazzifî oglu Alî (M. T. Houtsoum, Recueil, iii, 217-8), with the addition of the claim that Ertogrul and his associates belonged to the clan of the Kayl (s.v.). The related fuller version in Şihhurullah’s Bahsol-Æawirîkh (ed. Th. Seif, in MOG, ii (1923-6), 76-8) adds that Ertogrul had come into Rûm from the east with 340 followers after the Mongol invasions and settled first at Karadja-dagh (south of Ankara), that he captured Kärdaja-hîşar (20 km. south-west of Eskihisehr), and died at the age of 93; Karaman Mehemmed Paşa gives a similar account (tr. M. E. Khañl (Younq), ZÖKM, no. 792, 1921). A statement of this tradition Gûndüz is said to be not the asso-
ciate but the father of Ertoghrul (K. Mehemmed Pasha, and cf. Neshri, ed. Taeschner, i, 21-2, and cf. Leunclavius, Annales, etc.]. Leunclavius, [see Biledjik]. In the later years of the Ottoman Empire, Ertogrul was the name given to a sandjak of the vilayet of Bursa, which was the site of the battle of Malazgirt in 1071 (see Biledjik). According to Armenian sources, Erzincan dates back to before the Christian era, though detailed information does not appear before Saldırga times. The town was in the region over which Muslims and Byzantines fought, and had changed hands several times prior to the battle of Malazgirt (1071). After this, it came under the rule of the Saldırga amir Mengüçük, and remained in the hands of his successors until 625/1228, when the Rūm-Saldırga Sultan Ala al-Din Keykūbād I forced the last of the Mengüçükidīs Ala al-Din Dāwūdshāh, to hand it over. Keykūbād rebuilt the town and its walls (Hamdallah Mustawfī, Nusha, 95, top). On 28 Ramadan 627/10 August 1230 the Khwārizmshāh Dājal al-Din suffered a defeat at the hands of the Rūm-Saldırga Ala al-Din Keykūbād I, an ally of the Ayyūbid al-Āshraf, near Yassı-Cimen in the vicinity of Erzincan (Die Seltsuchungsgeschichte des Ibn Bīlī, transl. H. W. Duda, Copenhagen 1959, 166 ff., in particular 171). In 640/1243, Erzincan was taken by the Mongols, who broke into Anatolia from the direction of Erzurum. Thenceforth it belonged to that part of Anatolia which was administered by the İkhanī governors. According to Ibn Battīta (ii, 293 f.; Eng. tr. H. A. R. Gibb, ii, 436 f.), the town was largely populated by Armenians in his day, though there were also some Turkish-speaking Muslims. He also mentions the industriousness of the inhabitants of the town (engaged in textiles and copperwork). There was also a branch of the Aghī [q.v.] order.

After the collapse of the Mongol Empire of the İkhāns, Erzincan first belonged to the amir Ertugrul [see ERZURUM], then to the kǎbīr Bûrān al-Dīn; subsequently, Bāyazīd I incorporated it into the Ottoman Empire for a short time. After his defeat by Timūr near Ankara in 804/1402, the town passed to the Karakoyunlu and the Ak-koyunlu. There are two funerary monuments in the shape of rams (as they are frequently found in cemeteries of eastern Anatolia) which bear witness to their rule. These have been erected in an attractive garden near the main road (concerning this, cf. Strzygowski’s work on Armenia, and also Hamit Koşay, Les statues de bîliers et de moutons dans les cimetières historiques de l’Anatolie orientale, 1er Congrès international des arts turcs, Ankara 1959, 58-60). After the victory of Mehemmed II over Sultan Hasan near Tercan (Otluk Beli), the town belonged to local rulers for a time. During Selim I’s campaign against Shah Ismā’īl in 920/1514, Erzincan and its district were finally incorporated in the Ottoman Empire as a livadı (sandıq) of the eyalet (later vilayet) of Erzurum. In the 17th century, Erzincan played a part in the Djaļâł [q.v. in Supplement] rising. During the 19th century it was the seat of a lodge of the reformed Nakşbandī order, headed by Fehmi Efendi [q.v.]. In the First World War, Erzincan was occupied by Russian forces on 24 July 1916, but evacuated again after 18 months, on 26 February 1918.

Erzincan has frequently suffered destruction by earthquakes; the last of these was in 1939. Consequently, nothing remains of its historical buildings. The Ulu Dīamlı, which dated from Saldırga times, and the Kırshunlu Dīamlı and the Tekes Dīamlı, which dated from the time of Sultan Süleymān, used to be noteworthy. Thanks to the fertility of the surrounding country, the town has always been able to recover. Today its main exports are horticultural. From a military point of view, it is...
a main centre of the defence of Turkey's eastern frontier.

ERZURUM — one of the principal cities in eastern Turkey, today the chief town of the province of Erzurum with a population of 91,196 (1960 census).

Situated between the Karasu and Aras valleys which formed the main thoroughfare between Turkey and Iran for caravans and armies, Erzurum has been an important commercial and military centre in the area since antiquity. It was the ancient Karin, also known as Karin Kâlıkâ in Armenian, from which Kâlkâla or Kâlî in the Arabic sources (cf. Ibn Hawkal, i, 343; Ibn al-Fakhîth, Abhâr al-balûdân, Leiden 1885, 295) must have been derived. Under the Romans it was fortified and called Theodosiopolis in 415 A.D. The name of Erzurum comes from Arzan-i Rûm, Arzan-i Rûm or Arzi Rûm (see the Saljukid coins in I. Ghâlib, Ta'kwûm-î meşkûdât-i Seljûkıyé, Istanbul 1930, nos. 10, 147, 152). Arzan (Erzen) was a nearby commercial centre, the population of which took refuge in Kâlıkâla upon its destruction by the Saljukids in 440/1048 or 441/1049 (see ARZAN).

First taken by the Arabs under Caliph 'Uthâmân after 63/653, it was possessed by Byzantines and Arabs (Byzantine in 66/686, Arab in 81/700, Byzantines again in 127/754 for a short time and then Arab again until 338/949 when the Byzantines took it, to hold it until the Saljukid conquest). The native Armenian princes in the area played an important part in all these changes. With its strong walls, Kâlî made a base for the Arabs from which to control the area and organize ghûz raids into Byzantine Anatolia. In 153/770-2 the local Armenian dynasts organized a large-scale insurrection against the Arabs and came to lay siege to Kâlî (Ghévond, Histi des guerres et des conquêtes des Arabes en Arménie, trans. Chahazaryan, Paris 1856, 136-43; Ya'kîbî, ii, 447).

Under the Byzantines the chief city of the 'theme' of Theodosiopolis, it withstood the Saljukid onslant until 753/1352 when Amir Ahmad took it, and it was then made the capital of the Turkish principality of the Saltukids (see SALTUK-OGLU). In 997/1201 it came under the Saltukids of Anatolia and was made the seat of a malîkî prince, possessing the province as his appanage. The city under its new name of Arzan-i Rûm became one of the most prosperous commercial centres in Anatolia (cf. Ya'kût, Muşâhid-i balûdân, s.v. Arzan) and it's important monuments belong to this period: the Ulu-djami (Great Mosque) of Kâlî Kâtûn (Cittë-minnâ) built in 651/1253, and the mausoleums of the Saltukids.

In 639/1242 the Mongols under Bayduj took it. Remaining a part of Seljukid territory under Mongol suzerainty, the province of Arzani-Rûm paid a large annual tribute to the Mongol treasury, 222,000 dinâr in 736/1335 (Z. V. Togan, Mogollar dernde Anadolu'nun ihtisât variyeti, iTHITM, i, 1932).

After the dissolution of the Ilkhanid empire in Iran, Erzurum was occupied by the rival Mongol amis successively, the Cobändan Shaykh Hasan in 741/1340, Muhammed b. Ertina about 761/1360. Then the city became part of the rising Türkmen states in eastern Anatolia, first of the Kara-koûyunlu (q.v.) from 787/1385, and then of the Ak-koûyunlu (q.v.) from 869/1465. Taken by Shah Isma'il from the latter in 908/1502, it was conquered by the Ottoman Sultan Selim I following his victory at Çâldîrân in 920/1514. It was made in 941/1534 the chief city of a new Beglerbegiïk comprising the sandjaks of Erzurum, Şêbein Kebûr, Kâhî, Kûfîs, Yûkûr-Fasûn, Malazgîr, Tekênam, Kûfûzan, Işirî, Torum, Nûmârî and Vâmînîkîrân. The tax regulations of the time of Uzun Hasan (q.v.) preserved after the Ottoman conquest, were later in 926/1520 and in 947/1540 modified and replaced by the typical Ottoman kanûn (cf. O. L. Barkan, Kamûniar, 63; W. Ginz, Das Steuerwesen Ostanatoliens, 13. und 16. Jahrhundert, in ZDMG, c, 1950, 177-201).

Under the Ottomans the city benefited from the active caravan trade between Iran and Bursa (for a description of it in 1050/1640 see Ewîlyâ Celebi, Seyyâhatname-i, Istanbul 1314/1896, 203-19). Erzurum became also the chief Ottoman military base during the wars against Iran and Georgia in the 10th/16th and 11th/17th centuries. In 1031/1622, upon the murder of 'Ogînî II, Abaza Mehmêd Paşa, beglerbegi of Erzurum, supported by the population and the Djalâli (q.v. in Supplement) groups, rose up against the central government then under Janissary control. Enchanted in Erzurum, Mehmêd defied imperial armies sent against him until Muhammed 1058/1648.

During the Ottoman-Russian wars the Russians occupied Erzurum temporarily in September 1829, in 1878 and in February 1916. On 23 July 1919 the first national congress under Mustafa Kemal (Atatürk) was held in Erzurum. Today it is the most important city in eastern Turkey with the headquarters of the Third Army and the Atatürk University which was opened on 17 November 1958. The city was linked with the country's railway system in 1904.

Karal, Zaman Paşann Hayratlar, in Belleten, iv/16 (1940), 473-94; Sûlnâmeh of the wilayaet of Erzurum; Erzurum Halkvî Mezmûs; IA, Erzurum (by Besim Darクト, M. Halî Yînanc, H. Ilalokî, (Halîl Ilalokî), ESD'AD EFENDI, AHMED (1937/1420-1315/ 1514), Ottomanc Shaykh al-Islâm, son of the Shaykh al-Islâm Mehmed Mehmed Sâhid Efendî (q.v.). After being kâdî successively of İzmir (from 1184/1770), Bursa (from 1192/1778) and Istanbul (1201/1782), he held office for a short time (1204/1790-1206/1791) as kâdîkash of Anadolu. One of the prominent personalities consulted by Selim III (q.v.) on the reforms necessary in state affairs, he made proposals particularly for the
improvement of military efficiency. As a known advocate of reform, he twice held office as kadi'asker of Rûmeli (from Radjab 1210/February 1794 and Radjab 1213/December 1796), and in 1218/1219 he was made Shaykh al-Islâm. When in 1221/1806 the attempt was made to apply the Nişâm-i devâtî [g.v.] in Rûmeli, Es'ad Efendi issued a fatwâ censuring those who resisted it, but upon the Sultan's abandoning the attempt to enforce the reform he was relieved of office at his own request (1 Radjab 1221/14 September 1806). The influence of the Shaykh Ibrâhîm Idrîsî and the 'ulema' saved his life during the rebellion of Kâbiîk Mustâfâ [g.v.]. When Mustâfâ Pasha Bayrâkdâr [g.v.] came to power, Es'ad Efendi was again appointed Shaykh al-Islâm (22 Dümâdâ II 1223/15 August 1808) and took part in the discussions which bore fruit in the Sened-i ittifâk [see (art. durrûr, ii)]. When Mustâfâ Pasha fell, Es'ad Efendi was again saved by the 'ulema'; dismissed on 3 Shawwâl 1223/22 August 1808, he was set on his own protection to his argâlî at Ma'nîs. He was later permitted to return to Istanbul and died, on 10 Muharrâm 1230/23 December 1814, in his yâlî at Kanîliçe.

ES'AD EFENDI, MEHMET (1069/1658-1166/1753), Ottoman Shaykh al-Islâm, son of the Shaykh al-Islâm 'Abî Is'hâk Is'mâ'îl Efendi and brother of the Shaykh al-Islâm Is'hâk Efendi, after holding various posts as midîrîs was appointed kadi' of Selânik (Bâle) in 1064/1657 (son of the brother of the Sultan Othmân II). During his seven years in office he showed himself to be a distinguished musician. His best-known works are (1) Lajîqâl-i ûsûrîî, a dictionary of Turkish (printed Istanbul 1216), and (2) Atriîb al-âkhîr fî lâdîkhir 'urâfâlî al-adâwîr (also called Têhkhîrîî hîârânendê-gânî), containing the biographies of 100 musicians (poor edition in Mekteb, 3rd year, Istanbul 1311, nos. 1-7 and 10). For details of his other works (poems, tâhirî) see IA.

(M. Münir Aktepe)

ESCAF EFENDI, ŞAHİP AYLAŞ-SHEVKI-ZÂDE SERV- YID MEHEMMED (1204/1789-1264/1848), Ottoman official historiographer (wa'âbân-u naşvî) and scholar, was left in strained circumstances by his father's accidental death (Deär, cf. H. Inalcik, 125). After holding various clerical posts, in Safar 1241/October 1825 he succeeded Şahîd-zâde 'Abîtullah Efendi (q.v.) as wa'âbân-u naşvî, a post he held until his death. His work immediately afterwards (3 Safar 1264/10 January 1848) was for two years a member of the Medjlis-i ahkâm-i 'âmil-i 'âli (q.v.) in Istanbul, and was appointed editor of the official gazette Takwim al-wakdâ (see art. Divân, col. 465b) when it first appeared in 1247/1831. In September 1243 he was appointed 'âbât of Istanbul, and in 1245-6 was sent as special envoy to Persia, to congratulate Muhammad Şâh on his accession. A long illness interrupted his career, but after the Takwim-i tawdrikh, an uncompleted translation of the Mirâtât al-adawr, Istanbul 1277, 13; Djemal al-Dîn, Dawhat al-mash'dikh, Istanbul 1308, ii, 57 ff.; Fatih, Tuhfet, Istanbul 1271, 13; Diemäl-dîn, 'Âyne-i serefî, Istanbul 1314, 79 ff.; İbnülmalek Muhammed Kemal, Şan 'âşir türk şâ'îrleri, Istanbul 1314, ii, 321 ff.; Sadeeddin Nûzhet Ergun, Türk şâ'îrleri, Istanbul 1944, iii, 1235; Takvim-i wa'dahâ, years 1247-64; Babinger, 354-5; U. Heyd, The Ottoman 'ulema and westernisation in the time of Selim II and Mahomed II, in Scripta Hierosolymitana, vi, Studies in Islamic history and civilization, Jerusalem 1961, 63 ff.; IA, s.v. (of which the above is an abridgement).

(M. Münir Aktepe)

ESAME [see YENI ÇERI].

ESCHATOLOGY [see KİYÂMA].

ESHÂM [see AŞHAM].

EŞHKINDJI, also ĝeshkindji, means in Turkish 'one who rushes, goes on an expedition' (ĝeshk is defined by Mehmed Kâzâhkar [Duvin låğišt al-Tûrkh, 1, 100; — Besim Atalay's T. tr., i, 100] as 'long journey', and ĝeshkandji as 'galloping courier'; cf. also Tanskansiyeye tarama söslûkû, ed. Türk Dil Kurumu, i-iv, s.v.; the verb ĝeshke, to go on an expedition, was later replaced in Ottoman Turkish by müxâsem, Ar. mułâṣama.)

As a term in the Ottoman army ĝeshkandji meant in general a soldier who joined the army on an expedition. Thus ĝeshkandji timariots (see TİMÂR) who joined the army were distinguished from ka'bâ-eri or mustâbâhîs, those who stayed in the fortresses as garrison (cf. Sâret-i Defter-i Sancak-i Arnavud, ed. H. Inalcik, Ankara 1954, 108, 109).

As a special term ĝeshkandji designated auxiliary soldiers whose expenses were provided by the people of reşâd (q.v.) status as against giбелîs equipped by the şâgarî (q.v.). The obligation was in return for the tax exemptions made on agricultural lands which were considered in principle as under proprietorship (cf. H. Inalcik, Şefan Duvân'dan Osmanlı imparatorluğu'na, in Fuat Körprüsî Armagam, Istanbul 1953, 134, note 122). In the organizations of yarsîcî, şânlâbî, yaya, müzellên, Tatar and the like, each group of 10, 24, 25, or 30 persons was to furnish the expenses of an ĝeshkandji each year. Three or five among them were appointed ĝeshkandji, which three each year was called ġesâli. Each year the yamaḳs, assistants. Each year an ĝeshkandji collected in turn, be-newbet, a certain sum called kârâli (usually 50 akçe per person) from the yamaḳs and joined the Sultan's army on an expedition (under Bâyezîd Î ģerâli was collected only when an expedition occurred). In return the ĝeshkandji and the yamaḳs, as well as the expropriated from taxes and taxes on their çiftlik [q.v.] entirely or partly (cf. Kâneûn-ûme Sultan Mehmed des Eroberers, ed. Fr. Kraelitz, in MOG, i (1921-2), 25, 28; T. Gökbilgin, Rûmî'îde Yüriikler, Tatolar ve Eвлад-i Eflafî, Istanbul 1957, 244-6). The voymaks and Eflakks can be considered also as ĝeshkandji organizations (cf. H. Inalcik, Ibid., 241). Even the dogâncîs [q.v.] in some areas, who were organized in the same manner, were to furnish ĝeshkandji.
Another category of eshkindjis was provided by the possessors of wakfs and mulks. Increasingly in need of new sources of income, the Ottoman emperors in the 9th century ordered in Bagdad in December 1476 that these wakfs and mulks of certain types were to furnish eshkindjis for the army (cf. Fatih devrinde Karakayd’ Evleleti vakfaslar fihristi, ed. F. N. Uzlu, Ankara 1958, facsimile 3). The measure was applied extensively in the empire, especially in central and northern Anatolia, and resulted in the widespread discontent in the last years of his reign (cf. IA, s.v. Mehmed III, O. L. Barkan, Malikhane-Divan sistemi, in THITM, ii (1932-9), 119-84). It was assumed that such wakfs and mulks, mostly of pre-Ottoman times, were valid only by the approval of the Ottoman Sultan. In most cases he did not confirm them, on the grounds that they did not meet the conditions required; he then made most of them state-owned lands granted as timar (q.v.) or else required their possessors, in return for the taxes and dues, to equip eshkindjis for the army. Such wakfs and mulks were known as eshkindjis. Under Bayezid II, who followed a more tolerant policy, timars of this kind too were made eshkindjis. But later records in the defters [see DAFTAR-I KHAKANI] show that these were again made timars.

An eshkindji of the Yürük organization was equipped with a lance, bow and arrows, a sword and a shield, and every ten eshkindjis had one horse for joint use and a tent (cf. Kannonme Sultan Mehmeds Des Eroberers, 28).

Eshkindjis from the different groups made up a large part of the Ottoman army in the 9th/15th century, especially under Mehmeden II. But from the mid 10th/16th century, when the Ottoman army had to consist mainly of infantry with fire-arms, the eshkindjis and the various organizations to which they belonged lost their importance and gradually disappeared. (Hajil Inalcik)

ESHERFOGHU RUMI [see Supplement].

ESKI BABA [see BABA ESKE].

ESKI SARAY [see saray].

ESKİŞEHİR (modern spelling Eskişehir), a town in the eastern part of Central Anatolia, 39° 47’ N., 30° 33’ E., altitude 792 m. (= 2,597 ft.), on the river Porsuk, a tributary of the Sakarya; it is the most important railway repair workshops in Turkey. The Kurshunlu Daimi (921/1515) was erected by a certain Muwafaith Pasha, and is the most notable building of the town. Beside it there is an extensive factory, laid out in two parts (khan and bedesten). The ‘Ala’i al-Din mosque, which dates from Saldırgan times, has been completely renovated; but on the base of its minaret there is an inscription by Djadja Beg of the year 666(?)/1268 (RCEA, xii, Cairo 1943, 3, no. 4596) which refers to its erection. In 1927 there was still a small bridge, which apparently dated from Saldırgan times, over the Sari Su, which flows into the Porsuk. This bridge could, however, no longer be found in 1955. It is probable that it was removed when the industrial buildings were extended.

ESNE [see isne].

ESOTERICS [see tahr].

ESPIONAGE [see gazis].

ESSENCE [see şahik].

ESZÉK (Esseg), until 1919 a town in Hungary (Slavonia) on the right bank of the Drave, not far from its junction with the Danube, and since 1919 in Yugoslavia. The name of the town is in Serbo-Croat Osijek, in Hungarian Eszék and in German Esseg; in Turkish it was written as ğesk (Ösek).

During the first decisive phase of the Turkish-Hungarian wars the town is mentioned for the first time in connexion with events relating to Turkish history. After the Turks had overrun Sirmium (Hung. Szeremseg), the then commander of the Hungarian army, Paul Tomori, wanted to bring the Turks to a halt on the Drave. The forces of Sultan Sulayman, however, gained possession of Eszék easily, built a bridge over the Drave, crossed the river and advanced on Mohács (932/1526).

The passage over the Drave near Eszék was, for
a century and a half, an important halting-place for Turkish armies on the march into Hungary.

In the course of his later campaigns (1529, 1534, 1547, 1554) Sultan Süleyman, tinny of the Danube, caused a bridge of boats to be built nearby (cf. J. Thöry, Török Történetírők, Istvánffy, in I, 328, 331, 351 and II, 103, 107). He had a permanent bridge erected over the Drave only on the occasion of his last campaign against Széth in 974/1566.

As we know from later accounts in particular, the permanent bridge over the Drave itself rested on boats, while its prolongation on the left bank of the Drave consisted of a marshland some 8000 paces broad and was laid on piles (Ewliya Celebi, vi. 187). On both sides of the bridge there were parapets (körbuluk); in the middle, 'lay-bys', i.e. towers (baste), had been constructed, so that here the pedestrian might rest without impeding the flow of traffic. There was room for two wagons side by side on the main road of the bridge. A horseman needed one and a half hours to cross the bridge. In western sources, too, the bridge at Esztergom is mentioned as a remarkable piece of construction work. H. Otten-dorff (Vienna, Heeres-archiv, Kartenabteilung K. VII, K. I) offers a description similar to the one given above. A portion of his travel narrative From Buda to Belgrad in the year 1663 has been published in Hungarian translation (Budaról Belgrádás 1663, 1851). There are available a comprehensive study of the bridge: P. Z. Szabó, Az eszéki hid [The bridge of Esztergom], Majorossy Imre-Mázeum értesítője, Péc 1941.

Bridgeheads were built on both banks of the river to protect the bridge, on the northern bank beyond the marshland near Dárda and on the southern bank not far from the Drave near Esztergom. The defences at Dárda consisted only of palisades; the defences near Esztergom were constructed of brick, but were, however, only weakly fortified. The Turks feared no attack on these defences, for they lay 200-300 km inside the Ottoman frontiers. All the greater, therefore, was their surprise at the onslaught of Nicholas Zrínyi, the poet, who, in the winter of 1664, invading the Turkish frontier fortresses, pushed forward as far as Esztergom and on 2 January set the bridge in flames. It was, however, rebuilt by the Turks. The bridge at Esztergom was once more burnt down in 1685 by General Lesley and in 1687 was seized definitively from the Turks by the Imperialists.

From the diffuse information of Ewliya Celebi (vi, 175 ff.) the following data can be gathered: Ösek, a voivodaci in the sandjak of Poljega, a kâği with a stipend of 150 akçe. The defences consist of an inner and an outer fortress (i.e. kaša and orta kışâr); outside the outer fortifications lies the town (tarog). Ewliya Celebi does not mention the fortress as being an especially strong one; on the other hand he writes appreciatively of the religious buildings (above all the gâmi of Kâsim Pasha and Muştafa Pasha) and of the tekke and the other hâvat (medrese, sebil, and hamâm). He draws particular attention to the much frequented trade fair (panavyr) held once a year and to the covered market built by İbrâhîm Pasha of Kanizsa. The speech of the inhabitants, according to Ewliya Celebi, was Hungarian, but according to Ottendorff it was Russian.

(L. Fekete)

ESZTERGOM (Gran), a fortress town in Hungary situated on the right bank of the Danube about 80 km. to the north-east of Budapest, in the Turkish period the name and chief town of a sandjak.

The place-name Esztergom is said to be of Frankish origin (osterrinac = eastern fortress). The site, named Gran in German, is called Strigium in Latin, Ostrihom in Slovenian and Esztergom or Eszter on in Hungarian, while in Turkish such forms as Ece-Alem, Ayse-Alem, Areslem etc. are known.

Gran, in the time of the Arpad dynasty, was on a number of occasions the royal residence: the founder of the Hungarian Kingdom, Stephen I (St. Stephen), was born—and it was at the same time the seat of the Archbishop of Hungary (the head of the ten bishoprics established by Stephen I) and from about 1200 A.D. his own exclusive possession.

After the conquest of Buda (948/1543) Gran entered the pages of Turkish history. In order to safeguard Buda, now a frontier fortress, Sultan Süleyman ordered his forces to conquer Gran, which fell into Turkish hands after a siege lasting barely two weeks (950/1543). Detailed Turkish sources on this siege are Djalilzâde Mustafa (translated, from the Vienna Ms., by J. Thöry in Török Történetírők, Istvánffy, Budapest 1896, ii, 244 ff.) and Sinân Çavuş (ibid., ii, 325 ff.).

A fruitless attempt was made in 1002/1594 to wrest Gran from the Turks by a fighting against the place, on the Hungarian side, the distinguished Hungarian lyric poet B. Balassi. The assault on Gran in 1003/1595 was, however, successful; after the food and water of the defenders of the fortress had become exhausted, the Turkish garrison mutinied and the commander of the besieging troops, Nicholas Pâfî (called Mîkîloş, Hung. Miklós) in Ewliya Celebi, vi, 291, was able to gain possession of the fortress by capitulation. The Turks tried on several occasions to win back the fortress; eventually the Grand Vizier Lâlâ Mehemmed Pasha, who ten years before "had given over the fortress into the keeping of Mîkîloş" (Ewliya Celebi, vi, 291), recovered it in 1605, likewise by capitulation. The history of these sieges is recorded, on the Turkish side, in Pécwel (ii, 175 ff. and 301 ff.), who was present on both occasions at the negotiations over the two-fold surrender of the fortress, and—leaving out of account some statements of little value—in Ewliya Celebi (vi, 237 ff.); and on the Hungarian side, in N. Istvánffy (Historiarum de Rebus Ungaricis libri xxxiv, Colonge 1622). More modern studies by J. Thöry and G. Gömöry are in Haditörténeti Közlemények [Communications of the Hungarian History] (Budapest 1889 and 1892).

Thereafter the Turks remained until 1094/1683 undisturbed in their possession of the fortress. Gran, in the autumn of 1683, passed without serious fighting and by agreement into the hands of the Imperialists; Turkish attempts to reconquer it were unsuccessful. Gran, i.e. Esztergom, has in Turkish a proverbial fame (the newspaper Yeni Sabah). On 30 April 1935, carried on the front page a picture of a fortress with the superscription "Estergon kašel" and near it, in a caption, the words referring to the still firmly established Menderes régime: Menderes Estergon kalesidir—"Menderes is [strong as] the fortress of Estergon!"), but it is difficult to state on what events connected with Gran this fame is based.

The mukâta'a deyters of Gran for some ten years between the dates 973/1566 and 991/1582 are extant (Vienna, Flügel Catalogue, no. 1359); in them are recorded the following topographical names relating to the town of Gran: Kahî-i Bâlî, Kalâ-i Zîr, Iskîe-i Bâlî, Iskîe-i Zîr, Ilîjiâ, Varosh-i Kebrî and Varosh-i Şaghr (or Varosh-i Buzurg and Varosh-i Kâbek); these deyters, moreover, record the personnel of three Muslim mosques in the upper fortress, in the main town and in the suburb Tîşer.
delen as receiving salaries from the state. Ewliya Celebi (vi, 272-2), in connexion with his visit to
Gran in 1074/1663, offers information about several Muslim families, and also tells us in some
cases who founded them.
To the fortress of Gran belonged, on the left bank of the Danube, the bridge-head of Digi
derelen Parkani ("Liver-piercer", "Liver-piercing Fort")—whence the later Hungarian name of the
place: Párkány), the point of departure for the subsequent geographical extension of this sandjak.
According to Ewliya Celebi (vi, 273) it was Lala Mehmed Pasha who ordered the building of the
outer defence work of Gran on the right bank of the Danube, i.e., of the mountain fort of Szenttamas;
he is also said to have given to it the name of Tepedelen, "Head-piercer" (a locality of this name
There is extant also a Turkish survey of the houses in Gran, dating from about 1570 (Vienna,
Kraft Catalogue, ccc). In this survey Muslim
and, in lesser number, Orthodox (Pravoslav) are shown as house-holders; there are no Hungarians
amongst them. It seems that Hungarians, at that
time, cannot have been living in Gran.
The sandjak of Estergom was established after
the conquest of the fortress in 950/1543. At
first it consisted essentially of some 30 villages
on the right bank of the Danube, but, growing
outward from the bridge-head of Digi
derelen on the left bank of the river, it became extended later, thanks to the unwearying expansionist
activities of the Sandjak Begs, far to the west and north, so that the chief town of the sandjak, Gran, came
to be situated on the inner border of the actual
administrative area (other examples exist in
Hungary of such an expansion, as, for example, the
sandjaks of Szolnok (Solnok), Istulni Belgrad and
Szigtvár (Ségeth), in each of which the chief place,
after which the sandjak was named, found itself eventually
on the inner border of the actual area
administered from it). The "financial frontier" and
territorial administration thus brought into being
did not receive recognition from the Austrians, now
growing stronger, or from the Hungarian kingdom,
with the result that numerous villages paid taxes
to two masters—a situation which, from the end
of the 16th century, gave occasion for countless
disputes.
Several tax registers (tabrīr) of the sandjak are
preserved at Istanbul and one also, dating from 1570,
at Berlin (Berlin, Prussian State Library, Pet. II,
Nachtr. I). The tax register preserved at Berlin is
available in Hungarian (L. Fekete, Az Estergomi
standárok 1570. évi adóösszeösszeadás [The tax register
of the sandjak of Gran for 1570]. Budapest 1943).
According to this register there belonged to the
sandjak 12 "varoși", i.e., towns, 365 villages (karye)
and 93 abandoned farms, i.e., pusztas (meszérő) with
a total of 4206 households (mhane). A number of
the villages paid taxes to two masters and so it
came about that Nikolaus Olah, the Archbishop of
Gran, caused to be built, around 1580 and near the
locality known as Nyárhíd, with a view to the
hindering of the further advance of the Turks, a
fortress (Újvár, later Ersekújvár, Germ. Neuhausel),
the site of which lay more or less in the centre of the
Turkish sandjak. After the conquest of the
Neuhausel by the Turks in 1574/1663 most of the villages of the
sandjak of Gran were in the time of Sultan Ahmed I
(1012-26/1603-17), and was there married to the
court jeweller, Ewliya's father. Ewliya says that his

EVIDENCE [see BAYYINA].
EVORA [see YABURA].
EWLIYA CELEBI [see VÁBURA].
EWLIYA ÇELEBI D. DERWISH MEHMET ZILLI,
which he adopted in veneration of his teacher
the court-imam Ewliya Meḥmed Efendi. His father
is the chief jeweller to the court
(Sarā'ī 'Amīrī baḥshuyummuṣuṣ, sar-sargārān), Derwīsh Meḥmed
Zilli (cf. i, 218 [here and below the Istanbul edition
is referred to; see below]), who died Dju̇mādā II
1058/June-July 1648 (cf. ii, 458), according to
Ewliya's autobiography aged 127 (lunar) years; he is said
to have taken part in the (last) campaigns of the
sultan Sulejmān Kānānī and to have served and
undertaken works of craftsmanship for the later
sultans also (cf. i, 218; iv, 102; vi, 267; x, 298).
Ewliya's father must have been a merry and also a
poetically talented man, since on this account he
was allowed to enjoy the favour of the court.
The family tree which Ewliya claims on his father's side
is contradictory and improbable (cf. i, 424-5; iii, 444;
v, 226; x, 915). His paternal ancestors probably
came from Kütahya; the family seems to have
remained in Istanbul after the conquest of
Constantinople in 827/1425, but to have retained
the house in Kütahya and to have had also a house in
Bursa, in the İne Bey quarter, and at Manisa, an
estate in Sandıklı, four shops in the Unkapani
quarter of Istanbul as well as two houses there, and
a vineyard in Kadıköy near Istanbul (cf. i, 471; vi,
146; ix, 51). This gives some idea of Ewliya's
economic circumstances, which—though in addition to his
shrewdness in making himself useful to the
dignitaries—made it possible for him to follow his
Wanderlust. Ewliya's mother was from the Caucasus;
she came to the sūdān in the time of Sultan Ahmed I
(1012-26/1603-17), and was there married to the
court jeweller, Ewliya's father. Ewliya says that his

EWWLIYA CELEBI

he mentions is 1 Dijumada I 1087/12 July 1766, although he knows of events which took place in 1093/1682 (cf. x, 1048) and later (cf. biographical details discussed above). He seems to have spent the last year of his life in Istanbul editing his book, his last task which had some literary value. He piecemeal at various times and required a final redaction which Ewliya, as the ms show, never fully accomplished.

Ewliya Celebi is an imaginative writer with a marked penchant for the wonderful and the adventurous. He prefers legends to bare historical fact, indulges freely in exaggeration, and at times does not eschew bragging or anecdotes designed for comic effect. His Seyahatname thus appears in the first place as a work of 17th century light literature, which satisfied the need of the Turkish intellectuals of his time for entertainment and instruction, and which, thanks to the use at times of a traditional Turkish narrative technique and of the colloquial Turkish of the 17th century, with occasional borrowings of phrases and expressions from the ornate style, was intelligible to a wide circle; this obvious purpose of the work explains Ewliya's lack of concern for historical truth. He also occasionally describes journeys which he himself manifestly cannot have undertaken. His literary ambition often drives him to record things and occurrences as though he had seen or experienced them himself, whereas a close examination reveals that he knows of them only from hearsay or that he is indebted to literary sources which he does not cite.

In spite of these reservations, the Seyahatname offers a wealth of information on cultural, historical, and geographical sources which will be especially valuable once the philological groundwork is done and the necessary criticism of content applied. The charm of the work lies not least in the fact that it reflects the mental approach of the 17th century Ottoman intellectual in its attitudes to the non-Muslim Occident, and throws some light on the administration and internal organization of the Ottoman empire of that time.

Cavid Baysun, to whom we owe the most comprehensive study to date of Ewliya Celebi's life and work (see below), has declared that one of the most pressing needs of the preparation of a new critical edition of the Seyahatname, and that only this would make possible the effective use of the information that it contains. Baysun's suggestions have been in part taken up in the admirable detailed researches of Meşkûre Eren (see below), limited to the first book of the Seyahatname. On the basis of her findings from the ms, Dr. Eren demonstrates Ewliya's method of working, and points to the many blank and unfinished passages in the Seyahatname, which suggest that the author intended to expand the work further and to give it a final redaction which he did not however complete; she also proves that Ewliya made abundant use of literary sources for his descriptions and even for the chronograms which he quotes. Dr. Eren classifies these literary sources (all with reference to book i of the Seyahatname), identifies those named in the work by Ewliya; (2) those which Ewliya has used but not cited. In this group fall: (2) Ah, Kunh al-akhbar (cf. Babinger, GOW, 122 ff.); Ibrahim Pasha, Tarih (cf. Babinger, 192 ff.); Newwizade Aṭṭâʾī, Hādāʾik al-habibi fī takmilat al-Shahābī (cf. Babinger, 171 ff.); Sād, Tadhkira al-bunyān (cf. Babinger, 137 ff.); Awli, Divanı (al-khadîyât, in the Turkish translation of Djelalzade Şâlih (cf. Ms Istanbul
Topkapısayar, Revan Koskii no. 1085, 6g3a); Basırı, Lafaṭi (quoted in the Tedhkire of Khnallīzāde Ḥasan Celebi, Ms Istanbul, Üniversite Kütüphanesi, T.Y. 2525, 74a); and chronogram verses from various poets cited by Eren (100-14); (3) those which Ewliya cited, but has not used.

Mss of the Seyḥabatname.

Istanbul: Pertev Pasa collection nos. 458-62; Topkapısayar, Bagdat Koskii nos. 300-4; Beşir Ağă nos. 448-52 (copy of 1158 [= 1745]). These mss include all ten books of the work. Also Topkapısayar, Bagdat Koskii nos. 304 (i, ii), 305 (iii, iv), 306 (ix), 307 (vi), 308 (vii, viii); Topkapısayar, Revan Koskii nos. 366/1457-369/1460 (vi, vii, viii, ix); Hamiṣiye no. 963 (x); Halis Efendi no. 2750 (i), ibid. 2750 mukerrer (i), iv; Üniversite Kütüphanesi no. 2371 (i, ii, copy of 1170 [= 1756-7]), 593 (i, ii, copy of 1155 [= 1742-3]); Yıldız, Tarih Kısımlı, no. 48 (x). Evrenos, (Ghazi Evrenos) makes his appearance in history after the emirate of Karasi had been occupied by the Ottomans (after 735/1334-5). Ghazi Evrenos was the descendent of Evrenos, who was the father of Cemal-oghullari, the four houses of which are mentioned by the Ottomans historians also refer to his great generosity; he devoted a large part of his wealth to charitable foundations. Together with the Malkodi-oghullari, the Turakhan-oghullari, the Malkoçi-oghullari and the Tårkhân-oghullari, the descendants of Evrenos constitute the four ancient families of the Ottoman warrior nobility.

Bibliography (in addition to works quoted above): Ashikpashažade, ed. Ali, 51, 53, 54, 55, 56, 60, 61, 63 (= Osmanlı Tarikileri, i, Istanbul 1946, 125-8, 130-2, 135); Nejri, edd. Unat and Köyem, i and ii, passim; Die altsarmenischen anonymen Chroniken, tr. F. Giese, 25, 30, 31, 34, 35, 68, 70; Chaiozidynes, Bonn ed., 79-90, 97-9, 175, 181; Ducas, Bonn ed., 50; Phrantzes, Bonn ed., 62-3, 83; Epiroteika, Bonn ed., 234, 235; Hamid Wehbi, Ghazi Evrenos Beg, Meğhikir-i İslam, Istanbul 1301-2, 801-40; Ofomân Ferid, Evrenos Beg Khañeddnina Evliyâ-ı Vardar, which was called “Evrenos Beg yores”; cf. Evliya Celebi, ix, 47. In the time of Murad I, Evrenos had already become one of the greatest feudatories of the Ottoman empire. The extent of the lands belonging to him had become legendary (Ali, Künk, v, 75; Beausejour, Tableau du commerce de la Grèce, i, 111 ff.). The Ottoman historians also refer to his great generosity; he devoted a large part of his wealth to charitable foundations. Together with the Malkoçi-oghullari, the Malkoçi-oghullari and the Tårkhân-oghullari, the descendants of Evrenos constitute the four ancient families of the Ottoman warrior nobility.

whom married the Grand Vizier Candarli Khalil Pasha and became the mother of Bayezid II's father, and became the mother of Bayezid II's father, and became the mother of Bayezid II's

son. Two of his sons became famous in history; Ali and Isla. Ali was at first head of the akbindjis under the command of his father, then sandjak-begi. During the interregnum he adopted the cause of Mūsā Celebi, and was sent by him to join his father who was living in retirement at Yeniğen-i Vardar, but on the advice of Evrenos he went into the service of Mehmed Celebi. When Mehmed died, the sons of Evrenos, like the other begs of Rûmeli, joined the cause of the pretender known as Mustafa Düzme [q.v.]; but at Ulubâd they forsook him and went over to Murâd II. They were pardoned, and the sultan confirmed their possession of the fief granted to Evrenos by Murâd I. In 833/1430, when Murâd II was storming Salonika, Ali Beg won distinction by inciting the assailants with promises of booty. In 838/1434-5 he headed a raid into Albania and returned laden with booty. In 1437 he was sent with the akbindjis to make a reconnaissance raid in Hungary; he came back after a month, loaded with spoils, and advised the sultan to invade the country. In 845/1441 he led siege to Belgrade, but the akbindjis were defeated by the Hungarians and the Turks had to withdraw. During the revolt of the Albanians under the leadership of George Castrioti, Iskender Beg (1443-58) [q.v.], he several times commanded the Turkish forces sent against the rebel. In 866/1462 he took part with his two sons Ahmed and Evrenos in the campaign in Wallachia, in which they several times played a great part in the rise of the Ottoman empire, remained, throughout the course of history, one of the most prominent by reason both of the strategic and administrative division under a beglerbegi [q.v.]. In this sense it was officially used after the Mamluks, the two sons of Ali Evrenos-oghlu, Shems al-Din Ahmed and Evrenos, were present with their father

Encyclopaedia of Islam, II

Berat. In 867/1463 he was involved in the incidents in the Morea which led to the Turco-Venetian war. In 884/1479, together with Ali and Iskender Mkhâl-oghlu and Bali Malköö-oghlu, he led the raid into Transylvania which ended in the massacre of the Turks who, too avid for loot, allowed themselves to be taken unawares and were crushed by the volvode Stephen Bathori. He died after this date; his tomb is at Yenidie-i Vardar.

The two sons of Ali Evrenos-oghlu, Shems al-Din Ahmed and Evrenos, were present with their father on the campaign in Wallachia in 866/1462; Evrenos was sent on a raid to the frontier of Moldavia; the former, whose name occurs in numerous archive-documents, was in 890/1486 beg of the sandjak of Trikika, and then of Semendria; in 883/1478 he took part in the siege of Shkodra in Albania and was afterwards appointed head of the garrison left in the fort. A year before his death (903/1498), he established a waqf of which his son Mūsā was put in trust; his other two sons, Isla and Süleyman, had died in 893/1488 at the battle of Agha-Cayril, against the Mamlûks.

Other descendants of Evrenos are recorded at the beginning of the 9th/16th century, notably Mīhâmmed, son of Isla b. Evrenos, sandjak-begi of Elbasan, who captured Durazzo in 907/1502; and Yûsuf, grandson of Mâdâr-Shâh b. Evrenos, who was present on Selim I's Egyptian campaign. The Evrenos family, who won their fame by their raids in Rûmeli, lost their importance as military leaders after the middle of the 16th century. This family, which played a great part in the rise of the Ottoman empire, remained, throughout the course of history, on the most prominent by reason both of the strategic and administrative division under a beglerbegi [q.v.], governor-general. In this sense it was officially used after

EYALET, from the Arabic iyyâl, "management, administration, exercise of power" (cf. Turkish translation of Fürûzâbâdî's Kûmûs by Şaşm, Istanbul 1250/ 1834, iii, 135); in the Ottoman empire the largest administrative division under a beglerbegi [q.v.], governor-general. In this sense it was officially used after
1000/1591. The assumption that under Murad III the empire was divided up into eydlets (M. d’Ohsson, Tableau gêne“ral de l’empire ottoman, vii, 277) must be an error since the term does not occur in the documents of the period. Instead we always find be~lerbegilik and wilayet (wilaya). Beli$erglik was then the proper term for this administrative division, while wilayet designated any governorship, large or small (cf. Sûre$-i Deft$-i San$âhi$-i Aramâ, ed. H. Inalcik, Ankara 1954, index; U. Heyd, Ottoman documents on Palestine, Oxford 1960, 277). As a term designating the territory of a beliger$eglik, eydlet must have been adopted by 1000/1591, while be$ler$eglik continued to be used rather for the office of a be$ler$egi.

In early Ottoman history the be$ler$egi was the commander-in-chief of the provincial forces, in particular timariots, and as such the institution was directly connected with that of the be$ler$egi, commander-in-chief, found with the Sel$d$ukids and Il$hâ$ns (cf. F. Köprülü, Bitânas mis$ses$ellerinin Osman$-man mi$sses$ellerine tespî, in THITM, i (1931), 190-5 [Ital. tr. Alcune osservazioni . . . , Rome 1944]; I. H. Uzunçarşılı, Osman$-man devleti $eh$îd$-în$ên medhal, Istanbul 1941, 59-60, 108). Ork$han during his father’s reign, ’Alâ’ al-Dîn Pasha his brother and Sûleymân Pasha his son during Or$han’s reign, were contemporaries of be$ler$egi (cf. article Dulkadîrlar, in TDK, iii/52 (1949), 35). But Murâd I (922) made Shâhîn, his lâlâ [q.v.], beliger$egi (under the Sel$d$ukids some beli$erges$egi bore the title of lâlâ, or the synonymous alâbeg). In a passage in Rûhî’s chronicle lâlâ emek means to appoint be$ler$egi, and set out for his historic conquests in Thrace. The conquered lands there were put under lâlâ Shâhîn’s military responsibility while Ewr$enos [q.v.] was made lâlâ [q.v.] begi over the irregular ghâzî forces on the marches (Neghrî, Gîhânmîsû, i, ed. Fr. Taeschner, Leipzig 1951, 54; Ör$ü$î, Tewârî$kh-î Alî ‘Oth$man, ed. Fr. Babinger, Hanover 1925, 20, 92). Thus the Ottoman be$ler$egi became be$ler$egi of Rumeli, and the rivalry between him and the sâ$di-begi became an important factor of Ottoman history down to Mehe$med II’s time (cf. H. Inalcik, Osman$-man devleti de Alî ’Oth$man, Istanbul 1958). But the be$ler$egi of Rumeli was still the only be$ler$egi, the actual commander-in-chief of the Ottoman army. In the period between 728/1325 and 729/1326 the vizier Cândarî Khêtîr al-Dîn was made at the same time the commander-in-chief, with the title of pasha, of all the forces in Rumeli [q.v.] while the Sultan himself had to stay in Anatolia. Thus the growing responsibilities in Rumeli and Anatolia, the two parts of the empire divided by the Straits (of which the Ottomans were not in complete control until the time of Mehemmed II), led to the creation of the two bé$ler$begeliks of Rumeli and Anadolu (Anatolia), which thereafter formed the backbone of the empire. In 795/1393 when Bâyazîd I had to leave Anatolia for Rumeli he appointed Kara Timur$tagh bé$ler$egi of Anadolu in Ankara (Neghrî, 86). In his father’s time Bâyazîd himself had been a governor on this udî area in Kütâ$yâ$ha. But the bé$ler$egi of Rumeli preserved his position of primacy in the state by being always considered as the first among the be$ler$egi, having the exclusive right to sit with the viziers at Dîwân [q.v.] meetings etc. (cf. Kânûnîne-î Alî ‘Oth$man, Mehemmed the Conqueror’s code of laws, ed. M. 3$rî, suppl. of TOEM, 1330/1912, 13; Sûleymân I confirmed these provisions in Muharrâm 942/July 1555, see Fehrîn, Mün$â$ha’dâl$-î Sâl$â$în, Istanbul 1274, 305; cf. also Kânûnî-î Mîr$-î Mîrûn, in MTM, i (1331), 527). Mahmûd Pasha under Mehemmed II and Ibrahim Pasha under Sûleymân I both held the offices of Grand Vizier and begler$egi of Rumeli at the same time.

It appears that further be$ler$begeliks in Anatolia were founded subsequently according to the traditional pattern.

The farthest udî wilayet in Anatolia, which became the nuclei of the new be$ler$begeliks, continued to be assigned to the Ottoman royal princes. The third be$ler$egi, that of Rûm in the Amasya-Tokat region, developed from an udî under the royal princes whose lâlâs, responsible for the actual administration, bore the title of pasha and be$ler$egi from Bâyazîd I’s time (cf. H. Hûsûn el-Dîn, Amâ$sa ta$rî$ghî, iii, Istanbul 1927, 157-91). Timur’s invasion and later on Shâshruk$h’s threats (cf. article Murad II, in IA) made this region vitally important for the Ottomans, and the new conquests in Dîn$ak and Trebizond were incorporated into it. Also put under a royal prince with his lâlâs after its conquest in 873/1468 (cf. article Mehemmed II in IA) the ‘udî wilayet of Karaman (cf. Fâtih devîrîn Karaman eyle$ti vâ$flar$-î fîhr$î$stî, ed. F. N. Uzûluk, Ankara 1958, fac. 2) developed into a be$ler$egi later on (in 922/1526 Khi$$rew Pasha was the be$ler$egi). The development of the udî wilayet of Bosna into a be$ler$egi in Rumeli took more than a century from 867/1463 until 915/1508 (the period is examined in detail in the monograph by H. Sabanovic, Bosanski Pa$aluk, Sarajevo 1959). With some variation dependent on the particular conditions of the udî sand$ja$qs and further conquests (cf. L. Bekete, Osman$-man Tür$kleri ve Macarlar, in Belleten, xiii/52 (1949), 679-83), the Ottomans maintained the pre-conquest boundaries, especially in the first ‘udî wilayet stage (cf. H. Sabanovic, op. cit., 1-55; H. Inalcik, Sûre$-i Deft$-i . . . , 33, 55, 75). Later on in reorganizing them as sand$ja$qs [q.v.] and be$ler$begeliks they acted more freely and fixed the boundaries according to the situation.

The conquests under Selim I were organized first as the wilayet of ’Alâ’ al-Dawla (conquered in 921/1515), the wilayet of ’Arab which included Syria, Palestine, Egypt and the Hidjaz, and the wilayet of Diyar-Bakr (conquered in 923/1517, first survey in 924/1518, cf. Barkan, Kanûnlar, 145 and article Diyar$-bekir in IA). In an Ottoman record of 926/1520 (cf. O. L. Barkan, H. 933-934 mül$î$zûn a$a will bû$tu$ne $orne$vi, in Ist. Ünv. İktisat Fakül$tesi Mem$mu$z, xvi/1-4 (1953-4), 303-7) we then find the wilayets of Rumeli with 30 sand$ja$qs, Anadolu with 20 sand$ja$qs, Karaman with 8 sand$ja$qs, Rûm (Amasya-Tokat) with 5 sand$ja$qs, ’Arab with 15 sand$ja$qs, Diyr$-Bakr with 9 sand$ja$qs (the names of the sand$ja$qs are given). In addition 28 Kurdish dî$me$’s$ta$ts in south-eastern Anatolia were mentioned as li$wads (sand$ja$qs). In the first years of the reign of Sûleymân I events forced him to reorganize the wilayet of ’Arab into the be$ler$begeliks of Haleb (Aleppo), Shâm (Damascus) and Egypt (cf. Gibb-Bowen, i/i, 200-34; B. Lewis, Notes and documents from the Turkish Archives, Jerusalem 1952; S. J. Shaw, The financial and administrative organisation and development of Ottoman Egypt, Princeton 1962, 1-19). The wilayet of ’Alâ’ al-Dawla too was put under an Ottoman be$ler$egi in 928/1522 (cf. article Dulkadîrlar, in IA). In 940/1533 Sûleymân I also created the be$ler$begi of Djeza’ir (Algeria) with the appointment of Khêtîr al-Dîn Kapudân Pasha [q.v.]. The development of the sea udî into a be$ler$egi was
precipitated by Andrea Doria's capture of Koron and the crusading activities of Charles V in the Mediterranean. In the western reports of about 941/1534 (Rambert, A. Gritti in A. H. Lybyer, Theeyelet of the Ottoman Empire in the time of Sultan Selim the Magnificent, Cambridge, Mass., 1913, 255-61, 270-1) the beglerbegis in the Ottoman empire are listed as follows: Djezzâir under the name of the beglerbegis of the sea, Rumeli, Anadolu, Karaman, Amasya-Tokat, Ḍâlâ al-Dawla, Dîyar Bâkr, Şâ姆 and Egypt.

Further conquests under Süleyman I gave rise to the new beglerbegis: Ağbâr-ı Alemdar and Baghdad in 941/1534, Van in Râdjab 955/August 1548, Erzurum in 941/1534, Akça-kaḷ'ıa in Georgia in Şâbān 956/September 1549 (cf. Feridûn, op. cit., i, 586, 604, 606) in Asia; Budân in Dâmâdâr 948/August 1541, Temeshâvar in 959/1552 in Europe (cf. Fekete, op. cit.). Thus in appointing beglerbegis on the spot immediately after the conquest Süleyman I made an innovation.

In 976/1568 when a large scale expedition was planned in the Volga basin the sandjak of Kefe (Caffa) in the beglerbegis of Rumeli was raised to a beglerbegi (cf. H. Inalcik, Osmanlı-Rus rekabetinin menşesi, in Belleten, xii/4 (1948), 375 = The origin of the Ottoman-Russian rivalry... , in Ann. de l'Un. d'Ankara, i (1946-7), 75). As, after its conquest, Crete had been assigned to the Lekfokhs (Nicoya) was made the centre of a beglerbegi in 979/1571, and, the sandjaks of Ḍâlâ-ı Alemdar, Şarsûs, Iezel, Sis and Târâbulus-Şâm (Syrian Tripoli) were attached to it.

Of many beglerbegis created during the occupation of the Caucasian lands between 986/1578 and 999/1590 (cf. B. Kütükoğlu, Osmanlı-Iran siyâslî mânâsâbâtleri, Istanbul 1962) only those of Çálido and Kars (created in 988/1585) remained after the Persian war. (For the Persian war under ʿAbbâs I q.v.).

In the list of ʿAyn-i ʿAll of 1018/1609 (Kâzım-ı ʿAli-i ʿOthmân, Istanbul 1280) are mentioned thirty-two eyalets in the empire. Twenty-three of them were regular Ottoman eyalets subject to the timâr system. These were: Rumeli, Anadolu, Karaman, Budân, Temeshâvar, Bosna, Djezzâr-i Bâkr-i Seffâ (q.v. KLâh), Dhuţâklâdîriye (formerly ʿAlâ al-Dawla or Marâşh), Dîyarbâkîr, Rûm (Amasya-Tokat or Sivas), Erzurum, Şâm, Târâbulus-Şâm, Şâple, Raḵkâ, Kars, Çálido, Trabzon, Kefe, Mosul, Van, Şehrizâr. Nine eyalets were with sâlyâne (q.v.), that is, to say the tax revenues were not distributed as timârs but collected directly for the Sultan's treasury; the beglerbegi, soldiers and all the other functionaries were assigned salaries from the annual tax collection of the eyalet. The eyalets with sâlyâne were: Mişr (Egypt), Baghdaḏ, Yemen, Ḥâbeṣh (Eritrea), Baṣra, Laḥṣâ, Djezzâr-i Ḥârāb (Algeria), Târâbulus-Şâm (Tripoliânia), Tînûs (Tunis). (See further MÜSTÊHENİ EYALETLERİ.)

In the list given by Koçi Beg about 1640 (Risâle, ed. A. K. Aksi, Istanbul 1939, 99-102) the only difference is that the eyalet of Şîrîn which had been created by then primarily with the purpose of stopping the continuing Cossack attacks on the Black Sea coasts. It included the sandjaks on the western coasts of the Black Sea and the Danube. In both lists the eyalets of Kâzım-ı Šârî (Kanîzsa) and Egri (Eger) are missing though these were created after their conquest in 1004/1596 (cf. Fekete, op. cit., 681). In Kâthl Cevlî's Dîyâkâmümâ (ed. İbrâhîm Mişril, İstanbul 1945, 145/1732, and trans. J. von Hammer, Rumeli und Bosna, Vienna 1812) we find the same eyalets with the differences that Marâşh for Dhuţâklâdîriye, Sivas for Rûm, Konya for Karaman are mentioned, and the eyalet of Adana is added.

The term of eyalet for beglerbegi disappeared by the end of the 18th century. Proceeding from various documents in its general meaning (cf. Feridûn, i, 614). Also in the new period the important eyalets were assigned to beglerbegis of the rank of vizier, with three tughâs (cf. Gibb-Bowen, i/i, 139-41), who had some authority over the neighbouring beglerbegis of two tughâs. Also now the general tendency was to create smaller beglerbegis which were required to cope with certain military situations. Such was the case with the small beglerbegis set up in Georgia and Ağbâr-ı Alemdar after 986/1578. In Syria a fourth eyalet, that of Șâyâdâ, was created in 1023/1614 for the better control of the area (cf. U. Heyd, op. cit., 45-8).

An eyalet was composed of sandjaks (lînâs) under sandjak-begis and, as a sandjak was always the basic administrative unit, the beglerbegi himself was at the head of a sandjak called șâğa sandjâkgâ. It included certain centrally located towns and districts in each sandjak as his kâdî (see TİMÂR).

The main responsibilities of a beglerbegi were summarized in berdâs (diplomas) of assignment (see for example the berdâ of ʿĪsâ Beg in Feridûn, i, 269; for its date cf. H. Inalcîk, Fâṭîh devri, Ankara 1954, 77; also see RMTM, 1-2, i, 527-8). Representing the executive power of the Sultan on all matters (umâr-i siyâset) in the eyalet and called in this capacity wâld of it, he enforced the kâdî's decisions and the Sultan's orders. He was also entitled to give decisions in the diwan under him (beglerbegî siyâslî) on matters concerning the persons of 'askerî (see 'ASKARî) status. But the beglerbegi with the rank of vizier had larger and more absolute powers (cf. RMTM, i, 528). The beglerbegi's main administrative responsibility was to maintain public security, and pursue those who broke the law and opposed the Sultan's orders (for their ceremonial privileges see RMTM, i, 527-8). It should be emphasized that the kâdî and mül defterdâr (see DÂFTARDÂR) in an eyalet were independent of the beglerbegis in their decisions, and, could apply directly to the central government. Also the ağhas of the Janissary garrisons in the main cities were independent of the beglerbegis, who could never enter the fortresses under the Janissaries' guardianship. These restrictions and frequent changes of their posts were obviously designed to prevent beglerbegis from becoming too independent.

The Beglerbegî-evlâdeti was essentially based on the tîmâr system and a beglerbegi was responsible primarily for the army of timarîPlâhîns in his eyalet. Under his command it was the largest military unit in the imperial army. It was the beglerbegi's responsibility to bring it to the Sultan's army in perfect condition. The appointment and promotions of the sipahîs depended on him. He was entitled to grant timârs up to a certain amount (cf. ʿAyn-i ʿAll, op. cit., 61-81). Two high officials, the deffet-defterdâs and timâr-defterdâs under him, were responsible for these affairs. The copies of the timâr and muflâşaf defters, basic record-books of timârs drawn up for each sandjak, were sent by the Sultan to the eyalets (H. Inalcîk, Sûret-i Defter, xxi; Heyd, op. cit., 48).

But in the period of decline when the central authority weakened the whole system deteriorated. In some distant eyalets the Janissaries obtained a large number of tughâs and landed estates, and in the case in the North African provinces and Baghdaḏ. In Egypt, however, it was the Mamlûk beg who
finally seized the actual control (cf. Shaw, op. cit., 184-5, 316). In the eyalets of Eastern Anatolia the Janis- saries' attempt to seize power failed before the violent reaction of the provincial forces and the Dulkadirli (see Supplement, s.v.) under Abaza Mehmed Pasha [q.v.]. But it was the disorganization of the timar system that brought about fundamental changes in the eyalets. Now an important part of the tax revenues was not distributed as timars, but reserved directly for the Sultan's treasury, and farmed out to the tax-farmers; it then became a widespread practice to assign governorships with the governor himself farming the taxes, a practice applied previously in some distant eyalets like Egypt. Thus on his appointment the governor guaranteed to deliver to the treasury a certain amount of money as the province's tax revenue. Also governors in general were encouraged by the Sultan to maintain forces at their own expense. It was principally these developments that prepared the way for the emergence of autonomous eyalets in the 12th/13th century. In the same period local magnates called a'yans [q.v.] acquired power in the eyalets, since the governors were actually power- less without their cooperation. Despite the Sultan's efforts to reserve the rank of pasha for his own men, some of these a'yans managed to obtain governorships and even to found real provincial dynasties not only in the remotest provinces but also in Anatolia and Rumelii [see DEREBEY].

In 1227/1812 Mahmud II [q.v.] opened war against the pasha and a'yans of this type to re-establish the authority of the central government in the provinces, and after 1241/1826 reorganized them as mumkiyyet (mumkiyya) giving the mumkis large powers in military as well as financial affairs with a view to organizing the new army (cf. Lütfl, Ta'rikh, v, 107, 172). With the proclamation of the Taşşmâd [q.v.] in 1255/1839 financial affairs in the eyalets were made the exclusive responsibility of the muhasısls, and later on important changes under Western influence were introduced in the provincial administration: administrative councils were set up in the provinces sharing the governors' responsibilities, and most of the eyalets were reduced in size (see especially the sâlimânes [state year books] published since 1263/1849). The eyalet system was finally replaced by that of vilayet [q.v.] in 1281/1864.

(HALİL İNALÇIK)

**EYÜL** (see TA'KIRLİ)

**EYMRİ (EYMİR)**, name of an Oğuz tribe (boy). They are mentioned in a legendary account of the pagan Oğuz as being the only tribe of the Üc-ök group from whom sprang rules, but the historical references to them so far known go back only to the 10th/16th century, when they formed part of Türkmen federations in the Ottoman Empire, in Persia, and south-east of the Caspian Sea.

(1) The Eymir of the Ottoman domains were in two main branches, the one living among the Türk- men of Aleppo, the other with the Dulkadirli confederation (ulus). The former consisted, in the reign of Süleyman I, of four clans (oymak); later in the 10th/16th century their numbers increased, to form 11 clans. At this period another clan of this branch was found among the Veni-er tribesfolk south of Sivas. After the second siege of Vienna (1683), the Eymir, like other Türkmen groups, were required to serve in the war with Austria. A little later an unsuccessful attempt was made to settle a large group of the Türkmen of Aleppo, the Eymir among them, in the Hamâ-Hims region; their population is recorded in the 12th/18th century as 500 tents. The Eymir living among the Dulkadirli were much more numerous, those of the Mar'âş region alone comprising, in the third decade of the 10th/16th century, 49 clans. Like the other groups constituting the Dulkadirli confederation, these Eymir were half-settled, engaging in agriculture in their winter camping-grounds and growing rice. During the 11th/ 17th century they became completely settled in the Mar'âş-Aynâtâb region. Some scattered clans of this group were then living in other areas occupied by the Dulkadirli confederation—in the sandjak of Kars (Kadirlî) and Bozok, among the Boz-ulus, and in Persia.

Small communities named Eymürülü and Eymürüler were found in the regions of Söğüt, Aydın and Adana, but they took their name probably not from the tribe but from individuals (Eymir/Imir was a common personal name in the 13th/15th and 16th centuries). 'Eymir' or 'Eymür' is a common village-name in central and western Turkey, particularly around Sivas, whence it appears that this tribe formed an important element among the Turkish immigrants into Anatolia.

(2) The Eymir of Persia belonged to the Dhu 'l-Kadr confederation, dwelling in Fars, which was one of the seven great Kızıl-baş tribes upon which depended the power of the Safawid dynasty. The Dhu 'l-Kadr tribe was a branch of the Dhu 'l-Kadr/ Dulkadirli confederation of Anatolia, from whence it had migrated to Persia.

(3) Eymir were found in the 10th/16th century also among the Sayân Khandu Türkmen dwelling along the rivers Atrak and Djurdjan north of Astarâbâd. Upon their submission to Shah 'Abbâs, their chief 'All Yâr was appointed governor of Astarâbâd, with the title of Khan; after his death in about 1605/1596, his son Muhammed Yâr succeeded him. A remnant of these Eymir, numbering some 200 households, is still living in this region.

**EZELI** [see AZALI]

**EYRA** [see IDRIS, 'UZAYR].
FADAK, an ancient small town in the northern Hijaz, near Khaybar and, according to Yâkût, two or three days' journey from Medina. This place-name having disappeared, Hâfiz Wabba in his Digerat al-'Arab (Cairo 1936, 15) identified the ancient Fadak with the modern village of al-Huwayyit (pron. Howeyat), situated on the edge of the harrâ of Khaybar. Inhabited, like Khaybar, by a colony of Jewish agriculturists, Fadak produced dates and cereals; handicrafts also flourished, with the weaving of blankets with palm-leaf borders.

Fadak owes its fame in the history of Islam to the fact that it was the object of an agreement and a particular decision by the Prophet, and that it gave rise to a disagreement between Fatîma and Abû Bakr, the consequences of which were to last more than two centuries. When, in 5/627, Muhammad took his well-known measures against the Banû Qurayza (q.v.), the Jews of Khaybar and the neighbourhood became alarmed and secretly attempted to form a league in the expectation of an attack; a hâyy of the Banû Sa'd living in the vicinity then offered them help, but Muhammad sent about a hundred men commanded by 'Ali against this hâyy in Shabân 6/December 627-January 628; the expedition was reduced to a raid. In the following year, Muhammad marched against Khaybar, and the Jews of Fadak, frightened by the news of his victories, agreed to hold discussions with a view to concluding an agreement with the Prophet's envoy, Mubahyaisa b. Mas'ûd al-Ansârî, even going so far as to propose giving up all their possessions provided that Muhammad allowed them to depart. An initial agreement was followed by a second pact granted by Muhammad, sometimes overlooked by the sources (e.g. the K. al-Khandaj); they were to remain in Fadak while giving up half their lands and half the produce of the oasis; on this point al-Baladhuri (Fathî, 29) is explicit: `âlî miaf al-ard bi-turbatâhâ (the emendation suggested in the Glossary, bi-

FAMILY [see HIKAYA, KIŠSA, MATHAL].

FADA'IL [see FADILA].

FADAK, 20th letter of the Arabic alphabet, transcribed /; numerical value 80, as in the Syriac (and Canaanite) alphabet [see ABDJAD].

Definition: fricative, labio-dental, unvoiced; according to the Arabic grammatical tradition: riqqa, ḥaṭāyīya (or ḥaṭāhīya), mahmûsa; f is a continuation of a p in ancient Semitic and common Semitic. For the phonological oppositions of the phoneme f, see J. Cantinoue, Ésquisse, in BSL (no. 126), 94, 2; for the incompatibilities, ibid., 134.

Modifications: some examples exist of the passage of f to ðh, as in the doublet: nukât and nukhât "tumour on a camel's jaw" (a less frequent passage than the reverse: ðh > f); see al-Kâllî, Alâ, ii, 34-5, Ibn Dînân's critique, Sîrân sindâ', i, 250-1. This passage probably explains the existence of ðhâm "mouth" (nomad) > ðumm (sedentary), in modern Syro-Lebanese dialects, side by side with ðumûm (the expected form) in central Syria (see A. Barthélyen, Dict. Ar.-Fr., 93 and 622).

(H. FLEISCH)
based on the valuation of their property. This fact confirms that the former were regarded simply as usufructuaries, so that the share-cropping agreement with them could thus be broken without compensation, whereas the rights of ownership of the latter to one half of the oasis were recognised. Even after the expulsion of the Jews, Umar used different methods for Khaybar and for Fadak: to the Muslims who had received from Muhammad a share in the produce from Khaybar (or to their heirs), he gave ownership of the land (rakabat al-ard, says al-Kubi, ii, 573); as regards Fadak, he did not change the system, and his immediate predecessors followed his example. However, this assertion by the majority of the sources is explained by a note which ıyakt has preserved for us and Ibn Katir has clarified with some details: when the Muslims, thanks to their conquests, had attained widespread prosperity, Umar, guided by his ıgithab, assigned Fadak to al-Abbas and ıAli; these two men quarrelled bitterly, each maintaining his own right of possession, and ıUmar left them to sort out the matter themselves; it seems that they partitioned the oasis—subsequently, however, there is no further mention of the rights of al-Abbas and his descendants to Fadak—and that one condition had been imposed by ıUmar, namely that Fadak had to remain a ısadaka in the caliph's view, ıAli and al-Abbas had naturally been the ard's usufuctuaries, so that the share-cropping agreement could thus be broken without compensation of a charitable foundation. It is to be assumed, however, that since the Prophet had used the revenues of Fadak also to meet the needs of his family, ıAli, and the ıAlids after him, put the same interpretation upon the way in which the ısadaka should be administered; thus is to be explained their persistence in claiming possession of the oasis, and the promptness with which the caliphs dismissed them of it as soon as they went into opposition (see below). In later times it was not clearly understood what had happened; the uncertainty of the information is explained by ıYakt, according to whom the disagreement over the question of Fadak sprang from political passions; and further evidence of this is to be found in the Kithab al-Abdsyyah of al-Djahiz (see Ibn ıAbi ıHaddad, Sharı al-kubiya, iv, 98; Rasdil, ed. Sandubl, 300). Ibn Katir (ıBidayya, iv, 203) confirms and explains the above account. According to some ıhadiths (e.g. al-Bukhari, ed. Krehl, ii, 272 f.), ıUmar assigned to ıAli and to al-Abbas the ısadaka which the Prophet possessed at Medina, but retained Fadak and Khaybar. In any case, the change in the situation at Fadak took place after the expulsion of the Jews, for the government then had to look for the most convenient means of exploiting the land thus vacated. It was Mu'awiyah who brought the oasis under private ownership by giving it as an ıfida to Marwan b. al-Hakam; however, he took it away from him during the years when he was in disgrace (from about 48/668 to 54/674), and others then vainly coveted it, since it produced an annual revenue of approximately 10,000 dinars (Ibn Sa'd, v, 286), Marwan, in his turn, gave it to his sons ıAbd al-ıAziz and ıAbd al-Malik. When ıUmar II came to the throne, the whole property of Fadak was in his possession, since a share of it had been given him by his father ıAbd al-ıAziz, and he had gained possession of the shares belonging to al-Walid and Sulayman, ıAbd al-Malik's heirs. He was thus able to proclaim in a speech in the mosque that he had restored Fadak to its original purpose, and that the difficulties encountered by the rulers who respected the ısharla when, for political motives, they proposed to modify a situation established by the Prophet and his immediate successors.

To conclude, the question of Fadak is interesting from the legal point of view (it proves that, from the earliest times of Islam, there was a very precise conception regarding the difference between private and collective property and an awareness of the duties and rights relating to each; it is moreover an example of the difficulties encountered by the rulers who respected the ısharla when, for political motives, they proposed to modify a situation established by the Prophet and his immediate successors.

M. Hamid Allah, Cairo 1959, i, 59, 78 f.; Abu Yusuf, K. al-Ijrad, trans. Fagnan, 78 f.

This is a translation of the FADAK — FADIL BEY page of the document. The text provides historical and cultural information about Fadak, a series of stanzas in the tradition of the Shehr-english [q.v.]. It discusses the dancing-boys of Istanbul, their history, and their significance.

The text also mentions Casablanca, a port in Morocco, and the activities of Spanish companies in the region. It notes the introduction of a fair number of industries and the increase in tonnage from 1952 to 1958. The population of Casablanca is also discussed, with a focus on the residents of the Kasbah neighbour of al-Mansuriyya. The text mentions the use of the anchorage in the 14th and 15th centuries.

(J. H. MORDTMANN*)
MUSTAFA FApIL PASHA, MISIRLI, Ottoman
statesman, was born 2 February 1830 in Cairo,
the youngest son of Ibrahim Pasha and grandson
of Muhammad CA1I Pasha, wall of Egypt. After his
education in Cairo, he went in 1262/1846 to Istanbul,
where he was attached to the office of the Grand
Vizier. He advanced in government service and was
nominated vizier in Shacban 1274/March-April 1858.
On 19 November 1862 he became Minister of Education and was transferred on 12 January 1863 to
the ministry of Finance, a post he held until March
1864, when he resigned. On 5 November 1865 he was
appointed president of the Medjlis-i khazd^in, from
which he was dismissed on 16 February 1866. Being
exiled from the Ottoman Empire, he left Istanbul,
4 April 1866, and went to Paris. His exile was probably due to his criticism of the policy of Fu'ad
Pasha [q.v.], who favoured Ismacll Pasha, the wall
of Egypt. Ismacll Pasha sought to restrict the
succession to the hereditary governorship to his own
descendants, thus depriving his brother Mustafa
Fadil Pasha of his right to succeed. Mustafa
Fadil Pasha took the leadership of Ottoman
liberalism by publishing on 24 March 1867 in the
French newspaper Libertd a letter addressed to the
Sultan cAbd al-cAz!z, in which he advised the Sultan
to accept a Constitution for the Empire (for the text
of this letter see Orient, no. 5 [icr Trimestre 1958],
29-38). He invited the Young Ottomans [see YEN:
C
OTHMANL!LAR] to join him in Europe and helped
them in their press campaign against the autocratic
government in Turkey. But he profited from the
official visit of the Sultan to Western capitals to
regain favour and returned on 20 September 1867 to
Istanbul. He was nominated, on 25 July 1869, a
member of the Medjlis-i Wdld and became for the
second time, in Muharram 12877April 1870, Minister
of Finance. He was dismissed from this post on
18 December. He occupied from October 1871 to
January 1872 the ministry of Justice. He died on
2 December 1875 in Istanbul and was buried at
Eyyub, the holy quarter of the city. His remains
were moved to Egypt on 25 June 1929. He was an
intelligent and able statesman and succeeded in
negotiating the sixth forei&n Joan of the Ottoman
Empire in 1863 during his first term as Minister of
Finance. The conditions of this loan were reasonable.
His ambition caused him to behave in an opportunist way: he used the Young Ottomans as a tool in
his intrigues to become wall of Egypt. He spent unsuccessfully extraordinary sums in this aim. Nevertheless he patronized such writers as Shinasi [q.v.]
and artists as Zeka°I Dede [q.v.]. He founded in
1870 the first club in Istanbul: this End/[umen-i
Vlfet lasted just over a year.

FAplLA (Arab., pi. fadd*il) an excellence or
excellent quality, a high degree in (or of) excellence.
The plural fadd^il indicates a definite category of
literature, related to but distinct from the so-called
"disputes for precedence". Fadd^il literature exposes
the excellences of things, individuals, groups,
places, regions and such for the purpose of a laudatio.
The polemical comparison or dialogue, characteristic
of the "disputes for precedence", is lacking.
Fadd^il literature, the opposite to which is
mathdlib literature, may be divided into various
branches:
K u r 5 a n . Fadd'il literature takes its point of
departure from the Kur5an. The praise of the Kur3an
preserves, modified for the conditions of Islam, the
custom of the pre-islamic Arabs to boast (mufdkhara)
of the nobility and exalted rank of their tribes (see
Goldziher, Muh. St. i, 51, 54 ff.). A comparison of
its fadd^il with others, despite the Arab fondness
for comparison, was impossible, for the Kur3an,
as the direct and unadulterated word of God, was
immeasurable, even in polemic against the A hi alKitdb (see Goldziher, ZDMG, xxxii(i878), 344 ff.;
M. Schreiner, ZDMG, xlii (1888), 593 f.). An enumeration of its excellences was furthermore to win
back to the study of the incomparable holy book
those Muslims who had occupied themselves all too
exclusively with profane science, such as that of the
maghdzi and the amthdl (see Goldziher, Muh. St., ii,
155; Abu cUbayd, K. al-Amthdl, beginning). The
nucleus of the fadd^il al-Kur^dn consists of sayings
derived from the Prophet, his Companions and their
descendents (sahdba, tdbi'un etc.) concerning the
excellences of the individual suras and verses and the
reward for those who occupy themselves with them.
There are also accounts providing information as to
when separate revelations were granted to Muhammad. Questions of Kur'anic readings are treated in
special chapters. The oldest preserved K. Fadd^il alKur^dn is very likely that of Abu cUbayd (died 224/
837; see Brockelmann, I, 106, and SI, i66ff.),see
Ahlwardt no. 451; A. Spitaler, in Documenta Islamica
Inedita (Festschrift R. Hartmann), Berlin 1952, 1-24.
The list in HadidjI Khalifa (under <Ilm Fadd^il alKur^dri) is incomplete (see Yakut, Irshdd, indexes;
Ibn Khayr, Fihrist, index; Brockelmann, index).
The large collections of traditions, such as Bukhari's
(died 256/870) Sahih (book 66), have a separate
chapter on the Fadd^il al-Kur^dn.
Companions of the Prophet. Among others
Wahb b. Wahb (d. 200/815) had already written a
K. Fadd^il al-Ansdr (Irshdd, vii, 233, 7), al-Shaficf
(d. 204/820) a K. Fadd^il Kuraysh wa 'l-Ansdr
(Irshdd, vi, 397, 17), and Ahmad b. Hanbal's (d. 24i/
855) K. Fadd^il al-Sahdba has been preserved
(Brockelmann, S I, 310, 312). The 62nd chapter of
Bujkhari's Sahih contains fadd^il ashdb al-nabi. The
"excellences" of the Companions of the Prophet
are for the most part concerned with the experiences which they shared with the Prophet.
Historically confirmed traditions, such as that
concerning Muhammad's hidjra in the company of
Abu Bakr, stand beside fantastic prophecies by
Muhammad about the destiny and future of his
Companions, and so forth.
Individuals. Al-Mada3inI (d. 225/840) wrote a
book about the fadd^il of Muhammad b. al-Hanafiyya,
Djacfar b. Abl Talib and al-Harith b. cAbd alMuttalib (Irshdd, v, 313, 9 ff.), and al-Tabarl (d. 3io/
923) one about those of Abu Bakr, cUmar, al-cAbbas


and 'Ali (Irshād, vi, 452, 18ff., 16). Ibn al-Kalbi's (d. 304/819) collected the faddā'il of Keys 'Ayyān (Irshād, vii, 251, 1), and al-Shu'ubī (ca. 200/815) those of Kināna and Rabī'a (Fiḥrist 105, 15 ff.; Irshād, vi, 16, 16 ff.). Elopement of a rather unusual nature, we have to be the case with Ahmad b. Abī Tāhir Ṭāfarī's (d. 280/893) K. Faddā'il al-'Arab lula 'L-'Adjam (Irshād, i, 155, 6), has not been clearly established.

Various. The faddā'il of the holy months (Ibn Abī Dūnyā, d. 281/894, Brockelmann, I, 160, S I, 247, and others) have been the subject of treatises, as have been those of prayers (Ahmad b. al-Husayn al-Bayhaḵi, d. 438/1066, Brockelmann I, 446 ff., S I, 619, and others), of the basma (al-Būnī, d. 622/1225, Brockelmann I, 655, and others), of the jihād (Ibn Shaddād, d. 632/1234, Brockelmann, S I, 550, and others), as well as the “excellences” of quite profane things which have been particularly collected: for example, shaving of the head (al-Šaymārī, d. 275/888; Irshād, vi, 402 and 403), the days of the week (al-Sīrāfī, d. 368/979; poem, Irshād, iii, 89, 5-11), the herb basil (Muhammad b. Ahmad al-Nūkātī, d. 382/992; Irshād, vi, 324, 16), archery (al-Jāshīs, d. 429/1037; Brockelmann, S I, 619; IC, xxxiv (1960), 195-218 and coffee (al-Ubūdī, d. 967/1559; Brockelmann II, 414 no. 9).

Faddā'il [see Figur].

Faddār [see al-Salāt].

Faddār-I Āṭī [see Faddār-Ī Šāṭī].

Faddāl, Bā, a family of madīkhīyān of Tarīm in Ḥadramawt claiming descent from the Saiid al-ashira clan of Madīkhī. The name Bā Faddāl seems to derive from an ancestor called al-fādh Faddāl b. Muhammad b. Umayyad, whose genealogy cannot be traced beyond that. They seem to have had supreme authority in religious matters in academic circles and at the Islamic court, especially during the reign of Caliph al-Ma'mūn (813-833). They were known for their contributions to the study of Hadith and for their leadership in the Islamic religious community. Their influence extended to various aspects of Islamic life, including poetry, scholarship, and politics. They also played a significant role in the preservation and transmission of Islamic teachings, especially the hadith literature. The Faddāl family's contributions to Islamic scholarship and jurisprudence have been widely acknowledged, and their name is synonymous with excellence in the Islamic sciences.
Tarim until superseded by the Bāʿawī sayyids around the 9th/15th century. They have long been prominent as şāfīs and fakīhs, jurists. In the 10th-11th/16th-17th centuries one branch existed in Aden. The most famous of this branch, and probably the founder, was Djamāl al-Dīn Muhammad b. Ṭāhir b. al-ʿAbd Allāh, born in Tarim, who attained prominence in Aden as teacher and mustaʿfī, and was later on by Sulṭān ʿAmīr b. Abī al-Wahhāb, the Ṭāhirī ruler of al-Yaman. He died in Aden in 903/1498.

Another branch, known as Bal Ḥāḍī, existed in Aden, of which the probable founder was ʿAbd Allāh b. Ṭāhir Ṭāhirī. The author of a number of manuals on şīrī and şīfīsm some of which gained circulation beyond his land and were commented upon by other authors (cf. Brockelmann II 386 and S II 1528). He also acted as arbitrator between the rulers of the region and exercised some public authority. He was succeeded by his son Ahmad, known as al-ṭāhirī, the martyr, because he was killed in al-Shīhr in a battle with the Portuguese in 929/1523. The family might then have moved back to Tarim, for a brother of Ahmad al-ṭāhirī, Hūsayn (d. 979/1572), was a prominent teacher, and Ahmad al-ṣāḥibī, of al-Shīhr in 919/1510, travelled as a student to Aden, Zabīl, Mecca and Medina and back to al-Shīhr and then to India and then back to Mecca, where he settled and traded in coffee and cloth between al-Mukhā and Mecca. He became a prominent and rather controversial şāfī and wrote some şīfī poetry. He died in Mecca in 1087/1677.

Of the Tarim branch Muhammad b. Ismāʿīl (d. 1006/1600) was a prominent teacher, and Ahmad b. Abī al-Walī b. Ṣālim, called al-Sūdī (d. 1044/1634) was a linguist and grammarian of some merit.

Shaykh Muhammad ʿAwād Bā ʿAbsād was the first example of the ʿIrākī secretaries of Christian origin who, during the 3rd/9th century, were to become numerous. He was held to have little competence in religious knowledge, but to be highly competent in the exploitation of landed property. As an expert in land taxes, he also played a part under the succeeding caliphs, particularly al-Walībī and al-Musṭāfīn. He died in 250/864, about 90 years old.

Bibliography: Tabari, index; D. Sourdrel, Le vizirat ʿabsāside, Damascus 1959-60, i, 246-53 and index. (D. SOURDEL)
During the short reign of al-Amin (193-8/809-14), al-Fadl remained as before the caliph's most intimate adviser, playing a particularly important part in the episodes of the struggle with al-Ma'mūn. But he only retained any general control over the administration, nor was he responsible for the jurisdiction of the mażālīm.

On the arrival of al-Ma'mūn's troops he went into hiding, reappearing when the inhabitants of Baghdaḏ, in revolt against the rule of the caliph in Marw who had chosen an 'Alīd as his heir, brought Ibrahim b. al-Mahdī (201/816-7) to power. He subsequently gained al-Ma'mūn's confidence. The latter, having reached Baghdaḏ, and died in 207/822-3 or 208/823-4. Al-Fadl b. al-Rabīʿ thus seems to have been an intriguer of mediocre personality and limited ability. As chamberlain he succeeded by means of adroit manoeuvres in replacing the Baramika and, in exalting himself to the highest government office, manoeuvred in replacing the Baramika and, in exalting himself to the highest government office, the vizierate. He then adopted the cause of al-Amin, in a weak character over whom he planned to exert great influence, but he was unsuccessful in meeting the situation created by the forceful opposition of al-Ma'mūn.

(D. SOURDEL)

AL-FAḌL B. SAḤL B. ZADḤĀN_FARŪKH

Vizier to the ʿAbbāsids caliph al-Ma'mūn, had originally been in the service of the Barāmīka [q.v.]. His father, of Iranian origin and Zoroastrian by religion, had been converted to Islam and had entrusted the Barāmīka with his two sons, al-Fadl and al-Ḥasan [q.v.]. Al-Fadl, who immediately attracted attention on account of his intelligence, was taken into the service of Djaʿfar al-Barmakī, then tutor to prince al-Ma'mūn, and took over this position from him after the fall of the Barāmīka; it was in the presence of al-Ma'mūn that he is said to have been converted, in 190/806, at a time when the prince was holding power, deputising for his father who had gone to Anatolia.

From the end of the reign of al-Rašīd, al-Fadl was to demonstrate the influence that he held over al-Ma'mūn's mind and to give his pupil certain advice of great political significance, namely that he should accompany the caliph on the expedition which he had launched in 192/808 in the eastern provinces. On the death of al-Rašīd, which took place at Tūs in 193/809, al-Ma'mūn thus found himself in the centre of the province of which, under the terms of his father's will, he became autonomous governor. While his brother on being proclaimed caliph in Baghdaḏ had the whole of the expeditionary force brought back, he himself stayed on in Kūrāsān, though not without being exasperated by al-Amin's decision, which he held to be contrary to the last wishes of the dead sovereign. His adviser al-Fadl, urging patience, restored his equanimity.

Relations between the two brothers thus being strained and the situation having deteriorated to the point of civil war, al-Fadl, who had at his command a well-organized intelligence service in ʿIrāk, continued to give al-Ma'mūn helpful advice, promising to secure him the caliphate in the near future. In fact al-Ma'mūn was soon to overcome his brother after the siege of Baghdaḏ and to succeed him, without being the first to infringe the will of al-Raḥīd, which al-Amin had violated by putting forward his own son as heir. As soon as the first victory had been gained by al-Ma'mūn's forces over those of al-Amin, al-Ma'mūn was proclaimed caliph in the eastern provinces (196/812) and al-Fadl was made officially responsible for civil and military administration in the occupied territories from Hamadhān to the paróghīz and therefore responsible for the jurisdiction, nor was he responsible for the jurisdiction of the mażālīm.

On the arrival of al-Ma'mūn's troops he went into hiding, reappearing when the inhabitants of Baghdaḏ, in revolt against the rule of the caliph in Marw who had chosen an ʿAlīd as his heir, brought Ibrahim b. al-Mahdī (201/816-7) to power. He subsequently gained al-Ma'mūn's confidence. The latter, having reached Baghdaḏ, and died in 207/822-3 or 208/823-4. Al-Fadl b. al-Rabīʿ thus seems to have been an intriguer of mediocre personality and limited ability. As chamberlain he succeeded by means of adroit manoeuvres in replacing the Baramika and, in exalting himself to the highest government office, the vizierate. He then adopted the cause of al-Amin, in a weak character over whom he planned to exert great influence, but he was unsuccessful in meeting the situation created by the forceful opposition of al-Ma'mūn.

(D. SOURDEL)
the cultural field, he was particularly in favour of an orientation of policy by the caliph which would have pleased many of the Iranian multitude, and it was no doubt for that reason that he was soon stopped by the Arab and Ḣakīth aristocracy.

**AL-FADL B. SAHL B. ZADHANFAROKH — FADL ALLĀH**

During the reign of Hārūn al-Rashīd, in the first years of the domination of the Barāmikā (q.v.). As tutor to the crown prince al-Ahmūn, on whose behalf he caused the customary oath of loyalty to be sworn by the notables, he was particularly distinguished by the benevolence he showed towards the inhabitants of the eastern provinces and by his policy of conciliation with regard to the 'Ālīs, perhaps going so far as to support the establishment of an independent Zaydi State in Daylam. His ambiguous attitude won him public execration by the caliph in 183/799 and partly explains the disgrace of the family. Imprisoned at the same time as his father in 187/803, he died at al-Rakkā in 193/808, at the age of 45.

**FADL ALLĀH**, a family of Mamlūk state officials who traced their descent from the Caliph 'Umar I, hence their nisba al-Umari, al-'Adawi al-Kurashi. The family received its name from its founder Fadl Allah b. Moqāllāt b. Da'īyūn, who was living in al-Karak (Transjordan) in 645/1247. Shārāf al-Dīn 'Abd al-Wahḥāb, a son of Fadl Allah, held office as kātīb al-sīr (head of the chancery) in Damascus, and was transferred to the same office in Cairo by the Sultan al-Ashraf Khalīl in 692/1293. 'Abd al-Wahḥāb continued to head the central chancery of the Mamlūk his brother 'Abd al-Wahḥāb, served for a time in Hims, then returned to Damascus. Summoned to Cairo in 692/1292 to act for his brother who had fallen ill, he returned to Damascus as kātīb al-sīr, and remained in that office until he was replaced by his brother in 711/1311. After staying out of office for some years, he re-entered the public service in Damascus as a court clerk (muṣawwī) fi l-dāṣīḥ and rose again to be kātīb al-sīr in 727/1327 or 728/1328. In 729/1329 he was appointed to head the central chancery in Cairo, and he died in this office.

Nothing is known about the progeny of Badr al-Dīn Muhammad I, if he had any. 'Abd al-Wahḥāb's son Šālāh al-Dīn 'Abd Allah (d. 719/1319) served as a Mamlūk ġūndī (soldier), and his grandson Nasīr al-Dīn Muhammad b. 'Abd Allah (704-6/1304-63) also entered the Mamlūk military service in Damascus and rose to be an āmir of 40 (āmir tablakhdīn). Nasīr al-Dīn Muhammad sired the undistinguished Abū Bakr. It was the progeny of Muhīl al-Dīn Yahyā which maintained a position of distinction for the family for two more generations.

Of Yahyā's three known sons, the most distinguished by far was Shīhāb al-Dīn Ahmad I (700-49/1301-49) (q.v.), author of *Masālik al-abqār fi mumālik al-umārī* and *Ta'rī̄ḥ bi l-musū'ilāt al-qāīfī*, and perhaps the most outstanding of all the Faḍl Allahīs (b. Ahmad) assisted his father in the Cairo chancery, and was later kātīb al-sīrī in Damascus. His brother 'Ālī al-Dīn 'Ali (729-6/1328-68), who also assisted his father in the Cairo chancery, succeeded his father as kātīb al-sīrī of Cairo (736-8, 743-6/1337-42, 1342-68) and died in that office, to be succeeded in turn by his son Badr al-Dīn Muhammad III (d. 796/1394). Badr al-Dīn Muhammad II (710-6/1310-45), a third son of Yahyā, and brother of Shīhāb al-Dīn Ahmad, also served as kātīb al-sīrī in Cairo (where he replaced his brother 'Ālī for a few months in 1342) and in Damascus (743-6/1342-5).

Apart from Badr al-Dīn Muhammad III, 'Ālī al-Dīn 'Ali had three sons. Shīhāb al-Dīn Ahmad II

state until 711/1311, when he was transferred back to Damascus. There he died in office in 717/1317. 'Abd al-Wahḥāb b. Fadl Allāh was the first member of his family to hold a high position in the Mamlūk civil service. During his lifetime, and for nearly a century after his death, other members of his family distinguished themselves as Mamlūk state officials. Barād al-Dīn Muhammad I, a younger brother of 'Abd al-Wahḥāb, who died in 706/1306, was a chancery official in Damascus. A still younger brother, Muhīl al-Dīn Yahyā (645-738/1247-1337), began his career in the Damascus chancery under (d. 777/1375) acted as deputy kātīb al-sīrī for his father in Cairo, and died a young man. His brother Dājmāl al-Dīn 'Abd Allah (d. 821/1418) was an impoverished ġūndī. Equally undistinguished was his brother Hāmza (d. 796/1394), of whose career nothing is known.

The family of Faḍl Allāh had a family home in Cairo; but they regarded Damascus as their home town, and there had a family cemetery in which most of them were buried.

**Biography**: Brockelmann, SII, 141; al-Dīhahbī, *Duwal al-Islām*, Ḥaydarābād Deccan,
between Fadl Allah and 'Ali (Ist. Univ. Lib., MS Farsca 1043, 51a). The fact that the ninth ancestor in one list, the eighth in the other, is Muhammad al-Yamānī deserves attention in view of the fact that the Yemen is known to have been one of the most important centres of the Bātınīs from the latter part of the 3rd/9th century onwards (Muhammad b. al-Ḥasan al-Daylamī, Kawdīd altabādī al-Muhammad, ed. R. Strothmann: Die Geheimlehre der Bātınīs: Dogmatik des Hauses Muhammad, Bibliotheca Islamica II, Istanbul 1938, Introduction vi-ix, 24-5, 95, 96).

One also finds scattered throughout both the Istiwdā-nama and the Khabā-nama information relating to the life of Fadl Allah and the places which he visited. According to the Istiwdā-nama (3b), being at one point—the date is not known—in Isfahān, he rejected the notion that the human soul becomes non-existent after death and the assertions of the Hurufis who denied the existence of the after-life. In the Khabā-nama also (3ob) he is said to have rejected such a claim in Isfahān. Again according to this latter book Fadl Allah embraced Sūfism at the age of eighteen. He was inspired with the ability to interpret dreams in 756/1355 (19a), in which year he was in a place named Tokdji in Isfahān; later he went to Tabriz, where the Djalālīrdī Sultan Uways b. Ḥasan (55a-55b). While in Tabriz, Fādλ Allah Sādī Ṣāykh Khwādja accepted his teachings (19a-b). In Tabriz he married a girl from Astarābād on the recommendation of his disciple Kamāl al-Dīn Ḥāshimi. He wrote a book on fikr for 'Izz al-Dīn Shāh Shujāī (d. 786/1384) and his name is recorded as Shihāb al-Dīn Fadl Allah and `Allī. He was arrested on the strength of a decree (hudjre) issued by Sultan Uways in 772/1370-1, at the age of thirty-two, and there went into retreat (35a-b). He also spent some time in Dāmghān (35b) and Bāb-e-Ḥeizā (47a). While in Shāmākh interpreting a dream of Kādī Bāyazīdl, he foretold his own martyrdom (49b). When he left the house of this kādī and was returning to his cell (ḥudīr), he was arrested on the strength of a decree from Astarābād and taken to the fortress of Allāndjāk (50a). He was imprisoned on the order of Mīrān Shāh (55a). Among those believing in him were important men; he even had a dervish cap conveying his blessing, to Sultan Uways (55b-56a). His followers are known as Darabgān-i hald-ḵhor ve rāst-guy (48a). A bayt in the Taeqīd-nama of `All al-Ḵālā, called the Hurufis "Ḵālifat Fadl Allah" and "Wuṣūl Allah", states that Fadl Allah was born in Astarābād (Ist. Univ. Lib., MS Farsca 1158, 3b).

There exist three chronograms giving the date of the death of Fadl Allah-i Ḥurūfī. In one of these the name is recorded as Shihāb al-Dīn Fadl Allah and his death as having occurred on a Friday in Dhu l-Kaʿda 796/October-November 1394, when he was fifty-six years of age (Millet Library, MS Ali Emiri, Farsca 1043, at the beginning). The second chronogram is in a 16th cent. mağāmī's belonging to the book-dealer Ṣeifī Valienki. Though the chronographic mīrād is known to all Ḥurūfīs and to all those connected in any way with the Ḥurūfīs (see, for example, Ahmad Rīfāʿ, Mīrād al-mahābīd fi daf al-mafāsid, Istanbul 1293, lithograph, 133, where there is also the genealogy of Fadl Allah, taken from a risāla), I have seen the whole of the chronogram only in this mağāmī's. The author of this chronogram is unknown, as is that of the first chronogram. In the first bayt Timur is mocked, in the fourth bayt the name of Mīrān Shāh is mentioned, and in the fifth bayt it is stated that Fadl Allah was put to death on "Thursday, the eve of Friday" the sixth of Dhu
In the first poem, which contains seven bayts, it is also stated that he died in Dhu-'l-Ka'da, but on a Friday. It is clear, however, from the specific method of the month that he was put to death after the afternoon prayer on Thursday, since, according to the custom of the holy law, Friday begins after that time. The year is stated in the sixth and last bayt in the form 796 (according to the conversion-tables, the first day of Dhu-'l-Ka'da 796 corresponds to Friday, 28 August 1394). But the new method of the month has been confirmed the day before by observation, in which case the sixth day of Dhu-'l-Ka'da would coincide with Thursday, 3 September 1394. The third chronogram is in a madājma containing the poems of Fadl Allāh, along with those of Sharīf and ʿAlī al-Aʿlā. In the fourth of the seven bayts in this chronogram it is stated that Fadl Allāh was fifty-six (Dīsū tār i si d u du) when he was put to death. The place of his martyrdom is specified in the last bayt as “Allāndjā” while the date is conveyed by the phrase Shahādd-i ʿighā-i a (Mīllet Library, MS Kenan Bey, Farsa 186, f. 149b).

In a risāla of Mir Fāḍīl is found the note: “The honoured resting-place of that most excellent Prophet (Ṣāḥib bayān) is at a town called Allāndjā, by Astarābād on the tār side of Tābrīz. ‘Alī al-Aʿlā is also buried there. The covering of (Fadl Allāh’s) tomb is black, that of ‘Alī al-Aʿlā’s green, and of the other’s red” (MS Allī Emīrī, Farsa 1393, f. 92b). In his risāla entitled Ṣalāt-nāma Shaykh Muhammad, who is known by the name Iṣkurt Dede and who is known to have met some of the disciples of Fadl Allāh, writes while discussing the rules governing the ḥaḍīrī that during the days when the Tāḡīlī thirty-three stones are thrown, twenty-one each day, at the Tower of Mīrān Shāh, opposite the Alindjak fortress, which is also called Sandjariyye, and that the ṭāwīf procession occurs in a place called “Mafrāt-gāh”; during the course of this discussion he states that Fadl Allāh was put to death in Allāndjā and that his grave is there (Mīllet Library, MS Kenan Bey, Farsa 1393, f. 92b).

To regard certain numbers as sacred and to assign various meanings to certain letters are ancient, magical practices; examples occur in both the Old and New-Testaments in appropriate places (293, 37a). One meets in the same book (293, 37a). The names of Madjd al-Dīn, Ishak, and Nasīmi (properly entitled Risdla-i ma’ddiyya) of the author of the Ma’ddiyya, Sayyid Sharīf, in his Risāla-i ma’ādīyya (properly entitled Bayān al-wādāb) lists the disciples of Fadl Allāh, with the note “whom I remember”, as follows: Amir Sayyid ʿAlī, Husayn Kīyā b. Ṭahābī, Ma’dīl al-Dīn, Māhmūd, Kamāl al-Dīn Ḥāshimī, Muḥammad Bāyāzīd, Tawakkūl b. Dārī, Abu ʾl-Ḥasan, Sayyid ʿĪsāb, Sayyid Nasīmī, Ḥasan b. Ḥaydār, Husayn Gharīz, Sulaymān.

Later he records that all of them, four hundred in number, were Sayyids, that they were in Fadl Allāh’s company day and night, and that they went with him wherever he went (134, 15a). Sayyid ʿAlī is the ʿAlī al-Aʿlā who, in the Istīd-l-nāma, is called Khaḥīfat Allāh and Wāṣī Allāh, and who is known to have been Fadl Allāh’s favourite disciple (2a, 11a, 29b, 37a). The names of Ma’dīl al-Dīn, ʿĪsāb, and Nasīmī occur in the same book (29a, 37a). One meets in the same Risāla such names as Darvīsh Bahā’ al-Dīn, Darvīsh ʿAlī, Muḥammad Nāṣīnī, Iṣā Bīṭilīs, Muḥammad Tir-ger, Tādī al-Dīn, Sayyid Muṣṭafār, and Ḥūsān al-Dīn Yazdūrdī (12a-b, 37a, 40a-b, 43a-b, 80a). Of these, the names of ʿAlī al-Aʿlā, Nasīnī, and ʿĪsāb are found in the Sa’dl-nāma of Iṣkurt Dede and are those of the author of the Ma’ādīyya, Sayyid Sharīf, and Dāwīdī. Besides these, the name of Mir Fāḍīl is mentioned, and he
is reported to have been the disciple of Khalifatul 'Atiyyah. It is also reported that Amir Ghayyath al-Din was the son of 'Ali al-Ala's sister, and that, in addition to the Khub-ndma, the Ishtih-jindan, which was the author of a risala named Turab-nama (5a), Djawidi, in a risala which he wrote in Shawwal 1000/July-August 1592, reveals that his personal name was 'Ali (Millet Library, MS Farsca 437). In view of the date in which he wrote his risala, this person must have been connected with one of the disciples of Faḍl Allah. In the Muhammad-nama of Sayyid al-Aṣā, one finds the following names: Sayyid Tājī al-Din Kehrā-ya Bayhaqi, one of the intendants of Faḍl Allah and known to the Hurufis as Sāhib Tāwil (see C. Huart, Textes persans relatifs à la secte des Houroufis, Leiden and London 1909, Gibb Memorial Series, 42); Mawla-'an Kamāl al-Dīn Hāshimī; ‘Ali Dāmmānī, who, it is reported, had formerly been one of the intendants of Sultan 'Uways and had been Wāl of Khorāsān; and Pir Ḥasan Dāmmānī (ibid., 42). Both in this book and in the Naum-nama, which is attributed to Faḍl Allah, other names are mentioned in a section devoted to statesmen; but it is impossible to determine definitely the degree of their relationships with Faḍl Allah (Wāgha-nama-i Gurgī, 36; examples from the text and translations into Persian, 336-46). Mir Fādill writes in a risala on the names of the disciples of Fādūl al-'Rū, 'Sayyid Abu 'l-Ḥākiyya, Kamāl al-Dīn Hāshimī Ġūmī (i.e., from Anatolia) and Kamāl al-Dīn Hāshimī Iṣfahānī, and says that they are “the four friends of the felicitous one” (“Sāhib Deoletīn īr yārdān”), thus testifying to a belief that Faḍl Allah had “four friends” corresponding to the “four friends” of the Prophet Muḥammad (Millet Library, MS Farsa 990, last folio).

The names of the sons, daughters, and grandchilden of Faḍl Allah are written in a different hand on the last folio of the Risāla-i ma'ādīya (6rb). Among these is the name of Amīr Nūr Allāh, who was arrested and put to the question along with the author of the Istawā-ndma, Ghayyath al-Dīn Muḥammad, after the attempt on the life of Shāh Rūkh. Among his sons there is one Salām Allāh, who was not of Dībāl, and another, who was appointed by Faḍl Allah in the last will and testament which he wrote before his arrest as the trustee and guardian for all his children. (Aḥmadbākī Gūlpinārī, Faḍl-Allāh Hurūfī'nīn Wasiyya-Ndma's veysa Waṣāyda's, in Şarkiyat mcmuna's, ii (1958), 54-62. There is a copy of this will also in Millet Library, MS Farsa 1009, 1b-9a, as well as an incomplete copy in the same section of the library, MS 933, 1048-b).

Works. Faḍl Allah's most famous work is the Dīwāndān-nāma. From the Khub-nāma one learns that this work became famous after Faḍl Allah's death (43a). The Istawā-ndma reveals that the Dīwāndān-nāma begins with the word “ibīddū” repeated six times (29b). There is a copy beginning with this word and written in the Gurgān dialect in Millet Library, Farsa, MS Kenan Bey 920. The Dīwāndān-nāma written in normal Persian and common in both public and private libraries must be a new redaction, separated into sections, and arranged by Faḍl Allah personally or by one of his disciples, made on the basis of this text. For a copy belonging to the period of Faḍl Allah but without a colophon see MS Fatih (Süleymaniye) 3726; another copy, written by Darwih 'Alī Sarhānī in 1283 (ABDULBAKI GOLPINARLI).
FADL-I Hakk — FADLAWAYH

FADL-I IMAM B. MUHAMMAD ARSHAD AL-‘UMARI AL-HARGAMI, B. MUHSIN SIYAD B. ‘ABD AL-WADID B. ‘ABD AL-MADID B. KADI SADR AL-DIN AL-HANAFI, was a contemporary of ‘Abd al-‘Aziz al-Dihlawi, and the first Indian Muslim scholar to have accepted the post of mufti and sadr al-sudur under the authority of the Saldjuks [q.v.], which Shahdjar described as “the Shiraz of India”, in the last quarter of the 12th/18th century. He completed his studies with ‘Abd al-Wadid Kirmami, a learned scholar of Khayrabad (cf. Rahmain ‘Ali, Tadhkira-i ‘ulamad-i Hind, Lucknow 1914, 236). One of his maternal uncles Mull‘a Abu ‘l-Wadid Hargamii was one of the compilers of al-Fatwat al-‘alamiriya [q.v.]. Speciality interested in rational sciences, he devoted his leisure hours to the teaching of logic and philosophy. He was so fond of his pupils that once he strongly upbraided his son Fadl-i Hakk for misbehaving towards a dull student. His grandson ‘Abd al-Hakk b. Fadl-i Hakk and has since been translated into Urdu: (ii) Ta’dil al-ash’al fi Sharh al-Musam (MS I.O.; Delhi-Arabic no. 13513), 1244/1829. He left behind three sons of whom Fadl-i Hakk [q.v.] gained very useful booklet on Persian infinitives for beginners of which chapter v, comprising short biographical notices of some of the leading ‘ulama’ and scholars of Awadh, has been published at Karachi under the title Taradgim al-fudal ‘i (1960), with English translation and notes by me (vii) Sadr al-sudur

FADLAWAYH, BANU, a Kurdish dynasty which ruled in Shabankara [q.v.] from 485/1095 to 718/1318-9. Very little is known about them except for the founder Idris, who dates from Fadlawayhis (in Ibn al-‘Ajrir, x, 48: Fadlun) and for members of the family during the Ilkhang period [q.v.]. Fadlawayhis, son of the chief ‘Ali b. al-Hasan b. Ayyub of the Kushid tribe Ramani in Shabankara, was originally a general (Sipah-Salur) under the Buwayhids [q.v.] and closely connected with their vizier Shahid b. Adil. When the latter was executed after a change of government, Fadlawayhis eliminated the last Buwayhid in 474/1085 and placed himself under the authority of the Saljuqs [q.v.]. Later, however, he fell out with Alp Arslan [q.v.] and was defeated by Nizam al-Mulk [q.v.] and finally taken prisoner and executed in 464/1071.

Reports of the Banu Fadlawayhis until the beginning of the 12th/18th century are vague. After 626/1227-8 Mu‘azzar al-Din Muhammad b. al-Mubarriz expanded his rule in the direction of Fars and the coast opposite Hormuz. He asserted himself against the atabeg of Fars, but fell during a siege of his own capital Tij by Hulagu [q.v.] in 658/1260. Until 664/1266 three rulers followed one another in rapid succession: Kutb al-Din, the brother (according to Zambaur the son) of Mu‘azzar al-Din (murdered 10 Dhu ‘1-Hijjah 659/5 November 1261); Nizam al-Din II, who fell in Rabii‘ II 663/February 1662; Nusrat al-Din Ibrahim, the brother of the latter, deposed Rabii‘ II 664/Jan.-Feb. 1266,
after which more peaceful conditions obtained. The brother of the last named, Djalal al-Din Tayyibshah, ruled for sixteen years under Mongol suzerainty until his execution on 10 Dijmâda I 688/16 August 1282. His brother Bahâ al-Dîn Ismâ'îl died a natural death in 688/1289-90. The cousins who succeeded, Ghîyâth al-Dîn b. Djalal al-Dîn and Nizâm al-Dîn III b. Bahâ al-Dîn, were quite powerless. In the year following the suppression of a revolt in 712/1312-3 a certain Ardaghîr, whose lineage is uncertain, succeeded to power. As early as Dhu l-Kharbiyya-March 1314 he was eliminated and his cousin, Ghiyâth al-Dîn b. Djalal al-Dîn Muhammad, and thus the dynasty of the Banû Fadlawayh came to an end.

On the 13th century: Wâsâfî, Ishâ, 1269/1852-3, 423-5; Mustawfi Kazwini, Târikh-i guzîda, i, 613 ff. (GMS, xiv); B. Spuler, Die Mongolen in Iran, Berlin 1955, 146 ff.; E. de Zambaur, Manuel, Pyrmont 1955, 233 (genealogical table with considerable differences from Wâsâfî, whose version is the basis for the above article). See also Tâbrîzî, and its bibliography.

FADLLI (commonly written Fadlî), a tribal territory now one of the states of the Federation of South Arabia, area about 1600 square miles with an estimated population of 55,000. Its western bounds touch on the Aden Colony and then run northwest bordering on Lahij (`Abdali), Hawshabil and Lower Yâfiî tribes; in the northeast it is bounded by Awdhali and Dathina, in the east by the Arabian Sea. The country consists of two main parts: the lowlands of Abyan in the west, partly desert but containing the only fertile soil, with a mainly settled population; and the steppes and hilly parts in the east, with a mainly tribal population.

The territory was originally a confederation of tribes whose chieftain, a sulûn by title, of the Fadli tribe, lived in Shukra, the capital and a seaport. After the British occupied Aden, Fadlî remained hostile to them until 1865, after the Fadlis had attacked a caravan near Aden, the British attacked them by land and sea. In 1888 the Fadlî sulûn `Abdulrahman b. `Uthman signed a treaty accepting British protection; and in 1944 the Fadlî sulûn `Abd Allah b. `Uthman signed a treaty with the British whereby he accepted advice on the administration of his territory and the expenditure of his revenue. An executive acted for him in all matters in close cooperation with the British Political Officer in Abyan, and Zangîbîr (also written Zangîbîr) in Abyan became the administrative seat. In December 1962 Sultan `Abd Allah b. `Uthman was replaced as ruler by his na`b in Abyan the de facto ruler, Sultan Ahmad b. `Abd Allah. The sulûn is aided by a State Council, recently constituted, made up of thirteen members representing the tribes, the fishermen, the farmers and the traders. In June 1963 the State Council passed an ordinance providing for the election of 12 members, four from the settled areas in the west and eight from the tribal areas in the east, who, with five ex officio members and the members of the existing State Council will make a legislative body. In 1959 the Fadlî tribal territory was among the first territories of the Western Aden Protectorate to join in forming the Federation of Arab Amirates of the South, later called the Federa-

tion of South Arabia when Aden Colony joined it in 1962. The present Fadlî Sultan is a member of the Federal Supreme Council and holds a Federal ministerial post.

The economy depends chiefly on agriculture, which is centred in the Abyan delta formed by Wadl Banâ and Wâdî Hasan whose irrigation waters are shared by Fadlî and Lower Yâfiî growers under the control of the joint Abyan Board. The formation of the Board marked the settlement of the long standing dispute between the two territories over the leading channel, na`b, which the Fadlis had constructed in the last century to divert water to their land from Wadl Banâ in Lower Yâfiî territory. Cotton is the main cash crop, with the Fadlî production in 1963 nearing 5,000 tons. Other products are fruit and vegetables, to supply nearby Aden Colony, crops other than cotton, especially sorghum, and animal husbandry. There is also a fishing industry with good potential. The revenue of the state has reached £ 250,000 a year.

The state has two systems of courts, shari`a and Customary Law (urf); a Justice of the Peace system has also been introduced. There is also a State High Court with powers of appeal and with jurisdiction over some constitutional matters.

Education has progressed recently and there are 20 primary schools including two for girls, the first in the Federation outside Aden Colony.

FADLLI (commonly known as Kara Fadlî) (7-971/1563-4), Turkish poet, born in Istanbul, son of a saddler. Little is known of his early life. He does not seem to have had a regular education, but acquired knowledge in the company of learned people, particularly the poet Dhi`atî [q.v.], whose shop of geomancy had become a sort of a literary club for men of letters, where the old poet helped and encouraged young talents. On Dhi`atî’s suggestion he composed a kasîda on the occasion of the circumcision festivities of prince Mehmeh. When Dhi`atî had finished reading his poem on the same subject, he introduced to the Sultan, Süleyman the Magnificent, his young disciple who then recited it, which won him the favour of the court. Fadlî was made divân secretary to prince Mehmeh and, upon his death, to prince Musta`fâ. On the latter’s tragic end (960/1553) he wrote a long remembered elegy. He then entered the service of the crown prince Selîm who, upon succeeding to the throne, made him his chief secretary with a high fief. The poet died in Kütahya the following year.

Fadlî was a master of classical formal prose (ingâlî), but he is better known as a poet. Unlike most poets of the classical age, he does not seem to have collected his poems into a divân and his known poems are scattered in various medîawatîs. Some of his works, mentioned and praised in tedhîkîs (the mathnawîs Humâ Lewis and Lecky ed. An Encyclopaedia of Islam, II
esrār, and a collection of stories in prose, Nakhlistān) have not come down to us. Apart from his ṣaḥāla, ḥaṭāla, ṣaḥrūf, Fadli owes his fame to being one of the minor poets of the first half of the 5th century (A.D.) the distinction of first hunting with the cheetah, the animal does not appear to have been commonly

FAGHĪR or BAGHBUR, title of the Emperor of China in the Muslim sources. The Sanskrit bhagapatra and the Old Irranian baghagaputra, with which attempts have been made to connect this compound, are not attested, but a form ḍībghābur (|= ḍībghābur), signifying etymologically “son of God”, is attested in Parthian Pahlavi to designate Jesus, whence Sogdian baghbur, Arabicized as baghbar and faghfur; these forms were felt by the Arab authors as the translation of the Chinese T'ien ists “son of heaven” (cf. Relation de la Chine et de l'Inde, ed. and tr. J. Sauvaget, Paris 1948, 20; al-Masūdī, Mūṣīdī, ii, 306 (tr. Pellat, § 334); Fīhrīsī, 350 (Caired, ed., 491): baghbar = “son of heaven,” that is to say descended from the heavens; Ibn al-ʿArīfī, vii, 221). The form faghfur (faghfur in Marco Polo, ed. Yule-Cordier, ii, 145, ed. L. Hambis, Paris 1955, 194, to refer to the last emperor of the Sung dynasty), which has been borrowed by Persian (cf. Ferrand, in J.A., 1924/1, 243; idem, in BSOs, vi (1931), 359-39; S. Lévi, in J.A., 1934/1, 19), seems to be a more eastern form, although it is attested in al-Masūdī (Mūṣīdī, ii, 200 = tr. Pellat § 622); it is also mentioned in the text of the Etudāwa, p. 284, and an Arabic inscription in the cemetery of Zaytūn (Ts'iu-an-chou) dated 723/1323 (cf. G. Arnaiz and G. Ferrand, “porcelain”, and also Slav languages, through the T'oung-Pao, Pelliot, in T'oung-Pao, 1931, 458). This term has been modernized in Russian faghfur or baghbar, with which attempts have been made to connect this word make faghfur a region of China (cf. P. Pelliot, in T'oung-Pao, 1931, 458). This term has entered Modern Greek (faghfur) in the sense of “porcelain”; and also Slav languages, through the Russian faghfur (fagfur) (cf. B. Winter, in Kuban, i, 279; Lauffer, Beginnings of porcelain, 126).

Bibliography: in addition to the references in the text: E. Blochet, Introduction à l'histoire des Mongols, GMS XIII, 76 n. 1; H. Cordier, in Mélanges H. Derembourg, 434; H. Yule and A. C. Burnell, Hoobson-Jobson, London 1903, s.v. Faghfur; G. Ferrand, Relations de voyages et textes géographiques de Paris 1913; 21; Maspero, La Chine antique, Paris 1927, 144; P. Pelliot, Notes on Marco Polo, ii, Paris 1963, s.v. faghfur, devotes a well-developed and documented study to this term.

FAGH FUR, in the sense of “porcelain” [see §1], FADH (Ar.), (e.m. fa'aha, pl. jahād, afadd, afhād, jadāha), is the name of the Cheetah (Urdu īdā < Sanskrit cītra, “spotted”), Acinonyx jubatus, also called “Hunting-leopard and Hunting-cat” (French: “guèpard”, Persian: “yāz”), the subspecies Acin. jub. venaticus being found from Balūstān to ʿIrāq and Jordan and the subspecies Acin. jub. hechi or gutatus in northern Africa, from the borders of the Sahara. The noun faʻā, the form to be preferred to fahād which was recommended by al-Kalīshī (ṣīb i al-ahādī, ii, 39 ff.), is connected with the root FHD which can equally well be supposed to be an Arabic corruption of the Greco-Latin term ἱάπος/παρδός, “panther”.

From remotest antiquity travellers in regions inhabited by cheetahs have not failed to observe this slender wild beast, asleep all day in the shade of a bush, hunting only at dawn or dusk, and, though with the tabby coat of a feline, claiming relationship with the canine family. Modern mammalogists in fact recognize it as a greyhound with the fur of a big cat from the form of the cranium, teeth like those of the canidae, non-retractile claws, its habit of running in strides, each step being a leap of five to six yards, and its peaceful nature; the cheetah does not experience the blind atavistic ferocity shown by the big felines at the sight of blood. It is not therefore surprising that the Mongols, Russians, Persians and Hindus who hunted because they needed food and consequently were close observers of wild animals should at a very early time have had the idea of taming the yards, and making use of its predatory instinct for catching hares and various ungulates with edible flesh; by so doing they gained the services of the swiftest of all quadrupeds, the cheetah having a speed of about eighty miles an hour for a distance of five or six hundred yards. It is probable that the Lakhmīd princes, vassals of the Sāsānids, tamed the cheetah in east Syria and ʿIrāq, the animal being fairly widespread in those countries; the strain from the Samāwā had the reputation, according to al-Māngī, of being superior to any other in the 14th century.

Although Arab tradition attributes to Kūlayb Wādī of the Nādīq (second half of the 9th century A.D.) the distinction of being the first to hunt with tame cheetahs, the animal does not appear to have been commonly
employed in hunting by the Arabs before the Islamic conquests. Pre-Islamic poets, to judge by such of their writings as survive, make no mention of them; instead, it must have been regarded, like the panther, as a dangerous wild animal best avoided. Although extant in the Hiḍjaz and the Yemen, the cheetah was never very numerous in Arabia, its elective biotope hardly going beyond the tropic of Cancer and being pre-eminently the dry Mediterranean steppe of grass- and bush-land found between the 25th and 35th parallels. The absence in ancient Arabic of any “collective noun” in mas'ūla among derivatives from the root FHD may to some measure corroborate, if not the ignorance of the Bedouins of pre-Islamic Arabia in respect of the cheetah, at least their confusion of this animal with the panther Leopard, Panthera pardus, (namir, nimr, arkat). This confusion, incidentally, has been perpetuated unfailingy even up to our own time in the works of many western writers since the introduction by the Crusaders in the 14th century of the cheetah to the courts of Sicily and Italy, and subsequently from there to the courts of France, Germany and England. The French name “guepard”, after the names “gopard” and “chat-pard” derived from the Italian “gatto-pardo”, has only lately, and correctly, been substituted for the incorrect middle-French appellation “leopard”, “leopard”, “léopard-chasseur”, just as the anglicized term “cheetah” has taken the place of the archaic Middle-English forms of “leopart”, “leparde”, “lebarde”, “libbard”, and “hunting-leopard”. Many also continue to make a serious error in confusing the cheetah with the Ounce or “Mountain Panther”, also called “Snow-leopard”, Felis uncia, a species of panther confined in the hilly mountainous central Asia, which only certain Mongolo-Altaic clans ventured to tame for hunting cervidae, and without any great success. The word Ounce, used for “Lonce” (from the Low German “Lonce” meaning “large”), has taken the place of the archaic Middle-English form of “lance”, “lance”, “leonce”, “lonce”, which of the Persian was actually the cheetah, and not an “unidentified” panther. By erroneous sources of later date, failed to realize that the yūdah of the Persians was actually the cheetah, and not an “unidentified” panther.

However that may be, it was not until the Muslim expansion towards the north-east took place in the 1st/2nd century that the Arabs could be seen to have familiarized themselves with this new auxiliary in their hunting expeditions, afterwards taking to it with passionate enthusiasm. Their interest in the cheetah was to be revealed by their concise aphorisms; they said, among other things, “sleepier than a cheetah” (ānsamūn min fahd), “heavier-headed than the cheetah” (aṭḥalūn ra’sūn min al-fahd), “a better purveyor than a cheetah” (aksabūn min fahd), “quicker off the mark than a cheetah” (aṭḥalwān min fahd), “angrier than a cheetah” (aṭḥalūn min fahd), “bored with the cheetah” (aṭḥalūn min fahd), “good enough to eat, but not a cheetah” (aṭḥalūn min fahd), “bored with the cheetah” (aṭḥalūn min fahd), “good enough to eat, but not a cheetah” (aṭḥalūn min fahd), “bored with the cheetah” (aṭḥalūn min fahd), “good enough to eat, but not a cheetah” (aṭḥalūn min fahd), “bored with the cheetah” (aṭḥalūn min fahd). The vast expense entailed by the upkeep of a hunt with cheetahs, for which
a paid staff of experts was essential, precluded all but the rich from the privilege of this luxurious diversion; the less affluent contented themselves with flying and coursing sports. It is however surprising to note that the Maghrib and Muslim Spain took no interest in the cheetah and never trained it; no reference to it occurs in any of the great number of documents, both Arabic and European, from which we draw our knowledge of Western Islam. The cheetah is known throughout the pre-Saharan zone of the Maghrib, from Tunisia to the Moroccan borders, although it is becoming rare there, and the nomads of the region have always regarded it simply as a permanent danger to their flocks (see L. Lavauden, Les vertébrés du Sahara, Tunis 1926, 39-40; idem, Les grands animaux de chasse de l'Afrique française, in Faune des Colonies françaises, Paris 1934, no. 30, 366-7; idem, La chasse et la faune cynégétique en Tunisie, Tunis 1920, 9-10). The Touaregs for their part were pleased, when they capture the beast, either to sell it to Europeans or else to make beautiful saddle-cloths and food-bags (miruwat, pl. masuwid) from its skin, but they have never thought of training it; they are, however, aware of its elegance and power, often giving its name (in Tamahāqī amayās) to their children as a first-name (H. Lhotè, La chasse chez les Touaregs, Paris 1951, 129-30).

In contrast to the indifference shown by the Muslim West towards hunting with cheetahs, the East for its part has until our own time kept this ancient practice very much alive in ʿIrāk, ʿIrān and India; Persian tradition ascribes it to Chosroes Anūshirwān (531-79 A.D.), but in fact it goes back to remotest antiquity. The renowned poet Firdawṣī is somewhat nearer the truth when, in his Sīhāh Nāmā he names Tāhmūras, prince of the legendary dynasty of the ʿAfṣādān, as the inventor of the training of beasts of prey, in these lines: Siyāh-gāzh o āz dar miyān bargozāl I Bālā lāra bidwārdāzāk as daqīl o kīh ("He [Tāhmūras] chooses from them the wild beasts; the Caracal and the Cheetah. By artifice he took them from the desert and the mountains").

Muslim writers in the Middle Ages, naturalists like al-Kazwīnī (599-682/1203-83) in his K. ʿAḏḏīb al-māḥbūkātāl and al-Dāmīrī (742-807/1341-1405) in his K. Bayāṭ al-ḥayawān, encyclopaedists like al-ʿAḍhīb (d. 755/1351) in his K. al-Ḥayawān and al-Kalkashandī (d. 821/1418) or al-Fahd (d. 975-96); however, the anonymous author, in the Bāb sayd al-ḥadā (118 H.), puts forward his own personal remarks which are not lacking in interest. As for Usāma b. Munkīdī (d. 1188), he recalls his childhood days when at his father’s house there was a she-cheetah of unusual docility, living in freedom (musayyaba) and on perfectly good terms with the fowls and the numerous tame gazelles belonging to the house, although when hunting she displayed a relentless ferocity towards her quarry. From his “Hunting memories” it emerges that he himself took no interest in this sort of hunting. It was a very different matter with al-Mangīli, a famous Mamluk hunter, who in his treatise dated 773/1371 gives us the fruit of his great experience in the matter of cheetahs; it is certainly the most thorough study on this subject in Arabic that we possess. The works of al-ʿAṣirī (848/1444) and al-Fākīhī (d. 948/1544) of which L. Mercier made use (mss. Paris, B.N., no. 2831 and 2834) are merely repetitions of the earlier writings.

In the light of these texts it is easy to formulate an exact idea of the difficulties which mediaeval Islamic huntsmen had to overcome before being able to experience to the full the excitement engendered by the cheetah’s “career” (fahl, pl. al-fahlā). First it was necessary to find an animal in the prime of life (musīn), for the cheetah does not breed in captivity. As for Usāma b. Munkīdī (d. 1188), he himself took almost no interest in this method of hunting. In the light of these texts it is easy to formulate an exact idea of the difficulties which mediaeval Islamic huntsmen had to overcome before being able to experience to the full the excitement engendered by the cheetah’s “career” (fahl, pl. al-fahlā).
Certain tribes had specialized in this activity, like the Banu Kurra and the Banu Sulaym in Egypt, and made a profit from selling the animals they captured. The tactics most usually employed in catching the animal that was required, a female for preference, were “to recognize it by its footprints” (hibis al-akhdb), to “stalk its lair” (takrib ar-larin) with two or three men on horseback, in the heat of the day, to “start it” and to “trail its slot” (naqdasba) slowly, without pressing it too hard; soon the indolent creature lies down to resume its interrupted nap, but is started once again. This manoeuvre is repeated three or four times until the animal is forced by fatigue to “wait steady” (makbawuma) and to “face” (mu darada) its pursuers, if it is not falling asleep from exhaustion. One of the trackers (naqisidjarud) then dismounts, throws his burnous over it with a rapid dastab al-fahd ka-id, states: “... to recognize it by its footprints” (hifz al-arm). Certain trackers, who were “to recognize it by its footprints” (hifz al-arm) and “to stalk its lair” (tadjrld) the beast, used the daily feed (tum) only after that it is given a thick carpet (tidfisa) and watches it by the light of a lamp and prevents it from sleeping in the constant movement and the teasing by the children soon result in making it absolutely harmless. They even go so far as to make it walk through the markets, held firmly on a lead and carefully surrounded. In the evening it is taken to its room, a dark stable where it is fastened to a long chain (miqjar) which leaves its movements entirely free. For the first nights an ostler (sdj) watches it by the light of a lamp and prevents it from sleeping in the constant movement and the teasing by the children soon result in making it absolutely harmless. The Indians avoid this difficult initiation by conveying their cheetahs to the hunting-grounds in small, individual vehicles, shaped like cages and drawn by horses or oxen.

To convey the cheetah to the room set aside for it by its owner is a delicate operation to which the cheetah-keeper devotes particular care: he has to avoid any accident which might impair the animal’s fine condition. To do this, he puts it into a “street-jacket” (urtaf, ghtara, kays), a large bag, allowing it to pass its head through the opening and, to prevent it being frightened by anything nearby, he accustoms it to wear on its head a hood (bunuma), a leather visor shaped like a baby’s bonnet and tying under the chin; two porters then suffice to carry it safely to its destination when thus “hooded” (muqattt il-wardq).

On reaching its new home the cheetah, like sporting-birds, has to receive some “manning” (uns, ilf), training that will make it lose its savageness (ladgirid) completely. For this purpose the cheetah-keeper, leaving the hobbles on its feet, tethers it outside a house facing on to a busy street; the din, the constant movement and the teasing by the children soon result in making it absolutely harmless.

All this time and for the rest of its life it receives food only from the hand of its keeper, for it is by means of the daily feed (tum) that he begins the education (tadjrld) of his pupil. The art is not in teaching it to hunt, for it already has the instinct to do so, but instead in accustoming it to jump and ride pillow (isrididaf) on its trainer’s horse at any speed. For the first nights an ostler (sdj) watches it by the light of a lamp and prevents it from sleeping in the constant movement and the teasing by the children soon result in making it absolutely harmless. To convey the cheetah to the room set aside for it by its owner is a delicate operation to which the cheetah-keeper devotes particular care: he has to avoid any accident which might impair the animal’s fine condition. To do this, he puts it into a “street-jacket” (urtaf, ghtara, kays), a large bag, allowing it to pass its head through the opening and, to prevent it being frightened by anything nearby, he accustoms it to wear on its head a hood (bunuma), a leather visor shaped like a baby’s bonnet and tying under the chin; two porters then suffice to carry it safely to its destination when thus “hooded” (muqattt il-wardq).

On reaching its new home the cheetah, like sporting-birds, has to receive some “manning” (uns, ilf), training that will make it lose its savageness (ladgirid) completely. For this purpose the cheetah-keeper, leaving the hobbles on its feet, tethers it outside a house facing on to a busy street; the din, the constant movement and the teasing by the children soon result in making it absolutely harmless.

All this time and for the rest of its life it receives food only from the hand of its keeper, for it is by means of the daily feed (tum) that he begins the education (tadjrld) of his pupil. The art is not in teaching it to hunt, for it already has the instinct to do so, but instead in accustoming it to jump and ride pillow (isrididaf) on its trainer’s horse at any speed. The Indians avoid this difficult initiation by conveying their cheetahs to the hunting-grounds in small, individual vehicles, shaped like cages and drawn by horses or oxen.

To train it to ride pillow the cheetah-master installs in its neck a large “saddle” (miqhal al-dabbba) or a small platform (dakha, marhab) on trestles of adjustable height, and then having fastened a solid leather collar (bilida), fitted with a ring with swivel-pin (midrard), round the cheetah’s neck, he releases it from the chain and holds it by the leash with one hand; with the other he shakes the bowl with rings (kas’a) from which the animal feeds and places it on the raised platform, to start with a cubit and a half above the ground. Repeating this manoeuvre several times, he ends by ostentatiously throwing a piece of raw meat into the bowl standing on the platform, at the same time inviting the animal to jump up by pulling lightly at the leash. Egged on by hunger, the cheetah quickly understands that the rattle of rings on the bowl is the announcement of something good for it to eat and that it had to go up onto the platform to get it. In this way the copper or bronze bowl, with rings attached, now continually plays the part of the cheetah’s “reclaim”, like the sporting-bird’s lure. For this same purpose the Indians use a large iron ladle which is easier to handle on horseback than a bowl. By repeating this routine several times a day, each time increasing the height by several centimetres, the keeper accustoms the animal, in less than ten days, to come and look for its food at a height of more than three cubits above the ground, the average height of the crupper on a saddled
horse; he does not fail, each time, to give it confidence by patting its flanks. Finally he replaces the platform and brings it on a leash close to the horse; to begin with, he is careful to hound the cheetah before taking it outside, to prevent it being at all alarmed by the sight of the horse. As soon as he is in the saddle he pulls the leash with one hand and with the other makes a clinking sound with the bowl which is placed behind him on the pillion (rijāda) or "crupper-seat", fixed to the cantle of the saddle. The animal is attracted and nibly jumps up to eat the meat in the bowl; intent on its food, it pays no attention to the movement of the seat, the rider having meanwhile made his mount start to move. Patient and frequent repetitions of this manoeuvre quite soon allow the cheetah-keeper to ride at a trot, and then at a gallop, without disturbing its passenger which, being "harnessed" (resāk), sits firmly on its pillion, untied except for its slip which is knotted to the saddle-bow.

The "slipping on live" (īrād al-ţād ṭ-şāyād) of the cheetah is fairly rapid: some train-deer (kasīra, pl. khasāţir), hares or gazelle fawns (khāţif, pl. khasūţif) are easily caught and are slaughtered under the cheetah's feet so that it may lap the blood, quickly bringing out its hunting instincts. The skilful cheetah-keeper can even ensure that his beast only "sets upon" the gazelle bucks (fahl, pl. fuhūţ), the does (šuţ, pl. šanţ) in venery in East and West alike being always left free for breeding; whenever a doe is seized, the cheetah is deprived of its "right" by being immediately removed from its take, whilst it is allowed to "take its pleasure" (iğbāţ) on the bucks it has caught.

When a cheetah is judged to be "well-tried" (mukham), three days of hunting are possible. The first, a princely prerogative, is "hunting at force" (al-mukākāra, al-muwaqāţāka): the huntsmen, having reconnoitred the herd (sirb) from a distance, dislodge a buck and run it down until the "finish"; at the same time the cheetah is cast on the exhausted quarry and lays it low without difficulty or fatigue. These tactics entail long rides at random and require great endurance from riders and mounts alike. The second way is greatly relished for the thrilling spectacle that it offers, for it depends on the action of the cheetah alone: it is "stalking" (al-dāsīt); the cheetah which has been unhooded (makhūţ al-va'dal) "reconnoitres" (tasgawwuf) from a distance the gazelle as it is browsing and, at a sign from its keeper who has put it down on the ground, it sets off to try to take its quarry by surprise without being noticed. The cheetahs take cover in order to see without being seen, and tremble with delight at the cheetah's manoeuvres as, having made its way upwind (mustakbil al-rīh), it steals on and creeps up (da'alān, tasālūl) to the quarry, crouches down, remaining stock-still at the first alarm, and starts off again, one foot after another, taking advantage of every undulation of the ground, and so comes up quite close to the gazelle without having put it on its guard; the final charge is a matter of only a few seconds. As for the third way, it is by far the most commonly used by cheetah-keepers and gentlemen fahūţ (al-dūţ, al-dakhīb), for the small number of difficulty and fatigue that it entails: it is "trailing" (al-mukhāţāba, al-šīnāb); the huntsmen recognize a herd by its footprints and trail it upwind as far as its cover without alerting it. The cheetah, unhooded and "cast on the fur" unawares, is able to lay low several beasts before they have time to escape.

Whichever method of attack is adopted in the course of hunting, the cheetah-keeper cannot call for more than five or six "careers" (fahl, pl. atďb) from his cheetah since it makes the maximum effort in each career and thus rapidly becomes exhausted; for the same reason, it is only allowed to hunt on alternate days. Furthermore the cheetah-keeper must always cut the quarry's throat while the cheetah is still lying on it (tamahīdī), biting it hard in the nape of the neck or the throat, and must let it lap the blood caught in the bowl in order to remove it from its quarry and to take away the body. Nor will he neglect to hound the cheetah again as soon as it has remounted the pillion, so that it is not tempted to dash off after some game not intended for it, since it is only lawful to eat the flesh of a wild beast caught in this manner if the cheetah-keeper has pronounced "it is mine" involving the name of Allah (tasniya) at the moment when the beast of prey is deliberately let slip (īrsīl bi l-niyyā). The cheetah, being subject to laws of nature, becomes vexed and angry when it misses its quarry and turns a deaf ear when its master calls it in; only the clinking of its bowl makes it decide to go back. Although sensitive to reprimands, it is doubtful if this animal goes so far as to learn a lesson, as the legend has it, from a rebuke addressed in its presence but vicariously, to a dog that is in fact blameless.

The excitement of watching coursing with the cheetah has not escaped the inspiration of those Muslim poets who were responsive to subjects provided by the chase (tarādīsyyāt). Some accomplished masters of the urūjūs have left superb descriptions of the animal and its lightning charges, stressing the beauty of its tabby coat, its suppleness when creeping, its unparalleled speed and irresistible assault. Of the writings devoted to the cheetah, which are rarer than those describing hounds and sporting-birds, only those by poets of the ʿAbbāsid period have survived; we need note only such famous names as Abū Nuwās, al-Faḍl al-Raḵşāhi the rival of Abū Nuwās, Ibn al-Muṭṭāz, al-Nāšī, Ibn Abi Karīma the contemporary of al-Dāhīz, Ibn al-Muʿadhdhin and Ibn al-Ḥusayn al-Ḥāfiz. The sport of hunting with cheetahs having remained a diversion for the rich in Islam, it is not surprising to find that only the court poets of caliphs and wealthy patrons have celebrated it in verse; popular poetry and Bedouin songs have scarcely touched on the subject.

Sāsānīd Persia gave the cheetah a certain place in its works of art; miniaturists represented it either realistically or else symbolically, by pair affronted or addorsed, on either side of the "tree of life" (ṭāmīm). The West eagerly borrowed this last motif in the illuminations of the main Middle Ages, as we can see in a frontispiece of the 11th century Byzantine of Lothair (Latin ms. Paris, B.N., no. 226, f° 75v).
according to A. Michel, *Histoire de VArt*, Paris 1905, I, 1st part, 400-4). The cheetah is also to be seen as an element of animal decoration in ceramics, tap-
stones and judges; in the Bucharest Museum there are two openwork clois-
notations which were discovered in ancient Potissa and are therefore known as the "Petrossa treasure"; each handle on these vases is made in the form of a cheetah supporting the vessel, the body made of gold and studded with garnets and turquoise (see A. Michel, op. cit., 413-4). Throughout Islam, the dominating influence of Sākādīd inspiration in the minor arts swept through all the Muslim terri-
tories and remained effective for several centuries; thus one frequently finds the "cheetah motif" in the works of art in metal or stone left by the artists of Fātimid Egypt and Muslim Spain. In this con-
nection one may wonder if the historians of Muslim art have occasionally been mistaken in regard to some of these decorations with animal figures, and have identified as lions what the artist intended as cheetahs. Finally, we may note that despite the renown it enjoyed among the great in the East, the cheetah never attained the heraldic eminence in the East, in the last it corresponds with *tabat, masikhka* (masyakha) or *mu'gidam* (this last word is also used in the west).

In the east, the best known of these works is *Mu'adin al-mufahras* of Ibn Ḥaḍjar al-Askalānī (d. 852/1449), still in manuscript (see Brockelmann, S II, 73), who adopts the same classification as Ibn Khayr (see infra). In the west, the *fahrasas* appear to be more numerous (Ibn Khayr and al-
Ru'ayni [see below] give quite a long list) and some still survive; three of them have already been published: a. Ibn Khayr al-Iṣbīlī (502-70/1108-76 [g.v.]), *Fahrasat mu rāshū w an 'an 'umaydul min al-
dawādīn al-muṣāmnī fī durūb al-'im wa-awdī al-
muṣārīf: Index librorum de diversis scientiarum or-
Ru'aynī al-Iṣbīlī (592-666/1195-1268), *Barnāmadāj* or K. al-
Tākrīd li-nubūḍāt al-mustafād min al-rūṣūm wa'āl-
isnad bi-lāhī* ḍamalat al-'im fī 'l-bīltī sa'īl ārak al-
tākrīd wa'āl-ṭībīlīdā, ed. Ibrahim Shabbūb, Damascus 1361/1942.

3 Abd al-'Azīz al-Ahwānī has examined the ms. still extant and incorporated the results of his research in an extremely well documented article, *Kutub barīmādī al-ṣūlāmī fī l-'Andalus, in RIMA, i/2* (1955), 91-120. According to this writer, it is possible to distinguish four categories of *fahrasa* or *barnāmadāj*: — I. Catalogue of writings, classified according to the branch of study to which they belong. Ibn Khayr observes the following order: Kur'ānic studies, *hadith, siyar* and genealogy, *fībāh*, grammar, lexicography, *adab*, poetry; he does no more than give the names of his masters, without any further observations. To this category belongs the *Barnāmadāj* of Ibn Mas'ūd al-Khushānī (d. 544/1149) of which only a few pages survive (al-Ahwānī, 99).

2 A list of masters, with note of the works studied under their direction. The *Ghunya* of bāhlī Ḥīyād (476-544/1083-1149 [g.v.] who adopts an alphabetical classification, belongs to this category,
as does the Fahrasa of Ibn 'Atiyya al-Muhāribi (d. 541/1146; see Pons Boigues, Ensayo ... cAlids and their partisans met their deaths at Fakhkh in a battle (yawm Fakhkh} on 8 Dhu '1-Hijjah 169/11 June 786.

Madrid 1898, 207; Brockelmann, S I, instead of Granada] of his death; ms. Escorial 1726), (ballut} sometimes not without indicating c

This genre, which appears to be a particular speciality of the Andalusians, should be associated with the transmission of hadīth, and indeed it was the traditionists and fukahd* who first gives the names and biographies of his masters according to the subjects in which they specialized: Kur'ān, hadīth, grammar, adab, poetry. — 3. A combination of the two classes as in the Barmumadī of Ibn Abī 'l-Rabī', and that of Muhammad b. Dībir al-Wādiyashi (d. 749/1348; see Brockelmann, S I, 311, and correct the date and place [Tunis instead of Granada] of his death; ms. Escorial 1726), who first gives the names and biographies of his masters, then the list of subjects and works studied under their direction. — 4. The addition of personal observations, narratives etc. by the author to the above list.

During the Almoravid period, in 528/1134, the Castilians crossed through the region of the Pedroches and reached the castle of al-Bakār, where they were routed by Tāshfīn b. 'Allī and compelled to retreat along the valley of the Guadiato. In the summer of 549/1155 Alfonso VII took Pedroche and Santa Euphemia, but Pedroche was immediately recaptured by the new Almohad governor of Cordova, Ibn Igtī who defeated the count left in command of Pedroche by Alfonso VII, took him prisoner when capturing the castle by storm, and sent him to Marrākush. For a considerable time Ghāfīk-Belalcazar remained in the hands of the Almohads for, although we do not know the date when the Fahs al-ballūt passed completely into the power of Castile, it is certain that in 580/1184 the caliph Yusuf b. 'Abd al-Mu'mīn b. 'Abd al-Mu'min, on his arrival at Seville to start the Santarem campaign, sent his general Muhammad b. Wānūdīn into exile at Ghāfīk, his conduct in action against the Castilians and Portuguese having been somewhat discrepant.

The counts of Sotomayor, when building their castle on the site of the abandoned fortress of Ghāfīk, erected a grand tower of extremely picturesque appearance which, standing out prominently in the restricted setting that it commanded, merited the name of Belalcazar; the old name of Ghāfīk fell into oblivion, although later it was felt desirable to give it a more Arabic etymology with the tortuous invention of Belalcazar.

The latter were, however, the “Martyrs”. The battle, which in the time of Snouck Hurgronje was known only to cultivated Meccans but of which the Shi'a has preserved vivid recollections, was the dramatic conclusion of an 'Alid revolt which began in Medina and which, though lasting less than forty days, was regarded, because of the final massacre, as the most serious of the revolts after that which culminated in Karbala. This revolt sprang from more or less long-standing causes in addition to its immediate cause. Al-Ya'qobî tells us that, after the elevation of al-Hadi to the caliphate, there was a renewal of the persecutions against the Shi'a, some of whom went to Medina to complain to the 'Alids in the town of the persecutions which had been suffered. But so short a time elapsed between that event and the revolt that, even if the information given by this author can be accepted, it is necessary to go further back to find the real causes of the occurrence. The revolt had connections with that of Muhammad b. 'Abd Allah al-Nafs al-Zakîyya [q.e.] and his brother Ibrâhîm [q.e.] in 145/762-3, for the 'Alids which revolted in 169 were closely related to the victims of 145; on the other hand, if we examine word by word the speech which the leader made to his followers, we see that it must have been the culmination of one of those movements of a social character to which the 'Abbâsid state from the time of al-Hadi was often subject. For their leader, the movement, the cause and the course of the insurrection, see AL-HUSAYN B. 'ALI SÁHIB FAKHKH:

here we mention only that after resisting for eleven days at Medina Hûsyan set out with his followers for Mecca, and the clash with the ‘Abbâsid forces took place on the day of the tarîsîyâ (8 Dhu 'l-Hijja 113/22 June 786) at the foot of the mountain of al-Bûrît at Fakhkh. Al-Husayan, the Sâhib Fakhkh as he is often called, having refused to accept a safe-conduct, fell in battle along with other 'Alids. For their three days' bodies were left unburied, an incident which provided the poets with a moving theme for their elegies. The 'Alid Idrîs b. 'Abd Allah b. al-Hasan succeeded in escaping; he took refuge in Egypt, and from there went to the far residence of the caliphs from 223 to 269/838-83, that is, until the beginning of the 'Abbâsid period (3rd/9th century). It is to the excavations at Sâmârâ, the residence of the caliphs from 223 to 269/838-83, that we owe our earliest and in any way precise knowledge of the wares. They seem already very varied and skilfully executed, so that we are led to believe that there had been earlier developments of which we know nothing. In addition to pottery with or without glaze, incised or stamped, there are three main types of wares represented at Sâmârâ; there is a white earthenware decorated with spots or pseudo-calligraphic motives in cobalt blue, an earthenware decorated in polychrome, obviously inspired by Chinese stonewares of the T'ang period (7th-8th centuries); and finally there is an earthenware known as lustre, characterized by its metallic lights. The decoration of this last type is achieved by means of an ochre mixed with powdered silver, or copper, which separates out in the firing and is deposited as a thin film on the surface of the tin glaze; the colour varies from pale gold to ruby red and the iridescence of these tones varies according to the fall of light. Other analogous and doubtless contemporary pieces have been found at Susa. At Baghûdâ, or at other centres in the 'Abbâsid empire, this ware, which in appearance rivalled the vessels in precious metals but was never hit by the same interdiction on the part of strict Muslims, seems to have been an item in the lively export trade across the Islamic world. Thus is it that a number of fragments have been dug up at Madînat al-Zahrâ', the royal city of the caliph of Cordova, thus also that the finest collection to come down to us (nearly 150 tiles sent from Western Asia was the birth place of Islamic pottery. Its ultimate ancestors were undoubtedly the glazed bricks of the Achaemenid palaces, and its more recent forrunners the Parthian and Sâsânid wares. Islamic pottery, however, is not known to us until the beginning of the 'Abbâsid period (3rd/9th century). Baghdād or manufactured there) appear in the surround of the mihrāb in the Great Mosque at Kayrawān. In Egypt the workshops of Fustāt were initiated into the technique of lustre decoration, where we shall meet this ware again.

Persia played a remarkable part in the development of ceramic wares at a very early date. She seems to have profited from foreign as well as from pre-Islamic traditions, as is evidenced by the ware called gabrī, after the name of "Guebres", adherents of Zoroastrianism, which Islam had not completely stamped out. The ornamentation of this ware, produced by means of larger or smaller scratches in the slip that covers the body under the transparent partly coloured glaze, consists of schematic representations, recalling the ancient culture of Persia, notably of fire altars, as well as figures of men and beasts, birds, lions and dragons depicted in a curiously stylized manner.

Of all the centres of ceramic production in Ḫūrāsān, the now ruined city of Rayy, in the vicinity of Tehran, seems the most ancient. It was extremely active until the 7th/13th century and, under the name of Rhages, is the best known to collectors. The wares show great diversity of both form and technique. Lustre wares, often of a greenish gold tone, are frequently represented. Apart from tiles, facing wall surfaces, cut in eight-pointed stars and in crosses with arms of equal length, Rayy also produced bottles and vases in the form of animals, or ornamented with wild beasts modelled in relief. The predilection displayed by the potters for the representation of living beings, and even their interpretation in the round, is a pronounced characteristic of Persian taste. Inside and on the rims of plates, on the swelling walls of bottles, as well as on wall tiles, mounted soldiers and hunters ride along, rulers and stumpy, doll-faced musicians sit, all bringing to mind the figures depicted in the miniatures of the period. These little figures, standing out against a white or pale blue ground, are dressed in delicately coloured cloths heightened with gold. Inscriptions in golden letters tell of the Iranian legends illustrated in this type of decoration.

Rayy was sacked by Cingiz Khatān's Mongols in 624/1227; yet although appallingly impoverished, her potters continued production, using the techniques with which they were familiar. Attributed to the small town of Kubāca, we find not only late survivals of Chinese influence, but also characteristics that foreshadow the Turkish pottery of Asia Minor. The painted decoration under the glaze, which is colourless or stained green or blue and is often crackled, consists of stylized flowers and animals, usually in silhouette, or turbaned personages against a green ground.

The arrival of the Mongols appears to have some connexion with the establishment of stores that were found in the ruins of Gurgān. The pieces, which were found intact, had been packed in large jars, or had been buried at the time of the invasion. The wares are dateable to the end of the 5th-6th/11th-12th century; some of them might be earlier. They include copper lustre wares with a cream or turquoise ground; there are some, too, that may have been imported from Sava.

Under Mongol domination, the ceramic industry remained vigorous, especially in the Persian area, at ʿĀmul and even more so at Sava and Kaḏān, as well as in the north-east at Samarkānd. Wares with geometric, floral and highly stylized animal decoration, cut through a slip dressing and tinged with green and manganese purple are believed to have been made at ʿĀmul in the 5th-7th/11th-13th centuries.

In the Mongol p-riod we find new centres of production, such as that at Sulṭānābād, springing up. Chinese influence asserts itself and is favoured by the new rulers of Iran, who brought in Chinese potters, just as they had introduced miniature painters in the 13th century. Chinese fashions were to persist into the ʿĀlīāf period, which followed that of the Mongols. The fabulous beasts of the Far East enliven the wares attributed to Kirman in the time of Shāh ʿAbbas 995-1037/1587-1628.

The excavations carried out by the Americans before and during the second World War have brought to light the existence of ceramic activity in Nishāpūr in Transoxiana, which must have achieved its apogee in the 2nd-5th/8th-11th centuries under the Sāmānids. The wares produced seem to be the earliest ones covered with a very thin dull glaze stained lemon yellow, green or brick red; they display a disorderly grouping of geometric motives, pseudo-calligraphic elements, flowers, animals and figures, perhaps derived from ancient Persia, enclosed by black lines.

In the wares of Dāghistān to the south-west of the Caspian, and in the dishes, somewhat arbitrarily attributed to the small town of Kūbdāz, we find not only late survivals of Chinese influence, but also characteristics that foreshadow the Turkish pottery of Asia Minor. The painted decoration under the glaze, which is colourless or stained green or blue and is often crackled, consists of stylized flowers and animals, usually in silhouette, or turbaned personages against a green ground.

Apart from pieces of such forms as vases and dishes, Persia produced an abundance of ceramics for architectural purposes, which make a glittering and colourful addition of great charm to the elegantly proportioned buildings. Combinations of brick and glazed tile, as well as polychrome tiles produced by setting mosaics in monochrome surfaces, make up geometric, calligraphic and floral decorations that have a place both on the inside and on the outside of architectural structures. On the outside these ceramics encase domes, tall minarets and porches, the colours most frequently occurring being dark and light blue; on the inside one is struck by the faience mīrābs, especially those made at Kaḏān, with their flat central panels flanked by pilasters and crowned with a Persian arch with straight members.

The settlement of the Saldjūk Turks in Asia Minor at first resulted in a considerable spread of Persian art. Konya, which became the capital of the Turkish kingdom of Rûm, and where the sultans established many foundations, had an influx of craftsmen, particularly of potters, from Khorāsān as the consequence of the Mongol invasion of their country. Dating from the 6th/12th and 7th/13th centuries are some fine wall facings for interiors made from bricks glazed on one side, or of tile mosaics, besides polychrome tiles.

The collapse of the sultanate of Konya at the beginning of the 8th/14th century brought the ceramic production of Anatolia to a standstill. But it was to have brilliant revival, thanks to the Ottoman Turks, who in 726/1326 made Bursa their capital. They endowed the city with fine buildings of which ceramic ornament is the most prominent feature, and of which the mosque and the turba are the most justly celebrated. Nevertheless Bursa was not the real centre of the industry; this was at Iznıkk, a town not far from the capital. It was to remain a flourishing centre for the production of Anatolian wares (from the end of the 8th/14th to the end of the 10th/16th century), in the course of which different stages in style and techni-
que are distinguishable. At the beginning of the 10th/16th century Persian influence was still very marked, but at the end of this century, which saw the polychrome wares of Iznik reach their apogee, the potters freed themselves from Iranian tradition and the wares began to acquire specifically Turkish characteristics. The decoration is painted on slip, and to the colours already in use (cobalt blue, turquoise and green from copper), are added a black equaling them in mastery. The posthumous glory of production and was replaced by Kutahya, which copied especially a greyish green Chinese celadon colour.

During the 11th/17th century Iznik ceased production and was replaced by Kütahya, which copied the techniques and styles of Iznik but without equaling them in mastery. The posthumous glory of Iznik reached even Istanbul, where the kilns known as Tekfur came into operation at the beginning of the 12th/18th century.

Attributed to Damascus are some very fine dishes, related to the Anatolian wares, but distinguished from them as much by the colours (lacking tomato red and using manganese purple and a green from chromium oxide), as by the drawing of the designs, which are less naturalistic, less sensitive and which give greater weight to the background.

The skills of the kiln and the crucible are very ancient in Egypt and it is known that making of glass was first practised there. In the lands of the Pharaohs the people also made pottery and understood the use of glaze. If lustre ware was not first invented there, as some people believe, at least it was made there at a very early date in imitation of that of Sicily. There are some pieces of lustre very similar to those from Sāmarrā, dated to the 3rd/9th century, that is the period of the Tūnimids, or even earlier. The decoration, drawn very boldly, introduces somewhat uncouth human figures and pseudo-calligraphic elements. These wares underwent a remarkable development in the course of the 5th/6th to 7th/8th centuries under the Fatimidids. The diversity of the wares of the period, and the visible attention of the artists, attests alongside a very free attitude to the orthodoxy prescriptions concerning images, a striving after that elegance which imbues all the arts of the Fatimid era. The surfaces, covered with a fine gold lustre, are enriched by the details within the field of the lustre itself being delicately traced out with a fine point. The repertory of ornament includes four-footed beasts, birds or fish, and also the human figure, the men wearing turbans and the women with their hair hanging down. The crucifix and representations of Christ with a halo lead one to believe in the existence of Coptic craftsmen.

The same period saw the flowering of a ware with carving decoration under a monochrome glaze, especially a greyish green Chinese celadon colour. The quantity of sherds thrown on the refuse heaps dating like the city from the 4th/10th century, have yielded a great quantity of pottery with decoration consisting of manganese brown painted lines and copper green for the coloured surfaces. These wares, dating like the city from the 4th/10th century, have parallels among the eastern Barbary examples of an appreciably later date. The Islamic ceramics of Sicily (6th/12th century) suggest further parallels of a similar kind. This appearance of family grouping and the relative homogeneity of the wares of Western Islam raises a problem that warrants some attention.

The excavations of Madinat al-Zahra² show that Spain was aware in the 4th/10th century of the lustre wares imported from the east; yet the Iberian peninsula had its own centres of production also. Malaga from the 7th/13th to 9th/15th century was just such a centre, at which were produced gold lustre dishes and large jars of the type of which the one known as the “Alhambra Jar” is the most famous.

The noble grace of form of these great pottery jars is echoed in the large vases, with impressed decoration, that seem to have the same origin and may perhaps be attributed to the same period. The paste is left unglazed, or is covered with a green enamelled glaze; the decoration, arranged in registers above another, comprises blind arcing, calligraphic forms, interlacing elements and sometimes animal forms. The same technique and a similar decor is found in the linings for wells and tanks such as those preserved in Andalusia and the Maghrib. A fine collection of these stoutly-made ceramic shafts, by which to draw water, has been

² Moorish Spain was, indeed, a producer of fine ceramic wares. The excavations at Madinat al-Zahra, the caliphate city near Cordova, have yielded a great quantity of pottery with decoration consisting of manganese brown painted lines and copper green for the coloured surfaces. These wares, dating like the city from the 4th/10th century, have parallels among the eastern Barbary examples of an appreciably later date. The Islamic ceramics of Sicily (6th/12th century) suggest further parallels of a similar kind. This appearance of family grouping and the relative homogeneity of the wares of Western Islam raises a problem that warrants some attention.

The excavations of Madinat al-Zahra show that Spain was aware in the 4th/10th century of the lustre wares imported from the east; yet the Iberian peninsula had its own centres of production also. Malaga from the 7th/13th to 9th/15th century was just such a centre, at which were produced gold lustre dishes and large jars of the type of which the one known as the “Alhambra Jar” is the most famous.

The noble grace of form of these great pottery jars is echoed in the large vases, with impressed decoration, that seem to have the same origin and may perhaps be attributed to the same period. The paste is left unglazed, or is covered with a green enamelled glaze; the decoration, arranged in registers above another, comprises blind arcing, calligraphic forms, interlacing elements and sometimes animal forms. The same technique and a similar decor is found in the linings for wells and tanks such as those preserved in Andalusia and the Maghrib. A fine collection of these stoutly-made ceramic shafts, by which to draw water, has been
found at Sidi Bāʿ Uṯmān to the north of Marrākush and perhaps dating from the 6th/12th century. At the beginning of the 6th/12th century Moorish Spain and the Maghrib gave ceramics an important rôle in architectural ornament. Glazed earthenware tiles, which we first encountered in Persia and then in eastern Barbary, are associated with the adornment of minarets and make up panels in rooms. The facility of the craftsmen, specialists in sallīḍī [q.v.], in cutting out shapes in monochrome tiles and assembling them to make geometric, calligraphic and floral decorations, is astonishing. They are equally skilled in a kind of ceramic čamplévé which consists of chiselling out the glaze with a graving tool, thus leaving the elements of decoration in reserve. Finally there is recourse to a closonné treatment, called in Spanish cuerdaseca, which, using similar interlacing geometrical motives, gives from a distance an impression as of inlay work. It is a very ancient technique, not without analogy with the glazed bricks of the Achaemenid palace at Susa. Each surface is enclosed by a black line, which has an important place in the composition and which serves to prevent contiguous colours spilling over into each other. Neither the potters of Sāmarrā nor those of Madinat al-Zahrāʾ passed over this technique; and it was practised in North Africa in the 5th-6th/11th-12th centuries, [q.v.], in which the black line is replaced by a thin line incised in the paste to separate the colours, was to become a special skill of the Spanish centres of production, notably of Seville. At the beginning of the 11th/17th century (1019-1610) the Spanish Moors took the technique with them when they were expelled to Tunisia.

Traditional methods of wall revetment prolonged the tradition of ceramic inlay, so the mudejar period saw the manufoctures of Manises take over the making of lustre ware from Malaga. In the same way the green and brown decorated wares of Paterna, in the region of Valencia, seem, in the 8th/14th and 9th/15th centuries, a late legacy of the Andalusian Caliphate.

Ceramic art was still to survive, not without remarques with Africa. Morocco still has her cutters and assemblers of tile mosaics (sallīḍī), and the potters of Fez knew, until quite recent times, how to produce vessels with blue or polychrome decoration as well as dishes of an original kind. Turkish Algeria used to have a remarkable quantity of earthenware tiles, but they were almost entirely imports from Europe.

Tunisia, and especially Tunis, has not wholly forgotten the mediaeval ceramic arts. It is indeed likely that tin-glazed wares have never ceased to be made while there has been a use for them. The last few centuries have seen the production of vessels which preserve quite well the older colours, and panels decorated with blind arcing, vessels and covers, in which local traditions merge with contributions from the Levant.

On the death of ʿAdud al-Dawla (372/982), Muʿayyid al-Dawla tried unsuccessfully to initiate a reconciliation with his brother, and died in his turn in 373. His vizier Ibn ʿAbbād (959) seems to have calculated that no adequate opposition would be put up against Fakhr al-Dawla, now the eldest member of the family, or that the sons of ʿAdud al-Dawla, the masters of ʿIrāk and Fārs, already had vizziers of their own and would not retain him (Ibn ʿAbbād) in his present position; he appealed boldly to Fakhr al-Dawla, the very man whom hitherto he had always opposed and who, travelling to Rayy with all haste, assumed power without difficulty, while the son of Muʿayyid al-Dawla, the governor of Ṣafāsān, submitted to him; naturally enough he retained the all-powerful Ibn ʿAbbād as vizier.

Despite the difference in temperament of these princes, this fact ensured a certain continuity in policy, and in particular Fakhr al-Dawla, despite the debt he owed to Kābūs, retained Diurdjān which Muʿayyid al-Dawla had annexed; in Ḵūraşān, the struggles between Tāgh, whom he supported and welcomed, and Ibn Simṛḏūr, his successor, allowed him on the other hand to combine gratitude with the continuation of an anti-Sāmānīd course of action. However, Muʿayyid al-Dawla had become a vassal, and Fakhr al-Dawla, the very man whom hitherto he had always opposed and who, travelling to Rayy with all haste, assumed power without difficulty, while the son of Muʿayyid al-Dawla, the governor of Ṣafāsān, submitted to him; naturally enough he retained the all-powerful Ibn ʿAbbād as vizier.

We know that the methods of adjudication of fiscal districts, in use at Rayy, helped to make Ibn ʿAbbād unpopular when he tried to introduce them in Ḵūrizān; there can be no doubt as to the general vigilance and regularity of the administration under this vizier, and certain minor innovations made by him are recorded in the Taʾrikh-i Kūm, written in the days of Fakhr al-Dawla, and later the Siyāsat-nāma of Niẓām al-Mulk, chap. 41. The geographer al- Ṭūsī, who also wrote during this reign (see especially 399-400), gives an impression of the prosperity of the country; apart from a mosque, Ravy is also indebted to him for a new citadel (perhaps Tabarak) (Yāḵūt, iii, 855).

Fakhr al-Dawla died in 387 (August 997) and, it is said, the Treasury key being in the possession of his son who was absent, there were no funds available to provide for a decent burial. Some weeks after his death Kābūs returned to Dīrdjān.

Fakhr al-Dawla, name of two Lebanese amirs of the Druze house of Maʿn (p.n.): Fakhr al-Din I, amir of the Shūf (north-east of Sidon) at the time of the Ottoman conquest of Syria, was among the chieftains who offered submission to the conquering Sultan Selim I in Damascus in 921/1516. The Sultan, impressed by his eloquence, is said to have sent him back with the title amīr al-barr (lord of the land), recognizing him as overlord of the chieftains of the Druze Mountain (the Ḥarb, the Dīrūd, and the Shūf). Fakhr al-Dawla I was assassinated in 951/1544 under obscure circumstances on the orders of the Pasha of Damascus, and was succeeded by his son Korkmaz.

Fakhr al-Din II, son and successor of Korkmaz, was born in c. 980/1572, and was only a boy when his father died in 993/1585. In the previous year a convoy bearing the annual tribute from Egypt was ambushed and robbed at the bay of ʿAkkār, to the north of Tripoli; and the enemies of the Maʿns in Lebanon, jealous of their rising power, accused Korkmaz of responsibility for the misdeed before the Ottomans. Consequently, Ottoman troops attacked and ravaged the Shūf, and Korkmaz died in flight. His fall was followed by civil war in the Druze Mountain between the Kayṣāl faction who supported the Maʿns, and the opposing Yamanis led by the house of ʿAlam al-Din. By 1000/1591 the Kayṣās had clearly gained the upper hand, and Fakhr al-Din II could effectively take over his father's position.

The first aim of the young amir was vengeance against Yūṣuf Sayfā, the powerful Kurdish chieftain of the Tripoli region in northern Lebanon who had been the chief instigator of the Ottoman attack on the Shūf in 1585. Shortly after Fakhr al-Din's
accession, in 1593, Yusuf Sayfā had considerably expanded his domain by absorbing the Maronite districts of Bsharri, Batroun, Diabāy and Kisrawān, and extending his hold southwards to include Beirut. Master of the whole of northern Lebanon and of Ṭākār, Yusuf Sayfā became the most powerful figure of the time in Syria, and his territory extended northwards to Lattakia and Hamā. However, in his struggle against the Sayfā, Fakhr al-Dīn had for allies the Maronites who, smarting under Sayfā oppression, were ambitious for the grand Druze amir as a possible deliverer. Fakhr al-Dīn encouraged the Maronites in this attitude, surrounded himself with Maronite advisers, and was soon dreaming of uniting the Druze and the Maronites of Lebanon under his own dynasty.

Fakhr al-Dīn’s first step was to make friends with Murād Pasha of Damascus, paying him a formal visit and obtaining from him possession of the port of Sīdīn, which he made his capital. While in Damascus Fakhr al-Dīn also started an intrigue against his enemies ʿAlī Harfūsh of Bālaib and Ǧībāl ʿAmīl and Mānsūr Fūrayyḥ of the Bīkā, both potential allies of Yusuf Sayfā. As a result both chieftains were seized and executed by Murād in the following year. Fakhr al-Dīn thereupon invaded and seized the Bīkā, making peace with Mūsā Harfūsh, ʿAlī’s successor, and securing the Druze Mountain against Beduin attack with the additional wealth accruing from the trade of Sīdīn, which he made his capital. While in Damascus, from 1023/1614, he made peace with his successor on the payment of ʿalām for the tribute; and in the following year a Maronite bishop was sent to Italy to represent the Druze amir at the court of Tuscany and at the Holy See.

Murād Pasha died in 1020/1611 and was succeeded by Fakhr al-Dīn’s bitter enemy Nāṣūḥ Pasha. Meanwhile, the growing relations between Fakhr al-Dīn and Tuscany had greatly increased the suspicions of the Porte. Nasuḥ Pasha’s suspicions were particularly aroused when Fakhr al-Dīn began to employ a standing army of mercenaries (the subkan—see SEGAB) instead of depending on the usual peasant levies, and when he began to show a keen interest in the sandjaks of Nablus and ʿAgālijīn, in Palestine and Transjordan, which controlled the road to Jerusalem. Attempts to appease the Grand Vizier with gifts proved useless. When Fakhr al-Dīn clashed with Ahmad Hāfīz Pasha of Damascus over the two sandjaks, Nāṣūḥ Pasha mobilized a powerful army for the command of Hāfīz. Expecting defeat, Fakhr al-Dīn handed over affairs to his brother Yūnūs with instructions to move the capital to Dayr al-Kamar in the Ṣūḥr, and himself took ship from Sīdīn and fled to Tuscany.

The self-imposed exile of Fakhr al-Dīn was a temporary retreat after a temporary reverse. In 1023/1614 Nāṣūḥ Pasha died. Hāfīz Pasha was shortly after recalled from Damascus, and Yūnūs Maʾn made peace with his successor on the payment on a large sum of money and a promise to dismantle the fortresses of Arrūn and Sūbāyba. Fakhr al-Dīn could now return to Lebanon, arriving back at Acre in 1027/1618.

In 1024/1615, during Fakhr al-Dīn’s absence, Yusuf Sayfā had sacked Dayr al-Kamar. This gave Fakhr al-Dīn an excuse, upon his return, to ally himself with ʿUmar Pasha of Tripoli, who wanted Sayfā to pay arrears of tribute. Fakhr al-Dīn successfully intervened against Sayfā on behalf of the Pasha, and in return received the districts of Djubayl and Batrun. A formal peace between the two chieftains was arranged in 1028/1619, Fakhr al-Dīn taking Sayfā’s daughter in marriage. In the same year Fakhr al-Dīn procured the tenure of the sandjaks of Ǧībāl and Lattakia, which had previously belonged to Sayfā. During the next five years fighting between the amir and his father-in-law continued, Fakhr al-Dīn meanwhile seizing the districts of Bsharri and Ṭākār, until Yusuf Sayfā died in 1033/1624. Three years later Fakhr al-Dīn completed his triumph by arranging for his son Husayn, a Sayfā on his mother’s side,
In the meantime, Fakhr al-Dīn had also obtained the titles to the sandiaks of Nābulus and 'Aqūlūn, and it was left to him to evict the occupants of these sandiaks. As he campaigned in Palestine for the purpose, Muṣṭafā Pāša of Damascus, incited by Kürd Ḥamza, formed a coalition against the amīr and advanced into the Bīṯā in 1032/1623. Fakhr al-Dīn rushed back and met him at 'Andjar, where Muṣṭafā Pāša was defeated in battle and taken prisoner, then honourably released. During the years that followed this victory Fakhr al-Dīn reached the height of his power; and by 1040/1631 his territory had come to extend westwards to Palmýra, and northwards almost to the borders of Anatolia.

Following 1040/1631, however, troubles began to come upon Fakhr al-Dīn thick and fast. While he campaigned in northern Syria Beduín chieftains revolted against him in Palestine and Transjordan; while in the Šīfā the Yamanī 'Alām al-Gīns, in alliance with the sons of Yūsūf Sayfayr, were creating unrest. By 1042/1633 civil war broke out in the Druze Mountain, and Fakhr al-Dīn’s firm allies the Kaysā Tanālūḳ [q.v.] were massacred by a man by the name of the ‘Alām al-Dīns. Meanwhile the Ottoman Government, under the vigorous Sultan Murād IV, was becoming concerned about Fakhr al-Dīn’s activities in northern Syria and the fortresses that were going up near the Anatolian border. Accordingly, the Grand Vizier Qādir, and Khaṣṣūl Pāša, instigated Mustafa Pasha of Damascus, incited by the amīr’s troops, commanded by his son ʿAlī, were defeated at Šubayba, and ʿAlī himself was killed. Before the resolute Ottoman attack Fakhr al-Dīn’s precariously balanced power collapsed within a few weeks. The amīr himself fled to a cave in the cliffs of Dżazzān, where he was discovered and captured by Kūṭūk Aḥmad, then sent in chains to Istanbul. There Fakhr al-Dīn was executed by strangling in 1045/1635, along with his sons. Only his youngest son, Ḥusayn, was spared, to become a prominent Ottoman courtier and an ambassador of the sultan to India. He was a friend of the historian Sharih al-Manarzade [q.v.], and is himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, himself a warm partisan of al-Ashʿar, his master in philosophy, and al-Kamal al-Dilli (al-Diaball?), whom he followed to Maragha, 1042/1635, conquered up to Cāfīgān in the south and made a bid for Lakhnawtī in the north-west, but failed in the latter venture. From 1032/1623 to 1033/1624 he ruled undisputedly at Sonargāwn, issued silver currency and assumed the titles of Yāmīn-ī Khaṭṭālī-Allāh and Nāṣir-ī Amīr al-Muḥimin. In 1031/1623 he succeeded at Sonargāwn by his son ʿIyyār al-Dīn Ghażī Shāh, who in 1032/1632 lost his kingdom to ʿIyyār al-Dīn Ilyās Shāh, the ruler of Lakhnawtī, the latter united the whole of Bengal under his authority. Ibn Battūta visited Sonargāwn when Fakhr al-Dīn was the ruler. He pays tribute to the king’s generosity towards the pirs, and speaks of the cheapness of commodities within the kingdom.

ing to Rayy, he entered into relations with Shihab al-Dîn al-Ghuri, Sultan of Ghazna, who heaped money and honours upon him. The same thing occurred to him in the Minâri, in the person of Muhammad b. Takaš, with whom he lived for some time in Khorásân. This prince showed him the greatest consideration and caused a madrasa to be built for him.

In 580/1184, while on his way to Transoxania in order to reach Bukhârâ, he stopped for some time at Sarâkhg where he was received with honour by the Shâh of Ghur and his company of disciples. He was sent on a mission, he settled down finally in Herât, where the Ghûrid Sultan of Ghazna, Ghiyâth al-Dîn, allowed him to open a school for the general public within the royal palace.

After a certain number of journeys which took him to Samarqand and as far as India (where perhaps he was sent on a mission), he settled down finally in Herât where he passed the greater part of his life. He was known there by the title of Shaykh al-Islâm. It is said that at this period, at the height of his glory, more than three hundred of his disciples or followers accompanied him when he moved from one place to another.

He was so poor at the outset of his career that his compatriots in Bukhârâ were obliged to make a collection in order to help him when he fell ill there; but later on he came into a vast fortune. He married two sons to the two daughters of an immensely rich doctor from Rayy and, on this man’s death, inherited part of his money.

His lively and penetrating intelligence, his prodigious memory (he is said to have learned the Shâmil of al-Djuwayni by heart in his youth), his methodical and clear mind, caused him to become a teacher celebrated throughout the whole region of Central Asia, from all parts of which people came to consult him on the most diverse questions. He was, moreover, an excellent preacher. Of medium height, well-built, heavy-bearded, endowed with a voice both powerful and warm, he inspired and enflamed his listeners to the point of tears and was himself deeply moved by emotion when he was preaching. His preaching converted many Karrâmis to Sunnism. Despite his strong grounding in philosophy and numerous controversies he was extremely pious (kîna min ahl al-dîn wa l-tasawwuf). In many of his treatises, he often meditated upon death and, according to Ibn al-Ansârî, 730), he also criticized Ashâ’î's zeal in the defence of Sunnism was an opponent of atomism (cf. K. al-Djâwhar al-fard, ii, 286, 392, 475, etc.; Lawdmi-al-bayyindt, xix (1937), 190). He points out Razi's frequent resort derives from the interpretation of the Timaeus" (Les "Controverses" de Fakhr al-Dîn Râzî, in BIE, xix (1937), 213-47).

For the influence of al-Razi’s ideas on a mind as uncompromising as that of Ibn Taymiyya, see the remarkable thesis of H. Kraus, Fakhr al-Dîn Râzî, in Isl., iii (1912), 213-47.

For the influence of al-Razi’s ideas on a mind as uncompromising as that of Ibn Taymiyya, see the remarkable thesis of H. Kraus, Fakhr al-Dîn Râzî, in Isl., iii (1912), 213-47.

These last, who accused him of corrupting Islam by preferring to its teaching that of Aristotle, Fârâbî and Avicenna. He was also reproached for reporting so much of the arguments of the adversaries of Islam, without being capable of refuting them convincingly.

In 606/1209, seriously ill and feeling the approach of death, he dictated his “Testament” to his disciple, Ibrâhîm b. Abî Bakr al-Iṣṭâhânî, on Sunday, 21 Muhârram/26 July. The text of this has been preserved by, among others, al-Subîkî and Ibn Abî Usaybî. It is a true profession of Sunni faith and a beautiful example of total resignation to the will of God. He commends his children to the Sultan and asks him, as well as his disciples, to bury him according to all the ordinances of Muslim law on the mountain of Mârâjân near Herât. Certain biographers of al-Râzî have held that he was poisoned by the Karrâmîs. In addition, Ibn al-Ṭabarî (Barbehraeus) and Ibn Abî Usaybî pass on a rumour according to which he was buried secretly within his house to prevent the crowd from ill-treating his remains. It is unlikely that either of these reports is true: al-Râzî’s tomb is still venerated at Herât. Although he was a convinced follower of al-ʾAshârî, al-Râzî showed himself, at least in his youthful works, to be an opponent of atomism (cf. K. al-Djâwhar al-fard, ii, 27). It is true that later on (cf. Mafâṣîth al-ṣâhil, 2, i, 5 and K. Lawdim al-bayyindt, 229; K. al-Arba’in ft usul al-dîn) he seems to have changed his views or at any rate to have shown less severity in his criticism of atomism. He dedicated his K. al-Djâwar al-sard (Ibn Abî Usaybî, ii, 30) to this subject and al-Ṭòstî gives a short analysis of it in his Shârî al-ʾIṣṭâhâl (ed. of Istanbul, 4). According to Khînsârî (Rawdât al-dîjanâmât, 730), he also criticized Ashâ’î’s doctrine of the divine attributes.

His profound knowledge of falsafa (he had studied al-Fârâbî and composed a commentary on the Iṣṭâhâl and the Ḭaṣūn al-ʾakhrîr of Ibn Sinâ), allowed him to make use of considerable portions of it in his dogmatic synthesis (cf., for example, the greater part of the Mabdhîth, which he inspired and enameled his listeners to the point of tears and was himself deeply moved by emotion when he was preaching. His preaching converted many Karrâmis to Sunnism. Despite his strong grounding in philosophy and numerous controversies he was extremely pious (kîna min ahl al-dîn wa l-tasawwuf). In many of his treatises, he often meditated upon death and, according to Ibn al-Ansârî, 730), he also criticized Ashâ’î’s doctrine of the divine attributes.

many points he was led to make some concessions to his doctrine of the Prophets. Furthermore, his political sociology remains incomprehensible enough unless we set to some dropping, a portion against the conception of sovereignty and the theory of the Caliphate defended by al-Razi. In short, it cannot be denied that Fakhr al-Din al-Razi led Ibn Taymiyya on towards a deeper personal understanding of philosophy and heresiography” (85). Ibn Taymiyya himself passed a severe enough judgment on al-Razi (cf. Bughyat al-murtad, Cairo 1390, Ri’d, Cairo 1390).

4. —Lubab al-I’gharat (Cairo 1326/1908; 2nd ed. Cairo 1355/1936, 136 pp.). A summary of Avicenna’s celebrated work, written after the commentary referred to last. It is concerned not with extracts from the work, but with a true digest of Avicenna’s thought. Al-Razi follows thus each nakdij of the logic and each namat of the physics and metaphysics.

5. —Mu’asalsal afkdr al-mutakhaddimin wa ‘l-mutad-‘alakhhijrmin min al-’ulam‘i wa ‘l-hukammi wa ‘l-mutakallimmin (a précis of ideas, scholars, philosophers and mutakallimun, ancient and modern). Although at the beginning al-Razi indicates the plan which he intends to follow, in the course of the book’s development this design is almost lost. Kaldm, he says, is divided into four parts which he calls “cornerstones” (arkhmin). He begins immediately with the first, the basic sciences, with others which are as follows: 2) being and its several modes; 3) rational theology (ilahiyyiyat); 4) the traditional questions (al-sami‘iyid). The preliminaries (1-32) go far beyond those of al-Diuwayni (in the Irshad) and of al-Ghazali (in the Ithistad). Three important questions are: a) the first ideas, where al-Razi speaks of perception, of judgment, and where he erects the divers theories concerning the innate or acquired character of the judgments; b) the characters of reasoning (akhim al-napar), including the setting out and proving of a dozen “theses”; c) apodictic proof (al-daili). It is in the second part that the sections are distinguished with less clarity. Al-Razi begins by speaking of the mul‘aimii (things known) where we can distinguish with some difficulty the second division into characters of existing beings; 2) the non-being (fi ‘l-ma’dum); 3) the negation of modes (abwdl) which are intermediary between being and non-being. Al-Razi next divides created beings into necessary and possible and goes on to examine the various arguments concerning these two categories, expounding and discussing in turn the theory of the mutakallimun and that of the falsafa. There follow thirty or so paragraphs whose contents are oddly enough assorted (on cold, softness, weight, movement, death, science, the senses, etc.), badly arranged paragraphs which are meant to link up probably with what immediately follows concerning the kinds and properties of accidents. Next the author studies bodies (ajismun), their constitution, properties and kinds. Finally, the last section of this part is dedicated to the general characteristics of being, the One and the Many, cause and effect, etc. The two last ruhms deal directly with kaldm. The third study, the Ilahiyyiyat, is a demonstration of the existence of the Necessary Being, of its attributes both positive and negative, of its acts, and of the relationship between divine and created acts. Then come some brief lines on the Divine Names. The fourth part, which is exclusively based on “Scripture”, comprises four sections: doctrine of the Prophets, eschatology, the “Statutes and Names” (the problem of faith), and finally, the imamate.

Encyclopaedia of Islam, II 48
The Cairo edition (the only one in existence; printed at al-Husayniyya, n.d.) has at the bottom of the pages the Ta'dib al-Muhasabat of Nasir al-Din al-Ma'ani al-Hasan, the "Principles of Razi and Tusi," Bonn 1910, and Die spekulative und positive Theologie des Islam nach Razi und ihre Kritik nach Tusi, Leipzig 1912), but "their value is diminished, if not indeed made doubtful, by the great number of errors in translation and arbitrary interpretations" (P. Kraus).

6. — al-Ma‘ālim fi usūl al-dīn. In his introduction to this work, al-Ra‘īz writes: "This is a compendium which deals with five kinds of sciences: dogmatics (usūl al-dīn), the methodology of law (usūl al-fikhr), fiqh, the principles on which differences of opinion are based (usūl al-mu‘tābāra fi l-‘ibādat, fi-siyās), the rules of controversy and of dialectics." Only the first of these five parts has been printed (on the margin of the Muhassal, see above, no. 5).

7. — Mafādi al-ghayb or K. al-Tafsir al-kabir (ed. Būlāq 1279-89, 6 vols.; Cairo 1310, 8 vols. (reprinted in 1924-27); 1327, 8 vols., with the commentary). This short work has been analysed by Kraus (who seems to have believed that it had never been published): Les controverses de Fakhr al-Din Ra‘īz, in BIE, xix (1937), 187-214. The full title, added by a later hand, is: "The controversies of Fakhr al-Din al-Ra‘īz which took place during his journey to Samarqand and then to India".

9. — Ḥikāyāt firāk al-Muslimin wa l-Mushrikin. In this little treatise, edited in 1938 by 'All Sānī al-Nashabār, al-Ra‘īz refers, in a manner very concise but at the same time precise and objective, to the majority of Muslim sects and to a number of the "sects" of the Zoroastrians, Jews and Christians. A special chapter is reserved to the philosophers. Al-Ra‘īz points out that he is the only one to regard the Sūfis as a sect.

10. — Al-Mabādī l-ma‘ārifiyya (Haydārābād 1342, 2 vols. of 726 and 550 pp. respectively). This is a work on "metaphysics and physics" (fi l-ilāhiyya wa l-fab‘āliyya) which, however, does not refer at all to the ‘ilm al-ma‘ārifiyya. The author does not fail to point out that he is the first to have conceived a work of this sort. At the beginning, he explains clearly the plan which he intends to follow in this work which consists of three "books". Knowledge being the more perfect as its object is more general, the author will dedicate the first book to the study of being and its properties, then to its correlative, non-being, then to essence, unity, and multiplicity. Having defined these general principles (al-umrūr al-‘imama), the author studies a certain number of logical problems, beginning with the concept of identity and of the possible, substance and accident. An introduction studies them in a general manner (25 chapters), then a first dibni consisting of five funūn is concerned with accident as follows: 1) quantity; 2) quality; 3) relative categories (al-mabādī l-ma‘ābīyya); 4) causes and effects; 5) movement and time (72 chapters). The second dibni is concerned with substance as follows: 1) bodies; 2) soul (l-ilāhiyya); 3) intelligence. Finally, the third book (li, 448-524) deals with "pure metaphysics" (fi l-ta‘lāhiyya l-ma‘ādī) and comprises four sections: 1) proof of the existence of the Necessary Being and of its transcendence; 2) its attributes; 3) its acts; 4) prophecy. This work is divided carefully into funūn, abāb, and ḥuṣūl, which call to mind Avicenna's Shifā‘. From him, whom he calls simply al-ra‘īz, and to whom he refers very frequently and sometimes quotes verbally, he borrows much important material, above all from the Shifā‘ (physics, metaphysics, de Coelo et Mundo), the Naḥṣ, and occasionally the Fakhārī (cf. ii, 342). He often accepts his data, but he does not hesitate to dispute freely certain of his principles, pointing out, sometimes with astonishment, what he calls contradictions in him. On the
subject of necessary emanation ("from one can come forth only one") and the theory of the active intellect (cf. ii), he disagrees completely with Avicenna. He represents the point of view which was expressed by al-Farabi, especially by his school and by his most famous disciple, Fakhr al-Din al-Razi (d. 755/1353), the prince of the Razi dynasty, where at first, as in the 13th/19th century, the school of al-Farabi was brought from Persia to Turkey in the 10th/16th century, and to the west, to the 11th/17th century, where at first, as in the west, light paper on a dark ground was always used. It is not possible to classify the forty questions as follows: 1) the signs of the temperaments; 2) the conditions special to the four ages; 3) the conditions special to the several states; 4) differences of character arising from the differences of countries, hot and cold climates, etc. Finally, the third dissertation is given up to the significance of numbers.

11. — Kitāb al-Fīrsad. This book on physiognomy has been edited (from the three manuscripts of Cambridge, the British Museum, and the Aya Sofia) by Youssouf Mourad (La physique, v. monisme arabe et le Kitāb al-fīrsad de Fakhr al-Din al-Razi, Paris 1936), with a long introduction and a French translation, notes and commentary. The work consists of three dissertations (mahālād). The first deals with the general principles of this science, the second is made up of four sections as follows: 1) the signs of the temperaments; 2) the conditions special to the four ages; 3) the conditions special to the several states; 4) differences of character arising from the differences of countries, hot and cold climates, etc. Finally, the third dissertation is given up to the significance of numbers.

12. — Kitāb al-Arba'īn fi usūl al-dīn (Ḥaydarābād 1353/1934, 500 pp.). This treatise on theology was written by al-Razi for his eldest son Muhammad. The plan of the questions with which it deals is not indicated by the author. It is nevertheless possible to classify the forty questions as follows: A. Beginning of the world in time (q. 1); the non-being is not a thing (q. 2). B. Existence of God (q. 3). C. Attributes of God (q. 4-40): God is eternal (q. 4), unlike everything which exists (q. 5). His essence is identical with His existence (q. 6). He does not exist in space (q. 7 and 8), it is impossible for His essence to enter anything (q. 9), it is impossible that He should be subject to accident (q. 10). He is all-powerful (q. 11), all-knowing (q. 12), possessed of will (q. 13), living (q. 14), He has knowledge and will (q. 15), He is hearing and seeing (q. 16), speaking (q. 17), everlast-
inger (q. 18), visible (q. 19); His essence can be known by man (q. 20); He is one (q. 21), creator of the acts of man (q. 22), and of all which exists (q. 23). He wills all things (q. 24); good and evil are determined by religious Law (q. 25); the actions of God are not identical (q. 26); the existence of atoms (q. 27), reality of the soul (q. 28), existence of the void (q. 29), impecableness of the Prophets (q. 30), comparison of angels and messengers (q. 31), the miracles of the saints (q. 34); reward and punishment (q. 35), non- eternal nature of the punishment of Muslim sinners (q. 36), the intercession of the Prophet (q. 37); whether proofs based on tradition produce certainty (q. 38), the imāmate (q. 39), methodology concerning rational proofs (q. 40). What is so striking in this treatise is the attitude of al-Razi towards atomism which here he seems to approve, whereas in the 11th/17th century, where at first, as in the east, light paper on a dark ground was always used. There are specimens of Fakhrl's work—he cut principally examples of calligraphy, flowers and gardens—in the album prepared for Murād III, now in the Vienna Hofbibliothek; for Ahmad I he cut out a Gulistān, which did not, however, survive his criticism; Murād IV on the other hand thought very highly of the artist. He is buried in Istanbul near the Edirne gate.

FAKHR AL-DIN AL-RAZI — FAKHR AL-DIN AL-RAZI

FAKHR AL-MULK [see ‘AMMAR, BAND].

FAKHR AL-MULK B. NĪẓĀM AL-MULK [see NEJĀMĪDS].

FAKHRĪ (d. ca. 1027/1618), a native of Bursa, the most celebrated silhouette-cutter in Turkey. This art (san'āt-i šaf) was brought from Persia to Turkey in the 10th/16th century, and to the west, in the 11th/17th century, where at first, as in the east, light paper on a dark ground was always used. There are specimens of Fakhrl's work—he cut principally examples of calligraphy, flowers and gardens—in the album prepared for Murād III, now in the Vienna Hofbibliothek; for Ahmed I he cut out a Gulistān, which did not, however, survive his criticism; Murād IV on the other hand thought very highly of the artist. He is buried in Istanbul near the Edirne gate.

FKHRI, SMS AL-DIN MUHAMMAD b. Fakhr al-Din Sa'dī Iṣfāhānī, an Iranian philologist, author of the Misṣārī-Dīmnāl wa-mujtāḥid Bū Iṣbāhī ("The bird-trap offered to Dīmānl and the key entrusted to Abū Iṣbāhī"), written in Iṣfāhān, after residing in Sīrāq, and dedicated in 1454/1934 to Dīmān al-Din Abū Iṣbāh Muhammad, the last prince of the Iṣbāhī dynasty (q.v.). The work consists of four sections: prosody (tarīd), knowledge of rhyme (kawsīfī), rhetorical devices (badad-r al-sandānī), a lexicon intermingled with verses in praise of the prince (German words arranged according to their final letter: they will be found in recent western dictionaries). Salemann, the editor of this lexicon, also adds a poem of 150 lines of verse, Ṭoḥāḥ al-balāh ("Hearts’ desire"), moral and mystical in content, its attribution to Fakhrl being questionable (the manuscript of the B.N., Paris, Cat. Blochet no. 158, 5°, used by Salemann, puts it only under the name Shams). In the preface to the Misṣārī, writing in a very careful and elaborate style, the author states that in 713/1313, while still a youth, he lived...
in Luristan in the company of writers and scholars and there composed a manual on versification ... to as Khatt', cf. R. B. Serjeant in BSOAS, xxv (1962), 246. His great ancestor was Muhammad b. Idris b. Muhammad became the technical term for a specialist (fakih) in its non-technical (shari'a [q.v.]) sense. His ancestor of Muhammad b. Zayn b. Muhammad b. Ahmad (d. 556/1162), after the town of Daw'an where he moved and where he died, and his brother Husayn b. Muhammad (d. 1040/1630) who was kadi in Tarim and got involved in disputes between members of the influential Aydars b. [q.v.] family. Husayn had two sons: Ahmad (d. 1052/1642) and 'Abd Allah, who travelled to India in his youth and settled in Kunur, where he married the daughter of his governor 'Abd al-Wahhab and gained public importance, although he mainly occupied himself with teaching. He seems to have studied mathematics while there and to have applied himself to the pursuit of alchemy. He died in Kunur. A nephew of Abu Bakr and Husayn, called Muhammad b. 'Umar b. Muhammad, settled in Kunur where he married the daughter of his governor 'Abd al-Majid and acquired some prominence, which he retained in the days of 'Abd al-Majid's brother and successor 'Abd al-Wahhab; but he fell upon bad days after the latter's death and moved to Haydarabād, where he died.

From (e) 'Ali was descended his great-grandson Ahmad b. 'Umar b. Muhammad b. 'Ali (d. 1181/17th century), whose studies took him to Mecca, Medina and Cairo; then he went back to Tarim where towards the end of his life he was twice kadi. From (d) 'Alawi were descended his son Muhammad b. Alawi (d. 924/1519 in Aden) and his great-grandson 'Abd al-Rahmān b. Alawi b. Ahmad b. Alawi (d. 1047/1637), a prominent sāfi, jurist and teacher. From (e) Zayn was descended 'Abd Allah b. Zayn b. Muhammad b. 'Abd al-Rahmān b. Zayn, a teacher of al-Shilli, author of al-Maṣṣira al-rāwī, who later moved to India, studying and teaching, until he settled in Bījāpur, where he died. A chronicler called Muhammad b. 'Umar al-Tayyib Bā Fakih Bā al-Shilli, about whom no biographical details can be traced, was the author of a chronicle commonly referred to as Ta'rikh Bā Fakih al-Shilli (covering the 9th/10th century); cf. R. B. Serjeant in BSOAS, xii (1950), 292-5; xxv (1962), 245 f.

From (f) Fakih, Bā, a family of Bā 'Alawi sayyids of Tarim in Ḥaḍramawt descended from Muhammad b. 'Ali (d. 682/1245), called masul 'Ajydid or sāhib 'Ajydid, after 'Ajydid, now a suburb of Tarim, to which he moved from Tarim. His father, 'Ali b. Muhammad (d. 838/1434) was called sāhib al-banā'at, after an estate he had near Tarim which he developed as a plantation and which became a saccosant enclosure (kafta). The name Bā Fakih apparently refers to sāhib al-banā'at's great-grandfather, al-Fakih Ahmad b. 'Abd al-Rahmān b. 'Ali b. Muhammad (d. 726/1326), whose great-grandfather was Muhammad sāhib Mirbāt (d. 556/1652), after the town of Mirbāt, then a prosperous town on the coast of Ḫūfar, where he moved from Tarim and where he later died and was buried. From sāhib Mirbāt are descended all the Bā 'Alawi sayyids of Ḥaḍramawt. Muhammad b. 'Ali, masul 'Ajydid, the ancestor of the Bā Fakih, is described in sayyids literature as a great sāfi, a description, however, which is lavishly used by sayyids writers about their ancestors. His descendants known to us were mainly sāfis, teachers and jurists. They are descended through his sons (a) 'Abd al-Rahmān, (b) 'Abd Allāh, (c) 'Ali, (d) Alawi and (e) Zayn.

Through (a) 'Abd al-Rahmān were descended his son Zayn (died in al-Ṣāir) and the latter's son 'Abd al-Rahmān (d. 1350/1934). Through (c) 'Ali were descended, from his great-grandson Muḥammad, Bā Bakr b. Muḥammad (d. 1005/1696), a prominent teacher and jurist, called sāhib Kaydān, after the town near Daw'an to which he moved and where he died, and his brother Husayn b. Muḥammad (d. 1040/1630) who was kadi in Tarim and got involved in disputes between members of the influential Aydars b. [q.v.] family. Husayn had two sons: Ahmad (d. 1052/1642) and 'Abd Allāh, who travelled to India in his youth and settled in Kunur, where he married the daughter of his governor 'Abd al-Wahhab and gained public importance, although he mainly occupied himself with teaching. He seems to have studied mathematics while there and to have applied himself to the pursuit of alchemy. He died in Kunur. A nephew of Abu Bakr and Husayn, called Muhammad b. 'Umar b. Muhammad, settled in Kunur where he married the daughter of his governor 'Abd al-Majid and acquired some prominence, which he retained in the days of 'Abd al-Majid's brother and successor 'Abd al-Wahhab; but he fell upon bad days after the latter's death and moved to Haydarabād, where he died. From (c) 'Ali was descended his great-grandson Ahmad b. 'Umar b. Muhammad b. 'Ali (d. 1181/17th century), whose studies took him to Mecca, Medina and Cairo; then he went back to Tarim where towards the end of his life he was twice kadi. From (d) 'Alawi were descended his son Muhammad b. Alawi (d. 924/1519 in Aden) and his great-grandson 'Abd al-Rahmān b. Alawi b. Ahmad b. Alawi (d. 1047/1637), a prominent sāfi, jurist and teacher. From (e) Zayn was descended 'Abd Allāh b. Zayn b. Muhammad b. 'Abd al-Rahmān b. Zayn, a teacher of al-Shilli, author of al-Maṣṣira al-rāwī, who later moved to India, studying and teaching, until he settled in Bījāpur, where he died. A chronicler called Muhammad b. 'Umar al-Tayyib Bā Fakih Bā al-Shilli, about whom no biographical details can be traced, was the author of a chronicle commonly referred to as Ta'rikh Bā Fakih al-Shilli (covering the 9th/10th century); cf. R. B. Serjeant in BSOAS, xii (1950), 292-5; xxv (1962), 245 f.

Fakih, BAL, a family of Bā 'Alawi sayyids of Tarim in Ḥaḍramawt descended from al-Fakih Muḥammad b. 'Abd al-Rahmān, called al-asābā, a prominent scholar who, after studying in his native Tarim, Aden, Ṣūbīd, Mecca and Medina, settled in Tarim, where he died in 917/1512. A kind of historical work by him was used as a source of the Ta'rikh Bā Fakih al-Shilli, where it is referred to as Ḫaffī; cf. R. B. Serjeant in BSOAS, xxv (1962), 246. His great ancestor was Muḥammad b. 'Ali b. Muḥammad
FAKIH, BAL — FAKIR

The Bal Fakih is a title given to Sahib Mirbat, commonly called al-ustadh al-atash wa l-fakih al-mukaddam (d. 653/1255). The Bal Fakhis also includes Al-Aska, who was a teacher and jurist. They were descendants of Al-Fakih Muhammad bin Bakr b. Husayn b. Zabud, which he left for Shihr, Aden, Mecca, Medina and Zabud in search of learning, and then went back to it where he became a prominent teacher. He left it later for Mecca, where he lived the last 14 years of his life and where he died in 974/1567. His son All, a fakir, died in Mecca in 1021/1612. The latter had two sons, Muhammad, who attained wealth and public importance in Mecca, where he died in 1066/1656, and Abd Allah, a fakh, who died in Mecca in 1590-1640.

From (b) Abd al-Rahman and (c) Ahmad were descended his son Abu Muhammad (d. 1007/1598) and his two grandsons by his son Husayn, Abu Abd al-Rahman, who was twice kadi of Tarim and got involved together with Husayn b. Abu Bakr b. Husayn b. Abu al-Rahman, who travelled to India where he finally settled in Badjapur enjoying the patronage of his ruler Mahmud i Abd Shah until his death there in 1074/1663.

Of (c) Ahmad's descendants we know of a grandson called Ahmad b. Abu al-Rahman b. Ahmad who was born in Tarim, where he studied and then became a teacher and jurist. He was a contemporary and friend of al-Shilli, author of al-Masbik al-Rawl. Bibliography: as for Fakih, B.; add R. B. Jeaneetz, The Sayyids of Hadramaut, London 1957, 14, 19 and 25.

AL-FAKIH, Abu 'Abd Allah Muhammad b. Ishak b. al-Azwar, 3rd/9th-century historian of Mecca. No information on him was available to later Muslim scholars, or is to us, except what can be learned from his History of Mecca, of which the second half is preserved in a single manuscript in Leiden (cod. or. 463). A small portion of the work has been edited by F. Wustenfeld, Die Chroniken der Stadt Mekka, Leipzig 1857-61, ii, 3-51. Al-Fakih was alive and, it seems, quite young during the judgment of Abu al-Rahman b. Yazid b. Muhammad b. Hanzala b. Muhammad which came to an end in or shortly before 238/852-3 (Wustenfeld, ii, 43 f.; Waki, Akhbar al-Kudai, i, 268 f.): his birth may thus be placed around 225/840, and this agrees with the fact that some of his authorities died in the early 240s. He was in contact with the leading scholars of Mecca. He completed his work between 272/885-6, a date he himself mentions, and the end of 275/1450 when Abu al-Aziz b. Abu Allah al-Hahimi, who is referred to as being still alive, died (Wustenfeld, ii, 12; Tariikh Bagdadd, x, 451 f.; or, if the passages cited refer to different men, at the latest 279/892). He left a son, Abu Muhammad 'Abd Allah, who is briefly noticed in al-Fasi, Jbd.

His work is referred to as Akhbar Makka or (in the Leiden ms.) Tariikh Makka, but Fikrist 159 calls it Kitab Makka and Akhbar Maka fi 'l-Thaluthiya wa l-Islam. Its size was more than twice that of the earlier History of Mecca by al-Azraki (q.v.). It shares with the latter the arrangement and, to a large degree, the material but must be considered an independent scholarly achievement. The insads prove that al-Fakih collected his material on his own; certain historical statements and descriptions of architectural features and the like noted by insads agree literally with al-Azraki and, therefore, may have been taken over from his work without acknowledgement. The fact that al-Fakih makes no mention of al-Azraki and even appears to suppress references to his family may have its reason in some personal enmity between him and the Azrakis and their circle, or the latter may have refused him permission to make use of the material in their possession; at any rate, it does not mean that al-Fakih was out to conceal an alleged improper use of al-Azraki's work, which would, anyhow, have been impossible.

Bibliography: Wustenfeld, op. cit., i, xxiv-xxv; Brockelmann, i, 143.

The word fakir has four different connotations—etymologically, Kur'anic, mystical and popular. Etymologically it means (a) one whose backbone is broken (see Kur'an, lxxxvii, 25); (b) poor or destitute; (c) canal, aqueduct or mouth of a canal; (d) hollow dug for planting or watering palm-trees. When used in the sense of a pauper its plural form is fubur, but when used in the sense of an aqueduct, fubur is its plural form.

The word fakir or (fudur) occurs 12 times in the Kur'an. It is sometimes used as opposed to ghani (one who is self-sufficient and independent, see xxxv, 16) and is sometimes conjoined with the term miskin to indicate two distinct types of needy persons (ix, 60). According to Imam al-Shafi'i, a fakir is one who neither owns anything nor engages himself in any avocation; a miskin, on the contrary, is one who owns something though it is barely sufficient for his immediate needs. He cites in support of his view the parable of Khidr and Moses in which the sailor of a boat is called a miskin (xviii, 79). Imam Abu Hanifa held the other view. According to him a fakir is one who owns something while a miskin is one who owns nothing. The supporters of this view say that the sailor in the parable was not the owner of the boat though it were on hire. Reconciling all these differences Ibn al-'Arabi says that these terms are interchangeable and synonymous. According to some commentators the word fubud in ii, 273 refers to the abd al-suuffa (q.v.) who lived in the mosque of the Prophet and devoted all their time to prayers and meditation.

In mystic terminology fakir means a person who 'lives for the Lord alone'. As Shibli says: Al-fakir man la yastaaghni bi-shay, dun Allah (a fakir does not rest content with anything except God.) Total rejection of private property ('adam tamalluk) and resignation to the will of God (taawukul) were considered essential for a fakir who aspired for gnosis (ma'mar).

In popular parlance the term fakir is used for a poor man, a pauper or a beggar. Its use in the English language dates from 1608; see Oxford English Dictionary, s.v. Fakir, and H. Yule and A. C. Burnell, Hobson-Jobson, London 1903, s.v. Fakeer.

FAKIR Muhammad KHAN, an Urdu writer (FAKr) is a taqhallus, nom de plume. He is chiefly known as the author of a translation of the Amurad-i Subhadr of Husayn Wâziq Kashîfî (q.v.), an adaptation in elaborate Persian prose of the stories from Kâtla us-Dimma (q.v.). The title of the Urdu translation by Fakir Muhammad Khan, for whom he appears to have been helped by the celebrated Urdu poet Mir Hasan (d. 1200/1786), is Bustân-i hikmat (Garden of wisdom). This first edition is a lithograph, Lucknow 1845. As a lyric poet, Fakir belongs to the Lucknow school and to the sîsâla (poetic school) of the famous Nâsîkh (d. 1225/1809).

(A. BAUSANI)

FAKIRI, Kalkandelenli, Turkish poet of the mid-10th/16th century. Very little is known about his life. From the scanty information provided by tekhârî-writers, we learn only that he was from Kalkandelen (Tatova) near Üsküb (Shopje); of a modest family and a modest education. His life was unambitious and died young, while still a student. Fakirî is the author of a shahrêngiz, a sâhab-nâmê and a number of ghâzâls scattered in medîmnu’as and nasîre collections, all of which are of rather mediocre quality. He owes his reputation to his original Risâl-i ta’rifât (Book of Definitions) written in 947/1534 in the tradition and style of shahrêngiz. This is a collection of short definitions (in 156 fâsh) of various officials, artisans and types of the Ottoman Empire, and one of the rare examples of social satire in Turkish literature. In every “definition” of three couplets, the characteristics of the type are given in a concise, often colourful description, a vivid and informative parade of the famous and infamous.

After the customary introduction in praise of God, the Prophet and the first four Caliphs and homage to the reigning Sultan, Suleyman the Magnificent, Fakirî begins his definitions with the highest ranking official, the vizier, and proceeds to other ranks and classes. The vizier is “the aid of religion and the State, he is the orderer of the country”. The kadîr’ashers are not liked by the kadîls as “they give life to some by distributing largesse and take the life of others”, the defterdîrs turn some people’s business into gold, and dismiss and deceive others, the bêys and âqâs “lead always a pleasant life, they stage stately divânns where notables foregather; some, by their justice, make the country prosperous, some, by their tyranny, destroy the world”.

Further he describes in short but accurate terms the functions of the solah, sîlêh-dar,î, tawâsh, nabl, yenîcîler, mevâli, etc., and passes critical judgment on members of various professions: mûdérîs “the heirs to the science of the Prophet”, the “insatiable” mu’âlînd, “the corrupt” nâhî, etc. The joy of the mansûb (the newly-appointed official) and the sorrow of the ma’sûli (the dismissed one), the ranges of expectation of the müsilîm (the probationary), the difference between the true devout shaykh and the hypocritical false one, the insincere preacher, wâzi, with an eye to profit are concisely portrayed. The parade continues with the imâm, mûlîd, hâf, hâtî, the poet, the lover, the gentleman, the beauty, the lady’s man, the rival, etc. The arts, crafts and professions are represented by the porter, physician, barber, acrobat, musician, dancer, merchant, tailor, town-crier, cobbler, saddler, butcher, blacksmith, etc. Then come characters: the hypocrite, intriguer, liar, idiot, etc. Further come definitions of some national types: Persian, Arab, Fellâb. Fakirî’s uncompromising definition of “Turk” (faṣl 80) “with a fur on his shoulder and a bûrk on his head, ignorant of religion and sect” confirms the fact that in the period of the Empire this term meant “uneducated peasant, country boor” as opposed to the cosmopolitans, the Rûmî, who are “refined and educated, but some think of themselves as writers, some as poets, yet when they gather to talk they do nothing but backbite one another”.

Fakirî is strongly critical in his definition of sipâhî, âsad, subhâshî, a’ses, mübesseb, kâtibyet, ‘âmâmî, mülewyetî, etc., and popular complaints about bribery, abuses, tyranny, cruelty, injustices of the types are reflected in these definitions. An edition of the Risâl-i ta’rifât is in preparation.

FA’L, tira and sadîr are terms which merge into one another and together correspond to and express adequately the concept of “omu” and of olaîev. Fâl, a term peculiar to Arabic and equivalent to the Hebrew nekâshîm and the Syriac nêkbi, originally meant natural omen, cledonism. It appears in various forms, ranging from simple sneezing (al-Dâshîl, Musâtarafs, trans. Rat, ii 182), certain peculiarieties of persons and things that one encounters (al-Nuwaytî, Nihâya, 133 f., trans. in Arabicîa, viii:1 (1961), 3-7), to the interpretation of the names of persons and places which presents itself spontaneously to the sight, hearing and mind of man. On this last point, the sîrâ, tradition (hadît) and Muslim chronicles give ample evidence depicting this tendency of the Arab mind to draw omens from all kinds of physical movement, all kinds of chance happenings, from all kinds of words heard and all attitudes observed. “After all, the whole of good manners has grown out of fa’l” (Doutté, Magie et religion, 354). To this must be added the predominant role among all Semites, and the Arabs in particular, of ephemerism and antiaphorism (see infra).

This tendency of the Arab mind reveals itself clearly in the conduct, practice and recommendations of the Prophet. The sîra is full of incidents where the Prophet “drew omens from the names of the regions and tribes through which he travelled on his raids” (Ibn Hîgânî, 434). Furthermore, he made a considerable number of changes in proper names, with the double design of efficacing all traces of Arab paganisms from Muslim terminology (cf. Wellhausen, Restî, 8 f.), and even more of removing from any shocking or unsuitable names of followers which he must hear around him, all baleful influences which might emanate from their meanings. It was for this reason that he changed Kalîl into Kağîr, 95 into ‘Uthîr (Ibn Hîgânî, 434), and thus also that he gave the future Medina the name of Tayyyiba in place of Yathrib, whose root
contained the idea of "calumny" (Mardsid al-ittild*, ed. Juynboll, i, 2). He changed the name of Zayd al-Khattab (cf. al-Djahiz, Hayawan, iii, 140). "In the Dahiliyya, Sulaymân b. Sârad was called Yasâr (as a euphemism for 'leij'); the Prophet called him Sulaymân" (Ibn al-Abîr, Usd, i, 357). "Sahl used to be called Hazn but the Prophet renamed him Sahl" (ibid. 380; cf. Ibn ʿAbd Rabbih, Ṭabd, i, 226), and so on (cf. ibid. ii, 301; al-Bakri, Muʾjam, ed. Wüstenfeld, 313, 359; Goldzéher, in ZDMG, lii (1897), 326 f.). As a whole, the Christian names were not only a sign of the individual's name but also from his appearance. The Prophet was imitated in this respect by his Companions, especially ʿUmar b. al-Khattâb (cf. Ibn Kuttayba, ʿUyân, ed. Brockelmann, ii, 148 f.; Ibn ʿAbd Rabbih, Ṭabd, i, 225; al-Ṭabarî, xv, 2609, etc.). On the other hand, omens were not only drawn from the individual's name but also from his appearance. The Prophet wrote to his officials: "When you send me a courier, see that he has a beautiful name and a handsome face" (Ibn Kuttayba, i.; Ibn ʿAbd Rabbih, loc. cit. cf. Aḥaqqî, ii, 20; xvii, 35). In North Africa, even a man's social position could become a factor from which omens could be drawn; thus to encounter a šarif was a matter of happy omen, while to meet a Jew or a blacksmith was unlucky (Doutte, op. cit., 362). A whale would rise, and the Prophet was considered to have a baleful influence (cf. the family of Baṣṣâṣ, who gave bad advice to the Taghibh, Hamâsa, 254, 1, 5, in Freytag, Einleistung, 162). Certain individuals are referred to as maghâm (cf. al-Djahiz, Hayawan, vii, 150 f.); their company augured ill.

Because of this, choice of names was important to parents for their children and to masters for their slaves. With regard to this, the Arabs followed a definite ruling, "Someone asked a Bedouin: 'Why do you give your children the worst of names such as Khilāf and Dhīb, and to your slaves the best such as Marzūk and Rabâb?' He replied: 'It is because the names of our children are destined for our enemies, and those of our slaves for ourselves'. He meant to say that the children are a shield against the enemy and enemies in their bosoms; it is for this reason that the children are a shield against the enemy and enemies in their bosoms, and that the worst of names such as Khilāf and Dhīb are destined for our enemies, and the best such as Marzūk and Rabâb for ourselves."

This process of interpretation was expanded from personal names to the names of precious stones, of fruits and flowers, and even to the words of songs. Thus gold (dhahab) means 'departure', onyx (dji≥a) sadness and melancholy (al-Tifaṣṣî, i, 14); a lemon (utruṣṣi) presages hypocrisY because of the fact that the exterior of the fruit does not resemble the interior (al-Djahiz, Hayawan, iii, 142; Ibn ʿAbd Rabbih, Ṭabd, i, 226); the quince (saffardâj) signifies a journey because its name contains the word safar (Ibn ʿAbd Rabbih, loc. cit.; cf. ZDMG, lxvi (1913), 275 ff., and lxviii (1924), 275 ff.). Lilac (sasām) brings misfortune because its name contains the word sâ (Ibn ʿAbd Rabbih, loc. cit.), and misfortune which will last for a year because its name is made up of sâ and sana (cf. Flügel, Loosbücher, 27); basil (rībān) is at the same time of good and evil omen because on the one hand its name includes the word ra, and on the other hand it has a bitter taste, even though it pleases the eye and the nose (al-Djahiz, Hayawan, iii, 142). As for the evil presentiments aroused by the contents of a phrase or a song, there are many examples of these in the Arab chronicles (cf. al-Djahiz, loc. cit., 139; al-Masʿūdî, al-Murdiy, iv, 426 ff.; vii, 269 ff.; al-Bagdîhi, ii, 154). These facts are generally classified under the name of ṿifā.

According to ʿAbd al-Qâdir Khâlîfah, Kasîf, ed. Flügel, iv, 646 f., ṿifā is an approval of a man's intentions and thence an encouragement to his carrying them out, while ṿifā or ṿiṣāra or ṿario, e.g. Kâmâs, i, 93) is a disapproval and in consequence an obstruction, a postponement until later. This opposition which in the end established itself between two concepts which were originally complementary, seems to have developed from the attitude which Tradition ascribed to the Prophet concerning this predominant variety of ṿifā. ṿifā (ḥawṣq) is in effect a technique whose origin is pastoral and nomadic; Arabia was therefore a very propitious region for its development, as Cicero had already commented: "Arabes (et Phryges et Cilices), quod pastu pecudum maxime utuntur, campos et montes bieme et aestate pergrantes, propretia facilius canvim ant avium et volatus notaventur" (De divinatione, i, 41; cf. i, 1 and ii, 93-5). Its technical character made it the prerogative of a privileged class of men, which in an organized and developed society enjoyed the status of priesthood. In the short-lived and nomadic civilizations of Bedouin Arabia, the existence of a divination, as we have it here, must be explained by a kind of borrowing. The procedure of ṿifā is at the same time of good and evil omen because on the one hand its name contains the word ra which is regarded as that part of it which comes true: "asdāḥ Ṽifâ Ṽifâ al-ʿaṭāwā" (Ibn Kutayba, ʿUyân, ii, 146). Another ṿifâh even seems to give ṿifā a wider meaning, including Ṽifâ al-ʿaṭāwā itself which is regarded as that part of it which comes true: "asdāḥ Ṽifâ Ṽifâ al-ʿaṭāwā". Ibn al-ʿAbîr, Usd, i, 314 and ii, 79). In the same way, there are examples which give Ṽifâ the meaning of evil omen (cf. al-Nuwayt, Nihâya, iii, 138; Ibn Durayd, Ḥtbâkh, 4).

This confusion reveals the existence of a primitive foundation which was not entirely submerged by the powerful wave of puritanism which swept over Arabia in the first two centuries of the Hiḍjra. It appears from all this that ūifâ, which was originally no more than the observation and interpretation of the flight, cries and perching activities of certain birds used in divination, became the equivalent of the male omiari of the Latins and the λεκτόμια and διαμαντία of the Greeks. From this was derived a whole literature, essen-
tially of poetry and proverbs, created to dissuade man from following the ideas inspired in him by fira, and to which all men are subject. The Prophet is reported to have said: "There are three dangers which no-one escapes: fira, suspicion and jealousy". When asked what remedy there is for this, he replied: "If (on your way) you think you have seen an evil omen (fayyarta), do not turn back; if you suspect, do not execute; if you are envious, do not commit an injustice" (Ibn Kutayba, *Uyun*, ii, 8; Ibn 'Abd Rabbih, *Tadk, i*, 226). Quotations from poetry on this subject are very numerous (cf. especially al-Buhturi, 'Abelq., nos. 596-7, 731; al-Bayhakhi, Mahasin, 368 and Ps.-Djahiz, Mahasin, 68 f.; al-Djihiz, *Hayawun*, iii, 138, 139, 160; Ibn Kutayba, *Uyun*, ed. Cairo, ii, 145 f.).

It is worth remembering that when it means presaging evil, fira does not strictly apply only to *signa ex avibus* but also to all other kinds of evil omen (cf. Ibn Kutayba, *Uyun*, ii, 147; al-Djihiz, *Hayawun*, iii, 240; al-Masudi, *Murud*i, vi, 426 ff., 432 f., vii, 269 ff.; Aghasi, i, 184; al-Tabar, 3/364 f., etc.).

But the primitive meaning of fira seems to be better preserved in zadjr, which is often used as its equivalent, although originally this term designated a technique belonging to fira. Indeed, if fira is the observation and interpretation of the spontaneous flight and cries of birds, zadjr consists on the contrary of the deliberate instigation of these flights and cries; it belongs to the category of *auspicia impetratia*, in contrast to *auspicia oblatia*. Apart from the meaning of zadjrara (to arouse, chase someone with cries, make fly, draw omens, practise divination), Arab tradition still preserves some accounts of the existence of this practice (cf. *Arabica*, viii/1 (1961), 50 f.).

But in the same way as fa'il and fira, zadjr soon began to lose its primitive meaning and specific character and came to stand for evil omen or divination in general. Indeed sometimes there is a kind of zadjr which is confused with khitha (cf. al-NuwayrI, Nihaya, iii, 135-9). This leads us to believe that zadjr was, as in Assyria and Babylonia, the prerogative of the soothsayer who, especially in Arabia, combined various functions and acted as a guardian of institutions in a nomadic society which lacked the formal legal protection enjoyed by the Christian and Jewish faiths.

Thus in a passage from Ps.-Djihiz, Arab zadjr includes the interpretation of the cooing of doves, the cries of birds, the sudden appearance of an animal crossing from right to left or from left to right, the rustling of leaves, the sigh of the wind and other similar portents (Ifris, ed. Nicolausse, 23).

Zadjr is also referred to as a *syafa* (q.v.) which applies to various procedures of divination. As for the birds whose flight and cries form the object of fa'il, fira and zadjr, they are of many kinds, but the bird of divination most regarded by the Arabs is the crow (Corvus capensis Lichtenst., Corvus umbrinus Rüppel, and perhaps also Corvus agricola Tristram which exists in Palestine). Nevertheless, these three procedures do not limit themselves to birds, for any animal is capable of furnishing an omen (on the crow and other birds, animals and insects of divination, cf. *Arabica*, viii/5 (1961), 30-58).

The direction of a bird’s flight, or an animal’s steps, plays a very important part in the application of the three procedures. Technical terms designate the various directions: sanah (that which travels from right to left), barih (that which travels from left to right), djiboth (that which comes from front), ba’id or bharif (that which comes from behind). As a general rule, the left is of evil omen (al-Tibriz,

in Abū Tammān, Ḥamāsa, ed. Freytag, i, 165), therefore *"al-sanah is desired by the Arabs and al-barih is dreaded"* (al-Masudi, *Murud*i, ii, 340). Thus it is the way of euphemism that Arabs call the left side *al-barîd* and the left hand *al-arad* (comp. the Greek eunymonos), whereas in fact they signify “difficulty” to them, whence the name of al-‘asrād, also used for the left hand (cf. al-Djihiz, *Hayawun*, v, 150).

In other respects too, euphemism and antiphasis play an important part in fa'il, "The desire to hear from the mouth of others a word of happy omen, the fear of hearing some unlucky expression, is moreover found in Islam in all ages and all countries" (W. Marcais, *Euphémisme*, 421). A whole vocabulary has been created in order to avoid certain expressions whose meanings suggest evil omens. Hence the blind is called “seeing”, baṣīr (cf. other euphemisms for blind and ref. in Fischer, in *ZDMG*, lxi (1907), 425 sqq.), smallpox is described as “blessed”, musḥabrah, as also are syphilis, plague and insanity (cf. Greek *Iphigos*, the Italian *il benedetto*). It is because of fira, al-Djihiz tells us (Hayawun, iii, 136), that the Arabs call someone who has been bitten by a snake “safe and sound” (salim), call the desert the “refuge” (mafdāsa); it is for the same reason that they name the blind, for kunya, Abū Baṣīr and the negro Abu ‘I-Baydr (white). Such examples are innumerable (cf. W. Marcais and Fischer, *op. cit.*, Wellhausen, *Reste*, 200 ff.).

For astrological fa'il, see *Nudr*, and for the fa'il by drawing lots, see *Kura*. For books of divination, see *Fal-Nama*.

**FAL-NAMA**, book of divination. In the Muslim East (especially in Iranian and Turkish countries), in order to know if not the future, at least the signs or circumstances that are auspicious for some decision, recourse is still sometimes made to certain procedures (cf. Massé, *Croyances*, ch. XI: divination), among others to two kinds of books: 1. collections of poems (diwan of Hāfiz); 2. special works (*fāl-nāma*). Consulting the diwan, an act within the reach of everyone, consists in opening the book at random and interpreting the text which first strikes the eye (for details, see Massé, *op. cit.*, 244-5); and in particular E. G. Browne, iii, 315-9; also Binning, i, 220. As for the fal-nama, some are tables of divination, used in the manner of the above-named diwan (cf. the *sortes Virgilianeae*; and for the diwan of Hāfiz, the description of this table in Browne, iii, 312-5); others are booklets containing quadrangular or circular tables (dā’irā), preceded by an explanatory text, in which the divisions of the page (būrj) contain letters and words arranged in eastern abjad (q.v.) order. The *fāl-nāma* which has always been the most authoritative (taking prece-
dence even over the one attributed to 'Ali is that of Dja'far which is attributed to the imam Dja'far al-Sadik (q.v., see also garm); and Dja'far al-Sadik is also, according to M. Donaldson, The Shi'ite religion, ch. XII). The essence of this booklet is as follows (according to the manuscript in the B.N., Paris, Suppl. persan, no. 77): "Fäl-näma of his holiness the imam Dja'far Sadik. If anyone wishes to consult the omens, he must make his abscissae, recite the fikâna once, the sūra of the Ashâdi three times, the Kûr'ânic Throne verse once, and then he taps the fikâna under his arm (fol. 40), while keeping his eyes closed, on one of the page divisions containing the letters (for example, the letter nûn); each division of the second table contains one of these letters accompanied by a word (e.g., nûn — al-kayl); then follows a list of these words, each incorporated in a phrase linking it to a sign of the zodiac (e.g., "Al-kayl: your fâl is fortunate; but refer to the Ram (hamal) which will elucidate it", etc.); next comes a list of these signs with reference to the planets (e.g., "Sun: good tidings, O ye who seek fâl! God has opened the gates of his clemency for you; He will give you your daily bread, multiply your powers, watch over your concerns; your children shall repay you; it will be propitious for you to build, to buy horses and arms, to marry and to travel; in the event of a parent or a friend being absent, it will give peace; if ill, it will assist you to recover; if old, it will offer you to perform your almsgiving; then God will certainly provide"), these replies, which are all of the same order, justify the Persian proverb "It is the fâl of the imam Dja'far which cannot do harm" (Dehkhodâ, Amthâl u-hikam, s.v. Fâl, and the following proverbs). Sometimes the first table of the fäl-näma is composed not of letters of the alphabet but of figures; in this case the procedure is as follows (beginning of the Fäl-näma manuscript in the B.N., Paris, Suppl. persan 1872, fol. 62 v.): "Hear ye, this is the fäl-näma which his holiness Dja'far Sadik has learnt from the august divine Word. Whoever has a transaction, dispute or a certain desire and wishes to know what is good, what is evil and what the outcome, must stand face to face with a partner who must act exactly as he does and place his hand under his arm, and then, bringing out their hands, both must show what number of fingers each has chosen; the man concerned must add up the total, and then consult whichever page division contains this number; he must read the sacred verse of the Kûr'ân inscribed in the circular table of the fäl-näma; having thus recognized the good and evil features of his plan, let him not deviate from it!" (after which he will proceed as above). Another fäl-näma, less well-known and more literary, the versified answers of which are often of a disturbing precision, is that of Shaykh Baha al-Sadik (d. 1030/1621; see also garm); this fäl-näma deviates from it" (after which he will proceed as above). Another fäl-näma, less well-known and more literary, the versified answers of which are often of a disturbing precision, is that of Shaykh Baha al-Sadik (d. 1030/1621; see also garm); this fäl-näma deviates from it. In addition to these methods, Chardin and other travellers (cf. Massé, op. cit., 247) noted three others based on dice (this practice has not entirely disappeared); in these cases, recourse is made to a specialist known as fâl-bin or fâl-gir (augur) who shakes and then throws the dice (in Persian, rami, divination by dice, practised by the rammâl); Arabic words distorted from their original meaning); this rami is related to the sorts of classical antiquity (cf. Fontenelle, Histoire des oracles, ch. XVIII).

The fäl-näma of Dja'far was translated into Turkish; also there exists in this language (and in Persian) a series of minor works dealing with divination by the lines of the hand, coffee-grounds, beans and chick-peas, stars, molten lead, omantoscopy, omens drawn from the quivering of parts of the body, bruises and wounds.

FÄL-NÄMA — FALAK

761

FALAK, Sphere, in particular the Celestial Sphere.

a. Etymology and semantic evolution. The word fâlak (pl. aflâk) occurs already in the Kûrîân with the specific significance "celestial sphere" (xxi, 34 "it is He who has created night and the Sun, and the Moon, each of which moves in its own sphere"; similarly xxxvi, 40). Etymologically and semantically it has a long history: it can be traced back to Semitic origins, where the stem bala (st. *pîlak) already has the meaning "to be round" or also "to turn around". In Akk. it appears as pilakku, which denotes the whorl of the spindle as well as the double-edged axe (to be distinguished from the single-edged axe, Akk. paššu, paššu > Sury. pustâ, Aram. passâ > probably Ar. ja'a; cf. H. Zimmern, Akkadische Fremdwörter als Beweis für babylonischen Kultureinfluss, Leipzig 1914, 12). The double significance is readily explained by the resemblance of the whorl with the head of the double-axe, both being round and pierced so as to be mounted on the spindle, or else on the handle. The Akk. word is found again in Sury. pelbâ, "(double-) axe" and, with its other meaning, in Heb. ydl, "spindle". The original Sumero-Akk. form is best preserved in the Talmudic yeldeq, "whorl" (also "spindle") used apparently indiscriminately with yâd and yeldeq = Ar. fâlakâ, of which the abstract technical term falâk, "(celestial) sphere", is of course a later derivative. The question may be left open whether also Ar. falaka and faladjâ, which have both
The meaning "to cleave", are derived from the same stem.

On the other hand, the occurrence of the term *Falak* (cf. E. Boisacq, *Dictionnaire dymo-

logique de la langue grecque*, Heidelberg and Paris, 1923, 793, s.v. *Falaka*) in a great many (Eastern and Western) Indo-European languages, in all cases with the meaning "to plait", "to pleat", "to coil", "to twist", "to fold", etc., strongly supports the assumption of a common origin of the Semero-Akk. and the Indo-Europ. words, but seems to exclude the etymology of Gr. *Falak* (and Skr. *parapak*; see below) the possibility of a direct loan. Thus we have the various genuine Greek words for (hair-) curl, curl, and similar round objects: *πλέκτι*, *πλεκτήν*, *πλέκος, πλέκαμος, πλέγμα* etc., while the representat-

ive of the second significance: *πλέκως, double-

axe*, alone clearly betrays its Akk. origin. (Against this, cf. Walther Wüst, *Ag. *Falaka* — *Asi, Beil.* Eine palagnostische Studie, in *Suomalainen Tiede-
akatemian Toimitus*., Helsinki 1956).

In Greek texts dealing with astronomical subjects, derivatives of *πλέκος* are not too common, though they do occur occasionally, e.g., *Timaeus* 36 D: δε δε [μουχ] ει μεσον προ τον ενσαυγον ουδοραν παντε 

δυτικατεα ή αυτον ευδερε περηκα-

λυφοςα, αυτη εινα ευτε στρεφομενη, though here the idea of roundness inheres in the word *πλεκτον* rather than *πλεκτι αθεα* (*twisted* or "plaited through"). In *The Myth of Er*, however, *Republic* X, 616 B-617 D), which adumbrates the later elaborate theory of material spheres revolving inside one another, the word used for the (hollow) whorls, *σπόντυλος* (*σπόντυλος, vertebrä*) of larger mammals suffices to show that they are the ideal prototype of the pierced whorl. Lat. *vertebra*, Eng. *whorl* (or *sekid*), Ger. *Wirbel* and *Wirbel*, all stress the idea of turning or whirling round (vertice, *wirbeln*, etc.; conversely, the Arabic word for the vertebrä, *fibra*, emphasizes the other characteristic of the object, viz., its being pierced (modifär or *muflabär*). The Gr. word *σφιχα*, finally, which later (Eudoxus, Aristotle, Ptolemy, etc.) became the generally accepted technical term, equally reflects the idea of "turning round", since it is obviously akin to *σφαίρα* (*σφερα*— justification, "spiral". It is this word which we find generally rendered by the Ar. *falak*.

b. Definitions. *Falak* thus corresponds with Gr. *σφαίρα* and Lat. *sphaera* or *orbis*, while *dāvira* can be equated with Gr. *χώκος* and Lat. *cirricula*. Authors writing in any one of the three languages, however, seldom aim at a perfect consistency in the use of these terms. According to al-Birûnî (al-

*Kâmán al-Masádî, i., Hyderabad-Dn. 1954, 54-5*), *dāvira* and *falak* are two terms that denote the same thing and are interchangeable; but sometimes *falak* refers to the globe (kura), in particular when it is moveable (muharakri). *Falak*, thus, does not apply to the motionless (globe); and it is called "falak" only on account of its similarity with the whorl of the rotating spindle (*sāl wadāj al-taqšíth bi-falakat al-miţqal al-dāvira*). According to Ibn al-Haytham’s *Fi hay‘at al-falām (Ms. Kastamonu no. 2298, fol. 6r 11 H.), the term *falak* "applies to any round quantity of a globular body or surface or of the surface (area) or the circumference of a circle; the body surrounding the world, which turns about the centre (viz., the Earth), is called in particular *falak*, and this *falak* is divided into many parts, but first and foremost into seven parts, which are spherical bodies (i.e., shells) contiguous with one another in such a way that each one of them surrounds the next one, the concave surface of the surrounding [spherical shell] touching the convex surface of the one surrounded by it. The centre of all of these spheres is the centre of the world, and each one of them individually is also called *falak*".

μενον*, *circulus aequinoctialis* (the celestial equator, not the terrestrial, which is called *καθή τασιωά*); al-f. al-bhâridî = *εκεντρος, excentricus*; al-f. al-mâdîl = *ο παρακλίσιον* (the circles parallel to the equator)); al-f. al-muṣṭaḥîn = η *δρόθη σφιχα, sphaera recta* (the celestial sphere as appearing to the inhabi-

tants of the equatorial region, where the celestial equator passes through the zenith).

c. History. There can hardly be a doubt that the conception of a universe consisting of concentric spheres, in which the celestial bodies are carried around at various distances from the Earth, is very old. The correct interpretation is a tablet in the Hilprecht Collection at Jena dating from the Cassite period, but copied probably from a much older original (1st Babylonian Dynasty), see F. Thureau-Dangin, *La tablette astronomique de Nippur*, in *Revue d’Ass.*, xxviii, 85-8. According to O. Neugebauer, *The exact sciences in antiquity*, Copenhagen 1957, 100. "This text and a few similar fragments seem to indicate something like a universe of 8 different spheres, beginning with the sphere of the moon. This model obviously belongs to a rather early stage of development of which no traces have been found preserved in the later mathematical astronomy, which seems to operate without any underlying physical model. It must be empha-

sized, however, that the interpretation of this Nippur text and its parallels is far from secure".

While later Babylonian (Seleucid) astronomy thus no longer shows any trace of such a conception, it reappears, in Greece, in the astronomical and cosmological speculations of Plato (*Myth of Er*, see above, and *Tim.* 36 C-D) and of the late Pythagoreans (Philolaos). The former of these two "models" (the Platonic "whorls") leaves out of account the planets’ standstills and retrogradations; the latter, which replaces the hypothetical "central fire" in the centre of circular motion, is capable of explaining them at least in part, owing to the fact that the Earth, too, is
